PREFACE

THE compilation of an Encyclopaedia of Buddhism in the English language was one of the several undertakings of the Laṅkā Bauddha Maṇḍalaya (Buddhist Council of Ceylon) which was set up by the Government of Ceylon in 1955 in connection with the celebration of Buddha Jayanti, the 2500th Anniversary of the Buddhist Era as traditionally accepted in countries of South Asia where the Theravāda (often also called Hīnayāna) form of Buddhism prevails. The Maṇḍalaya appointed a Sub-Committee for the task of compiling the Encyclopaedia. This Committee appointed me its Chairman and Editor-in-Chief of the Encyclopaedia. When in 1956 the Government of Ceylon created a Ministry of Cultural Affairs, the administration of the Encyclopaedia was transferred to that Ministry while I continued to be Chairman of the Editorial Board and Editor-in-Chief.

The editorial office was at first set up in Colombo but soon afterwards was moved to Peradeniya (near Kandy) where it is now accommodated in the University Park through the courtesy of the Vice-Chancellor of the University of Ceylon. The transfer to Peradeniya not only keeps us in a congenial academic environment but has also given us the added advantage of being able to use the excellent University Library which is particularly favourable for our purpose. The Librarian and his staff have been most helpful to us.

There have been several changes in the personnel of our limited editorial staff, chiefly as a result of its members having left us to join the teaching staff of the two Universities recently established in Ceylon. The vacancies so created have been filled and it is hoped to have the staff further strengthened in the near future.

After the inception of the work, the first couple of years were spent in the essential but exacting duty of indexing, compiling subject-lists, &c. Most of this work has already been completed but it is a continuing and almost never-ending task, especially in view of the numerous publications dealing with Buddhism which are being increasingly issued in many parts of the world, thus contributing to our knowledge of Buddhist matters all the time.

Buddhism covers a vast expanse, both of time and space. The Encyclopaedia aims at giving a comprehensive account of the origins of this World-Religion and of the developments that have taken place during a period of more than 25 centuries. To deal with Buddhism is to deal with a whole civilization, in fact, a whole series of civilizations which have influenced the lives of myriads of human beings, in many lands. A satisfactory treatment of the subject should, thus, include information on the doctrines of Buddhism and their growth, the story of their spread and expansion, accounts of the numerous Buddhist Schools and Sects and of their origins and subsequent ramifications, descriptions of Buddhist rites and ceremonies as found in many countries, the history of the fine arts—painting and sculpture, music, dance and drama—under the influence of Buddhism in various countries, details of Buddhist shrines and places of pilgrimage and of the vast literatures connected with Buddhism which developed in many languages, both ancient and modern, in original works as well as in translations, and biographies of persons who, in the course of Buddhist history, played important rôles in their own countries and made contributions to the development of Buddhist culture. Even so, the list of topics would not be exhausted.

We have made it our aim that the Encyclopaedia should contain information both on the Mahāyāna and the Theravāda and that such information be so presented as to make it useful not only to the scholar and the expert but to the general reader as well.

It is also our endeavour to bring together in a single publication information on various aspects of Buddhism which can at present be obtained only by consulting numerous scattered sources some, at least, of which are not available except in rare or inaccessible collections.

The original plan was to publish a series of volumes, each under a different title, e.g., the Buddha, the Dhamma, the Saṅgha, Literature and the Fine Arts. But this was given up after consultation with experts. It was found that such a scheme would not be quite practicable in the present state of our knowledge and would involve a great deal of editorial treatment resulting in excessive delay in publication. We have, therefore, adopted the alphabetical method of treatment of topics as found, for instance, in Hastings' *Encyclopaedia of Religion and Ethics* which has, in many ways, served as our model. This method, too, has its difficulties and drawbacks as will be seen in dealing with a subject like art or architecture, where the information will have to be presented separately under different countries. The more satisfactory method would, of course, be to treat it as a single topic and devote a special volume for this purpose. We shall, however, endeavour to overcome such shortcomings by an elaborate scheme of cross-references and by the provision of a very comprehensive Index.

The question of the space to be allotted to various subjects in general and to each item in particular has been difficult to decide. The principle ultimately adopted has been to leave the matter very largely to the discretion of the contributors themselves, emphasis being laid on the requirement that no vital information should be omitted and that all information should be given as concisely as possible. The avoidance of repetition and overlapping has been made the responsibility of the editors but it has to be recognised *that a certain amount of repetition and overlapping* is unavoidable. As at present planned, the Encyclopaedia will comprise about 15,000 pages and *will include illustrations* both in colour and in black and white. It is hoped to complete the first edition within ten years.

Every effort is being made to select an acknowledged authority to write on a particular topic, especially in the case of the more important topics, and a Buddhist, if available, in preference to a non-Buddhist, more particularly where matters of doctrine are involved or details of different Schools and different Sects. In the case of the more specialized subjects, contributors will sign their own articles so that theirs will be the responsibility for the views expressed. Where it is necessary to inform the reader that a different point of view or a different interpretation exists, suitable steps are being taken to indicate that fact. In some instances, more than one article will be published on the same topic from separate contributors, while in others more than one contributor will co-operate in the production of a single article. Every attempt is thus being made to make the information given as complete and as comprehensive as possible.

As will be seen from what has already been said the Encyclopaedia is a work of international collaboration, and it has been our good fortune to be able to secure for this colossal undertaking the active goodwill of scholars of repute from many lands. We have also been able to enlist as Honorary Editors some of the most eminent scholars in the field of Buddhist and allied studies. For the better co-ordination of the work several regional committees have been set up, the largest of these being the Japanese committee with its headquarters in the Tōyō University in Tokyo. This committee has as its Chairman the veteran Buddhist scholar, Dr. Makoto Nagai, with Dr. Shosōn Miyamoto and Dr. Susumu Yamaguchi as Vice-Chairmen, while Professor Shinsho Hanayama and the Rev. Riri Nakayama are responsible for the work of organising and compilation including the translation of Japanese articles into English. The committee has also agreed to depute a Japanese scholar for full-time work in the Encyclopaedia office in Ceylon to act as liaison and also help in the revision of the translations.

In China, under the aegis of the People's Republic, a very representative Committee of scholars has been set up in Peking. The Chairman of this committee is Professor

Dr. Chao Pu-chu, Vice-President of the Buddhist Association of China. Smaller committees also function in Burma, Thailand, Germany, France, Italy and the Netherlands. Some of the members of these committees and of the Board of Honorary Editors have already visited our office in Ceylon and have made useful suggestions for organising and expediting the work. It is hoped to have some of them working in our office from time to time, at least for short periods.

In May, 1957, a specimen fascicule of the Encyclopaedia was published containing a few articles representing a cross-section of the kind of information the Encyclopaedia hopes to provide and the method which it is proposed to follow. The purpose of the specimen fascicule was to obtain criticisms and suggestions for our guidance in the preparation of the main work. The specimen fascicule has more than amply proved its usefulness and we are deeply grateful to those who sent us their criticisms and suggestions. Criticisms and suggestions will be welcome at every stage of our work. In order to expedite publication, the Encyclopaedia is being issued in fascicules of about 100 pages each ; it is hoped that we shall be able to release these fascicules in quick succession.

I should like to take this opportunity of thanking most sincerely all those who have helped in their various ways to make this publication possible. It would be too big a task to give their names in detail, but I should like to record here my special appreciation of the personal interest taken by the Government Printer of Ceylon and his staff in getting this publication through the Government Press.

I also have pleasure in acknowledging with deep gratitude the financial assistance given by UNESCO under the auspices of the International Council of Philosophy and Humanities.

G. P. MALALASEKERA,
Editor-in-Chief.

Embassy of Ceylon,
Moscow,
15th April, 1961.

IN MEMORIAM

IT is with great sorrow that we record the sudden death of one of our colleagues of the Editorial Staff of the Encyclopaedia of Buddhism, Mrs. Lakshmi Ranjani Goonesekere.

She was born in 1929 and had her early education at Sri Sumangala Girls' School, Panadura and Visakha Vidyalaya, Colombo. She joined the University of Ceylon in 1947 and graduated in 1950.

After her marriage to Mr. Raja K. W. Goonesekere, at present a Senior Lecturer in Law at the University of Ceylon, she went abroad, and shortly afterwards, in March, 1957, she joined the staff of the Encyclopaedia of Buddhism as an Assistant Editor.

Her death on the 16th May, 1965, at the early age of 36, has deprived us of a most devoted and conscientious worker. Her contributions to the Encyclopaedia, over the initials L. R. G., have already won much praise. Further fascicles will continue to publish articles written by her because at the time of her death she had completed more than 800 articles.

Her quiet efficiency and her sincere friendship will be long remembered by her colleagues.

16th May, 1965. G. P. MALALASEKERA.

NOTE

THE system of transliteration used in the case of Pali and Sanskrit terms is that now generally accepted by scholars and lexicographers. In the case of Chinese and Japanese names and words, Wade's system has been followed. Where Siamese words are concerned, a system suggested by H. H. Prince Dhani Nivat has been largely adopted.

In certain cases the textual word (Pali, Sanskrit, Tibetan, &c.) has been retained in preference to a dubious English rendering with a connotation foreign to Buddhism. Thus, Saṅgha for the Order of Monks; bhikkhu for priest, monk or almsman; arahant for saint; karma for action; bodhisattva for aspirant for enlightenment, &c. And such term will be used in the language of the source employed, Nibbāna (Pali), Nirvāṇa (Sanskrit), &c. But a comprehensive system of cross-references will ensure that the reader who is not familiar with such technical terms is guided from an English term to the more precise and classical one; thus, Apperception, see Javana; Awareness, see Sati; Void, see Śūnya; &c.

In Ceylon the dates of events up to the 16th century have been taken from the Chronological List in the University of Ceylon, *History of Ceylon,* Vol. I, Part II.

Instead of A. D. the abbreviation A. C. has been used throughout.

ENCYCLOPAEDIA OF BUDDHISM

First letter of the Devanāgarī alphabet in Lantsha script used by Buddhists in India and Tibet in the 8th century A. C. (Csoma Körösi).

THE sound represented by the first letter of many alphabets, Sanskrit, Roman, Greek, as well as of most modern languages of East and West, has served as a mystic symbol for the ultimate beginning or creation, as well as for the Absolute, e.g., I am Alpha and Omega.

It is the first of all sounds and, hence, the beginning of all knowledge which used to be communicated only by word of mouth. It is the first sound of the sacred syllable AUM (OM), which is said to be the essence of all the Vedas. It is from this that Indian mysticism has developed a cult, attributing to this initial sound a privileged position and function. This tradition was taken up by Buddhism, whereby it spread throughout east Asia.

It is the most elementary sound, produced by the mere opening of the mouth, and forms in most Oriental languages an essential part of the fundamental syllables: ka, ga, ta, da, pa, ba, ma, &c. These syllables are not built up from pure consonants plus a vowel (k + a), but form a concrete unit in which the vowel is inherent in the letter-symbol. The pure consonants, k, g, &c., would then be abstractions (ka *minus* a), making the sound incomplete. The vowel sound is, therefore, an essential constituent, and the vowel **A** is the beginning of such essence.

Moreover, **A** is in Sanskrit and Pali, as it is in Greek, a negating particle (*alpha privans*), whereby is symbolised the original non-entity of existence (*an-ātmya, an-atta*) and its non-permanent nature (*a-nitya, a-nicca*). In this denial of permanence it becomes a symbol of permanence itself, for "Whether a Tathāgata arises or not, all component things are impermanent ". Thus, the letter **A** symbolises, at the same time, the origination of the very essence of things, as well as the negation of the foundation thereof. This apparent contradiction is in fact an identity, for it is in the negation of the absolute nature of things that their origination and cessation is postulated.

Thus, the letter **A** is considered to be the most perfect letter, which is imperishable (*akṣara*), even though in its combination with other letters, e.g., in AUM (q.v.), the evolution, continuation and involution of this world of events is symbolised.

Further developments which were carried to far-away lands by Buddhist missionaries had their origin in India, where even to this day their equivalents are found with hardly any difference in the Tāntric schools of Hinduism, which flourished particularly in Bengal and south India. Tibetan Buddhism has given much room to the development of such types of speculation.

According to the *Mani bKah:hbum* (fol. 31 b.) the sacred syllable symbolises the noumenal source, the absolute; and around this symbol is evolved the idea of creative sound in the theory of vibration. Well-known and far spread as this concept is in the mystic East, it was not unknown in the West either. Pythagoras, who himself was an initiate of eastern wisdom, and who was the founder of one of the most influential schools of mystic philosophy in the West, spoke of the harmony of the spheres, according to which each celestial body and each and every atom, produced a particular sound on account of its movement, rhythm and vibration. All these sounds formed a universal harmony in which each element, while having its own function and character, contributed to the unity of the whole. This idea of creative sound was continued in the doctrine of the Logos (the Word), partly absorbed by early Christianity, which thereby linked itself with the philosophy of the Gnostics and the traditions of the East, even though the link was not maintained by the later Church: "In the beginning was the Word, and the Word was with God, and the Word was God . . . . And the Word was made flesh and dwelt among us " (*John*, I, 1, ff.).

The word, however sacred, being a repetition of a mere sound and an expression of a concept will not produce the desired effect, unless accompanied by perfect knowledge, pure attitude of mind and complete responsiveness on the part of the person using the *mantra*. Its power is truly sacramental, i.e., bestowing internal grace through an outward sign on the initiated, the spiritually cultured one. Such words, although self-evident (*sandiṭṭhika*), yet can be comprehended only by the wise (*paccattam veditabbo viññūhi*). This is admitted by all schools of Buddhism, not excluding the Theravāda, who do not differentiate otherwise between exoteric and esoteric teachings of the Buddha, who is said not to have the closed fist of some teachers who retain certain teachings for select pupils only.

The sound-letter **A** signified, therefore, the void, creative existence and the permanent,[1] i.e., non-entity, becoming and being, all of which are descriptive terms of the actual and real nature of everything, impermanence itself being permanent.

1 *Taishō*, 1796, vii.

Chinese as well as Tibetan authors have made frequent use of this symbol. In exoteric texts the letter **A** stands for negation, for the uncreated source (*ādyanutpāda*), for the beginning (*ādi*), for impermanence (*anitya*). A bodhisattva (a Buddha-to-be), by listening to this sound as a result of former meritorious actions, comprehends the uncreated source of all essences.[2] Essences, however, are not thought of as eternal (as in Greek philosophy), but as impermanent; and thus the same symbol can signify negation and essence, for the Void is the essence of All.

Just as the sound **A** as basic vowel is found with all pure consonants forming the root syllables of oriental scripts, without which sound no language would be possible, and for which reason it is called the "mother of all sounds",[3] so it symbolises the origin of all essences, to know which is the highest wisdom.

Especially the Tāntric masters of China and Japan, beginning with the Indian Subhakarasinha (Zemmui) who brought the most important Tāntric text, the *Mahā Vairocana-abhisambodhi*, from India to China in the beginning of the eighth century, have laid great stress on this learning. The letter **A** stands for the spirit of awakening. By means of mental application in the contemplation of this symbol one identifies oneself with the substance of the body-essence of Vairocana.[4] According to the system of Amoghavajra, the letter **A** represents the central Buddha, Vairocana, corresponding to the earth element, because the Vajrasattva, immanent in all beings as the creative spirit, is the substantial nature which produces the Buddhas, in the same way as the earth is the basis which sustains and maintains the substance proper to all beings. In the body it represents the spleen, the seat of anger; astronomically the Dog-star, and seasonally the Dog-days. It is coloured yellow.[5]

Probably the first evidence of the mystical importance accorded to the three-letter syllable AUM is found in the *Aitareya Brāhmaṇa* (*v.* 32), where the celestial sphere is declared to be resolved in the three letters A-U-M, which are derived from the three Vyāhṛtis: Bhūh, Bhuvah and Svar, from the *Ṛgveda*, the *Yajurveda* and the *Sāmaveda*, from the gods Agni, Vāyu and Āditya, from the earth, the atmosphere and the air. This set of speculations is largely developed in the Upaniṣads.

Although the syllable was primarily characteristic of the Brahman, the force of its popularity is shown by the fact that it became an integral part of the *mantra* of Avalokiteśvara in Mahāyāna Buddhism.[6] Its final development is found in 16th century Tāntric Buddhism in Orissa, the sacred sound (*praṇava*) being derived from the Void (*śūnya*), bringing it close to the principle of non-entity, and the original negative meaning of its first letter **A**.

H. G. A. van Zeyst.

ABABA is the name of a subdivision in one system of hells (Niraya) in Buddhist cosmology. It occurs in a recurrent passage in the Saṃyutta and Aṅguttara Nikāyas and the Mahāvagga of the Sutta-nipāta (*S.* I, 150; *A.* V, 173; *Sn.* iii, 10).

In this passage the Buddha says, in answer to a question, that the term of life in the Ababa Niraya is four hundred times that of the Abbuda Niraya (q.v.). The commentaries (e.g., *SnA.* ii, 477) state that it is not a separate Niraya but a period of suffering in Avīci (q.v.).

The etymology of the term is uncertain. The Sutta-nipāta commentary says that some (*keci*) contend that *ababa* represents the sounds of lamentation of its inmates as also do *ahaha* and *aṭaṭa*. Its origin was therefore onomatopoetic. The same commentary, however, adds that some say it is one of the "cold hells".

The term *ababa* in the sense of a high numeral is met with in the *Abhidhānappadīpikā* (475), where it means a *koṭi* to the power of eleven, i.e., ten to the power of eleven millions, this usage probably being derived from the fact that the word had been associated with a high figure with reference to the term of life in Ababa Niraya. See also COSMOLOGY, KOKĀLIKA.

B. J.

ABADDHA-PRALĀPA, frivolous talk (*sambhinna-pralāpa*). According to F. Edgerton this term has been used only once (*Mhvu.* I, 107, 15) instead of the better known *sambhinnapralāpa* (*BHS*). There it occurs as one of the ten *akuśala-karmapatha*, refraining from which a bodhisattva is firmly set on the road to enlightenment.

It is interesting to note that in Pali, which prefers the term *samphappalāpa*, *abaddha* is declared to be well known as 'incoherent' speech (*samudāyattharahitam abaddham iti kittitaṃ*: *Abhidhānappadīpikā*, sec. 126) and the compound *abaddhamukha* is used in the sense of 'foul-mouthed' or 'scurrilous' *mukkharo dummukhā-baddhamukho* (*cāppiyavādini*: sec. 735). See also KARMAPATHA.

ABADDHA-SĪMĀ, boundary (s.v. SĪMĀ) without marks especially staked out by the Saṅgha, but agreed upon in general, e.g., a hillside, a rock, a grove, for the purpose of one single ceremony (*uposatha*) of recital of Vinaya rules (*Vin.* I, 106).

ABAGARA VAHARA, a shrine in Ceylon (now in ruins), so named in an inscription of the third century. Earlier it had been known by the Sinhalese name Velgam Vehera (q.v.).

ABANDONMENT, CONTEMPLATION OF (*paṭinissaggānupassanā*). The term abandonment (*paṭinissagga*, *pahāna*) does not contain anything of what is usually implied in the concept of renunciation, viz., abnegation, self-denial, austerity and self-mortification. It is rather a rejection, a letting go (*nissajjana*), the opposite of hanging on to (*sajjana*). Thus the term *nissaggiya* is used in the Vinaya[1] for an unauthorised possession

by a monk, which ought to be abandoned. Such abandonment is an act of purification, like bathing, not based on methodical acquisition; it is based on the understanding of that which has to be relinquished. And so Buddhaghosa, quoting the *Paṭisambhidāmagga*, describes virtue as the abandoning (*pahāna*) of killing, of stealing, sexual misconduct, false speech, malicious words, harsh language, frivolous talk, of covetousness, of ill-will and of wrong views[2]. And again, abandoning is counted as virtue, through relinquishing (*nekkhamma*) in the case of lust, through non-ill-will (*abyāpāda*) in the case of hate, through the perception of light (*āloka-saññā*) in the case of physical and mental sluggishness (*thīnamiddha*), through attention (*avikkhepa*) in the case of agitation (*uddhacca*), through determination of mental states (*dhammavavatthāna*) in the case of perplexity (*vicikicchā*), through insight (*ñāṇa*) in the case of ignorance (*avijjā*), and through gladness of heart (*pāmujja*) in the case of discontent (*arati*)[2]. Even the abandonment of a lower state of mental absorption (*jhāna*) for the higher state is the virtue of abandoning.

The *Paṭisambhidāmagga*[3] describes in terms of abandoning 47 stages in the normal progress from ignorance to arahantship, through the abandoning of evil actions, of hindrances to contemplation, of gradual attainments in concentration, of successive stages of insight, and of steps on the path to sainthood. Although these 47 stages are induced, each in turn by abandoning the preceding one, there is one stage which requires further attention here under the heading of contemplation of abandonment (*paṭinissaggānupassanā*).

In the successive stages of insight (*vipassanā*, q.v.) by means of which both knowledge and vision are purified in respect of what is the path and what is not (*maggāmaggañāṇadassana-visuddhi*), there are eighteen principal ones (*mahā vipassanā*). In the seventh of these it is mentioned: "he who develops contemplation of abandonment, gives up craving" (*paṭinissaggānupassanaṃ bhāvento ādānaṃ pajahati*[4]). For, by the contemplation of abandonment the formations (*saṅkhārā*) of body, mind and volition are not grasped any more; it is their apprehension as permanent which is relinquished[5]. Further, it is this contemplation of the dissolubility of the formations (*khayānupassanā*) which leads to the abandoning of the perception or assumption of unity in continuity (*ghanassaññā*[6]), one of the main stumbling blocks on the road to insight and enlightenment.

This contemplation of abandonment is called the abandonment of giving up (*pariccāga-paṭinissagga*) and also abandonment of entering into (*pakkhandana-paṭinissagga*[7]), for, by substituting the opposites, it abandons karma formations (*khandhābhisaṅkhāra*) and mental defilements (*kilesa*, q.v.), and by seeing the shortcomings in whatever is conditioned (*saṅkhata-dosa-dassana*), it gives an inclination towards the unconditioned Nibbāna. It is also counted as a strength of insight (*paṭinissaggānupassanā vipassanābalaṃ*[8]), because, owing to the contemplation of abandonment, insight does not waver in the face of grasping. It is one of the contemplations which should occupy the mind and thereby deliver and liberate it, whilst the meditator is engaged in the exercise of mindfulness in breathing[9] (*paṭinissaggānupassī assasissāmi passasissāmī 'ti sikkhati*).

Though not in the same orderly classification of various types of contemplation as have been set out in later compilations and commentaries, the living in contemplation which regards all conditions and feelings dispassionately and as something to be renounced (*paṭinissaggānupassī viharanto*) is an ideal held up by the Buddha quite frequently. It is his answer to Mahā Moggallāna's question: "How does a monk become free by the destruction of craving?" (*taṇhā saṅkhaya vimutto*[10]). "The monk who abides viewing all senses, sense-objects, their contacts and resultant feelings, cravings, reflections, etc., as objects of abandonment, he is worthy of offerings . . . and becomes for others a field of merit, unsurpassed in this world"[11]. It is one of the models of contemplative thought, when the exercise of mindfulness on inhalation and exhalation (*ānāpānasati*) is mentioned[12].

On the other hand, it will not be possible for a monk to dwell in contemplation on abandonment (*abhabbo paṭinissaggānupassī viharituṃ*[13]), unless he has the eleven qualities which enable a cowherd to lead his herd and make it prosperous: he must know of any object that it is composed of the four great elements and derived therefrom; he must know that both the fool and the wise man are distinguished by their deeds; he must abandon all sensuous thinking before it develops into deeds, as the cowherd must remove the eggs of the flies; he must watch his senses, as the cowherd dresses the wounds of his herd; he should be able to expound the *dhamma* in detail to others; frequent the company of other monks of greater knowledge, as the herdsman takes his flock to the ford; and take delight in the proclamation of the *dhamma*; he should know the Noble Eightfold Path, and be skilled in resting his mind in the pastures of mindfulness and meditation; he should observe moderation in accepting gifts from his supporters, as a good cowherd does not milk his cows dry; and he should pay due respect to his seniors, the leaders of the congregation and the flock.

But the paramount importance of this contemplation of abandonment is shown by its inclusion in the advice given by the Buddha as to how a monk should meet his end, his appointed time (*kālaṃ āgameyya*), with mindfulness (*sato*) and self-composure (*sampajāno*[14]): any feeling, whether pleasant, painful or neutral, should be approached

with understanding that such feeling has arisen in dependence on his body which itself is impermanent, compounded and originated in dependence on certain conditions; hence such feeling too cannot be permanent. Contemplation of this impermanence should make the monk dwell on the transience (*vaya*) thereof, with disinterest (*virāga*), bent on cessation (*nirodha*) and abandonment (*paṭinissaggānupassī viharati*).

The prototype of this formula occurs in what is probably the earliest reference, the *Ānāpānasati Sutta* (*M.* III, 83) on the cultivation of mindfulness in breathing and the development thereof, in order to make it very fruitful and profitable [15].

Its importance is also evident from the frequent repetition of the formula in which it has become stereotyped. Throughout the *Ānāpāna Saṃyutta* [16] this contemplation of abandonment appears as the culminating thought with conscious awareness of the entire process of breathing (*paṭinissaggānupassī assasissāmīti sikkhati, paṭinissaggānupassī passasissāmīti sikkhati*). Thus it conduces to the abandoning of the fetters (*saṃyojana-pahāna*), to the loosening of evil tendencies (*anusayamugghāta*), to thorough knowledge of the way out (*addhāna-pariññā*) and to the utter destruction of mental intoxication (*āsavakkhaya*). [17]

H. G. A. v. Z.

ABAYATURĀ-MAHA-SĀ, a name for Abhayagiri Thūpa, an ancient shrine in Ceylon. See ABHAYAGIRI.

ABBHĀHATA SUTTA, a short sutta in verse form of four lines, occurring in the *Saṃyutta Nikāya* (I, p. 40). The name is derived from the opening question: "Through what is this world afflicted?", and the answer thereto in the third line: "The world is afflicted by death" (*maccunābbhāhato loko*), indicating the chief affliction of all existence. Then follow other afflictions: it is encompassed by decrepitude, affected by the (poisoned) dart of craving, saturated always with longing.

With a slight variation these verses recur in the *Theragāthā* (222) where they are uttered by Sirimaṇḍa who became an arahant during the recitation of the rules of discipline (*pātimokkha*).

ABBHĀNA, rehabilitation of a bhikkhu on completion of a probationary period, subsequent to an offence, s.v. DISCIPLINE (*Vinaya*).

ABBHAÑJANADĀYAKA THERA, a monk mentioned as an arahant, who in one of his previous lives during the dispensation of Buddha Koṇḍañña had prepared some ointment and made thereof an offering to him (*Ap.* I, 236). The result of this meritorious action was his rebirth as Cirappa fifteen aeons (world cycles) ago, when he became a king (*cakkavatti*).

ABBHANTARA, a linear measure which is defined as consisting of 28 *hattha* (cubits), each of which reaches "from the elbow as far as the tip of the nail" of the small finger (*Vin.A.* 654). The total length would be in the neighbourhood of 38 feet. The *abbhantara* is referred to (e.g., in *Vin.* III, 201), where a bhikkhu is not allowed to leave his robes in an unprotected, open place in the jungle, and be separated from them by a distance of more than one *abbhantara*. In doing so, his robes are liable to forfeiture (*nissaggiya*) and the monk has committed an offence to be expiated. (For comparative study, see MEASURES.)

The literal meaning of the word being "towards the inside" (*abhi-antara*), the term is frequently used in the general sense of interval, both in respect of time and of space.

ABBHANTARA JĀTAKA. Once when the Buddha was in Jetavana he overheard the monks relating how Sāriputta had comforted Bimbādevī, formerly princess Yasodharā, by obtaining sweetened mango juice for her. When she was indisposed one day, she had remarked to her son, Rāhula, how she formerly used to get over this feeling by drinking sweetened mango juice, and added: "But now that we live on alms, how could we procure this?". Later in the day Sāriputta noticed Rāhula looking sad and learnt from him the reason. On the next day Sāriputta went to Sāvatthi to the palace of the king of Kosala. At that moment a gardener brought a basket of fully ripe sweet mangoes, which the king peeled with his own hands, squeezed for the juice, added some sugar and offered to Sāriputta. Sāriputta took the juice to Bimbādevī and when she drank it her pain subsided. From that day the king supplied mango juice regularly to Bimbādevī.

The Buddha remarked that this was not the first time she had been comforted by Sāriputta with mangoes. He then related the story of how Sakka in a spiteful mood, disturbed by the virtue of a group of ascetics living in a park near Bārāṇasī, made all the mangoes in the park disappear, as though they had been eaten by the ascetics. Then Sakka stimulated in the queen a desire for a "midmost mango" (*abbhantara-amba*), which, although she did not know what it was, was sure to result in her giving birth to a male child. As no mangoes were to be found in the park, the king made his people give the ascetics a thorough beating and drive them out of the park. Thus Sakka's wish was fulfilled. But still the queen did not receive her "midmost mango".

A brāhman gave some fanciful explanation which he had heard from immemorial tradition according to which "midmost mangoes" grew in the Golden Cave in the Himalayas, where no human being could go, as it was in the "gods' portion". The tree was fully encircled with seven iron nets and guarded by thousands of goblins.

But the king had a strong and clever parrot who after many adventures obtained one fruit from a hermit in the Himalayas to whom king Vessavaṇa used to send four mangoes daily. The parrot flew back and gave the mango to the queen of Bārāṇasī

15 *M.* III, p. 83, sutta 118.
16 *S.* V, x, pp. 311–341.
17 *S.* V, x, suttas 17–20.

who satisfied her craving, but all the same did not get a son.

No further reference is made to Sakka and his ruse. But the cast of the story is identified as follows: Rāhula's mother was the queen of Bārāṇasī at that time; Ānanda was the clever parrot; Sāriputta was the hermit in the Himalayas; and the Buddha was then the leader of the ascetics living in the park at Bārāṇasī (*J.* No. 281).

ABBHANTARA-SĪMĀ, the ninth of fifteen types of boundaries (s. v. SĪMĀ) and enclosures for ecclesiastical acts, as enumerated by Buddhaghosa (*Vin A.* 1136).

ABBHANTARA VAGGA, the fourth division of the third book (*tika-nipāta*) of the *Jātakaṭṭhakathā* comprising ten Jātaka stories (Nos. 281-290). It has derived its name from the first of these ten, called the Abbhantara Jātaka (the story of the Middle Mango).

ABBHASA is the common name of thirty-five kings who lived eleven world cycles ago, sometimes also called Ambaraṃsa. All of them were links in the chain of existence which culminated in this Buddha age at Sāvatthi in the brāhman's son, named Nīta, who, seeing the care-free life of the Buddhist monks, became a member of the Saṅgha himself. Spending his time in idle talk, eating and sleeping, he paid little or no attention to his monastic duties, till he was admonished by the Buddha himself. Concentrating his mind he developed insight, and attained arahantship not long thereafter. His verses are recorded (*Thag.* 84).

ABBHA SUTTA occurs in *Valāha-Saṃyutta* (*S.* III, 256). The Buddha when questioned as to why sometimes thunder clouds appear, explains that there are devas called Abbhavalāhakā (q.v.).

Thunder clouds appear when, in accordance with their wish, they desire to revel in the delight of their bodies (*sakāya ratiyā rameyyāmāti*: literally, revel in their own company, their own bodies or in embodied delight, *Kindred Sayings*, III, p. 201. Another interpretation is "wish to give joy to their bodies": *DPPN.* I, 125).

In the commentary Buddhaghosa adds that this would refer to a really great thunder cloud "that lasts for seven weeks darkening the entire place, concealing the sun and the moon", or to those rain clouds appearing out of season (*SA.* II, 351).

ABBHAVALĀHAKĀ, a group of celestial beings belonging to the Valāhakakāyika (cloud-embodied) class of gods, according to a statement attributed to the Buddha in the *Saṃyutta Nikāya* (III, 254). While discussing the four groups of gods which belong to this class, the Buddha mentions the Abbhavalāhaka group third in order. They are distinct from the other cloud gods by their association with thunder or cumulus cloud. See also ABBHA SUTTA, VALĀHAKA-KĀYIKA-DEVĀ and COSMOLOGY.

ABBHOKĀSA (Skt. *abhyavakāśa*) means "the open air, an open space". The word is often used purely in this sense, with no religious implications, e.g., *Tena kho pana samayena āyasmā Mahāmoggallāno abbhokāse caṅkamati* (At that time Mahāmoggallāna was walking in the open: *M.* I, 332), or *Tena khalu samayenāyuṣmānando bahirvihārasyābhyavakāśe caṅkrame caṅkramyate* (At that time Ānanda was walking in the open space outside the monastery: *Avś.* I, 228).

But it acquired a special significance when it was used in the famous and frequently quoted metaphor, *sambādho gharāvāso rajāpatho abbhokāso pabbajjā* (*D.* I, 63; *M.* I, 179, &c.). Here, the homeless life is said to be as free and unhindered as the open space in contrast to the household life, full of cares and like a dusty road. This expression is put into the mouth of the person on the threshold of renunciation.

The Sanskrit parallel is also found: *sambādho punarayaṃ gṛhavāso rajasāmāvāso abhyavakāśaṃ pravrajyā* (*Mhvu.* III, 50; also II, 117).

The commentaries elucidate this metaphor and give reasons for the comparison of the life of a recluse, with open space. This explanation in identical words is contained in several commentaries. The life of a monk is like the open air in that it is not attached to anything. Even if a recluse were to live in a gabled house, a jewelled palace or a divine mansion with doors and windows closed, he would not be distracted or hindered by them. Again, as opposed to the encumbrances of the life of a householder, the ascetic life is as free as the open air because of the abundance of opportunity to do good (*DA.* I, 180; *MA.* II, 204, &c.). Like the open air it is also clear from all obstruction. Even if two bhikkhus were to be seated in a cell made of the four kinds of precious things, to them these would mean nothing, there would be no hindrance because of them.

Of greater religious significance is when *abbhokāsa* figures even in the earliest Buddhist literature as one of the places suitable for meditation. A bhikkhu in pursuit of meditation goes in search of a secluded lodging (*vivittaṃ senāsanaṃ*) and the fitting places mentioned are *araññaṃ, rukkhamūlaṃ, pabbataṃ, kandaraṃ, giriguhaṃ, susānaṃ, vanapatthaṃ, abbhokāsaṃ, palālapuñjaṃ* (a forest, the foot of a tree, a mountain slope, a wilderness, a mountain cave, a cemetery, a forest haunt, the open space, a heap of straw: *D.* I, 71; *M.* I, 181; *A.* II, 210, &c.).

Even apart from this context *abbhokāsa* is recommended along with other places, like the foot of a tree, as an appropriate haunt for a bhikkhu. Instances are found in both Pali and Sanskrit literature (*SA.* I, 28; *Laṅk.* I, 308).

The variant form *ajjhokāsa* (from *adhi* + *okāsa*) which has the same meaning is also met with, often in the locative *ajjhokāse* (*S.* I, 212; *Vin.* I, 15) and sometimes in other case endings (*ajjhokāso*: *Vin.* III, 200; IV, 270; *ajjhokāsā*: *Vin.* II, 146; *ajjhokāsagato*: *S.* II, 230).

The *Abbhokāsa Sutta* gives the reasons for becoming an *abbhokāsika*—"One is an open-air

lodger just because his wants are little, for contentment, to mark (his own faults), for seclusion . . . . " (*A.* III, 220).

But, living in the open air alone does not make one a recluse. He should possess the other factors of a bhikkhu, too (*M.* I, 282).

The culmination is reached when the term is used in connection with the tenth of the thirteen *dhutaṅgas* (austere practices) known as the *abbhokāsikaṅga*.

The benefits of living in the open air are enumerated in the *Visuddhimagga*: "the impediment of dwellings is severed; stiffness and torpor are expelled; his conduct deserves the praise 'Like deer the bhikkhus live unattached and homeless' (*S.* I, 199); he is detached; he is (free to go in) any direction; he lives in conformity with (the principles of) fewness of wishes, and so on." (*Vism.* p. 61).

The practice of living in the open air was not confined to Buddhism. Along with some of the other austere practices followed by bhikkhus, open air dwelling was also practised by non-Buddhist ascetics, which is inferred from the stock passage containing popular non-Buddhist ascetic practices (*D.* I, 166 f).

LAKSHMI R. GOONESEKERE.

ABBHOKĀSA SUTTA occurs as the fifth sutta in the *Araññа Vagga* of the Book of Fives (*pañcaka nipāta*) of the *Aṅguttara Nikāya* (III, v, sutta 185).

The ten suttas of this Vagga are all identical in their description of five types of people who have adopted one or other of the thirteen ascetic practices (*dhutaṅga* q.v.). They differ in their selection of an individual ascetic practice, such as living in the open air (*abbhokāsa*), in the sutta under review. The five types are guided to such practices through folly and blindness (*mandattā momūhattā*), through evil desires (*pāpiccho icchāpakato*), in foolishness and perplexity (*ummādā cittakkhepā*), by the thought that such a life is praised by the Buddha and his disciples (*vaṇṇitaṃ buddhehi buddhasāvakehi*), or just because one has but few wants, is easily contented, inclined to self-purification, to a secluded life and because one thinks that this is the best (*appicchataṃ—santuṭṭhiṃ—sallekhaṃ—pavivekaṃ—idaṃ aṭṭhitaṃ*). This last type is said to be the highest and the best.

ABBHOKĀSIKAṄGA, one of the thirteen ascetic practices (*dhutaṅga*). It consists of dwelling in the open air, refusing not only the protection of a roof but even that offered at the foot of a tree. The strict observance of this rule would not allow one to live near a house, or a rock or a tree, but a tent made out of robes would be permissible. Lesser degrees of observance of this rule admit a certain amount of relaxation, such as a hut made of branches, cloth stiffened with paste, or an overhanging rock, as long as no drip-ledge has been cut therein (*Vism.* ii, §§ 60-63).

The spiritual benefits of such austerity are obvious: the monk is free from the impediment of a dwelling; he is free to go in any direction he chooses; concentration will be easier under the starry sky; he will be less inclined towards laziness; the joys of detachment and seclusion are his.

For this and other ascetic practices, see ASCETICISM, DHUTAṄGA.

ABBHUTADHAMMĀ, mysterious or supernormal phenomena, the recital of which seems to have formed one of the nine divisions of the Buddhist sacred texts (*navaṅga-satthu-sāsana*, q.v.) when classified according to their form or style.

The majority of these divisions is easily recognisable in the standard names of books of the *Tipiṭaka*, as known to us. As regards the *abbhutadhammā*, we are told by the commentator (*DhsA.* p. 33, Introductory Discourse): "all suttantas connected with wonderful and marvellous things spoken, should be understood as *abbhuta*." Hence the wonderful things manifested at the time of the conception or birth of a Buddha-to-be, at the time of his enlightenment and of the Buddha's first sermon, the marvellous experiences of people hearing the preaching of the Buddha, or at the sight of a universal monarch, or at meeting and hearing Ānanda should also be reckoned as belonging to the *Abbhutadhammā*. See AṄGA.

ABBHUTADHAMMA SUTTA. See ACCHARIYA ABBHUTA-DHAMMA SUTTA.

ABBHUTA SUTTA. This discourse (*S.* IV, xliii 31: 20) and many others, besides, are a repetition of the *Asaṅkhata Sutta* (12: 1). The subject they all discuss is the Absolute. As their titles show it has been named variously, with the result that there is a multiplicity of discourses differing in name but identical in form and content. The only point of difference between the *Asaṅkhata Sutta* and this discourse is that the words 'Absolute' (*asaṅkhata*) and 'way of attaining the Absolute' (*asaṅkhatagāmimagga*), which are contained in the former, are here substituted by the words 'Wondrous' (*abbhuta*), and 'way of attaining the Wondrous' (*abbhutagāmimagga*).

ABBOT. Although there is no equivalent title in ancient Buddhism, and the Buddha himself refused to appoint a leader of the Order of monks (*D.* II, p. 100), yet Buddhist monastic institutions have developed a kind of hierarchy, not unlike the one found in Christian monasteries. Hence the word Abbot is nowadays freely used in Western countries, and also in the Far East where the influence of the West has been felt more keenly than in countries like India and Ceylon, to denote the spiritual leader of a group of monks. The head of a group of Buddhist monasteries in Ceylon is usually referred to as *Nāyaka* (leader), and the chief of a sect (Nikāya) is called the *Mahā-Nāyaka* (chief leader). The spiritual head of the Shinshū Sect in Japan is called *Hossu*, meaning Lord of the Dhamma, while the superior in charge of a single establishment is referred to as *Kanchō* (chief) in the Shinshū, Jōdoshu and other sects. See also SAṄGHA.

ABBUDA, name of a king who lived very long ago and who in a subsequent life became known as Niggunṭhipupphiya thera. He is mentioned in the *Therāpadāna* (No. 327 *v.* 24 ; *Ap.* I, p. 263).

ABBUDA NIRAYA, one of the subdivisions in the system of hells found in Buddhist cosmology. The name occurs in a passage common to the *Saṃyutta* (I, 150) and *Aṅguttara Nikāyas* (V, 173) and the *Sutta-nipāta* (iii, 10), having, but for slight variations in detail, the same style, subject-matter and contextual reference, namely the death and rebirth of the Kokālika bhikkhu.

The passage claims to present a statement of the Buddha regarding the length of life in Abbuda Niraya and the other hells in this group. Abbuda being the one in which duration of life is the lowest, the Buddha, in answer to an earthly questioner, draws a comparison in earthly terms : " Suppose there were a load of twenty *khārīs*[1] as we reckon them here in Kosala, of sesamum seed. And suppose at the end of every century a man were to take out one seed a time. Sooner would that same load be used up than a term in the Abbuda Purgatory." (*S.* i, 150 ; trsl. *Kindred Sayings*, I, 190). Abbuda is then employed as the unit for calculating the duration of life in the next hell mentioned, i.e., Nirabbuda, where life is twenty times as long as in Abbuda.

The *Sutta-nipāta* commentarial observation (ii, 477) that Ababa Niraya (q.v.) is not a particular hell but a period of time spent in Avīci, applies also to Abbuda, as it does to the other Nirayas in this system. The *Udāna* commentary (140) mentions it as a cold hell (*sītanaraka*).

The word *abbuda* (Skt. *arbuda*) is used in the sense of excrescence, as in the *Saṃyutta Nikāya* (I, 206), also metaphorically to mean 'stain' or 'scandal' (*Vin.* III, 18) and to signify a very high numeral (*Abhidhānappadīpikā*, 475), viz., 10 millions, raised to the eighth power. See further COSMOLOGY, KOKĀLIKA.

B. J.

ABEGG, Professor Emil, of Zürich University, author of *Der Pretakalpa des Garuḍa-Purāṇa* (Berlin, 1921), *Der Messiasglaube in Indien und Iran* (Berlin, 1928), *Die Indiensammlung der Universität Zürich* (Zürich, 1935), *Die Berner Tafeln zur Krishna-Legende* (Berne, 1935), *Krishnas Geburt und das Indische Weihnachtsfest* (Zürich, 1938), *Indische Psychologie* (Zürich, 1945).

He is quoted by M. Winternitz in *A History of Indian Literature* (II, pp. 273 and 289), with reference to the future life of Maitreya, and translations in German from the Sanskrit *Maitreyavyākaraṇa* and *Maitreyasamiti* ; and with further reference to the *Divyāvadāna*, relating the advent of the future Buddha Maitreya, combined with the legend of king Praṇāda (*Die Messiasglaube in Indien und Iran*, pp. 132 ff. and 153 ff. respectively).

In his *Indische Psychologie* Abegg devotes several pages to Buddhism (ch. V, pp. 107–121). He takes the doctrine of dependent origination (*pratītyasamutpāda*) as the psychological basis in the arising of human personality, and compares the twelve links thereof with the four mental factors of *vedanā*, *saṃjñā*, *saṃskāra* and *vijñāna*. These are shown correctly as impermanent (*anitya*) and subject to constant change. Without an abiding substance, the concept of a soul is denied (*anātma-vāda*). The heresy of individuality-belief is compared with the *Ahaṃkāra* of Sāṅkhya philosophy. A doubt arising from the doctrine of soullessness in respect of moral responsibility is overcome by the teaching of karma.

Frequent resort is made to the *Milindapañha* a post-canonical work, which, however, is greatly esteemed in Theravāda Buddhism. Comparisons are drawn with the Nyāya philosophy, especially in respect of the function of memory in dreams.

Thus Buddhism is presented as a psychology with a purpose of religious salvation, originating from a metaphysics already found in the Upanishads. Abegg has expounded in *Der Messiasglaube in Indien und Iran auf Grund der Quellen dargerstelt* (Berlin and Leipzig : Walter de Gruyter and Co., 1928) the Hindu notions concerning Kalki, the Buddhist conception of Maitreya and the Zoroastrian doctrines concerning the return of the founder of that religion (*JRAS.* 1932, pp. 447 ff.). The Buddhist doctrine is treated (pp. 145–202), and his main sources for this section are the Pali *Cakkavattisīhanāda Sutta* (*D.* III, 58–79), the *Anāgatavaṃsa*, the *Divyāvadāna*, and a number of Maitreya texts existing in Tibetan and Chinese versions, all previously brought together and examined by Leumann in connection with his edition of the Saka-Khotanī *Maitreya-samiti*. Abegg finds little evidence of interchange of ideas among the three religions. Only in some traits of the Buddhist Maitreya, his emanations of light and his supernatural power of vision, is he willing to recognise a borrowing from Zoroastrianism ; he thinks that in central Asia the Mahāyāna Buddhism may have beeen affected not only by the Parsi religion but by Manichaeism, Gnosticism and Nestorian Christianity.

H. G. A. v. Z.

ABERRATIOI (*vipatti*). This technical term is found in various meanings and contexts, but could roughly be classified under two headings, as deviation from morality (*sīla*) and deviation from understanding (*diṭṭhi*).

As a failure of morality (*ācāra-vipatti*) it is frequently mentioned in the *Vin.* (I, 171 ; II, 28 ; IV, 7 ; etc.). Such a lapse in good conduct, however, may also form an object of thought, and " it is well for a monk to review from time to time his own faults " (*sādhu kālena kālaṃ attavipattiṃ paccavekkhitā hoti: A.* IV, 160). The fault of another (*paravipatti*) too can become useful food for thought, as long as this does not become faultfinding. For, faultfinding is one of the seven items which are considered aberrations (*satta vipattiyo* : *A.* IV, 26),

1 According to the *Saṃyutta* commentary twenty *khārīs* equal a cartload of *tila*-seeds of the Magadha kind. The Kosala measure was four times the Magadha measure.

the other six items being: failure to keep contact with the monks, neglect to listen to the true dhamma, no training for higher virtue, little trust in elders, seeking for worth outside the Order and serving first outside the Order. The opposites are profitable attainments (*sampatti*).

As a deviation from understanding (*diṭṭhi-vipatti*) it becomes synonymous with heresy (*Nett.* 126). Both aberrations will go frequently together, for a deviation from right views will usually lead to a moral lapse; and vice versa (*sīlavipattiyā codeti, atho ācāradiṭṭhiyā*: *Vin.* V, 159). As a pair of aberrations (*sīlavipatti ca diṭṭhivipatti ca*) they are opposed by the pair of attainment of virtue and right understanding (*sīlasampadā ca diṭṭhisampadā ca* : *A.* I, ii, suttas 11 and 12).

In a group of three, we find the aberrations as failures in action (*kammanta-vipatti*) which are identical with the deviations from morality (*sīla-vipatti*) or the transgressions of the moral code, which comprise the taking of life, stealing, sensuous misbehaviour, lying, slander, harsh language and idle talk; failures in living (*ājīva-vipatti*) by obtaining a livelihood in a wrong way; and the aberrations of perverse views (*diṭṭhi-vipatti*), which include the views that there is no use in making offerings, that neither good nor evil deeds produce any result, that there is no world either here or beyond, that no recluse or brāhman has attained perfection or realisation through his own intuition, etc. (*A.* I, 270). In an earlier sutta we find mentioned a group of three aberrations, in which, however, the failure in obtaining a right livelihood (*ājīvavipatti*) is exchanged for mental aberration (*citta-vipatti*) or a warped mind, which is explained as a mind full of covetousness and malevolence (*abhijjhālu hoti vyāpannacitto hoti* : *A.* I, 268). Their opposites are reckoned as successes or attainments (*sampadā*) in the absence of these aberrations.

H. G. A. v. Z.

ĀBHĀ. I. **Meaning of the word.** *Ābhā* (light) has equivalents in Sanskrit, e.g., *prabhā* (splendour) and *raśmi* (radiance). It is the light emanating from the body of Buddhas and bodhisattvas and is translated into Chinese as kwang-ming (光明), sometimes simply kwang (光), both of which mean brightness or light. This meaning, found in the *Sukhāvatīvyūha* (Nanjio, 27), is described as follows: " The mighty light of Amitābha Buddha is the most deserving of respect in the world "; in chap. 1 of the *Saddharmapuṇḍarīka Sūtra* (Nanjio, 134): " The Tathāgata emanates light from his *ūrṇā-keśa*[1] which shines on the 18,000 Buddha Lands in the eastern world. "

II. **Kinds of Ābhā.** There are two kinds of light. One is ch'ang-kwang (常光 or *nityābhā*, permanent light), and the other is shên-t'ung-kwang (神通光 or *abhijñābhā*, transcendental light).

(1) *Ch'ang-kwang* (*nityābhā*), also called yuan-kwang (圓光 or *kavākārābhā*, round light), is light which emanates continuously. It is explained in chap. 3 of the *Buddhadhyāna-samādhisāgara Sūtra* (Nanjio, 430) as follows: " This light is called round light. It surrounds the neck of the Buddha. It spreads to a fathom on all sides. "

In the second chapter of " the Sūtra of the Highest Reliance " (Nanjio, 259, Wu-shang-i-ching 無上依經) it is said, " Owing to his Karma, the Tathāgata's body is of golden hue, and his light shines out to a distance of 10 feet. " In chap. 8 of the *Mahāprajñāpāramitopadeśa* (Nanjio, 1169) it is said that Buddhas and bodhisattvas have lights which spread to a length of ten feet all round their bodies. When bodhisattvas are born they all have this light. It is one of the 32 major marks of a great being, named Chang-kwang-hsiang (丈光相 'characteristic of ten-foot light ').

These are all explanations concerning the quality of the light of the Buddha (Ābhā). But these marks can be seen only in respect of the Buddha's *Nirmāṇa-kāya*. As regards the light in respect of his *Sambhoga-kāya*, its quantity cannot be measured. This is also confirmed in chap. 1 of tho *Wang-shêng-lun-chu* (往生論註). Chap. 3 of *Hsüan-tsê-chuan-hung-chuëh-i-chao* (選擇傳弘決疑鈔) states that the 84,000 rays of Amitābha's light are not an *abhijñābhā* but a *nityābhā* because these rays are the result of his original vow.

(2) *Shen-tung-kwang* (*abhijñābhā*), sometimes called hsien-c'hi-kwang (現起光) or fang-kwang (放光), meaning arising light and spreading light respectively. Chap. 7 of the *Mahāprajñāpāramitā-śāstra* (Nanjio, 1169) says: " Sometimes the Buddhas spread the light in order to manifest their transcendental power (*abhijñā*). What is ' sometimes ' ? It means when the Buddha was born, when he won enlightenment, when he preached for the first time, when many gods and saints assembled to hear him and when he confuted the heretics ".

It is said that this light emanates not only from the Buddhas and bodhisattvas but also from minor gods. But the quantity and the benefit of the light vary.

Chap. 7 of the *Mahāprajñāpāramitā-śāstra* says, " The transcendental light is of three kinds, i.e., lower, middle and upper. The light emanated through magic and sorcery is the ' lower one '. The light of many gods and serpents (*nāgas*) is the ' middle one '. The light gained through the merit of practice is the ' upper one '. And further, many gods can emanate the light, but its quantity is limited. The sun and moon can shine on this world only. The light of the Buddhas pervades the 3,000 greater worlds and spreads down to the lower world. The light of the gods makes mortals rejoice, while that of the Buddhas can lead every-one to emancipation ".

III. **Transformation of the light.** The light of the Buddha sometimes transforms itself and can

1 Strand of hair turned clock-wise and situated between the eye-brows. This is mentioned as the last of the thirty-two major marks of a great being (mahāpuruṣa). It is translated into Chinese as pai-hao-hsiang (白毫相) or the ' mark of the brilliant white hair '.

lead men to emancipation. The first chapter of the *Pañcaviṃśati-sāhasrikā-prajñāpāramitā* (Nanjio, 2) says : " A thousand lights are emanated from the tongue of the Buddha. Each such light transforms itself into a thousand leaves of the treasure-flower, whose light is gold. On each leaf is seated a Buddha, who preaches the teaching of the six pāramitās, thus awakening in every one the faith for perfect enlightenment ". *Buddhabhāṣitāmitāyurbuddha-dhyāna Sūtra* (Nanjio, 198), says : " Each ' jewel ' (*maṇi*) has 84,000 rays of light. Each light makes 84,000 varieties of gold and each variety of gold transforms itself, manifesting a multitude of things, such as a stand of diamond (*vajra*), a net of pearls, or a cloud of flowers ". As mentioned above, it manifests itself in many directions, and serves the cause of the Buddha. In the first chapter of the *Sukhāvatīvyūha* we are told : " If a sentient being comes within this light, all defilement will instantaneously disappear and his will and body become soft and comfortable. In his mind wholesome thoughts will arise. If sentient beings come within this light in one of the hells, there suffering will cease so that they will be able to rest, and become emancipated at the end of their period in hell ".

Many examples of the service and benefits of *ābhā* are found in other sūtras.

IV. **Kinds of light based on the Buddha's body and mind.** In the transcendental light, according to the angle at which the light emanates, there are several kinds of *ābhā*. The light that emanates from the whole body of the Buddha is called the light of the whole body (chü-shen-kwang 擧身光). The light from one aspect of the Buddha (*Buddhatā*) is called the light of the one character (sui-i-hsiang-kwang 隨一相光). The light from the ūrṇā-keṣa is called the light of ūrṇā-keṣa (pai-hao-kwang 白毫光 or hao-kwang 毫光 or sometimes mei-chien-kwang 眉間光 or the light of the born). The light from the pores of the skin is called the light of the pores (mao-kêng-kwang 毛孔光). The round light from the head is called the light of the head (t'ou-kwang 頭光). The light behind the Buddha is called the light of the back (hou-kwang 後光).

Light that emanates from the body of the Buddhas and bodhisattvas is generally called the light of the body (shen-kwang 身光) or the light of the rūpa (sê-kwang 色光) or sometimes the external light (wai-kwang 外光). Conversely, the insight of wisdom is called the light of wisdom (chih-hui-kwang 智慧光 or chih-kwang 智光) or the internal light (nei-kwang 内光).

This is explained in many sūtras. Thus, chap. 47 of the *Mahāprajñāpāramitā-śāstra* says, " There are two kinds of light. One is the light of the body (sê-kwang 色光), the other is the light of wisdom (chih-hui-kwang 智慧光) ".

In chap. 3 of Fa-tsang's (法藏) commentary on the *Gaṇḍavyūha Sūtra* (Hui-yen-ching-t'an-hsüan-chi 華嚴經探玄記) it is explained more in detail thus : " There are two kinds of light, one is the light of the body (shen-kwang 身光) the other the light of wisdom (chih-kwang 智光), which in each case divides further into two. Through the latter, which is the light of wisdom, there shines forth the dharma, i.e., Truth, both sacred, and secular. On the other hand, when the former, i.e., the light of the body, issues forth and falls upon sentient beings they become emancipated each according to his individual capacity. Similarly, the light of the body is also of two kinds. One is the eternal light (yuan-kwang 圓光) which is eternal and round. The other is the spreading light (fang-kwang 放光), which astonishes man. "

The second chapter of the *A-mi-t'o-ching-t'ung-tsang-shu* (阿彌陀佛通贊疏), commentary on the *Sukhāvatīvyūha*, says : " There are two kinds of light. First the inner light (nei-kwang 内光) which shines within, as wisdom. Secondly, outer light (wai-kwang 外光) which illuminates the body, so that it is also called shen-kwang (身光) or the light of the body.

Sometimes, the light of wisdom is called the light of the mind (*citta*, hsin-kwang 心光) as against the light of the *rūpa*. In *Kwan-nien-fa-men* (觀念法門 or the doctrine on *smṛti*), it is explained as follows : " The light of the body shines all over the world. The light of the mind of Amitābha Buddha shines only on sentient beings who pray to Amitābha Buddha ". In the third chapter of *Hsüan-tsê-chuan-hung-chüeh-i-ch'ao* (選擇傳弘決疑鈔) there is the further explanation : " It is named the light of the mind, because this light emanates from the mind of the Buddha. It is also called the light of wisdom ".

Chap. 11 of the *Yogācārabhūmi* (Nanjio, 1170) states : " There are three kinds of light, namely, the light which shines through darkness, the light of truth, and the light of the body. There are three kinds in regard to the light which shines forth through darkness. One is the light of night, i.e., the stars and the moon. The second is the light of day, i.e., the sun. The third is common light, such as fire. The light of truth is another name for wisdom by which one observes the world. The light of the body means the natural light which emanates from the body of sentient beings ".

V. **Other kinds of light.** In the first chapter of the *Sukhāvatīvyūha* (Nanjio, 27), there are mentioned 12 names of the Ābhā of Amitābha Buddha. Further the 30th chapter of the *Ratnakūṭa* (or *Sumati-dārikā-paripṛcchā*, Nanjio, 23) enumerates 41 kinds of light as regards Śākyamuni. In *Tsan-a-mi-t'o-fo-ch'i* (讚阿彌陀佛偈), the stotra for Amitābha Buddha, mention is made of a number of lights, as follows : the wheel of light (kwang-lin 光輪), the light of dawn (kwang-hsiao 光曉), sensorily perceptible light (kwang-ch'u 光觸), cloud of light (kwang-yun 光雲), glitter of light (kwang-tsê 光澤), radiance of light (kwang-chao 光照), power of light (kwang-li 光力), merciful light (ts'u-kwang 慈光), sympathetic light (fei-kwang 悲光), divine light (shen-kwang 神光), fierce light (wei-kwang 威光), great light (ta-kwang 大光), golden light (chin-kwang 金光), unthinkable light (pu-kê-ssu-i-kwang 不可思議光), and many more besides.

In the earlier books of the canon not so many kinds of *ābhā* are mentioned. The *Aṅguttara Nikāya*, for example, enumerates only four *ābhā*

II, p. 129, No. 141) : the light of the moon, of the sun, of fire and of wisdom, of which the light of wisdom is the best.

SHŪYŪ KANAOKA.

ABHABBA SUTTA (1). Like many other discourses, this is a double sutta dealing with its subject in two ways, the negative and the positive aspect. Much repetition is thereby introduced. The sutta occurs in the *Aṅguttara Nikāya*, in the Book of Tens (*A*. V, 146). Without any introduction as to place or occasion, the Buddha tells his monks that even the Buddha and his teaching are subject to dependent origination. For, " if there were not found in this world the phenomena of birth, decay and death, there would have been no occasion for a Tathāgata, a supremely enlightened Buddha, to arise, or to proclaim his teaching of truth and discipline (*dhamma-vinaya*) ".

However, it should not be thought that one is not capable (*abhabba*) of outgrowing those conditions. But without abandoning certain states one would not be able to overcome birth, decay and death. And these states are now collected in groups of three, each group depending for its continuation or cessation on the continuation or cessation of the preceding group. Thus the logical sequence in groups is as follows : shameless (*ahirika*), reckless (*anottappa*) and negligent (*pamatta*) ; disregard (*anādariya*), stubbornness (*dovacassatā*) and association with evil (*pāpamittatā*) ; disbelief (*assaddhiya*), stinginess (*avadaññutā*) and indolence (*kosajja*) ; flurry (*uddhacca*), lack of self-control (*asaṃvara*) and immorality (*dussīlya*) ; distaste for seeing people of noble character (*ariyānaṃ adassanakamyatā*), dislike for listening to noble teaching (*ariyadhammaṃ asotukamyatā*) and a faultfinding disposition (*upārambhacittatā*) ; forgetfulness (*muṭṭhasacca*), lack of intelligence (*asampajañña*) and mental derangement (*cetaso vikkhepa*) ; lack of thorough attention (*ayonisomanasikāra*), following the wrong path (*kummaggasevana*) and sluggishness of mind (*cetaso līnatta*) ; the wrong view of individuality (*sakkāyadiṭṭhi*), perplexity (*vicikicchā*) and attachment to ritualism (*sīlabbataparāmāsa*) ; lust (*rāga*), hate (*dosa*) and delusion (*moha*).

Then the sutta reverses the process, showing that by abandoning lust, hate and delusion one is capable (*bhabba*) of attaining to the destruction of birth (*jāti*), decay (*jarā*) and death (*maraṇa*), repeating the same order in full.

The commentary says nothing by way of explanation.

H. G. A. v. Z.

ABHABBA SUTTA (2) enumerates ten conditions which prevent one from the realisation of arahantship : lust (*rāga*), hate (*dosa*), delusion (*moha*), anger (*kodha*), enmity (*upanāha*), hypocrisy (*makkha*), spite (*palāsa*), envy (*issā*), stinginess (*macchariya*) and pride (*māna*). But the abandoning of these evil qualities makes the realisation of arahantship possible.

This sutta occurs in the *Upāsaka Vagga* of the *Dasaka Nipāta* (*A*. V, 100).

ABHABBAṬṬHĀNA. The word as such does not occur in the texts of the *Tipiṭaka* but is confined to the commentaries[1] where it denotes a number of unprofitable states or conditions of existence into which a bodhisatta aspiring for complete enlightenment shall not fall, by reason of the resourcefulness of his initial aspiration (*samiddhābhinīhāra*).

Thus, a bodhisatta shall not be born (1) blind, (2) deaf, (3) mentally deficient, (4) dumb, (5) crippled (*pīṭhasappī*), (6) amongst uncivilised tribes (*milakkhesu*), (7) in the womb of a slave woman, (8) as a permanent follower of a heresy, (9) liable to a change of sex (*nāssa liṅgaṃ parivattati*), (10) a perpetrator of any of the five heinous crimes that result in retribution no sooner than the offender dies (*ānantariya-kammāni*), (11) a leper (*kuṭṭhī*), (12) an animal smaller than a quail or larger than an elephant (*vaṭṭakato pacchimattabhāvo,... hatthito adhikattabhāvo*), (13) amongst the petas of the class called the Hungry and Thirsty (*khuppipāsikā*) or of Consuming Thirst (*nijjhāmataṇhikā*), (14) among the Kālakañjaka Asuras, (15) in the purgatory called Avīci, (16) in the hells called Lokantarika, (17) as Māra (the suzerain of the sensual realms), (18) in the non-perceptual world (*asaññībhava*) of the realms of form (*rūpabhava*), (19) in the pure abodes (*suddhāvāsabhava*), (20) in the formless realms (*arūpabhava*), (21) or in another world system.

But the commentaries, where this list is given in full, have reckoned the number of these states as eighteen (*aṭṭhārasa*) without stating exactly how this has been computed.

The apparent anomaly of eighteen becoming twenty-one could, however, be explained if the first four of the items comprising this list are considered collectively. Such a conclusion is supported also by the authority of the *Abhidhammatthasaṅgaha* and its commentary, the *Abhidhammatthavibhāvanīṭikā*. The former refers to the case ' of persons born blind and such like ' (*jaccandhādīnaṃ*) whose rebirth consciousness must necessarily be an *ahetuka-kusala-vipāka-citta*[2]. The commentary explains the phrase *jaccandhādīnaṃ* as possibly

1 *SnA*. II, 1, p. 50 ; *ApA*. p. 141.
2 *Abhs*. p. 22.

including not only those born blind, but those who are deaf, dumb, garrulous and mad from birth, as well as eunuchs, hermaphrodites and a-sexual persons[3]. On the basis of this explanation the first four items of the list could very well be grouped together and counted as one, so that along with the others this would make a total of eighteen.

Many of these "unprofitable states" also feature in the *Nidānakathā* of the *Jātaka* commentary as immunities enjoyed by a resourceful bodhisatta[4]. But although these are severally referred to, nowhere is the word *abhabbaṭṭhāna* used to denote any or all of them whether particularly or collectively.

A comparison of the list contained in a versified form in the *Nidānakathā* with that mentioned earlier clearly indicates that they were inspired by different traditions. The *Nidānakathā* list contains fewer items than the other. Even with regard to the terminology of such items as are found common to both, there is no identity. This, however, may be explained as being due to the exigencies of metrical form. But, there are other discrepancies which lead to the conclusion that the *Nidānakathā* list represents an earlier tradition. For instance, whereas the *Nidānakathā* list inspired by the *Jātaka* tradition refers only to "tiny beings" as a category into which a bodhisatta shall not fall, the other list mentions the category of huge creatures as well, and even furnishes us with examples of the minimum and maximum sizes possible.

Further, the very word *abhabbaṭṭhāna* which was absent in the *Nidānakathā* is specifically mentioned in the commentaries, having become wide enough in content to include eighteen unprofitable states from which a full fledged bodhisatta is immune.

The Pali expression itself was finally superseded by the Sanskrit *abhavyasthāna* by the time that the *Jātaka* collection, with its introduction, was fully rendered in Sinhalese. The list contained in the Sinhalese version approximates very closely to that of the Pali commentaries.

In tracing the development of this term's content it is interesting to note that although as a compound word *abhabbaṭṭhāna* nowhere occurs in the *Tipiṭaka*, its disjoined participial form is to be met with in the *Sutta Piṭaka*[5] where it occurs predicatively along with the word *khīnāsava* which in turn is followed by the substantive *ṭhānāni* thus: "*Yo so āvuso bhikkhu arahaṃ khīnāsavo . . . . abhabbo nava ṭhānāni ajjhācarituṃ.*" According to this context, an arahant, or *khīnāsava* as he is sometimes called, is said to be morally incapable (*abhabbo*) of nine instances of violation (*nava ṭhānāni*). The nine instances mentioned in the text comprise (1) depriving a sentient being of life, (2) theft, (3) sexual indulgence, (4) deliberate lying, (5) enjoyment of delightful things (*kāme*) that are enjoyed as a layman, and conduct prompted through (6) desire (*chanda*), (7) hatred (*dosa*), (8) delusion (*moha*) and (9) fear (*bhaya*). Sometimes only the first five of these are given, in which case they are treated as *pañca ṭhānāni*.[6]

The above 'instances' are no doubt as important for an arahant as the *abhabbaṭṭhānāni* are for a bodhisatta. In an ultimate sense both constitute a set of things morally impossible which vary only according to the category of persons to whom these relate. Thus, what was originally in the *Sutta Piṭakas* an expression denoting certain immunities enjoyed by an arahant, became in the commentaries a stylised compound word denoting similar immunities to which a bodhisatta was latterly entitled. And all but one of these immunities were exclusively enjoyed by bodhisattas, the only exception being that of never committing any of the five heinous crimes (*ānantariya-kamma*). This is a quality enjoyed also by a person of right views,[7] that is, one who has attained the first fruit of enlightenment.

7 S.V. ABHIṬHĀNA.

ĀBHĀ DEVĀ, a class of deities mentioned in the *Majjhima Nikāya*. In the *Saṅkhāruppatti Sutta*[1] the Buddha is shown to expound faith (*saddhā*), virtue (*sīla*), knowledge gained from others (*suta*), a sense of charity (*cāga*) and wisdom (*paññā*) as conditions which decide the nature of the rebirth of individuals, the particular type of life to which one is born being determined according to the particular wish of the individual who, these five qualities of heart and mind being present in him, cultivates and develops them while concentrating on the goal of his desire. An individual possessing the five qualities, on hearing that any particular group of gods has long life, beauty and abounding well-being, nurtures the wish to be born into that group, and his wish is fulfilled. In a series of such groups, in this list given in ascending order, the Ābhā devā are included as one such class.

It is not clear whether this sutta indicates that the attributes of long life, &c., are facts or merely illusions of the individual, based on hearsay, just as the *Mūlapariyāya Sutta* of the same Nikāya maintains that the idea of certain gods as entities, is mere illusion, based on inadequate understanding[2]. But, it is plain from the context that the joys of life among these gods are made to pale in comparison with the passionless existence of arahantship.

This is achieved by a remarkably interesting manner of approach. Each group of beings, among whom the individual aspires to be born, is mentioned in ascending order, beginning with the caste groups, brāhmans, &c., and passing through devās and brahmās of various kinds, until the gods of the realm of Neither-perception-nor-non-perception

1 *M.* III, 99 f.
2 *M.* I, 5 f.

Nevasaññānāsaññāyatana) are reached. And of each of these groups it is repeated that the individual aspires to birth among them on coming to hear that they possess various attractive attributes. Then almost with some jubilation, the author of the sutta declares " . . . . possessing these same five qualities, the individual forms the wish that, by the extinction of the Cankers, he may here and now develop and dwell in the Deliverance of heart and mind without Cankers which he has discerned and realised of and by himself. And by the extinction of the Cankers he wins the goal. This individual, Sirs, is reborn nowhere, passes no-whither to rebirth ! "[3]

The emphasis is brought about by the arrangement of the gods in ascending order. The purpose of the sutta is obviously to demonstrate that the life without aspiration for rebirth, the life without Cankers (*āsavā*) of the heart, is the highest, and that this life may be attained here and now, unlike the life in these various divine realms which men attain only after death.

The Ābhā devā are placed high up in the scale of gods in this sutta, indicating probably the place they bore in the popular mind. They are reckoned higher than the Cātumahārājika gods,[4] and the Vedic Thirty-Three,[5] and even the Brahmā. They are mentioned immediately after the Brahmā of a Hundred Thousand Worlds (*Satasahassassa Brahmā*)[6] who is the highest of a hierarchy of Brahmā arranged according to the number of worlds over which they wield power. It is shown that individuals aspired to companionship with these Brahmā, hearing of the number of worlds over which they held sway and of the radiance they shed over all creatures. The Ābhā devā, literally meaning the 'shining gods', are reminiscent of the descriptions of the Ṛgvedic deities as shining ones.

This attribute of luminosity seems to be emphasised in the sub-groups into which the Ābhā devā are divided. The Parittābhā, the gods of minor lustre, and the Appamāṇābhā, the gods of infinite lustre, it is clear in this sutta,[7] belong to the Ābhā class. Whether the Ābhassara devā, who are mentioned next, are also meant to be taken as belonging to the same class or are a different class altogether is not quite clear. Their name, meaning the radiant gods, or the self-luminous gods, suggests that they may have been so meant to be. The next class, the Subhā, too, has two names, following its own, viz., Paritta-subhā and Appamāṇasubhā which are sub-groups of the same genus, but it is again not clear whether the Subhakiṇṇā mentioned immediately after them were a third sub-group.

The other sources which mention the Ābhā devā or any of the sub-groups are not more informative. The *Anuruddha Sutta* of the same Nikāya, which does not in this context mention the Ābhā devā by name, however, has the two sub-groups, the Partittābhā and the Appamāṇābhā, but does not include the Ābhassarā devā. Instead it adds two others, apparently as sub-groups, namely the Saṅkiliṭṭhābhā and the Parisuddhābhā, the gods of tarnished luminosity and the gods of pure luminosity, respectively.[8]

Nor are the other sub-groups mentioned together with the Ābhassarā devā in any of the many other references[9] to the latter in the Nikāyas, where the Ābhassarā are discussed in some detail and given some importance. An instance interesting for comparison is the *Mūlapariyāya* list (referred to earlier).

It appears, however, that traditionally[10] the Ābhassarā devā were considered a sub-group of the Ābhā class. A later work, the *Abhidhammattha-saṅgaha*, which attempts a systematisation of canonical thought from a philosophical perspective, places them in the second *jhāna* plane along with the Parittābha and the Appamāṇābhā,[11] just as it places the Subhakiṇṇā with the Paritta-subhā and the Appamāṇasubhā in the third *jhāna* plane, though here, too, no mention is made of the generic names, Ābhā or Subhā.

However unresolved the problems of classification may be, it is obvious that the Ābhā genus and its different species of gods were strongly associated with the idea of luminosity. This is even more emphatically brought out in the *Anuruddha Sutta*[12] already mentioned, where this attribute is made a subject for a discussion[13] not dissimilar to the preoccupation of European scholastics with the question of the number of angels who could stand on the point of a needle. The problems in our sutta are such questions as : whether the Parittābhā, Appamāṇābhā, Sankiliṭṭhābhā and Parisuddhābhā, when assembled together, manifestly differ in hue but not in brilliancy ; whether the Ābhā devā are all of them of lesser brilliancy or all of them of boundless brilliancy, &c. The former problem is reminiscent of the seven states of survival (*sattaviññāṇaṭṭhiti*) in the *Dīgha* and *Aṅguttara Nikāyas*[14] in which beings are divided on the basis of difference and uniformity in body and mind. And the answer is interesting, by reason of a most apt example of the brilliance of oil lamps compared with the brilliance of the Ābhā gods. When assembled together these gods differ in hue but not in brilliancy, just as oil lamps brought together differ in hue but not in brilliancy. When departing they differ both in hue and in brilliancy, like oil lamps brought out of the place where they were assembled together[15].

The latter problem, the lesser brilliancy of some gods (Parittābhā) and the boundless brilliancy of others (Appamāṇābhā), is settled, however, on the authority of Anuruddha (to whom this sutta is ascribed) by their state of rebirth, due to the difference of their kamma[16].

In the *Anuruddha Sutta* the Ābhā gods are described in the following terms :

" No thought have they whether their lot today will continue always, without change and everlastingly ; nay, wheresoever they find themselves they are glad to be, just as flies borne along in a pingo or basket have no thought whether their lot today will continue always, without change and everlastingly, nay, wheresoever they find themselves, they are glad to be." [17]

This sutta is ascribed not to the Buddha but to Anuruddha whose name it bears. He is apparently the same as the Anuruddha who is believed to have recounted the Abhidhamma discourses of the Buddha. If he is, then it is significant that Anuruddha here declares that he has had his knowledge of the Ābhā devā from direct experience, having lived and conversed with them, for the Abhidhamma is traditionally believed to have been discourses of the Buddha given to the gods. In fact, Anuruddha declares, when Abhiya Kaccāna raises the question why he has not used the conventional " Thus have I heard " as an introduction to his declarations, that it is because he bases himself on his own experience.[18]

ABHARAṆACCHATRANIRGHOṢA, the name of a Tathāgata given in a list of Tathāgatas who were propitiated (*ārāgita*) by the Śākya girl, Gopā, in her previous births (*Gvyū.* 422, 3).

17 Translation according to Chalmers, op. cit., Pt. II. 241
18 *M.* III, 152.

ĀBHARAṆAPUṢKARIṆĪ, 'Ornament Pool', the name given to a pond or lotus pool, which was most probably situated in the inner courtyard of king Śuddhodana's palace.

The *Lalitavistara** states that when Chandaka, bringing with him the horse Kaṇṭhaka and the ornaments (worn by the bodhisattva at the time of his departure from the palace in search of enlightenment), entered the inner apartments, Bhadrika the Śākyan, Mahānāman and Aniruddha attempted for a long time to take these ornaments. However, " since these ornaments had the stoutness of Great Nārāyaṇa, and the vigor of Half-Nārāyaṇa, the Śākyas could not lift them " (*BHS.* 549, s.v. Saṃghaṭaṇa). Now, it occurred to Mahāprajāpatī Gautamī that the very sight of these ornaments would be a source of sorrow to her. She, therefore, cast them into a pond which, as observed in the above work, is " even unto this very day known as Ābharaṇapuṣkariṇī. "

T. R.

ĀBHAŚRĪ, name of a world system influenced by the teaching of a Buddha (*buddha-kṣetra*) or, merely a potential field for a Buddha, but not necessarily containing one. The name occurs also as Samantābhaśrī (*Gvyū.* 259. 12).

ĀBHASSARA, a species of beings described in the Pali canonical literature as denizens of a world called Ābhassaraloka. It is not certain whether they were originally, or only later, recognised as deities (*devā*), but they appear to have been considered as inhabiting a world, perhaps spatially but certainly spiritually, above the Brahmaloka. Throughout the suttas they are referred to as having luminosity as a main characteristic. A recurrent description of them is that they dwell, made of mind (*manomayā*), feeding on joy (*pītibhakkhā*), radiating light from themselves (*sayampabhā*), traversing the air (*antalikkhacarā*), continuing in glory (*subhaṭṭhāyino*).[1]

The etymology of the word " Ābhassara " is not settled. Tentatively, we may accept the suggestion that it is a combination of ābhā + svar (to shine, be bright), thus meaning the radiant ones. The tradition explains Ābhassara as standing for the gods from whose bodies rays of light are emitted like lightning ; hence the suggestion ā + bhā + sar, which has also been made.[2] The traditional description brings them into contrast with the Subhakiṇṇā who are usually mentioned immediately after them in the ascending scales of deities found in the Nikāya lists, for the Subhakiṇṇā are described as the gods of steady light. Thus, on the commentarial information, the distinctive attribute of the Ābhassara is the *radiation* of light.

The Ābhassarā appear to have held an important place in the early Buddhist mind, and figure frequently in the Pali Nikāyas. In the *Dīgha* and *Majjhima Nikāyas* they appear in the context of an origin story which seems to have a strong Buddhist twist given to it, apparently for the purpose of

* 229.11.19. This passage offers many difficulties in translation ; also cp. *Annales du Musée Guimet*, VI, p. 200.
1 e.g., *D.* I, 17 ; III, 28, 86.
2 *Compendium of Philosophy*, 138, n. 4

refuting the Brahmanical claims for the supremacy of Brahmā as creator. This origin story is given in the *Brahmajāla*, *Pāṭika* and *Aggañña Suttas*,[3] the last named containing a minor variation, the examination of which is of importance in determining the notion which the Buddhists had regarding these beings.

All three suttas agree that the Ābhassara world is the one in which beings are born when the world system begins to pass away in its course of evolution (*vivaṭṭa*) and involution (*saṃvaṭṭa*). But the *Aggañña Sutta* differs in its description of the role it plays when the world system begins to re-evolve after this involution. This sutta names the Ābhassarā as beings of the world from which, when the re-evolution begins, certain beings, dying because their merit is exhausted there, are reborn as beings on this earth. The *Brahmajāla* and *Pāṭika Suttas* relating the same story state that a being dying through the exhaustion of merit in the Ābhassara world, is reborn in the Brahma world. According to these latter suttas, it is a being who has exhausted his merit in the Brahma world (and not the Ābhassara world) who is reborn as a being on earth; if he develops insight into his past, he misinterprets his experience and comes to hold false views as to the beginning of things.

But this seeming discrepancy is understandable in terms of the different purposes of the three suttas, and the different contexts in which the origin story is related. The *Aggañña Sutta* attempts to refute the claims of the brāhmans for caste supremacy for themselves through their having sprung from the mouth of Brahmā. The sutta attributes this "false notion" to the ignorance of the evolutionary history of the earth and of society and characterises caste as a man-made institution traceable to psychological factors in the evolutionary process. The *Brahmajāla Sutta* employs the origin story to demonstrate the psychogeny of the view of certain contemporaneous philosophers that the world and the soul are partly eternal and partly not. The notion of the eternal Brahmā which is depicted as underlying this view, as one ground on which this theory is built, is here the target of attack. In fact, Brahmā, according to this sutta, is a being who has died in the Ābhassara world through the exhaustion of his life-term or his merit and is reborn in the Brahma world. His conception of himself as eternal creator, &c., is based merely on a hasty empirical conclusion, arrived at without recognition of all the relevant data, owing to the limitations of his own intellectual horizons. The same "false notion" is believed and perpetrated by other Brahmas, his co-inhabitants, who were born to his company subsequently, and who cannot visualise the possibility of Brahmā himself having been reborn from another world, as he truly had been, from the Ābhassara, just like themselves. Holders of the Brahmanical view of the eternity of Brahmā and his world are human thinkers on the same lines, who are unable to conceive of the process to which the Brahmas themselves are subject, unable to visualise the previous birth of these Brahmas in the Ābhassara world, unable to see that they themselves were at one time on an equal footing with Brahmā in their previous birth in the Ābhassara world and later in the Brahma world, unable to recollect their own pre-existence beyond that in the Brahma world to which they fell from Ābhassara. It is due to thinking so, limited as they are in their capacity to recollect beyond their birth immediately preceding, that they come to the conclusion that Brahmā and his Brahma world are eternal and that they themselves are ephemeral, having passed away from the Brahma world. The sutta here no doubt attempts to explain Brahmanical claims to the one-time companionship or union of human beings with Brahmā and the conception of the Brahma world as eternal and worthy of aspiration, a conception which probably preceded the later notions of Brahmā. The Ābhassara world is here obviously brought in to demonstrate that there are other worlds, and higher worlds than Brahmā's.

Concerned as the *Pāṭika Sutta* is with meeting the criticism of Sunakkhatta that the Buddha has not performed miracles or declared the origin of things, the Buddha is shown here to assert that he has in fact done both. The Buddha cites an instance[4] when he declared the origin of things, that is, when replying to the claims of certain recluses and brāhmans who declared as their traditional doctrine that the world was the handiwork of a supreme creator. Their origin story, which attributed the world to the fiat of Brahmā, is now reflected in Buddhist light. The creation story is psychological in origin. That was the origin story that he, the Buddha, had to tell. The fact is, as maintained in the *Brahmajāla Sutta* also, that things are in process. Brahmā is himself subject to rebirth, to change; he is fallible, has misconceptions (*ayoniso manasikāra*), sustained in his position by merit and liable to fall on its exhaustion, that is, subject to the karmic law. The Ābhassara world is that plane of existence in which he had been born before his birth in the Brahma world, about the time of the involution of the world system. It is also the world in which those who held the view of Brahmā as creator had been born two births previous to their human existence, but who having forgotten that birth, unable to recollect that previous existence, and only remembering the Brahma world, eternalise the Brahma world and treat Brahmā as primordial.

Thus, comparisons of the origin story in the three suttas reveal no ground for considering the Ābhassarā as intended to be some kind of first men, a view which may suggest parallels where they do not exist. It has now been shown that the *Aggañña Sutta* names the Ābhassarā as the inhabitants of the world from which beings are *reborn* on the re-evolution of the earth which has already had an involution. In referring to them, it tries to trace the origin of the idea of caste and to demonstrate its falsity by asserting emphatically that, originally, beings were merely considered as being and that this attitude was the more natural and normal view, the difference of caste and race being due to corruption that later set in.

---

3 *D*. I, 17; III, 28, 84.

4 *D*. III, 28.

The *Brahmajāla* and *Pāṭika Suttas* are engaged in demonstrating how the brāhmans and recluses came to hold such views as they did. These suttas do not intend, by any means, to depict these brāhmans and recluses as first men. The Ābhassara is merely the world which they have forgotten though they had existed there. It is only the Brahma world that they recall in their intuitions of the past. The Ābhassara is not necessarily the world of their first existence. The position is, as it were, that the philosopher king in Plato's *Republic* recognised only the lower concepts in the hierarchy of Platonic Forms, while he had, in fact, associated and recorded in his memory *all* the Forms. The brāhman philosophers merely recollected the lower concepts in the hierarchy but denied the existence of the higher, because they could not recollect them. The Brahmā world was the lower concept, the Ābhassára the higher.

Thus there appears to be no logical contradiction in the seeming discrepancy of the origin story, if the Buddhists have in the same breath asserted that, in the one case, beings of the earth were reborn from the Ābhassara world and, in the other, that the beings who claimed themselves to be Brahmas were reborn from there, or that the Brahma-adoring brāhmans and recluses came from there, though through a devious route. The contradiction would exist only when the Ābhassarā are interpreted to be some Buddhist representatives of first men.

At any rate, in all three suttas the world is merely in a state of involution and evolution. The births and rebirths in the Ābhassara and other worlds are only phases in that constant process. Nor does the negative evidence, that there is no higher world than the Ābhassara mentioned in these suttas, suffice to demonstrate that the Buddhists held the Ābhassara world to be the original or lasting world.

There is some evidence that the origin story of the suttas is not purely of Buddhist concept. Elements of the Brahmanical creeds are strongly visible in it.[5] Further, the Buddha himself is shown to reveal that certain brāhmans admitted to having heard the story before.[6] The casual manner of the statement of the brāhmans, "Even so have we heard, even as the reverend Gotama has told us", adds strength to this argument. The *Aggañña Sutta* too points in the same direction when the Buddha declares brāhman caste pretentions to be due to ignorance of the ancient lore,[7] and then proceeds to tell the origin story we are here considering. The recurrent verse, which forms the backbone of the *Aggañña Sutta*, is attributed by the Buddha to Brahmā Sanaṅkumāra, and there is strong possibility that the verse had been part of ancient lore.[8] Thus, whether in this story there was anyting more original than the Buddhist twist given to it is uncertain, and it cannot be said whether the Ābhassarā themselves were found mentioned by name in the earlier origin story, whether they were mentioned as gods to whom the Buddhists gave a name, or whether they were invented by the Buddhists to assert the existence of worlds other than Brahmā's. If they belonged to the earlier story, there is the possibility that in this version they were reckoned a kind of first beings and that this accounts for some of the characteristics they bear and the role they play.

Whatever this may be, that the Buddhists themselves did not hold them in such a position is supported by the evidence of the *Mūlapariyāya Sutta*, which gives a list[9] of concepts that are usually mistaken to be entities by the uninitiate. This list includes, among others, Cāturmahārājika devā, Prajāpati and Brahmā, who are well recognised to have been gods of the contemporaneous theology. Ābhassarā are also given among these concepts. But, after them are placed two names, Subhakiṇṇa and Vehapphala, names referred to as those of gods in other contexts.[10] These are followed by several other names which are designated in some contexts[11] as states of survival, in others as states of cognition, and in yet others, like the *Anuruddha*[12] and *Saṅkhāruppatti Suttas*,[13] as gods (*devā*). This evidence indicates that the Buddhists believed there were other and higher worlds than the Ābhassara, and accepted it as a matter of fact that the Ābhassara was merely one world in a vaster cosmos.

Lists[14] are also found in several other suttas which mention gods above the Ābhassarā. The *Brahmanimantanika Sutta*[15] gives the same list as the *Mūlapariyāya* up to Abhibhū and inclusive of it. It names, like its counterpart, the Subhakiṇṇā as the gods immediately above the Ābhassarā. The *Sāleyyaka Sutta*,[16] the *Saṅkhāruppatti Sutta* and the *Anuruddha Sutta*, however, mention two other classes, the Parittasubhā and the Appamāṇasubhā immediately succeeding the Ābhassarā and before mentioning the Subhakiṇṇā, just as they add two more before mentioning the Ābhassarā, namely the Parittābhā and the Appamāṇābhā.

These differences in the lists and the addition of names for gods in some of them suggest the possibility of a stratification in the cosmological views of the Buddhists, the process being assumed to be a progressive elaboration. The only *Dīgha Nikāya* reference to gods above the Ābhassarā is found in the *Saṅgīti Sutta*[17] which clearly exemplifies the elaboration of the simpler ideas of the Ābhassara found in the other earlier references, elaboration by the insertion of the Ābhassara among the planes of cognition, the division into the *jhāna* states of which the Ābhassara is one, the highly metaphysical flavour of the sutta as a whole that is characteristic of the later Buddhist thought, and the Abhidhamma literary style in the presentation. The addition of new names as classes

17 *D.* III, 253.

of gods in the *Saṅkhāruppatti* and other suttas further supports this suggestion.

Thus, not over-ruling the possibility, rather, even conceding it, it must be shown that in the *Brahmanimantaṇika Sutta*, which seeks to illustrate in the particular the general theory regarding the psychogeny of the creator concept traced in the *Brahmajāla*, *Pāṭika* and *Aggañña Suttas*, it is emphatically asserted that there are other worlds superior to the Brahmā world, and that they are, Ābhassara, Subhakiṇṇa and Vehapphala.[18] The Baka Brahmā of this sutta is told firmly and definitely by the Buddha, that it is his ignorance of the other three worlds that is the origin and cause of his conceit and his misconceptions as to his eternity. In this sutta the Buddha's concern is to convince the Brahmā of the fact of the other worlds.

Besides, the absence of mention of a world or worlds above Ābhassara in the *Dīgha*, except in the already eliminated *Saṅgīti Sutta*, is insufficient evidence for the conclusion that they were originally treated as a kind of first being and that the other devas were added later for purposes of elaboration. This is revealed by the *Brahmanimantaṇika Sutta*. In one place[19] the author is content to mention three classes, but in the other he discusses several more classes. But, both are mentioned in the same context. Here the author has probably adapted the material at his disposal to suit the purpose of his sutta and its context. This may explain the absence of mention of other worlds besides Ābhassara in the *Dīgha Nikāya* suttas.

This is not to deny the possibility of elaboration having taken place in the Buddhist cosmology. Elaboration has already been admitted of the *Saṅgīti Sutta*, and may even be admitted of the two names, Parittābhā and Appamāṇābhā. Several *Aṅguttara Nikāya* references[20] may also be cited to support this view. The elaboration into seven or nine states of which the Ābhassarā are one, with their assignment to the third place in the second *jhāna* plane of the Rūpaloka, is a development which finds its fullest systematisation in the later *Abhidhammatthasaṅgaha* (*v.* 3).

The facts already mentioned show that the Ābhassarā were not considered a kind of first men or primordial beings, and their world as the first and lasting one.

Another noteworthy point is that they are consistently referred to in the *Dīgha Nikāya* as beings (*sattā*) and not as deities (*devā*). Even after their rebirth on earth they are not referred to as human beings but merely as "beings". The designation "devā" is attached to them, however, in the *Majjhima* and other Nikāyas.[21] It is an interesting fact that the *Aggañña Sutta* is consistent in its use of *sattā* for these beings throughout its context, even after it is quite clear that the beings referred to in the later evolutionary phases are human beings.

Further statements are made regarding the Ābhassarā in the Pali suttas. They are said to be ever joyful, feeding on joy, long-lived, beautiful, gods of love and pity. From time to time they utter shouts of joy, saying, "ah! what bliss! (*aho sukhaṃ*)", which is the best of sounds.[22] But, to them, too, come change and reverse;[23] their bliss is short-lived, and they fall from that state. They are uniform in body and diverse in intelligence.[24] The *Jātakas* say that bodhisattas are born there in times of chaos in the world. The genus to which they are said to belong (at least in the later suttas), i.e., the Ābhā, (gods of light), is like a swarm of flies carried about in a basket or a pingo, knowing not the transiency of their joys. See also ĀBHĀDEVĀ, ĀBHĀSVARA, AGGAÑÑA SUTTA, BRAHMĀ.

BANDULA JAYAWARDHANA.

ĀBHĀ SUTTA, a sutta in the Book of Fours of the *Aṅguttara Nikāya* (II, 39) where the Buddha speaks of four radiances or splendours, namely, the radiances of the moon, the sun, fire and wisdom; of these the radiance of the last is said to be the highest. This sutta is an example of many suttas where the gnostic position of Buddhism is clearly asserted.

ĀBHĀSVARA. Sanskrit *Ābhāsvara* corresponds to Pali *Ābhassara*, and is translated into Tibetan as "ḥod-gsal" or the "light-sound". In Chinese it is transcribed in various ways thus: a-po-hui-shih-p'o (阿波會提婆), a-wei-pi (阿維比), a-hui-kêng-hsiu (阿會亘修), a-p'o-ch'uai-lo-chê (阿婆嘬邏遮). It is translated variously into Chinese as light-skandha (kwang-yin 光陰), immeasurable water (wu-liang-shui 無量水), water not to be measured (shui-wu-liang 水無量), extremely pure light (chi-kwang-ching 極光淨), extreme light (chi-kwang 極光), light pure (kwang-ching 光淨), prevailing excellent light (pien-shêng-kwang 遍勝光), brilliant light (hsang-yü 晃昱), light glitter (kwang-yao 光曜). These various translations are based on the two different interpretations of the word. One divides ābhāsvara into *ābhā*, light, and *svara*, sound. The other analyses it as *ābhās*, light and *vara*, supreme.

Ābhāsvara is a name of an ethereal world (*rūpa-dhātu*). This is the third or last stage of the second degree of meditation (*dvitīyadhyāna*). Sentient beings who live in this mystical world, i.e., those who have developed these meditative powers up to this stage have no language of sound, but they communicate with each other through light emanating from their meditating minds. Only good sentient beings can be reborn in this world, where they will be possessed of the supreme colour of gold, be tall of stature (eight *yojana*. See Kirfel's *Die Kosmographie der Inder*, p. 332), and will enjoy a life-span of infinite years (eight *mahākalpa*). Their food is joy. They live in great comfort and obtain sufficient light on account of their inherent capacity.

22 *A.* III, 202.
23 *A.* V, 60.
24 *D.* III, 253.

Further, they can fly by their transcendental power (*abhijñā*).

The origin of this world is explained as follows : At the beginning of this world, many Brahma-palaces had no residents, wherefore a resident of this world (*ābhāsvara*) went down and lived in those Brahma palaces after his life in *ābhāsvara* was over. He is Sahampati, the Brahmarāja. Afterwards his descendants went down to the human world and thus constituted the population.

Concerning the real relation of this mystical world with the meditative stage of the yogin, Stcherbatsky gives us a well condensed account based on the *Abhidharmakośa-śāstra*. (See his *The Conception of Buddhist Nirvāṇa*, pp. 11-12).

" Imagination has built up above the heavens of the carnal gods a series of mystic worlds. They correspond exactly to the degrees of trance which are gradually reached, or supposed to be reached, by the mystic . . .

" Whereas our material frame consists of elements of 18 kinds, four of them are in abeyance in the worlds of ethereal bodies. The sense-data of smell and taste and the corresponding two sets of sensations do not exist. It is because these beings do not want any hard food, no food which is taken piecemeal, chewed and swallowed. Their nutrition is spiritual. Here imagination evidently is founded upon the fact that the mystic, when deeply engaged in meditation, forgets all about his meals. Therefore olfactory and gustatory sense-data lose their raison d'être. They are by the mystic power of *yoga* extinct altogether. But the physical organs, the nose and the tongue, remain, because absence would make the body ugly. All bodies are beautiful, none is mutilated. Their faculties of sight and audition are illimited, they possess *divya-cakṣuh* and *divya-śrotram*. Their tactile sensations are the same as the characteristic agreeable feeling of bodily ease and lightness (*prasrabdhi*) which produces levitation in the mystic. Their movements are therefore extremely swift and dexterous. But the faculties of smelling and taste are absent altogether, because their food is immaterial. They have no need for clothes, they are born with a light ethereal covering that lasts all their very long life through. Neither do they want any dwellings. Every new-born finds a house provided for him by *karma*, i.e., by nature. The phenomenon of sex is spiritualised. The bodies are without the members of physical procreation. This does not make them mutilated. Gross sexual passion does not exist at all. But total indifference does neither exist. The feelings are delicate. The birth of a new being is quite free from all pain and filth. The new born child does not come out of the matrix of a female, it is apparitional (*upapāduka*). Those who happen to be nearest to the place of his birth are his parents. No government, of course, is needed in such a community, because there are no crimes, no gross passions. Total absence of passion would mean total absence of volitions, and this, according to the Indian conception, would stop life altogether, it would be Nirvāṇa. But all feelings have a mild form. The feeling of hatred (*pratiqha*) is totally absent. Other feelings are veiled indifference (*nivṛta-avyākṛta*). "

In esoteric Buddhism, *Ābhāsvara* seems to be a personification of such an idea as mentioned above. And as such he is portrayed with his two followers at the north of the Outer-Vajra section of the Garbha-dhātu-maṇḍala. His portraits generally resemble those of the bodhisattvas. Nevertheless, he is distinguished from the others by the fact that he is represented as holding a lotus flower in his right hand, and as resting his left hand, with the palm folded into a fist at the waist. See also ĀBHASSARA.

ABHĀVA, the negation of *bhāva* (q.v.) which is a state of becoming, a condition of existence, e.g., the condition of monkhood (*samaṇa-bhāva*) or loneliness (*ekī-bhāva*). *Abhāva* is then the negation or absence of such a condition, and is found only in the commentaries, which shows the fairly late development of the term in post-canonical literature, e.g., " through not being avaricious " (*maccherassa abhāvato : Pvu.* 17).

ABHĀVASAMUDGATA (meaning : " arisen from non-specific reality, or non-existence ") is the name of a Buddha who lived many *asaṅkheyyas* ago. Chapter 8 of the *Samādhirāja Sūtra* is devoted to the birth and feats of Buddha Abhāvasamudgata. It is related here how the moment this Buddha was born he rose into the air to a height of seven *tāla* (palm) trees and then, taking seven strides in the air uttered the following words, ' *Abhāvasamudgatā sarvadharmā iti* ' ' All things are born of non-specific reality, of non-existence '. Hence his name.

It is said that with the pronouncement of this truth the non-specific nature of three thousand world systems was realised. This pronouncement made on earth was, in succession, proclaimed and heard in all the worlds up to the world of Brahmā.

At the moment of his attainment to Buddhahood, every single leaf of every tree, every blade of grass, thicket, plant, forest tree emitted the word ' Abhāvasamudgata '. And, in every world system where the pronouncement of this truth was made, the doctrine of ' non-specific reality ' of mere consciousness was discerned, recognised and realised.

It is also stated that during the dispensation of this Buddha there lived a prince called Mahākaruṇācintī, who listened to the discourse on

samādhi at the feet of the Buddha Abhāvasamudgata. On hearing this discourse the prince gave up the lay life and donned the yellow robe. He grasped and understood the importance of *samādhi* and its significance for the attainment of Buddhahood. He then meditated on it, preached it and, after the lapse of twenty kalpas during which he was never again born in an evil state, he himself attained enlightenment.

LUCY DE ZOYSA.

ABHAYA (1), name of a former Buddha occurring in the *Bahubuddhasūtra* (q.v.) of the *Mahāvastu* (iii, 20). He was proclaimed (*vyākārṣīt*) by the Tathāgata Oghaja and in turn predicted the future appearance of the Tathāgata Svayamprabha (iii, 237, 1-2).

ABHAYA (2), the personal attendant of Buddha Atthadassī (*Buv.* 44; *J.* I, 39; *ApA.* 43).

ABHAYA (3), said to have been an ancient king of Ceylon in the time of Buddha Kakusandha when the land was known by the name of Ojadīpa. Accounts of him, varying in the extent of detail, are contained in several works (*Dpv.* 1, xv, xvi; *Mhv.* xv, 56-90; *Mhbv.* 126-127; *VinA.* I, 86).

The story of king Abhaya is told by Mahinda to king Devānampiyatissa: king Abhaya ruled in Ceylon (then called Ojadīpa) from his capital named Abhayapura situated to the east of the Kadamba river (Malvatu Oya). His people were afflicted with a certain disease, to eradicate which the Buddha Kakusandha visited the island with forty thousand disciples and stood on the Devakūṭa mountain (which corresponded to the Cetiyapabbata of the present age on which Mahinda stood). By the power of the Buddha the disease disappeared from the island. Abhaya welcomed them, gave food and also offered the Mahāmegha grove (then called Mahātitthaka) to Buddha Kakusandha. The king planted in the grove the branch of Kakusandha's Bodhi-tree brought from India by bhikkhunī Rucānandā. (The bhikkhunī's name is Rucānandā, according to the *Dpv.* and *Mhv.*, but the *Mhbv.* has Rājanandā and, variantly, Gajanandā).

Buddha Kakusandha returned to India leaving his drinking vessel as an object of homage for the people of Ceylon.

L. R. G.

ABHAYA (4), an arahant whose verse is included in the *Theragāthā* (*v.* 98). This has two lines in common with the first stanza in *S.* IV, 73. According to the commentary (I, p. 213) he was born in a brāhmen family in Sāvatthi and having heard the Buddha preach, he entered the Saṅgha. Once while begging for alms in the village, he saw a well-dressed woman and was disturbed in mind. He entered the monastery and suppressing his desire with the thought that he had acted improperly he developed insight and became an arahant.

In the same account it is said that in the time of Buddha Sumedha he was born a clansman and offered the Buddha some *saḷāla* flowers as a result of which he was born among the devas till his final birth in this world.

The commentator has identified Abhaya with Vaṭaṃsakiya whose verses are found in the *Apadāna* (I, p. 174). The account of Vaṭaṃsakiya's past life contained in the *Apadāna Aṭṭhakathā* (p. 444) is similar to that of Abhaya contained in the *Thera-gāthā-aṭṭhakathā*, but with greater detail. He left the household life and lived in the forest as an ascetic. At that time Buddha Sumedha entered that forest in search of solitude. It was then that Vaṭaṃsakiya made a garland of *saḷāla* flowers and offered it to the Buddha. According to the *Apadāna* he was also born as a cakkavatti named Nimmita sixteen times, one thousand nine hundred *kappas* ago.

L. R. G.

ABHAYA (5), a thera noted for the quality of *upaṭṭhita-sati* (ready attention). In the discussion of *satisambojjhaṅga* contained in several commentaries, where one of the four factors leading to it is given as *upaṭṭhitasatipuggalasevanatā* (association of persons with ready attention). Abhaya thera together with Tissadatta thera are mentioned as examples of such individuals, and worthy of association (*DA.* III, 786; *MA.* I, 290; *SA.* III, 155; *AA.* II, 54; *VbhA.* 275).

There have been several theras by the name of Abhaya and it is difficult to say which of them is referred to here. In the *Mahāparinibbāna sutta-vaṇṇanā* in the Dīgha Commentary (II, 530) where the word *upaṭṭhita-sati* is commented upon and its meaning explained as "profound memory", examples of bhikkhus noted for this quality are given as Mahāgatimba Abhayatthera, Dīgha-bhāṇaka Abhayatthera and Tipiṭaka Cūḷābhayat-thera. One might be tempted to identify the Abhaya thera under discussion with one of these three (*DPPN.* I, 129), but a striking fact is that Tissadatta thera together with whom Abhaya thera is always mentioned is not included in this account.

L. R. G.

ABHAYA (6), a monk of Ceylon who was reputed to have been very handsome and, for that reason, the townsfolk began to compare his looks with those of a minister's son. The latter's relatives decked the young man and brought him to the Mahā Thūpa so that they might see the two together and make comparisons by themselves. The mother of the thera, determined to be no whit behind, sent her son a fine robe requesting him to shave his head, put on the special robe and come to the thūpa along with the other bhikkhus. Thus they met in the courtyard. The thera is said to have referred to the other somewhat cynically in connection with an incident in which they had figured in a previous existence. In that, the thera had acquired merit by sweeping the courtyard of a certain cetiya, whereas the other had only removed the sweepings.

Abhaya thera is reported to have contemptuously asked him whether he, who had removed the sweepings, was now coming forward as a competitor! (*VinA*. III, p. 1336 f.).

D. T. D.

ABHAYA (7), a specialist thera in Abhidhamma who was a resident of the Vālikapiṭṭhivihāra (probably in Ceylon). He was known as Ābhidhammika Abhaya. At the beginning of the rainy season (*vassa*) he recited the *Mahāsuññata Sutta* along with a large number of other monks. Living apart from each other during the rainy season, they attained arahantship before the end of the season (*MA*. IV, p. 157).

ABHAYA (8), a thera of Pagan, Burma. He was the author of the *Mahāṭīkā* which is the commentary on *Saddatthabhedacintā* of Saddhammasiri. He is also credited with having written *Sambhandhacintāṭīkā*, a commentary on Saṅgharakkhita's *Sambhandhacintā*. He is said to have lived about the fourteenth century, but may have flourished earlier.

ABHAYA (9), king of Kaliṅga. In the course of a discussion on the attributes of the Buddhas, Mahā Kātyāyana, addressing Mahā Kāśyapa, declares that, for the benefit of men, the Buddhas grant apparitions (*upahāras*: see *Mhvu.*, Jones, I, 140 n. 2, for the meaning of the word). Among the accounts he cites in support of this declaration is the story of Abhaya, king of Kaliṅga in the time of the Buddha (*Mhvu.* I, 178-180).

He professed that good and bad acts alike bear no fruit. Nor is there a world beyond, or reward for charity anywhere. There is none to be found who is rid of passion, hatred and folly. Having come to this belief he assembled his people and preached to them his own views, nor did he afterwards abandon his beliefs. " If ", said he, " my own dead father would appear of his own accord before my eyes and speak to me, then and only then should I believe in this other world. "

The Buddha, being aware of this, showed himself in the palace as Abhaya's father, and admonished him to give up his false beliefs and evil ways, whereupon Abhaya expressed remorse and asked his father's forgiveness and guidance.

Jones, (*Mhvu.* trsl. I, 141 and II, 2), while observing that this Abhaya, the king of Kaliṅga, is otherwise unknown, asks whether he could be identified with Abhaya, the caravan leader (No. 11).

T. R.

ABHAYA (10), a Licchavi who visited the Buddha and Ānanda at Kūṭāgārasālā at Mahāvana in Vesāli and consulted them on matters of doctrine. Abhaya was apparently satisfied with what was preached by them (as is expressly mentioned in the case of Ānanda's discourse); but there is no indication that he became a follower of the Buddha.

Once he goes to Ānanda accompanied by the Licchavi Paṇḍitakumāraka. Abhaya tells Ānanda of Nigaṇṭha Nātaputta's claims to all pervading knowledge and his preaching of ascetic practice and inaction for the breaking down of kamma which he proclaimed would lead to cessation of sorrow. Abhaya asks Ānanda for the Buddha's opinion, whereupon Ānanda preaches the threefold way of purification advocated for the bhikkhu for the realisation of Nibbāna (*A*. I, 220 f.).

On another occasion (*A*. II, 200 f.), Abhaya is the silent listener to the Buddha's exposition addressed to his companion Sāḷha regarding the uselessness of self-mortification for the attainment of salvation.

Abhaya has been wrongly identified with Abhayarājakumāra (*Gradual Sayings*, I, 200, n. 2; II, 211, n. 2; *Kindred Sayings*, V, 107, n. 1). The latter was the son of king Bimbisāra of Magadha and Padumāvatī the courtesan of Ujjeni and was therefore not a Licchavi.

An attempt has also been made to connect Abhaya with the royal family of the Licchavis (*SBE*. XLV, p. xv) but there is no foundation for this. In the texts Abhaya is referred to merely as 'Abhaya the Licchavi'.

L. R. G.

ABHAYA (11), a caravan leader. He was one of those who left Tusita heaven at the same time as the bodhisattva (*Mhvu.* II, 2, 7-17). He was born in Rājagraha and became a wealthy householder, well-disciplined and exerting a good influence on his associates. The question has been raised (Jones, *Mhvu.* trsl.) as to whether Abhaya, the caravan leader, could be the same as Abhaya, the king of Kaliṅga (No. 9 above). However, the fact that the former hails from Rājagraha while the latter rules in Kaliṅga, as well as the distinctive epithet of the one as *sārthavāha* and of the other as *rājā*, does not allow it. On the other hand, it is interesting to note that Abhayarājakumāra, who claims to be a well-known charioteer (*rathika*) conversant with every detail of the parts of a chariot (*M*. I, 396), was also a contemporary of the Buddha. A definite conclusion regarding their identity is not possible.

ABHAYA (12), name of a monk who had once been the chief of the ascetics resident in a monastery in Ceylon called the Pañcapariveṇamūla. His name occurs in connection with a secret mission of king Kittisirimegha (about the 12th century), who is said to have sent him along with another apparently influential layman to fetch his nephew Parakkamabāhu, from his exploits in the territory of his foes (*Mhv.* lxvii, 61, 80).

ABHAYA (13), name of one of the two nunneries built by king Mahasenā in Ceylon (*Mhv.* xxxvii, 43; *MhvA*. ii, 685). See ABHAYUPASSAYA.

For others who are sometimes referred to as Abhaya, see under their full names, e.g., CORĀBHAYA, CŪLĀBHAYA, DĪGHABHĀṆAKA ABHAYA, DUṬṬHAGĀMAṆI ABHAYA, MAṬṬĀBHAYA, VAṬṬAGĀMAṆI ABHAYA, &c.

ABHAYĀ (1), a goddess, referred to in the *Mahāvastu* (ii, 26). According to this reference, the bodhisattva Gautama is, immediately after his birth, taken from Lumbinī to the shrine of this goddess on the orders of his father, so that the infant may 'bow his head at her feet'. But the bodhisattva, entering her shrine reluctantly, puts his feet forward when he is brought to her presence to salute her. The goddess Abhayā, admitting that it is not fit that the bodhisattva should worship her, and that if he made obeisance to anyone, his or her head would split in seven, herself makes obeisance to him [1].

ABHAYĀ (2), an arahant therī during the lifetime of the Buddha Sikhī, earlier the chief queen of that Buddha's father, Aruna. She showed her devotion towards the Enlightened One. Under the dispensation of the Buddha Gotama she was a playmate of Padumāvatī who later gave birth to a child by Bimbisāra, the king of Magadha. The boy, named Abhaya, became a monk and attained arahantship. The two friends, Padumāvatī (Abhaya's mother) and Abhayā, listened to a discourse of the arahant and decided to renounce the worldly life, living thereafter together at Rājagaha. In her contemplation on the impure (*asubhadassana*) Abhayā became afraid when she saw the initial condition of a swollen corpse (*uddhumātakādibhāva*) before her. But the Buddha calmed her mind with the verses (35, 36) recorded in the *Therīgāthā* (also found in the *Therī Apadāna*, 8, ascribed to Uppaladāyikā), whereby she realised the "brittleness of the body, whereto the worldling's happiness is bound", and attained arahantship.

H. G. A. v. Z.

ABHAYĀCALA, one of the names for the famous establishment in north Anurādhapura, Ceylon, better known as Abhayagiri.

ABHAYA-DĀNA. In Sanskrit this word literally means 'the gift of fearlessness'. It is translated into Tibetan as "mi-ḥjigs-sbyiṅ", or to give non-fear. In Chinese, various translations of this term can be found, thus: "shih-wu-wei" (施無畏 or to give fearlessness), "wu-wei-shê" (無畏捨 or to offer fearlessness), "wu-wei-shih" (無畏施 to give fearlessness). It is a kind of giving (*dāna*). It means to take away one's fear and to give a sense of security.

Chap. xxv of the *Saddharmapuṇḍarīka* (Nanjio, 134) says: "Āryāvalokiteśvara Bodhisattva can afford to give fearlessness to every person suffering from various pains. So he is called the Giver of Fearlessness (Abhayaṃdada)".

Further in the 39th fasc. of *Yogācārabhūmi* (Nanjio, 1170) we find the following statement: "To resolve the fear of lion, tiger, wolf and demon is called Abhayadāna. It is also intended to dispel the fear of king, water and fire".

These passages attempt to explain the power of Buddhas and bodhisattvas which dispels every kind of fear and suffering of mankind.

But this word became popular later in esoteric Buddhism, as a significant symbolical posture (*mudrā*) of the hand, implying *abhaya-dāna*. In Chap. ix of *Mahāvairocana-sūtra* (Nanjio, No. 530), this mudrā is stated to be that of De-hshin-gśegs-pa rin-dbyaṅs-can and is described as follows: "Stretch the right hand and five fingers up, turning the palm outside. This is the sign of non-fear. (See Pl. I.) One who makes this mudrā is called a 'non-fear giver' (mi-ḥjigs-phyag-rgya)." I-tsing (683–724 A.C.) commented on it as follows (in his *Ta-jih-ching-shu* 大日經疏 or the commentary on the *Mahāvairocana-sūtra*, fasc. B): "This posture when assumed makes one appear as if beckoning with the hand and is almost identical with the Śākya mudrā of the Yogācāra system. One who makes this mudrā is able to banish all kinds of impurities and to dispel all fears." In the same fasc. occurs the statement, "this mudrā symbolises the five characteristics of the attainments of Buddhas and bodhisattvas, namely, faith (*śraddhā*), diligence (*vīrya*), mindfulness (*smṛti*), concentration (*dhyāna*) and wisdom (*prajñā*)."

This mudrā is also associated with Bhaiṣajyaguru Tathāgata, Amoghapāṣāvalokiteśvara Bodhisattva, Ekādaśamukhāvalokiteśvara Bodhisattva, Cundī Avalokiteśvara Bodhisattva and others. Further, one of the forty hands of Sahasrabhujāvalokiteśvara Bodhisattva makes this mudrā and its mantra reads thus: "Oṃ vajra ānaya hūṃ phaṭ".

In the *Ch'ien-kwang-yen-kwan-tsu-tsai-pu-sa-mi-mi-fa-ching* (千光眼觀自在菩薩祕密法經 or Esoteric Sūtra of Sahasrabhujāvalokiteśvara Bodhisattva) the mudrā of Abhayadānāvalokiteśvara Bodhisattva is described as follows: "Those who wish to be devoid of fear must practise the way of fearlessness . . . . . Stretch the right hand and five fingers up and turn the palm outside. Raise the left hand up to the chest stretching the five fingers and turning the palm outside."

According to one tradition this mudrā is said to have originated from the gesture made by the Buddha when he was confronted by the drunken elephant Nālāgiri who was let loose on the highway at the instigation of Devadatta.

It is now necessary to show that Abhaya-dāna was given concrete expression by some kings of the Theravāda countries, in their own ways. We have instances from the inscriptions of Asoka (3rd cent. B.C.) such as the Fifth and the Second Pillar-Edicts (*CII*. Vol. I, pp. 127, 121). The former inscription is almost wholly devoted to the same idea which, today, we know as

1 There is a parallel passage in the same work (*Mhvu*. i, 222), in connection with the bodhisattva Dīpaṅkara, but the goddess concerned is not mentioned by name. The reading is doubtful. Senart (*Le Mahāvastu*, Société Asiatique, p. 549, n. 4) suggests the goddess referred to is the same. Jones (*Mhvu*. I, p. 177, SBB. trsl.), however, rejects this suggestion. An interesting parallel is found in the instance where the Brahmā who appears to Gotama Buddha (*M*. I, 168. ff; *D*. II, 157) to persuade him to preach the Dhamma is given the precision of a name, viz., Sahampati, while the Brahmā who appears to Buddha Vipassī (*D*. II, 36, 40, &c.) is only referred to as 'one of the Great Brahmās' or 'that Brahmā'. The authors probably wish to make the distinction between the persons meeting Gotama Buddha and the persons meeting previous Buddhas.

"Prevention of Cruelty to Animals". It does not altogether prohibit the slaughter of animals, it is true, and only takes a realistic view of the subject. But in effect there is no question that it is a positive case of Abhaya-dāna. So also is it evident from the contents of the same emperor's bilingual inscription (Greek-Aramaic) recently found in Afghanistan (*EW*., New Series, IX, 1, 3).

The *Mahāvaṃsa* mentions that some kings of Ceylon had forbidden the slaughter of animals, sometimes wholly and at other times in certain circumstances. Amaṇḍagāmaṇi Abhaya (1st cent. A.C.) and Kassapa V (10th cent. A.C.) may be cited as examples (xxv, *v.* 6; lxii, *v.* 15). In later times we have inscriptional records, like those of Nissaṅka Malla of the 12th cent., who gave safety of life to animals such as fishes in tanks, birds and forest animals. It is to be noted that here, unlike in the inscriptions of Asoka, the actual word used is "abhaya dāna" (e.g., *EZ*. II, pp. 110, 155).

It is undoubtedly this tradition which is being perpetuated in Ceylon to this day. Regulations issued by the Department of Wild Life make it illegal to destroy animals in areas declared "Sanctuaries". Among these are the Ruined Cities of Anurādhapura and Polonnaruva, with their intimate Buddhist associations, as well as the greater tanks where there is a profusion of wild life, especially birds. There are also regulations to the same effect sometimes passed by local bodies, e.g., Municipalities and Urban Councils. As far as Ceylon is concerned, the regulations, while drawn up in the interests of the country's fauna, have taken cognizance of the traditional practice, in a land where the followers of ahimsā predominate.

SHŪYŪ KANAOKA.

ABHAYADEVA, a former Buddha, mentioned in a list of former Buddhas under whom Śākyamuni while a bodhisattva in the ninth bhūmi (q.v.), acquired merit (*Mhvu*. I, 140. 13).

ABHAYAGIRI (ABHAYĀCALA, ABHAYAVIHĀRA, ABHAYUTTARA, UTTARAVIHĀRA, &c.).

History of the Vihāra: This was a well known monastery of ancient Ceylon, founded by king Vaṭṭagāmaṇi Abhaya about 89 B.C., and 217 years 10 months 10 days after Mahāvihāra, to which it became the first great rival. The *Mahāvaṃsa* traces its origin to the following incident: the king was fleeing before Tamil invaders and on his way northward from Anurādhapura, the capital, he was passing Titthārāma, a shrine of the nigaṇṭhas. Giri, the nigaṇṭha who lived there, taunted the royal fugitive with words to the effect that the Big Black Sinhalese was running away (*palāyati mahākālasīhalo*)[1]. The king felt humiliated and vowed to avenge the insult some day. When he regained the throne he had the nigaṇṭha's ārāma pulled down and in its place set up a vihāra with twelve cells. To it he gave the composite name of himself and of the nigaṇṭha. His new foundation he gifted to the learned Mahā Thera Mahātissa of Kupikkala vihāra, who had befriended him in adversity.

This grant of a vihāra personally to a bhikkhu is the first instance of its kind recorded from Ceylon. The grantee belonged to the Mahāvihāra and, in spite of the innovation, there is no reason to suppose that the new foundation was not a constituent of the Mahāvihāra.

Not long after this and in the same reign occurred the incident concerning Mahātissa which doubtless put Abhayagiri in opposition to Mahāvihāra. As time passed Abhayagiri came to form its own faction and a stage was reached when its residents came no more to Mahāvihāra.

(For the particular points of view of the Abhayagirivāsins and their place in the history of the ancient Saṅgha of Ceylon, see the next article. Reference is made here only to such of the works as were effected in the vihāra itself under royal patronage, taking in detail the great thūpa which is its most prominent feature today).

King Gajabāhuka-gāmaṇi (114–136 A. C.) who enlarged the thūpa also had the Gāmaṇitissa reservoir constructed for cultivating land which was to maintain the vihāra[2]. King Kaniṭṭha Tissa (167–186) had a splendid structure built for Mahānāga thera of Bhūtārāma. It was given the name Ratana Pāsāda[3]; the name was that of a type, for we find in the city and elsewhere others similarly designated.

A memorable addition was made by Mahāsena (275–301) who, in the early stage of his reign, had been hostile to Mahāvihāra. This was the *mahākālasilā-paṭimā* (great stone image of the Buddha). His brother and predecessor is said to have found it in Thūpārāma where it had been placed by Devānampiya Tissa, that is to say, in the years when Buddhism was introduced. This king had it removed to his own foundation of Pācina-tissapabbata and Mahāsena had it transferred to Abhayagiri.

Cetiyapabbata, which had long been a constituent of Mahāvihāra, was given over to the charge of Abhayagiri which also now owned Pubbārāma (Puliyankuḷama).

In the later reigns we read of the planting of a Bodhi tree, extensions to the vihāra, the grant of a village of weavers for maintenance, the construction of a bathing tank and of the Dāṭhaggabodhi house. The Tooth and the Bowl relics were in the keeping of Abhayagiri. Fa-hsien has given a description of a ceremony held here in veneration of the Tooth relic (see article on Buddhism in Ceylon). We thus see that the vihāra was particularly associated with the relic (Tooth) which was the personal possession of the king; thus Abhayagiri would have been held in special regard in the country.

1 *Mhv*. xxxiii, 43, 44. The Pali *mahākāla* used here has been interpreted as an epithet of Yama. (S. Paranavitana: *The God of Adam's Peak*, p. 63 f.)

2 *Mhv*. xxxv, 119 f.

3 ibid. xxxvi, 7.

The position of Abhayagiri monks was such that it led to their sponsoring new ideas from abroad which were not viewed with favour by the orthodox. They even persuaded other vihāras to accept their ideas.

Probably one result of the constant royal benefactions towards the institution was evident in a certain laxity of discipline among the residents. We are told that in the 7th century they were truculent, unrestrained and undisciplined. Matters came to such a pass that one of their number, Bodhi, complained to king Silāmeghavaṇṇa—with disastrous consequences to the complainant himself.

Among the several additions and establishments to Abhayagiri in mediaeval times was Kappūra-pariveṇa and also the Tiputthulla monastery. It was the former which owned Cetiyapabbata and Ät-vehera (Inner Monastery) in the time of Kassapa V (914–923)[4]. The latter was an encroachment on property claimed by Mahāvihāra which, naturally, protested. But the king ignored the protests. The remains of one of the two Kappūra-pariveṇas (Greater and Lesser) have since been identified in an archaeological excavation[5]. (See Pl. II. Kapārāmūla, one of the main establishments of Abhayagiri, played an important part in religious matters from the seventh to the eleventh centuries.

An interesting group of Paṃsukūlikas, a rag-robed fraternity which was represented in the Mahāvihāra, too, were also constituents of the Abhayagiri. In the ninth century they separated from the latter and formed a distinctive group.

Abhayagiri flourished exceedingly in the 11th century. Here resided the head of the Dhammarucis who greatly befriended king Vijayabāhu I, then engaged in campaigning against the Cholas who had been in occupation of the country for half a century. After driving the enemy away, the king built for Abhayagiri the Uttaramūla-pariveṇa as an act of reward.

In the next century the powerful Parākramabāhu I (1153-1186) summoned a council at the capital city of Polonnaruwa with the idea of unifying the Saṅgha. An epigraphical record of the work of this council is found engraved on the side of the rock now known as Gal Vihāra, and anciently as Uttarārāma or the monastery in the north. One important consequence was the disappearance of Abhayagiri as a separate sect.

With the abandonment of Anurādhapura (about the 13th century) Abhayagiri virtually ceased to exist as a historical entity. But two of their principal colleges continued until the 16th century, under their original names of Uturoḷmuḷa (Uttaramūla) and Mahanet.[6]

Thūpa : The thūpa of Abhayagiri Vihāra will here be considered as that situated in the north of Anurādhapura and known, too, by the directional epithet of Uttara Mahācetiya. (See Pl. I.) It is not specifically mentioned during Vaṭṭagāmaṇi's founding of the monastic establishment and, in fact, is mentioned by name for the first time in the account of its enlargement by Gajabāhuka-gāmaṇi (as in *Mhv.*). According to the earlier *Dīpavaṃsa* (xxii, 13) this king "caused a great thūpa to be built in the delightful Abhayārāma". It is mentioned very infrequently thereafter. But this is no reason not to connect it with the founder of the vihāra. For, thūpas are recorded as having been constructed from the very introduction of Buddhism to Ceylon.

When first built the thūpa was smaller than as we now see it since the latest enlargement, in the twelfth century. Gajabāhuka-gāmaṇi in the course of his enlargement of the thūpa added four *ādimukhas* at the thūpa gates. What the *ādimukhas* were is not precisely known. It is conjectured that they were the architectural embellishment called *ayaka* in an inscription of king Maḷu-tisa (Kaniṭṭha Tissa) which, again, was probably the *āyaka* of some of the inscriptions at Amarāvatī. Variantly, they may have been the features now known amongst the Sinhalese as *vāhalkaḍa*, that is to say, the off-sets or "frontispieces" mentioned in Ceylon archaeological writings.[7] These erections here are each 45 ft. 6 in. long and about 16 ft. high.

The thūpa and its environs were practically covered by forest growth till the last quarter of the 19th century after which the jungle was cleared; but no restoration was effected. It shows the general constructional principles of Ceylon thūpas, and is built on a courtyard 587 ft. square, raised 6 ft. above the adjoining ground. A processional path (Sinhalese : *väli maḷuva*, sanded courtyard) 95 ft. broad runs round the base. Above the square courtyard rises the hemispherical dome of brickwork with the three usual rings or ledges (Sinhalese : *pēsā vaḷalu*) at the base. These are 16 ft. high, the lowest being 6½ ft. high and 355 ft. in diameter. The base moulding of stone is partly ornamented with a design of lotus petals. The dome has a diameter of 310 ft. at the top of the basal ledges ; its centre is 4 ft. above the paved courtyard in which the building stands. At the apex of the dome is the square enclosure (Sinhalese : *hatarās koṭuva*, Sanskrit : *harmikā*). It is 33 ft. high and 75 ft. square. On each of its four faces is found the post-and-rail design in sunk relief. The design is interrupted by a representation of the disc of the sun in the middle: its diameter is 6 ft. 6 in. The railing consists of 12 pilasters each 2 ft. 3 in. wide, and 14 flat rails each 15 in. wide. The height from the platform to the top of the square enclosure is 187 ft. 6 in. The cylindrical drum of brickwork (Sinhalese : *devatā koṭuva*) springs from the middle of the square enclosure and is 30 ft. in diameter and 15 ft. high. Its face is divided by pilasters into eight compartments, in each of which is a shallow niche. The broken spire rises on the top of this drum vertically up to 5 ft. after which it gradually tapers. This spire (Sinhalese : *kot kärälla*) rises 42 ft. 6 in. from the top of the drum, giving a total height of 245 ft. to the thūpa from the raised ground level to the

summit.[8] Bands of cut stone 6 in. thick had been inserted at intervals of 2½ ft. into the brick-work of the spire. They are presumed to have symbolically served as *chattas* (umbrellas), particularly as they fulfil no constructional purpose, and give the appearance of a series of superposed *chattas* of gradually diminishing size. On some of the courses of bricks from the collapse of the spire, the numbers of the various courses in which they had been laid were found marked in the Sinhalese script of about the eighth century. King Vohārika Tissa (209-231) is recorded as having placed a *chatta* on the thūpa;[9] fragments of stone shafts which had probably supported *chattas* were found on the pavement.

No idea of the cost of erecting such a colossal thūpa can be given and therefore it is very interesting to learn that king Sena III (938-946) is recorded as having contributed 40,000 *kahāpaṇas* for the paving of stone.[10]

Since the last century there has existed a confusion in the minds of many people as to the location of the thūpas of Abhayagiri and Jetavana, which are both colossal and not very far removed from each other. The confusion is perpetuated by popular usage even today and much evidence has been adduced by scholars against the popular identification of the eastern and the northern thūpas as those of Abhayagiri and Jetavana respectively. More material has come to light since this evidence was first summarized and further confirmed in 1913.[11]

This discussion should be prefaced by stating that the claims for the proper identification are confined to the thūpas on the north and the east respectively. These, with the Mahā Thūpa about which there is absolute certainty, are the only two colossal thūpas in the city whose dimensions tally with the heights of 160 and 140 cubits given to them and remained practically untouched thereafter.[12]

There is no forthright statement in any early chronicle as to the direction of the compass in which each of these colossal thūpas was originally sited. Abhayagiri thūpa has been consistently referred to as being the north one, both in historical writings and in inscriptions; Jetavana was built in Joti or Nandana park which scholars have located opposite the south city gate of Anurādhapura. In fact the *Mahāvaṃsa* accounts of the establishment of Abhayagiri Vihāra, taken in conjunction with the founding of the city and the campaign of Vaṭṭagāmaṇi, point to the site as the north. The earliest direct mention of the north as the location was made by Fa-hsien who noted that Cetiya (Mihintalē) was due east of the (Abhayagiri) Vihāra.[13] The traces of a northern road which led east towards Mihintalē, and was met by another (possibly the main street) from the east gate of the city, have been found in the archaeological records.[14] Thus the statement is independently confirmed.

The significance of the inscriptions found in the north area will now be discussed in chronological order. In the buiding once loosely called Elephant Stables there was *in situ* an inscription of Gajabāhuka-gāmaṇi. It called the thūpa *Abhaya-gamiṇi utaramahaceta*, "the great Abhaya Gāmaṇi cetiya in the north".[15]

In front of the south vāhalkaḍa of the thūpa there was discovered in the pavement an inscribed slab of Maḷu-tisa (Kaniṭṭha Tissa), three decades later, which refers to certain works done by the king. Among these were the addition of four *ayika* and an *asana-hala* (sitting-hall). Incidentally, the *Mahāvaṃsa* has ascribed them to Gajabāhuka-gāmaṇi. The phrase *Utara-maha-ceta* appears in this inscription.[16] Ayrton who examined the stone took it to be in its original position.[17] Two inscribed stone relic caskets of the same period were also found among the debris of the vāhalkaḍas and with several plain caskets. At least one of these two, that with the inscription of the queen, Mitabi, was from the northern vāhalkada; the other bore a legend of the queen-mother Sirala.[18] (See Pl. II.)

There are, in addition, eight inscriptions of obscure individuals who lived about the 7th century. They were found on the steps of a ruined shrine and contain the name for Abhayagiri, variantly given as *Apahayagara-vahara, Apayagara* and *Apahagara*.[19]

Granite tablets with Tāntric mystic formulae were found to the south-east of the north thūpa.[20] The script used is Nāgarī of about the 9th century. The find, while supporting the statement in the chronicles that the residents of Abhayagiri were sympathetic towards heterodox teachings introduced from time to time from India, strongly suggests the discovery to be itself one from their ancient vihāra.

The Slab Inscription (No. 1) of Mahinda IV (956–972) found near a large stone trough names Abhayagiri, Jetavana and several others.[21] It has to be taken in conjunction with No. 2, in which specific mention is made of *tun maha-sala-piḷima Budun* (Three Great Stone Buddha Images) and *Bud piriboyi miṇi-payi* (Buddha's Gemset Bowl).[22] Three images, in seated position, which answer to the reference, are still found in the area. (See Pl. III.) We have already adverted to the fact that the Bowl was at Abhayagiri. It was in Uttaramūla-pariveṇa. The inscription gives the regulations for the residents of Abhayagiri (*Abaya-turā-maha-sā*).

8 *Mhv.* lxxviii, 98. In Geiger's English translation the measurements given in *Mhv.* to the thūpas of Abhayagiri and Jetavana, respectively, have apparently been transposed. Those given in the present article are taken from *Ancient Ceylon* (H. Parker) following *The Architectural Remains of Anuradhapura* (James G. Smither, 1894).

A slab inscription of Kassapa V found near the stone canopy close to the above refers to Abhayagiri and Kapārārāma (*Abuhaygirī-veherä Kapārā-mulaṭ Salameyvan-pavu*, &c.).[23]

In 1954 an inscribed stone was found somewhat further east, that is, near the great twin ponds in the north area, in the site which has been identified as one of the two Kapārā pariveṇas (Greater and Lesser). The script is south Indian Grantha but the last two lines are in Sinhalese of about the second half of the 10th century, very similar to Mahinda IV's tablets. The inscription precisely mentions words which have been translated "here in Kapārārāma". The pillar was *in situ* ; the *ārāma* and, therefore, Abhayagiri, have been taken to be in the area, that is, the north.[24]

We shall now touch on the eastern area. Here, on the other hand, two inscriptions have been edited as against the several above. Both these were found at the site of the well-known stone railing close to the great thūpa on the east. The earlier one was found on a cross-bar of the railing and contains words *Abagiri-mahavihara*. On palaeographical grounds it has been ascribed to the time of Mahāsena who founded Jetavana. But in what connection Abhayagiri Mahāvihāra was mentioned in this inscription has not been explained.[25] The other inscription from the same site had been incised in the seventh year of Mahinda IV (962) and suggests something more helpful. The translation of the extract relevant to our discussion goes thus :

"Lodgings shall not be given in this 'Water Pavilion at the Gate' constructed by the devotees, desirous of heavenly bliss and final emancipation, who reside at the Ratnamāpirivena in the great royal monastery of Denā established (of yore) for the benefit of the great elder Tis who was moderate in his desires, was content, and was known by the name of the great lord Sāguli . . . ".[26]

On the inscriptional evidence rests a strong case for considering that the popular usage is incorrect, and that it is the northern thūpa which belonged to Abhayagiri and the eastern one to Jetavana.

Other points material to the identification, made by scholars against this popular view will now be discussed.

The greatest obstacle to the view that the great northern cetiya is that of Abhayagiri is the generally current translation of the statement in the *Dīpavaṃsa* that the vihāra of Abhayagiri was founded *between* the Cetiya and Silā-thūpa.[27] It is not known what cetiya was meant, nor what the Silā-thūpa. An adjustment was suggested (by Parker), that is, to take the cetiya as that of Abhayagiri and Silā-thūpa as Silā-Sobbhakaṇḍaka. But there are objections. The *Dīpavaṃsa* which mentions the later Gajabāhuka-gāmaṇi as the builder of Abhayagiri thūpa now particularly connects him with an event anterior to him, that is, of the time of Vaṭṭagāmaṇi.[28] Thus it is possible to reconcile the identification of the cetiya only by conceding that the chronicler recorded, for the time of Vaṭṭagāmaṇi, an event which he knew took place much later—an anachronism. There is a further difficulty and that is Silāsobbhakaṇḍaka (assuming it to be Silā-thūpa) has not been identified. Laṅkārāma has been suggested as its modern name ; but expert opinion has not been expressed on the suggestion.

The *Mahāvaṃsa* account does not present this difficulty for it says that Gajabāhuka-gāmaṇi enlarged the thūpa.[29] This implies that the thūpa was already existing and, as far as the evidence goes, only Vaṭṭagāmaṇi could have been its author. Thūpas have been erected in the country from the very time of Mahinda two centuries earlier and it is quite conceivable that such an important foundation as the Abhayagiri would have had its own thūpa from the commencement.

The translations referred to above (*Dpv.*), though freely current and widely accepted, have been questioned by certain scholars who are of the view that *between* is not the correct English rendering of the Pali word in this context, and that *near* or *within* conveys the proper sense (edd. P. Ñāṇānanda Thera, 1927 ; and trsl. of S. Paranavitana in article in the *UCR*. XVI, 1–2, p. 60). Paranavitana is of the view that the core of the thūpa (Silācetiya, i.e., Abhayagiri thūpa) was the work of Vaṭṭagāmaṇi. He further thinks it probable that the spot was that held by tradition (Fa-hsien) to have been consecrated by the Buddha leaving the impression of his foot thereon.

But the thūpa of stone (*silā cetiya*) is mentioned as having existed in the city between Thūpārāma and Lohapāsāda, or opposite the former (*Svu.* Stories 53 and 82). This reference in the ancient Pali text is not to any thūpa in the Abhayagiri area which is too far afield from the two well-known structures named.

The size of the thūpa of Abhayagiri has also a bearing on our question, for at present it is distinguished by the same huge proportions as those of only two others in the city, Mahā Thūpa and Jetavana Thūpa. As Gajabāhuka-gāmaṇi enlarged the thūpa, it must have at first been smaller. The earliest specific mention of the height has been made by Fa-hsien who has given the figure 40 *chāng*, (Legge: 400 cubits; Beal: 470 ft. and, in trsl. by Li Yung-hsi. 400 ft.[30]). Now, the *Mahāvaṃsa* has given the figure of 140 cubits when referring to the last restoration recorded by it, viz., by Parākramabāhu I. This part of the chronicle was written by Dharmakīrti in the 13th century.[31] We have a cubit measure engraved on a rock, and so

30 Beal has evidently adopted the measure of 141 in. for a *chāng*, generally taken for tariff purposes. Jean Przyluski has categorically stated that the value of a Chinese foot varied with dynasties and states (*IHQ*. XI, 202). Li Yung-hsi's trsl. was published in 1957 by the Chinese Buddhist Association, Peking.

described, at the 14th century Gaḍalādeṇiya, and this is 30 in. in length.[32] The same would have held good a century earlier when the account was written, unless it had been taken over from a still earlier figure. If the cubit (Legge) should be as long, then 400 cubits would measure up to 1.000 ft., which is quite incredible. Nor could we readily accept 470 ft. (Beal), as it would give the thūpa a height which has not even been hinted at by local chroniclers or tradition. However we have the *Dīpavaṃsa* statement of a " great thūpa " by Gajabāhuka-gāmaṇi. This chronicle was written about the same century as Fa-hsien's visit and, in view of the suggestion of size, we can take it that the thūpa was of some magnitude. The actual figure, however, stands on the sole testimony of Fa-hsien. This is open to challenge, unless his unit of measurement is taken as very different from that used in Ceylon, as already indicated.

The information so far available leads to the strongest probability that the colossal thūpa in the north is that of Abhayagiri. The identification of the eastern thūpa as that of Jetavana Vihāra depends at present far more on elimination than on the one or two points mentioned above.[33]

One more important reference to Abhayagirithūpa might be mentioned before closing this discussion. The *Saddharmaratnākaraya*[34] (completed in 1417[35]) has recorded the raising of the height to 140 cubits by one of the kings called Kassapa. He is also said to have enshrined therein the *dharmadhātu.* Now this *dharmadhātu* has been suggested as the book by that name.[36] But if we take Kassapa as the fifth of the name, we have this passage translated from the inscription: " By (celebrating) relic-festivals he honoured the Buddha-gem. In fulfilment of the resolution (appearing in his words), ' how shall I honour the Dhamma-gem' he caused the Abhidhamma discourses to be transcribed on plates of gold (and therewith) made a great offering."[37] It is not unlikely that a portion had been offered to Abhayagiri where he had some work done. In that case it was probably enshrined in the thūpa, and and it would not be far-fetched to imagine an enshrinement of the Abhidhamma plates as *dharmadhatu.*

In spite of the importance of Abhayagiri vihāra in the history of the Saṅgha, if only as the powerful challenger of Mahāvihāra, the thūpa itself is not recorded as enshrining any relic. It thus seems not intrinsically an object of veneration by the standards of other relic-enshrined thūpas like those of Thūpārāma, Mahā Thūpa, Mahiyaṅgaṇa, &c. Its claim to recognition seems to lie in the fact of its great dimensions—it ranks next to Jetavana thūpa which is probably the largest construction of its class in the entire Buddhist world. When the *Mahāvaṃsa* was compiled the site had evidently been sanctified in the eyes of the chronicler and Fa-hsien's account suggests this. To the monk-chronicler of the orthodox Mahāvihāra Abhayagiri vihāra was not a hated home of heterodoxy.

(The name Abhayagiri Vihāra was used, at least in 1870, for an image-house in the Quadrangle, Polonnaruwa, and changed into Thūpārama in 1886, both without any authority. *ASCAR* for 1903, p. 32).

D. T. Devendra.

ABHAYAGIRIVĀSINS. This name is given to the monks residing in or connected with the Abhayagirivihāra in Anurādhapura, Ceylon, with special reference to their doctrinal and other differences with the orthodox monks of the Mahāvihāra, from the first century B.C. till the 12th century.

According to the Sinhalese tradition[1] their heretical tendencies can be traced to a certain monk Mahātissa who had been expelled from the Mahāvihāra according to the Vinaya rules on account of his frequenting the families of laymen. A pupil of his, Bahalamassutissa, had come in anger to reside in the Abhayagirivihāra, where he formed a separate faction. The apparent welcome given to the angered bhikkhu suggests that even prior to this incident the relations between the two vihāras were certainly not intimate, if not actually strained. A sense of individual aloofness and superiority in Abhayagiri may well have been caused by the special provisions made for its inmates by a unique expression of the royal patronage of king Vaṭṭagāmaṇi Abhaya referred to in the preceding article ABHAYAGIRI.

In the reign of Vohārika Tissa (209–301 A.C.) this faction, which had earlier received a body of Vajjiputta monks from Pallārāma in India led by their teacher Dhammaruci, is reported to have adopted some views belonging to the Vetulya-vāda (q.v.), although there is nothing on record indicating essential doctrinal differences between them and the Mahāvihāravāsins. In the second century a variant reading of a Vinaya rule was contested in regard to a transgression of a bhikkhuṇī, named Mettiyā, which was decided by a brāhman scholar Dīghakārāyana in favour of the Mahāvihāra. But the subsequent adoption by Abhayagiri of Vetulya-vāda under the name of Dhammarucika, and the increase of their influence were the causes of an order for expulsion of sixty monks by king Goṭhābhaya, also known as Meghavaṇṇābhaya (early 4th century). The monks were not only expelled from the Saṅgha, but also banished from the country[2]. Even this episode shows that there was still unity in doctrine, without which no disciplinary measures could have been taken.

Still, the seed of dissension had been sown, and the removal of the sixty monks does not seem to have entirely eradicated the supposed evil. For we find that notwithstanding this purge some three hundred bhikkhus led by Ussiliyātissa thera left the institution and joined Dakkhiṇagiri, i.e., the vihāra south of, and attached to, the Mahāvihāra, under the royal protection of Goṭhābhaya.

The monks who were expelled and banished to India seem to have reorganised their ranks and

gained the support of a certain Saṅghamitta who was versed in the teachings concerning the exorcism of spirits. This Coḷa bhikkhu proved himself to be the evil spirit guiding them on from bad to worse. Coming to Ceylon he engaged in successful disputation with the leading thera of Thūpārāma who happened to be the king's uncle. Saṅghamitta's eloquence and logic so impressed the king that he appointed him as tutor to his two sons, Jeṭṭhatissa and Mahāsena. The elder prince did not take well to his teacher, but the younger one became the bhikkhu's favourite.

After the death of king Goṭhābhaya, Jeṭṭhatissa succeeded his father and reigned for ten years, during which time the monk Saṅghamitta lived in voluntary exile. But when after that period the throne fell vacant again, Saṅghamitta returned from the further shore[3] and made all the arrangements for the consecration of Mahāsena, the younger brother. Using his influence on the young king, he had all royal support withdrawn from the Mahāvihāra and gave as reason that those monks did not teach the correct discipline (*vinaya*). It is noteworthy that no accusation of heretical doctrine was professed. Soon it became impossible for the monks to continue to live in the Mahāvihāra, and after it had been deserted for nine years, its building material was removed to enrich the Abhayagirivihāra. "Some three hundred and sixty four colleges and great temples were uprooted and destroyed, says an ancient chronicle; and the spoils gathered from them went to enrich and adorn the home of heresy, the Abhayagiri, which, now splendid in ornaments and rich in possessions, stood pre-eminent over all as the greatest and wealthiest monastery in Laṅkā".[4]

Some palace intrigue, however, by a minister named Meghavaṇṇābhaya who turned rebel, and by one of the king's wives, caused the murder of the monk Saṅghamitta and of one of his adherents, the ruthless minister Soṇa. Thereafter, several buildings were reconstructed within the premises of the Mahāvihāra.

But again, when in the years 412–414 Fa-hsien visited Ceylon, Abhayagirivihāra with 5000 resident monks had regained its supremacy over the Mahāvihāra with only 3000 monks. And during the reign of Dhātusena (455–473) we find the Mahāvihāra itself occupied by Dhammarucika bhikkhus,[5] a sect which branched off from the Theravādins during the reign of Vaṭṭagāmaṇi Abhaya, and which is usually identified with the Abhayagirivāsins.[6]

In the time of Silākāla (518–531) a Vaipulya Sutta (Mahāyāna text) known as *Dhammadhātu* was brought from India by a merchant of Kāsī, named Pūrṇa. This text was readily accepted by Abhayagiri and was honoured in the palace. Various Sanskrit works, such as the *Dīrghāgama* and the *Saṃyuktāgama*, and also the *Saṃyuktasañcaya-piṭaka* together with the *Vinaya-piṭaka* of the Mahīsāsaka school, which were removed by Fa-hsien from Ceylon, and partly translated into Chinese by Guṇabhadra, a bhikkhu from central India (in 436), are supposed to have been obtained from Abhayagiri.

King Silāmeghavaṇṇa in the 7th century was made aware of complaints against the monks of Abhayagiri and he empowered one of their own number, named Bodhi, to lead an enquiry. This monk, however, was killed, whereupon the king had the hands of those responsible for the murder cut off. He sent a further hundred monks into exile. Having thus purified the Saṅgha, he endeavoured to bring the monks of the Theravāda school and "the others" together for the purpose of performing the *uposatha-kamma* (q.v.) but the former unyieldingly refused. The king lost his temper, abused everybody, left the city in a rage and died suddenly thereafter.[7]

Here, the "other" monks referred to are the Abhayagirivāsins. They were not unworthy monks, as the king had just cleansed the Order. The refusal of the monks to co-operate must, therefore, have been based on doctrinal differences, which were still existing at this time, although there were no open clashes between them. Succeeding kings, such as Jeṭṭhatissa and Dāthopatissa II, befriended both parties with royal grants.

In the 9th century a member of the Vajraparvata sect in India came to reside in Abhayagiri from where he spread his teaching which is described as "secret teachings and popular with the foolish and ignorant". Some granite slabs with Tāntric formulae (see foregoing article) support the statement in the chronicles that Abhayagiri was friendly towards heterodox teachings periodically introduced from India. An inscription dating from the 11th century[8] refers to the Abhayaturāmahasā and the great literary works of the scholars dwelling there, versed in the scriptures, and endowed with the virtues of temperance, contentment and religious austerity.

The last is heard of them in the 12th century, when the "schism" appeared to be as wide as ever. As mentioned in the preceding article a conciliation was attempted by king Parākramabāhu I. In the beginning it proved to be "an exceedingly difficult task".[9] Many bhikkhus would hear nothing of reconciliation; and even to establish harmony among the bhikkhus of one school (Mahāvihāra), it became necessary to exclude the undisciplined elements from the Order and offer them lucrative wordly positions to prevent them from doing further harm. After the purification of the Saṅgha, the king set about bringing unity among the three different schools of the Mahāvihāra, Abhayagiri and Jetavana, divided by adherence to the Vetullapiṭaka.

Not a single work has been preserved as belonging to the Abhayagirivāsins. But the Chinese canon contains a sixth century translation of a work entitled *Cié-to-tao-lung* or the *Vimuktimārgaśāstra*

by Upatiṣya, which, according to the considered opinion of P. V. Bapat, [10] belongs to the school of the Abhayagirivāsins. P. C. Bagchi [11] also is of opinion that the *Vimuttimagga* of Upatissa represents the Abhayagirivāda version and the *Visuddhimagga* of Buddhaghosa the version of the Mahāvihāra. There is no fundamental difference in doctrine between them sufficient to warrant the stigma of heresy. Yet the dissimilarity of certain doctrinal points, as well as their manner of treatment, would be sufficient to form a basis of divergence which would allow for co-existence without the merging of one school into the other, unless compelled by royal decree. Several of the dissimilarities touch on the method of mind control in the process of meditation. The Abhayagirivāsins accepted only 38 objects of concentration (*kammaṭṭhāna*), leaving out the objects of light (*āloka*) and of limited space (*paricchinnākāsa*). The form or shape of the concentration device may be not only circular, but even quadrangular or triangular. Upatissa recommends, but Buddhaghosa vehemently opposes, the developing of the after-image (*nimitta*) of the sublime mental states (*brahmavihāra*). In character classification the Abhayagirivāsins accepted not only the six basic classes of lust, hate, delusion, confidence, wisdom and investigation, but also various combinations thereof, making a total of fourteen classes.

It is not only in the process of development of the mind but also in the philosophical analysis of material phenomena that the Abhayagirivāsins differed from what was considered orthodoxy. For they added two further phenomena to the list of 28, namely the physical phenomenon of origination (*jāti-rūpa*) and that of inertia (*middha-rūpa*). This view is rejected by Buddhaghosa [12] on the grounds that birth is included in integration and continuity (*upacaya-santati*), and that inertia is non-existent; and his commentator Dhammapāla emphasises that these views are held by the inmates of Abhayagiri monastery at Anurādhapura[13]. In this connection it is interesting to note the logical consistency of the Abhayagirivāsins. The material inertia (*middha-rūpa*) which is produced by the weather (*utuja*) is to be found even in an arahant; and hence only mental languor (*thīna*) is mentioned as a hindrance (*nīvaraṇa*), whereas the usual Theravāda enumeration of the five hindrances speaks of the combination of sloth and torpor (*thīna-middha*).

Another view, which according to the commentator Dhammapāla is that of the adherents of the school of Abhayagiri (*Abhayagirivāsike sandhāyāha*),[14] is that ascetic practices (*dhutaṅgāni*) can be also unprofitable (*akusala*), as they are concepts consisting in a name (*nāma-paññatti*).

On essential points of doctrine, however, there is perfect harmony with Theravāda, e.g., the acceptance of one single unconditioned (*asaṅkhata*), while clear-cut differences with the *Abhidharmapiṭaka* of the Sarvāstivādins, with the ***Sāriputrābhidharma-śāstra*** and the ***Satyasiddhi-śāstra*** make it evident that the Abhayagirivāsins cannot be treated as doctrinal heretics.

Although the Abhayagirivāsins are frequently said to have embraced the heresies of the Vetulyaka, there is no evidence that they went so far as to deny the actual personality of the Buddha, which is the heretical transcendentalist view (*lokottaravāda*) that the Buddha did not dwell in the human world, but that he created a material body (*nimitta-rūpamattaka*) to appear in this world, whilst residing in Tusita heaven.[15] Neither does the fact that some disciples of a teacher called Dhammaruci, belonging to the Vajjiputra Sect in India, were received at the Abhayagiri monastery[16] prove that all the heterodox views of that school were adopted by the Abhayagirivāsins. Certain theses of these Dhammarucikas were taken over, but essential doctrinal points against the accepted Theravāda of *anattā* did not find favour with the Abhayagirivāsins. The relationship between the two rival sects may be summed up as one between the conservative Mahāvihāravāsins and the liberal Abhayagirivāsins.

"The Abhayagiri monks seem to have kept up constant contact with various Buddhist sects and new movements in India, from which they derived inspiration and strength. They were liberal in their views, and always welcomed new ideas from abroad and tried to be progressive. They studied both Theravāda and Mahāyāna and ' widely diffused the Tripiṭakas ' "[17]. The Dhammarucikas of Abhayagiri are supposed to have accepted the Vetulya-piṭaka. The Vetulyas or adherents of Vetulla-vāda are well known by name both in the Sinhalese chronicles and in the commentary to the *Kathāvatthu*. They are said to have believed that the Buddha did not live on earth as a real personality, and that the Dhamma was actually preached by Ānanda. The word "Vaitulya", however, is unknown in Sanskrit lexicons; but H. Kern has found the word as an alternate reading of "Vaipulya" in the sūtra of that name, the Sūtra of Great Development, in some Kaşgar fragments of the *Saddharmapuṇḍarīka*. And hence the Vetulyas (Vetullakas) may not have constituted a separate sect or school, especially as they are not named among the eighteen schools; and the designation then merely stands as a kind of nickname for "those of the developed doctrine",[18] or Mahāyāna in general, in a way similar to the sobriquet "Hinayāna", the Small Vehicle, derisively given to the Theravāda.

In the commentary on the Great Chronicle of Ceylon we find a more plausible explanation of the separation of the two communities without either of them becoming heretical in the doctrine. The community of Abhayagiri established themselves in the Abhayagiri-vihāra which was constructed by king Vaṭṭagāmaṇi. They assumed the name of Dhammarucikas 217 years after the establishment

of the Dhamma in Ceylon, rejecting the *Parivāra* section of the Vinaya which, according to the orthodox view, had been recited by the Buddha.[19] It must not be forgotten in this connection that the commentator is here explaining the historical facts from the viewpoint of the Mahāvihāra. The name Dhammaruci itself is already open to different interpretations, one deriving the name from the supposed founder, another indicating the nature of the seceders : those who delight in the Dhamma, or who cause the Dhamma to shine.[20]

As regards their non-acceptance of the *Parivāra*, the fifth book of the Vinaya, this too can be interpreted in various ways. One is the interpretation of the Mahāvihāra, given above. But a different view will be obtained when it is noted that the *Parivārapāṭha* is " an abstract of the other parts of the Vinaya, in fact, a very much later compilation and probably the work of a Ceylon thera. In some stanzas which are found at the end of the *Parivārapāṭha*, it is stated to have been composed by ' the highly wise, learned and skilful Dīpa, after he had inquired here and there into the methods (literally, the way) followed by former teachers'."[21] Moreover, we know that the canon of the northern schools distinguishes only four and not five divisions of the Vinaya, notwithstanding the natural tendency to increase rather than retrench in the course of the years. In this light the refusal of the Abhayagirivāsins to include this work in the Vinaya-piṭaka, whereby it would receive the undeserved authority of the Buddha's word, seems more like a cleansing reform than a schism, based on differences in interpretation and texts (*atthantara-pāṭhantara-karaṇa-vasena bhedam*). But it would appear that in the course of centuries the original zeal for reform lost its keen edge and when finally a reunion of the Mahāvihāra, Abhayagirivihāra and Jetavanavihāra was proposed by the great Sinhalese king Parākramabāhu 1, he succeeded, where so many others before him had failed. After this the school of the Abhayagirivāsins ceased to exist in the history of Buddhism.

It is interesting to note a somewhat similar, although much less pronounced, difference of attitude rather than of doctrine between two of the foremost Oriental universities in present day Ceylon. Both derive their monastic ordination (*upasampadā*) from the same source(Siam--Thailand); both subscribe to the fullest extent to the orthodox Theravāda ; both are equally recognised and patronised, even by the government. And yet one emphasises more the classical Pali of the traditional texts and commentaries and appears to have become somewhat constricted in its home island of Ceylon ; the other is visibly influenced by Sanskrit texts and translations, thereby assuming a wider outlook, if not from a doctrinal aspect, certainly so in practical daily life. The slight difference between them in the manner of wearing the monastic robes and in the attitude of one in actively participating in certain secular movements might be taken as reflecting these points of view. No stigma, however, can be attached to either.

ABHAYĀKARA. See ABHAYĀKARAGUPTA.

ABHAYĀKARAGUPTA (ABHAYAKĀRAGUPTA), a great scholar of the university of Vikramaśilā (q.v.). It was from this university (founded by king Dharmapāla in the 8th century A.C.) that the largest number of Indian missionaries went to Tibet.

Following the Tibetan tradition, Rai S. C. Das Bahadur[1] holds that Abhayākaragupta was born about the middle of the 9th century of the present era. Phanindranath Bose,[2] however, thinks that he flourished towards the end of the 11th century and at the beginning of the 12th century. It is said that he died in 1125 A.C.[3]

A native of Gauḍa, Abhayākaragupta was educated in the country of Magadha which was, at that time, under the sway of king Rāma Pāla. After learning the five Vidyās, or sciences, of the day : Śabdavidyā, Śilpasthānavidyā, Cikitsāvidyā, Hetuvidyā and Adhyātmavidyā, he joined the order of monks and soon became famous as a great scholar. King Rāma Pāla invited him to perform the religious ceremonies in his palace.[4] As a monk he worked hard ; he wrote śāstras in the first two watches of the day, and explained the principles of of the Dharma in the third.

There is a story told in Tibetan books about a Ḍākinī (Tibetan : mkhaḥ ḥgro-ma) who, disguised as a girl, tried to tempt Abhayākaragupta. He was, however, more than a match for her wiles. His stern morality pleased the Ḍākinī so much that she blessed him thus : " You will obtain foreknowledge during the interval between your death and rebirth. As a step towards its acquirement you must write many works on the Dharma Śāstra." She also drew his attention to the practice of making Tāntric maṇḍalas (Tibetan : Dkyil ḥkhor) or ritualistic circles. Tibetans who believe in this story think that this incident inspired Abhayākaragupta to compose several śāstric works and commentaries, such as the (1) Theṅ-wa-korsum, (2) Commentaries on Khajor (Mkhaḥ-ḥgro), (3) Man-Ṅag, (4) Ñema, and the (5) Saṅye thod-pai-nam-shé-mi-jigpa (Saṅs-rgyas thod-paḥi rnam-shes mi-ḥjigs-pa), besides criticisms on the works of other commentators.

Another story is told of how he visited the city of Carasiṃha, where the caṇḍāla king was about to make a hundred human sacrifices to his god. The appearance of a hideous snake over his head, created by magic, terrified the caṇḍāla king so much that he set his victims free at the request of Abhayākaragupta. There is yet another account which

1 "Lives of the Panchhen-Rinpochhes or Tasi Lamas" *JASB*. 1882, pp. 16–18.

4 *Ancient Indian Education*, R. K. Mookerji (1951) ; Tārānātha's *Geschichte des Buddhismus* (A. Schiefner) pp. 250 ff

relates how Abhayākaragupta allayed the sufferings of the many hunger-stricken beggars in Sukhāvatī by giving them food and drink from his mendicant's platter, which was miraculously supplied from heaven. These stories are meant to add glory to his saintly character.

Though Abhayākaragupta was the head of the monks belonging to the Mahāyāna school, he was respected also by the Śrāvakas. He remained at Vikramaśilā for a long time. In his day this university was under the protection of the son of king Śubhaśrī of "eastern India" (perhaps the eastern districts of Magadha). On the authority of Tibetan writers, it is said that there took place at this time a Turuṣka war in which Abhayākaragupta played an important part by invoking the aid of the Dharmapālas (i.e., the spiritual protectors of the world) and transforming the offerings with their help into eagles, who turned out the Turuṣkas. Afterwards, he cured many of poisonous snake-bites and arrested numerous bandits and robbers by the spell of his mantras. The last of the many wonders he achieved was the bringing to life of a child in the great cemetery of Himavana.[5]

Like Dīpaṅkara (Atiśa), Abhayākaragupta was a great writer as well as a translator of Buddhist texts. He was proficient in Tibetan, translating into Tibetan several of his own books in Sanskrit.[6] Some of his writings appear in the Tibetan catalogue under the name of Abhayākaragupta, and others under that of Abhyākara. He seems also to have been associated with the famous university of Nālandā, where he translated a few books. The Śrī-mahākālasādhana-nāma, Śrīmaha-kālāntara-sādhana-nāma, Siddhaikavīrasādhana, Vajrayāga-mūlāpattikarma-śāstra, Kālisūryacakravaśa-(kriyā-) nāma, Gaṇacakrapūjākrama-nāma, and the Saṅkṣiptavajravārāhisādhana, were translated into Tibetan by him. It is interesting to note that all these books belong to the Rgyud-ḥgrel or Tantra group, thus confirming his reputation as a great Tāntric scholar, which is not surprising since Vikramaśilā was a great centre of Tantra. Another book, the Abhiṣeka-prakaraṇa, was composed in Sanskrit and translated into Tibetan by him. He is reputed to be the author of 26 more books, which were translated into Tibetan by various hands. They are :—Śrī-kāla-cakroddāna, Śrī-cakra-saṃvarābhisamaya, Svādhiṣṭhānakramopadeśa-nāma, Cakraśambarābhisamayopadeśa, Śrī-sampuṭatantrarājaṭikā-āmnāyamañjarīnāma, Śrī-buddhakapāla-mahātantrarājaṭikā-Abhayapaddhati-nāma, Pañhacakramamataṭikā-candraprabhā-nāma, Raktayamāntaka - niṣpannayoga - nāma, Gaṇacakravidhi-nāma, Vajrayānāpattimañjarī-nāma, Vajrāvali-nāma-maṇḍalopāyikā, Niṣpannayogāvali-nāma, Jyotir-mañjarī-nāma-homopāyikā, Ucchuṣmajambhala-sādhana-nāma, Bodhipaddhati-nāma, Śrī-mahākāla-karmasambhāra, Vajramahākālakarmoccāṭanābhicāra-nāma, Vajramahākālakarmavibhaṅgābhicāra-nāma, Vajramahākālakarmakāyastambhanābhicāra-nāma, Vajramahākālakarmavākstambhanābhicāra-nāma, Vajramahākālakarmacittastambhanābhicāra-nāma, Vajramahākālakarmabhavaśoṣaṇābhiśāpa-nāma, Vajramahākālakarmābhicārapratisañjīvanaśāntikarman-nāma, and the Upadeśamañjarī-nāma-sarvatantrotpannopapanna-sāmānyabhāṣya, all of which belong to the Tantra group. Besides these, two works of the Mdo-Ḥgrel or sūtra group were written by him : the Āryāṣṭasāhasrikāprajñāpāramitāvṛttimarmakaumudī-nāma, and the Munimatālaṅkāra. Yet another book, the Vajramahākālābhicārahoma-nāma, which, according to some was written by Nāgārjuna, is also credited to him. It is more probable that Abhayākaragupta collected together the instructions of Nāgārjuna and compiled this book.[7] The following works are also recorded in Cordier as having been composed by Ācārya Mahāpaṇḍita Abhayākaragupta: (1) Bodhisattvasaṃvaragrahaṇa-vidhi (III, 333), (2) Jñānaḍākinīsādhana (II, 100), (3) Kālacakrāvatāra-nāma (II, 22), and (4) Śrī-Mañjuvajrādikramābhisamayasamuccaya-niṣpannayogāvali-nāma(III,230).

Thus Abhayākaraputa was well known both in India and Tibet. In the Tengyur he is sometimes called Paṇḍita, Mahāpaṇḍita, Ācārya, Siddha and Sthavira. His name in Tibetan is Ḥjigsmed ḥbyuṅ-gnas sbas-pa or Ḥjigs-med ḥbyuṅ-gnas sbaspaḥi shabs (i.e., Abhayākaraguptapāda), and his influence on Tibetan Buddhism was very great. The question whether he visited Tibet remains to be decided. It seems, however, probable that he did; he is worshipped even now as a saint there.

ABHAYA (-LIPI), one of the many scripts under the control (*nīti*) of a bodhisattva, listed in the *Mahāvastu* in the section dealing with the seventh Bodhisattva-bhūmi. This script was probably used by a people of the name of Abhaya (*Mhvu.* I, 135, 7 : 'Bhaya).

ABHAYAMĀTĀ, a theri who had been a courtesan (*nagarasobhinī*), named Padumāvatī in Ujjeni. King Bimbisāra of Rājagaha hearing about her beauty wished to see her and informed his chaplain (*purohita*) about it. By the power of spells the *purohita* called the yakkha Kumbhīra with whose help the king's desire was fulfilled. When she informed the king that she had conceived a child, he sent word to say that if she had a son, he would like to see him.

A son was born and named Abhaya (*ThīgA.* 39) whereupon Padumāvatī came to be known as Abhayamātā. Abhaya is generally referred to as Abhayarājakumāra.[1] But the commentator of the *Therīgāthā* does not call him 'rājakumāra' (*ThīgA.* 39–41).

When the boy was seven years old, he was sent to the king who brought him up with the princes of the court. Later, Abhaya renounced the world

1 *DPPN*. But Āmrapāli is mentioned as his mother in the Mūla Sarvāstivāda Vinaya (*GM.* III, 2. p. 22).

substances "). In every respect it was like the royal city of Puṣpāvatī which, too, had a pillar named Valayā, which was bright and beautiful and of seven colours.

Here, in Abhayapura, Supātra the Tathāgata preached the "word of the renowned calm" (*kṣema-vaistārikaṃ prāvacanaṃ*: op. cit. p. 227, n. 1), and proclaimed the Tathāgata Varuṇa.

T. R.

ABHAYAPURA (2), the capital city of king Abhaya (No. 3).

ABHAYARĀJAKUMĀRA, a popular appellation of 'prince' Abhaya, who, perhaps, was so known in order to distinguish him from the other Abhayas of his time.

He was a son of king Bimbisāra. This is stated in the *Apadāna*, in the verses ascribed to Abhaya, as well as in a few commentaries (*Ap.* II *v.* 22; *MA.* III, p. 108; *ThagA.* I, 87-88). His mother, according to one of these commentaries, was Padumāvatī the courtesan of Ujjeni (*ThīgA.* xxvi), also known as Abhayamātā (q. v.).

In the *Apadāna*, Abhaya recounts that having fallen among evil friends he was beguiled by the religious teacher Nigaṇṭha Nātaputta. Nātaputta taught him a question which Abhaya promised to put to the Buddha, and which they both thought would considerably embarrass him.[1] The implications of this question and the Buddha's reply are fully discussed in the *Abhayarājakumāra Sutta* (q.v.) of the *Majjhima Nikāya* (Sutta 58). The question that Abhaya asked at his own residence, after having invited the Buddha there, was whether the Tathāgata uses such language as may be unpleasant to others and disliked by them. The Buddha's answer so impressed Abhaya that he enquired whether the Buddha anticipated such questions and had answers ready, or whether he answered them spontaneously. Before taking his leave of the Buddha, Abhaya expressed a wish that he be accepted as a lay disciple.

Apparently, there were other occasions when he met the Buddha. At one such meeting at Gijjhakūṭa, when he discussed the view of Pūraṇa Kassapa that both non-knowledge as well as knowledge had neither cause nor reason, the Buddha replied that they were both conditioned in that they were the result of the 'hindrances' (*nīvaraṇāni*) and 'factors of enlightenment' (*bojjhaṅgāni*) respectively. Abhaya was convinced, and being unable to contain his admiration for the Buddha, he declared that his fatigue both physical and mental evinced during his climb to Gijjhakūṭa had been all allayed and the dhamma realised (*abhisameto*) by him (*S.*, *Bojjhaṅga Saṃyutta*, sutta 6).

This 'realisation of the dhamma' is probably synonymous with the comprehension of the Four Noble Truths which marks the moment of the attainment of *sotāpatti*. That at least is the sense in which this expression has been often employed in the texts. But the question whether Abhaya was here declaring his attainment of *sotāpatti* cannot be adequately pursued in view of the fact that the commentary makes no allusion to it and also because of two other commentarial traditions which contradict one another as to the occasion when such a spiritual change took place.

In the *Theragāthā* commentary (I, 58) he is said to have attained *sotāpatti* when the *Tāḷacchigalūpama Sutta*[2] was preached, while according to the *Dhammapada* commentary (III, 166 f.) this happened after the Buddha had discoursed to him in connection with a nautch girl's death that occurred scarcely a week after she had been presented to Abhaya by his father the king.

The king is said to have given her over to Abhaya in recognition of his services when he quelled a frontier rebellion. Nothing, however, is said of his military skill except that in the *Abhayarājakumāra Sutta*, he himself claims to be a well-known charioteer skilled in the various parts of a chariot (*M.* I, 396). The king is also said to have bestowed on him his kingdom for seven days, during which time Abhaya enjoyed regal splendour within the confines of his house.

But, in spite of his having received such a rare honour, Abhaya never succeeded to the throne. He probably had no such aspirations as there was already prince Ajātasattu, the legitimate son of Bimbisāra, and according to the commentarial tradition, Abhaya was so deeply moved when his father died, that he eventually decided to become a monk.

Before his admission into the Order, Abhaya probably was the father of the celebrated physician Jīvaka. This, however, has been denied in the Vinaya in an episode where Jīvaka himself questions Abhaya about his parentage. Abhaya, while claiming to be as ignorant as Jīvaka on that matter, takes full credit for having brought him up (I, 269). As against this statement of the Vinaya, the *Aṅguttara* commentary records that Jīvaka's father was Abhaya and that his mother was the courtesan Sālavatī (*AA.* I, 399).

The Vinaya tradition seems to reflect a deliberate attempt to safeguard the reputation of Abhaya and Bimbisāra. It not only depicts Abhaya as innocently ignorant of Jīvaka's paternity, but says further that having accidentally discovered Jīvaka as an infant discarded on a heap of rubbish and on the verge of being pecked by crows, he took pity on the child and had him removed to the inner city to be brought up by nursing mothers (I, 269). Nothing is said of the child's paternity. Abhaya's conduct may have been prompted either by a sense of social service, or a feeling of guilt that the child was his own. The Vinaya tradition seems to imply the former; but the latter consideration is the more likely as Abhaya himself since his seventh year had been brought up by Bimbisāra for no other reason than that he was an illegitimate son

1 Jacobi has stated that this Abhaya has been frequently mentioned in the legends and canonical works of the Jains (*SBE.* XLV. Introduction xv. n. 1).

2 This is probably a misprint for *Ṭāla-chiggalpama Sutta.*

of the king (*ThīgA.* xxvi, 39). It is again significant that this fact is mentioned only in a commentary which belongs to the sutta tradition. The Vinaya does not even vaguely allude to it—an indication that it recorded nothing that was prejudicial to the reputation of the king.

In the *Abhayarājakumāra Sutta*, too, Abhaya is closely associated with a child for whom he evidently had great affection; that child might well have been Jīvaka, but unfortunately his identity and paternity have nowhere been revealed either in the sutta or its commentary.

Abhaya is said to have won arahantship not long after his entry into the Order. That this was the result of his having listened to the eloquent words of the Buddha is stated in the one and only verse ascribed to him in the *Theragāthā* (ekanipāta *v.* 26). The *Therīgāthā*, too (dukanipāta *v.* 33), has incidentally recorded another of his verses along with one other ascribed to his mother who, after her entry into the Order of nuns, was called Abhayamātā. That verse was an admonition to his mother that she should reflect on the body from head to foot as foul and rotten. That this advice helped her to win deliverance is acknowledged by his mother.

Abhaya's first association with a Buddha is said to date from the time of Buddha Padumuttara (*Ap.* II, 502 f.). He had then been a preacher of the dhamma and out of reverence for the Buddha is said to have always prefaced his sermons by reciting four laudatory stanzas in honour of the Buddha. As a result of the merit so accumulated he escaped being born in any of the woeful states of existence for one hundred thousand aeons. The *Theragāthā* commentary also associates him with Buddha Vipassī to whom, it is said, he made an offering of *keṭaka* flowers (I, 87). The verses that allude to this incident also occur in the *Apadāna* where, however, they are ascribed to a thera named Keṭakapupphiya (II, 449 f.). It is doubtful whether Keṭakapupphiya was another appellation of Abhayarājakumāra. As Malalasekera suggests, that probably was just a title of another thera whose real name was Abhaya (No. 2 in *DPPN.*). Such titles were common in ancient times and were used to signify a special virtue or quality that was characteristic of the person, e.g., Abhaya Sārthavāha, Abhaya Dīghabhāṇaka, Abhaya Duṭṭhagāmaṇi, Abhaya Cora, &c., but for which it would have been scarcely possible to distinguish one Abhaya from another.

H. S. C.

ABHAYARĀJAKUMĀRA SUTTA, a discourse of the Buddha preached to Abhayarājakumāra when the Buddha visited Abhaya's house in compliance with an invitation to accept alms there (*M.* No. 58). The Buddha was invited while he was residing in Veḷuvana at Rājagaha but the invitation was really a pretension to courtesy, the real purpose being to embarrass the Buddha with a question that was a dilemma.

Abhaya learnt the question from Nigaṇṭha Nātaputta who induced him to put it to the Buddha on the grounds that Abhaya's fame would spread once it is known that he had raised an argument against the recluse Gotama.

The question was whether the Tathāgata uses such words as may be unpleasant and disagreeable to others. And the nigaṇṭha surmised that if the Buddha answered in the affirmative, it would show him up as being no different from a worldling (*puthujjana*), but that if he answered in the negative he could be called a liar because his use of such language had provoked and enraged Devadatta.

But no sooner was the question asked than came the Buddha's reply that it could not be answered directly (*ekaṃsena*)[1]. That alone was enough for Abhaya to acknowledge the greatness of the Buddha over the nigaṇṭhas. The Buddha then proceeded to explain that irrespective of whether his words would ultimately be pleasant and agreeable to people or not he would utter them when he knew that it was the proper time (*kālaññū*) to do so, and provided certain necessary conditions were present, namely, that he was aware that what he uttered was a fact (*bhūtaṃ*), was real (*tacchaṃ*) and would conduce to the person's welfare (*atthasaṃhitaṃ*). If any one of these conditions was absent he would not speak. This, said the Buddha, was due to his sympathy for beings (*sattesu anukampā*) which he likened to Abhaya's sympathy for a child who happened to be then in his arms.

So greatly was Abhaya impressed by the manner in which the Buddha answered his question that he asked him whether he anticipated such questions and had even thought out answers to them or whether he answered them spontaneously. The Buddha replied that since the *dhammadhātu*[2] had been realised by him, he answered them spontaneously very much as Abhaya who was a skilled charioteer would have spontaneously named the various parts of a chariot in case he were questioned about them.

The discourse ends with Abhaya's entreaty that he be accepted by the Exalted One as a lay disciple (*upāsaka*).

H. S. C.

ABHAYARĀJAKUMĀRA VATTHU. This narrative contains an episode of the life of Abhayarājakumāra. He was deeply grieved over the death of a nautch girl who had been presented to him by the king his father, a week earlier. Abhaya visited the Buddha at Veḷuvana to find comfort (*DhpA.* No. 4).

The Buddha first consoled him by stating that the amount of tears that Abhaya had likewise shed during a number of lives each time that this

1 *Na kho'ttha rājakumāra ekaṃsenāti.* This meant, says the commentary, that the question could not be answered absolutely, for the Tathāgata may or may not utter such words, and in case he does utter, that would be merely because he sees a benefit resulting therefrom. Otherwise he could remain silent (*MA.* III, 109).

2 The commentary explains this word as being synonymous with omniscience—*sabbaññuta ñāṇassa etaṃ adhivacanaṃ* . . . . (*MA.* III, 113).

very woman had died was, indeed, beyond measure. Having thus considerably lessened his grief, the Buddha preached to him about the dangers of affection, in a stanza in which he compared a living being to a decorated royal chariot where only fools sit complacently [3]. But discerning ones, says the Buddha, find no attachment therein.

Having listened to the words of the Buddha, Abhayarājakumāra is said to have attained the first fruit of enlightenment (*sotāpattiphala*). But according to other accounts (see ABHAYARĀJA-KUMĀRA), his spiritual awakening took place under different circumstances.

However that may be, it is worth noting that in the present account the Buddha is made to address his words, compressed in the metaphor of a royal chariot, in a manner that would be most intelligible to Abhayarājakumāra who, according to a sutta of the *Majjhima Nikāya*, was himself an excellent charioteer (*Abhayarājakumāra Sutta*, *M*. No. 58).

H. S. C.

ABHAYARĀJA PARIVEṆA, a foundation in Ceylon attached to Vanaggāmapāsāda Vihāra, both of which were the works of king Vijayabāhu IV (1271-1273 A. C.). They were built in Sindhūravāna where the king arrived from Gaṅgāsiripura (Gampola) on his return from pilgrimage to Sumanakūṭa. It is mentioned that the pariveṇa was built in the name of his father Parākramabāhu II. It was endowed with villages, fields and various other gifts which, however, are not specified (*Mhv*. lxxxviii, 48 f.).

ABHAYASAMĀNA SUTTA is in reality the *Abhaya Sutta* of *A*. II, 173. The confusion has probably arisen from the text of Jānussonī's words to the Buddha : " There is no one subject to death, who does not fear" (*n'atthi yo so maraṇadhammo samāno na bhāyati*). The uddāna, however, which gives in verse form the titles of the suttas in each chapter, describes the first five suttas as : *Yodhā pāṭibhogasutaṃ abhayasamaṇasaccena pañcamaṃ* : the warrior (*yodhajīva*), surety (*pāṭibhoga*), hearsay (*suta*), fearless (*abhaya*), recluse (*samaṇa* or *brāhmaṇa-sacca*).

ABHAYA SUTTA (1). There are several suttas under this name, but not all deal with the same subject of fearlessness (*abhaya*). There is, e.g., the *Abhaya Sutta* which occurs in the *Saṃyutta Nikāya* in the chapter on the factors of enlightenment (*bojjhaṅgasākaccaṃ*), in the *Bojjhaṅga Saṃyutta* (V, 126). Here the name is derived from the Licchavi prince called Abhaya (No. 10), who asked the Buddha about the teaching of Pūraṇa Kassapa that deeds had no result (*ahetuvāda*). But the Buddha replied that both the lack of knowledge and understanding (*aññāṇa-adassana*), as well as wisdom and insight (*ñāṇadassana*), have their roots (*hetu*) and conditions of arising (*paccaya*). The first find their roots in lust of the senses (*kāmarāga*), ill-will (*byāpāda*), sloth and torpor (*thīnamiddha*), excitement and worry (*uddhaccakukkucca*) and perplexity (*vicikicchā*), which collectively are called hindrances (*nīvaraṇa*). The latter, wisdom and insight, find their roots and conditions of arising in the cultivation of mindfulness (*sati*), investigation of truth (*dhammavicaya*), energy (*viriya*), rapturous joy (*pīti*), tranquility (*passaddhi*), concentration (*samādhi*) and equanimity (*upekkhā*), which are collectively called the seven factors of enlightenment (*sambojjhaṅga*).

ABHAYA SUTTA (2), dealing with the subject of the fearless (*abhaya*), occurs in the Book of Fours of the *Aṅguttara Nikāya* (II, iv, sutta 184).

The discourse is the result of a statement made by the brāhman Jāṇussoṇi who, although a follower and great admirer of the Buddha, was keen on listening also to other teachers like Subha Todeyyaputta (*M*. II, *Subha Sutta*) and Pilotika (*M*. I, *Cūḷahatthipadopama Sutta*) and comparing these different views or investigating their claims. Jāṇussoṇi expresses the view that any being subject to death fears the thought of death. The Buddha in reply does not dismiss this statement *in toto* but, while admitting that some beings subject to death fear the thought thereof, says that there are also beings, equally subject to death, who do not fear and tremble at the thought of death. This view is then further developed by the Buddha, who gives four classes of beings who fear the thought of death, and four classes who do not so fear.

First of all there is the person who in respect of the pleasures of the senses is not free from lust, from desire, from affection, from longing, from passion, from craving. When a serious illness overtakes him, he is grieved that he will have to forego the pleasures of the senses, and is afraid of death. Then there is the person who is not free from lust and passion as regards his body (the seat of sensation). He too will lament in the case of a serious illness that he will lose this instrument of enjoyment, and he too will be afraid of death. Further, there is the person who when afflicted by a serious illness will reflect that he has not done any noble or wholesome deed, that all his deeds have been evil, cruel and stained, that after his death he will go to the place he deserves ; and he too will be afraid of death. Finally, there is the man who is undecided as to the worthiness of the Buddha, his teaching and the Order, the usefulness of the training, the dependency of things originating, one who is so full of wavering that he is unable to attain the goal by learning through questioning (*AA*. III, p. 161), and cannot come to a conclusion as to the true Dhamma. In a severe illness he too will be afraid of death, due to his uncertainty.

But then there are four types of beings who do not tremble in fear at the thought of death, even if they are stricken by a severe illness. There is the person who is free from lust in respect of the pleasures of the senses, one who is free from passion as regards his body, one who has performed noble deeds and skilful actions in protection of the weak, and one who does not entertain any thoughts of

3 The word used in the stanza for living being is *loka* (world). But the commentary has explained this as meaning " one's own existence that is comprised of the aggregates and the like that are reckoned in terms of world. " (ibid).

doubt but has reached a convincing conclusion, whereby he has no fear of death although being subject thereto.

ABHAYA SUTTA (3) occurs in the Book of Nines (*navaka-nipāta : A.* IV, 455) where it forms one of a series of twenty suttas, abbreviated in the text, as all are drawn up according to an identical pattern with a mere change of subject. The fearless state (*abhayaṃ*) is brought about by entering and abiding in the four states of mental absorption (*rūpa-jhāna*), the four immaterial spheres (*arūpa-jhāna*) and the cessation of perception and feeling (*saññā-vedayita-nirodha*) through the complete destruction of the mental intoxicants (*āsava*).

ABHAYATĀDĀNA-NĀMA-APARĀJITA (Tib. *Ḥphags-pa gshan-gyis mi-thub-pa mi-ḥjigs-pa sbyin-pa shes-bya-ba*), a Tantric work found in the Tibetan Kangyur. This was translated into Tibetan, revised, and edited by the Indian scholar Prajñāvarma, the great Tibetan translator Ye-Ses-Sde and others (*ŌM.* No. 297 & 553—fragment). The Tōhoku Catalogue of the Sde-dge edition records this work as *Abhayapradā-nāma-aparājita* (Nos. 708, 928). It is a collection of mantras, conferring courage on a devotee.

ABHAYAVĀPI. Paṇḍukābhaya, a pre-Buddhist king of Ceylon, constructed this reservoir in Anurādhapura which he founded as the capital city (*Mhv.* x, 89). The reservoir used to go dry sometimes. Once king Devānampiya Tissa, the first patron of Buddhism in the country, had its dried clay collected in lumps. These were raised into a pile as high as an elephant and on the top he deposited the collar-bone relic of the Buddha, which had been secured from India, until a worthy thūpa could be erected to house the sacred object (xvii, 35 f.). The Maricavaṭṭi Vihāra of Duṭṭhagāmaṇi overlooked Abhayavāpi, for a great and beautiful hall of the vihāra is described as having been carried on piles into the reservoir (xxvi, 20). King Bhātikābhaya had the water of the reservoir pumped by machines and sprayed from the summit on the flowers offered by him at the Mahā Thūpa (xxxiv, 45 f.). The sheet of water was not of exceptional size, the surface area now being about 255 acres. The greatest depth, in olden times, was about twenty-two feet near the sluice. The embankment is a little over a mile long. Abhayavāpi has been identified with the modern Basavakkuḷam (Parker : *Ancient Ceylon*, pp. 360 f.). See also ANURĀDHAPURA.

D. T. D.

ABHAYA VIHĀRA, one of the names for the famous establishment in north Anurādhapura, Ceylon, better known as Abhayagiri.

ABHAYEBALĀKAPĀSĀNA. It was a spot which was incorporated in consecrating the sīmā-boundary of Mahāvihāra marked out by king Devānampiya Tissa soon after the formal establishment of Buddhism in Ceylon. The name was derived from the fact that it was on the Abhayavāpi (*Mhv.* Appendix B, 13; *Mhbv.* pp. 135-6).

ABHAYUPASSAYA, one of the two nunneries built by king Mahāsena in Ceylon, the same as ABHAYA, No. 13 (*Mhv.* xxxvii, 43 ; *MhvA.* II, p. 685).

ABHAYUTTARA, one of the names for the famous establishment in north Anurādhapura, Ceylon, better known as Abhayagiri.

ABHAYŪVARA. It is the name of the eighth *bhāṇavāra* or portion for recitation of the first Khandhaka of the *Mahā Vagga* of the *Vinaya-piṭaka*. This bhāṇavāra deals largely with cases of persons—young or old, reputed or notorious, healthy or diseased. and of whatever social standing —who successfully sought entry into the community of monks merely to ensure their own safety and security. When this was known, the Buddha was often requested to enjoin a rule which would each time prevent such exploitation of the liberty to seek admission into the community of monks (*Mahāvagga*, pp. 71 f.).

As a result there was gradually formed a code of rules which delcared it to be an offence (*dukkaṭa* q.v.) for a monk to admit into the Order of monks any of the following : namely, (1) a person suffering from one or other of the following diseases, namely, leprosy (*kuṭṭha*), boils (*gaṇḍa*), eczema (*kilāsa*), consumption (*sosa*) and epilepsy (*apamāra*), (2) a person in the king's service (*rājabhaṭam*), (3) a thief who wears an emblem (*dhajabaddha*), (4) a thief who has broken out of jail (*kārabhedaka cora*), (5) a thief proclaimed to be killed at sight (*likhitaka cora*), (6) a person punished by being scourged (*kasāhata*), (7) a person punished by branding (*lakkhaṇāhata*), (8) a debtor (*iṇāyika*), (9) a slave (*dāsa*), (10) a boy of less than fifteen years (*ūnapannarasavassa*) " unless that boy has the capacity to scare crows " (a mere indication of the minimum strength). The code also contains other rules not relating to *dukkaṭa* offences properly so called as, for instance, that a monk admitting a person into the community should seek permission from the community to shave the hair of the head close, or, that a monk ordaining a person under twenty years of age should be dealt with not only according to *dukkaṭa* rules but also to *pācittiya* rules. The penultimate rule of this section disallows a monk from having two novices to attend on him, while the last rule decrees that a monk possessing special qualifications may live five years in dependence (i.e., under a teacher's guidance), whereas an inexperienced monk should do so all his life.

H. S. C.

ABHIBHĀYATANA, a contraction of *abhibhū āyatana*, meaning a stage of mastery over the senses. This power of having conquered (*abhibhavati*) is frequently detailed in the canonical texts of the *Dīgha-*, *Majjhima-*, and *Aṅguttara Nikāyas* as comprising the following eight stations or stages (*āyatana*), not to be confused with the twelve spheres of perception of sense organs and objects for which the same term *āyatana* (q.v.) is used.

"When anyone, being conscious of the material qualities of the body in his own person, sees forms exterior to himself—be they limited, fair or foul—and when he has mastered them with the thought: I know, I see, and when he, conscious thereof, enters into a state of mental absorption, that is the first stage of mastery" (*A.* IV, 305; *M.* II, 13, &c.).

The second stage differs from the first in that the forms exterior to himself are known and seen to be immeasurable, fair or foul.

The third and fourth stages of mastery refer equally to exterior forms, respectively known and seen to be limited or immeasurable, but in these two stages one is unaware of the material qualities of the body in one's own person, consciousness being confined only to external forms.

The four remaining stages of mastery over the senses are identical in that one remains unconscious of the material qualities in one's own body; they differ in that the external objects appear in various hues of blue, of yellow, of red, and of white. And with this conscious thought one enters into a state of mental absorption.

These states of mental absorption (*jhāna*, q.v.) are thus called 'positions of mastery', because the sphere (*āyatana*) in which they arise is one of overpowering (*abhibhū*) knowledge. Though they are similar in object to the various devices for concentration (*kasiṇa*), they are dissimilar in culture (*DhsA.* 187: *samāne pi ārammaṇe bhāvanāya asamānattāya*). Except for the first two stages, there is no perception of material qualities in one's own body, because that is not the object of mastery. Here the external objects are to be mastered. And these objects are known and seen as either limited, through initial application of mind (*vitakka*), or immeasurable, through delusion (*moha*); the beautiful is suited to a predominantly hateful character, and the ugly to a character ruled by lust (ibid. 189; cp. *Vism.* pp. 82 f.).

Thus the earth device (*paṭhavī-kasiṇa*) for purpose of attaining mental absorption (*jhāna*) is mentioned as the basis for the acquisition of the first four stages of mastery by the limited and measureless methods, while the four colour devices are given as the bases for the acquisition of the final four stages of mastery by the methods of fairness and ugliness, all according to one's particular character (*Vism.* pp. 92 f.).

The stages of mastery then become bases for transcendence of both boredom and delight, fear and dread, cold and heat, hunger and thirst, contact with insects and creeping things, abusive and hurtful language, painful, miserable and even deadly feelings—all these are but the beginning of ten blessings (*ānisaṃsa*) which may be anticipated by him who cultivates mindfulness, and which culminate in the extinction of the mental intoxicants (*āsavānaṃ khaya*) and the deliverance of heart and mind (*cetovimuttipaññāvimutti*: *M.* III, 97, 99).

H. G. A. v. Z.

ABHIBHŪ (1), a bodhisatta, mentioned in the *Anāgatavaṃsa* (the Book of Prophecy) at the end of the *Metteyya Sutta* (*JPTS.* 1886, p. 37). He is said to have obtained the assurance (*vivaraṇa*) of his future enlightenment from Gotama, the Buddha, that he will be the sixth in the line of succession which begins with Metteyya.

ABHIBHŪ (2), a monk, disciple of Sikhī Buddha. The *Aṅguttara Nikāya* (III, 80) merely calls him a disciple (*sāvaka*) but the *Saṃyutta Nikāya* (VI, 2, 4) and *Buddhavaṃsa* (xxi, 20) as well as the commentaries describe him as one of two chief disciples of that Buddha (*J.* I, p. 41; *DA.* II, p. 417; *ApA.* p. 45).

According to the *Saṃyutta Nikāya*, Abhibhū goes with Sikhī Buddha to one of the Brahma worlds where, at the Buddha's request, Abhibhū preaches the dhamma to a whole host of Brahmās who are surprised that a disciple should have preached to them in the very presence of his Master. At the request of the Buddha, Abhibhū is said to have further agitated the Brahmās with many miracles which culminated in making his voice ring in the thousand world systems. According to one commentary he even made himself visible to his hearers everywhere (*DA.* II, p. 417).

His words, contained in two gāthās, exhort his listeners to yield their hearts to the Buddha's teaching and to be for ever diligent in order to end suffering. The same verses occur in other contexts as well, where they have been ascribed sometimes to the Buddha Gotama, and at other times to a thera named Abhibhūta (q.v.) and to devas.

In the narrative of the visit Sikhī Buddha addresses Abhibhū as *brāhmaṇa*, while in the commentary thereon he is called *rājaputta* (*BuvA.* p. 202). The apparent inconsistency is perhaps due to the fact that brāhmaṇa here means a saint[1] and rājaputta indicates the class or caste to which he originally belonged. The commentarial tradition also represents him as one who had attained to the perfection of wisdom (*paññāpāramiyā matthakaṃ patto*: *DA.* II, p. 417).

The *Apadāna* (I, 84) says that once seven fragrant and colourful flowers were offered to Abhibhū by a hermit who later became the thera Adhopupphiya.

H. S. C.

ABHIBHŪ (3). This word sometimes used metaphorically as a compound [2], to mean "overcoming, vanquishing", has been used in the *Brahmajāla* and *Paṭika Suttas* of the *Dīgha Nikāya* as an epithet of Brahmā, in the familiar phrase *abhibhū anabhibhūto* which means "the vanquisher, who has not himself been vanquished" (*D.* I, 18; III, 29; *It.* 122). The phrase is again used by the Buddha in the *Pāsādika Sutta* (*D.* III, 135) to describe an essential quality of the Tathāgata.

1 Cp. definition of *brāhmaṇa* as *bāhitapāpadhamma* at *Ud.* p. 4 and *Brāhmaṇavagga* of *Dhp.*

2 *A.* IV, 95, *kodhābhibhūto*; *Sn.* 99, *tuvam mārābhibhū muni*; *Sn.* 212, *kāme abhibhuyya*; *Sn.* 122, *sabbalokābhibhuṃ vīram.*

In the *Mūlapariyāya Sutta* of the *Majjhima Nikāya* (I, 2) its connotation is not clear and may apply to a species or state of being. Here, the Buddha, while indicating the numerous processes which the person, uninitiate in the dhamma, mistakenly regards as entities, lists liquid, heat, motion, beings, devās, Pajāpatī, Brahmā, Ābhassarā, Subhakiṇṇā, Vehapphalā, Abhibhū, dwellers in the planes of infinite ether, of infinite consciousness and so on up to Nibbāna. In the *Brahmanimantanika Sutta*, the Buddha repeats the same list, saying that knowing each of them to be "not-self", and to be not leading to the highest goal, he is above them, not subject to them (*M*. I, 329; this sutta also shows Baka Brahmā as misconceiving himself to be *abhibhū anabhibhūto*).

It is possible that the reference here is to *Abhibhū* in the sense of overlord, Issara or Brahmā. That *abhibhū* has been used as an epithet of Brahmā in the earliest Nikāyas, lends support to this view, but for the fact that Brahmā has already been mentioned in the same list.

The commentator on the *Mūlapariyāya Sutta*, on the other hand, favours the view that the reference is to a species of being (*MA*. I, 35). He asserts that the Abhibhū belong to the same plane as the Vehapphalā devā. This is supported by the fact that the Abhibhū are mentioned immediately after the Vehapphalā in the *Mūlapariyāya* and *Brahmanimantaṇika* lists. The commentator further states that these beings belong to the Asaññasatta or 'unconscious' state of being, but it also refers to another tradition which held that Abhibhū is the generic name for all ruling Brahmās, beginning with Sahassa Brahmā. This tradition, which the commentator declares to be erroneous, however, may link with the idea that Abhibhū in the *Mūlapariyāya* connotes the Brahmā as "Overlord, unsurpassed" (*abhibhū anabhibhūto*). But again, the commentator's assertion that the Abhibhū are devās belonging to the ninth plane of being or cognition, and are unconscious beings (*asaññasatta*) bears comparison with the lists of states of beings in other suttas (*D*. II, 68; III, 253, 263; *A*. IV, 41), especially that on the Sattāvāsa in the *Aṅguttara Nikāya* (IV, 401).

No definite conclusion is, therefore, possible on the evidence available. One thing is certain, that by the time of the commentaries Abhibhū came to stand for a species of beings, unhesitatingly designated as devas belonging together with the Vehapphalā, to the *asaññasatta* group of devas. See further AGGAÑÑA SUTTA, ASAÑÑASATTA, BRAHMĀ, SATTĀVĀSA, VEHAPPHALA.

B. J.

ABHIBHŪ SUTTA (1). This is the concluding discourse of the eighth chapter, called the *Ānanda Vagga*, of the Tika-nipāta of the *Aṅguttara Nikāya* (I, iii, p. 226). The sutta derives its name from an opening reference to Abhibhū (No. 2), one of the two chief disciples of the Buddha Sikhī who was the second of the seven traditional Buddhas: Vipassī, Sikhī, Vessabhu, Kakusandha, Konāgamana, Kassapa and Gotama (*D*. II, No. 14), the earlier three belonging to a previous dispensation or world cycle. This Abhibhū was supposed to have said once, that even without raising his voice above normal usage, he could make his words heard in thousand realms (*S*. I, 154).

In this present sutta the Buddha Gotama explains (*AA*. II, 339) to Ānanda that this Abhibhū was a mere disciple (*sāvaka*), who had only limited knowledge (*padesañāṇe ṭhito sāvako*), but that the Tathāgata's powers are immeasurable (*appameyya*). The thousand realms referred to are then described in all their radiance and extents; and yet they are only the system of the thousand lesser worlds (*sahassī cūlanikā lokadhātu*). A system thousand fold this size is called middle-sized (*majjhimikā*), and a thousand middle-sized systems would constitute a great world system. If the Buddha wished, he could make himself heard in these thousand million realms, or even beyond, by means of spreading the radiance of his body (*sarīrobhāsena phareyya*: *AA*. II, p. 342). When Ānanda in his elation exclaimed that this indeed was great profit to him, his companion Udāyin asked him more soberly, "How can the power of your teacher be of any profit to you?" But the Buddha replied that if Ānanda would pass out of this life now without having attained perfect freedom from desire (*avītarāga*), he would seven times over be born as a ruler among the gods, due to his faithful mind (*cittappasādena*). "But", the Buddha prophesied, "Ānanda will attain supreme deliverance in this life itself". And that is indeed what happened immediately before the First Council.

ABHIBHŪ SUTTA (2), enumerating the eight spheres of mastery (*abhibhāyatana*, *A*. IV, 305). With slight variations the formulae are also found in the *Mahā Sakuludāyi Sutta* (*M*. II, 13) and in the twentieth chapter of the Eka-nipāta (*A*. I, 39) where they are ranked among 192 practices of development of mental concentration, which will not be empty of gain, even if they are pursued for so short a duration as the snapping of one's fingers. It is not the body which is to be mastered, but the material objects of one's contemplation, whereby the required state of mental ecstasy is brought about. These material objects, external to one's self, are: limited (fair or foul), or boundless (lovely or ugly), either experienced while being personally conscious of the corporeal process of experience, or experienced while being unaware of the physical process. These four categories slightly differ in the Abhidhamma exposition (*Dhs*. 204) where consciousness of any part of the corporeal process is excluded from all spheres of mastery (*arūpasaññī* is not "perceiving the immaterial", but "not perceiving the material"). The commentary hereon emphasises: "a person devoid of the perception of the preparatory process (of mental absorption) in his own bodily frame" (*ajjhatta-rūpe parikamma-saññā virahito*: *DhsA*. 188 ff.).

The four other stages of mastery refer to the coloured appearance of form seen exterior to one's self: blue, yellow, red and white. There is no personal awareness of the bodily function at the time.

The spheres of mastery (*abhibhāyatana*) consist in mastering the various concentration devices (*kasiṇa*) thereby leading to attainment of concentration (*appanā samādhi*) and complete mental absorption (*jhāna*), which final stage is expressed in the words "I know, I see," indicating that he "has arisen from, and is not still within, the attainment" (*appanā* : *DhsA*. 188).

H. G. A. v. Z.

ABHIBHŪTA, a rājā of the city of Veṭṭhipura. Once, when the Buddha was in this city, the rājā visited him, listened to him preaching and on the following day served him with alms. After the meal, the Buddha made him rejoice in the merit of his act and discoursed to him on many a detail. So pleased was Abhibhūta at what he heard that he renounced his kingdom and, having entered the community of monks, won arahantship.

Three verses ascribed to him are contained in the *Theragāthā* (*vv.* 255–257). These constitute an exhortation to his kinsmen that they should overcome repeated birth which is full of sorrow by diligence in regard to the doctrine and discipline of the Buddha. The commentary states that these were uttered when his relations, ministers, followers and subjects came to him and lamented that they were without a leader as a result of his renunciation (*ThagA*. II, p. 104).

The last two verses are found elsewhere also. In the *Saṃyutta Nikāya* (I, 156) these two extra verses are uttered by Abhibhū, a chief disciple of the Buddha Sikhin, in his presence, while they were standing in the Brahma world in the midst of a display of miraculous powers. The last verse by itself is recorded also as having been said by Gotama, the Buddha, in the *Mahā Parinibbāna Suttanta* (*D.* II, p. 121), while the second verse is quoted by Nāgasena as spoken by the Buddha (*Miln.* p. 245). A Sanskrit version occurs in the *Divyāvadāna* (p. 300).

Malalasekera thinks that Abhibhūta is evidently to be identified with Citakanibbāpaka thera of the *Apadāna* who, as his very epithet denotes, had extinguished the flames of the pyre on which the remains of Buddha Vessabhū were cremated (*DPPN*. I, 142). The *Theragāthā* commentary in its short narrative on Abhibhūta has, in fact, cited the relevant verse from the *Apadāna* where allusion is made to the extinguishing of the flames. The commentary adds that while people were striving to collect relics, Abhibhūta alone extinguished the flames of the pyre with scented water, and that in consequence of this meritorious act he sojourned among gods and men, till finally he was born in the family of the rājā of Veṭṭhipura.

H. S. C.

ABHIBHŪYA, or "Surpassing," (var. for Abhisūrya q. v.), name of a future Buddha of this "auspicious world age" Puṣpika.

ABHIBHŪYAYAŚA(S). As proclaimed by the Buddha Śākyamuni to the five Bhadravargīya monks, Abhibhūyayaśa(s) or "Surpassing Fame" is the name of one of the thousand Buddhas who must arise in this "auspicious world age" named Puṣpika. He will be possessed of a radiance of one yojana (*Mhvu.* III, 330.14—text : Abhibhūyaśa).

ABHIBHUYYA SUTTA, a sutta of the third *vagga* of the *Mātugāma Saṃyutta* of the *Saṃyutta Nikāya* (IV, 246). The Buddha says that a woman who possesses the five powers (*bala*) of beauty (*rūpa*), wealth (*bhoga*), relatives (*ñāti*), sons (*putta*) and virtue (*sīla*), gets the better of her husband (*sāmikaṃ abhibhuyya*).

ABHICĀRA-KARMAN, a Sanskrit work by Ācārya Candragomin (Gliṅ-pa). It has come down to us only in its Tibetan translation, the *Mṅon-sbyod-kyi las*, and is found in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. The translator's name is not recorded (Cordier, II, p. 362, No. 158).

ĀBHICĀRUKA, that which pertains to hostile or black magic, the performance or practice of such magic being called *ābhicāruka-karma*. It is frequently mentioned in the *Mañjuśrīmūlakalpa*. The black magician employs spells for a malevolent purpose. See further ESOTERIC RITES.

ABHIDHAMMA (Skt. ABHIDHARMA).* The title given to the third (and last) collection, or Piṭaka, of the Buddhist canonical books ; it is also a name for the specific method in which the Dhamma, or doctrine, is set forth in those books, the subject-matter thereof and the literature connected with it.

I. **Introductory**. Both historically and logically, the Abhidhamma represents a development of the Dhamma or the doctrine of the Buddha. It enjoys equal canonical authority with the Dhamma and its texts have been compiled into a separate Piṭaka. Traditionally, the *Abhidhamma Piṭaka* is mentioned after the *Vinaya* and *Sutta Piṭaka*. It is probable that each of the early Buddhist schools had its own Abhidhamma texts if not a whole Abhidhamma Piṭaka, but only two of them have handed down their complete *Abhidhamma Piṭaka*. Of these the *Abhidharma Piṭaka* of the Sarvāstivādins is preserved to us only in its Chinese and Tibetan translations. The Theravādins, who have actively flourished to the present day in south-east Asia, alone have been able to preserve their *Abhidhamma Piṭaka* in its original Pali version.

The Abhidhamma, which expounds the word of the Buddha in terms of an ethical realism, is a philosophy with an essentially religious basis.

* The present article has been compiled from three articles, written separately, by Dr. W. S. Karunaratne and Mr. H. G. A. van Zeyst of Ceylon and Dr. Kōgen Mizuno of Japan. Broadly speaking, the former two give an account of Abhidhamma from the point of view of Theravāda, the latter from that of Mahāyāna. As these accounts are largely complementary, the greater portion of each article has been reproduced here, credit being given to each author for his contribution. Though not quite successful, an attempt has been made to avoid undue overlapping.—G. P. M.

Especially among the Theravāda Buddhists it is venerated as the finest flower of Buddhist philosophy, and both monks and laymen assiduously study and practise it throughout south-east Asia, more keenly in Burma than in any other country.

W. S. Karunaratne.

There is reason to think that each of the early schools of sectarian Buddhism possessed at one time what corresponded to the *Tipiṭaka* of the Theravādins. In the Buddhist texts which now exist in Chinese translation, we find most of the triple texts of the Sarvāstivāda School. According to Hsüan-tsang's itinerary, he learnt the Abhidharma of the Sammitīya School in the Parvata country, in north-west India, and that of the Mahāsaṅghika at Dhanakaṭaka, in southern India. And when he returned to China he took with him the sacred Buddhist texts of various schools from India. They included 14 books of the Theravāda, 15 books belonging to the Mahāsaṅghika, 15 to the Sammitīya, 22 books to the Mahiṃśāsaka, 19 books of the Kāśyapīya, 42 books belonging to the Dharmaguptaka, and 67 books of the Sarvāstivāda. Of these books, what he translated were mainly the philosophical books of the Sarvāstivāda ; all the others remained untranslated and the original texts have been lost. Again, according to the introductory remarks prefaced to I-tsing's Travels on the South Seas 南海寄歸傳 (Taisho, 2125) there were in India at that time four schools (the Mahāsaṅghika, the Sthaviravāda, the Mūlasarvāstivāda and the Sammitīya) which represented the eighteen schools, and all four of them had the Tripiṭaka. They consisted of either 300,000 or 200,000 verses.

In this case, what were called the Tripiṭaka of various schools were the fundamental books. The commentaries and the manuals were, as a rule, excluded. As for the philosophical books, the fundamental philosophical books (*mūla-abhidharma*) regarded as sacred were the seven Abhidhamma books of Pali Buddhism and the corresponding seven books of the Sarvāstivāda. The commentaries, &c., of later production were not regarded as sacred literature. That was the proper arrangement and Pali Buddhism followed it. As for the scriptures in Chinese translation, however, there is no such discriminatory arrangement. There we find that the commentaries and manuals, produced later than the fundamental books, and their sub-commentaries are equally ranked with philosophical texts (*Abhidharma-piṭaka*). Sometimes, we find later schools of Mahāyāna Buddhism, such as the Yogācāra School, using the name Abhidhamma for books belonging to the school, without consideration of their contents, e.g., the *Mahāyāna-abhidharma-sūtra* or the *Mahāyāna-abdhidharma-samuccaya*.

Kōgen Mizuno.

II. **Meaning of the word.** The term ' Abhidhamma ' is a prepositional compound formed out of ' abhi ' and ' dhamma ' and the fact clearly suggests that its origin and emergence are subsequent to that of Dhamma. The term has obviously been coined to indicate a difference between what it denotes and the Dhamma. According to the commentator Buddhaghosa *abhi* when prefixed to *dhamma* conveys the sense of 'supplementary Dhamma' and 'special Dhamma'.[1] This well accords with what we know about the nature and character of the Abhidhamma texts. Tradition itself has recognised a distinction in style between the Dhamma and the Abhidhamma.[2] Thus, the suttas embodying the Dhamma are said to be taught in the discursive style (*sappariyāya-desanā*) which makes free use of the simile, the metaphor and the anecdote. This is contrasted with the non-discursive style (*nippariyāya-desanā*) of the Abhidhamma which uses a very select and precise, and therefore thoroughly impersonal, terminology which is decidedly technical in meaning and function. The same distinction is clearly implied in the separate mention of the two modes, *Suttanta-pariyāya* and *Abhidhamma-pariyāyā*.[3] Buddhaghosa tells us[4] how tradition recognised the distinctive character of each Piṭaka. The Vinaya is the discourse on injunctions (*āṇā-desanā*) ; the sutta is the popular discourse (*vohāra-desanā*), while the Abhidhamma is the discourse on ultimate truths (*paramattha-desanā*). The term Abhidhamma, used both as a neuter[5] and as a masculine.[6] is already attested in the Vinaya[7] and in the Nikāyas[8] and much more frequently in the post-canonical works.[9] In its earlier usage, it refers largely to the subject-matter of the special doctrine and sometimes possibly to the distinct techniques employed by the latter.[10] In some of the later works included in the *Sutta-piṭaka*[11] and in the commentaries[12] and chronicles[13] the term Abhidhamma is increasingly used in its literary sense to refer to the text or to books of a special collection. The derivative *Ābhidhammika* (q.v.)[14] refers to one who is skilled in the doctrine pertaining to ultimate truths. Abhidhamma, itself a technical term, has given rise to a number of other compounds which perform a conveniently useful technical function in the discussions relating to the special doctrine. Thus, Abhidhamma-mātika[15] = subject-head of

the special doctrine ; Abhidhamma-tanti[16] = Abhidhamma-pāli[17] = text of the special doctrine ; Abhidhammanaya[18] = method or technique of the special doctrine ; Abhidhamma-bhājaniya[19] = analysis on the basis of the special technique; Abhidhamma-kathā[20] = discussion pertaining to special doctrine ; Abhidhamma-desanā[21] = exposition of special doctrine ; Abhidhamma-virodha[22] = contrary to special doctrine, and so on.

W. S. K.

*

The occurrence of the word *abhidhamma* in the *Mahāvagga*,[23] connected with instruction in the rules of monastic life (*abhivinaye vinetum*) deprives the word of the special meaning given to it in later works. In the Vinaya text *abhidhamma* and *abhivinaya* do not refer to anything deeper than "what pertains to the dhamma and vinaya", the capability of teaching which is considered to be an essential requisite in any teacher-monk, and which, therefore, cannot be taken as a profound study and exposition of psycho-analysis. As Oldenberg says[24] : "The only passage in the Vinaya which really presupposes the existence of an *Abhidamma-piṭaka* is one in the *Bhikkhunī-vibhaṅga*[25] : 'If a nun, having asked for permission to put a question regarding the Suttanta, would do so in regard to the Discipline or the Abhidhamma, there is an offence of expiation.'" This view is supported by I. B. Horner[26] who says : "Yet the very presence of the word *gāthā*[27] is enough to preclude the term *abhidhamma* from standing for the literary exegesis of that name, for no reference to the third Piṭaka as such would have combined a reference to part of the material, verses, which one of the Piṭakas finally came to include." The "only" passage in the *Bhikkhunī-vibhaṅga* quoted above is then "unhesitatingly assumed to be an interpolation" by Oldenberg.

The earlier uses of the term *abhidhamma* do not, therefore, convey any suggestion of transcendentality, although the translation of the term as title of an entire collection of psycho-logico-eschatological treatises naturally will have to emphasise the special meaning of the prefix *abhi*.

Abhidhamma then has been translated as "special dhamma" both by E. J. Thomas[28] and G. P. Malalasekera[29] referring to the mode of teaching found in the *Abhidhamma Piṭaka* which is so different from the method employed in the suttas. The translation by F. L. Woodward[30] as "extra doctrine" is not warranted owing to its connection with *abhi-vinaya* which can only mean "pertaining to the discipline". And this applies also to his translation of *abhidhamma* as "further dhamma"[31] in its connection with "further discipline". E. M. Hare's translation[32] : "More Dhamma" is also joined to the "More-Discipline", and cannot, therefore, refer to the *Abhidhamma Piṭaka*. even though the commentary tries to explain it in that way. Here also, therefore, the reference is not to *more* dhamma but just to "being questioned on what pertains to the dhamma and what pertains to the discipline".

At another place, however, *abhidhamma* is used together not with *abhivinaya*, as in all the previous instances, but with *vedalla*, which are suttas in the form of questions. These catechetical suttas are usually mentioned as one of the nine classes of Buddhist texts (*navaṅga-satthu-sāsana*) and cannot, therefore, be taken as a general name for the whole *dhamma* in opposition to *abhidhamma*. The *Anāgata-bhaya-sutta*,[33] speaking of *abhidhamma-katham vedallakatham*, only gives two instances : "a talk pertaining to teaching, a talk pertaining to questioning".

Again, the word is used in the *Citta* (*Hatthisāriputta*) *Sutta*[34] and in the *Mahā-gosiṅga Sutta*[35] where Elders are said to have "a talk pertaining to the doctrine" (*abhidhammakatham*). There is nothing in these suttas to indicate that the word is being used in the specialised meaning of the system of philosophy, collected in the *Abhidhamma Piṭaka* ; whereas its use in the *Gulissāni Sutta*[36] is once more linked with that "pertaining to the discipline" (*abhivinaya*).

It has, therefore, been suggested by Horner[37] that the word *abhidhamma* occurring in the suttas and *Vinaya*, although not indicating a complete and closed system of philosophy, "had been intended to stand for something more than *dhamma* and *vinaya*, perhaps in the sense of some more than usually complete grasp and mastery of them due to further study and reflection." The prefix *abhi-* has been compared to that other prefix *adhi-* in combination with *sīla*, *citta* and *paññā*, higher morality, i.e., more than the five precepts, higher thought and higher wisdom, which are related to the spheres of existence above the world of sense-pleasures[38]

H. G. A. v. Z.

III. Verbal definitions. In China, Abhidharma is translated as "great dharma (law)" (大法) "peerless dharma", (無比法), "excellent dharma" (勝法) and "the study about dharma" (釋法) or "facing dharma" (對法). According to the commentary of the *Ekottara-āgama*, "Abhidharma is the great dharma. It is called great because it is great knowledge of the four truths and destroys wrong views, ignorance and delusion. And the

eight forms of intelligence, ten forms of wisdom and the right view of purity help to surmount the obstacles of the three realms of sentient beings. Therefore it is called the peerless dharma."

Another source says, Abhidharma is called 'excellent or peerless dharma' because it reveals wisdom. Again, it is called 'proceeding dharma' (向法) because cause proceeds to effect, and it is called 'dharma-confronting' because wisdom confronts its objects. Further the *Mahāvibhāṣā-śāstra* gives various theories as to the verbal meaning of Abhidharma, namely, (*a*) The ābhidharmikas give the following reasons: it is able to investigate and discriminate the characteristics of phenomena thoroughly well; it is able to reflect on the various natures of phenomena and penetrate into them; it is able to perceive and realise phenomena its dharma is very profound and reaches the very foundation; various sacred eyes of wisdom are purified by this Abhidharma; it is able to reveal the hidden and subtle nature of things; the expounded dharma is not inconsistent; it can conquer all heretic doctrines. (*b*) Vasumitra gives the following reasons: it is always able to investigate the nature and characteristics of phenomena, expounded in the sūtra, &c.; it explains the twelve-member causal law and the inherent nature of phenomena; it helps us to understand the Four Noble Truths thoroughly; it studies and practises the law of the Noble Eightfold Path; it enables one to realise Nirvāṇa; it arranges phenomena in various ways by means of profound doctrines. (*c*) Bhadanta's theory: it is called Abhidharma because it collects, arranges and discriminates such problems as defilement, purity, bondage, emancipation, degeneration and elevation, by means of sentences, phrases and words. (*d*) Pārśava's theory: it is called Abhidharma because it is ultimate, excellent and infallible wisdom. (*e*) Ghoṣaka's theory: it is called Abhidharma because, through it, one who seeks emancipation, following the right practice, gets clear insight as to suffering, cause and cessation of suffering, the path, the preparatory process, the penultimate path, the process of emancipation, the special higher process, the noble paths and the noble fruits. (*f*) The Dharmaguptakas' theory: it is called Abhidharma because of the predominance of dharma. (*g*) The Mahiṃśāsakas' theory: it is called Abhidharma because its wisdom ably illuminates the phenomenal. (*h*) The Dārṣṭāntikas' theory: Nirvāṇa is supreme amongst all things and the Abhidharma is next to it and therefore it is called Abhidharma. (*i*) The Śabdavāda theory: *a* designates removal and *bhi* designates discrimination. It (Abhidharma) abandons fetters, bad predispositions, trivial stains, the outburst of bias, and discriminates aggregates (*skandha*), sense organs and perception and their objects (*dhātu* and *āyatana*), causal law, truth (*satya*), material and spiritual nutriment (*āhāra*), the fruition of the path (*śrāmaṇyaphala*), factors of supreme knowledge (*bodhyaṅga*), &c., and therefore it is called Abhidharma. (*j*) Buddhapālita's theory: *abhi* means appearance and this Abhidharma draws all the good and causes various factors of supreme knowledge to appear. Therefore it is called Abhidharma. (*k*) Buddhadeva's theory: *abhi* means predominance and this Abhidharma is called Abhidharma because it is predominant. (*l*) Vāmalabdha's theory: *abhi* means veneration and this Abhidharma is called Abhidharma because it is venerable and honourable.

The above are verbal definitions of Abhidharma given in the *Mahāvibhāṣa-śāstra*. (s.v. ABHIDHARMA-MAHĀ-VIBHĀṢĀ). Vasubandhu defines and explains it in a nutshell in his *Abhidharmakośa-śāstra*. "Abhidharma" means "facing the dharma" and dharma designates Nirvāṇa and the four truths as the law of the ideal. That which confronts this dharma is Abhidharma and in its primary sense it is pure and immaculate wisdom, but in its wordly sense, preliminary wisdom, anterior to pure immaculate wisdom, and abhidharma books themselves are called Abhidharma. This maculate wisdom includes innate wisdom, wisdom consisting in learning and hearing, wisdom consisting in thought, wisdom acquired by practice.

K. M.

IV. **The origin of the Abhidhamma.** A critical study of the texts of early, medieval and modern Abhidhamma leads us to the conclusion that the origin and development of the Abhidhamma extended over a considerable period of gradual and systematic historical evolution. Reasons of orthodoxy, however, prevented the early Buddhists from cultivating or approving a strictly historical view of this development. The traditional claim, shared alike by the Theravādins and the Sarvāstivādins, ascribed the Abhidhamma, both in regard to its historical origin as well as in regard to its literary form, to the Buddha himself. According to the *Abhidharmakośavyākhyā* of the Sarvāstivādins, the Buddha himself taught the Abhidharma on a variety of occasions.[39] The *Atthasālinī* of the Theravādins, which describes the Buddha as the first Ābhidhammika,[40] goes to the length of claiming that the seven treatises of the *Abhidhamma Piṭaka* were themselves uttered by the Buddha.[41] This text, in an interesting and valuable passage, speaks of a twofold origin of the Abhidhamma.[42] In this connection it answers as many as seventeen questions pertaining to the origin, purpose and continuity of the Abhidhamma. According to these answers, the Abhidhamma was inspired by the earnest aspiration for enlightenment, matured through five hundred and fifty births, realised by the Buddha at the foot of the Bodhi tree, in the month of Vesākha. It was reflected upon by the omniscient Buddha, while he was on the seat of enlightenment, during his week's stay at the Jewelled Mansion. It was taught in heaven, that is, in the realm of the thirty-three gods, for the benefit of the latter, that is, for the purpose of enabling them to get across the four floods of life. It was received

39 Part I, 12: evam abhidharmo hi dharma-lakṣaṇopadeśa-svarūpo vineyavaśāt tatra tatra bhagavatoktaḥ.

by the gods, and is studied by the venerable seekers after perfection as well as by the virtuous worldly folk. It has been mastered by those who have extinguished their depravities, and is held high by those to whom it was meant. It is the word of the Buddha, and has been handed down by the succession of teachers and their pupils. Through Sāriputta it has been successively handed down by Bhaddaji, Sobhita, Piyajāli, Piyadassī, Kosiyaputta, Siggava, Sandeha, Moggaliputta, Visudatta, Dhammiya, Dāsaka, Sonaka, Revata and others up to the time of the Third Council and thereafter by their pupils.[43] Through the traditional succession in India it was brought to the island of Ceylon, that is, by Mahinda, Iṭṭhiya, Uttiya, Sambala and Bhaddasāḷa and again it was handed down in its new home by their pupils.[44]

This traditional account no doubt contains valuable historical information, specially with reference to its latter part. The orthodox view is, as already mentioned, that the Buddha not merely inspired the later growth of the Abhidhamma but was himself responsible for the literary form which the seven treatises have assumed within the *Abhidhamma Piṭaka*. There is, however, internal evidence in the Buddhist texts themselves which militates against such a claim. It is very significant, for instance, that there is no reference, even nominal, to the Abhidhamma in what are generally regarded as the earliest authentic texts of early Buddhism such as the *Sutta-nipāta* and the verse portions of the *Jātaka* tales. And, as has been mentioned already, even in those places in the *Dīgha*, *Majjhima* and *Aṅguttara Nikāyas* where the term Abhidhamma occurs, the reference is not to a literary compilation or composition but to a distinct technique of analysing the Dhamma or to a literary classification based on this technique.[45] There is also a more positive kind of evidence which tends to confirm the critical opinion of modern scholarship in regard to the origin of the Abhidhamma. Buddhaghosa himself records that the ascription of the Abhidhamma to the Buddha had been questioned even in the early days of Buddhism.[46] The monk Tissabhūti of Maṇḍalārāma held the view that the Buddha did not preach the Abhidhamma and cited the *Padesavihāra Sutta* as supporting him, while, on the other hand, the monk Sumanadeva tried to persuade his listeners about the Buddha's authorship of the Abhidhamma by citing the orthodox tradition.[47] Critics raised the same question at a later date in respect of the *Kathāvatthu*. Buddhaghosa quotes the Vitaṇḍavādins (probably meaning cynical sophists) as saying that the *Kathāvatthu* was composed by the elder Moggaliputtatissa two hundred and eighteen years after the death of the Buddha, and that, therefore, it ought to be rejected as having been spoken by the disciples.[48] While being constrained to admit the truth of this historical event, Buddhaghosa, however, forestalls the objection by holding that in the case of this book the Buddha had laid down the list of subjects and the appropriate technique for their elucidation on the part of his disciple who was destined to be born over two hundred years after his own death.[49]

It is generally accepted that the Abhidhamma originated and developed out of the Dhamma. The term Dhamma, in its normative aspect, bears the widest meaning and comprehends the entire teaching or doctrine. The Dhamma was taught to composite audiences as and when occasion presented itself to the Buddha, and the language used was largely non-philosophical with a fair admixture of the colloquial. As the understanding of the disciple became deeper the necessity arose for a more precise statement of the nature of reality. The Dhamma was capable of being understood and grasped only by the wise even though it was presented frequently in popular discourse. Hence there were occasions when the doctrine was not well grasped by some disciples even after the Buddha had taught the sermon. On such occasions, as the suttantas themselves record, it was customary for these disciples to betake themselves again either to the Buddha or to one of his initiated disciples, who thereupon undertook a further detailed exposition of the knotty problems involved. This detailed exposition and explanation actually took the form of a commentary and the beginnings of the Abhidhamma can be partly traced to it.

Especially because of the fact that the greater part of the Dhamma was taught in a free style, the rich and varied contents of the suttas lent themselves to a wide variety of interpretations. As the word of the Buddha gradually grew into a religion and philosophy professed by an increasing number of people, the necessity arose for a precise and more categorical presentation of the doctrine. This was all the more necessary in view of the fact that other contemporary schools of religion and philosophy were turning out their own literature in which they attempted to present the doctrines precisely and systematically. The richness of the philosophical content of the Buddha's discourses allowed for the possibility of divergence of opinion even among the Buddhist monks themselves.

That this was actually so is indicated by the early history of the emergence of the Buddhist schools. Each school tried in its own way to render explicit what was only implicit in the earlier discourses of the Buddha. This process was probably accelerated after the Council of Vesāli which was exclusively devoted to the discussion of ten points of monastic discipline. It was at the Council of Pāṭaliputta, in Asoka's reign, that controversial points were settled and incorporated in the canonical texts under the name *Kathāvatthuppakaraṇa*. It would appear, therefore, that the various schools with schismatic tendencies had their origin between the two later Councils. In the Pāṭaliputta Council the dispute was no longer about rules of discipline, as at Vesāli, but about the finer points of psychology and logic. These divergences were naturally

reflected in the Abhidhamma works that were in process of being compiled or composed at the time.

This also explains the reasons that led to the convention of many assemblies and councils for the purpose of determining the exact meaning of " points of controversy ". The differences came to be more exaggerated when each school held its own closed sessions to decide the import of the doctrine. The earlier life of eremitical mendicancy gave place gradually to one of settled monasticism and, as a result of the geographical expansion of early Buddhism, monasteries came to be established in scattered places, remote from each other. The life of leisure thus secured induced the monks to engage themselves in philosophical and literary pursuits and the geographical isolation of the monasteries resulted in the growth of independent schools of thought. This explains at once many of the disparities between the various schools in regard to the Abhidhamma. This also contrasts with the position relating to the Dhamma. Whereas there is a remarkable degree of agreement among the early schools on the interpretation of the early teachings included in the Dhamma, there is a marked lack of such agreement in regard to the doctrines contained in the Abhidhamma. The Dhamma was shared in common by all Buddhists prior to their secession into schools and their geographical separation from one another. In view of the differences among the schools on the subject of the Abhidhamma each felt the need for the compilation of a separate Piṭaka for the special and elaborated doctrine. Even from the point of view of literature, we see the contrast between the Dhamma and the Abhidhamma. There is an almost complete correspondence between the *Sutta Piṭakas* of the early schools, as the available versions in Pali, Sanskrit, Chinese and Tibetan show. But in the case of the *Abhidhamma Piṭakas*, there is not even correspondence in name in regard to the titles of the canonical Abhidhamma texts, let alone agreement in doctrine. This disparity in literary works is especially clearly illustrated by a comparative study of the Sarvāstivāda and the Theravāda. We can, therefore, say that while the Dhamma belongs to the period of undivided Buddhism of the earliest days, the Abhidhamma belongs to the period of divided Buddhism. Thus alone can we account adequately for the wide measure of divergence in regard to the *Abhidhamma Piṭakas* and their subject-matter. From its very inception and throughout the medieval and modern periods, the Abhidhamma evolved and developed in the isolation of the separate schools.

V. **The method of the Abhidhamma.** The method of the Abhidhamma (*Abhidhammanaya*) is distinguished from that of the Suttanta. The difference between the Dhamma and the Abhidhamma consists precisely in the distinction between two methods. This method assumes the form of a special kind of analysis called *Abhidhamma-bhājaniya*, to be distinguished again from the *Suttanta-bhājaniya*. In the suttas there is frequent reference to loose and, therefore, vague and unscientific popular designations such as the term *puggala* for an individual. In the Abhidhamma, on the other hand, an impersonal technical terminology has taken the place of popular names. The individual, for instance, is considered here only in terms of so many categories such as *khandha*, *dhātu* and *āyatana*, in a more detailed and thorough way than is to be found in the suttas. Mrs. Rhys Davids (*ERE*. I. 19) speaks of the *Abhidhamma* as a recount of suttanta doctrines, with analysis and elaborations and comment : hence, not a positive contribution to the philosophy of early Buddhism, but an analytic, logical and methodological elaboration of what was already given in discourses.

The analysis in the Abhidhamma proceeds with the aid of the method of induction. The progress from the particular to the general is always to the advantage of the Ābhidhammika. The observation of the nature and function or behaviour of particular objects and events and persons leads naturally to the statement of fundamental characteristics common to all phenomena. In the ultimate analysis, this method yields us knowledge about the first principles that govern the whole universe. It is this knowledge, elevated to the level of immediate intuition through the systematic purification and development of the human mind, that finally results in the realisation of full enlightenment. This explains why the Ābhidhammika shuns the method of deduction which only breeds endless speculation to becloud the purity and openness of the mind of the truth-seeker.

The method of the Ābhidhammika is not, however, confined only to the analytical. The Abhidhamma denies the competence of mere analysis to yield us a comprehensive statement of the nature and function of events and objects. Hence the Ābhidhammikas have recognised the importance of synthesis as a method that supplements analysis. In the *Abhidhamma Piṭaka* of the Theravādins the method of analysis is illustrated in the *Dhammasaṅgaṇi*, while the *Paṭṭhāna* is wholly devoted to the application of the method of synthesis. Analysis helps us to know the participial nature of phenomena. Synthesis, on the other hand, gives insight into the dynamic function, as well as the cause for the separate identity, of the same phenomena.

The method of the Abhidhamma has given us a description of phenomena as they are made available to perception. This attempt to undertake only a descriptive analysis of empirical reality has eliminated the possibility of the intrusion of speculative matter into the Abhidhamma. The purpose of the Abhidhamma is solely to understand the world around and within us and the only function of the Ābhidhammika, which can be both ethically edifying and practically useful, is to describe the data as they are actually presented to perception. This invests the facts stated by the Abhidhamma with a scientific character.

W. S. K.

Buddhist philosophy is not a mere speculation on mental analysis. It is no doubt analytical through and through, so much so that the Theravāda school, whose system of philosophy is now under discussion, was earlier known as Vibhajjavāda, the Analytical School. But it is analysis with a purpose, and

the purpose is ethical. And thus we have a psychology of conduct as well as a moral code based on mental analysis. Will (*chanda*), volition (*cetanā*), adjustment of attention (*cetaso abhiniropanā*) or aspiration and intention (*saṅkappa*) show the working of the mind as it inclines with craving to either unwholesome or the so-called good. And that is exactly the content of that Compendium of Mental States, the *Dhammasaṅgaṇi*, the first book of the seven which constitute the collection of philosophical works, the *Abhidhamma Piṭaka*.

It is obvious that the Abhidhamma as a whole and the *Dhammasaṅgaṇi* in particular are works of serious study. And in this is found the great difference in style and composition, in method of exposition and argument, and even in the basic approach to the subject between the *Sutta-piṭaka* and the *Abhidhamma-piṭaka*. For, the suttas are expositions in the form of discussions and discourses, giving details of circumstances and of the people taking part therein, whereas the Abhidhamma teaching is entirely devoid of explanation (*nippariyāya*). It is certainly not a handbook for beginners and a fair amount of at least acquaintance with the subject matter is presupposed. Neither does it essentially add to the knowledge of the Buddha-dhamma which could be gleaned from the suttas. But whereas this doctrine is found scattered, incoherently, throughout the many thousands of suttas, this same doctrine is methodically arranged and systematically explained in the various books of the Abhidhamma, without historical detail regarding persons or occasions, frequently in the academic form of question and answer. A summary at the end of a chapter adds to its scholastic appearance. Thus we have a plan (*uddesa*), an exposition (*niddesa*) in question and answer, rounded off with a summary (*appanā*).

In the suttas the doctrine is given with a practical purpose, the development of morality, of insight, the attainment of realisation. In the Abhidhamma the preacher has been replaced by the scholar, whose main interests are definitions, technical determinations, analytical knowledge and synthetic logic. Yet the goal is the same for both. The suttas will preach of altruistic love and selfless virtue, of mental absorption in meditative exercises, of purity of living, leading to clarity of thought. The Abhidhamma will analyse the process of thought, the components of corporeality and mentality, and thereby prove that there is no abiding entity which could be called a soul. And thus the two meet again in the realisation of soullessness (*anattā*) through self-renouncing virtue and self-renouncing wisdom.

H. G. A. v. Z.

VI. **The Characteristics of Abhidhamma.** In a preceding section we gave verbal definitions found in early literature. These are definitions either of Abhidhamma in its final and perfected form or of Abhidhamma as it should be. They do not denote the actual or historical Abhidhamma in its various stages of development. In this section, we shall give the characteristics of Abhidhamma as seen in the existing Abhidhamma literature of various stages.

The original Abhidhamma was a sort of commentary on the sutta which was the Buddha's teaching, as is seen in the juxtaposition of the pair (*abhidharma* and *abhivinaya*) found in the Nikāyas. Gradually, annotation and explanation on the teaching (*dhamma*) and precept (*vinaya*) began during the Buddha's lifetime or immediately after his parinibbāna. These were called *abhidhamma* and *abhivinaya* respectively. In the early period, they were included in the writings as commentary, sutta and systematised sutta. They are the oldest form of Abhidhamma. Their characteristics were: (1) They annotated and explained the sutta texts and gave definitions and explanations of terminology. (2) They arranged and classified numerical doctrines according to numerals. (3) They systematised the doctrines preached in the suttas and established a consistent method of practice. These were the distinctive characteristics of the earliest Abhidhamma. These abhidhammic suttas were attributed to the Buddha or to his famous disciples. They are now included in the sutta collection. These Abhidhammic suttas developed into independent Abhidhamma which may be called the fundamental Abhidhamma. They were products of growth during a long period. In accordance with the various stages of development the methodology too underwent some changes. The early fundamental Abhidhamma had the abovementioned three qualities in common with the abhidhammic suttas which preceded it. The only difference was that in the former the qualities were more developed. Accordingly, they still consisted of explanations and interpretations of the suttas or their arrangement or organisation. But in the next stage, Abhidhamma gradually deviated from the suttas and came to have contents of its own. The methodological characteristics of this (second) period were: the subjects of discourse were classified by some abhidhammic standards, by arrangement into various branches (P. *Pañhapuccha*); consideration of the subordination of concepts of the objects of discourse according to their connotation and denotation (P. *saṅgaha*, Skt. *saṅgraha*); consideration of concurrence and correspondence of various mental functions, &c., (P. *sampayoga*, Skt. *samprayoga*).

By means of these three methods, the conceptual definition of the objects of discourse became very exact, and mind and matter were considered as a whole. In early Buddhism they were explained only as far as they had any connection with practice and emancipation. But here they came to be examined as a whole and objectively. Consequently, the method of classification used by original Buddhism and the early Abhidhamma proved to be inadequate. And there arose the method of classification unique to the Abhidhamma of this period.

Let us explain it concretely. In original Buddhism and the early Abhidhamma, matter and mind were synthetically classified by such categories as five *skandhas*, twelve *āyatanas*, eighteen *dhātus*. But in Abhidharma of, e.g., the Sarvāstivādins from the middle period onward, all forms of existence were classified into five categories, namely: matter (*rūpa*); mind (*citta*); attributes of mind (*cetasika*); that power which belongs neither to matter nor to mind and yet activates matter and

mind (*citta-vippayutta-dhamma*); and, the unconditioned (*asaṅkhata-dhamma*).

But this classification varies more or less with schools. On the other hand, in the late Abhidhamma, all things, from temporal and local relations, are considered in terms of conditions or causes of their birth, rise, decay and extinction. Again, some schools consider the accomplishment or non-accomplishment of some phenomenon by the influence of matter and mind. Hitherto, we have stated the characteristics mainly common to all schools of Abhidhamma.

K. M.

VII. **The subject-matter of the Abhidhamma.** Our knowledge of the internal and external worlds is obtained through sensory perception. This world of sense experience is comprehended by mind and matter. Reality, however, is not exhausted by the data of the six sense organs. Ultimate reality transcends the empirical world of relativity. The totality of life is, therefore, fully exhausted by mind, matter and ultimate reality. These precisely define the scope and limit of the subject-matter of the Abhidhamma. The data of sensory perception are either corporeal or psychological. Every datum of corporeality or psychology is found to be an instance of contingent existence. The contingent is that which is subject to change and evolution. All corporeal and psychological data are, therefore, of the nature of phenomena, for the non-contingent noumenal nature said by speculative philosophers to underlie them is not yielded to sensory perception. The fundamental generic term which comprehends all phenomena is dhamma. The Abhidhamma is largely devoted to the discussion of *dhammā* or phenomena. In so far as the empirical world is concerned, the Ābhidhammika is wholly interested in the modal view of reality. In the view of the Ābhidhammika, there is nothing in all the data of sensory perception which does not admit of the nature of dhamma, for all phenomena are evanescent, non-substantial and lacking in perfect harmony and consistency. As a result of the application of this test of reality, the discussion of *a priori* categories such as God and soul are not found in the Abhidhamma.

This leads to the Abhidhamma definition of what is real in the fundamental sense. This is none other than *paramattha*. There are four types of this reality, namely, mind (*citta*), co-efficients of mind (*cetasika*), matter (*rūpa*) and ultimate reality (*nibbāna*). Of these four types the first three are empirical and mundane, while the fourth alone is transcendental. The reality of the first three consists in their capacity for change and evolution. *Paramattha* means fundamental category. The four types of *paramattha* are based on a distinct theory of degrees of truth and reality. Although all four types of reality are commonly called *paramattha*, there is a vital difference in the levels of reality as between the first three and the fourth. The former belong to the realm of empirical reality while the latter belongs to the transcendental realm of the unconditioned absolute. Mind and its co-efficients and matter, although called *paramattha* are not unchanging entities enduring and perdurable in character. They have no underlying permanent nature, while the fourth *paramattha*, namely, ultimate reality, being of a transcendental nature, does not lend itself to verbal predication. The four types of ultimates comprise, according to the Theravāda Abhidhamma, a total of eighty-two categories. The mind is one ultimate, the co-efficients of mind divide themselves into fifty-two ultimate forms, matter is analysed into twenty-eight distinct forms and reality (*nibbāna*) constitutes one ultimate from the transcendental point of view.

The Buddha asserts the supremacy of the mind in the direction and determination of life. The world is led by the mind (*cittena nīyati loko*). This truth leads to the recognition that the proper study of man is his own mind. If the realisation of the truth is possible only through the development and purification of the mind, it then follows that the proper understanding of its nature and function must necessarily precede any serious and successful attempt at such purification and development. Since the Abhidhamma teaches the path to the realisation of truth, the study of the mind has been given the foremost attention and consideration throughout its discussion of reality. The content of the Abhidhamma is thus predominantly psychological. Herein we have the first serious attempt in the history of human thought to place the study of psychology on a scientific footing. It is a system of descriptive and critical psychology which " psychologises " without the aid of a metaphysical psyche. It claims only to describe and analyse psychological situations as they actually occur. The value of the Abhidhamma in this regard lies in the fact that it gives us an insight into the mainsprings of psychological life in the individual.

The thoroughgoing psychological analyses of the Ābhidhammikas reflect the heights to which the science of the mind had attained among the Buddhists at a very early date in the history of intellectual progress. The classical Abhidhamma term for the mind is *citta*. It has other synonyms such as *mano*, *viññāṇa* and *ceto*. The mind is no abstraction. It is participial in formation. Given the necessary conditions, there is origination of consciousness of one sort or another. Hence the mind is always a specific instance consisting of particular characteristics.

The mind, itself considered as a sense-door, is surrounded by five other external sense-doors, the eye, ear, nose, tongue and body. Perception is described and explained on the basis of the stimuli which impinge on the one or the other of the sense organs. Sensory contact comes about as a result of the coming together of a sense organ and its corresponding object. This sensory contact then leads to the birth of sensations of one sort or another (visual, auditory, olfactory, gustatory, tactile and, in the case of the mind, the sixth sense organ, conceptual), which in their turn generate situations which are pleasant, unpleasant or hedonistically neutral. Pleasant sensations conduce to the growth of craving which makes one attach oneself to objects of one sort or another. This attachment provides the

motive impulse which keeps a-going the stream of becoming, which is nothing other than the continuity of life in all its manifestations.

The Abhidhamma deals in detail with the process of perception. According to the Theravāda analysis, this is marked by seventeen distinct stages of cognitive and conceptual activity. From the stage of bare awareness up to the point when there is an indelible registration of the cognised object there are seventeen thought-moments involved. According to this theory it would appear that one moment of physical change is co-extensive and co-eval with seventeen moments of psychological change. Hence, the Abhidhamma says that the mind changes sixteen times as fast as matter. The co-efficients of mind are the various non-cognitive elements and the Theravâda lists them as amounting to a total of fifty-two. These are separately listed, probably on account of their importance for the psychology of human conduct.

The Sarvāstivāda Abhidharma, which analyses all reality into seventy-five ultimate dharmas, adds to the analyses of the Theravādins in many important ways. Their extensive classifications are summarised in the *Abhidharmakośa* and the commentaries thereon, just as those of the Theravāda are summarised in the *Visuddhimagga* and other commentaries on the books of the canonical Abhidhamma.

The analysis of matter in the Abhidhamma is significant especially in view of the modern scientific researches into the subject. Matter, according to the Abhidhamma, is considered as a function and the Theravāda enumerates as many as twenty-eight forms of it.

Perhaps the most important single contribution of the Abhidhamma to the history of thought is its fully developed and thoroughly comprehensive theory of causality and relativity. Being a thoroughly consistent attempt at explaining the dependent origination of all phenomena, it is, in its widest empirical sense, a gigantic theory of cosmic dynamics. The most voluminous work of the Theravāda Abhidhamma, namely, the *Paṭṭhāna*, is wholly devoted to the consideration of this theory from the point of view of its application to the facts of sensory perception.

The Abhidhamma deals at length with the mechanics of mind control and with the techniques of psychic development of the mind. The primary aim here is to indicate the path to the realisation of wisdom or *paññā*. The Abhidhamma concludes with the discussion of the ultimate reality of *Nibbāna*. The latter is more frequently defined in ethical terms and more rarely as the unconditioned Absolute which transcends all antinomies. Throughout this discussion the Abhidhamma avoids the subtler metaphysics of the later Buddhist Absolute Idealists.

W. S. K.

VIII. Subject-matter before the fundamental Abhidhamma. Abhidhamma developed, as we saw above, from the attempt at clarification of what is preached in the sutta. The subject-matter treated there was the teachings of the Nikāyas, especially their creed and doctrines. Let us take as an example the *Paṭisambhidāmagga*, a source literature which existed before the fundamental Abhidhamma. In the book thirty items concerning doctrine are treated. They are (A) knowledge (*ñāṇa*), wrong views (*diṭṭhi*), mindfulness regarding respiration (*ānāpāna*), controlling principle (*indriya*), emancipation (*vimokkha*), sphere of existence (*gati*), karma theory (*kamma*), perversion (*vipallāsa*), path (*magga*), excellent drink (*maṇḍapeyya*). (B) association of quietude and insight (*yuganaddha*), truth (*sacca*), factor of supreme knowledge (*bojjhaṅga*), love or amity (*mettā*), absence of desire (*virāga*), analytic insight (*paṭisambhidā*), wheel of law (*dhammacakka*), transcendental world (*lokuttara*), spiritual power (*bala*), void (*suññā*). (C) great wisdom (*mahāpaññā*), psychic power (*iddhi*), clear understanding of truth (*abhisamaya*), detachment (*viveka*), behaviour (*cariyā*), marvels (*pāṭihāriya*), "equal-headed one", who simultaneously attains an end of craving (*samasīsa*), application of mindfulness (*satipaṭṭhāna*), insight (*vipassanā*), tabulated summary (*mātikā*).

These 30 items are in most cases given in the Nikāyas. But some show further progress. At any rate, these 30 items exhaust the important problems of Buddhist doctrine. But systematisation is not complete. Their arrangement and organisation is seen in the Pali *Vibhaṅga* and the *Dharmaskandha* of the Sarvāstivāda school, treatises representative of the early fundamental Abhidhamma.

IX. The fundamental Abhidhamma of the early period. To begin with, the Pali *Vibhaṅga* arranged the subjects of study into the following 17 items: aggregates (*khandha*), sense-organs and sense objects (*āyatana*), elements (*dhātu*), truth (*sacca*), controlling principle (*indriya*), mode of causes (*paccayākāra*), application of mindfulness (*satipaṭṭhāna*), right exertion (*sammappadhāna*), psychic power (*iddhipāda*), factor of supreme knowledge (*bojjhaṅga*), path (*magga*), meditation (*jhāna*), set of precepts (*sikkhāpada*), analytic insight (*paṭisambhidā*), knowledge (*ñāṇa*), miscellaneous vices (*khuddakavatthu*), and, essence or summary of dhammā (*dhammahadaya*). They include the important problems of Buddhism, such as five khandhas, twelve āyatanas, eighteen dhātus, four saccas, twenty-two indriyas, twelve-member causality, four satipaṭṭhānas, four sammappadhānas, four iddhipādas, seven bojjhaṅgas, the Noble Eightfold Path, meditation of four jhāna and four āruppa samāpatti, the five precepts of the house-holder, four analytic insights, various types of wisdom, and various evil desires.

The *Dharmaskandha* of the Sarvāstivāda deals with the following 21 items, which are in the main the same as those mentioned above. They are: sets of precepts (*sikṣāpada*), four phases of conversion (*srotāpattyaṅga*), perfect faith (*avetya-prasāda*), fruition of the path (*śrāmanyaphala*), practice and knowledge (*pratipad-abhijñā*), noble lineage of recluses (*ārya-vaṃśa*), right exertion (*samyak-prahāna*), psychic power (*ṛddhi-pāda*), application of mindfulness (*smṛti-prasthāna*), noble truth (*ārya-satya*), meditation (*dhyāna*), the illimitable (*apramāṇa*), formless meditation (*ārūpya*), practice of other meditation (*samādhi-bhāvanā*),

factor of supreme knowledge (*bodhyaṅga*), miscellaneous vices (*kṣudraka-vastu*), controlling principles (*indriya*), sense-organs and sense-objects (*āyatana*), aggregates (*skandha*), many elements (*bahu-dhātu*), and law of causation (*pratītyasamutpāda*).

The twenty-one items are a little more than the 17 items of the Pali Buddhism, and roughly speaking, many items of these two sets coincide with or resemble each other. And all of them are relevant to the primary doctrines of Buddhism. But Buddhism treats worldly problems besides the doctrinal ones. So the Abhidhamma of the early period also dealt with these worldly problems. The section which dealt with them is called the *prajñapti-śāstra* (Skt.), *paññatti* (P). In Pali Buddhism, individual persons of various kinds, ranging from the unenlightened layman to the enlightened saints, are dealt with in the *Puggala-paññatti.* In the Sarvāstivāda, world (*loka*), action (*karma*), causes (*upādā*), &c., are treated from the worldly standpoint in the *Prajñapti-śāstra* (Taisho, 1538). These worldly conceptions (temporal questions, issues) were dealt with only superficially in the Nikāyas. The *Paññatti* gleaned and arranged the discussions which had been scattered.

X. **The Abhidhamma from the middle period onward.** When the above-mentioned contents of the early Abhidhamma came to be studied by the method adopted in the Abhidhamma from the middle period onward, they were studied in the abstract and objectively, and the study for the sake of practice which had been traditional since original Buddhism became the study for the sake of theory, detached from practice. Consequently, the classification of the contents was, as has been mentioned before, made into matter (*rūpa*), mind (*citta*), mental attributes (*cetasika*), the unconditioned (*asaṅkhata*), &c. These studies were made in various schools and in some cases various theories arose in the same school. Some discourse books collected these different theories. The Pali *Kathāvatthu* is a book of this kind and the book contains 217 items of difference. Though not a fundamental discourse-book, the *Samayabhedoparacana-cakra* describes the history of the divisions into schools and their divergent theories. Among others, the *Mahāvibhāṣa-śāstra* also gives many divergent theories.

XI. **Manuals** (Compendiums). When the age of manuals followed the age of fundamental Abhidhamma, the practice of Buddhism came to be discussed again. For example, the form which the Pali *Visuddhimagga* chose was to set up seven stages of purity as the grading of Buddhist discipline and to expound the doctrines according to them. The *Abhidharmakośa-śāstra* and the *Satyasiddhi-śāstra* of the Sautrāntika line systematise doctrines according to the order of the four truths (sorrow, origin of sorrow, cessation of sorrow and the path). Again, Skandhila's *Abhidharmāvatāra* and the *Mahāyāna-pañcaskandha-śāstra* of Vasubandhu of the Yogācāra School, and other discourse books arrange the doctrines and theories in the order of five aggregates. But on the other hand, some, based on purely objective theories, discuss doctrines by classification into matter, mind, mental attributes, &c.

XII. **The method of study adopted by the Abhidhamma.** 1. *The method of the early Abhidhamma :* By what methods was the subject-matter mentioned in the preceding chapter studied ? As has been referred to earlier, the methods also underwent changes as the Abhidhamma developed. First, let us look at the method of the early Abhidhamma. It had three distinctive features. There were : (1) the items concerning the conditions by which evils arise and those concerning practice and emancipation are systematically expounded. This method can be seen in the Pali *Paṭisambhidāmagga* and the *Vibhaṅga* and the *Dharmaskandha* of the Sarvāstivāda ; (2) various doctrines are arranged in numerical order. This can be seen in the *Puggala-paññatti* and in the theory of evils expounded in the *Vibhaṅga* and the *Saṅgītiparyāya* ; (3) exposition of doctrines and definition and explanation of the terminology. This is seen everywhere in the early Abhidhamma and is typical of it.

These three distinctive features in rudimentary form could be seen before the establishment of the fundamental Abhidhamma in the suttas and other literature of abhidhammic tendency. More particularly, in the *Paṭisambhidāmagga* and the *Niddesa* the features are nearly the same as in the Abhidhamma.

2. *The method of study adopted in the Abhidhamma of the middle period and after :* The methodological characteristics of the Abhidhamma of the middle period and after were, as has already been mentioned: §1. Consideration according to abhidhammic standards (P. *pañha-puccha*), §2. Consideration of the subjects matter from the point of view of connotation and denotation (Skt. *saṅgraha*, P. *saṅgaha*), §3. Consideration of the concurrence and coexistence of mental action (Skt. *samprayoga*, P. *sampayoga*), §4. Consideration on the conditional relation of phenomenal succession and coexistence (Skt. *pratyaya*, P. *paccaya*), §5. Consideration on maturity and non-maturity of the phenomena (Skt. *samanvāgamana*). These will be surveyed below.

§1. *Questioning* (*Pañha-puccha*) : In the Pali Abhidhamma, 22 triplets (*tika*) and 100 doublets (*duka*) are established as standards of consideration. The total of 122 standards are called " abhidhammic table of contents " (*abhidhamma-mātikā*). They are the standards applicable to the whole Abhidhamma. Other schools have no such fixed standards and the kinds and numbers vary with the convenience of the occasion. To begin with, the 122 standards of the Pali Abhidhamma are as follows :

A. 22 TRIPLETS (*TIKA*) : (1) Good (***kusala***), bad (*akusala*), indeterminate (*avyākata*) ; (2) Associated with pleasant feeling (***sukhāya vedanāya sampayutta***), associated with painful feeling (*dukkhāya v°. s°.*), associated with neutral feeling (*adukkhamasukhāya v°. s°.*) ; (3) Result (*vipāka*), that which has resultant quality (*vipākadhamma*), that which is neither result nor a thing having resultant quality ; (4—6) That which has the act of applied and sustained thinking (***savitakka-savicāra***), the act of sustained thinking only (***avitakka-vicāramatta***), the act of neither applied nor sustained thinking (*avitakka-avicāra*) ; (7) State of

being accompanied by zest (*piti sahagata*), state of being accompanied by happiness (*sukhasahagata*), state of being accompanied by indifference (*upekkhā sahagata*); (8) Removability by vision (*dassanena pahātabba*), removability by culture (*bhāvanāya p°*), irremovability either by vision or by culture; (9—10) Going to degeneration (*ācayagāmi*), to purification (*apacayagāmi*), to neither degradation nor elevation; (11) The trainee (*sekhiya*), the adept (*asekhiya*), the one who is neither trainee nor adept; (12) Limited (*paritta*), sublime (*mahaggata*), infinite (*appamāṇa*); (13—14) Low (*hīna*), of medium worth (*majjhima*), excellent (*paṇīta*); (15) Fixed wrongfulness as to consequence (*micchattaniyata*), fixed rightfulness as to consequence (*sammatta-niyata*), undefined (*aniyata*); (16—18) Past (*atīta*), future (*anāgata*), present (*paccuppanna*); (19—20) That which belongs to one's self (*ajjhatta*), what is external to one's self (*bahiddha*), what is both inside and outside of oneself (*ajjhatta-bahiddha*); (21—22) What is visible and reacting (*sanidassana-sappaṭigha*), what is invisible and reacting (*anidassana-sappaṭigha*), what is neither visible nor reacting (*anidassana-appaṭigha*).

B. 100 DOUBLETS (*DUKA*): (1) Moral roots (*hetu*), what are not moral roots (*na hetu*); (2) Concomitance with moral roots (*sahetuka*), non-Concomitance with moral roots (*ahetuka*); (3—7) Causally related (*sappaccaya*), not causally related (*appaccaya*); (8) Conditioned (*saṅkhata*), unconditioned (*asaṅkhata*); (9) Visible (*sanidassana*), invisible (*anidassana*); (10) Reacting (*sappaṭigha*), not reacting (*appaṭigha*); (11) Having material form (*rūpī*), immaterial (*arūpī*); (12) Mundane (*lokiya*), supramundane (*lokuttara*); (13) Being cognised (*kenaci viññeyya*), being incognisable (*kenaci na viññeyya*); (14) Stain (*āsava*), no stain (*na āsava*); (15) Having stains (*sāsava*), having no stains (*anāsava*); (16—55) Having objects of thought (*sārammaṇa*), having no such objects (*anārammaṇa*); (56) Mind (*citta*), non-mind (*na citta*); (57) Mental attribute (*cetasika*), not mental attribute (*acetasika*); (58) Conjoined with mind (*cittasampayutta*), detached from mind (*citta-vippayutta*); (59—66) One's own (*ajjhattika*), external (*bāhira*); (67) Derived (*upādā*), not derived (*na upādā*); (68—75) Vices (*kilesa*), non-vices (*na kilesa*); (76—77) Vitiated (*saṅkiliṭṭha*), not vitiated (*asaṅkiliṭṭha*); (78—93) Realm of sense (*kāmāvacara*), not realm of sense (*na kāmāvacara*); (94) Realm of form (*rūpāvacara*), not realm of form (*na rūpāvacara*); (95) Formless realm (*arūpāvacara*), not-formless realm (*na arūpāvacara*); (96) Included (*pariyāpanna*), un-included (*apariyāpanna*); (97) Leading onward (*niyyānika*), not leading onward (*aniyyānika*); (98) Fixed (*niyata*), not fixed (*aniyata*); (99) Having a beyond (*sauttara*), having no beyond (*anuttara*); (100) Strife (*saraṇa*), non-strife (*araṇa*).

The *Sāriputra-abhidharma-śāstra*, in its Chinese translation of an unknown school, gives 36 doublets and 7 triplets, a total of 43 standards. The *Jñāna-prasthāna* of the Sarvāstivāda gives 50 standards. Most of them can be found in the 122 standards of the Pali Buddhism, but some are different from those of the Pali Abhidhamma, owing to the differences of sectarian Buddhist theories.

§2 *Classification* (*Saṅgaha*). Aided by investigations by means of the standards listed above, the attributes of concepts became defined more and more minutely and exactly. Consequently, the identity, resemblance and difference of the doctrines and items under examination became clear and distinct. Accordingly, it was natural that the contrast or comparison of the conceptual connotation and denotation led to the subordination of one to another.

§3. *Mental association or combination* (*Sampayoga*). Mental function was examined with reference to perception, good and evil deeds, the practice of the path, the realisation of the fruit, meditation and various psychic powers. And the concrete mind in these cases was analysed and mental substance (*citta*) as an agent was distinguished from mental attributes (*cetasika*). The coexistence of the mental substance and its attributes was considered as combination (*sampayoga*) This theory, too, varied with schools. For example, with the Sarvāstivāda, the conditions which regulate combination are: (1) Equality of support (*āśraya-samatā*). Mental substance and its attributes should have the same sense organ for support. (2) Equality of sense object (*ālambana-s°*). Mental substance and its attributes should perceive the same object. (3) Equality of mode (*ākāra-s°*). Mental substance and its attributes should work in the same manner when perceiving. (4) Equality of time (*kāla-s°*) = synchronism. Mental substance and its attributes work at the same time. (5) Equality of substance (*dravya-s°*). As each mental attribute associates with mental substance at the same time, so two or more agencies of the same attribute cannot associate simultaneously with one mental substance. This is called the Theory of the five-aspect Equality of the Sarvāstivāda. Pali Buddhism also sets out much the same theory.

§4. *Theory of Correlation* (*Paccaya*). This theory is intended to make an exhaustive survey of the spatial and temporal relation of phenomena with one another as they appear and disappear and change. Mental association is, of course, one of those relations. As for conditions, the theory of correlation may have developed from the consideration of the twelve-member causal law (*paṭicca-samuppāda*). The law which originally ruled moral actions only was extended and made applicable to all physical and material phenomena as well as to moral actions. The Pali Abhidhamma gives 24 relational conditions, the *Śāriputrābhidharma-śāstra* 10 kinds, and the Sarvāstivāda 6 or 4 kinds. These theories of various schools show some resemblance or similarity with each other, but probably there had been no direct relation among the various schools.

To begin with, the 24 kinds of relational condition of Pali Buddhism are the following. (1) Condition of cause (*hetu-paccaya*). Immediate cause, principal cause; (2) Object (*ārammaṇa-p°*). Objects which cause cognition; (3) Dominance (*adhipati-p°*). Various auxiliary conditions, mediate or indirect cause; (4) Contiguity (*anantara-p°*). The same as the next one; (5) Immediate contiguity (*samanantara-p°*). The immediately preceding mental state performs the function to give place

to the immediately following mental state ; (6) Coexistence (*sahajāta-p°*). Coexistential relation of concurrent material or mental things ; (7) Reciprocity (*aññamañña-p°*). The reciprocal relation of concurrent mental and material things ; (8) Dependence (*nissaya-p°*). Sensations or perceptions depend on the corresponding sense-organs or seats of perception ; (9) Sufficing condition (*upanissaya-p°*). Object and contiguity become sufficing condition in order to become more powerful ; (10) Antecedence (*purejāta-p°*). Sense organs and sense objects become condition by antecedence ; (11) Consequence (*pacchājāta-p°*). Succeeding mind becomes condition to preceding body ; (12) Succession (*āsevana-p°*). The relation in which powerful apperception lasts ; (13) Karma (*kamma-p°*). The relation of good or evil karma with material and mental things ; (14) Effect (*vipāka-p°*). The relation of the karmic result with concurrent material and mental things ; (15) Nutriment (*āhāra-p°*). The relation of material and spiritual nutriments with body and mental experience ; (16) Controlling power (*indriya-p°*). Relation of twenty-two controlling powers with material and mental things ; (17) Meditation (*jhāna-p°*). Relation of the constituents of meditation, such as applied thinking (*vitakka*) and sustained thinking (*vicāra*), with concurrent phenomena ; (18) Path (*magga-p°*). Relation of the constituents of the path, such as right view, &c., with concurrent phenomena ; (19) Association (*sampayutta-p°*). Relation through association of mind substance and mental attributes ; (20) Dissociation (*vippayutta-p°*). The case where there occurs no association ; (21) Presence (*atthi-p°*). Dependence of matter and mind on each other for existence ; (22) Absence (*natthi-p°*). Relation of the preceding mental state to the succeeding one ; (23) Abeyance (*vigata-p°*). Relation similar to item (22) ; (24) Continuance (*avigata-p°*). Relation similar to item 21.

Some of these 24 items resemble or overlap some others. They are not adequately arranged. This is not a strict and logical classification. The ten relational conditions expounded in the *Śāriputrābhidharma-śāstra* seem to correspond to those of Pali Buddhism, as given here in parentheses: 1 (1) ; 2 (4.5) ; 3 (2) ; 4 (8.9) ; 5 (13) ; 6 (14) ; 7 (6.10.11) ; 8 (7) ; 9 (12) ; 10 (3). The four relational conditions expounded by the Sarvāstivāda are : (1) Condition of cause (*hetu-pratyaya*), (2) Condition of object (*ālambana-p°*), (3) Condition of immediate contiguity (*samanantara-p°*), (4) Condition of dominance (*adhipati-p°*). These correspond to the first 4 or 5 items of Pali Buddhism. The six causes expounded also by the Sarvāstivāda are : (1) Cause of coexistence (*sahabhū-hetu*), (2) Association (*samprayukta-h°*), (3) Relation between the similar (*sabhāga-h°*), (4) Cause of all-pervading evils (*sarvatraga-h°*), (5) Cause of effect (*vipāka-h°*), (6) Various cause (*kāraṇa-h°*). Comparison with the 24 conditions of Pali Abhidhamma gives the following table of approximate correspondence : 1 (6) ; 2 (19) ; 3-4 (12) ; 5 (13) ; 6 (3).

§ 5. *Samanāgamana.* As to the possessing and non-possessing of something, we have the discussion by the Sarvāstivāda, but its exposition is omitted here.

XIII. **The Value of the Abhidhamma.** It was a distinctive merit of the Abhidhamma that it systematically unified various doctrines of original Buddhism into a consistent system and gave exact definitions of all Buddhist terminology, clarifying all Buddhist concepts. But it carried with it some shortcomings. The definitions of concepts and the exposition of doctrines were too formal and uniform, with the result that the profundity and sublimity of the early doctrines were lost. For, it is impossible to grasp the stream of concrete practice by uniform and abstract definitions. In original Buddhism, the same terminology conveyed various meanings as the hearers' understanding and ability varied. The abhidhammic definitions deprived the words or concepts of their nuance and flexibility, and the abhidhammic studies gradually deviated from the practice of the path and became mere theories for their own sake, subtle and complicated. The religiosity and practical nature proper to Buddhism were lost. It was to rectify these shortcomings that Mahāyāna Buddhism arose.

K. M.

XIV. **Abhidhamma as religion.** To the religious consciousness human life is essentially ethically conditioned. The meaning and significance of human conduct can be made intelligible only from the standpoint of ethics. Culture and civilisation, whether of the individual or of the group, are inconceivable without the motive force of an ethical ideology. Morality is the sense of value that the mind attaches to human behaviour, in thought, word and deed. All ethics, therefore, is psychological. Ethical action is fully conscious, purposive action. Human action, if it is to be ethically significant, has to originate always from volitional impulse. Psychological behaviour is not a mechanical process. The laws of the mind are fundamentally different from the laws of physics. Since the Buddha asserts the supremacy of mind over matter, what is essential for the seeker after ethical and spiritual perfection is to understand the nature and functions of psychological processes. In the view of the Abhidhamma, the study of ethics and psychology is not an academic pursuit but something that is essentially relevant to the progress and harmony of individual and social life.

The Abhidhamma marks a consistent and highly successful attempt at the harmonious integration of ethics, psychology and religion. This fact gives the Abhidhamma its distinctive religious character. The discussions in the Abhidhamma are charged with a thoroughgoing ethical earnestness springing directly from the religious consciousness of the Abhidhamma. It is only in the light of the intense interest in ethics and religion that we can make sense of the seemingly unending and remorselessly monotonous classifications and enumerations that keep on occurring in the pages of the Abhidhamma, both canonical and commentarial.

XV. **Abhidhamma as Philosophy.** The Abhidhamma constitutes the results of an inquiry into the nature of human experience, both sensory and

extra-sensory. Since the results are stated and interpreted in terms of language and logic, it allows the Abhidhamma the justification to be considered as philosophy. The function of philosophy, if the latter is to be practically useful and ethically edifying, is not to indulge in speculative cogitation or mere intellection but to understand nature. This understanding cannot be obtained or developed without reference to the observation of the world within and around us in the way it actually functions. The principles that govern nature are not made available to sense perception directly except through instances and illustrations in one's daily experience, such as seeing falling mangoes and decaying bodies. They can be discovered only through the philosophic method of analysis and synthesis. If we are not to remove ourselves further away from reality it becomes imperative that we first describe rather than re-interpret the data of our perception. In this regard the Abhidhamma can be introduced as a critical and descriptive philosophy. The greater part of the content of the Abhidhamma is an analysis and synthesis of phenomena, but it does not stop at a mere phenomenalism or realism. Towards its latter part the Abhidhamma describes the unconditioned absolute, but it does not claim to be a thoroughgoing monism that altogether denies the objective reality of the world which is received and confirmed by the sensations. Realism that denies the world of spirit is false materialism, while idealism that denies the reality of the phenomenal world removes the very possibility for ethical striving and religious and spiritual development. In the interests of ethics and religion the Abhidhamma avoids both extremes and follows the middle path of sanity and common sense.

ABHIDHAMMA-ANUṬĪKĀ is a sub-commentary on the Abhidhamma. The work generally known by this name was written by Dhammapāla to supplement the original *Abhidhamma-Mūla-Ṭīkā* of Ānanda (*Sāsv*. 33; *Gv*. 69). Its official title which, however, is less frequently used, is *Līnatthavaṇṇanā* (*Gv*. 60). The name *Abhidhamma-anuṭīkā*, appears in an inscription at Pagān (Burma), dated 804 B.E. (1442 A.C.) among a list of 295 texts offered by the ruler of Taungdwin and his wife to the Saṅgha (*BEFEO*. V, 183). Ariyavaṃsa, the celebrated Burmese teacher and author of the 15th century, composed an interpretation (*atthayojanā*) in Burmese on the *Abhidhamma* (*aṭṭhakathā*) *anuṭīkā* (Bode: *Pali Literature of Burma*, p. 43).

ABHIDHAMMA-MŪLAṬĪKĀ, or, to give this work its proper title, *Paramatthappakāsinī*, or *Sattābhidhammagandha-aṭṭhakathāya mūlaṭīkā* (*Gv*. 60), is an exegesis on the entire Abhidhamma-piṭaka. As it was the first born (*ādibhūtattā*) of all sub-commentaries, it became known as the *Mūla Ṭīkā* (*Sāsv*. 33). It stands apart from the individual commentaries on the seven books belonging to this collection (*piṭaka*). The work is ascribed to a certain Ānanda (Vanaratana Tissa), who, like other commentators, Mahā Kaccāyana, Buddhaghosa, Buddhadatta, Dhammapāla, was an Indian by birth. He joined the Order of monks in Ceylon and stood at the head of the Araññavāsī brotherhood, which was founded at the beginning of the 6th century, during the reign of Aggabodhi II, and which was devoted to a more secluded hermit's life. He is said to have composed this work at the request of a senior monk, Buddhamitta (*Gv*. 69). Although there are occasional dissents, e.g., the rejection of a static phase of thought, apart from its arising and cessation,[1] the work which is the oldest extant sub-commentary on the Abhidhamma,[2] is evidently based on Buddhaghosa's commentaries.

An interpretation (*anuṭīkā*) on the *Mūla Ṭīkā* and named the *Līnatthavaṇṇanā*, was compiled by Culla Dhammapāla, although sometimes this work is included in the list of commentaries and sub-commentaries attributed to Dhammapāla Ācariya (e.g., *Gv*. 60 and *Sāsv*. 33). This Ācariya Dhammapāla, however, lived before the 7th century, when the famous Chinese traveller of that time, Hsüan-tsang, referred to him. Dhammapāla Junior (Culla Dhammapāla), on the other hand, was a senior pupil of Ānanda Vanaratana Tissa referred to above. As he was already the author of the *Saccasaṅkhepa* (q.v.) it is more likely that it was he who compiled the explanatory notes to his teacher's *Mūla Ṭīkā*.

Various schools had in the course of time composed their own sub-commentaries, and when conflicting expositions had become too obvious, they were reviewed by Mahā Kassapa, the author of of the *Saddhammasaṅgaha* and his band of scholarly monks at Jetavana Vihāra in Pulatthipura (Polonnaruwa, Ceylon), after the reconciliation of opposing schools during the reign of Parākramabāhu I. The outcome of this revision was the *Pañcappakaraṇaṭṭhakathā* in three parts concerning the Abhidhamma works, exclusive of the Dhammasaṅgaṇī's *Atthasālinī* and the Vibhaṅga's *Sammohavinodanī*.

The author of the *Mūla Ṭīkā*, therefore, probably lived in the 8th or 9th century, and should not be confused with another Ānanda, who also belonged to the Araññavāsī brotherhood and who was a disciple of Udumbaragiri Medhaṅkara, the pupil

1 Shwe Zan Aung: *Comp. of Phil.* Introd. Essay, p. 26.
2 De Z. p. 3.

of Sāriputta, in the early 13th century during the reign of Vijayabāhu III at Jambuddoṇi (Dambadeṇiya, Ceylon), although to this latter Ānanda is frequently ascribed the authorship of the *Abhidhamma-Mūla-Ṭīkā.*

Palm-leaf manuscript copies of this work are extant in many temple libraries in Ceylon, according to K.D. Somadasa: *Laṅkāvē Puskolapot Nāmāvaliya*, a catalogue of palm-leaf MSS. in Ceylon (Colombo, 1959).

H. G. A. v. Z.

ABHIDHAMMA-PAṆṆARASAṬṬHĀNA, a work of the 14th century explaining some passages of the Abhidhamma (*Gv.* 74). The author is a monk, named Vimalabuddhi, with the alternate prefixes of Nava- and Cuḷla- (*Gv.* 64). But, in the early period of Pali–Burmese literature it is not always possible to unravel the confusion of names of Burmese and Sinhalese authors. Thus, the Sinhalese monk, Sāriputta Mahāsāmi, author of the *Vinaya-saṅgaha* written in the 12th century and of a paraphrase to the *Abhidhammattha-saṅgaha*, is called in Burma Nava Vimalabuddhi.* He should not, however, be identified with the author of the *Abhidhamma-paṇṇarasaṭṭhāna*.

ABHIDHAMMA PIṬAKA. See ABHIDHAMMA.

ABHIDHAMMATTHA-SAṄGAHA. This work is a summary (*saṅgaha*) of the sense or meaning (*attha*) of Buddhist philosophy (*abhidhamma*). It is a manual compiled in Pali not earlier than the 8th century A.C., but it came into use as a text book for students of Abhidhamma in the 12th century only. It is a treatise excessively condensed, yet extremely popular as a handbook. " Even at the present day this manual is still held in the highest possible esteem in Ceylon as well as in Burma, and has been more frequently commentated and translated in Burma than any other text of the Abhidhamma."[1] The author's name is always given as Anuruddha, who, according to Burmese tradition, was a senior monk (*thera*) in Ceylon residing in Polonnaruwa in the Mūlasoma Vihāra. Nothing more is known of him, except that he was the author of two other books, *Paramattha-vinicchaya* and *Nāmarūpaparicheda*, and, perhaps, of the *Anuruddha Śataka.*[2]

Four sub-commentaries have been written on this compendium, two in Ceylon, *Porāṇa-ṭīkā* by Nava Vimalabuddhi thera, and *Abhidhammattha-vibhāvanī* by Sumaṅgala thera, and two in Burma, *Saṅkhepa-vaṇṇanā* by Saddhamma Jotipāla and a recent work, *Paramatthadīpanī Ṭīkā*, by Ledi Sayadaw.[3]

Although the *Abhidhammattha-saṅgaha* covers in its final chapter more or less the same range of subject-matter as Buddhaghosa's *Visuddhimagga*, the two works can hardly be compared otherwise. For, where the *Visuddhimagga* treats its subject with an amplitude of interpretation and critical explanation with the assistance of numerous legends and a wealth of historical and mythical detail, the compiler of the *Abhidhammattha-saṅgaha* is so severely concise in his subject-matter, that one can hardly speak of him as the " author " of the compendium, the work being much more in the nature of an extensive table of contents. Buddhaghosa, moreover, has given us in his *Visuddhi-magga* a practical standard work on the method of developing sainthood by means of virtue and meditation. It is ethical in its end, even when he treats his subject psychologically. Anuruddha in his *Abhidhammattha-saṅgaha* has given a purely theoretical analysis with a conciseness bordering on the laconic.

The work could be called a Digest, but for the fact that the summary is so compact that it might easily cause some mental indigestion. For here we find in one small volume the whole subject-matter of the Abhidhamma which is contained in seven books on psychological ethics, dealing with consciousness both moral and immoral, as experienced in the various spheres of sense, form, formless and transcendental; its concomitants or mental properties (*cetasika*), analysed and distributed according to the mental states in which they occur; the process of cognition detailed in its seventeen thought moments; the process of becoming or life in the various realms of karma and rebirth; the many aspects, origins, groups and qualities of matter which may be so subtle that it is mere form (*rūpa*); the laws which govern conditional origination and inter-relationship; and the various stations of mental exercise and spiritual development.

All this is condensed in less than 50 pages of print. Its very terseness does not make it easily intelligible to lay readers, but it should not be forgotten that this book is not one of exposition. The composer himself says in the opening verses:

> " Now will I speak in summaries concise
> of things in Abhidhamma-lore contained ".[4]

And he continues to enumerate the four categories dealt with in this compendium: consciousness (*viññāṇa*), mental properties (*cetasika*), material qualities (*rūpa*) and emancipation (*nibbāna*). Further, we find that every chapter and section, in which each of these four chief divisions is subdivided, is rounded off with a verse giving the barest outline for purpose of memorising the contents. Thus, the twelve classes of unskilful thought (*akusala citta*) are to be memorised as follows:

> *Aṭṭhadhā lobhamūlāni dosamūlāni ca dvidhā*
> *mohamūlāni ca dve'ti dvādasākusalā siyuṃ.*
> (Eight there are with roots in greed,
> Twofold those from hateful seed,
> Two are in confusion caught,
> In all twelve types of sinful thought).

Having dealt summarily with the eighty-nine classes of consciousness (which may be expanded to one hundred and twenty-one by resolving each of the eight kinds of transcendental consciousness

1 Winternitz: *History of Indian Literature* (Calcutta University publication, 1933) II, 222.
2 *DPPN.* p. 90.
3 For further details, see *Pali Literature of Ceylon*, pp. 168-172.
4 *Compendium of Philosophy*, p. 81.

into five, thus obtaining forty kinds in place of eight), the *Abhidhammattha-saṅgaha* passes on to the classification of fifty-two mental properties (*cetasika*) seven of which are common to each and every thought, six contingent ones, fourteen always linked with unskilful thought and twenty-five common to all aesthetic states of mind. The various combinations of these mental properties constitute a rich variety of mental states or thought processes which makes one admire the keen sense of psycho-analysis at such an early date. For fuller explanation of these mental properties, see CETASIKA.

The next part of the book treats of the concomitants particular to the various states of consciousness. Thus, sense-impressions may be divided according to the six senses and according to the nature of the impression of pleasure, pain, joy, grief and indifference, which again results in a large variety or combinations and mutual exclusions. Thus "among the sense-impressions which are the result of moral deeds (done in a former birth), there is only one kind that is accompanied by pleasurable feeling (*kāyika-sukha*), and that is tactile impressions" (III, 2).

Another classification of thoughts is shown according to the roots from which a thought originates: greed, aversion, ignorance, disinterestedness, affection and intelligence; although eighteen kinds of consciousness are mentioned which are not conditioned by any of these roots, i.e., when a thought is not full-grown. For details, see HETU.

This is followed by summaries regarding consciousness under the aspect of function (*kicca*), of sense-doors or organs (*dvāra*), of sense objects (*ārammaṇa*), of sense-bases (*vatthu*).

Part IV of the *Abhidhammattha-saṅgaha* deals with the process of cognition and mentions how a single unit of mental activity or thought-moment consists of three time phases, to wit, nascent, developing and breaking off. Seventeen such thought-moments constitute the normal duration of a material phenomenon. It is interesting to note that "Buddhists have come to speak of matter as lasting for seventeen thought-moments".[5] It is not the thought which lasts that long!

Following the analytical process of the birth and the passing of a thought is the next section, dealing with rebirth, i.e., the various planes of life, four types of rebirth, and sixteen kinds of karma resulting in rebirth.

Matter and the twenty-eight material qualities are analysed in Part VI. For details, see RŪPA.

All the distinctive states set forth in this work up to this stage are now in Part VII categorised in different groupings. Here we find first various categories of evil, mixed categories and all that pertains to enlightenment (*bodhi*).

Part VIII deals with relations, first with the arising and ceasing of relations according to the law of dependent origination (*paṭicca-samuppāda*) as this is frequently found in the *Sutta-piṭaka*, and then with the system of correlation, which constitutes the subject-matter of the *Paṭṭhāna*, the last or "Great Book" of the *Abhidhamma-piṭaka*.

The concluding part treats of mind culture, the forty exercises for meditation (*bhāvanā*), the states of mental absorption (*jhāna*), and supernormal intellection (*abhiññā*), which all lead to pacification (*samatha*) of the mind. Real insight (*vipassanā*), however, is attained along the path of purification of morals, of thoughts, of views, of doubts, of discernment, or knowledge and of insight, by concentration on the salient marks or characteristics of impermanence (*anicca*), conflict (*dukkha*) and egolessness (*anattā*).

Emancipation (*vimokkha*) can be attained through realisation or insight following any one of these three contemplations, which thereby become the cause of emancipation (*vimokkhamukha*).

H. G. A. v. Z.

ABHIDHAMMATTHA-SAṄGAHA-(PORĀṆA-)ṬĪKĀ. As a compendium of the vast literature of Buddhist philosophy comprised under the name Abhidhamma, there has been no more useful and used handbook than the *Abhidhammattha-saṅgaha* (q.v.), which for more than eight centuries now has occupied a unique position as primer and manual for students of psychology and philosophy in Burma and Ceylon. Its excellence as a handbook for further study, and a compendium for ready reference, brought about a considerable amount of exegetical literature, which became all the more necessary owing to the extremely condensed nature of the compendium.

The earliest known attempt in compiling an interpretation of the compendium, without making it a reconstitution of a condensation, is the *Abhidhammattha-saṅgaha-ṭīkā* which is called the *Porāṇa-ṭīkā* and ascribed to Vimalabuddhi Thera (*Sāsv.* 34; *Sāsanavaṃsa Dīpa*, v. 1223). In Burma this author is also called Nava Vimalabuddhi, but he is better known in Ceylon as Sāriputta Mahāsāmi. His pupil too wrote a sub-commentary on the *Abhidhammattha-saṅgaha*, entitled the *Abhidhammattha-vibhāvanī* (q.v.), "which still remains in favour both in Burma and in Ceylon" (*Pali Literature of Ceylon*, 173), whereas the *Porāṇa Ṭīkā* "is considered quite superannuated" (*Compendium of Philosophy*, ix) and so little used, that "this work is not known to exist in Ceylon at present" (De Z. p. 4). Even the very exhaustive *Laṅkāvē Puskolapot Nāmāvaliya* (K. D. Somadasa) has failed to discover a single manuscript. The *Gandhavaṃsa*, or History of Books (Minayeff ed.), although far more detailed than either the *Sāsanavaṃsa* or *Sāsanavaṃsadīpa* and mentioning names of authors and works of several *abhidhammasaṅgaha-anuṭīkās*, such as the *Dasagandhivaṇṇanā* by Vepullabuddhi and the *Maṇisāra-mañjusā* by Ariyavaṃsa, has no reference to the oldest interpretation of the Compendium of Philosophy, the *Abhidhammattha-saṅgaha-Porāṇa Ṭīkā*.

[5] Shwe Zan Aung: Introductory Essay to the ***Compendium of Philosophy***, p. 26.

ABHIDHAMMATTHA-VIBHĀVANĪ, a sub-commentary (*ṭīkā*) on the *Abhidhammattha-saṅgaha* (q.v.) written in Ceylon by Sumaṅgala Ācariya (*Gv.* 52), a pupil of Sāriputta Mahāsāmi (in Burma known as Nava Vimalabuddhi). Sāriputta's commentary on the same work, called the *Abhidhammattha-saṅgaha-Porāṇa-ṭīkā* (q.v.), became entirely eclipsed by his pupil's exegesis, which is the most popular and most authoritative interpretation of the *Abhidhammattha-saṅgaha*. In Burma it is known as the "famous Ṭīkā" (*Ṭīkā gyaw*), because of a masterly exposition thereof by Ariyavaṃsa, and is generally well known and quoted as the "Ceylon Commentary". Earlier, it was known as the "beautiful Ṭīkā" (*lakkhaṇaṭīkā, Sāsv.* 96), "because the comments in it are so very apt to the subject of discussion" (*Pali Literature of Ceylon,* 200). A subsequent commentator, Chapaṭa, who also wrote a commentary on the *Abhidhammattha-saṅgaha* (*Sāsv.* 116), compared his own modest work, the *Saṅkhepa-vaṇṇanā,* to a firefly, whereas Sumaṅgala Ācariya's *Vibhāvanī* is likened to the moon. But then, he adds slyly, "the moon cannot shine within bamboos; the firefly can" (*Pali Literature of Ceylon,* 201).

This late medieval 12th century work consists of 100 ola leaves, 18 inches in length. In this work it is stated that several commentaries have been written on the *Abhidhammattha-saṅgaha,* with the following titles: *Abhidhammattha-saṅgaha-Porāṇa Ṭīkā,* by Vimalabuddhi; *Abhidhammattha-saṅgaha padārtha-sanne,* a Sinhalese paraphrase by the same (here called Sāriputta Mahā Thera); *Abhidhammattha-saṅgaha-padayojanā,* by a Buddhist monk of Lāva (Laos ?).

According to De Zoysa's *Catalogue of Pali Manuscripts* these are not now extant in Ceylon, and the latest inquiries in this field have not been more successful (K. D. Somadasa: *Laṅkāvē Puskolapot Nāmāvaliya*).

ABHIDHAMMATTHA-VIKĀSINĪ, name of an old commentary written in Ceylon on the *Abhidhammāvatāra.* It is ascribed to the thera Sumaṅgala (circa 12th century) who was also the author of the *Abhidhammatthavibhāvanī,* a commentary on the *Abhidhammatthasaṅgaha.* Sumaṅgala was a pupil of the thera Sāriputta and his speciality, like that of his teacher, was the Abhidhamma.

A more recent work having the same name as that of this old commentary and serving the same purpose is said to have been produced in Burma (*Buddhadatta' Manuals,* xviii).

ABHIDHAMMĀVATĀRA, a book which, as suggested by its very name, involves a 'descent into the Abhidhamma'. According to its author it was written to enable monks to acquire skill in regard to the noblest of the canonical divisions,[1] and in substance is said to be the same as that which the Buddha preached to an assembly of gods in the deva world[2]. It is the unfailing remedy (*hatthasāraṃ*), says the author, for monks professing the Abhidhamma.[3]

The book consists of twenty-four chapters of which sixteen are entirely in verse, one entirely in prose, and seven in a mixture of prose and verse. But this pattern is no indication of the sequence in which these chapters appear.

The chapters are generally called *niddesa* (exposition) and are as follows:— (1) *Citta niddesa;* (2) *Cetasika n°;* (3) *Cetasikavibhāga n°;* (4) *Ekavibhādi n°;* (5) *Cittupatti n°;* (6) *Ārammaṇavibhāga;* (7) *Vipākacittapavatti n°;* (8) *Pakiṇṇaka n°;* (9) *Puññavipākapaccaya n°;* (10) *Rūpavibhāga;* (11) *Nibbāna n°;* (12) *Paññatti n°;* (13) *Kārakapaṭivedha;* (14) *Rūpāvacara-samādhi-bhāvanā n°;* (15) *Arūpāvacara-samādhi-bhāvanā n°;* (16) *Abhiññā n°;* (17) *Abhiññārammaṇa n°;* (18) *Diṭṭhivisuddhi n°;* (19) *Kaṅkhāvitaraṇavisuddhi n°;* (20) *Maggāmaggañāṇadassanavisuddhi n°;* (21) *Paṭipadāñāṇadassanavisuddhi n°;* (22) *Ñāṇadassanavisuddhi n°;* (23) (*a*) *Kilesapahāna kathā;* (*b*) *Saccābhisamaya kathā;* (24) *Paccaya n°.*

The first chapter is an analysis of the mind (*citta*) into eighty-nine types; twenty-one of such types are said to be wholesome (*kusala*), twelve unwholesome (*akusala*), thirty-six resultant (*vipāka*) and twenty non-efficacious (*kriyā*). The second chapter enumerates the mental factors (*cetasikā*) which are associated with the types of consciousness classified in the first chapter. In the third chapter each of these mental factors is reckoned in terms of the particular type of consciousness with which it is associated. The types of consciousness, however, are here regarded as consisting of a total of one hundred and twenty-one.

The fourth chapter is a discussion on the mind viewed variously for example as conditioned, good, resultant, &c., or as their very opposites. The fifth chapter classifies the types of mind in terms of the planes of existence (*bhūmi*) and the persons (*puggala*) born in them. In chapter six is an enumeration of the objects (*ārammaṇa*) corresponding to each of the many types of consciousness. Chapter seven treats of the types of resultant consciousness, and of their arising and continuance. The eighth chapter, though called *pakiṇṇaka* or miscellaneous, discusses the mind in its functional aspect, showing how sensory objects are presented to the mind and the process of ideation that follows. The mind is here likened to a road spider that has a web spread in five directions.

The next, chapter nine, deals with the mental formations, both wholesome and unwholesome, the thirty-two types of resultant consciousness that are present at and occur even after the moment of rebirth, as well as their causal conditions in regard to relevant states of existence. The tenth chapter is an analysis of form (*rūpa*), while the eleventh is an exposition on the Absolute or *nibbāna.* Chapter twelve is a discussion on the meaning of *paññatti* or connotation. Chapter thirteen is an exposition on causality and involves the denial of a permanent entity, such as the soul, which is said to be the doer of all actions whose results it also experiences.

1 *Buddhadatta's Manuals, v.* 4.
2 Ibid. vv. 2. 3.
3 Ibid. *v.* 7.

Chapters fourteen and fifteen describe the method of the concentration of the mind in regard to the spheres of form (*rūpāvacara-samādhi*) and the formless (*arūpāvacara-samādhi*) respectively, while chapter sixteen enumerates the five superior spiritual powers (*pañc'abhiññā*). This chapter, however, makes provision for two other spiritual powers—*anāgataṃsa-ñāṇa* and *yathākammūpaga-ñāṇa*—which are said to be capable of being induced through the power of the divine eye (*dibba-cakkhu*). This is followed by chapter seventeen which discusses the operation of all seven of these superior spiritual powers.

The next is chapter eighteen which is an exposition on the development of knowledge (*paññā*) or insight. This is followed by another exposition (chapter nineteen) as to how one must rid oneself of all doubts—doubts as regards causality that is pertinent to both name and form which are to be reckoned in terms of the three periods of time. And a person possessed of such knowledge is here described as a 'junior stream-winner' (*culla-sotāpanna*). Chapter twenty contains a discussion on the purification of knowledge and insight regarding the right and wrong paths (*maggāmagga*), while chapter twenty-one deals likewise with the method or way of such purification. Next, in chapter twenty-two, the four types of knowledge associated with the path of enlightenment are enumerated and chapter twenty-three, which consists of two parts, deals first with the defilements that must necessarily be purged and then of the cognisance, abandonment, realisation and mental cultivation which simultaneously occur in regard to each type of knowledge antecedent to enlightenment. And last of all there is chapter twenty-four which enumerates the causal conditions (*paccaya*) and the manner in which these arise.

At the end of each chapter is a verse which urges the necessity of a study of the Abhidhamma in order that one may successfully put an end to the misery of repeated existence.

The authorship of this book is ascribed to Buddhadatta, a contemporary of the great scholiast Buddhaghosa. According to the verses at the end of the book, Buddhadatta composed this work on the request of a monk called Sumati[4] while residing at the Eastern Mansion (*pācīna-pāsāda*) at the port called Kāveri. The mansion was evidently part of a larger establishment that was shaped like the crest of mount Kailāsa (*Kelāsasikharākāra*)[5] and had been built by one Kaṇhadāsa. This establishment may well have been the Kelāsa vihāra to which reference is made in the *Mahāvaṃsa* as the monastery from which the great thera Suriyagutta came with his retinue of monks at the time of the building of the Mahāthūpa at Anurādhapura.[6]

According to the legends that have grown round the composition of this book, Buddhadatta is supposed to have met Buddhaghosa while the latter was journeying to Ceylon and requested him to let him have the commentaries after he had translated them into Pali, in order that he may summarize them. And when Buddhaghosa had eventually complied with his request Buddhadatta is said to have summed up in the *Abhidhammāvatāra* all that was contained in the Abhidhamma commentaries.[7]

The *Abhidhammāvatāra* is the earliest of the non-canonical Abhidhamma books which attempt a systematisation of the Abhidhamma. It is not a commentary like the *Sammohavinodanī* or the *Atthasālinī* but an original work intended to convey the fundamentals of the Abhidhamma to those intent on studying them. It is free from various heresies that had crept into the various schools and is based on the tradition of the Mahāvihāra monks.[8] As such, it has been described as containing the quintessence of the *Ābhidhammikas*. It seems to have been superseded later by the *Abhidhammatthasaṅgaha* which Anuruddha composed in the twelfth century.

ĀBHIDHAMMIKA, one who has specialised in the study of the Abhidhamma.[1]

From very early times groups of monks devoted themselves to the special study and recitation of different sections of the canon. The little use of writing in those days and the need to preserve the sacred literature no doubt encouraged this system whereby the canon was handed down from generation to generation and preserved. These monks became known by names which indicated the nature of their specialisation. Thus the Suttantikas were those proficient in the Sutta Piṭaka; the Vinayadharas, experts in the Vinaya, and the Ābhidhammikas, masters of the Abhidhamma.[2] A group of Ābhidhammikas was known as Ābhidhammikagaṇa, just as a group of Suttantikas was referred to as Suttantikagaṇa (*Vism.* 76). In certain matters, the Ābhidhammikagaṇa held opinions different from the Suttantikagaṇa.

In the *Atthasālinī* (p. 17) the Buddha himself is described as the first Ābhidhammika: *Sammāsambuddho 'va paṭhamataram Ābhidhammiko.* Of the Buddha's disciples the foremost Ābhidhammika was Sāriputta. His successors who conveyed the Abhidhamma up to the time of the Third Council are said to have been Bhaddaji, Sobhita, Piyajāli, Piyapāla, Piyadassī, Kosiyaputta, Siggava, Sandeha, Moggaliputta, Visudatta, Dhammiya, Dāsaka, Sonaka, Revata and others. The Abhidhamma was brought to Ceylon by Mahinda, Iddhiya, Uttiya, Bhaddanāma and Sambala and preserved by a succession of their pupils (*DhsA.* 32).

1 *Abhidhammaṃ adhīto ābhidhammiko: Kaccāyanavutti* (Sinhalese ed., 1904, p. 80). See also p. 71, and *Saddanīti* (Helmer Smith, 1928), pp. 786, 809.

2 There were also the Bhāṇakas, the 'Reciters' of the sections of the *Sutta Piṭaka*. In the case of all these specialists, the fact that they made a special study of one section of the canon did not mean that thay had not studied the rest of the canon.

The Ābhidhammikas were held in very high esteem. They were considered superior to the Suttantikas and Vinayadharas. This is evident from literary references and epigraphic records. In the *Atthasālinī* (p. 29) the Buddha is reported as having said that the true preachers of the doctrine are the Ābhidhammikas, while the others though they may preach the doctrine are not competent preachers. In the *Majjhima* commentary, too, the superiority of the Ābhidhammika over the Anabhidhammika (non-Ābhidhammika) is asserted.[3] In the Mihintalē Rock Inscription of Mahinda IV of the latter half of the 10th century the exponents of Abhidhamma are clearly honoured above the exponents of the Sutta and Vinaya, for it states that they are to receive twelve shares (*vasag*) as against seven and five of the other two (*EZ.* I, 85, 100).

References are made to individual Ābhidhammikas who were greatly respected monks. In the commentaries the most prominent of them is Ābhidhammika Godatta.

The word Ābhidhammika is found in post-canonical works, the earliest of which was perhaps the *Milindapañha* (17, 341). In the canon the one who is well versed in the Master's teachings is referred to as *Dhammadharo, Vinayadharo, Mātikādharo* (e.g., *Vin.* II, 299). The term Mātikādhara is very probably the forerunner of the term Ābhidhammika of later times.

The Ābhidhammikas are most frequently referred to in the commentaries. In the *Atthasālinī* (p. 17) there is an allusion to Ābhidhammikas in the time of Buddha Kassapa and the *Sumaṅgalavilāsinī* speaks of eight Ābhidhammika bhikkhus who came to the aid of king Duṭṭhagāmaṇi. It is said that the latter had not been able to sleep for one whole month through joy of his victory over the Tamils and it was the eight Ābhidhammikas who succeeded in inducing sleep in him by chanting the *Citta Yamaka* of the Abhidhamma Piṭaka (*DA.* II, p. 640). References to the Ābhidhammikas are also found in Fa-hsien and Hsüan-tsang. Fa-hsien says that on certain days the masters of the Abhidhamma make offerings to the thūpa built in honour of Abhidhamma.[4] Hsüan-tsang, too, comments in his description of Mathura (Muttra) that on fast days those who studied the Abhidhamma honoured the thūpa erected in memory of Sāriputta (Beal: *Buddhist Records of the Western World*, p. 180). See also ĀBHIDHĀRMIKA.

ĀBHIDHAMMIKA ABHAYA. See ABHAYA (7)

ĀBHIDAMMIKA GODATTA. See GODATTA.

ABHIDHĀNAPPADĪPIKĀ, a dictionary of Pali synonyms, compiled by Moggallāna thera who resided in Jetavana Vihāra in Polonnaruwa (Ceylon) during the reign of king Parākramabāhu the Great (1153–1186 A.C.). The work enjoys the highest authority, holding in Pali literature the same place as the well-known *Amarakośa* in Sanskrit.

Thus we find 32 epithets of the Buddha, 46 of Nibbāna, 20 of Sakka, the king of the gods, to mention only three of 179 entries of the first book on Heaven (*sagga-khaṇḍa*). The second book on earth (*bhū-khaṇḍa*) is divided into six chapters on earth as soil (*bhūmivagga*); on township (*pura-vagga*) which contains, e.g., 24 synonyms for house; a chapter on humans (*nara-vagga*), giving, e.g., 10 synonyms for man, 15 for woman, but 24 for a wise one, with many details of their anatomy, clothing and household articles; a chapter on the social order of the four castes (*catubbaṇṇa-vagga*) with the greatest number of sobriquets (19) reserved for one's enemy; a chapter on forest-gardens (*araññādi-vagga*) and one on the underworld (*pātāla-vagga*) which includes all that is not solid earth, e.g., hells, oceans and water-lilies. The third book is miscellaneous (*sāmañña-khaṇḍa*) and has four chapters on distinctive features (*visessādhīna-vagga*), on mixed items (*saṅkiṇṇa-vagga*), on manifold aspects (*anekattha-vagga*) and on indeclinable prefixes (*avyaya-vagga*).

The entire work lists all these entries in 1203 stanzas of four lines each.

A commentary thereon, the *Abhidhānappadīpikā-ṭīkā*, was composed by Caturaṅgabala of Vijayapura, a Burmese explanation by Ñāṇāvāsa, and a complete index with grammatical notes, the *Abhidānappadīpikā-sūci*, by a Ceylon Buddhist monk, Waskaḍuwē Subhūti in 1883.

ABHIDHĀNAŚĀSTRA-VIŚVALOCANA-ITYAPARĀBHIDHĀNA-MUKTĀVALĪ-NĀMA (Tib. *Mṅonbrjod-kyi bstan-bcos sna-tshogs gsal-ba shes-pa miṅ-gshan-mu tig-phreṅ-ba shes-bya-ba*), a Sanskrit-Tibetan dictionary found in the Mdo-Ḥgrel section of the Tibetan Tengyur. It consists of 12 *vargas* divided, somewhat indistinctly, into *prakaraṇas*. It was compiled by Dpal-ḥdsin sde and had as its principal source the *Amarakośa*. It was translated into Tibetan by the great translator of Sha-lu, Chos-skyoṅ beṅ-po or Dharmapālabhadra (Cordier, III, p. 510, No. 2; Tōhoku, No. 4453).

ABHIDHĀNOTTAROTTARA, or *Avadāna-stotra-tantra*, which is rendered into French as "Le plus que supérieur quant aux désignations" (*L'Inde Classique* II, Sec. 2017), is a long Tantra (q.v.) in 68 *paṭalas*. It describes a mass of bījas or germs which evoke the Buddhas in their essences, such as Vajrasattva, Vajraḍāka, &c., and of psychic creations (*bhāvanā*). It is an Upadeśa (q.v.) and contains an account of the esoteric rites which

3 *Anabhidhammiko hi dhammaṃ kathento, ayaṃ sakavādo, ayaṃ paravādo 'ti na jānāti . . . Ābhidhammiko sakavādam sakavādaniyāmen'eva paravādaṃ paravādaniyāmeneva dīpeti*: *MA.* II, p. 256.

4 Legge: *Fâ-hien's Record of Buddhistic Kingdoms*, pp. 44-46. These thūpas are said to have been erected in monasteries in the Madhyadesa (central India).

"resemble in character the Tāntrika ritual of Brahmanism, and differ from it only in being addressed to different objects" (B. H. Hodgson: *Essays on the Languages, Literature and Religion of Nepal and of Tibet*, 19 f.). As a treatise of the Tantra class it is found embodied in the Rgyud among other fundamental texts of the Vajrayāna (*L'Inde Classique*, II, sec. 2040). It also contains mystic mantras and directions for the worship of demigods and good and evil spirits of various kinds. Although the work is anonymous it may be observed that among the Tantra works with which Rin-chen bzaṅ-po's name is associated is the *Abhidhānottarottara* (*IHQ*. X, 387). According to the Ōtani Catalogue, however, the *Mṅon-par brjod-paḥi rgyud bla-ma shes-bya-ba*, which is the title under which the work is known in Tibetan, was first translated, revised and edited by the great Indian scholar Dīpaṅkara-Śrī-jñāna (s. v. ATIŚA) and the Tibetan translator Rin-chen-bzaṅ-po. Afterwards, the great scholar Jñāna-śrī and the translator Chos-kyi brtson-ḥgrus revised it. Finally, Ananta and some lesser known translators compiled a complete edition of the work (ŌM. No. 17).

The scene is laid in the abode of a Guhyaka of the name of Vajrakrodha Ḍākinī — the Imp of Lightning Passion— where the great Tathāgata Vajrasattva once sojourned. There certain other Tathāgatas solicit him to impart to them a knowledge of the secret science of destroying the net of the Ḍākinī. Thus, the full name of the work—*Vajrakrodha-ḍākinī-jāla-saṃvaraṇābhidhānottarottara-hṛdaya*. This knowledge is imparted in a series of sixty-five lectures. After defining the time, the place, and the persons fit for the worship of various kinds of imps, the spirit of Vajrasattva is directed to be meditated upon in the essence of certain letters of the alphabet, which constitute the bīja-mantras. In his heart the worshipper should reflect upon a central point, and over it the syllable 'yam' forming a blue atmosphere, thereupon a brilliant red triangular halo formed by the syllable 'ram', thereupon a frost-like watery glow formed by the syllable 'vam', and thereupon a four-cornered yellow-coloured terrene globe formed by the syllable 'lam'. He must then meditate on the wheel diagram, which he should imagine to consist of eight red-coloured spokes placed on the globe aforesaid. The form of the demi-goddess is fierce, four-mouthed, twelve-armed, &c., and the bīja-mantra for her is *Oṃ huṃ āḥ mahāsukham*. In this way, the rituals for the performance of the rites and the worship of certain other divinities named are given at length.

The Yoginīs, whose worship is particularly enjoined, are described as women fair as the pith of the lotus stalk, with lotus-like pink eyes, fond of white garments, odorous as fresh sandal paste, and devoted to the adoration of Sugata and his successors. There are several kinds of these; some are called Kulajas, others Brāhmīs, others Rudrās. The Ḍākinīs are women of a bright red complexion, having the aroma of the lotus, benign countenances, red eyes and nails, and fondness for decorating their rooms with pictures of lotus flowers. They belong to the race of Padmanetra.

In the course of the work are also noted several charms and amulets to protect persons from the attacks of evil spirits, diseases and other evils (R. L. Mitra: *Nepalese Buddhist Literature*, 1-3).

ABHIDHARMA. See ABHIDHAMMA.

ABHIDHARMA-(DHARMA-) SKANDHA-PĀDA-ŚĀSTRA, a restored Sanskrit form of the Chinese A-p'i-t'an-mo-fa-yün-tsu-lun which is a translation by Hsüan-tsang of an important Sarvāstivāda Abhidharma text called the *Dharmaskandha* (Nanjiō No. 1296). See DHARMASKANDHA.

ABHIDHARMA-DHĀTUKĀYA-PĀDA-ŚĀSTRA, the restored Sanskrit form of the Chinese 阿毘達磨界身足論 *A-p'i-ta-mo-chiai-shen-tsu-lun* (Nanjio, No. 1282) which is a translation by Hsüan-tsang of the *Dhātukāya*, (界身) an important Abhidharma text in Sarvāstivāda.

ABHIDHARMA-DĪPA. The palm-leaf manuscript of the *Abhidharma-dīpa* was discovered in Tibet by Rahul Sankrityayana in the year 1937. He brought the photographs of this MS. which are preserved in the K. P. Jayaswal Research Institute, Patna.[1]

The MS. is incomplete. The last folio is numbered 150. Of these only 62 folios have come down to us. The MS. contains two works, viz., the metrical *Abhidharma-dīpa* (here referred to as *Dīpa*) and a prose commentary on it known as the *Vibhāṣā-prabhā-vṛtti* (here referred to as *Vṛtti*).

The kārikā text, viz., the *Dīpa*, closely follows both in the contents and in presentation its counterpart, the *Abhidharmakośa* (here referred to as *Kośa*)) of Vasubandhu. The eight *Adhyāyas* of the *Dīpa* correspond to the eight *Kosasthānas* of the *Kośa*. The number of the kārikās found in the extant *Dīpa* is 597. Of these a large number (about 300) correspond, almost one for one and sometimes word for word, to the kārikās of the *Kośa*. The commentary on the *Dīpa*, the *Vṛtti*, is also written more or less on the pattern of the *Abhidharma-kośa-Bhāṣya* (here referred to as *Bhāṣya*) of Vasubandu. It will be evident from the passages quoted below that this commentary was written solely for presenting the orthodox Vaibhāsika viewpoint, encountering the criticisms levelled against it by the Kośakāra in his *Bhāṣya*. Although criticising it, the *Vṛtti*, in most parts, is an imitation of the *Bhāṣya*. It borrows about fifty large passages from the latter and presents the subject-matter in more or less identical words. At the end of the *Kośa*, Vasubandhu claims that he composed it in conformity with the Kāsmira-Vaibhāṣika school.[2] But his *Bhāṣya* reveals that his real affiliation was

[1] I am grateful to the K. P. Jayaswal Research Institute for entrusting me with the work of editing this MS. which has now been published in the Tibetan Sanskrit Works Series, [illegible].

[2] Kāsmira-Vaibhāṣika-niti-siddhaḥ prāyo mayā'yam kathito'bhidharmaḥ: *Kośa*. VIII. 40ab.

with the Sautrāntika. He often uses the adverb *kila* to show his disagreement with the Vaibhāṣika view. On almost all controversial points between the two, he openly favours the Sautrāntika view-point. In his characteristically powerful style, Vasubandhu critically examines the *dravyavāda* of the Vaibhāṣikas, accuses them of being literalists, ridicules their dogmatism and compares them with such heretical schools as the Sāṅkhya and Vaiśeṣika. Yaśomitra rightly observes that Vasubandhu belongs to the Sautrāntika school.[3]

We learn from Paramārtha's 'Life of Vasubandhu'[4] that Ācārya Saṅghabhadra, a contemporary Vaibhāṣika, wrote two commentaries on the *Kośa*, called *Nyāyānusāra* and *Samaya-pradīpikā*, in order to present the orthodox Vaibhāṣika view and to correct the Kośakāra of his Sautrāntika bias. These works are available only in their Chinese translations. No other work written against the Kośakāra has come down to us. The discovery of the *Dīpa* (with its *Vṛtti*), therefore, is of great value as a sole surviving original work of the orthodox Vaibhāṣika school. Being an imitation of the *Kośa* (and the *Bhāṣya*) it does not add much to the subject-matter relating to the Abhidharma of the Sarvāstivāda school. But its references to the Kośakāra shed abundant light on the major points of dispute between the Sautrāntika and the Vaibhāṣika, and also on certain controversial aspects of the life of the Kośakāra Vasubandhu.

The extant *Vṛtti* contains the following sixteen hostile references to the Kośakāra :—

(1) Kośakāras tvāha— anuśayānuśayanāt sāsravāḥ. tad etad abrahma (Fol. 32b).

(2) Tatra yad uktaṃ Kośakāreṇa—' kim idaṃ ākāśaṃ khādyate. sāmagryāṃ hi satyāṃ dṛṣṭam ity upacāraḥ pravartate. tatra kaḥ paśyati' iti. tad atra tena bhadantena sāmagryaṅga-kriyā (paharaṇaṃ?) kriyate. Abhidharma-sammohāṅka-sthānenātmāpy aṅkito bhavaty ayoga-śūnyatā-prapātābhimukhyatvaṃ pradarśitam iti (Fol. 35b).

(3) Kośakṛd ācaṣṭe—na hy atra kiñcit phalaṃ utprekshyata iti. taṃ pratīdaṃ phalaṃ ādarśyate (Fol. 37a).

(4) Idam idānim Abhidharma-sarvasvaṃ Kośakāraka-smṛti-gocarātītaṃ vak tavyam (Fol. 37b).

(5) Kośakārādayaḥ punar āhuḥ—' svārthopalabdhāv eva cakshurādīnāṃ pañcānāṃ ādhipatyam'. tad etad Vaibhāṣikīyam eva kiñcid gṛhītam. nātra kiñcit Kośakārasya svaka-darśanam (Fol. 39a).

(6) Kośakāras tvāha—' sarvasūkṣmo rūpa-saṃghātaḥ paramāṇur' iti. tena saṃghāta-vyatiriktaṃ rūpam anyad vaktavyam (Fol. 43b).

(7) Tad idam ati—sāhasaṃ vartate yad viruddhayor api dvayor dharmayor ekatra citte samavadhānaṃ pratijñāyate. na hy etal loke dṛṣṭam . . . . iti Kośakārah . . . . . tad idam andha-vilāsinī-kaṭākṣa-guṇotkīrtana-kalpaṃ codyam ārbhyate (Fol. 45a).

(8) Siddhā sabhāgatā. Kośakāraḥ punas tāṃ Vaiśeṣika-parikalpita-jāti-padārthena samīkurvan vyaktaṃ pāyasa-vāyasayor varṇa-sādharmyaṃ paśyatīti (Fol. 47a).

(9) Atra punaḥ Kośakāraḥ pratijānīte—' sacittikeyaṃ samāpattih' iti . . . . tad etad abauddhīyam (Fol. 47a).

(10) 'samādhi-balena karmajaṃ jīvitāvedhaṃ nirvartyāyuḥ saṃskārādhishṭhānajam, āyur na vipākaḥ' iti Kośakāraḥ. tatra kim uttaram iti? na tatrāvaśyam uttaraṃ vaktavyam. yasmān naitat Sutre' vatarati, Vinaye na saṃdṛśyate, dharmatāṃ cha vilomyati. tasmād bāla-vachanavad adhyupekshyam etat . . . . tasmād Vaitulikaśāstra-praveśa dvāram ārabdhaṃ tena bhadantenety adhyupekshyam etat (Fol. 49a).

(11) Tasmāt pūrvokta-lakshaṇa eva bhikṣur na yathāha Kośakāraḥ (Fol. 92b).

(12) 'Abhidhyādaya eva karma-svabhāvāṅi' iti Sthiti-bhāgīyāh . . . . Kośakāraḥ—'kotra doṣaḥ' . . . . Sāṃkhyīya—darśanam abhyupagataṃ syāt (Fol. 94b).

(13) 'Sūkshmaṃ kuśala-dharma-bījaṃ tasminn akuśale cetasy avasthitaṃ yataḥ punaḥ pratyaya-sāmagrī-sannidhāne sati kuśalaṃ chittam utpadyate' iti Kośakāraḥ. yuktyāgama-virodhāt tan neti Dīpakāraḥ (Fol. 96b).

(14) 'Evaṃ tu sādhu yathā Dārṣṭāntikānām' iti Kośakāraḥ . . . . tad etat Sautrāntikair antargatam Buddha-vacana-nīti-śravaṇa kauśīdyam āvir bhāvyate (Fol. 104a).

(15) Tad atra Kośakāraḥ praśnayati—' ko vighnaḥ' . . . . tatra vayam prativadmaḥ— . . . . ' durbodhā khalu dharmatā' . . . . (Fol. 111b).

(16) Atra Sarvāsti-vāda-vibhrashṭir Vaituliko nirāha-vayam api trīn svabhāvān parikalpayiṣyāmaḥ. tasmai prativaktavyaṃ —. . . . it etad aparam adhva-saṃmohāṅkanā-sthānaṃ Kośakārasyeti (Fol. 112a).

Of these Nos. (3) and (4) refer to omissions of certain topics by the Kośakāra in his *Bhāṣya*. Nos. (2) and (5) deal with certain aspects of the Sautrāntika theory of perception. No. (6) deals with the Kośakāra's definition of *paramāṇu*. No. (7) refers to a controversy about the co-operation of *vitarka* and *vicāra* in a single moment of consciousness. Nos. (8), (9) and (10) deal with certain items of the much debated Vaibhāṣika categories called *citta-viprayukta-saṃskāra*. Nos. (1), (13) and (14) have a bearing on the Sautrāntika theory of *bīja* (seed). The last two references, Nos. (15) and (16), deal with the fundamental Vaibhāṣika doctrine of the reality of Three Times, i.e., the Sarvāstivāda.

---

3 Sautrāntika-pākṣikastvayam ācāryo nainam arthaṃ prayacchati: *Sphuṭarthā Vyākhyā*, p. 26.

4 By J. Takakusu, *T'oung Pao*, Serie II, Vol. V, 269-96.

It may be noted that these passages are all hostile and aim at exposing Vasubandhu's 'un-buddhistic' views. He is not only censured for his ignorance of the Abhidharma and his Sautrāntika leanings. but also accused of entering the portals of Mahāyāna, of accepting the Vaitulika Śāstra and of following the *ayogaśūnyatā-vāda*. Finally, he is called an apostate from the Sarvāstivāda, and an advocate of the *trisvabhāva-vāda*. This doctrine is contained in Vasubandhu's *Tri-svabhāvanirdeśa*, a work of the Yogācāra-vijñānavāda school. All these references seem to allude to Kośakāra Vasubandhu's conversion to Mahāyāna,[5] accounts of which are preserved in Paramārtha's Life of Vasubandhu.

The name of the author of the *Dīpa* is not known. The *Vṛtti* calls him Dīpakāra. It also refers to his other work called *Tattva-saptati*, which is unknown to us. It may have been written on the model of the *Paramārtha-saptatikā* of Vasubandhu. From the internal evidence it would appear that the *Dīpa* as well as the *Vṛtti* were written by one and the same ācārya as in the case of the *Kośa* and *Bhāṣya*. The *Vṛtti* refers only to seven eminent Buddhists, viz., Aśvaghoṣa, (Ārya) Maitreya, Dharmatrāta, Ghoṣaka, Vasumitra, Buddhadeva and Kumāralāta. Saṅghabhadra is not mentioned, but several views of the Dīpakāra are identical with his views. We. therefore, can ascribe this work either to Saṅghabhadra or to one of his disciples, particularly Vimalamitra, who is said to have entertained a desire to write such śāstras "as will cause the learned men of Jambudvīpa to forget the name of the Great Vehicle and destroy the fame of Vasubandhu" and consequently to have "fallen into the deepest hell".[6]

P. S. JAINI.

ABHIDARMA-HṚDAYA-ŚĀSTRA, 阿毗曇心論 *A-p'i-t'an-hsin-lun*, or Abhidharmahṛdaya (Abhidharma-sāra), restoration into Sanskrit of the name of a Chinese translation by Saṅghadeva, and Hui-yuen, in 391 A.C., of a work by Fa-sheng, (法勝).[1] It consists of 10 chapters in 4 fascicules and runs into 96 pages. Their contents are as follows: 1. Introductory; 2. Dhātu; 3. Saṃskāra; 4. Karman; 5. Anuśaya; 6. Āryapudgala; 7. Knowledge; 8. Samādhi; 9. Shu-to-lo (sūtra); 10. Miscellaneous, and, 11. Discussions.

Mention may also be made here of two further works which are commentaries on the above. In their restored form their titles read as *Dharmottara-Abhidharma-Hṛdaya-Śāstra* (法勝阿毗曇心論) and Miscellaneous (according to Nanjio *Saṃyukta-*) *Abhidharma-Hṛdaya-Śāstra* (雜阿毗曇心論).

The *Dharmottara-Abhidharma-Hṛdaya-Śāstra* compiled by Upaśānta (Upajita, according to Beal) was translated into its present form by a certain Narendrayaśas (A.C. 563), of the northern Tshi dynasty. This work consists of ten chapters in 6 fascicules and runs into 139 pages (Beal, op. cit. 82: "2 volumes; 6 Kiouen"). The contents of this work are the same as those mentioned above except that section 11 is lacking. This work has not been found in Tibetan. The *Abhidharma-Hṛdaya-Śāstra* of Dharmottara is mentioned by Tao-yen 道梴 (5th century) side by side with the *Jñānaprasthāna* and as if anterior to this work of Kātyāyanīputra (Nanjio, No. 1294 and Takakusu, loc. cit.). The *Saṃyukta-Abhidharma-Hṛdaya-Śāstra*, on the other hand, is a work of 11 chapters in 16 fascicules running into 362 pages (Beal, op. cit. 82, "5 volumes; 11 Kiouen") and was compiled by Fa-kiu (法救) whose name Nanjio restores as Dharmatrāta, while Takakusu conjectures a possible Dharmatara, a conjecture which he supports by the fact that the name is given as Ta-mo-to-lo (達麻多羅) in the introductory chapter. Takakusu further differs from Nanjio in that he mentions only Saṅghavarman as the translator of the present work, whereas the latter states that this work is a translation by Saṅghavarman and others[2], A.C. 434, of the earlier Sung dynasty. The contents of this work differ from those of the above two in that section 11 takes the form of a 'Conclusion'. This work too has not been found in Tibetan. In this book the *Abhidharma-vibhāṣā* is mentioned as the authority for the exposition given by the author. Hui-chi (慧愷 6th century) expressly states that this book belongs to the Sarvāstivāda school (Nanjio, No. 1287; Takakusu, loc. cit.). The *Saṃyuktābhidharma-hṛdaya-śāstra* was also translated by Īśvara in 10 fascicules in A.C. 426; and in A.C. 431 his translation was continued by Guṇavarman, so that it was complete in 13 fascicules. But the whole translation was already lost in A.C. 730.

T. R.

ABHIDHARMA - JÑĀNAPRASTHĀNA - ŚĀSTRA. This is merely the restored Sanskrit form of the Chinese *A-p'i-ta-mo-fa-chih-lun* (阿毗達磨發智論) which is a translation by Hsüan-tsang of Kātyāyanīputra's *Jñānaprasthāna* (Nanjio, No. 1275). See JÑĀNAPRASTHĀNA.

ABHIDHARMA-KOŚA-BHĀṢYA. As indicated by its very title this is a commentary (Bhāṣya), in prose, on the *Abhidharma-kośa-kārikā* of Vasubandhu. Paramārtha tells us that this prose text, the Sanskrit original of which is lost, was compiled by Vasubandhu himself at the request of the Kāśmīra-Vaibhāṣikas. The Kārikās and the Bhāṣya form the compilation known under the title The Abhidharma-kośa of Vasubandhu (cp. Nanjio, Nos. 1267, 1269, 1270; TM. 7090).

---

5 For controversies on this point, see my article 'On the Theory of Two Vasubandhus' in the *BSOAS*. 1958, xxi/i, pp. 48-53.

6 S. Beal: *Buddhist Records of the Western World*, I, pp. 193-7.

1 Nanjio, No. 1288, restores this name into Sanskrit as Dharmajina (ē) while Takakusu interprets it as Dharmottara, *JPTS*. 1904-5, pp. 140 ff. Cp. Beal in *Tripiṭaka Catalogue*, 83, quoting Julien (*Concordance*) who equates Fa-Sheng with Upajita, while he himself says that this name would seem to mean Dharmajita. De la Vallée Poussin, *L'Abhidharmakośa de Vasubandhu*, Introduction, pp. xlviii, lxiii and *L'Inde Classique*, section 2134, give Dharmaśrī.

2 Beal, *Buddhist Records of the Western World*, p. 112, n. 102, where Īśvara (426 A.C.) is given as a translator of the *Saṃyukta-abhidharma-hṛdaya-śāstra*.

ABHIDHARMAKOṢA-BHĀṢYA-ṬĪKĀ-TATTVĀRTHA-NĀMA, also known as *Abhidharmakośaśāstra-tattvārtha-ṭīkā* or simply *Abhidharmakośa-bhāṣya-ṭīkā*, and *Kośaiattvārthaṭīkā*. This work has been preserved for us only in its Tibetan translation, the 'Chos mṅon-paḥi mdsod-kyi bśad-paḥi rgya-cher ḥgrel-pa (don-gyi de-kho-na-ñid ceś-bya-ba)'. It is a 'super-commentary' by Sthiramati on the *Abhidharma-kośa-śāstra* of Vasubandhu. It was translated into Tibetan by Dharmapālabhadra and appears in the Mdo-Ḥgrel (*sūtra*) section of the Tibetan Tengyur (Cordier, III, p. 499; *L'Abhidharmakośa de Vasubandhu* of L. de la Vallée Poussin, Introduction. pp. xviii and xxi; and TM. No. 4421).

ABHIDHARMAKOŚA-ŚĀSTRA, a treatise written by Vasubandhu during the earlier period of his life when he had not yet embraced Mahāyāna Buddhism. He was a native of Gandhāra in north India *circa* the 5th century A.C., and became a Buddhist monk of the Sarvāstivāda school. At that time the Sarvāstivādins in the north of India regarded the Vaibhāṣikas as the representatives of orthodox Buddhism and adhered exclusively to the *Mahāvibhāṣā*. Vasubandhu was one of their followers at the beginning. But later he adopted the more 'progressive' views of the Sautrāntika school and wrote a general survey of the theories of the Sarvāstivāda school in a somewhat critical tone against the Vaibhāṣikas, and that is the *Abhidharmakośa-śāstra*. At first he composed the *Kārikā* in 600 ślokas and later the 8,000 ślokas of the *Bhāṣya* in prose form to explain it. It was entitled the "Kośa of Abhidharma" (the word *kośa* meaning a box or a sheath) because this work included the essentials of the important texts of the Abhidharma of the Sarvāstivāda school as were propounded in the *Jñānaprasthāna* which was regarded as a fundamental work, the six pādas, i.e., the *Dharmaskandha*, &c., and the *Mahāvibhāṣā*, which also constituted the basis on which the *Abhidharmakośa* was written.

According to the tradition told by Hsüan-tsang's disciples P'u-kuang and Fa-pao, Vasubandhu had gone to Kaśmīra in disguise and studied the Abhidharma literature four years under the instruction of Skandhila, with the purpose of preparing a thorough criticism of the *Mahāvibhāṣā*. Afterwards Skandhila discovered his real intention, and thereupon Vasubandhu returned to Gandhāra, where he began to lecture on the *Mahāvibhāṣā*. Each day when he finished one section he wrote a summary in the form of a śloka. Thus at the conclusion of his lectures he had amassed 600 ślokas which were collectively known as the *Abhidharmakoṣa-kārikā*. When this work was first introduced to Kaśmīra, the scholars there thought it an aid to their sect in the propagation of the theories of the *Mahāvibhāṣā*. It was only when they read Vasubandhu's subsequent *Bhāṣya* that they began to realise it was a work composed to criticise the *Mahāvibhāṣā*. Although such is the tradition, scholars at present mostly acknowledge that the *Abhidharmakoṣa-kārikā* was composed on the basis of the *Saṃyuktābhidharma-hṛdaya*, which was then prevalent in Gandhāra, added with extensive adaptations of the materials contained in the *Mahāvibhāṣā*. Therefore, it is not in concordance with fact to regard it purely as a compendium of the *Mahāvibhāṣā*.

The original Sanskrit texts of the *Abhidharmakośa-kārikā* and the *Abhidharmakośa-bhāṣya* were both lost long ago in India, only fragmentary quotations having been preserved in Yaśomitra's *Abhidharmakośavyākhyā*. In 1934 and 1936 Rahula Sankrityayana, the Indian scholar, discovered in Tibetan monasteries the Sanskrit texts of the *Abhidharmakośa-kārikā* and the *Abhidharmakośa-bhāṣya* (as the text of the *kārikā* is restored by making abstracts from the *Bhāṣya*, repetitious and superfluous lines sometimes occur), which texts he brought back to India in photographs. In 1946 V. V. Gokhale collated and published the *kārikā* (*The Text of the Abhidharmakośa-kārikā of Vasubandhu*, *JBRAS*. Vol. 22).

LÜ CH'ENG.

The term Abhidharma may be rendered, in brief, as the study of the dharma. *Kośa* primarily means a receptacle or a store-house, and secondarily it signifies a dictionary or a lexicon, while the term *śāstra*, denotes a philosophical or a religious treatise. The Chinese translators transliterated this title as 阿毗達磨俱舍奢薩怛羅, A-p'i-ta-mo-chu-shê-shê-sa-ta-lo, and rendered it into Chinese as Tui-fa-ts'ang-lun (meaning 對 'toward' 法 'dharma' 藏 'store' and, 論 'treatise'). The Tibetan translators interpreted this title as *Chos-mṅon-pa-mdsod* (the 'excellent-dharma-store-house').

This śāstra consists of 600 śloka-quatrain stanzas, with a detailed prose commentary to each stanza. The book is made up of nine chapters. Of the nine chapters the first eight form the main text, while the last is considered a subsidiary chapter. The first eight chapters taken together constitute a complete śāstra, while the ninth seems to be a later addition or an appendix. According to some scholars the ninth chapter was originally an independent treatise, which came to be appended to the *Abhidharmakośa* at a later stage for the convenience of the student. This view has, however, now been rejected.

Abhidharma-śāstra (or treatises on Abhidharma) and works of a similar nature seem to have been produced in almost all schools of Buddhism. However, the Abhidharma treatises (*śāstra*) which we now possess are mostly books written in the Pali language and transmitted through the Theravāda school of the south. There are also Chinese texts which belong to the Sarvāstivāda school of Buddhism. Abhidharma treatises of the other schools are very few in number. The Sarvāstivāda school was the most powerful of the schools of northern Buddhism of the Christian era in north-west India. A large number of Abhidharma treatises are said to have been written in this school, presumably in Sanskrit, but most of these works are now lost. A few, however, have been translated into Chinese and are preserved in the Chinese Tripiṭaka. Some texts have been rendered into Tibetan and preserved.

The above-mentioned works, however, represent only one branch of Abhidharma study. On the

other hand, there was the production of the compendiums. The subject matter of the compendiums was arranged systematically and in concise form. The *Abhidharmakośa* belongs to the class known as compendiums. Examples of such compendiums are the *Amṛtarasa* by Ghoṣa which belongs to the early period, *Abhidharmahṛdaya* by Dharmottara (circa 3rd century A.C.) and the *Abhidharmāvatāra* by Skandhila of a later date. All of them have been preserved in the Chinese Tripiṭaka. Of these Dharmottara's *Abhidharmahṛdaya* seems to have been the most popular, and commentaries on it were written by Upaśānti, Dharmagupta and several others. Vasubandhu's *Abhidharmakośa* followed in the wake of the treatises of Dharmottara, Upaśānti and Dharmagupta. The subject-matter of the *Abhidharmakośa–śāstra* is so systematically arranged and the argumentation is so thorough that it earned the name of the 'Book of Intelligence'. It was also considered to be the most authoritative treatise of the Sarvāstivāda school, and a large number of commentaries were written on it. Of these, three were written in India. These are still extant, either in the original Sanskrit or in a rendered form, namely, Yaśomitra's *Sphuṭārthā*, Sthiramati's *Tattvārthā* and Pūrṇavardhana's *Lakṣaṇānusārin*. Besides these, there is also an abridged version of the text by Dinnāga, and also a kind of special glossary by Śamathadeva. Both these works have been preserved in the Tibetan version. It may also be mentioned here that the *Abhidharmakośa* often verges on the doctrines of the Sautrāntika, a separatist school of the Sarvāstivāda faction. We find it, therefore, criticising the orthodox views on various points. For this very reason, in his extensive treatises the *A-p'i-ta-mo-shun-chêng-li-lun*(阿毗達磨順正理論), *Abhidharmanyāyānusārin* and *A-p'i-ta-mo-ts'ang-hsien-tsun-lun* (阿毗達磨藏顯宗論), Saṅghabhadra, a contemporary of Vasubandhu, bitterly attacks the work for its unorthodox views. After Saṅghabhadra, however, no new treatises were produced in the Sarvāstivāda school.

In the Chinese Tripiṭaka, there are two versions of the *Abhidharmakośa-śāstra*. There are (1) the *A-p'i-ta-mo-chü-shê-shih-lun* (阿毗達磨俱舍釋論) in twenty-two volumes translated by Chên-ti (眞諦) in the 6th century A.C., and (2) the *A-p'i-ta-mo-chü-she-lun* (阿毗達磨俱舍論) in 30 volumes translated by Hsüan-tsang in the 7th century. The Kārikā version is also preserved in the Chinese Tripiṭaka. It is entitled *A-p'i-ta-mo-chü-shê-lun-sung* (阿毗達磨俱舍論頌) and was translated by Hsüan-tsang.

In the Tibetan Tengyur there is one Kārikā version and one Śāstra version of the text. They have been translated by Jinamitra and Dpal-brtsegs Rakṣita. Stcherbatsky has published the first chapter and also the first half of the second chapter of the Tibetan version. Besides these, an Uighur version of the *Abhidharmakośa* has also been discovered.

Of the commentaries of the *Abhidharmakośa* mentioned above the original Sanskrit text of the *Sphuṭārthā* is extant.

Contents of the Abhidharmakosa. As mentioned earlier, the *Abhidharmakośa* consists of eight main chapters, and one additional chapter (*Pudgala-viniścaya*) which discusses the problem of non-ātman or anātman. The chapters which form the main text are the following: Dhātu-nirdeśa, Indriya-n°, Loka-n°, Karma-n°, Anuśaya-n°, Pudgalamārga-n°, Jñāna-n°, Samādhi-n°. The principal subjects dealt with in the text may be grouped as follows: (1) exposition of the term 'Dharma'. Dharma signifies the 'elements' which constitute the mind, the body, as well as all existent things; (2) the reasons for beings going astray and becoming subject to continuous rebirth; (3) the path which leads beings out of illusion into enlightenment.

The first chapter divides all dharma into two classes: *sāsrava* and *anāsrava*. They are next classified again as *saṃskṛta-* and *asaṃskṛta-dharma*. Then follows a classification of dharma as given in the *Āgama Sūtra*, namely, the five skandha (*rūpa, vedanā, saṃjñā, saṃskāra, vijñāna*) the twelve āyatana (*cakṣus, śrotra, ghrāṇa, jihvā, kāya, manas, rūpa, śabda, gandha, rasa, spraṣṭavya, dharma*) and the 18 dhātu (the twelve āyatana mentioned above, together with *cakṣur vijñāna, śrotra vijñāna, ghrāṇa vijñāna, jihvā vijñāna, kāya vijñāna* and *mano vijñāna*). A detailed exposition especially on the nature and structure of *rūpa* is also given here. This discussion gives a long exposition of the four great elements (*pṛthivī, āp, tejas, vāyu*) and the theory of the atom (*paramāṇu*).

In the second chapter, the twenty-two *indriyas*, and the five states of existence (*rūpa, citta, cetasika, citta-asamprayukta, asaṃskṛta*) are explained. In the latter, the theory of *skandha-āyatanadhātu* is carefully reconsidered, analysed in detail, and also systematised from the standpoint of the Sarvāstivāda. All phenomena are shown to be the result of those dharmas working together. The principles of interrelation are fully explained and also the relation of the dharmas to each other—each standing as a cause for an effect thus making up the existence of beings and their environment. There are 6 kinds of causes (*hetu*), 5 kinds of effect (*phala*), and four kinds of conditions (*pratyaya*). Causality is explained as the theory of 'taking' effect (*grahaṇa*) and 'giving' effect (*ādāna*). At the end of the chapter, mind is classified into three types, good, bad and neutral. The three kinds of mind are further sub-divided into 12 classes and also into 20 divisions. Their mutual relations are also dealt with in detail.

The third chapter describes the various forms of existence and living beings, and the conditions antecedent to their taking various forms of existence. It deals, firstly, with the five forms of existence namely, birth as beings in a purgatory, as departed spirits, as animals, as human beings and as gods. It describes also the three spheres of existence, namely, the *kāma-dhātu*, *rūpa-dhātu* and the *arūpa-dhātu*; also the four kinds of birth, namely, birth from the womb, oviparous birth, birth from moisture, and birth having no dependence. It mentions the four stages of life namely, birth, existence, death, and fourthly the state

6 S.P.C. 97040

intermediary to death and re-birth. The twelve stages or links of causation are next dealt with in relation to the three divisions of time, past, present and future. It also enumerates the four kinds of good. This is followed by a discussion on the phenomenon of dying. It describes the world as the receptacle of all types of beings, as the receptacle of three huge circular discs of gold, of water and of wind; it names the nine mountains, the eight seas, the four continents, the various purgatories, the sun and moon turning round Mt. Sumeru, the number of heavenly spheres, the measurements and dimensions of the bodies of all beings who belong to the different spheres and also their life span; and the vicissitudes the world goes through during the four kalpas, namely, that of 'forming', of 'maintenance', of 'destruction', and of 'vacantness'. It also describes the three major and minor calamities.

The fourth chapter gives the different kinds of karma, as a result of which beings take a variety of forms. First of all karma is analysed, according to its 'self-nature', into three kinds, namely, karma pertaining to the body, karma pertaining to speech and karma pertaining to willing and thinking. Along with the bodily karma or karma pertaining to speech (palpable karma) there exists a subtle *rūpa-karma* called *avijñapti karma* (impalpable karma), i.e., the karma of acquired character or habit. The relation between the antecedent mind and the resultant karma is next explained according to the twofold theory of *samutthāna*. The resultant karma is good or bad in accordance with the state of mind that causes the karma. *Avijñapti karma* is next divided into three kinds, namely, saṃvara, non-saṃvara, and neither saṃvara nor non-saṃvara. Of these, the first *saṃvara avijñapti karma* is further divided into three, namely, *prātimokṣa*, *dhyāna*, and *anāśrava*. The coming into being, the development, and also the elimination of the various *avijñapti karma* are next explained. The karma theories given in the *Āgama Sūtra* are also enumerated and explained in this chapter with special reference to the theory of the ten *karma-patha*. In the latter half of the chapter are discussed the interrelation of the different kinds of karma, their effects, the three kinds of *āvaraṇa* and the three meritorious practices.

The fifth chapter begins with an explanation of the ninety-eight *anuśaya*. Here, the six principal anuśaya (*rāga*, *pratigha*, *māna*, *avidyā*, *dṛṣṭi* and *vicikitsā*) become ten with *dṛṣṭi* being divided into five. The ten *anuśaya* further subdivided become ninety-eight dealt with in relation to the three worlds (*kāma*, *rūpa* and *ārūpya*) and each of the five classes of discipline. This is followed by a classification of *anuśaya* into 11 *sarvatraga anuśaya* and 9 *ūrdhvaviṣaya anuśaya*. Their distribution in relation to origin and character is also described. Other doctrines given in the *Āgama Sūtras*, namely, that of *āśrava*, *ogha*, *yoga*, *upādāna*, *saṃyojana*, *bandhana*, *upakleśa*, *paryavasthāna* and *mala*, are also treated in this chapter.

The sixth chapter begins with the two modes of removing defilement: (1) by insight into the Four Noble Truths; (2) by discipline. It then proceeds to explain the method of removing defilements. The first stage includes the preparatory courses of the 'three dhātu' and 'four kuśala-mūla'. One who goes through these two initial courses enters the group of the Holy Ones. First, he disciplines himself by means of the *darśana mārga*, insight into the Four Noble Truths, and then, by means of the *bhāvanā-mārga*, he destroys the nine kinds of defilements. The next stage is the *asaikṣa-mārga* which brings the fruit of arahantship. Eight stages are covered altogether by the three *mārga*. The first of the eight stages is the *śrotāpatti* and the last arahantship. Towards the end of the chapter are given the different classifications of the path as found in the *Āgamas*, i.e. the four *pratipad*, the four *smṛtyupasthāna*, the four *samyakprahāṇa*, the four *ṛddhipāda*, the five *indriya*, the five *bala*, the seven *bodhyaṅga*, the eight *mārga*, and the four *avetyaprasāda*.

In the seventh chapter a detailed account is given of the ten kinds of knowledge (*dukkha-jñāna*, *samudaya-jñāna*, *nirodha-j°*, *mārga-j°*, *anvaya-j°*, *kṣaya-j°*, *anutpāda-j°*, *paracitta-j°* and *saṃvṛti-j°*). This is followed by the various attributes belonging to a Buddha, namely, the ten powers, the four forms of fearlessness, the three *smṛtyupasthāna*, and the great compassion. It also enumerates the virtues common to the Buddha and the saints, namely, *araṇa*, *praṇidhāna-jñāna*, and the four *pratisaṃvid*, as well as the virtues common to the Buddha and ordinary beings, namely, the six *abhijñā*, the three *vidyā*, and the three *prātihārya*.

The eighth chapter gives a detailed explanation of the different forms of *samādhi* mentioned in the *Āgama Sūtra*, i.e., the four *dhyāna*, the four *ārūpya*, the eight *samāpatti*, and the three *samāpatti* (*savitarka-savicāra*, *avitarka-savicāra*, *avitarka-avicāra*). It gives also the gain resulting from the different types of *samādhi*, namely, the attainment of the four *apramāṇa*, the eight *vimokṣa*, and the eight *abhibhāyatana*.

The last and additional chapter, *Pudgalaviniścaya*, is an independent treatise. Here the ātman theories advocated by the Vātsīputrīya and by Brāhmanism are refuted and an attempt made to establish the ātman-less nature of all dharma.

The position of the Śāstra in the history of Buddhist thought. It is needless to say that the *Abhidharmakośa-śāstra* is one of the most important Buddhist treatises. There are three points which we have to take into special consideration with regard to this śāstra. (1) The *Abhidharmakośa* occupies an important place in the history of the Sarvāstivāda Abhidharma literature. (2) It is related to the rise of Indian Mahāyāna thought. (3) It has a special meaning as a text-book of the fundamental doctrines of Buddhism.

With regard to the first point it may be said, (*a*) that the *Abhidharmakośa-śāstra* completely systematised the Sarvāstivāda dogma; (*b*) that it marked an advance in Sarvāstivāda doctrine; and (*c*), that it introduced Sautrāntika views.

As mentioned earlier, the dogmas of the Sarvāstivāda school were given a definite form in the *Jñānaprasthāna*, but the systematisation was not yet complete. The *Mahāvibhāṣā*, too, though

it was so voluminous as to contain almost every doctrine and theory, was itself not a systematic treatise. The first work then which systematised the teachings of Sarvāstivāda school was the *Abhidharmahṛdaya.* The *Abhidharmakośa* followed the *Hṛdaya* very closely but it rearranged the subject matter of the *Hṛdaya* and added to it, while it was not so much a creative work or a new philosophy, in some places the author expresses his own hermeneutic views, e.g., in the interpretation of the *pratītya-samutpāda* theory and the interpretation of the theory of the ten *karma-patha*.

This generally follows the orthodox doctrine of the Sarvāstivādin śāstra, yet at times it deviates from it, criticising Sarvāstivāda doctrine severely. In this work the author prefers reason to tradition in the treatment of his subject-matter. His views on *prāpti* and *nikāya-sabhāga,* on the intermediary existence between death and rebirth, and on *avijñapti-karma,* testify to this fact. In his exposition of the above-mentioned doctrines Vasubandhu always took the Sautrāntika standpoint. This is a very significant fact, for Sautrāntika philosophy is the half-way house between Sarvāstivāda philosophy and Māhāyana Buddhism.

Issai Funahashi.

The author's attitude of relying solely upon reason, irrespective of the established dogmas, is even more manifest in the *Bhāṣya* of this śāstra. In the *kārikā* portions he either uses the phrase, " It is said so " to express his dissatisfaction with the theories of the *Mahāvibhāṣā*, or only points out some questionable points in a rather reserved manner, and then concludes in conformity with the *Mahāvibhāṣā* convention. The brevity of his statements often obscures his real intent. It is in the *Bhāṣya* that he begins to give full expression to his own opinions, frequently alluding to the theories of the Sautrāntika school and making repeated discussions on them until the right or wrong of a proposition is positively clarified. He even thoroughly criticises the theory of the " substantiality of the three times, i.e., the past, the present, and the future ", which was the most fundamental position of the *Mahāvibhāṣā* held by the Sarvāstivādins. He only remarks at the end, " The Dharma-nature is very profound ", so that one should not consider any old theory as untenable just because it is dubious and hard to understand. (See the fifth chapter of the śāstra). These words imply that the followers of the *Mahāvibhāṣā* only adhered to old theories, regardless of their correctness or error, and that it was needless to refer to the fallibility of the establishment of their theories. But Vasubandhu did not accept the theories of the Sautrāntika school *in toto,* though he highly esteemed them. His attitude towards them was of one who depended on reason alone. For instance, in analysing the falsehood and reality of the three kinds of dharma, i.e., *skandha, āyatana* and *dhātu,* the Sautrāntika school said that only the *dhātus* are real, but Vasubandhu held that the *āyatanas* are also real, implying his respect to the theory that " the twelve *āyatanas* include all dharmas ", as expounded in the sūtras. As regards the aspect of separate *dharma-lakṣaṇas,* such as general mental functions, i.e., desire, &c., ignorance, the root of life, and so forth, which the Sautrāntika school held to be false, Vasubandhu advocated that they are real in accordance with the propositions of the Sarvāstivāda school.

Lü Ch'eng.

The two main philosophical systems of Indian Mahāyāna Buddhism are the Mādhyamika philosophy of Nāgārjuna and his followers, and the Vijñaptimātra philosophy of Asaṅga, Vasubandhu, and others. The former is based on the radical criticism of Hīnayāna teaching, mainly the Sarvāstivādin doctrine ; and the latter is established on the Mahāyānist modification of the Sarvāstivāda philosophy. In order to give a new impetus to Buddhism, Mahāyānists had to confront Sarvāstivāda philosophy, compete with it and surpass it. Sarvāstivāda philosophy, therefore, had an important bearing on the rise of Mahāyāna thought. And this śāstra, which completely systematised the Sarvāstivāda philosophy, occupied an important place in the development of Mahāyāna thought. It may be mentioned here, that there is a very close relation between Vijñaptimātra philosophy and the Abhidharmakośa system. In recent years, the view has been put forward that Vasubandhu, the author of the *Abhidharmakośa-śāstra,* is not the same as the reputed Ācārya of Vijñaptimātra philosophy. Yet, the undeniable fact remains that this śāstra, which deviates from the orthodox teaching of the Sarvāstivādins and is deeply tinged with Sautrānta doctrine, served as an introduction to or a forerunner of Vijñaptimātra philosophy. We also note that most of the Indian commentators of this śāstra were Vijñaptimātra scholars.

The history of Buddhism in India, China, and in Japan shows that in all these countries the *Abhidharmakośa* has been used as the primer of Buddhism. In China and especially in Japan the Āgama and the Abhidharma had long been neglected ; these two branches of Buddhism were regarded in these countries as belonging to Hīnayāna thought and śrāvaka teaching. In spite of this, the *Abhidharmakośa*, " the Book of Intelligence ", was considered to be the treatise which teaches the fundamental doctrines of Buddhism. The study of the śāstra was, therefore, recommended as a necessary means for turning from Hīnayāna to Mahāyāna studies. There is also a proverbial saying among Japanese Buddhist students : " three years of *Vijñaptimātra* and eight years of *Abhidharmakośa* ". According to this saying of the prescribed period of eleven years for the study of Buddhism, eight years are to be devoted to the study of the *Abhidharmakośa.*

History of the Study of the Śāstra. Among the commentaries of the *Abhidharmakośa-śāstra* which are considered lost are those of Vasumitra and Guṇamati. This shows that the śāstra was studied not only as a book of the Sarvāstivāda school, but also as a kind of general introduction to Buddhism. I-tsing, the Chinese pilgrim who went

to India at the end of the 7th century and studied in the Buddhist college at Nālandā, tells us in his itinerary that in the Buddhist colleges and monasteries of India of those days, students who had completed the first stage of study, i.e., Sanskrit grammar and composition, had to proceed next to the study of *hetu-vidyā*, logic and the study of *Abhidharmakośa*. In the lamaist monasteries of modern Tibet and Mongolia, which are established on the lines of the Nālandā college of later Indian Buddhism, the *Abhidharmkośa-śāstra* is reckoned, along with Maitreya's *Abhisamayālaṅkāra* and Candrakīrti's *Mādhyamāvatāra*, as one of the five principal treatises which students should study.

The *Abhidharmakośa-śāstra* was introduced into China in 564 A.C. when it was translated by Chên-ti (眞諦). By this time, other treatises of the Sarvāstivāda school (such as the *Jñānaprasthāna*, the *Abhidharma-hṛdya*, the *Mahāvibhāṣā*) had already been translated into Chinese, and there was already a school known as the Pi-t'an-tsung (毘曇宗), or the Abhidharma school. Yet, after Chên-ti, the *Abhidharmakośa* became the sole subject of study and the other treatises were put aside. As a result, there arose the Chü-shê-tsung (俱舍宗), the Kośa school. Some 90 years after Chên-ti, Hsüan-tsang made a new translation of the śāstra. Besides the *Abhidharmakośa-śāstra*, Hsüan-tsang translated more than 400 volumes of the Sarvāstivāda treatises, including a new version of the *Jñānaprasthāna*, a complete version of the 200 volumed *Mahāvibhāṣā*, &c. His pupils, Shen-ti (神泰), P'u-kuang (普光), and Fa-pao (法寶), wrote a well-known commentary to the new Chinese version of the *Abhidharmakośa-śāstra*. These followers of the Hsüan-tsang school also criticised severely the old version of Chên-ti for its inaccuracy. Since then Hsüan-tsang's new version became the only text that was studied. Sometime later Yüan-hui (圓暉) wrote the *Chü-shê-lun-sung-shu* (俱舍論頌疏), a commentary to the *Abhidharmakośa-kārikā*, explaining in a simple manner the teachings of the *Abhidharmakośa*. Yüan-hui's commentary is a very useful text. It serves as an easy approach to the study of the *Abhidharmakośa-śāstra*. Several sub-commentaries to Yüan-hui's commentary were also written.

The study of the *Abhidharmakośa* was introduced to Japan by the scholars who went to China from Japan in the 7th century to learn Buddhism under Hsuan-tsang's direct pupils. From the Heian to the Kamakura period, the study of the śāstra was pursued in the great temples, the Todai-ji at Nara, Enryaku-ji on Mt. Hiei, and Kongobu-ji on Mt. Kōya. Chinkai (珍海) and Genshin (源信) were among the most famous scholars of the period. In the Tokugawa period the study of the śāstra was carried on in monasteries and teaching institutions belonging to different Buddhist schools and sects. Among the well-known scholars of the Tokugawa period are Kaidō (快道), Hōdō (法幢), Fujaku (普寂) and Kaiou (海應). These scholars, not being content with the mere study of Hsüan-tsang's version of the *Abhidharmakośa-śāstra*, proceeded to compare it with the older version of the śāstra by Chên-ti and thereby made a new contribution towards the study of the śāstra.

Bibliography; Kimura, T: *A Study of the Abhidharma-śāstra*, revised edition, Tokyo, 1937, pp. 259-324. Fukaura, S.: *An Introduction to the Study of the Abhidharmakośa*, Kyoto, 1951. Ouyang Chien: *Preface to the Abhidharmakośa-śāstra*, Nanking, 1924. Takakusu, J.: *The Essentials of Buddhist Philosophy*, Bombay, 1956, pp. 55-73.

Bibiliographical Notes : The first chapter of the *Sphuṭārthā* has been published by Levi and Stcherbatsky. The first half of the second chapter has been published by Wogihara and Stcherbatsky, and the third chapter by L. de la Vallée Poussin. The full text of the *Sphuṭārthā* was published by Wogihara (1932-36). There is also another edition of the *Sphuṭārthā*, containing the first three chapters only, published by N. N. Law in 1949. The Sanskrit originals of the other two commentaries have not been recovered. All three commentaries are, however, found in Tibetan. Furthermore, a fragment of the Chinese version of the *Tattvārthā* and also a part of an Uighur version have been recently discovered.

Of the texts mentioned above, the *Kārikā* has been translated by Teramoto, into Japanese from the Tibetan version, and the *Pudgalaviniścaya* by Stcherbatsky from the Tibetan into English. The entire śāstra has been translated by de la Vallée Poussin into French, following Hsüan-tsang's Chinese version (in comparison also with Chênti's Chinese version, the Tibetan version, and the *Sphuṭārthā* commentary). The first chapter of the *Sphuṭārthā* commentary has been translated by Wogihara from the Sanskrit original into Japanese. The second chapter of the same text has been rendered by U. Wogihara and S. Yamaguchi from the Sanskrit into Japanese. And, finally, the third chapter of the *Abhidharmakośa-śāstra* and the corresponding chapter of the *Sphuṭārthā* have been translated by Yamaguchi and Funahashi into Japanese, from the Sanskrit original.

As a result of scientific researches carried out in more recent years on the *Abhidharmakośa-śāstra* in India, Japan and in Europe, several new editions and translations of the text have been published. Among them are Rosenberg's *Die Probleme der Buddhistischen Philosophie*, Stcherbatsky's *Central Conception of Buddhism*, de la Vallée Poussin's *La Morale bouddhique*, and I. Funahashi's *Go no Kenkyu* (Studies on Karma). A complete concordance of Hsüan-tsang's Chinese version of the śāstra was made by S. Funahashi and I. Funahashi, and a concise concordance of the Sanskrit *Kārikā* was made by A. Bareau. Among introductory works to the study of the śāstra written in Japanese are those by S. Funahashi, Takagi and Fukaura. (I. F.)

The following is a list of the Tibetan translations of the *Abhidharmakośa-śāstra* and its commentaries: (1) *Chos mṅon-paḥi mdsod-kyi tshig leḥur-byas-pa* (*Abhidharmakośakārikā*), trsl. by Jinamitra and Dpal brtsegs Rakṣita. (2) *Chos mṅon-paḥi mdsod-kyi bśad-pa* (*Abhidharmakośabhāṣya*), 30 fascicules, by the same translators of the previous work. (3) *Chos mṅon-paḥi mdsod-kyi bstan-bcos-kyi tshig-leḥur byas-paḥi rnam-par bśad-pa* (Saṅghabhadra's *Abhidharmasamayapradīpikā*), 4,500 ślokas by an unknown translator. (4) *Chos mṅon-paḥi mdsod-kyi ḥgrel-pa gnad-kyi sgron-ma* (Diṅnāga's *Marmapradīpa*), 4,000 ślokas, trsl. by Rnal-ḥbyor zla-ba and Ḥjam-ḥpal gshon-nu. (5) *Chos mṅon-paḥi mdsod-kyi rgya-cher ḥgrel-pa don-gyi de-kho-na-ñid* (Sthiramati's *Tattvārthā*), trsl. by Sha-lu Lotsāba chen-po and Dharmapālabhadra. (6) *Chos mṅon-paḥi mdsod-kyi ḥgrel-bśad mtshan-ñid-kyi rjes-su ḥbraṅ-ba* (Pūrṇavardhana's *Lakṣaṇānusārinī*), 18,000 ślokas, trsl. by Kanakavarma and Ni-ma grags. (There is an abridged version abstracted by Mchims yon-tan ḥbar.) (7) *Chos mṅon-paḥi mdsod-kyi ḥgrel-bśad don gsal-ba* (Yaśomitra's *Sphuṭārthā*), 18,000 ślokas, trsl. by Viśuddhasiṃha and Dpal-brtsegs. (8) *Chos mṅon-paḥi mdsod-kyi ḥgrel-bśad ñe-bar mkho-ba* (Śāntistiradeva's *Upāyikā*), trsl. by Jayaśrī and Śes-rab ḥod-zer. All these translations are collected in the Tibetan Tengyur.

There is a French version, known as *L'Abhidharmakośa de Vasubandhu*, translated by L. de la Vallée Poussin in 6 Vols. and published in Paris, 1923-31.

Before the introduction of the *Abhidharmakośa* into China, Chinese Buddhist scholars who studied the Abhidharma, or the Chinese Abhidharma masters, held the *Saṃyuktābhidharma-hṛdaya* as their chief text, and so they were also known as masters of the *Saṃyuktābhidharmahṛdaya*. After the *Abhidharmakośa* was translated into the Chinese, they gradually took up this work as their principal text for study and hence the arising of Kośa masters. They also wrote a number of commentaries on it. At first, when Paramārtha was translating this śāstra, he expounded on it repeatedly for those who participated in the translation work, so as to make the translated version clear and correct in meaning. Thereupon, Hui-k'ai wrote the *Theoretical Commentary* in 53 fascicules. Afterwards, Tao-yao obtained the

manuscripts of this commentary after Hui-k'ai's death and abridged it into 22 fascicules. Still later, Hui-ching according to his own understanding, wrote a commentary on the śāstra in more than 30 fascicules. All these were important writings, but none of them is now extant. After Hsüan-tsang produced his new version of the śāstra, it was highly esteemed by the scholars of his time, as it interpreted the *Dharmalakṣaṇas* in a brief but complete manner and could be used as a preliminary text for the study of the Vijñaptimātra theories. Thus the study of the new śāstra came into vogue. Many of Hsüan-tsang's disciples wrote commentaries on the new version of the *Abhidharmakośa*, the three most famous ones being Shên-t'ai's *Commentary*, P'u-kuang's *Record* and Fa-pao's *Commentary*, each of them in 30 fascicules. All these are extant now (except Shên-t'ai's *Commentary*, of which only a few fascicules are preserved). Afterwards during the K'ai-yüan period (*circa* 722-727 A.C.), Yüan-hui made abridgements from the commentaries written by P'u-kuang and Fa-pao, only to explain the *Kārikā* (also the ślokas in the ninth chapter on the Refutation of the Grasp of Ego), which formed the *Commentary on the Abhidharmakośa-kārikā* in 30 fascicules. It was concise and easy to study and was a very popular work. Later, Ch'ung-i wrote the *Notes of Chin-hua* in 10 fascicules, for the exposition of this commentary, but it is now lost. Only Hui-hui's *Theoretical Notes on the Commentary of the Kārikā* in 6 fascicules, and Tun-lin's *Record of the Commentary of the Kārikā* in 12 fascicules are still extant. Among the lost exegetic works there were K'uei-chi's *Notes on the Abhidharmakośa-śāstra* in 10 fascicules, Huai-su's *Commentary* in 15 fascicules, Shên-ch'ing's *Theoretical Notes* in a few fascicules, Hsüan-yo's *Notes of Chin-hua* in 20 fascicules, &c.

In the Tibetan region, Jinamitra, who translated the *Abhidharmakośa-śāstra* during the former period of propagation, was a grand disciple of Sthiramati. As one who had received this śāstra from a right source, he worked energetically for its promotion. The tradition was suspended for sometime when the ruler Glaṅ dar-ma destroyed Buddhism in Tibet. During the later period of propagation of Buddhism in Tibet, it was Mchims Ḥjam-dbyaṅs of the Snar-thaṅ monastery, a disciple of Mchims Thams-cad mkhen-po of the Bkaḥ-gdams-pa sect, who fully developed the study of this śāstra at the end of the 13th century A.C., and composed the *Chos mṅon-paḥi mdsod-kyi Ḥgrel-ba mṅon-paḥi rgyan*, in which he made thorough and discriminative examinations of the views held by old masters on this śāstra and thus established the final system of this study. Afterwards, the Dge-lugs-pa sect laid even more emphasis on the study of this śāstra and put it as the final item in the curriculum of exoteric Buddhism. Buddhist masters of successive generations, such as Dge-ḥdun grub, Bsod-nams grags-pa, Dkon-mchog chos-ḥphal, Rgyal-ba lṅa-pa, Ḥjam-dbyaṅs bshad-pa, &c., have all written explanatory works on the *Abhidharmakośa* to be studied and followed by students.

Moreover, the study of the *Abhidharmakośa* has also been very popular in Japan. As far back as the T'ang dynasty Japanese monk scholars, Dōshō, Chitsū, Chitatsu and Genbō had come to China one after the other to study the *Abhidharmakośa* from Hsüan-tsang and Chih-chou. After returning home, they taught it to Japanese students and established the Kośa sect. Although this sect was later affiliated to the Dharmalakṣaṇa sect, this śāstra was still highly esteemed as a fundamental text that must be studied. Many scholars wrote commentaries on it. The works of scholars of later times, such as Genshin, Chinkai, Shūshō, Shū-ō, Tan-e, Fujaku, Rinjo Hōdō, Kyokuga, &c., are often used by scholars for reference in the study of the *Abhidharmakośa*. (L. C.)

ABHIDHARMA-KOŚA-(ŚĀSTRA-) KĀRIKĀ, 阿毘達磨俱舍論本頌 *A-p'i-ta-mo-chü-shê-lun-pen-sung*, restored Sanskrit title of the Chinese translation by Hsüan-tsang of a work by Vasubandhu. It consists of 8 chapters in 2 fascicules running into 53 pages (Nanjio, No. 1270; cp. Nos. 1267 and 1269; cp. also Takakusu in *JPTS*. 1904-5, pp. 132-3). This is a collection of 600 principal and 7 additional verses explained in the *Abhidharma-kośa-śāstra* and the *Abhidharma-kośa-bhāṣya*.

ABHIDHARMA-KOŚA-ŚĀSTRA-KĀRIKĀ-VIBHĀṢYA, a treatise by the orthodox teacher Saṅghabhadra in refutation of the *Abhidharma-kośa-śāstra* of Vasubandhu. This work is better known as the *Abhidharma-kośa-samaya-pradīpikā-śāstra* (Bareau: SECTS OF EARLY BUDDHISM, s.v. Sarvāstivādins).

ABHIDHARMAKOŚA SCHOOL, generally known as Kośa School. See KUSHA.

ABHIDHARMA- KOŚA-ṬĪKĀ-LAKṢAṆĀNUSĀRIṆĪ-NĀMA is the name of a text which exists in Tibetan only, and appears as such in Tengyur, Mṅon-pa, (vols. Cu and Chu, folios 1b¹–34a⁷ and folios 1b¹–322a⁷ respectively of the Sde-dge edition). The authorship is ascribed to Pūrṇavardhana, a pupil of Sthiramati and the teacher of Jinamitra and Śīlendrabodhi. Kanakavarma and Pa-tshab-ñi-ma-grags translated it into Tibetan (A. C. Banerjee: *Sarvāstivāda Literature*, p. 73).

ABHIDHARMAKOSA-ṬĪKOPĀYIKA-NĀMA, a text which exists in Tibetan only, and appears as such in Tengyur, Mṅon pa, (vols. Ju, folios 1b¹–287ā⁷, and Ñu folios 1b¹–95a⁷ of the Sde-dgo edition). The author of this work is Shi-gnas-lha. Jayaśrī and Śes-rab-hod-zer translated it into Tibetan (A. C. Banerjee: *Sarvāsticāda Literature*, p. 73).

ABHIDHARMA-(KOŚA-) VṚTTI-MARMA-DĪPA-NĀMA, a work which exists in Tibetan only, and appears as such in Tengyur, Mṅon-pa, (vol. Ñu, folios 95b¹–21a⁷, of the Sde-dge ed.). It is a commentary on the *Abhidharmakośa*, the author being Dignāga (Phyogs-kyi glaṅ-po or Phyogs-glaṅ). Ḥjam-ḥpal-gzhon-pa translated it into Tibetan (A. C. Bannerjee: *Sarvāstivāda Literature*, p. 73).

ABHIDHARMAKOŚA-VYĀKHYĀ, or *Sputārthā-abhidharmakośa-vyākhyā*, the name of Yaśomitra's commentary[1] on the *Abhidharmakośa* of Vasubandhu. This work is, fortunately, preserved in the original Sanskrit. It is not extant in Chinese but there exists a Tibetan translation by Viśuddhasiṃha and Dpal-brtsegs, which reads 'Chos mṅon-paḥi mdsod-kyi ḥgrel-bśad'[2] (Cordier, III, p. 395; TM. No. 4092).

The commentary of Yaśomitra follows the style of the Hindu philosophers and discusses the questions raised with reference to their philosophical bearings, but supplies no *vṛtti* or literal meaning. The work is divided into eight chapters each called a *kośasthāna*—'receptacle'. The first chapter opens with a discussion on dharma, or duty, which is said to be of two kinds—one *sāśrava*, leading to rebirth, and the other *anāśrava*, or that which effects emancipation from the bond of mundane existence. Then follow descriptions of the twelve sentient organs which constitute corporeality; these include the five sensory

1 The first two Kosasthânas have been edited by S. Lévi and Stcherbatsky (BB. XXI).

2 Bendall, p. 25; A. C. Banerjee: *Sarvāstivāda Literature* p. 73; Nanjio, p. 279.

organs, eyes, ears, &c., and seven desires collectively called the *adhyātmika-dhātu*. The second chapter treats of organic and mental functions (*indriya*), which are reckoned as twenty-two. The third treats of the different orders of beings resulting from carnal desires (*kāmadhātu*). The subject of the fourth chapter is the relation which our actions bear to our future life, and the corresponding good or evil states experienced in the course of continued existence (*saṃsāra*). The fifth describes the pain and suffering (*duḥkha*) resulting from such continued existence. The sixth refers to peaceful contemplation (*samādhi*) and the acquisition (*sampādana*) of penetrating insight (*vipaśyanā*). The seventh treats of knowledge (*jñāna*) which is of two kinds, one worldly (*laukika*) and impure (*sāśrava*), and the other transcendental (*lokottara*) and pure (*anāśrava*) or that which results from yoga meditation. The eighth explains *samādhi* or concentration of the mind (*cittaikagratā*) whereby all bonds of existence are destroyed (*vajropamena samādhinā sarvayojanaprahāṇaṃ kṛtvan*).

On the whole, it may be remarked that Yaśomitra's glosses are grammatically correct and philosophically accurate. In his diction he follows the grammatical school of Pāṇini. In his philosophy he pursues the canonical sūtra texts and expressly denominates himself 'Sautrāntika'. We do not actually possess all the authorities on which he relies. Nevertheless, Yaśomitra's labours represent that service to Buddhism which is rendered by the philosophical treatises of the Brāhmaṇas to the Vedas which they cite at every step. Yaśomitra assumes the division of the Buddhist texts into the Three Baskets. He refers fairly frequently to lost works. To the more eminent of his authorities he prefixes the epithet Ārya (noble), or Sthavira (elder). The quotations of Yaśomitra are sometimes exhaustive, at other times brief. They bear witness to his immense reading and orthodoxy. The concord between the Tibetan and the Sanskrit is unique. Among the noteworthy elders alluded to is Aśvajit so often met with in the Sanskrit texts from Nepal. We also come across Dharmatrāta and Buddhadeva. Further, we encounter more frequently Guṇamati and his disciple Vasumitra who both preceded Yaśomitra as expositors of Vasubandhu's *Abhidharmakośa*. Next we notice Saṅghabhadra, Bhadanta Śrīlābha, Ārya Dharmagupta, Ācārya Manoratha and Bhadanta Ghoṣaka.

There are two or three titles of books which seem to be of non-Buddhistic origin, e.g., *Nirgrantha-śāstra*, which was probably a Jaina work. There is also an allusion to the *Śatarudrīya* of Vyāsa, no doubt a Brahmanical treatise. Among the heretical sects mentioned by Yaśomitra are Pāṇḍaras, Pāśupatas, and Kāpālikas. Moreover, he refutes the Vaiśeṣikas. He admits that the Buddhists were by no means agreed on a number of disputed philosophical questions. Those schools which he cites most often, either for the purpose of refutation or for entering his own doctrinal protest, are the Buddhists of Kashmir and Ceylon and the Vātsīputrīyas. The Kāśmīras are frequently mentioned and are stigmatised as outsiders.

The method of Yaśomitra does not lend itself to a reconstruction of the text of Vasubandhu, his own exposition being so co-mingled with the words of the author whom he interprets. At the lowest estimate *Abhidharmakośa-vyākhyā* is a compilation of texts and philosophical interpretations. None of the subjects he treats of in his work is examined in a consecutive method or in a logical manner. They are all mixed up and the same matter is discussed in several connections in the work. The doctrine of the book is manifestly that of the most ancient school of Buddhism, which was atheistic.

Thus, the work is of great importance as a repository of the various metaphysical theories of the early Buddhists. It takes up, one after another, the various topics which engaged their attention, points out their character, notices their authors, decides upon their merits with great tact and learning, and forms altogether a valuable work of reference on the subject.[3]

ABHIDHARMA-KOŚA-(VYĀKHYĀ-)ŚĀSTRA, 阿毗達磨俱舍釋論 *A-p'i-ta-mo-chü-shê-shih-lun*, Sanskrit restoration of the title of an earlier Chinese translation (564–567) by Paramārtha of Vasubandhu's *Abhidharmakośa-śāstra*. "According to the San-dai-zô-mok-rok," says Nanjio, "the seventh character of the Chinese title is sometimes left out. If so, both Sanskrit and Chinese titles exactly agree with each other, i.e., without 'vyākhyā'". It consists of 9 chapters in 22 fascicules, and runs into 613 pages (Nanjio. 1269, p. 1267; also Takakusu in *JPTS*. 1904–1905, p. 132, n. 7).

ABHIDHARMA LITERATURE.* **Introductory.** From the earliest times there were, among members of the Buddhist Order, experts called *ābhidhammika* (*ābhidharmika*) who specialised in the study and exposition of Abhidharma. It was, however, during the period of sectarian Buddhism, i.e., after the growth of various schools that Abhidharma became a separate branch of study with a special literature attached to it, although the prototype of such literature was to be found even earlier. Not all schools, nevertheless, showed the same enthusiasm for the study and development of Abhidharma. The Mahāsaṅghikas, for example, lagged behind the others in this respect, although an examination of the texts of the various schools shows that each school had its own *Tripiṭaka*. (On this see s.v. ABHIDHAMMA.)

The growth of Abhidharma studies and their subsequent incorporation into books can be divided,

* Some of the information given in this article also appears elsewhere, sometimes in more detail, under separate topics such as persons and books, herein itemised. The information is repeated here in accordance with the principle adopted in this Encyclopaedia of making each article, as far as possible, self-contained.—G. P. M.

roughly, into three phases. The first covers the period of original or 'primitive' Buddhism and goes back to the time of the Buddha himself. The second is the period during which Abhidharma became an independent collection or *piṭaka*, detached from the two other *piṭakas* of Sutta and Vinaya. This was the period of the compilation of the fundamental texts of the Abhidharma and may be assigned chronologically to extend from about the middle of the 3rd century B.C. to the beginning of the Christian era. This period roughly coincides with the period of the differentiation of Buddhist schools.

The third period saw the production of commentaries to the fundamental books and manuals based on them. This period varies in different schools but, roughly speaking, it extended from about the beginning of the Christian era till about the end of the 5th century A.C. But, of course, the compilation of commentaries and manuals never actually ceased completely, especially in the southern schools of Pali Buddhism, and in some countries, like Burma, the process goes on even today.

Let us now proceed to consider in greater detail the three periods mentioned above.

I. Abhidharma prior to the establishment of the Abhidharma Piṭaka. The doctrine which the Buddha preached to his disciples and followers during the 45 years of his career as teacher was later edited and collected into the four Āgamas or the Five Nikāyas under the collective name of the *Sutta Piṭaka*. In addition to these were the disciplinary rules embodied in the Vinaya and codified as the *Vinaya Piṭaka*. At the Council of Rājagriha, held immediately after the Buddha's death, the whole of the Buddha's teachings was rehearsed and summarised under the appellation of *dhamma-vinaya*. This comprised the entire spiritual wealth of the Buddhists of the early period.

Thereafter, it became necessary not only to preserve the Dhamma and the Vinaya by committing them to memory, but also to study and expound them. It was found, in the case of the Dhamma, as embodied in the collection of suttas, that the form in which the discourses were couched and the contents thereof varied largely according to the nature of the audience to whom they were preached. Thus, while some suttas contained sublime and recondite doctrines, others contained more general teachings which were easier to understand. Moreover, the Buddha did not adhere to a particular system in expounding his doctrines; he depended largely on circumstances. Sermons were preached as the time and occasion arose for admonition. Many of the sermons that were remembered and preserved were, therefore, fragmentary and often concise.

In the case of the Buddha's immediate disciples, however, who received instruction direct from the Master, these sermons though brief were adequate and the sermons were understood by the listeners to whom they were addressed. But to disciples and audiences who came a century or two later, the discourses were less intelligible. The necessity thus arose for providing further explanation and elucidations. A similar position arose with regard to disciplinary rules, too, regarding their interpretation and application. Thus began two new branches of study, one called the *abhidhamma* for the exposition of the doctrine and the other, the *abhivinaya*, for the interpretation of disciplinary rules. As these went on there arose specialists who gave their attention to one branch of study or to other, called respectively *dhammadharā* (bearers of the doctrine) and *vinayadharā* (bearers of the rules), while experts of the *abhidhamma* and *abhivinaya* were given the name of *mātikādharā* (bearers of the matrices or 'moulds' of exposition). The term *mātikā* (Skt. *mātṛkā*) means a summary of a discourse on the *abhidhamma* or the *abhivinaya*. At a later stage, the *dhammadhara* was also called *suttantika* (Skt. *sūtrāntika*, master of the texts) and *bahussuta* (Skt. *bahuśruta* : learned).

When the *Sutta Piṭaka* was separated into 'books' called Āgamas or Nikāyas, still other terms were used, e.g., Dīghabhāṇaka (reciter of the Dīgha-nikāya), Majjhima-b° (reciter of the Majjhima-n°), Saṃyutta-b°, Aṅguttara-b°, Kuddaka-b° and Jātaka-bhāṇaka (reciter of the Jātaka). Those who were well versed in all the five Nikāyas were called Pañcanekāyikā (masters of the five Nikāyas). As time went on, the *abhivinaya* was appended to the *Vinaya Piṭaka* and became the theme of study for the *vinayadhara*. The *Parivāra*, of the Pali *Vinaya Piṭaka*, and the Vinaya of the Dharmaguptaka school contain nothing but *abhivinaya*. As a result, the term *mātikādhara* was confined to Abhidharma specialists who were also, evidently, called *dhammakathika* (Skt. *dharmakathika* : expositor of the doctrine). In the Buddha's own lifetime, there were monks like Puṇṇa Mantāniputta, nuns like Dhammadinnā and laymen like Cittagahapati, who were famed as *dhammakathikas*. We also come across many instances where the term *dhammakathika*, found in the Pali Vinaya Piṭaka, is translated in the Chinese versions as "discourse-master", the equivalent of *ābhidharmika*. Now, the term *ābhidhammika* is found in the Pali Tipiṭaka only in the *Khuddaka Nikāya* which is later than the four Āgamas (Nikāyas). It seems likely that by the time of the formation of the *Khuddaka Nikāya* and the *Niddesa*, the study of the Abhidhamma had developed to a considerable extent.

It should be noted that, chronologically speaking, the terms *dhammadhara*, *vinayadhara* and *mātikādhara* are found only in the *Majjhima* and *Aṅguttara Nikāyas* which are comparatively late among the Nikāyas. They have not been traced in either the *Dīgha Nikāya* or the *Saṃyutta Nikāya*. Secondly, the appellations of *bahussuta*, *vinayadhara* and *dhammakathika* are also found only in the *Majjhima* and *Aṅguttara Nikāyas*, while the three names of *suttantika*, *vinayadhara* and *dhammakathika* are never found in the four Nikāyas, but are found only in the *Vinaya Piṭaka* or in the *Mahā-niddesa* of the *Khuddaka Nikāya*. The names *suttantika*, *vinayadhara* and *ābhidhammika*, however, are never to be found in the *Vinaya Piṭaka* either, but only in the *Mahā-niddesa*.

These facts prove that it was from among Abhidharma specialists that arose the ābhidharmikas, and it was from them that Abhidhamma literature had its origin.

What were the themes that these fore-runners of the ābhidharmikas of the preparatory stage studied? Where have their achievements been preserved? They are found in the existing *Sutta Piṭaka*. In the suttas of the *Aṅguttara* and the *Majjhima Nikāyas*, the phrase *abhidhammakatham katheti*: he preaches Abhidhamma doctrine,* is frequently used. And in the suttas of the *Aṅguttara Nikāya*, we find the *Mahāvedalla Sutta* and the *Cūlavedalla Sutta*. The former, in which Mahākoṭṭhita questions and Sāriputta answers, deals with the difference between wisdom and ignorance, with consciousness, sensation, perception, right view, the three states of existence, the four stages of jhāna (meditation), attainment of annihilation and three forms of emancipation. In the latter sutta, Dhammadinnā, answering the questions of Visākha, her husband before her ordination, dwells on the subjects of the five *khandhas*, the heresy of individuality, the relation of the Eightfold Noble Path with the three studies, the difference between the conditioned and the unconditioned, attainment of annihilation and Nibbāna. The above-mentioned discourses, the *Vedalla-suttas*, may well be regarded as a kind of Abhidharma.

Now what subjects were treated in the Abhidharma research as seen in the Āgamas (Nikāyas)? And by what method? The subjects will be classified into the following three groups:

First, the systematic exposition of the conditions generating evil desires and virtues, matters concerning training and emancipation, and discussions of the general doctrine. Under this category come the *Bahudhātuka Sutta* and the *Chachakkha Sutta* of the *Majjhima Nikāya*. In the *Bahudhātuka Sutta*, the functions of the eighteen *dhātu* (elements), the twelve senses and objects, the twelve links of causation are treated. In the Chinese translation of this sutta (多界經) or (四品法門經) besides the above-mentioned, the four applications of mindfulness, the seven factors of wisdom are also treated. In the *Chachakkha Sutta* the subjects are the six sense organs, the six sense objects, the six kinds of touch, the six kinds of perception, the six kinds of craving, the conditions generating evil desires and the course of their extinction. The *Vedalla Suttas* mentioned earlier should also come under this category.

The second group is the nomenclature of technical terms arranged in numerical order. The *Saṅgīti Suttanta* and the *Dasuttara Suttanta* of the *Dīgha Nikāya* belong to this group. In the Chinese translation, we have, besides, the *Ekottara Sūtra* (增一阿含經). These suttas are collections of definitions and expositions of various discourses. The numerals are from one to ten or eleven. The *Saṅgīti Suttanta* of this group has been enlarged and developed into the Abhidharma book named *Saṅgītiparyāya* of the Sarvāstivāda school. The *Puggala-paññatti* of the Pali *Abhidhamma Piṭaka* is also of the same tendency. The above-mentioned suttas in the *Dīgha Nikāya* and the *Saṅgītiparyāya* are said to have been preached by Sāriputta who was well versed in Abhidharma. And the *Aṅguttara Nikāya*, which is for the most part a collection of items arranged in numerical order, seems to have been arranged in accordance with the abhidharmic tendency. The same thing can be said about the *Itivuttaka* (of which the Chinese translation is the *Ityuktaka* 伊帝日多伽).

The third group contains suttas which give detailed expositions of the doctrine and of verses. This tendency is represented by the suttas of discrimination (*vibhaṅga*) of the *Majjhima Nikāya*. The following eight suttas are included there: *Cūḷa-kamma-vibhaṅga Sutta*, *Mahā-kamma-vibhaṅga-s.°*, *Saḷāyatana-vibhaṅga-s.°*, *Uddesa-vibhaṅga-s.°*, *Araṇa-vibhaṅga-s.°*, *Dhātu-vibhaṅga-s.°*, *Sacca-vibhaṅga-s.°* and *Dakkhiṇa-vibhaṅga Sutta*. They all contain detailed definitions and expositions of such doctrines as kamma (karma), inner and outer sense organs, the six worlds and the four truths. Most of them were preached by the Buddha. But some were preached by his disciples who were well versed in Abhidharma. For instance, the *Uddesa-vibhaṅga Sutta* was preached by Mahāmoggallāna (Mahā-maudgalyāyana), and the *Sacca-vibhaṅga Sutta* by Sāriputta. In this manner, detailed definitions and expositions of simple teachings were frequently seen in early Abhidharma. The method of definition, as revealed in the above-mentioned *Vibhaṅga Suttas*, shows frequent coincidence or similarity with that of early Abhidharma books. Further, the annotations to the lines in the verses should also belong here. In the *Saṃyutta Nikāya*, for instance, we find a detailed commentary on a verse of the *Suttanipāta* (844), which was given for the benefit of Hāliddika, a lay follower, by Mahāmoggallāna, who was versed in Abhidharma. The sutta is quoted wholly intact in the *Mahāniddesa*.

II. **The Intermediate Literature between the Sutta-piṭaka and the Abhidhamma-piṭaka.** The abhidharmic tendency referred to earlier was already discernible in the Buddha himself and his disciples skilled in Abhidharma. After his death, this tendency was probably developed still further. Most of the abhidharmic discourses were, as already mentioned, contained in the Nikāyas. But when the tendency became more remarkable, there arose a literary style peculiar to Abhidharma, something different both in content and form from the suttas in general. These abhidharmic books were arranged independently of the sutta proper and developed themselves into the fundamental Abhidharma, which in turn became *Abhidhamma-piṭaka*. As a matter of fact, no example of the transitional or intermediate literature between the *Sūtra* and the *Abhidharma-piṭaka* can be found in the literature of Northern Buddhism. But in Pali Buddhism, we have the ***Paṭisambhidāmagga*** and the *Niddesa* of the *Khuddaka Nikāya*, which may serve as examples.

The *Niddesa* consists of two parts: the ***Mahāniddesa*** and the *Cūḷa-niddesa*. The ***Mahā-niddesa*** is a collection of word-by-word annotations of 210 verses of 16 suttas in the *Aṭṭhaka-vagga* of the *Sutta-nipāta*. The *Cūḷa-niddesa* is a commentary on 118 verses of 18 suttas of the *Pārāyana-vagga*

* For a variant interpretation (by Oldenberg and Horner) see ABHIDHAMMA, ft. nts. 24, 26.—Ed.

and 41 verses of one sutta in the same *Sutta-nipāta*. The *Aṭṭhaka-vagga* and the *Pārāyana-vagga* are among the oldest portions of the Buddhist canon. Probably, their prototype had been formed during the Buddha's life time. The suttas and verses of these two vaggas are quoted in the suttas of the *Saṃyutta Nikāya*, which itself is very old and, as was stated before, contains in it Moggallāna's word by word interpretation of one verse (*Sn.* 844). At any rate, the *Niddesa* are the texts which give abhidharmic interpretation to such sections as the *Aṭṭhaka-vagga* and the *Pārāyana-vagga*, belonging to the oldest strata. The definition and explanation of the clauses and the techincal terms are entirely of the nature of Abhidharma and agree completely with those of early Abhidharma books. Moreover, we find in the *Niddesa* such words as *suttantika*, *vinayadhara* and *ābhidhammika*, and *sutta*, *vinaya* and *abhidhamma*. These are never found anywhere else either in *Sutta-* or *Vinaya Piṭaka*. From this point of view, the *Niddesa* evidently belongs to the latest part of the *Sutta Piṭaka* and the *Vinaya Piṭaka*.

We shall now discuss the *Paṭisambhidāmagga*. In this book, thirty doctrinal problems, which were dealt with in early Buddhism, are treated in three parts and thirty chapters. Almost all the important items of the Buddhist doctrine are enumerated. Every item is preceded by the syllabus called *mātikā* (mother of discourse) or the concise content, and a detailed commentary follows the *mātikā* or the text. The method is much the same as that adopted in the early Abhidharma books. In some commentaries, too, the same formal Abhidharma definition has been adopted. In this respect, the *Paṭisambhidāmagga* seems to belong to the same class of literature as the *Niddesa*. In these two books the discourse is not altogether coherent and contains an admixture of several elements. Moreover, the doctrine contained there is more primitive than that of the early Abhidhamma books. We may infer, therefore, that the *Niddesa* and the *Paṭisambhidāmagga* belonged to the period prior to the emergence of the seven Pali Abhidhamma books. But, as was mentioned before, such words as *sutta*, *vinaya* and *abhidhamma* already found in the *Niddesa*, imply the existence of an Abhidharma belonging to the Tri-piṭaka, and we may be justified in supposing that by the time the *Niddesa* was produced, the early Abhidharma books were already in existence in some form or, at least, in the course of growth.

Today these two books belong to the *Khuddaka Nikāya* and are included in the *Sutta-piṭaka* and not in the *Abhidhamma-piṭaka*. It seems, however, there was a time when these were regarded as Abhidharma books. According to the *Sumaṅgala-vilāsinī* (the commentary of the *Dīgha Nikāya*), the reciter of the *Majjhima Nikāya* included these texts in the *Sutta-piṭaka*, as at present, but the reciter of the *Dīgha Nikāya* put them in the *Abhidhamma-piṭaka*. In the Chinese translation of the *Vimuttimagga* (解脫道論) of Upatissa, (the manual of the Abhayagiri-vihāra sect, somewhat different from the Mahāvihāra sect which represents the southern Buddhism of today), the *Niddesa* and the *Paṭisambhidāmagga* are frequently quoted. In the *Vimuttimagga*, the quotation from these two books is preceded by the clause "the Abhidhamma says", or, "it is said in the Abhidhamma". This shows that the author of the *Vimuttimagga* regarded these two books as Abhidharma literature.

Pali tradition attributes the authorship of these two books to Sāriputta, one of the Buddha's immediate disciples. We cannot, however, accept the tradition as being historically true. In these books the name of Sāriputta appears, but only in the third person. The traditional theory (as to the author) was, perhaps, due to the fact that Sāriputta, being versed in Abhidharma, was considered most competent to be the author of books having an Abhidharma tendency. In fact, judging from their content and form, these books should be regarded as Abhidharma books rather than as sūtras.

III. The Fundamental Abhidharma. *Abhidharma Piṭaka* as one of the three Piṭakas seems to have been produced after the various sects had established themselves, but something like their prototype probably existed even earlier. The Abhidharma books as we see them today have all a sectarian character. The probability is, therefore, that each school, after separation, produced Abhidharma books of its own. We cannot definitely ascertain the time of the separation of these schools. Moreover, the separation does not seem to have taken place in a brief period of time. At least two or three hundred years must have elapsed between the first branching and the final sub-branching. About the beginning of the Christian era, eighteen or twenty schools were already in existence. Thus, the process of branching covered about two or three hundred years from about 300 B.C. The Abhidharma books of each school probably got standardised during this period. It is to be inferred that the Abhidharma books of Pali Buddhism and of the Sarvāstivāda school were not produced in a short time, but that there was considerable growth of thought and doctrine, which is traceable in the Abhidharma books themselves. The Abhidharma books can be grouped into three categories: early, middle and late.

The fundamental Abhidharma of sectarian Buddhism is contained in the seven discourse books of the Sarvāstivāda school and the seven discourse books of Pali Buddhism (which is virtually the southern Theravāda school). To these may be added the *Śāriputra-abhidharma-śāstra* of an unknown school. According to the Pali tradition, the Abhidhamma was first preached by the Buddha himself during the three rainy months in the realm of the 33 gods before the Buddha's mother and other deities. Then Sāriputta begged the Buddha to repeat it for him. Having heard it, Sāriputta, after arranging it systematically, preached it to his five hundred disciples. In the *Kathāvatthu*, the last of the seven Abhidharma books, the Buddha, seeing into the future, expounded the different doctrines of the various schools in the form of *Mātikā* (mother of discourse). More than two hundred years after the Buddha's parinibbāna, in the reign of King Asoka, differences of opinion arose with regard to Buddhist doctrines. Moggaliputta Tissa, the senior monk of the Order, convened the third council in the capital, Pāṭaliputta, and recited the

Kathāvatthu, refuting heterodoxy and asserting orthodox view points, according to the *mātikā* of the *Kathāvatthu*, which, according to tradition, had been left by the Buddha himself. In Pali Buddhism, this is considered as a historical fact. Supporting this view, some western scholars, too, ascribe the formulation of the *Kathāvatthu* to the reign of Asoka and allege that the seven Abhidharma books had all been completed by that time. It is, however, not accepted by critical scholars that the *Abhidhamma-piṭaka* was preached by the Buddha or by his direct disciples; nor do they believe that the Pali Abhidhamma books were completed by the middle of the third century B.C. The views of schools, obviously formulated after Asoka's death, have been introduced into the *Kathāvatthu*. Besides, additions made later in Ceylon are to be found not only in the *Abhidhamma-piṭaka* but also in the *Sutta-piṭaka* and the *Vinaya-piṭaka*, which are supposed to have been produced before the Abhidhamma books. It is, therefore, improbable that the completion of the seven Abhidhamma books was effected earlier than when all the extant Pali sacred texts were reduced to writing in the first cent. B. C.

In the Sarvāstivāda school, the *Abhidharma-piṭaka* was not considered to contain the direct sermons of the Buddha. Even the early Abhidharma books were put into the mouth of the Buddha's disciples, such as Śāriputra or Maudgalyāyana. The later Abhidharma books are said to have been written by Vasumitra or Kātyāyanīputra, who lived two or three hundred years after the Buddha's parinibbāna. Thus, if we admit that the existing Abhidharma books were written by Śāriputra or some of his contemporaries, we must admit that the early Abhidharma books had already existed during the Buddha's lifetime, because Śāriputra and Maudgalyāyana had died before the Buddha's parinibbāna. But the *Saṅgīti-paryāya*, attributed to Śāriputra, was a development of the *Saṅgīti-sūtra* of the *Dīrgha Āgama* (*Dīgha Nikāya*), and the *Saṅgīti-sūtra* was certainly Śāriputra's sermon. It was natural enough, therefore, that the *Saṅgīti-paryāya*, which was produced later, based on the *Saṅgīti-sūtra* and with additions and extensions, was attributed to Śāriputra. Accordingly, strictly speaking, even if the prototype of what is now called the early Abhidharma was preached by the Buddha's direct disciples, it assumed its present form only after the Sarvāstivāda school became independent, i.e., a considerable time after the Buddha's parinibbāna. Another two hundred years would have elapsed before the middle and the late Abhidharma books were produced.

As for the *Śāriputra-abhidharma-śāstra* which belongs to an unknown school, in Nāgārjuna's *Mahāprajñāpāramitā-śāstra* (vol. II) a quotation is given to the effect that Śāriputra compiled the Abhidharma book during the Buddha's life time because he understood the Buddha's words, that later Vātsīputrīya recited it and it was handed down to that day under the name of *Śāriputra-abhidharma*. This book, too, seems to have been handed down, as its title suggests, as a book of discourses preached by Śāriputra. The book contains a synoptical collection of the seven Abhidharma books of other schools. It is representative of a stage half-way between the early and the middle stage of development.

The above is a brief account of the existing fundamental Abhidharma books. The next section will deal with the seven Abhidharma books of the Sarvāstivāda, the *Śāriputra-abhidharma*, the commentaries, manuals and other miscellaneous works on the fundamental Abhidharma, the Sautrāntika school and the Dārṣṭāntika, which detached themselves from the Sarvāstivāda school and had their own peculiar Abhidharma doctrine, and, lastly, the *Satyasiddhi-śāstra* as the manual of these schools. In brief, the second part will describe the change and development of northern Abhidharma Buddhism.

In the third part, we shall discuss the historical development of the Abhidharma literature in connection with the seven Pali Abhidhamma books and their commentaries and manuals.

IV. **Abhidharma Literature in the North.** 1. THE SARVĀSTIVĀDINS AND THE ABHIDHARMA: As far as the Abhidharma was studied in sectarian Buddhism, the Abhidharma might be said to have developed along with scholastic Buddhism. Some schools contributed much to the growth of Abhidharma while others did not. Of all the schools of northern Buddhism, that which made the largest contribution was the Sarvāstivāda. The Abhidharma doctrine of this school had much influence on that of other schools. This school is considered the most representative of all the Buddhist schools. Even the Mahāyāna schools were influenced by the doctrines of this school both positively and negatively.

Originally, the basic proposition of the Sarvāstivāda school was, as its name signifies, the doctrine of *sarvam asti* (all things exist). From this popular and plain proposition the school developed a rational and detailed doctrine. All the Mahāyāna schools adopted the doctrine of this school, either directly or indirectly, as an introduction to their recondite systems. That was the reason why it spread both inside and outside India as representing scholastic sectarian Buddhism and laid the foundation of the Mahāyāna schools. At first its centre was in the Mathura district, but in Asoka's reign and afterwards it moved into north-west India, where, above all, Kaśmīra was considered the centre of orthodoxy. Against this new sub-school, the Sarvāstivāda of Gandhāra and Parthia to the west of it, was called the western school. Later on, the influence of Sarvāstivāda permeated far into the districts of central Asia and still farther into China and Japan. In the other direction, it went into the South Islands (Sumatra and Java) by way of Burma and Indo-China.

2. THE SEVEN ABHIDHARMA BOOKS AS THE FUNDAMENTAL ABHIDHARMA OF THE SARVĀSTIVĀDA: These seven books are all extant in Chinese translation, but in the Tibetan version there exists only the *Prajñaptiśāstra* while the Sanskrit originals have been lost. Authors have been attributed to the seven books, but the Chinese tradition according to Hsüan-tsang and the Sanskrit and Tibetan versions disagree with regard to the ascription of the authorship of most of them. The seven Abhidharma books and traditional authors may be thus listed: (1) The Saṅgītiparyāya

(Ch. Śāriputra; Skt. and Tib. Mahākauṣṭhila); (2) The Dharmaskandha (Ch. Maudgalyāyana; Skt. & Tib. Śāriputra); (3) The Prajñapti (Ch. Kātyāyana; Skt. & Tib. Maudgalyāyana); (4) The Vijñānakāya (all three sources: Devaśarman); (5) The Dhātukāya (Ch. Vasumitra; Skt. & Tib. Pūrṇa); (6) The Prakaraṇa (all three sources: Vasumitra); (7) The Jñānaprasthāna (all three sources: Kātyāyanīputra).

Though the authors of the first three books are not the same in the Chinese, the Tibetan and Sanskrit traditions, all the authors mentioned are the Buddha's direct disciples. If we believe in the tradition, these books must have been produced in central India on or near the middle Gangetic plain. As for the fourth book, all versions agree in attributing it to Devaśarman. The *Ku-sha-ron-ki* (俱舍論記), a commentary on the *Abhidharmakośa-śāstra* of Pu-kuang (普光), who is said to have been a pupil of Hsüan-tsang, says that Devaśarman was a man of the first century after the Buddha's parinibbāna. He was not a direct disciple of the Buddha. According to the tradition of northern Buddhism, Asoka lived about a hundred years after the Buddha's parinibbāna. Thus, chronologically, Devaśarman lived some time prior to the king. The Travels of Hsüan-tsang, *Ta-t'ang-hsi-yü-chi* (大唐西域記), vol. V, testifies that there was a big monastery in a suburb of the metropolis of the country of Viśākha, and Devaśarman wrote the *Vijñāna-kāya* in this monastery. Viśākha is identified with Sāketa, that is, Ayodhya, which also lies in central India along the Ganges and half way between Bārāṇasī and Śrāvasti. It follows then that the *Vijñāna-kāya*, too, was probably produced before the Sarvāstivāda school spread to north-west India.

Vasumitra, author of the *Dhātukāya* and the *Prakarana* according to the *Ku-sha-ron-ki* (俱舍論記 vol. I), lived in the early part of the fourth century after the Buddha's death. He probably lived about a hundred years after Asoka. Hsüan-tsang's Itinerary (vol. II) says that Vasumitra wrote the *Dhātukāya* and the *Prakaraṇa* near Puṣkaravatī in the Gandhāra district. It may, therefore, be inferred from this that these two books were produced *after* the Sarvāstivāda school moved to north-west India. 'Kātyāyanīputra, author of the final book, the *Jñānaprasthāna*', according to Hsüan-tsang's Itinerary (vol. IV), 'wrote the treatise at Tamasāvana Temple, five hundred *li* south-west of Cinavati, in the fourth century after the Buddha's death'. Tamasāvana is supposed to be somewhere near modern Delhi. The fact that the book was produced in the east, i.e., in central India and not in the north-west, is also mentioned in the *Mahāvibhāṣā-śāstra* (vol. V). We may presume, therefore, that most of the seven treatises were produced in central India, before the Sarvāstivāda school began to flourish in north-west India.

These seven treatises may be divided into three groups: early, middle and late, according to their doctrinal contents and their form of expression. The first three, the *Saṅgītiparyāya*, the *Dharmaskandha* and the *Prajñapti*, come under the first group. The next two, the *Vijñāna-kāya* and the *Dhātu-kāya*, come into the middle group, while the last two, the *Prakaraṇa* and the *Jñānaprasthāna*, belong to the late group.

A. *Early Abhidharma.* From the fact that the first three treatises are all attributed to the immediate disciples of the Buddha, such as Śāriputra, Maudgalyāyana, Mahākauṣṭhila or Kātyāyana, we should infer that even if they were not the actual authors, early Abhidharma was developed from the method of discourse practised by those disciples. They were versed in Abhidharma and they were described as the authors of these books because their discourses provided the prototype for them.

In early Abhidharma what was originally meant by the word Abhidharma was the method of discourse, that is, the exposition of the sūtra as the law and its systematisation. Of the various kinds of Abhidharma, early Abhidharma alone was directly connected with the *Āgama* (*Nikāya*). The Abhidharma of later development gradually detached itself from the sūtra and developed doctrines and discourses of its own. At first the various schools had much resemblance and close correspondence to one another, but as time went on, they drifted apart till they showed great difference and discrepancy in their doctrinal contents and their forms of expression.

The *Saṅgīti-paryāya* is, as mentioned before, a collection of technical terms, arranged in numerical order (from one to eleven) in exactly the same manner as that of the *Saṅgīti-sūtra* of the *Dīrgha Āgama* (*Dīgha Nikāya*). The items contained in this book are more numerous than those of the *Saṅgīti-sūtra*. The definitions and expositions are more elaborate and minute; and what may be called abhidharmic definition has been adopted.

The *Dharma-skandha* is a collection of important doctrines and theories of the early Buddhist period, as found in the *Āgama*. They deal with the precepts and faith of the lay people, such as the *pañca sikṣāpadāni* (the laymen's five precepts), *catvāro śrotāpattyaṅgā* (the constituent parts of the lower stage of conversion) and *catvāro avetya-prasāda* (the four kinds of perfect faith); matters concerning the practice and enlightenment of disciples who are members of the Order, such as four *śrāmaṇya-phala* (the fruits of the life of the recluse), the four *abhijñā-pratipat* (knowledge and practice), the four *ārya-vaṃśa* (noble lineage), four *samyak-prahāṇa* (right exertions), four *ṛddhipāda* (bases of psychic power), four *smṛti-prasthāna* (application of mindfulness), four *ārya satya* (noble truths), the noble eightfold path, the four *dhyāna* (tranquillity), the four *apramāṇa* (boundless meditations), the four *ārupya samāpatti* (attainment of formless meditation), the four *samādhi-bhāvanā* (practice of meditation) and the seven *bodhyaṅga* (factors of wisdom); those dealing with the fundamental theory and doctrine of Buddhism, such as miscellaneous vices (*kṣudrakavastu*, *kleśa*), the 22 controlling powers, the 12 sense organs and objects, the five *skandha*, the various elements of the world (*bahu-dhātu*) and the theory of twelve causes. In the simple exposition the final authority was sought in the *Āgama* (*Nikāya*) and the passages from the sūtra are expatiated in

detail or systematically theorised after the manner of abhidharmic definition and explanation.

The *Prajñapti* in the Tibetan translation consists of three concepts (*prajñapti*) of *loka* (world), *hetu* (cause) and *karma* (action). But the *hetu-prajñapti* alone is translated into Chinese (因施設). The *prajñapti* (Pali: *paññatti*) is a sort of popular creed. For instance, the *hetu-prajñapti* describes the causes of the seven treasures of the *cakravarti-rājā* (the universal monarch). It also describes the fortunate signs and excellent aspects of the Buddha; the causes of various evil desires and the practice of virtues among all sentient beings; the causes of the *bhājana-loka* (or the physical world, that is, land and vegetation): the causes of various forms of physical and mental phenomena. Many sūtras from the *Āgama* are quoted as authority. The explanations are plain and simple. They are entirely irrelevant to the fundamental doctrine of Buddhism expounded in the *Saṅgīti-paryāya* or the *Dharma-skandha*. The *loka-prajñapti*, which is wanting in the Chinese translation, expounds the genesis and destruction of the world in the same manner as in the *Aggañña Suttanta* of the *Dīgha Nikāya*. The cosmogony of the *loka-prajñapti* is a development of that expounded in the Chinese *Loka-utsthāna-sūtra* of the *Dīrgha Āgama*, which describes the worlds of the gods, human beings, demons and so forth. Such a theory is a popular creed which has nothing to do with the primary doctrine of Buddhism. Yet the *Prajñapti*, like the *Saṅgīti-paryāya* and the *Dharma-skandha*, draws authority from the texts of the *Āgama* and explains them or arranges and unifies them. In this respect, these three Abhidharma books of the early period have the same character.

B. *Abhidharma of the middle period.* In the early Abhidharma the various schools, if we closely examine them, had some sectarian character of their own, but as a whole the Abhidharma schools of the early period had much similarity with one another. There was little that clearly distinguished each school. In the Abhidharma of the middle period, however, we find characteristics which distinguish them from each other. Let us examine the *Vijñāna-kāya-śāstra* and the *Dhātu-kāya-śāstra*, which are Abhidharma books of the Sarvāstivāda school of the middle period.

The *Vijñāna-kāya* clearly expressed for the first time the thought of "the real existence of phenomena in the three states of time". It was in contrast to the proposition of Maudgalyāyana (who belonged to another school and was presumably not the Buddha's famous disciple of the same name) that what exists at the present moment really exists, but that the existence of the future and the past is an appearance and not a reality, a view that was evidently held by the Mahāsaṅghika school and later on also by the Sautrāntika school. The Sarvāstivāda philosophers on the other hand maintained that not only the present, but the past and future phenomena also have real existence (as an entity) throughout the three states of time. The *Vijñāna-kāya* clearly asserted the real existence of phenomena in the three states of time. Yet, the idea of the everlasting existence of entity was not so clearly asserted. This idea was expressed in detail in the *Jñāna-prasthāna*, an Abhidharma book of the later period, and its commentary, the *Mahāvibhāṣā-śāstra*. But, in order to admit the real existence of phenomena in the three states of time, the real existence of entity must be presupposed as its logical basis. Therefore, we must take for granted that the idea of entity had been presumed in the *Vijñāna-kāya* though we find no such term or idea as 'everlasting entity' in it. Moreover, the assertion of the Pudgalavādins of the Vātsīputrīya school that there exists *pudgala*, which keeps karma going on, is, in the *Vijñāna-kāya*, contrasted with the Sarvāstivādins' non-ego theory that there exists no such thing as *pudgala*. Inasmuch as the real existence of phenomena in the three states of time and *anātma-vāda* (non-ego theory) constitute the cardinal points of the Sarvāstivāda doctrine, the *Vijñāna-kāya*, which emphasised these two points, laid the theoretical foundation of the school. Of course, the arguments adduced were still so primitive that they had to be developed further and expatiated in detail in the later Abhidharma books. In addition to these arguments, we find the four *pratyaya* theory described in this book. The four *pratyaya* (conditions) are *hetu* (direct cause or subject) -*pratyaya*, *ālambana* (object)-*pratyaya*, *samanantara* (immediate)-*pratyaya* and *adhipati* (additional or assistant)-*pratyaya*. The book was the first to describe this theory.

The *Dhātu-kāya* is concerned with mental attributes, while the subject-matter of the *Vijñāna-kāya* was the mind itself. *Dhātu* here means elements which constitute the attributes of the mind. *Kāya* means group. Therefore, *Dhātu-kāya* means a group of attributes which constitutes the mind itself. Mental attribute is called *caitasika* (or *caitta*) in Buddhist terminology. Though the word or concept of *caitasika* (Pali: *cetasika*) was found in the early Abhidharma books, it had not been systematically discussed. In the *Dhātu-kāya*, however, partitive actions of the mind are classified as follows: ten *mahābhūmika dharma*, ten *kleśa-mahābhūmika dharma*, ten *upakleśa bhūmika dharma*, five *kleśa*, five *dṛṣṭi*, five *dharma*, six *vijñāna-kāya*, six *sparśa-kāya*, six *vedanā-kāya*, six *saṃjña-kāya*, six *saṃcetana-kāya* and six *tṛṣṇa-kāya*. Of these groups, those which follow the five *kleśa* were already mentioned in the *Āgama* (*Nikāya*). But in this book they are explained more minutely and each group is clearly defined. The method of definition is the one developed from that of the early Abhidharma. On the other hand, the ten *mahābhūmika-dharma*, the ten *kleśa-mahā-bhūmika-dharma* and the ten *upakleśa-dharma* appear for the first time in this book. This classification was a forerunner of later classifications of *caitasikas*. Of course, not all *caitasikas* are comprised in it, nor is the classification complete. And no attempt has been made in this book to discuss *caitasikas* as a whole. For we find six *vijñāna-kāya* included here, which, from the later point of view, ought to be considered as mind itself.

C. *Abhidharma of the late period. The Prakarana-śāstra* and the *Jñāna-prasthāna-śāstra* belong to the Abhidharma of late period. Chinese tradition makes Vasumitra the author of both the *Dhātukāya* (阿毗達磨界身足論) of the middle Abhidharma and the *Prakaraṇa* (衆事分阿毗曇論)

of the late period. But between these two books we find some traces of development and change. The same problems are treated differently. The *Dhātukāya* introduced the problems and gave some kind of solution. The *Prakaraṇa* re-examined them and gave other solutions. This was an epoch-making development. For instance, it was in the *Prakaraṇa* that existing things were first grouped into five categories: *rūpa* (matter), *citta* (mind), *caitasika* (mental attributes), *cittaviprayukta* (various kinds of power which move mind and matter) and *asaṃskṛta* (unchangeable, unconditioned). We may say that the rationalistic approach, unique to the Abhidharma, began with this five-member classification. Hitherto, existing things were classified into the five *skandha*, twelve *āyatana*, eighteen *dhātu* or four *smṛtiprasthāna*. These classifications had been in use from the time of original Buddhism. The aim was to classify all things in such a way as to perceive their impermanence, unsatisfactoriness, painfulness and non-entity, with the purpose of achieving the Buddhist goal of Nirvāṇa. But these old classifications were inadequate to examine all things as a whole, objectively and rationally. It was to remove this defect that the five-member division was laid down in the *Prakaraṇa*. The classification is set forth in the first part of the book and each member is fully explained. Then, concerning the ten forms of wisdom, the relation of distribution and subordination of the old classifications (into five *skandha*, twelve *āyatana* and eighteen *dhātu*, &c.) with one another is explained. Next comes the discussion of the items from ten *mahābhūmika-dharma* to the six *vedanā-kāya*, which were discussed in the *Dhātukāya*, and the five *skandha*, twelve *āyatana* and eighteen *dhātu*. In the *Dhātukāya* the mental attributes were classified into ten *mahābhūmika-dharma*, ten *kleśa-mahābhūmika-dharma* and ten *parīttakleśabhūmika-dharma*: thirty in all, a new classification. In the *Prakaraṇa* the classification was further expanded and the ten *kusalamahābhūmika dharma* were added to make forty attributes together. Moreover, all the subjects, from one dharma to ten dharma, which were treated in the *Saṅgīti-paryāya* are dealt with more fully and the topics, from the five precepts to the twelve links of causation, are considered more deeply. And *āsava* and *kleśa* are classified into ninety-eight groups. This constitutes a new classification. To summarize, in the *Prakaraṇa* the doctrines explained in the Abhidharma books of the early and middle periods are all brought together and developed further into a sort of completion. This book seems to have been considered the most important of the fundamental Abhidharma books of the Sarvāstivāda school. There are two complete Chinese translations. Each of the eight chapters of the book seems to have been used as a separate text. In the oldest Chinese versions made in the middle of the second century A.C., it is said that three chapters were separately translated. Of these two are still extant. A commentary on the first chapter was written by Dharmatrāta in the fourth century and translated into Chinese (鞞婆沙論).

The last śāstra, the *Jñāna-prasthāna*, treating the Abhidharma topics as a whole, is called the *kāya-śāstra* (the trunk-treatise), while the other preceding books treat them partially and are called the *pāda-śāstra* (the limb-treatises). In this book, all the topics discussed in the Sarvāstivāda school are treated as a whole, in the eight chapters of *kṣudraka* (miscellany), *saṃyojana* (fetters), *jñāna* (wisdom), *karma* (action), *mahābhūta* (four elements of matter), *indriya* (controlling principles), *samādhi* (meditation) and *dṛṣṭi* (view). The doctrines expounded are so extremely technical and concise that they are very difficult to be understood by those who are not well versed in the doctrines and the methods of the Abhidharma. The arrangement of the eight chapters and the division into paragraphs in each chapter lack unity and systematic thought. Consequently, there was difference of interpretation among professorial thinkers, though the book was highly esteemed as a valuable text-book for students of philosophy. These diverse interpretations were later collected in the famous commentary, the *Mahāvibhāṣā-śāstra*.

3. THE ŚĀRIPUTRA-ABHIDHARMA-ŚĀSTRA exists only in a Chinese translation (舍利弗阿毗曇論). The school to which it belonged is unknown. Nor is there any authentic tradition regarding its origin. Nāgārjuna attributes the authorship of this text to a Vātsīputra but a tradition from Hsüan-tsang says that it belonged to the Sammitīya school. Vātsīputra here may imply a Vātsīputrīya, but the *pudgala-vāda* (ego-doctrine), which was allegedly the basic view of the Vātsīputrīya school, is not expounded in this book. There is a statement in a Chinese Buddhist book (出三藏記集 Chu-san-tsang-chi-chi, vol. III) of the early sixth century, where Vātsīputra is regarded as a person of the Mahāsaṅghika school. It is not improbable that Vātsīputra was another name for the Mahāsaṅghika school, because the Mahāsaṅghika school was first founded by Vātsīputra (Pali: Vajjiputta) monks. Also, we find mentioned in this book the doctrine of "the innate purity of mental nature and acquired contamination of evil desires" and the doctrine of the nine *asaṃskṛtas* (unconditioned), both of which are said to be the view of the Mahāsaṅghika. Moreover, the doctrines of the Sammitīya school are not well known. In the *Kathāvatthu*, twenty-two views are mentioned as those of the Sammitīya school. There is no positive contradiction between these twenty-two views and those which are asserted in this book. In some points, these two books agree with each other. For example, in both texts *vijñapti* (expressed force), *avijñapti* (unexpressed force) and *śīla* (behaviour, discipline) are included in *rūpa* (matter). In this respect, we find that this text represents the views of both Sammitīyas and Mahāsaṅghikas. Probably, an Abhidharma of a certain sub-sect of the Sammitīya school came to be tinged with Mahāsaṅghika tendencies. For the Sammitīya school was very eclectic.

The *Śāriputra-abhidharma-śāstra* contains, as it were in a single book, nearly all the contents of the seven Abhidharma books of the Sarvāstivādins and of Pali Buddhism. Consequently, it contains materials which belong to all three periods, the early, the middle and the late. But, the book is generally simpler and more primitive than those of other schools. It consists of four parts:

praśna-bhāga (section dealing with questions), *na-praśna-bhāga* (the non-question section), *saṅgraha-samprayoga-bhāga* (section on assimilation and association) and *prasthāna-bhāga* (?) (section on origins). The second bhāga belongs to the early period and the first to the middle period, while the third and fourth section belong to the period from the middle to the late Abhidharma. The second section, *na-praśna-bhāga*, is similar to and corresponds with the *Prajñapti*, the *Saṅgīti-paryāya* and the *Dharma-skandha-śāstra* of the Sarvāstivāda school. The section which describes various *dhātu*, *karma*, *pudgala* and *jñāna* corresponds to the *Prajñapti-śāstra*, and that which deals with *pudgala* corresponds to the Pali *Puggala-paññatti*. The *Nidāna-varga*, the *Smṛtiprasthāna-v*.°, the *Samyakprahāṇa-v*.°, the *Ṛddhipāda-v*.°, the *Dhyāna-v*.°, the *Mārga-v*.°, the *Kleśa-v*.°, and other Vargas of the second part deal with *pratītya-samutpāda* (chain of causes) and evil desires, &c., in the same manner as in the *Dharmaskandha-śāstra* and the *Saṅgītiparyāya-śāstra*. Here the text resembles also the Pali *Vibhaṅga*. In short, in the *na-praśna-bhāga*, as in the Abhidharma of other schools, quotations from the *Āgama* (*Nikāya*) are re-arranged and interpreted. The chapters of the latter half of the fourth section, the *prasthāna-bhāga*, may be regarded as belonging to the early stage.

In the first part, *praśna-bhāga*, are explained important Buddhist doctrines such as the five *skandha*, the twelve *āyatana*, the eighteen *dhātu*, the four *satya*, the twenty-two *indriya*, the seven *bodhyaṅga*, the three *kuśala-mūla*, the three *akuśala-mūla*, the four *mahābhūta*, &c. And the explanation is followed by a thorough examination of each item, to clarify its scope and range. This method of exposition is called *pañha-puccha* (*praśnapṛccha*) and constitutes one of the characteristics of the middle Abhidharma. The Sarvāstivāda school adopted this method in their *Prakaraṇa-śāstra* while the Pali Abhidhamma did the same in its *Vibhaṅga*. The third part, *saṅgraha-samprayoga-bhāga*, describes the inclusive classification of all things and the association of mental attributes. This method is adopted in the *Dhātukāya* and the *Prakaraṇa-śāstra* of the Sarvāstivādins. A similar method can be found in the *Dhātukathā* of Pali Buddhism. It belongs to the Abhidharma of the period later than the middle period. Lastly, the fourth part, *prasthāna-bhāga*, deals with the ten *pratyaya* and the ten *hetu* in the first half while the latter half belongs to the early period. This section resembles the *Paṭṭhāna* of Pali Buddhism which treats of the twenty-four *paccaya* (*pratyaya*, conditions).

4. THE ABHIDHARMA OF THE AGE OF COMMENTARIES AND MANUALS. A. *The compilation of the Mahāvibhāṣā-śāstra* : This book which is a commentary of the Sarvāstivāda school is considered to have been compiled in the reign of king Kaniska, i.e., first or second century A. C., or a little later. Between the establishment of fundamental Abhidharma books and the production of this commentary, there was a considerable space of time, during which the Abhidharma doctrine of this school made great progress. The results of the progress were embodied in the commentary. The *Mahāvibhāṣā-śāstra* gives us the doctrine of the various Buddhist schools, headed by the Sarvāstivāda school in north-west India, till about the second century. This book exists now only in a Chinese translation (阿毗達磨大毘婆沙論) and among philosophers mentioned in it the first is Kātyāyanīputra, author of the *Jñānaprasthāna-śāstra*. Others mentioned include Pārśva, who flourished in the period of the compilation of the great commentary, and the four great philosophers of the time : Vasumitra (different from the author of the *Prakaraṇa*), Dharmatrāta (different from the author of the *Saṃyukta-abhidharma-hṛdaya-śāstra* of the 4th century), Śrīghoṣaka and Buddhadeva. Even if these authors were not directly concerned with the compilation of the commentary, as tradition says, their views had great influence upon it and they are frequently quoted. Above all, Vasumitra's views were most highly esteemed as they represented the orthodoxy of Kaśmīra. We find in this book the following appellations : the Kaśmīra philosophers, the great western teachers, the great Gandhāra teachers, the foreign masters, the old ābhidharmikas and the new (present) ābhidharmikas. These local and chronological designations show that the Sarvāstivāda school had spread far and wide chronologically as well as geographically. Besides those mentioned above, among other philosophers whose views are represented in this book, are Buddharakṣa, Ghoṣa-varman, Vāmalabdha, Jīvala, Saṅghavasu, Kṣemadatta, Pūrṇayaśas, Vaṣpa, Dharadatta, and Dharmanandin. They were, perhaps, the philosophers of the Sarvāstivāda school. The place and time of their activities, however, are unknown. Probably some of them flourished at the time of the compilation. But most of them lived earlier and their works had survived or they were quoted in some other books. Besides the seven fundamental Abhidharma books, the works directly quoted in this book are the Acquired-wisdom-śāstra and the Innate-wisdom-śāstra. The latter is said to have been written by Śrīghosaka, but is not extant today. At any rate, from the number of these philosophers and the extensiveness of philosophies, we can see how greatly the Abhidharma study of the Sarvāstivāda school flourished in north-west India about the beginning of the Christian era.

The various views on Abhidharma philosophy quoted in the Great Commentary include those of the Yuktavādins, Dārṣṭāntika, Vibhajyavādins, Eka-citta-santāna-vādins, southern Yogācāra, northern Yogācāra, universal Yogācāra and so forth. Other schools are also mentioned, e.g., the Dharmaguptaka, Mahīśāsaka, Mahāsaṅghika, Vātsīputrīya, Kāśyapīya, Sthaviravādins, Sautrāntika and others. Further, schools outside Buddhism, such as the Sabdavādins, Sāṅkhya, Vaiśeṣika, Hetuvidyā, Anya-tīrthaka and others are also mentioned together with their doctrines. Of these, the Yuktavādins represent the standpoint of the Sarvāstivādins, and the Vibhajyavādins belong to the Sthaviravāda group or to a certain branch of the Mahāsaṅghika whose views are opposed to those of the Sarvāstivādins. The Dārṣṭāntika is of Sautrāntika descent and represents the old Sautrāntika school. The founder of the Dārṣṭāntika was Kumāralāta. It is said that he had originally belonged to the Sarvāstivādins, but

dissenting on grounds that the school was deviating from the sūtra (Āgama), and that too much emphasis was being laid on the Abhidharma, he established the Sautrāntika, which made the sūtra the criterion of speculations. Some of the Sarvāstivāda scholars, such as Buddhadeva, had views very closely similar to those of the Dārṣṭāntika.

B. *The Production of Manuals:* The Great Commentary was voluminous and contained as many as one hundred thousand verses (namely three million and two hundred thousand syllables). This work, which was originally a commentary on the *Jñānaprasthāna*, comments on the eight chapters of the *śāstra*, one by one. The eight chapters, however, have no doctrinal connection with one another. The same applies to the sections of each chapter. Accordingly, even if the chapters and sections are annotated, the theoretical system is not clarified. Moreover, digressions from the main subject, often inserted in the comments, produce complication and confusion. The Great Commentary, comprising all the doctrines and theories of the time in great detail, is very rich in source materials. But it has no unity whatever as a whole. There is no coherent system. It is of great use to specialists already versed in the various doctrines, but very hard for beginners to understand. To remove the drawback, there arose a movement to abbreviate it and another to give it a doctrinal system. As a result, many abridgements and manuals were produced. And the philosophy of the Sarvāstivādins was greatly advanced by those manuals. The following is the list of such manuals existing in Chinese translation: The *Abhidharma-hṛdaya-śāstra* (阿毗曇心論) 4 vols. by Dharma-śrī; the *Abhidharma-hṛdaya-sūtra* (阿毗曇心經) 6 vols. by Upaśānta; the *Saṃyukta-abhidharma-hṛdaya-śāstra* (雜阿毗曇心論) 11 vols. by Dharmatrāta; the *Abhidharma-kośa-śāstra* (阿毗達磨俱舍論) 30 vols. by Vasubandhu; the *Abhidharma-nyāyānusāra-śāstra* (阿毗達磨順正理論) 80 vols. by Saṅghabhadra; the *Abhidharma-kośa-samaya-pradīpikā-śāstra* (阿毗達磨藏顯宗論) 40 vols. by Saṅghabhadra.

The *Abhidharma-hṛdaya-śāstra* was produced about 200 A.C. The others followed it chronologically and the *Kośa-śāstra* was produced in 350 A.C. while the *Nyāyānusāra-śāstra* was of a later date.

The contents of the Great Commentary are condensed into 250 verses in the *Abhidharma-hṛdaya-śāstra*. Dharmaśrī himself gives simple explanations of these verses. The book was very concise and many expository works were written on it. The *Abhidharma-hṛdaya-sūtra* and the *Saṃyukta-abhidharma-hṛdaya-śāstra* were among them. Besides these, many others which are no longer extant are believed to have been written. The *Abhidharma-hṛdaya-sūtra* is, as it were, an *Abhidharma-hṛdaya-śāstra* to which 350 verses more were added and explanations given of them. The book has considerable unity and seems to have been studied extensively both in India and China. The P'i-t'an-tsung (毗曇宗), the Chinese Abhidharma sect, was established mainly on the doctrines of the *Saṃyukta-abhidharma-hṛdaya-śāstra*.

The three books above-mentioned are almost identical in their constitution, except that the last-mentioned book has one chapter inserted as supplement. Yet in the details of doctrine there is some difference and development among them. In some points they disagree with the Great Commentary. To sum up, the *Abhidharma-hṛdaya-śāstra* and the *Abhidharma-hṛdaya-sūtra*, not adhering to the orthodox Sarvāstivāda, belonged to the Sarvāstivāda of Gandhāra in the west and sometimes adopted the doctrines of the Sautrāntika and the Dharmaguptaka school. The *Saṃyukta-abhidharma-hṛdaya-śāstra*, on the other hand, shows considerable affinity with the orthodox schools and has a great deal in common with the Great Commentary. This book is said to have been written near Puṣkaravatī in Gandhāra.

The *Saṃyukta-abhidharma-hṛdaya-śāstra*, coherent in its doctrinal system and rather elaborate in its explanation, had been considered very useful as a text book of the Abhidharma. But its system imitated that of the *Abhidharma-hṛdaya-śāstra* and its arrangement was far from complete. To remove these drawbacks, Vasubandhu wrote the *Abhidharma-kośa-śāstra*, a treatise with a complete system. Vasubandhu seems to have used the *Saṃyukta-abhidharma-hṛdaya-śāstra* as a model. But, he wrote 600 entirely new verses (*kārikā*) quite independent of the 600 verses of the *Saṃyukta-abhidharma-hṛdaya-śāstra*, and gave explanations of them. Comparing the contents of the two books chapter by chapter, we have the following result:

Saṃyukta-abhidharma-hṛdaya-śāstra (596 verses)		*Abhidharma-kośa-śāstra* (600 verses)	
Dhātu	52..	Dhātu	44
Saṃskāra	44		
		Indriya	74
		Loka	99
Karma	75..	Karma	131
Anuśaya	60..	Anuśaya	69
Pudgala-mārga	54..	Pudgala-mārga	83
Jñāna	51..	Jñāna	61
Samāpatti	43..	Samāpatti	39
Sūtra } included in Indriya of *Kośa-śāstra*	69		
Kṣudraka	51		
Vicaya (?)	71		
		Pugdala-viniśćaya	0
Śāstra (?)	26		

The above table shows that the *Kośa-śāstra* consolidated the system of the *Saṃyukta-abhidharma-hṛdaya-śāstra* still further and defined the doctrinal system of the Sarvāstivāda school. The system is as follows:

1. *Dhātu* : the substance of all things (five skandhas, twelve āyatana, eighteen dhātu) 2. *Indriya* : the function of all things (twenty-two indriya, six causes, four conditions, &c.)		1. Outline of the doctrine	I. Positive assertion of the right view
3. *Loka* : actual world—sattva-loka (sentient beings) and bhajana-loka (physical world)	(1) *duhkha-satya* (truth of sorrow)	2. Detailed exposition of the doctrine	
4. *Karma* : approximate cause of the actual world—good and evil Karma 5. *Anuśaya* : auxiliary conditions of the actual world—dormant evils	(2) *samudaya-satya* (truth of the causes)		
6. *Pudgala-mārga* : ideal world—noble paths and nirvāṇa	(3) *nirodha-satya* (truth of extinction)		
7. *Jñāna* : the cause of the ideal world—wisdom 8. *Samāpatti* : auxiliary conditions of the ideal world—meditation	(4) *mārga-satya* (truth of path)		
9. *Pudgala-viniścaya* : the theory of non-ego—basic doctrine of Buddhism			II. Negative refutation of the wrong (heretic) view

In writing the *Kośa-śāstra*, Vasubandhu did not always adopt the orthodoxy of the Sarvāstivāda of Kaśmīra. He came from Gandhāra and was full of critical spirit. He wrote what he judged to be right. He himself says he adhered to orthodoxy, but often enough he criticised the Sarvāstivādins from the standpoint of the western schools, especially the Sautrāntika.

His criticism invited counter-criticism from the orthodox scholars of Kaśmīra. Saṅghabhadra wrote the *Abhidharma-nyāyānusāra-śāstra* and refuted the assertions of the *Kośa-śāstra*. The doctrines of the Sautrāntika represented in this book are that of Śrīlāta and Rāma, Sautrāntika masters of the time. Their views represent the much developed doctrine of the later Sautrāntika which is found neither in the Great Commentary nor in the *Kośa-śāstra*. Saṅghabhadra's book gives more detailed expositions than the *Kośa-śāstra*, and is one of the most important reference books for the study of the Sarvāstivāda and the Sautrāntika doctrines. But both in this work and his other book, the *Abhidharma-kośa-samaya-pradīpikā-śāstra*, Saṅghabhadra has closely followed the system of the *Kośa-śāstra*.

After Vasubandhu, no work was produced in the Sarvāstivāda school to surpass his *Kośa-śāstra*. Most of the later works were mere commentaries on the *Kośa-śāstra*. Guṇamati, Sthiramati, Vasumitra, Dignāga, Yaśomitra, Pūrṇavardhana may be mentioned among scholars who were also commentators of the *Kośa-śāstra*. Of their works, Yaśomitra's Sanskrit commentary alone has survived, while a part of Sthiramati's concise commentary remains in a Chinese translation. Those by Yaśomitra, Dignāga and Pūrṇavardhana are extant in the Tibetan translation. It may be mentioned here that the Kośa sect of Chinese and Japanese Buddhism (the Chü-shê-tsung or Kusha-shū 倶舍宗) was established on the doctrine of the seven fundamental Abhidharma books and the Great Commentary, with the *Kośa-śāstra* as its nucleus.

We have made a survey of the doctrine and the literature of the Sarvāstivādins, as forming the main current of Buddhism of the time. Besides the works mentioned above, there was also the *Abhidharmāvatāra* by Skandhila, Saṅghabhadra's teacher. He is said to have also written a commentary on the *Prakaraṇa-śāstra*. Dharmatrāta, author of the *Saṃyukta-abhidharma-hṛdaya-śāstra* wrote the *Pañcavastu-vibhāṣā*, a commentary on the first chapter of the *Prakaraṇa-śāstra*. Skandhila's *Abhidharmāvatāra* explains phenomena in the order of the five *skandhas*. He refused to admit the standpoint of the Great Commentary as being orthodox. He esteemed rather the seven fundamental Abhidharma books. Of the works of the Sarvāstivāda school, produced about the time of the Great Commentary, Śrīghoṣaka's *Amṛtarasa-śāstra* (*A-p'i-t'an-kan-lu-wei-lun* 阿毗曇甘露味論) and Vasumitra's *Samayabheda-vyūha-cakra-śāstra* (I-pu-tsung-lun-lun 異部宗輪論) and a few others have been translated into Chinese. There are one Tibetan and three Chinese translations of the *Samayabheda-vyūha-cakra*. Besides these we have in Chinese translation a similar discourse book entitled the Tsun-p'o-hsü-mi-p'u-sa-so-chi-lun (尊婆須蜜菩薩所集論: *Ārya Vasumitrabodhisattva-saṃcita-śāstra*). These śāstras, being chronicles of the differentiation of the various schools and collections of their different views, belong to the same class as the *Kathāvatthu* of the Pali Abhidhamma. Therefore, for the study of the various doctrines, the *Samaya-bheda-vyūha-cakra-śāstra* occupies as a reference book the same place as that occupied by the Great Commentary, the *Kośa-śāstra* and the *Nyāyānusāra-śāstra*.

C. *The Manuals of the other Schools* : In the preceding section, the Abhidharma manuals of the Sarvāstivādins were the central theme. In this section, those of the other schools will be dealt with. We shall begin with the Sammitīya school, which seems to have flourished in central India. Unfortunately, not much information has come down to us about this school. Of its texts only

the *Sammitīya-nikāya-śāstra* (San-mi-ti-pu-lun 三彌底部論) has been translated into Chinese. But the book is of little value. A Sanskrit manuscript of the *Abhidharma-samuccaya* of this school has now been discovered and published (q. v.).

We have a Chinese translation of the *Satyasiddhi-śāstra* (Ch' êng-shih-lun 成實論) in 16 volumes which are the manuals of the Sautrāntika school. The *Satyasiddhi-śāstra* was written by Harivarman of the same descent as Kumāralāta, reported to be the founder of the school. In this book, Āryadeva's *Catur-śataka* (the treatise in four hundred stanzas) is mentioned by name. This book was translated into Chinese by Kumārajīva in the early fifth century. From these facts we may infer that it was probably written between 250 and 350 A.C. Now, in the genealogy of the Sarvāstivāda school, Harivarman was regarded as a patriarch who was later than Nāgārjuna and Āryadeva but prior to Vasubandhu. The Vasubandhu of this genealogy is called the " senior Vasubandhu " who lived long before the Vasubandhu of the *Kośa-śāstra*. Therefore, the *Satyasiddhi-śāstra* must be considerably older than the *Kośa-śāstra*. Probably, it was produced about 300 A.C. The Sautrāntika doctrine, represented in this book, is earlier than that quoted in the *Kośa-śāstra* and the *Nyāyānusāra-śāstra* and shows affinity with the doctrine of the Dārṣṭāntika, which is mentioned in the Great Commentary as belonging to the old Sautrāntika.

According to tradition Harivarman studied the seven fundamental Abhidharma books, the Great Commentary of the Sarvāstivādins and, perhaps, the Sautrāntika doctrine. He studied also the doctrine of the five schools (including the Mahāsaṅghika) and other doctrines, ranging from the Mahāyāna teaching of Nāgārjuna and Āryadeva to the philosophies of the Sāṅkhya, the Vaiśeṣika and others. The study of this book was so prevalent in China of the sixth century that a sect based on this book was established in the country. At that time the book was claimed to be a Mahāyāna book, which claim, however, was later rejected.

The book consists of 202 chapters and discusses the four *satya* (truths) of sorrow, its causes, its extinction and the path, in that order. In the Introduction, the divergent views of the various Buddhist schools, concerning the Abhidharma, are enumerated. All discussion proceeds in the form of question and answer. The opponent-questioners express mainly the views of the Sarvāstivādins. Therefore, the book is a valuable reference work for the study of the difference between the Sarvāstivāda and the Sautrāntika.

Next, we have Ssu-ti-lun (四諦論), that is, the four volume treatise on the four *satya* in Chinese translation, which describes various views of the Buddhist schools on the four *satya*. Its author and the school to which it belonged are unknown.

The Yogācāra school too attempted to synthesise the doctrines of the Sarvāstivāda and the Sautrāntika from the Mahāyāna standpoint. As mentioned before, this school also had several manuals with titles beginning with the word *abhidharma*.

V. **The Abhidharma of Southern Buddhism**. What we call southern Buddhism is the Buddhism of the Sthaviravāda (Theravāda) school, with Ceylon as its centre. Almost all the materials concerning its Abhidhamma have been preserved to this day in the Pali language. There are seven fundamental Abhidhamma books in southern Buddhism and as later literature there exist the *Visuddhimagga* and commentaries on the seven Abhidhamma works, &c. These commentaries and the *Visuddhimagga* are ascribed to Buddhaghosa of the first half of the fifth century. His senior contemporary, Buddhadatta, also wrote manuals, such as the *Abhidhammāvatāra*. Then the Sthaviravāda school of Ceylon went through a period of eclipse for several hundred years. But, during this period, too, a few simple manuals were written.

The revival of Abhidhamma studies began in about the twelfth century. In particular Anuruddha's *Abhidhammattha-saṅgaha* was to the Sthaviravāda school what the *Kośa-śāstra* was to the Sarvāstivāda. Later, Abhidhamma studies proceeded mostly from this book and many commentaries and expositions of it were made. Soon afterwards, the centre of Abhidhamma study moved from Ceylon to Burma. In Burma much development has since been made. There even today, the study of the Abhidhamma is enthusiastically pursued. It constitutes the essence of Buddhist learning, and the study of Buddhism is itself called Abhidhamma.

It would be convenient to divide the course of development of Abhidhamma in Theravāda into three stages as was done in the case of northern Buddhism : (1) the seven fundamental Abhidhamma books, (2) the commentaries on the seven books and manuals, (3) their sub-commentaries. Consideration of the sub-commentaries will, however, be omitted from the present description.

1. THE SEVEN BOOKS OF THE FUNDAMENTAL ABHIDHAMMA : The abhidhamma literature of Pali Buddhism prior to the compilation of the seven books has already been discussed. The Pali books of fundamental Abhidhamma are customarily grouped in the following order : *Dhammasaṅgaṇi*, *Vibhaṅga*, *Dhātukathā*, *Puggala-paññatti*, *Kathāvatthu*, *Yamaka* and *Paṭṭhāna* or *Mahāpakaraṇa*.

As mentioned before, tradition attributes these books to the Buddha himself. But, as a matter of fact, they must have been produced during a period of two or three hundred years, beginning from the second or third century after the Buddha's death. The books may be considered in three groups according to their time of compilation : early, middle and late groups. The *Vibhaṅga*, *Dhammasaṅgaṇi* and *Puggala-paññatti* belong to the first period. The *Dhātukathā* and the *Kathāvatthu* belong to the middle period, and the *Yamaka* and the *Paṭṭhāna* to the late period.

A. *The Early Books :* In some parts of the *Dhammasaṅgaṇi* and the *Vibhaṅga* and throughout the *Puggala-paññatti*, quotations from the Nikāyas are explained and expatiated. These texts, therefore, seem to belong to the early period. It is true that the method of study found in the middle period is adopted in some parts of the *Dhammasaṅgaṇi* and the *Vibhaṅga*, but the characteristics of the early period are more prevalent in these books. So we may safely regard them as belonging to the early period.

7. S.P.C. 97040

The *Dhammasaṅgaṇi* constitutes the nucleus of the seven books. It gives detailed descriptions of *citta-cetasika-dhamma* (mind and mental attributes) and *rūpa-dhamma* (physical elements), preceded by a list of terms called *mātikā* (the matrix of discussion). The *citta-cetasika* and *rūpa-dhamma* are basic themes of the Abhidhamma. In the *Dhammasaṅgaṇi* these realities are treated from the ethical or "karmical" standpoint. The enumeration of eighty-nine *citta-dhamma* (the mind itself) and *cetasika* (attributes or concomitants of the mind) associated with each mind-consciousness shows evidently that the book should belong to the middle perid of the Abhidhamma, judging from the standard of the Sarvāstivāda and other schools. But the method of definition and explanation adopted in this book bears the characteristics of the early period. It generally proceeds analytically, dissecting existence into its ultimate constituents, which are bare impersonal phenomena. It was probably because of its importance and basic nature that the book came to be placed first in the list. This book may be compared to the *Vijñāna-kāya* and the *Dhātu-kāya-śāstra* in regard to its contents. The difference between the two was that the Sarvāstivāda Abhidharma developed theories not only on *citta* and *cetasika*, but also on *rūpa-dharma*, evil desires, training and other topics, while the Pali Abhidhamma set emphasis on the mental field and showed a special and characteristic development along that line. The difference in the modes of approach of the two schools is remarkable. The Sarvāstivādins may be described as philosophic and metaphysical, while the Pali Buddhism is scientific and psychological.

The *Vibhaṅga*, like the *Dharma-skandha-śāstra* of the Sarvāstivāda, explains important items of Buddhist doctrine, such as the five *khandha*, the twelve *āyatana*, the eighteen *dhātu*, the four *sacca*, the twenty-two *indriya*, the twelve *paṭicca-samuppāda*, the four *sati-paṭṭhāna*, the four *sammappadhāna*, the seven *bojjhaṅga*, the *ariya-aṭṭhaṅgikamagga*, *jhāna*, *kilesa*, &c. But while the *Dharmaskandha-śāstra* adopted the method of the early Abhidharma, quoting and explaining the texts of the *Āgama*, this book, besides using the method of sutta explanation (*suttanta-bhājaniya*) adopts the method of explaining items independent of the sutta in the Abhidhamma manner (*abhidhamma-bhājaniya*) and the *pañhapuccha* explanation through a hundred and twenty-two matrices of discussion (*mātikā*). These methods belong to the middle period. The work consists of a series of 18 treatises (*Vibhaṅga*), all complete in themselves, and independent of each other. Each *Vibhaṅga*, as a rule, consists of 3 parts, the sutta explanation, the abhidhamma explanation and a catechetic section by way of questions and answers. Many of the passages of *Vibhaṅga* are also found in the *Paṭisambhidāmagga* to which it has a great resemblance, in contents as well as in arrangement.

The *Puggala-paññatti* is the smallest of the seven books of the Pali Abhidhamma. There are in Pali Buddhism six *paññatti : khandha-, āyatana-, dhātu-, sacca-, indriya- and puggala-paññatti* (designation of human types). In the *Prajñapti-śāstra* of the Sarvāstivādins, the three kinds of *loka-hetu* and *karma-prajñapti* are described, as mentioned before. This book treats with the *puggala-paññatti* only. In fact, it appears somewhat out of place in the Abhidhamma, because one of the main characteristics of Abhidhamma is that it does not employ conventional terms like 'individual' (*puggala*) but deals only with ultimates. This book, however, is written in the conventional language of the suttas, and most of its contents have literal parallels in the *Aṅguttara Nikāya* and the *Saṅgīti Sutta* of the *Dīgha Nikāya*. The suttas from the Nikāya are quoted and explained concerning the various types of *puggala*. This book evidently belongs to the early Abhidhamma. The Pudgala chapter of the *Na-praśna-bhāga* of the *Śāriputra-abhidharma-śāstra* corresponds to the *Puggala-paññatti*.

B. *The Books of the Middle Period.* We have the *Dhātukathā* as a book of this period. The *Kathāvatthu* will be also regarded as a book belonging to the middle period.

The *Dhātukathā* describes in 14 chapters the relation of all phenomena to groups (*khandha*), bases (*āyatana*) and elements (*dhātu*) and all inter-association of mind and mental attributes (*citta-cetasika*) with one another. This dialectic method of study, involving hundreds of questions and answers, is one of the characteristics of the middle period. The same method is adopted in the *Dhātukāya* and the *Prakaraṇa-śāstra* of the Sarvāstivāda school.

The *Kathāvatthu* is traditionally ascribed to Moggaliputtatissa, president of the Council of Pāṭaliputta. Two hundred and nineteen different doctrinal items of the various schools are enumerated in 23 chapters and refuted accordingly. The book seems to have grown gradually and most of the heretical views discussed are ascribed to various schools, some of which are later than others. The text itself makes no mention of the names of the schools. This is supplied by the commentary. In this book many texts quoted from the *Sutta-piṭaka* give authority to the argument. As far as the terminology used and the theories set forth are concerned, this book seems to belong towards the late period. Some scholars agree with tradition and accept the book as belonging to the latest period. Others make the *Paṭṭhāna* the latest book of all. The various heretical views represented in this book, the commentary says, include those of the Vajjiputtaka, the Sammitīya, the Sabbatthivāda, the Mahāsaṅghika, the Kassapīya, the Andhaka, the Pubbaseliya, the Aparaseliya, the Rājagirika, the Siddhatthika, the Gokulika, the Bhaddayānika, the Mahiṃsāsaka, the Uttarāpathaka, the Hetuvāda, the Vetulyaka (Mahāsuññavāda), &c. Some of these are northern schools known to the *Samayabheda-vyūha-cakra-śāstra* and the *Mahāvibhāṣā-śāstra*. Some are southern schools unknown to northern Buddhism. The doctrines of the various schools could be better understood by studying this book in association with texts belonging to northern schools.

C. *The Late Books.* During the early period, the various schools resembled one another in that the early Abhidhamma books defined and explained the texts of the *Nikāya* (*Āgama*) in the Abhidhamma manner, while the books of the middle period

dealt with problems of classification, description and inter-subordination of things and the inter-association of mind and mental attributes. But with regard to the books of the late period, various schools came to differ in their methods of study and show little resemblance to one another. Thus, we can find little analogy between the late books of the Pali Abhidhamma and those of other schools.

The *Yamaka* discusses the problems of *saṅgaha* (classification and subordination) and *uppāda-nirodha* (appearance and disappearance) of all things, discussed pair by pair in a catechismal form. It tries to give a logical clarification and delimitation of all the doctrinal concepts as to their range and concepts. It may be described as a work of "applied logic", but much of the play upon words appears rather strange. The method, it may be said, somewhat resembles the catechism of the Vedalla in the *navaṅga-sāsana* (or Vedalla Sutta, earlier mentioned). But the catechism of the *Yamaka* is so recondite that it is almost unintelligible to beginners without deep knowledge of the Abhidhamma doctrine. In this point, the *Yamaka* resembles the *Jñāna-prasthāna*, a late book of the Sarvāstivādins, which again is too professional for beginners. Its name (*The Pairs*) is probably to be attributed to the dual grouping, of a question and its converse formulation, strictly adhered to from beginning to end.

The *Paṭṭhāna* reduces all phenomenal relations into twenty-four *paccaya* (causative conditions) and considers all phenomena from every angle with the aid of these conditions. The twenty-four *paccaya* are :—(1) *hetu-* (root-cause) *paccaya*, (2) *ārammaṇa-* (object) *p°*, (3) *adhipati-* (dominance) *p°*, (4) *anantara-* (contiguity) *p°*, (5) *samanantara-* (immediate contiguity) *p°*, (6) *saha-jāta-* (co-nascence) *p°*, (7) *aññamañña-* (reciprocity) *p°*, (8) *nissaya-* (dependence) *p°*, (9) *upanissaya-* (sufficing efficiency) *p°*, (10) *purejāta-* (antecedence) *p°*, (11) *pacchājāta-* (consequence) *p°*, (12) *āsevana-* (recurrence) *p°*, (13) *kamma-* (karma) *p°*, (14) *vipāka-* (result) *p°*, (15) *āhāra-* (support or nutriment) *p°*, (16) *indriya-* (control) *p°*, (17) *jhāna-*(meditation) *p°*, (18) *magga-* (means) *p°*, (19) *sampayutta-* (association) *p°*, (20) *vippayutta-* (dissociation) *p°*, (21) *atthi-* (presence) *p°*, (22) *natthi-* (absence) *p°*, (23) *vigata-* (abeyance) *p°*, (24) *avigata-* (continuance) *p°*. Some of these *paccaya* had already been discussed both in the *Paṭisambhidāmagga* and the *Kathāvatthu*. But this book was the first to group them into a body of twenty-four *paccaya*. Being a book of the late period, it has some resemblance to the *Śāriputra-abhidharma-śāstra*, in which ten conditions are discussed and to the *Jñāna-prasthāna-śāstra*, in which six causes are discussed. The ten conditions of the *Śāriputra-abhidharma* generally agree with some of the 24 conditions of the Pali book. As this book is the most recondite and voluminous of the seven books, it is sometimes called the Great Discourse Book (*Mahā-pakaraṇa*). Like the *Yamaka*, this book is very difficult to understand. It has, therefore, been said that he who masters this book masters all the doctrines of the Abhidhamma.

2. THE PERIOD OF COMMENTARIES AND MANUALS : A. *The Commentaries of the seven Fundamental Abhidhamma Books.* The style of the seven Abhidhamma books was very concise and sometimes so formal that they seemed dry and uninteresting. It was hard to understand the true meaning with their help alone. Such being the case, besides the books themselves, commentaries, explaining the meaning of the books, must have been handed down among the students of the Abhidhamma. The contents of the source books probably remained unaltered, while the commentaries gradually grew in size with the progress of study and the development of the doctrine. Therefore, it was only natural that various different commentaries should have appeared as the result of the differentiation of tradition and genealogy. The extant commentaries of the Abhidhamma are all ascribed to Buddhaghosa who lived in the first half of the fifth century. It is said that he consulted many old Sinhalese commentaries in order to write his own books. The old commentaries he consulted are mentioned as follows : (*a*) the *Mūla-aṭṭhakathā* (Fundamental Commentary) or the *Mahā-aṭṭhakathā* (Great Commentary), written in Sinhalese and preserved in the Mahāvihāra (Great Temple) of Anurādhapura, the ancient capital of Ceylon ; (*b*) a commentary that was preserved in the Uttara-vihāra (North Temple) of the same city, and called the *Uttaravihāra-aṭṭhakathā* ; (*c*) the *Mahā-paccarī-aṭṭhakathā* said to have been written on board a raft ; (*d*) the *Andhaka-aṭṭhakathā*, preserved at Kāñcīpura in "Āndhra" on the Indian mainland; (*e*) the *Kurundī-aṭṭhakathā*, preserved at Kurunda-velu temple in Ceylon; (*f*) the *Saṅkhepa-aṭṭhakathā* (Concise Commentary), a short commentary, probably preserved in south India.

In addition to the above list there seems to have been a commentary alluded to as the *Porāṇā aṭṭhakathā* (Ancient Commentary) or the *Porāṇā* (Ancient Masters).* Moreover, Buddhaghosa quotes not only from the *Paṭisambhidāmagga* and *Niddesa* which show Abhidhamma tendencies but also from the *Milinda-pañha* and the *Nettipakaraṇa*, &c., which appeared later than the fundamental Abhidhamma. This shows that the study of the Abhidhamma had developed considerably even before Buddhaghosa.

B. *The Mahāvihāra sect and the Abhayagiri-vihāra sect.* The six ancient commentaries mentioned above were not the monopoly of the Mahāvihāra sect. At that time, there were three sects of the Ceylon Theravāda school, which followed the teaching of Pali canon. They were the Abhayagiri-vihāra-vāsins (q. v., also known as Dhammarucika), the Mahāvihāra-vāsins and the Jetavanavihāra-vāsins (also called Sāgaliya). The monks of the Abhayagirivihāra and the Mahāvihāra were competing with each other for leadership both in learning and in monastic activity. The Mahāvihāra sect was conservative and puritanic, while the Abhaya-girivihāra sect was progressive and liberal. The Mahāvihāra excelled in observing the Buddha's precepts and faithfully preserving the sacred texts together with their commentaries.

* On this see s.v. PORĀṆĀ.—G. P. M.

The Abhayagirivihāra sect evidently was more active in monastic duties. This has been confirmed not only by books dealing with the history of Ceylon, but also by the travel books of Chinese monks, like Fa-hsien and Hsüan-tsang. The fact that the sacred books which were taken from Ceylon and translated into Chinese after the third century, e.g., the *Dhammapada*, the *Aṭṭhakavagga* of the *Suttanipāta*, the *Vimuttimagga*, &c., probably belonged to the Abhayagiri sect and not to the Mahāvihāra sect, proves the vast influence of the Abhayagirivāsins. The sect seems to have flourished on the Indian mainland as well as in Ceylon.

C. *Buddhaghosa, the great commentator* According to tradition, Buddhaghosa was born near Buddhagayā on the Indian mainland and was ordained at the Mahābodhi-vihāra there, as a member of the Abhayagiri sect. There he studied the Pali Tipiṭaka, but, coming across many obscurities, went over to Ceylon for further study. He is said to have written the *Atthasālinī*, the commentary on the *Dhammasaṅgaṇi*, in his Indian days. He evidently studied the *Vimuttimagga*, which was a manual of the Abhayagirivihāra sect. Arriving in Ceylon, he perceived that the Mahāvihāra sect was superior in point of learning and that the commentaries of the sect were orthodox. The scholars of the Mahāvihāra wished to test his scholarship and, giving him a certain verse in the Nikāya, requested his interpretation of the verse. Thereupon, it is said, Buddhaghosa wrote the *Visuddhimagga*, which systematised the doctrine of the Mahāvihāra sect. Satisfied with his scholarship, the scholars of the sect provided all the materials needed by him and asked him to write commentaries on the Tipiṭaka. And he, convinced of the orthodoxy of the Mahāvihāra view, clearly declared in his commentaries that the views represented there were those of the Mahāvihāra sect and agreed with the orthodox doctrine of the Buddha. His works dealing with the Abhidhamma are the *Visuddhimagga* and the commentaries on the seven fundamental Abhidhamma texts.

The *Visuddhimagga* was, according to tradition, the first work written by Buddhaghosa after his arrival in Ceylon. In Pali Buddhism, this book contains the best explanations of the doctrine of the Abhidhamma, given minutely and coherently. In writing this book, the author seems to have followed the manner of systematisation of the *Vimuttimagga* of the Abhayagirivihāra sect. Buddhaghosa's approach resembles that of Vasubandhu of the Sarvāstivāda school, who consulted Dharmatrāta's *Saṃyukta-abhidharma-hṛdaya-śāstra*, in writing his *Kośa-śāstra*. The *Vimuttimagga*, the Pali original of which is now lost, has been translated into Chinese (Chieh-t'o-tao-lun 清淨道論). The author, Upatissa, seems to have been about a hundred years prior to Buddhaghosa. That the *Vimuttimagga* was Upatissa's work and belonged to the Abhayagirivihāra sect is mentioned in the ṭīkā (sub-commentary, i.e., Dhammapāla's *Paramattha-mañjūsā*) of the *Visuddhimagga*. The following is a comparison of the arrangement and contents of the *Vimuttimagga* and the *Visuddhimagga* :

Vimuttimagga (12 chapters)		*Visuddhimagga* (23 chapters)
1. Nidāna 2. Sīlapariccheda	..	1. Nidānakathā Sīla
3. Dhutaṅga	..	2. Dhutaṅga
4. Kalyānamitta-sevanā 5. Bhāvanā-pariccheda (?) 6. Kammaṭṭhāna-pariccheda		3. Kammaṭṭhāna-gahaṇa 4. Paṭhavī-kasiṇa
7. Kammaṭṭhāna or Bhāvanāmukha (?)	..	5. Sesa-kasiṇa 6. Asubha-kammaṭṭhāna 7. Cha-anussati 8. Anussati-kammaṭṭhāna 9. Brahma-vihāra 10. Āruppa 11. Samādhi
9. Pañca-abhiññā	..	12. Iddhi-vidhā 13. Abhiññā
10. Paññā-pariccheda 11. Pañca-upāyā	.. ..	14. Khandha 15. Āyatana-dhātu 16. Indriya-sacca 17. Paññā-bhūmi
12. Sacca-pariccheda	..	18. Diṭṭhi-visuddhi 19. Kaṅkhā-vitaraṇa-visuddhi 20. Maggāmagga-ñāṇadassana-visuddh 21. Paṭipadā-ñāṇadassana-visuddhi 22. Ñāṇadassana-visuddhi 23. Paññābhāvanānisaṃsa

This comparison shows that both books describe the process of reaching the goal of emancipation through training, in the order of *sīla* (discipline), *samādhi* (meditation) and *paññā* (wisdom). The two books coincide with each other in outline, but the *Visuddhimagga* deals with topics more extensively. Their doctrinal contents also coincide in general, but there is some disagreement on points of detail.

The following three commentaries on the fundamental Abhidhamma books are ascribed to Buddhaghosa: (*a*) The *Atthasālinī*: this is the commentary on the *Dhammasaṅgaṇi*. Buddhaghosa had written the *Atthasālinī* before he went to Ceylon. Probably the original was not the same text as we have now. Even the existing text shows some difference between the *Atthasālinī* and the *Visuddhimagga* and the other commentaries of Buddhaghosa. This makes possible the supposition that the book was originally written on the Indian mainland and later revised to some extent, but that it still retained some signs of the influence of the Abhayagirivihāra in its style and contents. In this book are found certain interpretations of doctrine which are not found in the other commentaries. This fact makes the book indispensable for a thorough study of the Abhidhamma. (*b*) The *Sammohavinodanī*: This commentary on the *Vibhaṅga* agrees in most of its contents with the *Visuddhimagga*. (*c*) The *Pañcappakaraṇa-aṭṭhakathā* (the commentary on the five books): The commentaries of the remaining five books of the fundamental Abhidharma have been collected into one volume, which enables one to get concrete interpretations of the doctrine.

It should be added here that, though not considered Buddhaghosa's work, the commentaries on the *Paṭisambhidāmagga* and the *Niddesa* should also be consulted in the study of the Abhidhamma. Considering that the views contained in these commentaries agree almost entirely with one another whether they are the works of other authors or of Buddhaghosa, it would appear that when Buddhaghosa wrote his commentaries he withheld his own opinions, and took all his materials from the Sinhalese commentaries. In this respect he was different from Vasubandhu, the author of the *Kośa-śāstra*. He rather resembled the author of the *Mahā-vibhāṣā-śāstra*.

D. *The other Manuals of the Doctrine*. Buddhaghosa's books were too voluminous and difficult for beginners. So there arose a need for manuals of simpler and more concise form. To meet the need several manuals of the Abhidhamma were produced in the course of five or six hundred years after Buddhaghosa's time, which period was the dark age for the Theravāda school. At a later period the following nine books came to be regarded in Burma as the representative manuals of Abhidhamma study: the *Abhidhammāvatāra*, the *Rūpārūpa-vibhāga*, the *Sacca-saṅkhepa*, the *Mohavicchedanī*, the *Nāmarūpa-samāsa*, the *Abhidhammatthasaṅgaha*, the *Paramattha-vinicchaya*, the *Nāmarūpa-pariccheda* and the *Nāmācāra-dīpaka*.

The first two books were written by Buddhadatta, a contemporary of Buddhaghosa. He wrote several manuals of the Abhidhamma and the Vinaya, based on Buddhaghosa's commentaries. His attitude was not so conservative as Buddhaghosa's, and he expressed his own opinions freely. The first book, the *Abhidhammāvatāra*, is an abridgement of the *Visuddhimagga*; written in verse it was treasured and studied as the best of its kind until, later, the *Abhidhammatthasaṅgaha* appeared. The second book, the *Rūpārūpa-vibhāga*, in prose, was intended for the use of less experienced beginners. In these books of Buddhadatta reality is classified into four groups: *citta*, *cetasika*, *rūpa* and *nibbāna*; concepts as provisional phenomena which are called *paññatti* are classified and explained. *Rūpa* and *cetasika* are further subdivided. This theory and these classifications were an innovation and did not exist even in Buddhaghosa's works. The final form was given to them later in the *Abhidhammatthasaṅgaha*.

The third book, the *Sacca-saṅkhepa*, has been attributed to Dhammapāla. To distinguish him from Mahā Dhammapāla, the greatest commentator after Buddhaghosa, the prefix *Cūḷa* is added to his name. He seems to have been a little later than Mahā Dhammapāla. This book, which is a small text in prose, is suitable for beginners and contains no new doctrinal developments or characteristics. Mahā Dhammapāla, besides writing commentaries on several suttas of the *Khuddaka Nikāya*, is said to have written the *Paramattha-mañjūsā*, a sub-commentary (*ṭīkā*) on Buddhaghosa's *Visuddhimagga*, and the *Paramatthappakāsinī*, a sub-commentary on Buddhaghosa's commentaries on the seven books of the Abhidhamma. His work is very useful for those who wish to study the *Visuddhimagga* in detail. Mahā Dhammapāla, too, thus rendered great service in the elucidation of the Abhidhamma.

The fourth book, the *Mohavicchedanī*, is a work by a Sinhalese writer named Kassapa. The fifth book, the *Nāmarūpa-samāsa*, is also called the *Khema-pakaraṇa* (Khema's treatise). The exact period of these authors is unknown, but they were probably contemporary with Cūḷa-Dhammapāla. These are small books meant for beginners and show no originality.

The three books (from the sixth to the eighth in the list) were written by Anuruddha. The period of his literary activity is also unknown. Judging from the fact that the language of these texts contains Sanskritised Pali words and also the fact that sub-commentaries to these texts were written in the latter half of the twelfth century, it may be said that these three books were produced during the eleventh century or the first half of the twelfth century, when the Pali language began to be influenced by Sanskrit. The *Abhidhammatthasaṅgaha* is the most authoritative of these three texts. In this short manual, the Abhidhamma doctrine of the Mahāvihāra sect is very cleverly condensed. The book is by itself too concise and difficult for those who have had no special training. But various commentaries have been written on it. In the study of the Pali Abhidhamma of later times, this book and its commentaries have been indispensable guides to this day. The whole book is coherent and systematic. The classification and enumeration of *cetasika* (mental attributes) and

rūpa (material things), the explanation of *paññatti* (concepts), &c., have been finalised in this book. The book may be said to represent the highest peak of the doctrinal development of Abhidhamma. The position of this book is analogous to that of the *Kośa-śāstra* in the Sarvāstivāda school. The most famous commentary on this book is the *Abhidhammattha-vibhāvanī* by Sumaṅgala of about the eleventh or twelfth century. The seventh and the eighth books of the list, both written in verse, were intended for beginners, but were not regarded as highly as the *Abhidhammattha-saṅgaha*.

The ninth book is the work of Saddhamma-jotipāla, a Burmese monk. His Burmese name was Chapada. He went to Ceylon for study towards the close of the twelfth century and received ordination there.* Chapaḍa introduced the Sinhalese Order into Burma. At that time the Mahāvihāra sect was in full power both in the study of doctrine and in monastic activity. After a stay in Ceylon of ten years, Chapaḍa returned to Burma, bringing with him Sinhalese Buddhism and various literary materials connected with it. Thus the foundation of the Abhidhamma study was laid in Burma. Besides the *Nāmācāra-dīpaka*, Chapaḍa wrote also the *Visuddhimagga-ganṭhipada*, which gives explanations on difficult words of the *Visuddhimagga*, &c. Thereafter, the seat of Abhidhamma study moved from Ceylon to Burma and continues so to this day.

KŌGEN MIZUNO.

ABHIDHARMA-MAHĀVIBHĀṢĀ, a śāstra (text) (Taishō, No. 1545, 200 fascicules) compiled by 500 Elders of north India, and translated into Chinese by Hsüan-tsang of the T'ang dynasty ; it is sometimes simplified as *Mahāvibhāṣā* or *Vibhāṣā*. It belongs to the thesaurus of discussions on which the Sarvāstivāda school of Buddhism relied. By interpreting on a very broad scale the meanings of all dharmas and by thoroughly exhibiting the theories of various schools then existing, this śāstra furnishes detailed commentaries on the *Jñānaprasthāna* written by Kātyāyanīputra.

Jñānaprasthāna is the basic canon of the Sarvāstivāda, one of the twenty schools of Theravāda Buddhism. Together with the *Saṅgītiparyāya*, the *Dharmaskandha*, the *Prajñapti*, the *Vijñānakāya*, the *Prakaraṇa-pāda* and the *Dhātukāya*, it makes up the seven principal śāstras of the Sarvāstivādins. In the 1st fascicule of the 俱舍論記 (*Notes on the Abhidharma-kośa*, written by P'u-kuang 普光), there is this passage : " of these śāstras, the *Jñānaprasthāna* stands foremost for its comprehensive doctrines. This is why the śāstra-writers of succeeding ages say that the other six śāstras are legs while *Jñānaprasthāna* constitutes the body itself. " Evidently this śāstra was generally regarded of old as the representative work expounding the Sarvāstivāda doctrines. Continuous studies were made on it by the Sarvāstivāda scholars who held leading positions in the circle of thinkers of north India at that time, each propounding his own well-founded ideas and broadly disseminating them, and the *Mahāvibhāṣā* is the colossal encyclopaedic work encompassing all these different commentaries on *Jñānaprasthāna*. The title *Mahāvibhāṣā* implies three notions, i.e., comprehensiveness, excellence and variety of explanations. As is remarked in the *Notes on the Abhidharma-kośa-śāstra* (fasc. i) : " It is said to be comprehensive because it covers the vast differentiation of tenets ; to be excellent because it affords excellent treatment on all sorts of theories ; to be various because it presents different views conceived by the 500 arhats on the *Jñānaprasthāna*. On account of these three notions, it is fit to preserve the Sanskrit name by transliteration." This shows that this śāstra is held as a canonical treasure of the Sarvāstivādins.

The cause and circumstance for the compilation of this śāstra, as is mentioned by Hsüan-tsang in his *The Record of Western Countries of the Great T'ang Dynasty*, fasc. iii, may be thus summed up : About four hundred years after the Buddha's Nirvāṇa, Kaniṣka, king of Gandhāra, became an ardent supporter of Buddhism. Perplexed at the diversity of schools and differences of opinions within the Buddhist community, he consulted with Pārśva, on whose advice he built a monastery in Kaśmīra and convoked a council of 500 well-known arhats, with Vasumitra as the president, to undertake the work of compiling the Tripiṭaka. First of all, the *Upadeśa-śāstra* was composed of 100,000 ślokas to interpret the *Sūtra-piṭaka* ; next, the *Vinaya-vibhāṣā*, a commentary on the *Vinaya-piṭaka*, was composed of another 100,000 ślokas ; and lastly, the *Abhidharma-vibhāṣā*, a commentary on the *Abhidharma-piṭaka* was also composed of 100,000 ślokas. After the works were completed, they were inscribed on copper plates and deposited in a stūpa for preservation.

The commentary of 100,000 ślokas on the *Abhidharma-piṭaka* mentioned here denotes the *Abhidharmamahāvibhāṣā*, and the *Abhidharma-piṭaka* on which the commentary is written denotes the *Jñānaprasthāna*. Again, in his epilogue to the Chinese version of the *Mahāvibhāṣā*, Hsüan-tsang writes : " About four hundred years after the Buddha's Nirvāṇa, Kaniṣka, ruling over Jambudvīpa, called together 500 arhats in Kaśmīra to write commentaries on the Tripiṭaka. Of these commentaries we have obtained the *Abhidharma-vibhāṣā*, which is duly translated here." Moreover, the Tibetan record of this event (Tāranātha's *History of Indian Buddhism*, chapter 12) agrees with Hsüan-tsang in general, except to say that, in addition to the 500 arhats, 500 bodhisattvas and 500 pandits also participated in the assembly. This came to be called the Third Council. Since then, this śāstra has been recognised as a compilation by Vasumitra and the 500 arhats in Kaśmīra at the time of Kaniṣka.

But, recent investigations by modern scholars have shown that in this śāstra there are such words as : " In the past, at the time of Kaniṣka, king of Gandhāra. . . . " (fasc. 114), and such narration as : " In the past, there were two śāstra-masters of this school, one named Divira and the

* For a date of three centuries later suggested for him, see A. P. Buddhadatta Thera in *UCR. IX*, 1, pp. 69 ff. See also s.v. CHAPPAṬA.—G.P.M.

other Ghoṣavarman . . . . " (fasc. 129). These scholars have inferred that Pārśva, Vasumitra, Dharmatrāta, Ghoṣa and Buddhadeva do not seem to have participated in the compilation personally notwithstanding the fact that their opinions have been frequently referred to and criticised. These scholars have further maintained that this śāstra was compiled long after Kaniṣka and Vasumitra, some time in the 2nd century A.C., as a collective production of the Sarvāstivādins centering around the adherents of Kātyāyanīputra. This opinion agrees with the statement made in the *Mahā-prajñāpāramitā-śāstra*, fasc. 2, which runs thus: "Kātyāyanīputra, a Brāhmaṇa, ... composed the *Jñānaprasthāna* in eight granthas . . . . . As time went on, his disciples thought that the eight granthas might not be understandable to all later learners, whereupon they compiled the *Vibhāṣā*." It also agrees with Tao-shan's 道梃 preface to the earlier Chinese version of the *Abhidharma-vibhāṣā*, in which he says, "Six hundred odd years after the Light of Śākyamuni was removed from us, 500 arhats of north India composed the *Vibhāṣā* to rectify the divergent theories." Therefore, the exact time of the compilation of this śāstra still remains a subject to be investigated.

Nevertheless, the compilation of this śāstra definitely produced a profound and stimulating effect on the sphere of Indian Buddhism and contributed much to promote the position of the Sarvāstivādins' thoughts at that time. The name Vaibhāṣikas thus given to them testifies the significant relation between this śāstra and their school of Buddhism. Amidst the general flux of interest for this śāstra, there appeared a number of writings and well-known scholars in this connexion. For instance, Tao-an (道安) of the East-tsin period in his preface to the *Vibhāṣā* says: "There were three arhats named Sitapāṇi, Dha-si and Vi-la-ni, who wrote on the *Vibhāṣā* with extensive allusions to the Holy Scriptures. . . . . Dha-si's work is inclusive but too much given to minuteness, that of Vi-la-ni is concise but rather too brief, while that of Sitapāṇi is the best adjusted to the purpose." (Vide 出三藏記集 *A Collection of the Records of Translations of the Tripiṭaka*, fasc. 10.) Among the works composed with materials drawn from the *Vibhāṣā*, there are Dharmottara's *Abhidharma-hṛdaya* and Dharmatrāta's *Saṃyuktābhidharma-hṛdaya*. Besides, Vasubandhu produced his famous *Abhidharma-kośa-bhāṣya* by its inspiration. Saṅghabhadra's *Abhidharma-nyāyānusāra* and *Abhidharma-samayapradīpikā* were also written with a view to amplifying the doctrines conveyed in the *Vibhāṣā*. These are the well-known works now extant in relation with this śāstra.

The original Sanskrit text of this śāstra in 100,000 ślokas was rendered into a complete Chinese version by Hsüan-tsang. What we speak of as the *Mahāvibhāṣā* today generally refers to this version. But before the T'ang dynasty there were already an abridged version by Saṅghabhūti during the Fu Ch'in (苻秦) reign, and another incomplete version by Buddhavarman and Tao-t'ai (道泰) during the northern Liang reign.

1. The Fu-ch'in version, entitled *Vibhāṣā-śāstra in 14 fascicules* (Taishō, No. 1547), was translated in the 19th year of the Chien-yüan (建元) period (383 A.C.) of the Fu Ch'in reign, on the request of Chao Cheng (趙正), member of the imperial secretariat. The original text was Sitapāṇi's abridged copy of the *Mahāvibhāṣā*, transmitted orally by Saṅghabhūti of Kaśmira. A group of śramaṇas organised under the well-known Tao-an participated in the work. First, the text was recited by Saṅghabhūti and taken down in Sanskrit by Dharmanandi, another foreign śramaṇa; then it was translated into Chinese orally by Buddharakṣa, taken down and composed into Chinese literary form by the Fu-ch'in śramaṇa, Min-chih (敏智); and it was finally edited by Tao-an himself. In his preface, Tao-an says: "The original text contains much more. Owing to the oblivion of the reciter only 40 items which constitute the fundamentals of the ten methods of the Abhidharma are presented here. Fifteen items are grouped together and shifted to the forepart as 'the smaller portion', while twenty-five items are put to the rear as 'the larger portion'. Both these portions are complete versions. The two items attached at the end are fragments gathered and rearranged from his memory." The forty items mentioned earlier, together with the two last fragmentary ones, making up the whole content of 42 items, only cover the second Grantha (*Grantha on the Bonds*) of the T'ang version of the *Abhidharma-mahā-vibhāṣā*; the so-called Smaller Portion of 15 items roughly corresponds to the fascicules 46-50 of that version, that is, the first half of the *Varga* (chapter) *on Bad Factors* (不善納息), Varga I of the *Grantha on the Bonds*; and the so-called Larger Portion of 25 items corresponds to fascicules 71-86, that is, the first half of the *Varga on the Ten Methods* (十門納息), Varga IV of the same Grantha. Obviously, this version represents only a very small part of the complete *Vibhāṣā*. The reasons for the incompleteness of this version are given in the *Biography of Saṅghadeva* in the 高僧傳 (*Biographies of Eminent Monks*) as these: "Saṅghabhūti rendered the enormous thesis of the *Abhidharmavibhāṣā* at a time of tumult caused by the insurrection of the Mu-yung (慕容) tribe. Besides, the interpreters in too great a haste were unable to exhibit all the details and thus the meanings, implications, style, &c., were not sufficiently shown. Furthermore, the death of Tao-an, which took place shortly after, left the work unrectified."

2. The version of northern Liang, entitled *Abhidharmavibhāṣā in 60 fascicules* (Taishō, No. 1546), was translated by both Buddhavarman and Tao-t'ai. The original Sanskrit text of 100,000 ślokas was brought to the kingdom of Liang from the Western Regions by Tao-t'ai at the time when Buddhavarman also arrived at the Liang capital. On the request of the king, they both commenced the translation work at the Hsien-yü palace (閑豫宮) in the middle of the fourth moon of the I-ch'ou year (乙丑年, 425 A.C.). About three hundred śramaṇas, including Chih-sung (智嵩), Tao-lang (道朗) and others, were summoned to assist in examining the language and ascertaining

the meanings. In the beginning of the seventh moon of the Ting-mao year (丁卯年, 427 A.C.) the work was completed in 100 fascicules. Unfortunately the manuscripts were scattered and spoiled in the course of a mutiny that overran the Liang capital. Parts of them were later collected again and put down in 60 fascicules. Then the śāstra began to spread southward into the territory of the earlier Sung dynasty. This account is made according to Tao-shan's Preface to the *Abhidharma-vibhāṣā*. But according to the *Collection of the Records of Translation of the Tripiṭaka*, fasc. 2, the translation was commenced in the 4th moon of the Ting-ch'ou year (丁丑年, 437 A.C.), and was completed in the 7th moon of the Chi-mao year, (己卯年, 439 A.C.). All later recorders in general accept these dates. This is the 60-fascicules text now extant. The contents, however, consist of only (1) the *Grantha on Miscellaneous Categories*, (2) the *Grantha on the Anuśaya* and (3) the *Grantha on the Jñānas*; they simply correspond respectively to the first three Granthas (i.e., the Granthas on the Miscellaneous Categories, the Bonds and the Jñānas) of the T'ang version (fascicules i–iii). The translation itself reads more concise and fluent than the T'ang version, but is not so accurate as that one, with which it agrees in the main, with occasional differences in expression and arrangement.

The accomplishment of the Chinese translation of the *Mahāvibhāṣā* in its complete form of 200 fascicules has to be attributed to Hsüan-tsang, whose work stands to-day as the fullest and most accurate version of this śāstra in Chinese. The Sanskrit text used here was brought back by Hsüan-tsang himself from India. Following the completion of the translations of the *Abhidharma-samayapradīpikā* and the *Abhidharma-nyāyānusāra*, both belonging to the Vibhāṣā system, and of the *Abhidharma-kośa*, a work in close connexion with this śāstra, during the Yung-hui period (永徽, 650–655 A.C.), Hsüan-tsang commenced the translation of *Mahāvibhāṣā* on the 27th day of the seventh moon of the 1st year of the Hsien-ch'ing (顯慶) period (656 A.C.) at the Great Tz'u-ên monastery (大慈恩寺) of Chang-an. The śramaṇas Chia-shang (嘉尚), Hai-tsang (海藏), Shên-fang (神昉) and Ta-ch'êng-kuang (大乘光) wrote down the dictations; Shên-ch'a (神察) and Pien-t'ung (辯通) put them down in written records; Hsi-hsüan (栖玄), Ching-mai (靖邁), Hui-li (慧立), and Hsüan-tsê (玄則) composed the treatises; Ming-chu (明珠), Hui-kuei (惠貴), Fa-hsiang (法祥), Hui-ching (慧景), Shên-t'ai (神泰), P'u-hsien (普賢) and Shan-lo (善樂) ascertained the meanings; and I-pao (義褒) and Hsüan-ying (玄應) did the orthographic work. On the 3rd day of the 7th moon of the 4th year of the Hsien-ch'ing period (659 A.C.), the translation was completed at the Hsi-ming monastery (西明寺). The whole work of 200 fascicules, divided into eight Granthas (sections or parts) each of which is sub-divided into a number of Vargas (chapters), presents a comprehensive and detailed commentary on the *Jñānaprasthāna* with its eight sections and forty-three chapters; and, in addition, by comparing various theories and expounding the compilers' own opinions, it forms, as it were, an ocean of the doctrines of the Sarvāstivāda school. Of this stupendous śāstra, Hsüan-tsang's translation remains to-day the sole well-preserved version.

The original Sanskrit text of this śāstra in India seems to have been lost shortly after the production of its Chinese translation. Even in Tibet, which is very near to Kaśmīra, no Tibetan version has ever been produced. In 1944 A.C., śramaṇa Fa-tsun (法尊) began to translate it into Tibetan from the Chinese version of Hsüan-tsang. The work was completed in 1948, and is now awaiting publication.

The contents of this śāstra, its divisions and sub-divisions of Granthas and Vargas, are arranged in accordance with the *Jñānaprasthāna*, as is stated in the Prologue: " Separate treatises are composed in the form of Vargas, which are again grouped under distinct Granthas. The different conceptions concerning various predicaments are collected under the *Grantha on Miscellaneous Categories*; those concerning the problems of the Bonds are incorporated in the *Grantha on the Bonds*; and similarly those concerning the problems of the Jñānas, the Karmas, the Mahābhūtas, the Indriyas, the Samādhis and the Dṛṣṭis are collected and incorporated in respective Granthas." The main design consists of a series of exhaustive discussions on the problems classified in the above eight Granthas, according to the principle of refuting the opinions of other schools and upholding the doctrines of one's own school. The logical sequence of the eight Granthas begins with the *Grantha on Miscellaneous Categories* and it is defined in the 2nd fascicule of this śāstra as follows:

> " Whereby can one's cognitions of the miscellaneous phenomena be freed from impurity, obscurity, &c.? The answer is: By breaking through the Bonds. Hence follows the 2nd Grantha, the *Grantha on the Bonds*. Whereby can one realize the breaking through of the Bonds? The answer is: By Jñānas. Hence the 3rd Grantha, the *Grantha on Jñānas*. Who is capable of achieving the Jñānas requisite for breaking through the Bonds? The answer is: The Pudgala that is free from Karmic hindrances. Hence the 4th Grantha, the *Grantha on Karmas* (actions). Wherefrom do the Karmas chiefly arise? The answer is: From the Four Mahābhūtas (elements). Hence the 5th Grantha, the *Grantha on the Four Mahābhūtas*. Of all the innumerous compositions of the Mahābhūtas, what ranks the highest? The answer is: The Indriyas (organs). Hence the 6th Grantha, the *Grantha on the Indriyas*. By what power can the Indriyas be purified? The answer is: By the power of Samādhi. Hence the 7th Grantha, the *Grantha on Samādhis*. As there have been people who, having achieved the Samādhi, yet are led into various evil views and destinations by erroneous aspirations, therefore a final Grantha, the 8th Grantha, is devoted to the discussion on Dṛṣtis (views) with a purpose to bring about the readier extinction of the Vijñānas. "

The following is a list of the topics of the eight Granthas and their sub-divisions of Vargas, with numerals in brackets denoting the numbering of the fascicules they cover:

I. The *Grantha on Miscellaneous Categories* (1–45)

1. Varga on the Laukīkāgra-dharma (the highest of the mundane dharmas) (1–9). 2. Varga on Jñānas (9–23). 3. Varga on Pudgalas (23–29). 4. Varga on Affection and Reverence (29–34). 5. Varga on Shamelessness and Non-bashfulness (34–38). 6. Varga on Phenomena (38–39). 7. Varga on the Meaningless Practices (39–42). 8. Varga on the Cetanā (thinking) (42–45).

II. The *Grantha on the Bonds* (46–92)

1. Varga on Bad Factors (46–55). 2. Varga on Ekāvacavaka (treating the dharmas in succession) (56–63). 3. Varga on Sentient Beings (63–70). 4. Varga on the Ten Methods (71–92).

III. The *Grantha on Jñānas* (93–111)

1. Varga on the Branches of Study (93–97). 2. Varga on the Five Points (97–99). 3. Varga on the Paracittajñāna (intuitive knowledge of others' thoughts) (99–105). 4. Varga on the Cultivation of Jñānas (105–108). 5. Varga on the Seven Saints (109–111).

IV. The *Grantha on Karmas* (112–126)

1. Varga on Evil Actions (112–116). 2. Varga on Evil Speeches (116–118). 3. Varga on the Crime of Life-taking (118–121). 4. Varga on the Manifested and Unmanifested Actions (122–124). 5. Varga on One's Own Actions (124–126).

V. The *Grantha on the Mahābhūtas* (127–141)

1. Varga on the Creative Activities of the Mahābhūtas (127–131). 2. Varga on the Pratyayas (conditioning causes) (131–134). 3. Varga on the Realisations of Correct Views (134–137). 4. Varga on Impressions (137–141).

VI. The *Grantha on Indriyas* (142–156)

1. Varga on Indriyas (142–146). 2. Varga on Bhava (existence) (147–148). 3. Varga on Sparśa (touch) (149–150). 4. Varga on the Universal Mind (151–155). 5. Varga on the One Mind (155–156). 6. Varga on the Fish (156). 7. Varga on Hetupratyaya (cause) (156).

VII. The *Grantha on Samādhis* (157–186)

1. Varga on Prāpti (acquisition) (157–162). 2. Varga on Pratyaya (secondary cause) (162–165). 3. Varga on Saṅgraha (inclusion) (166–173). 4. Varga on Anāgāmī (never-returning) (174–183). 5. Varga on Ekāvacavaka (treating the dharmas in succession) (183–186).

VIII. The *Grantha on Dṛṣṭis* (187–200)

1. Varga on Smṛtyupasthāna (dwellings of remembrance) (187–192). 2. Varga on the Three Kinds of Bhava (existence) (192–195). 3. Varga on Sañjñā (ideas) (195–196). 4. Varga on Jñāna (wisdom) (196–197). 5. Varga on Dṛṣṭis (views) (198–200).

Herein is presented an all-including, point by point exposition of the *Jñānaprasthāna*, the basic canon of the Sarvāstivāda (with the sole exception of the Varga of Gāthās which needs no explanation), not merely a literal paraphrase of the text, but an all-embracing, exhaustive encyclopaedia of the Sarvāstivāda doctrines aggregated around the axis of the *Jñānaprasthāna*. Besides the orthodox views of the Sarvāstivādins which are promulgated with full energy, vast numbers of divergent theories are also taken into consideration at the same time, with a view to the refutation of falsehood as well as the revelation of the truth, which is in fact the motive of compiling this śāstra. For instance, very often a discourse in each section opens with such an introduction: "Question: What is the purpose of this treatise? Answer: To refute the divergent sects in order to reveal the right doctrine." And then the discussion is continued. The "divergent sects" to be rebutted here indicate chiefly the heretic doctrines, e.g., those of the Sāṅkhyas, Vaiśeṣikas, the Śabdavidyā-writers (the grammarians), the believers of the Vedas, the Lōkāyatas, and the Nirgrantha school (the Jainists), &c. Certain schools within the Buddhist community, such as the followers of Dharmagupta, the Mahīśāsaka, the Kāśyapīya, the Vatsīputrīya, the Mahāsaṅghika, the Vibhajyavāda, the Sautrāntika, &c., are also subject to confutation. Even writers of the Sarvāstivāda school itself who held deviating opinions, such as the so-called Western Teachers, the Gandhāra Teachers, and even the so-called Old Abhidhamma Philosophers, the Old Foreign Teachers and the Old Kaśmīrīs are not spared criticism, because the Sarvāstivāda realistic school wanted to establish the pure Sarvāstivāda system as was formulated by the followers of Kātyāyanīputra in Kaśmīra, the so-called Abhidhamma philosophers and the Kaśmīrīs, to promote the doctrines of the *Jñānaprasthāna*.

In discussing each topic in the *Jñānaprasthāna*, often a general survey is first made of the various existing theories as concern the matter, and then a decisive, righteous judgement is made on them. As a rule, those which accord with the truth are recommended objectively without any criticism of the compilers; while those which do not wholly or partly accord with the truth are invariably brought to criticism, which usually begins with some such phrases: "It is so said", "The truth is that", "It should be put thus", "Our criticism runs thus", "It should be criticised in this way", &c., thus introducing the right view. The process of discussion also varies, and sometimes involves debates. Unanimous agreement is requisite for an opinion to be accepted as truth. Even the opinions of the so-called Four Great Vaibhāṣikas, i.e., Vasumitra, Dharmatrāta, Buddhadeva and Ghoṣa, are not exempted from refutation (vide fascs. 16, 34, 74, 127, &c.), but are sometimes even crushed with such remarks as, "This treatise is composed for the purpose of doing away with such theories" (vide fasc. 154). That this śāstra was referred to by the ancients as "the authoritative judgement of the masters" illustrates the fact that it was compiled by the Sarvāstivāda scholars of that time democratically.

As for the materials used in this śāstra, besides making extensive references to various commentaries on the *Jñānaprasthāna* written by scholars after Kātyāyanīputra, this śāstra further incorporates the doctrines of the *Prakaraṇapāda*, the *Prajñapti*, the *Dhātukāya*, the *Vijñānakāya*, the

Dharmaskandha and the *Saṅgītiparyāya*, in order to amend the deficiencies found in the *Jñānaprasthāna* and thus render the system more satisfactory. "One body supported by six legs", as later ages put it, is an adequate metaphorical description of the compilation. It may be said to have encompassed the whole range of Sarvāstivāda philosophy, expressed through discussions on many problems, some of which have not been touched upon in the *Jñānaprasthāna* itself. The comprehensiveness of its contents, the magnitude of its organisation, the preciseness of its definitions, and the overwhelming wealth of its materials—all suffice, in quantity as well as in quality, to make it a wonder to scholars of succeeding ages and win for it general recognition as a master-work of the Sarvāstivāda school, a school that was Indian Buddhism *par excellence* in its sectarian age.

Since its Chinese version of the T'ang dynasty was produced, consecutive studies have been made of this śāstra by Buddhist scholars of China, Korea and Japan. According to the 諸宗教藏總錄 (*A Complete Catalogue of the Canonic Pitakas of Various Schools*) compiled by I-t'ien (義天) of Korea, there existed at his time a number of commentaries and records on this śāstra, e.g., Hsüan-tse's (玄則) 大毘婆沙論鈔 (*Notes on the Mahāvibhāṣā*) in 9 fascicules, Chi-t'ai's (極大) 鈔 (*Notes*) in 10 fascicules, Pen-i's (本義) 鈔 (*Notes*) in 11 fascicules, &c. Among the Japanese works on this śāstra now extant are Yūdo's (融道) 大毘婆沙論條箇 (*A list on Mahāvibhāṣā*) in 2 fascicules (or 1 fascicule), Renjio's (連常) 通覽記 (*Jottings in Reading Mahāvibhāṣā*) in 4 fascicules, &c.

ABHIDHARMĀMṚTA-(RASA-)ŚĀSTRA, 阿毗達磨甘露味論 *A-p'i-t'an-kan-lu-wei-lun*, Sanskrit restoration of the title of a Chinese translation of a work by Ghoṣa of Tukhāra. Although the name of the translator has not been recorded, the text has been registered as translated under the Wêi dynasty, A.C. 220–265 (Nanjio, 1278). It consists of 16 chapters in 2 fascicules, running into 55 pages. The 16 chapters deal with the following: (1) Dāna and śīla; (2) Forms of birth; (3) Beings that live on food; (4) Karmans; (5) Skandhas; (6) Saṃskāras; (7) Causes; (8) Pure indriyas; (9) Passions (*saṃyojana* and *anuśaya*); (10) Anāśravas; (11) Knowledge; (12) Dhyānas; (13) Miscellaneous meditations; (14) Thirty-seven stages of the holy; (15) Four āryasatyas or Noble Truths; and (16) Miscellaneous.

This work is nowhere indicated as belonging to the Sarvāstivādins, except that the entry in the catalogues (Tib.-Chin. and Nanjio) is made among the Sarvāstivādins' books. Wassilief gives this work in the place of the *Prajñaptipāda* (one of the six pādas) without stating his authority or the reason for which he assumes the identity of the two names. All that Takakusu says is that from its contents this work may well belong to the school (*JPTS*. 1904–5, pp. 139–40).

According to L. de la Vallée Poussin, this treatise though small is truly ambrosial (-*amṛta*-) and very readable in spite of the antiquity of the date of translation. It is very complete, yet brief; though at times detailed accounts of many things are found (*L'Abhidharmakośa de Vasubandhu*, Introd. p. xlvi).

T. R.

ABHIDHARMA-NYĀYĀNUSĀRA, a treatise of the Sarvāstivāda school, written in the latter half of the 4th century A.C. The author of this work was Saṅghabhadra, a contemporary of Vasubandhu. Chronologically this treatise follows the *Abhidharmakośa-śāstra* of Vasubandhu. In this book Saṅghabhadra refutes the assertions of the *Abhidharmakośa-śāstra*. It is an important reference book for the study of the Sarvāstivāda and Sautrāntika doctrines.

ABHIDHARMA-PAÑCA-DHARMA-CARITA- (or CARYA-) SŪTRA, 阿毗曇五法行經 *A-p'i-t'an-wu-fa-hsing-ching*, restored Sanskrit title of a Chinese translation by Ân-Shi-kâo (安世高, A. C. 148–170) of a work, the author of which remains unknown. It is a compendium of the Sarvāstivāda tenets. This work is mentioned as a Hīnayāna sūtra in Ch-tsin. It is not found in Tibetan (Nanjio, No. 1346 and Beal, *Tripiṭaka Catalogue*, p. 88). See PAÑCAVASTU-VIBHĀṢĀ-ŚĀSTRA.

ABHIDHARMA-PIṬAKA. See ABHIDHAMMA.

ABHIDHARMA-PRAKARAṆA-PĀDA-ŚĀSTRA, restored Sanskrit form of the *Chung-shih-fen-a-p'i-t'an-lun* (衆事分阿毗曇論 Nanjio, No. 1292) as well as of the *A-p'i-ta-mo-pin-lei-tsu-lun* (阿毗達磨品類足論, ibid. No. 1277) which are both Chinese translations of an important but lost Sarvāstivāda Abhidharma text called the *Prakaraṇapāda* (q.v.).

ABHIDHARMA-PRAKARAṆA-ŚĀSANA-ŚĀSTRA, the name given in the course of restoration by the Tibetan–Chinese authorities to Saṅghabhadra's *Abhidharma-samaya-pradīpikā-śāstra* (q.v.).

ABHIDHARMA-PRAKĀŚA-SĀDHANA-ŚĀSTRA is Julien's restoration into Sanskrit of the title *A-p'i-ta-mo-ming-ching-lun* of a work which is mentioned by Hsüan-tsang as having been composed by Īśvara, master of śāstras, at a certain saṅghārāma. Beal, however, says that this was perhaps

the *Saṃyukta-abhidharma-hṛdaya-śāstra*, which Īśvara is said to have translated in 426 A.C. (*Records of the Western World*, p. 112. n. 102).

ABHIDHARMA-SAMAYA-PRADĪPIKĀ-ŚĀSTRA *A-p'i-ta-mo-tsang-hsien-tsung-lun* 阿毗達磨(藏)顯宗論 (Nanjio, No. 1266), Sanskrit restoration of the title of a Chinese translation by Hsüan-tsang of a work by Saṅghabhadra. He (Paramārtha tells us) was an opponent of Vasubandhu, and was also the compiler of two śāstras in Ayodhyā, one entitled the 'Illustration of the Samaya' containing 10,000 ślokas, which merely explain the doctrines of the *Vibhāṣā*, on account of which the book is also known as *Abhidharma-kośa-śāstra-kārikā-vibhāṣā*, and the other bearing the name 'Conformity to the Truth', *Nyāyānusāra*, in 120,000 ślokas. As Takakusu has observed, Nanjio, who gives a somewhat different interpretation of the above title, has done so on the authority of the Tib.-Chin. restoration which reads: 阿毗達囉痲毗囉迦囉痲沙薩拏沙悉特羅 (*Abhidharma-prakaraṇa-śāsana-śāstra*). This interpretation,.however, has to be rejected in the light of Paramārtha's reference to this work as 'Illustration of the Samaya' (光三摩耶論 Kwang-san-mo-yeh-lun).

This work consists of 9 chapters in 40 fascicules, running into 749 pages, and is only an abstract of the author's own *Nyāyānusāra* (q.v.), with the addition, however, of an introductory chapter. It agrees with the Tibetan version. As the author himself tells us in his introduction, this is a compendium of his earlier work, the *Nyāyānusāra*, which is too elaborate and abstruse for general students. The shorter work is a simple exposition of the Vibhāṣā tenets, while the larger is devoted more to a detailed refutation of the tenets of other teachers. Vasubandhu's *Kośa-kārikā* itself, being a summary of the Vaibhāṣika doctrines, was not objectionable to any follower of that system, the only objection being directed to the prose exposition of the *Kośa*, in which some doctrines of the Sautrāntikas are found incorporated. This being the case, Saṅghabhadra cites freely the kārikās of his opponent, and explains them according to the orthodox views of his school. Among the authorities quoted there are the Kāśmīra-vaibhāṣikas, Kāśmīras, Vinaya-vaibhāṣikas, Yogācāryas, the *Abhidharmakośa*, *Dharmaskandha*, *Prajñaptipāda* and the larger text *Nyāyānusāra* itself.

At the end of each of the chapters 11–20 and 31–40 it is stated that this text belongs to the Sarvāstivāda school (Takakusu, *JPTS*. 1904–5, pp. 134–139).

The Tibetan translation of this work, the 'Chos mṅon-paḥi mdsod-kyi bstan-bcod-kyi tshig-leḥur-byas-paḥi rnam-par bśad-pa' by Ḥdus-bzan, appears in the Mdo-Ḥgrel (sūtra) section of the Tibetan Tengyur (Cordier, III, p. 394; TM. No. 4091; A. C. Banerjee, *Sarvāstivāda Literature*, pp. 72 f.).

T. R.

ABHIDHARMASAMUCCAYA, one of the two *śāstras* composed by Asaṅga to summarise in epitomic form the essentials of the *Abhidharma Sūtra*. It is a discourse on the characteristics of dharmas (*dharmalakṣaṇa*) which are common to all three vehicles (the other *śāstra* being the *Mahāyāna-saṅgraha* which is a discourse on the characteristics of dharmas distinctive of Mahāyāna). Works of pure Abhidharma are not rare in the Śrāvakayāna canon, but among the Mahāyāna works this is the only work specified in this field. Moreover, to the Mahāyānist an ideal Abhidharma should be one complete in four phases: the responding dharma (the presentation of the noble path leading towards the attainment of Nirvāna), the repeated dharma (the enumeration of the particular as well as the common characteristics of dharmas), the surpassing dharma (the argumentation to suppress opponent doctrines), and the comprehensible dharma (the interpretation of the meanings of the text). (See *Chapter on Dharmaparyeṣṭi* in the *Mahāyāna-sūtrālaṅkāra*: E. Obermiller, trsl. *The History of Buddhism by Bu-ston*, Part I, p. 37.) The *Abhidharmasamuccaya* is just such a work as accords with these criteria.

The whole work comprises about 1,500 ślokas and is divided into five parts. Part I, *The Compendium of Characteristics* (*Lakṣaṇasamuccaya*), forms a discourse on the basic knowledge of the characteristics of dharmas, and hence it is also entitled the Fundamental Sections (*Mūlavastu*). The contents fall into four sections: the section explaining the three things, viz., the *skandha*, the *āyatana* and the *dhātu*, the section explaining their collection (*saṅgraha*), the section explaining their union (*samprayoga*), and the section explaining their acquisition (*samanvāgama*). The first section contains a minute description of the nature of the *skandhas* and the rest under nine topics: (1) the kinds into which each of these *dharmas* is divided; (2) the reason why only these divisions are established; (3) the reason why the *dharmas* of *skandhas* are also called the grasped *skandhas*; (4) the characteristic features of these *dharmas*; (5) the reason of establishing these *dharmas*; (6) the reason of arranging them in such order; (7) the meaning of the names given to these *dharmas*; (8) the meaning of the similes employed in the text to explain the *skandhas* and the rest; and (9) elaborate discriminations made upon sixty categories, such as the real existence versus the false existence, and so forth. Under the last topic, each item is treated in a triple process of presenting its meaning, its divisions and the aim in making such an examination. The discrimination of categories itself constitutes the innermost part of the repeated *dharmas*, and it is here that this work displays the spirit particular to Mahāyāna. In the Śrāvakayāna Abhidharma works the discrimination is made with a view to the establishment of the existence of *dharmas*; but in this work there runs through every item an unmistakable trend towards renouncing the concept of the *dharmas* as existing realities, thus leading towards the realisation of the voidness of *dharmas*.

The second section (of Pt. I) demonstrates the collection of the *dharmas* as viewed from the angle of the identities in their nature. Here are enumerated eleven kinds of such inter-relations, e.g., the collection of characteristics and the rest. The

thorough comprehension of these relations will enable one to effect rudimentary concentration of the mind in one's contemplation of the external world. The third section demonstrates the union of the *dharmas* as viewed from the angle of the differences in their nature. Here the author presents six terms with which to illustrate these relations, e.g., their inseparability and the rest. The significance of the mutual responsiveness is particularly noticeable in the unity of the various mental *dharma* and therefore the thorough comprehension of these relations will enable one to understand the theory that responses depending upon the mental *dharma* have no reality of their own. The fourth section expounds the meaning of the acquisition of the *dharma* as viewed from the increase or decrease which is likely to occur in the course of their continuous development. Here the author enumerates three kinds of "acquisition", such as those of the "seeds" (*vīja*) and so forth. The thorough comprehension of these relations will enable one to refrain from regarding as decisive the rise and decline of worldly *dharmas*. Unlike the Śrāvakayāna Abhidharma the three dogmas related above (the collection, the union and the acquisition) are here applied chiefly to help the comprehension of the void nature of *dharmas*. These four main sections correspond to the repeated *dharmas* in the Abhidharma.

Part II, *The Ascertainment* (*viniścaya*) *of Truth* (*satya*), expounds the four dogmas in detail. The dogma of suffering deals with the animated world and the physical world; the dogma of accumulation with the evils (*kleśa*) and the karmas enhanced by them; the dogma of destruction with the extinction of the "leaky dharmas" on grounds of their ultimate reality; and the dogma of the noble path with the effectiveness of the five ways, viz., the provisions and others, to stop the accumulation and to bring about the destruction. The next part, Pt. III, *The Ascertainment of the Law* (*dharma*), presents a detailed account of the meaning of the Buddhist teaching on the basis of the twelve divisions of the Canon. Pt. IV, *The Ascertainment of Attainment* (*prāpti*), is a discourse on the various kinds of people (*pudgala*) capable of cultivating and the various clear understandings (*abhisamaya*) to be cultivated. Of the above mentioned, the truths are, the problems that Buddhism aims to solve, the law is the teaching that Buddhism sets forth to solve them, and the attainment is the result of the practice in accordance with the teaching. Put together as a whole, these correspond to the part of the responding dharma of the Abhidharma.

Lastly, Part V, *The Ascertainment of Argumentation* (*sāṅkathya*), explains the six-fold method of expounding the tenets of sūtras, e.g., theoretical exposition, and so forth, and, in connection with the forms of making arguments, provides different means to bring down the opponent in debate. This ascertainment corresponds to the parts of surpassing dharma and comprehensible dharma of the Abhidharma. Having thus fulfilled the four functions of the Abhidharma in its five parts, this work is rightly entitled to be called a fully planned *śāstra*.

Furthermore, there is another point worth noticing. The original text of the *Abhidharma Sūtra*, which was one of the most important basic texts of the Yogācāra school of Mahāyāna Buddhism, has long been lost and, what is worse, it had not been translated into any known language. The *Mahāyānasaṅgraha*, although having taken this sūtra for its basis, furnishes only a partial representation of its contents, as this śāstra was intended to interpret only one chapter of the whole sūtra. It is only in the *Abhidharmasamuccaya* that we find a complete compendium, that is, a comprehensive summary of the positions advanced in the lost sūtra, without leaving out a single point that demands examination and judgment. Herein, from the discourses contained in this śāstra, especially from those positions that are at variance with those presented in the *Yogācārabhūmi*, it is possible for us to draw a graphic outline of the *Abhidharma Sūtra* in its entirety, and herein lies the significance of the work.

The original text of the *Abhidharmasamuccaya* in India is lost (Fragments in Sanskrit were discovered by Rahula Sankrityayana in Tibet in 1934. The manuscript is a production of the early 11th century, comprising about two-fifths of the whole work. These fragments were collated and published in 1950 through the effort of P. Pradhan, who also restored the missing portions by retranslations from the Chinese and Tibetan versions. This is the modern edition of the *Abhidharmasamuccaya of Asaṅga : Visva-Bharati Studies*, 12.)

After Asaṅga composed the *Abhidharmasamuccaya*, a commentary (*bhāṣya*) was written by his disciple Buddhasiṃha, who added numerous supplements to it. Later, Sthiramati incorporated the contents of both the śāstra-text and its commentary into an integral work, the *Abhidharmasamuccaya-vyākhyā*, whose Sanskrit text still exists in Tibet. Besides, there was another commentary by Suddhacandra, but the original text is lost.

The *Abhidharmasamuccaya* was translated into Chinese in the 3rd year of Yung-hui (652 A.C.) of the T'ang dynasty by Hsüan-tsang, entitled the *Ta-ch'êng-a-p'i-ta-mo-chi-lun* (Taishō, No. 1605) in 7 fascicules. The contents are thus arranged according to the opening summary verses (*uddāna*) of the śāstra : the first part alone forms the *Portion of Fundamental Sections*, with its four sections on the three things, the collection, the union and the acquisition, standing for the four respective chapters ; while the other four parts form four chapters and are categorised together as the *Portion of Ascertainments*. As for Sthiramati's *Abhidharmasamuccaya-vyākhyā*, it was already translated six years earlier, i.e., in the 20th year of Chên-kuan (646 A.C.), in the form of a separate work entitled the *Ta-ch'êng-a-p'i-ta-mo-tsa-chi-lun* (Taishō, No. 1606) in 16 fascicules. The contents are substantially identical with those of the translation of the *Abhidharmasamuccaya* with the two portions sub-divided

into chapters. Moreover, as the form of its composition is somewhat similar to that of the *Saṃyuktābhidharmahṛdaya*, which is a separate work developed from the *Abhidharmahṛdaya*, its Chinese version takes the title of *Tsa-chi-lun*, meaning *Saṃyuktābhidharmasamuccaya*. This work afterwards became one of the ten authoritative śāstras of the Yogācāra school in place of the *Abhidharmasamuccaya* itself, and hence was highly esteemed by the followers of Hsüan-tsang, and a large number of commentaries were written by them. The existing ones are K'uei-chi's *Notes on the Tsa-chi-lun* in 10 fascicules and Hsüan-fan's *Commentary* in 10 fascicules; while other works, e.g., Ling-chün's *Commentary* in 16 fascicules, Chih-jen's *Commentary* in 5 fascicules, Shêng-chuang's *Commentary* in 12 fascicules, Yüan-hsiao's *Commentary* in 5 fascicules and T'ai-hsien's *Record of Ancient Traces* in 4 fascicules are now all lost.

Besides these, the *Abhidharmasamuccaya* has a Tibetan version in 5 fascicules, divided into 5 chapters and entitled the *Chos-mṅon-pa kun-las btus-pa*, translated by Jinamitra together with Śīlendrabodhi and Yes-śes sde. A commentary has also been translated into Tibetan, entitled the *Chos-mṅon-pa kun-las btus-paḥi bśad-pa* (5 chapters in 10 fascicules) which was attributed to Jinaputra and translated by the same translators as of the preceding work. The Tibetan version of a work that incorporates texts from both the śāstra and its commentary is entitled the *Chos-mṅon-pa kun-las btus-paḥi rnam-par bśad-pa*, translated by Jinamitra and Ye-śes sde, and the collation work was done by Ñi-ma rgyal-mtshan dpal bzan-po. Jinamitra, the translator of the above-mentioned works, was a disciple of Sthiramati's disciple and thus his transmission of this śāstra had its traceable origin. From him, it was transmitted to the translator Yes-śes sde, Nāgadhvaja, &c., and thus the tradition went on without interruption to Buston, Chos-kyi dpal-ba, and Tsoṅ-kha-pa. To this day it continues to be regarded in the educational system of the Dge-lugs-pa sect as a fundamental text of the Abhidharma, a work of equal authority with the *Abhidharmakośa-bhāṣya*. Many commentatorial works have been written by Tibetan scholars. Of these the best known ones are Bu-ston's *Chos-mṅon-pa kun-las btuṣ-paḥi rnam-bśad, ñi-maḥi ḥod-zer* and Rgyal-tshob's *Rnam-pa bśad legs-par bśad-paḥi chos-mṅon rgya-mtshoḥi sñiṅ-po*.

Lü Ch'eng.

Bibliography: Gokhale, V. V., *Fragments from the Abhidharmasamuccaya of Asaṅga*, *JBRAS*. XXII. Pradhan, P., *Abhidharmasamuccaya of Asaṅga*, *VBS*. 12, Introd. Ou-yang Chien: *Preface to the Abhidharmasamuccaya*, collected in the *Prefaces to the Portion of Śāstras, Important Scriptures of the Tripiṭaka*, Nanking, 1930. *Preface to the Saṁyuktābhidharmasamuccaya*, collected in the *Prefaces to the Śāstras of the Dharmalakṣaṇa School*, Chiang-chin, 1941.

ABHIDHARMASAMUCCAYA-BHĀṢYA and the *Abhidharmasamuccaya-vyākhyā* are the Sanskrit titles of two Tibetan translations of an original Sanskrit commentary on the *Abhidharmasamuccaya* of Asaṅga. As Cordier records it, this commentary was originally composed by Rgyal-baḥi sras (Jinaputra) or Rgyal-poḥi sras (Rājaputra) who was none other than Yaśomitra himself. The *Abhidharmasamuccaya-bhāṣya* was translated into Tibetan by Jinamitra and Śīlendrabodhi of India, and Ye-śes sde (Cordier, III, 384; TM. No. 4053).

A complete manuscript of this commentary was, however, fortunately discovered in Tibet by Rahula Sankrityayana. It is recorded by him as the *Sāṅkathya-viniścaya* from the *Abhidharmasamuccaya-bhāṣya* of Yaśomitra (JBORS. XXI, p. 35). On examinaton of the manuscript Pralhad Pradhan has found that this is a complete commentary on the *Abhidharmasamuccaya* and that only the fifth chapter is called the *Sāṅkathyaviniścaya*.

Further, according to Pradhan (*Abhidharmasamuccaya*, p. 5), the *Mahāyānābhidharma-saṃyukta-saṅgīti-śāstra*, which is a commentary on the *Mahāyānābhidharma-saṅgīti-śāstra* of Asaṅga, is a Chinese translation of the *Abhidharmasamuccaya-bhāṣya*. Nanjio, however, records that this commentary was compiled by Sthiramati and translated into Chinese by Hsüan-tsang in 646 A.C. He also says that this work is wanting in Tibetan. Thus, if the *Mahāyānābhidharma-saṅgīti-śāstra* is a Chinese translation of the *Abhidharmasamuccaya*, we are confronted with two divergent traditions as to the authorship of the original commentary: the one represented by the Tibetan works which attribute this authorship to Yaśomitra, and the other preserved in the Chinese translation which attributes it to Sthiramati.

T. R.

ABHIDHARMASAMUCCAYA-VYĀKHYĀ(-NĀMA) is the title as restored into Sanskrit from a Tibetan translation, the *Chos mṅon-pa kun-las-btus-paḥi rnam-par bśad-pa* (*shes-bya-ba*) of the commentary on Asaṅga's *Abhidharmasamuccaya*. The author of this commentary was Rgyal-baḥi sras (Jinaputra), *alias* Rgyal-poḥi sras (Rājaputra), who was evidently none other than Yaśomitra (Cordier, III, 384; TM. No. 4054). This work was rendered into Tibetan by Jinamitra of India and Ye-śes sde (Jñānasena), under the auspices of Chos skyoṅ-baḥi mi dbaṅ-phyug (Dharmapālanareśvara) at the monastery of Dpal Thar-pa gliṅ. This version was subsequently revised by Ñi-ma rgyal-mtshan dpal bzaṅ-po (Sūryadhvajaśribhadra).

Regarding the authorship of the original commentary and a second translation, see ABHIDHARMASAMUCCAYA-BHĀṢYA.

T. R.

ABHIDHARMA SAṂYUKTA, name of a non-existent text or class of texts in which the *Karmavibhaṅga* had been included by some schools (*BHS*. II, p. 51).

ABHIDHARMA-SAṄGĪTI-PARYĀYA, one of the seven books of the Abhidharma of the Sarvāstivādins. It is a collection of technical terms arranged in numerical order from one to eleven in exactly the same manner as the *Saṅgīti Sūtra* of the *Dīrgha Āgama* (cp. *Dīgha Nikāya*). The definitions and expositions in the *Saṅgīti-paryāya* are more elaborate than those of the *Saṅgīti Suttanta* and what are termed Abhidharma definitions have been adopted in this text. The items contained in the *Saṅgīti Paryāya* are also more in number than those of the *Saṅgīti Sūtra*.

According to Chinese tradition the authorship of this book is attributed to Śāriputra, the *Saṅgīti Sūtra* of the *Dīrgha Āgama* on which this text is based being also attributed to Śāriputra. The Sanskrit and Tibetan traditions, however, attribute it to Mahākausṭhila (Mahā Koṭṭhila).

The *Abhidharma-saṅgīti-paryāya* is extant in Chinese translation only (*A-p'i-ta-mo-chi-i-mên-tsu-lun*: *Nanjio, No. 1276*). The Sanskrit original is lost.

A fragment of this text is said to have been discovered in Bāmiyān (*L'Inde Classique*, II, 362).

L. de Z.

ABHIDHARMA-SĀRA, or the "Essence of the Abhidharma", better known under the title *Abhidharma-hṛdaya-śāstra* was, as the title indicates, a synopsis of the Abhidharma of the Sarvāstivādins based probably on the Gandhāra branch of this school. This work has been preserved to us in three Chinese translations (*L'Inde Classique*, Section 2134; cp. Nanjio, Nos. 1287, 1288, 1294). The Sanskrit recensions on which these versions were based are attributed to Dharmaśrī, Upaśānta, and Dharmatrāta respectively. According to the Chinese sources the first of these authors would have lived in the 3rd century, and Dharmatrāta in the beginning of the 4th century. See ABHIDHARMA-HṚDAYA-ŚĀSTRA.

ABHIDHARMA-ŚĀSTRA, generally called the *Jñānaprasthāna* (q.v.), is the other much later and much shorter translation by Hsüan-tsang of the *Jñānaprasthāna-sūtra* of Kātyāyanīputra. It consists of 20 fascicules in 8 divisions and 44 chapters and runs into 382 pages. This is the principal work upon which the Sarvāstivādins (who thus fall into the Ta-riki-kiô category) base their theories (Nanjio, No. 1275, cp. No. 1273; *JPTS*. p. 82 f.; A. C. Banerjee: *Sarvāstivāda Literature*, p. 55; Y. Sogen: *Systems of Buddhistic Thought*, p. 4).

ABHIDHARMĀṢṬAGRANTHA, 阿毗曇八犍度論 *A-p'i-t'an-pa-chien-tu-lun*, generally known as the *Aṣṭagrantha*, is the restored Sanskrit title of a Chinese translation by the Kāśmīra monk Gautama Saṅghadeva along with Ku-Fo-nien, in A.C. 383, of the *Jñānaprasthāna Sūtra* q.v. of Kātyāyanīputra. Nanjio, who renders the title of this work as "Abhidharmāṣṭakhaṇḍa-śāstra," says that the *Aṣṭagrantha* agrees with the Tibetan. But, according to Banerjee, who states that of the Abhidharma treatises the *Prajñaptiśāstra* only exists in Tibetan, this work does not exist at all in Tibetan. Consisting of 30 fascicules in 8 sections covering 44 chapters, and running into 554 pages, this version is much larger than the later translation of Hsüan-tsang.[1]

ABHIDHARMĀVATĀRA-ŚĀSTRA, restored Sanskrit form of the Chinese Ju-a-p'i-ta-mo-lun (Nanjio No. 1291), which is a translation by Hsüan-tsang of a treatise on Abhidharma ascribed variously to Skandharata (Beal, p. 83), Sugandhara (Nanjio, No. 1291) or Skandhila (*Moc.* p. 1421). The original treatise which is presumed to have been in Sanskrit is now lost.

The Chinese translation consists of eight sections (*padārtha*), five of which combine to form the five aggregates of existence (*pañcaskandha*) while the rest constitute the three unconditioned elements (*tryasaṃskṛtas*). Taken in their proper order these sections are as follows: *rūpa, vedanā, sañjñā, saṃskāra, vijñāna, ākāśa, pratisaṅkhyā-nirodha,* and *apratisaṅkhyā-nirodha*.

Nanjio states that the above work is wanting in Tibetan, but Cordier (III, 398, Nos. 5, 4) mentions two texts contained in the Mdo-Ḥgrel (Sūtra) of the Tibetan Tengyur, the names of which he has restored into Sanskrit as Abhidharmāvatāra-prakaraṇa-nāma and Sārasamuccaya-nāma abhidharmāvatāra-ṭīkā respectively. These names are found in the Tōhoku catalogue as well (Nos. 4097, 4098). The second is only a commentary on the former which, in turn, is perhaps identical in substance with the extant Chinese recension.

H. S. C.

ABHIDARMA-VIBHĀṢĀ-ŚĀSTRA, *A-p'i-t'an-p'i-p'o-sha-lun* 阿毗曇毗婆沙論, is the Sanskrit restoration of the title of a Chinese translation by Buddhavarman (浮(佛)陀跋) and Tao-tai (道泰: A. C. 437–439; Takakusu suggests A.C. 425–427), of a work by Kātyāyanīputra. It consisted originally of 8 books and 44 sections in 100 fascicules, but was lost during the war between the northern Liang and Wei, A.C. 439. The books were collected afterwards, but only 3 books in 16 sections were found and made into 82 fascicules running into 400 pages (Nanjio, No. 1264. cp. Takakusu in *JPTS*, 1904–5, p. 126. Also cp. Nanjio, No. 1263: *Abhidharmamahāvibhāṣā-śāstra*).

ABHIDHARMA-VIJÑĀNA-KĀYA-PĀDA, one of the seven books of the Abhidharma of the Sarvāstivādins. The Chinese, Tibetan and Sanskrit traditions agree in attributing the authorship of this book to Devaśarman who lived in the first century after the Buddha's parinibbāna (Kusharon-ki of Pu-kuang I). According to Hsüan-tsang this book is said to have been written by Devaśarman in a temple in Ayodhyā in middle India

1 Nanjio No. 1273; cf. No. 1275; cf. also *JPTS* 1904-5; pp. 82 ff.; 82 n. 2 establishes the title as "grantha"; A. C. Banerjee: *Sarvāstivāda literature*, pp. 54 f.

(Tā-lhān-si-yu-chi of Hsüan-tsang, V). It is, therefore, presumed that it was produced before the Sarvāstivāda school spread to north-west India.

· The Sanskrit original of this book is lost. It is however preserved in Chinese translation in the Chinese Tripiṭaka, as *A-p'i-tan-mo-shih-shen-tsu-lun*. The Chinese text runs into sixteen volumes (*Moc*. I, 53).

ĀBHIDHARMIKA, sometimes written as *abhidharmika*. This word stemmed from Abhidharma and means literally "one who is well versed in Abhidharma literature and who has an analytic understanding of the various problems of the Abhidharma." In Chinese translation (i.e., lun-shih 論師 lit., specialist in Abhidharma) its sense becomes wider, and we can divide it into three groups: (1) one who devotes himself to the study of Abhidharma, and is well versed in Abhidharma literature, (2) one who wrote on Abhidharma and developed Buddhism—a later meaning, (3) a devotee of Mahāyāna Buddhism. The term is commonly applied to the schools or teachers of Abhidharma literature, included in nos. (1) and (2).

Besides these three meanings the word was sometimes applied to Śākyamuni himself. Thus in the (new) Chinese translation of *Mahā-vibhāṣā-śāstra*[1], it is explained as follows: "In ancient times Ābhidhārmikas always used to improve their studies according to the way of Abhidharma. When they have improved, they would at once abandon their former studies. Now Śākyamuni became a supreme Ābhidhārmika; so we have no better way of Abhidharma than that given by him. Therefore we can contentedly follow his way of Abhidharma."

T. R. V. Murti has defined it as follows. "The earlier, realistic and pluralistic Phase comprising the Hīnayāna schools—Theravāda and Vaibhāṣika (Sarvāstivāda). This can be called the Ābhidharmika system. The Sautrāntika school is a partial modification of this dogmatic realism." (*Central Philosophy of Buddhism*, p. 4.)

But this definition should also include various other traditional and conservative schools such as Dharmottarīya, Bhadrayānīya, Sammitīya, and so on. The following quotation from the "Vinaya of Sarvāstivāda School"[2] shows the word in a broader sense. "Lun-shih (=Ābhidhārmikas) do their research always in consultation with Ābhidhārmikas and not with others. In the case of Fa-tzu[3], too, it is the same."

Fa-hsien wrote in his itinerary (kao-sêng fa-hsien-chuang 高僧法顯傳) about the practice of Ābhidhārmikas, (chap. on Mathura), that Ābhidhārmikas make offerings before the shrine of Abhidharma stūpa. In this case Ābhidhārmika is not used as a name of some special school but as a general term for the speculators in Abhidharma.

1 Ta-pi-po-she-lun (大毘婆沙論) trsl. by Hsüan-tsang, chap. 105.

2 Yo-pu-pi-na-ya (有部毘奈耶), chap. 13.

3 法子 lit., son of dharma, dharmika (?).

In the most narrow sense this word was understood as another name of the Sarvāstivāda school. In the old Chinese translation of the *Mahāvibhāṣā-śāstra* (Taisho, vol. 28, p. 87 c), Ābhidhārmika was mentioned as one of the 19 schools enumerated in that text. It is represented in Chinese characters as 阿毗曇人 (A-pi-tan-jen). In the new translation of this text, it is represented as 阿毗達磨者 (A-pi-ta-mê-chê).[4]

These bhikṣus of various Theravāda schools in the second or third century of India, who are generally called Ābhidhārmikas, engaged in producing many voluminous Abhidharma works, because of settled conditions, receipt of contributions and the protection of the rich as well as those in power. Liberal contributions in cash and donations of land (farm, forest or sometimes a whole village) were made to their temples. These temples were exempted from all kinds of taxation, and officials of the rājā were prohibited from entering these estates. The contributions in cash were invested in the co-operative association as a provident fund of their temples, and the interest which these yielded was applied for the general expenditure of the temples. Moreover, at that time there appeared some rich bhikṣus who had a number of estates as their own possession[5].

Several voluminous Abhidharma works belonged to the Sarvāstivāda school and other schools, e.g., *Abhidharma-mahāvibhāṣā-śāstra*. These were produced by these bhikṣus who were supported by a stable economy.

A noteworthy point regarding the Ābhidhārmikas which has not hitherto received our attention is that they are consistently referred to in the various works of Mahāyāna as general speculators and not as specialists of Abhidharma. In other words, we have Ābhidhārmikas both in Hīnayāna and Mahāyāna. In Chinese tradition, we have notable examples that this word was used in both schools. In traditional and conservative Buddhism the four scholars Dharmatrāta (Fa-chiu 法救 4th cent.), Ghoṣaka (Miao-yin 妙音), Vasumitra (Shih-you 世友), and Buddhadeva (Chiao-tien 覺天), were called "the four great Ābhidhārmikas in the Vaibhāṣika school."

In Mahāyāna, too, we have similar examples. Aśvaghoṣa (Ma-ming 馬鳴), Nāgārjuna (Lung-shu 龍樹), Āryadeva (Ti-po 提婆) and Kumāralāta (Tung-shou 童受), for instance, are called the four great Ābhidhārmikas in Mahāyāna Buddhism. Following are the ten great Ābhidhārmikas in the Vijñānavāda school, who wrote the authoritative commentaries on Vasubandhu's *Triṃśikāvijñāpti*: Guṇamati (Tê-hui 德慧, *c*. 420-500 A.C.), Śthiramati (An-hui 安慧, c. 470-500 A.C.), Nanda (Nan-to 難陀 c. 450-530 A.C.), Dharmapāla (Hu-fa 護法, c. 530-561 A.C.), Bandhuśri (Chin-sheng 親勝), Citrabhāna (Huo-pien 火辨), Śuddhacandra (Cheng-yueh 淨月), Viśeṣamitra

4 Taisho, vol. 27, p. 50 b. Also see B. Watanabe: Studies on the Abhidharma Literature of Sarvāstivāda Buddhism (in Japanese), p. 239.

5 H. Nakamura: Economical Ethics in Early Buddhism, in Japanese, ("Shi-so", Nov.-Dec. 1953). Also E. Tomomatsu: Studies on the Economical Thoughts in Buddhism (in Japanese).

(Shêng-yu 勝友), Jinaputra (Shêng-tzu 勝子), and Jñānacandra (Chih-yüeh 智月).

As the above quotations show us, the meanings of Ābhidhārmika are various. Its origin was in the age of Śākyamuni; later it came down to the period of Mahāyāna Buddhism. Here we can confidently conclude that Ābhidhārmika is a general name of Buddhist speculators engaged in research to elucidate the teaching of Buddhism. Their position in the history of Indian philosophy resembles that of the Scholastics in the history of European philosophy. And as in the case of the Scholastics they were absorbed in the complicated speculations, which gave rise to a new movement in Mahāyāna. See also ĀBHIDHAMMIKA, ABHIDHAMMA.

S. K.

ABHIDHYĀ, covetousness, one of the three *akusala karmapatha* of the mind (*Mhvu.* I, 107; *Lal.* 31). See ABHIJJHĀ.

ABHIJĀNA SUTTA, a discourse said to have been preached by the Buddha at Sāvatthi (*S.* xxii, 24). It declares that one cannot (*abhabbo*) put an end to suffering without knowing, comprehending, being detached from and abandoning each of the five aggregates of existence: namely, material form (*rūpa*), feelings (*vedanā*), percepts (*saññā*), mental factors (*saṅkhārā*) and consciousness (*viññāṇa*). But if one knows them, comprehends them, is detached from them and abandons them, one can (*bhabbo*) get rid of suffering.

By the terms 'knowing' and 'comprehending' what is meant is that each of the aggregates must be thoroughly examined or searched in order that this may expose its utter insubstantiality and thus awaken one to the fact that each of them is impermanent (*anicca*), sorrow-fraught (*dukkha*), and soulless (*anatta*). Having thus orientated one's values, the next thing to do would be to foster a sense of detachment that would gradually lead to the complete abandonment of each of the aggregates.

According to the commentary (*SA.* II, 264) the substance of this sutta concerns the three knowledges (*tisso pariññā*) which consist of the knowledge that the subject has been known or understood (*ñāta-pariññā*), the knowledge that it has been rightly adjudged (*tīraṇa-pariññā*), and the knowledge that it has been abandoned (*pahāna-pariññā*). The commentary also observes that the first of these is denoted by the term 'knowing' (*abhijānaṃ*), the second by the term comprehending (*parijānaṃ*), while the third is denoted by the two expressions 'being detached from' (*virājayaṃ*) and 'abandoning' (*pajahaṃ*).

In form, this sutta may be compared with that of the two *Parijāna Suttas* also of the *Saṃyutta Nikāya* (xxxv, 26, 27) which mention an *all* (*sabbaṃ*) that one must likewise know, comprehend, be detached from and abandon, in order to make an end of suffering. This "all" is said to include all the six sense organs, their corresponding objects, their points of contact, the resulting consciousness depending on the particular sense impression created and things cognisable by each such consciousness.

H. S. C.

ABHIJAPPANA or the "casting of spells" was classified by the Buddha as a low art (*tiracchāna-vijjā*) and as such it was recognised as one of the wrong means of livelihood (*D.* I, ii, 69).

In the *Brahmajāla Sutta* of the *Dīgha Nikāya* the Buddha mentions two specific forms of casting spells when speaking of the minor details of mere morality, of which the unconverted man might speak when praising the Tathāgata. They are *hatthābhijappana* and *kaṇṇajappana*, both of which are described in the commentary in the following manner (*DA.* I, 97): *hatthābhijappana* is the casting of a spell for the purpose of twisting the hands. When this spell is muttered within a range of seven feet from a person, he twists and thrusts out his hands. *Kaṇṇajappana* is a magic incantation to prevent sounds from being heard. When a person, having cast this spell, speaks as it suits himself in a court of law, his opponent, being unable to hear what is said, cannot make an adequate reply.

The Buddha as well as his disciples refrain from such low arts.

T. R.

ABHIJĀTI, a theory held by certain contemporaries of the Buddha of species of beings or classes of mankind, a counter-theory to which has also been formulated by the Buddhists under the same designation. See CHAḶĀBHIJĀTIYA SUTTA.

ABHIJIT (1), meaning the "Victorious One", is the name of a former Tathāgata, occurring in the *Bahubuddha Sūtra* (Sūtra of the Many Buddhas) of the *Mahāvastu* (III, 236. 13; also 14, where the text reads "Abhiji"). It was said by the Sage of the Śākyans to Ānanda that the Tathāgata Sāla proclaimed (*vyākārṣit*) the Tathāgata Abhijit who, in his turn, proclaimed the Tathāgata Jinavaruttama.

ABHIJIT (2), a monk, a former incarnation of Śākyamuni. As in the case of the monk Abhiya, it was prophesied by the Exalted Sarvābhibhū that he would in the future, in a hundred thousand world ages (kalpas), become a Tathāgata, an Arhan, a perfect Buddha, called Śākyamuni (*Mhvu.* I, 2. 3-5).

ABHIJIT (3), name of one of the seven constellations in the western quarter, which were invoked by the Buddha to guard the merchants Trapuṣa and Bhallika, should they happen to go on any business to the western quarter (*Mhvu.* III, 308.3: *ubhe āsāḍhe bhijicca*; Jones trsl. III, 295: "Bhiji").

T. R.

ABHIJJHĀ, covetousness, mentioned as the last item in a long list of 100 synonyms of lust (*lobha*: *Dhs.* § 1059), the root of all evil (*akusalamūla*), although many items of this list are more descriptive than synonymous, e.g., that which ensnares (*jālinī*).

that which leads to renewed existence (*bhavanetti*), while other items are more general than specific, e.g., craving (*āsā*), thirst (*taṇhā*), hindrance (*nīvaraṇa*), all of which include many other kinds apart from covetousness.

Abhijjhā is an intensification of burning up (*jhāyati*), consuming, wasting away through longing; although, etymologically, through the Sanskrit form *abhidhyāna*, it is derived from abhi + dhyā, i.e., from *dhyāyati*, 'to search for', 'to hunt after'.

Whenever the term is explained, frequently if not always, identical descriptions are found for *abhijjhā*, covetousness, and *lobha*, greed (e.g., *Dhs.* §§ 389 and 391), when the two terms are identically described as greed (*lobha*), lust (*lubbhana*), lustfulness (*lubbhitatta*), infatuation (*sārāga*), feeling of infatuation (*sārajjanā*), passionate prepossession (*sārajjitatta*), covetousness (*abhijjhā*), the root of evil (*akusalamūla*).

But, although the descriptions are identical, it will be seen that lust (*lobha*) is grouped with two other causes of evil (*akusalahetu*), viz., hate (*dosa*) and obtuseness (*moha*), whereas covetousness (*abhijjhā*) is grouped as a bodily tie (*kāyagantha*) together with ill-will (*vyāpāda*), the contagion of ritualism (*sīlabbata-parāmāsa*) and the inclination to dogmatise (*saccābhinivesa* : *Dhs.* §§ 1059 and 1136). Thus if one is intent on differentiation, one might say that *lobha* is greed considered as a cause from which further evil arises, whereas *abhijjhā* is covetousness considered as an inherited tendency. For, the classifying term: bodily tie (*kāyagantha*) is explained as that which binds to physical existence in repeated rounds of birth, by way of birth and death (*DhsA.* pp. 49, 377).

Covetousness (*abhijjhā*) would appear to be a more advanced state of greed (*lobha*), for we are told that "covetousness means coveting: a process of inclining towards another's property when confronted with it. It has the characteristic mark of thinking, 'Ah! would this were mine!' As offence it is small or great, as in the case of theft. Its two constituent factors are: another's property, and the bending over of oneself. Though greed for an object which is another's property has arisen (*lobhe uppanne*), it does not receive the distinction of being a full course of action so long as one does not bend over it saying, 'Ah, would this were mine!'" (*DhsA.* 101). It is thus the bending over of oneself (*attano pariṇāmana*) which gives to greed (*lobha*) the full grown state of covetousness (*abhijjhā*).

A more obvious parallel could be drawn between the groups *lobha-dosa-moha* and *abhijjhā-vyāpāda-micchādiṭṭhi*, where both sets are analogous with this slight difference, that the *lobha-dosa-moha* combination appears to be more general: greed (*lobha*) as against lust (*abhijjhā*); hate (*dosa*) as against aversion (*vyāpāda*); delusion (*moha*) as against wrong views (*micchādiṭṭhi*). Thus covetousness (*abhijjhā*) is more specified, more intensified, perhaps.

A decisive distinction between greed (*lobha*) and covetousness (*abhijjhā*) is found in the *Sammādiṭṭhi Sutta*, where covetousness is mentioned as 'unskill' (*abhijjhā akusalaṁ*) and greed as the root of 'unskill' (*lobho akusalamūlaṁ* : *M.* I, 47).

In the Nikāyas we find covetousness very frequently mentioned together with distress (*abhijjhādomanassa*), e.g., in the *Kandaraka Sutta* (*M.* I, 340, sutta 51) and the *Gaṇaka Moggallāna Sutta* (*M.* III, 2, sutta 107). In the *Padhāna Sutta* (*A.* II, p. 16, sutta 14), covetousness and distress are shown as results of lack of control of the senses, and an effort to restrain (*saṁvarappadhāna*) is given as the remedy thereto, which elsewhere is called 'the mode of progress that tames' (*damā paṭipadā* : *A.* II, p. 152, sutta 164) the senses which, untamed, will cause coveting and distress, evil and unprofitable states to flow in.

The well-known and oft repeated Sutta on the Foundations of Mindfulness (*Satipaṭṭhāna Sutta* : *D.* II, 290), with its fourfold method of contemplating the body, feelings, consciousness and mental objects, describes such a contemplative monk as ardent, clearly comprehending and mindful, having overcome in this world covetousness and distress (*vineyya loke abhijjhā-domanassaṁ*).

That in this combination with *abhijjhā* we find so persistently a preference of *domanassa* over other types of *dukkha*, is significant, and the specific type of mental conflict as distress (*domanassa*) sheds its peculiar light on *abhijjhā* in preference to *lobha*, the more general, greedy attachment.

This is all the more remarkable, as there are only two mental states which are accompanied by distress (*domanassa-sahagata*), and they are, according to the Abhidhamma view, rooted in or associated with aversion (*paṭigha-sampayutta* : *Dhs.* § 413).

Thus, when covetousness (*abhijjhā*) is mentioned in the suttas side by side with distress (*domanassa*), it would appear as if they in their specific fields cover the same ground, as greed (*lobha*) and hate (*dosa*) respectively do in a more general way.

The absence of covetousness (*vigatābhijjhā*) is the peaceful state of mind required for a monk who, after his round of alms-gathering, has seated himself at the foot of a tree to engage himself in mindfulness (*M.* III, 3). And with this, we seem to arrive at the moral implication of covetousness as an act of coveting, while the philosophic implication as a general root of evil is reserved for greed (*lobha*): "Although others may be coveting, we will not covet" (*pare abhijjhālū bhavissanti, mayaṁ ettha anabhijjhālū bhavissāma* : *M.* I, 42).

Covetousness is mentioned as the first in a series of five which, in addition, includes aversion (*vyāpāda*), sloth and torpor (*thīna-middha*), excitement and worry (*uddhacca-kukkucca*) and perplexity (*vicikicchā*), with the identical formula: "Putting away covetousness for the world, he lives with a heart that hankers not, and purifies his mind of covetousness" (*so abhijjhaṁ loke pahāya vigatābhijjhena cetasā viharati, abhijjhāya cittaṁ parisodheti* : *D.* I, 71 : *Sāmañña-phala Sutta*). "By getting rid of these five hindrances—which defile mind and weaken intuitive wisdom—aloof from pleasures of the senses, aloof from unskilful states of mind, a monk enters on and abides in the first stage of mental absorption . . ." (*M.* I, p.181, *Cūlahatthipadopama Sutta*, No. 27).

5 S.P.C. 97040

This series of five, in which the term covetousness (*abhijjhā*) is frequently replaced by the identical sensual lust (*kāmacchanda* : *M.* I, 60), is collectively referred to as the five hindrances (*pañca nīvaraṇāni*), for they prevent the arising of good thoughts by way of obstructing mental absorption (*jhāna*). The interchangeability of covetousness (*abhijjhā*) and sensual lust (*kāmacchanda*) brings into further relief the specific difference of covetousness (*abhijjhā*) from the more general greed (*lobha*). Thus we find just mentioned as a fetter (*saṃyojana* : *S.* V, 61), but greed as a defilement (*kilesa*) which is more general than a specific obstruction, and which appears as such only in the later canonical books (*Dhs.* § 1548).

As a specific act of immorality we find covetousness mentioned among the ten unskilful ways of acting (*dasa akusalakammapathā*) : three bodily evil actions : killing, stealing, uncontrolled sexual indulgence ; four oral evil actions : lies, slander, harsh speech and gossip ; three mental evil actions : covetousness (*abhijjhā*), aversion (*vyāpāda*) and wrong views (*micchā diṭṭhi*). These ten are very frequently referred to merely as the ten unskilful actions (*dasa akusalāni*), whereas the abstinences therefrom are the ten skilful actions.

What appears to be a mere corruption of tradition occurs in the substitution of *avidyā*, ignorance, for the usual *abhidyā*, covetousness, in its Sanskrit form (*Mhvu.* II, 99, 5-12). In the complete series of ten, ignorance is, of course, already represented by wrong views (*micchā diṭṭhi*), and one may wonder whether the similarity of sound (*abhidhyā-avidyā*) was the cause of the substitution at a time when tradition was still not committed to writing.

The absence of covetousness (*anabhijjhā*) together with good-will (*avyāpāda*), right attention (*sammā-sati*) and right concentration (*sammā-samādhi*) are called collectively the four bases of the Dhamma (*cattāri dhammapadāni* : *D.* III, 229 ; *A.* II, 29), "reckoned as ancient, of long standing, traditional, primeval, pure and unadulterated now as then, neither confounded, nor despised." In this context, *dhamma* should be taken to stand for moral righteousness rather than doctrine, for the factors constituting it are the opposites of the evil roots of greed (*lobha*), hate (*dosa*) and delusion (*moha*).

How covetousness arises from the sight of splendour and wealth is told by the Buddha in the *Brāhmaṇa-dhammika Sutta* (*Sn.* II, 7), when describing the self-controlled lives of the brāhmans of old : But,[1]

> " then corruption came. Bit by bit, they saw
> the monarch's splendour, women richly dight,
> steeds yoked to chariots, gay coverlets,
> stately abodes, and chamber'd palaces,
> girt round with crowded byres, and graced with troops
> of women fair to view ;—vast mundane wealth
> those brahmins saw, and seeing, coveted. "

Of his own experience the Buddha related to Jāṇussoṇi the brāhman, how without covetousness even before his enlightenment he used to dwell in lonely places in forest and jungle " braced with great confidence " (lit. with fallen hair : *palloma*, the opposite of the hair standing up in fear : *M.* I, 17), whereas recluses who take to a life of solitude in the wilds with strong passionate desires and covetousness, call upon themselves but fear and dread.

Covetousness indeed is bred by the evil disposition of the heart, hidden in the pleasures of the senses and the perception thereof, be it here and now, or in some after-life. It hampers progress but can be overcome by concentration of thought, when through awareness it can be prevented from arising (*M.* II, 262 : *Āneñja-sappāya Sutta*).

H. G. A. van Zeyst.

ABHIJÑĀ. Higher or supernormal knowledge through insight or intuition. See ABHIÑÑĀ.

ABHIJÑĀ-JÑĀNĀBHIBHŪ, the name of an earlier Buddha, mentioned in the *Saddharma-puṇḍarīka*. This form of the name, however, is used only in verse (157.11), whereas the prose form reads Mahābhijñājñānābhibhū (156.2 ff.).

ABHIJÑĀKETU, "he who has the fivefold higher knowledge (*abhijñā*) for his banner", a bodhisattva mentioned in a list of names of bodhisattvas (*Gvyū.* 3. 18).

ABHIMĀNA, obviously an intensification of *māna*, (q.v.) pride, which is derived from *māneti*, to honour, to think highly of ; and the prefix *abhi*, out, over, all-round. *Abhimāna*, therefore, is an all-round high opinion of one's self.

Although the *Cullaniddesa* (505) gives ten groups of forms (*vidha*) of pride (*māna*), each group consisting of one kind of pride more than the previous group, bringing the total to 55 kinds (including, however, several repetitions in different groups), yet the term *abhimāna* does not occur there. It would not be difficult, of course, to identify this term with one of those, most of which merely indicate certain degrees of intensity. Moreover, the prefix *abhi* is sometimes taken for the prefix *ati*, as in *abhikkanta* and *atikkanta*.

The term *atimāna* is very frequently used with other compounds of *māna*, *atimāna*, *mānātimāna*, *omāna*, *adhimāna*, *asmimmāna*, *micchāmāna*. Other combinations such as *kodhātimāna*, *vaṇṇātimāna*, *saggātimāna*, *anatimāna*, occur, but discussing these terms would not serve any purpose here, unless the interchange of *abhi-* and *ati-* is firmly established.

The word is found, however, in post-canonical works. Thus the word *abhivadati*, used in the *Pañcattaya Sutta* (*M.* II, 237, 102) when someone *declares* it as his idea that Nibbāna is a mere beneficial or useful mode of progress (*nibbānaṃ sappāyam eva paṭipadam abhivadati*), has been paraphrased in the *Papañcasūdanī* (IV, 27) as " speaks of it with arrogance " (*abhimānena upavadati*). In Buddhist Hybrid Sanskrit the term occurs as an adjective in the *Saddharmapuṇḍarīka* (380. 1), meaning proud, conceited (*abhimānika*),

1 Translated by Lord Chalmers, *HOS.* XXXVII, p. 73.

whereas the *Laṅkāvatāra-sūtra* (146. 13) uses the same adjective in the meaning of holding an erroneous view. As a noun it is found in the *Gaṇḍavyūha* (527. 10), indicating pride of birth (*jatyābhimānikā*).

Finally, the term occurs twice in the *Abhidhānappadīpikā*, a dictionary of Pali synonyms, where we are given (item 171) the following equivalents: pride, arrogance, self-conceit (*gabba, abhimāna, ahaṅkāra*) and pride of wealth, insolence, pedantry (*dhanādi-dappe paññayaṃ abhimāna* : ibid. 860).

H. G. A. v. Z.

ABHIMUKHĪ, ("face to face"; "turned toward") the name given to the 6th of the ten bodhisattva bhūmis or stages of progressive religious development of bodhisattvas (*Daśabhūmika Sūtra*, 5; *Mhvyut.* 31.6; *Dhsmg.* v. 64). The *Sūtrālaṅkāra* explains that this bhūmi is so called because the bodhisattva, practising the perfection of wisdom, now stands face to face with both Saṃsāra (transmigratory existence) and Nirvāṇa (liberation) (cf. *The Bodhisattva Doctrine*, H. Dayalal, 289). But Chandrakirti says that this bhūmi is called Abhimukhī because herein one comprehends that "the nature of things is like unto a reflection"; because "the bodhisattvas of the sixth stage are supported on the path by truth"; and because "this stage is directed towards the essence of the perfect Buddhas" (*Madhyamakāvatāra*, Le Muséon, 272).

This stage of his progressive religious development is arrived at by the bodhisattva when he understands the ten aspects of the equality and sameness of all things and phenomena (*dharmasamatā*), viz., that all things and phenomena are signless (*animitta*) and have no definite characteristics (*alakṣaṇa*); are not produced (*anutpāda*) and not originated (*ajāta*); are unrelated (*vivikta*) and also uncorrupted since the beginning (*ādiviśuddhi*); are in a state of freedom from activity (*niṣprapañca*); are neither admitted nor rejected (*anāryūhānirvyūha*); are like a dream, an optical illusion an echo, the disc of the moon seen in the water, an image and a magically created unreal object (*māyāsvapnapratibhāsapratiśrutkodakacandrapratibimbanirmāṇa*); and that they are free from the duality of existence and non-existence (*bhāvābhāva*). When a bodhisattva looks upon all things in this way, he acquires a conformable intellectual receptivity (*anulomikākṣānti*). He comprehends the formula of dependent-origination (*pratītyasamutpāda*). He realises that all sins and errors depend on the mind. He understands that all things are empty and characterless. He is absolutely free from desire. He gets rid of the notions of 'I' and 'Other', 'Doer' and 'Knower', 'Existence' and 'Non-existence'. He severs all connexion with the 'compounded' elements and experiences many samādhis which are related to the principle of 'emptiness' (*śūnyatā*). His thoughts are now perfectly firm, steady, profound and pure; and he resolutely sets his face towards Buddha-knowledge. He especially cultivates the perfection of wisdom (*prajñā-pāramitā*), without, of course, neglecting the others (cp. *Dasabhūmika Sūtra*, 47-54). The preparation towards the realisation of this stage of progressive religious development is twelvefold, viz., the accomplishment of the six perfections (*prapūraṇa*), of munificence (*dāna*), of good conduct (*śīla*), of patience (*kṣamā*), of exertion (*vīrya*), of meditation (*dhyāna*), and of wisdom (*prajñā*); the getting rid of the desires of śrāvakas and of pratyeka-buddhas; the dissipation of the fear arising out of the thought of the insubstantiality of nature (*svabhāvānupalambhottrāsacittasya varjanena*); the abolition of the thought of restriction towards beggars; the eradication of despondency in renouncing all belongings; and the suppression of the thought of refusal towards beggars, though oneself poor (*Abhisamayālaṅkārāloka*, GOS. LXII, p. 97).

It is to be noted, however, that according to the *Mahāvastu* the name of the 6th bhūmi is Rūpavatī ('Beautiful', 'Lovely' 'Having form': *Mhvu.* I, 76). As the bodhisattva passes from the 5th to the 6th bhūmi, he realises that this "whirlpool" of the world is exceedingly painful, and yields little joy and satisfaction (ibid. 121). There are two ways in which bodhisattvas, who have vowed to win enlightenment in the 6th bhūmi, lapse and fail to reach the 7th bhūmi, namely, by envying those who have won cessation of perception and feeling, and at the very time that there are consummate Buddhas in the world, by not listening reverently and attentively to the divine beings, each declaring, "I am the great-hearted bringer of peace" (ibid. 127).

T. R.

ABHINAMITĀ, the name of one of many hundred thousand Gandharva maidens (*gandharvakanyā*) who had assembled at Jetavana in Śrāvastī, when the Buddha was residing there, and mentioned in *Kāraṇḍavyūha* (*BHS*. s.v.).

ABHINANDAMĀNA SUTTA, found in the division entitled *Khandha Saṃyutta* (*S.* III, 75) as the third of a series of suttas grouped together in a chapter called *Arahatta Vagga*. The composition of these suttas is identical. And so are the locality, Sāvatthi in the park, and also the persons taking part in the discussion, the Buddha and an unidentified bhikkhu who requests the Buddha respectfully to teach him an aspect of the doctrine (*saṅkhittena dhammaṃ*) to enable him to retire in solitude and strive with zeal for perfection. Thereupon, the Buddha speaks concisely of one single aspect which varies with each sutta. The bhikkhu then explains the same in more detail to prove that he has grasped the full meaning of the Buddha's words. With the approval of the Buddha, the monk departs and shortly thereafter, in solitude, he attains the supreme goal of the holy life (*anuttaraṃ brahmacariyapariyosānaṃ*), arahantship. The *Abhinandamāna Sutta* speaks of delight in the forms of the body, delight in sensations, in perceptions, in ideations and in conscious thoughts. By taking delight in these fivefold activities of body and mind one becomes enslaved to evil, personified by Māra; while by not taking delight therein one becomes released from all that is evil (*mutto pāpimato*).

The other suttas conforming to this general pattern deal with different aspects: clinging (*upādiyamāna*), and boasting (*maññāmāna*, *S.* III, 73–74).

ABHINANDANA SUTTA. The Buddha addresses his monks at Sāvatthi on the subject of taking delight (*abhinandana*) in the five aggregates of existence, the material body (*rūpa*), sensation (*vedanā*), perception (*saññā*), mental formations (*saṅkhārā*) and consciousness (*viññāṇa*). On this account the sutta is placed in the *Khandha Saṃyutta* (Division on the Aggregates: *S.* III, 31). Here the five aggregates of body and mind are all ranked as woe (*dukkha*). And hence "whosoever takes delight in the body, in sensations, &c., takes delight in the conflict of woe and is not released therefrom". On the other hand, he who does not delight in the activities of the body and the mind, does not take delight either in what is woe, and is thus released therefrom.

ABHINANDENA SUTTA. Two suttas of this name without the usual introduction of place or persons occur in the *Saḷāyatana Saṃyutta* (*S.* IV, 13). They are practically identical with the *Abhinandana Sutta* but the five aggregates of existence, delight in which forms the subject of that sutta, are substituted by delight in the eye, delight in the tongue and delight in the mind (*mano*) in the first *Abhinandena Sutta*, and delight in the six sense objects, viz., forms, sounds, smells, tastes, tangibles and imageries in the second *Abhinandena Sutta*. By taking delight therein (*abhinandena*), one also delights in sorrow (*dukkha*) to which they inevitably lead; but by not taking delight therein, one is released from woe.

ABHIṆHA JĀTAKA (No. 27). The bodhisatta born as king Brahmadatta's minister solves the mystery of the king's pining elephant.

A certain dog used to come to the state elephant's stall and live on the scraps of food which it found there. In course of time a strong attachment grew between the state elephant and the dog and they could not do without each other. The dog used to play with the elephant's trunk, swinging on it this way and that.

One day a villager bought the dog from the mahout. The elephant missed the dog so much that thenceforth he refused to eat, drink or bathe. When the king was informed of this he directed his minister, the bodhisatta, to see what was wrong with the elephant.

The bodhisatta saw that the elephant was unhappy and seeing no physical ailment guessed that the cause of the unhappiness must be the loss of a great friend. On questioning the mahout he was told of the friendship with the dog and further that it was not known where the dog had been taken.

The bodhisatta informed the king accordingly and uttered the stanza which forms the basis of the Jātaka. When the king asked him for his advice, the bodhisatta suggested that it be announced by beat of drum that the person who had taken the dog would be liable to a penalty. This was done and the man who bought the dog soon let it loose. And away it ran to the state elephant. The elephant took the dog in his trunk, put him on his head and wept and only after the dog ate did he eat himself. The king bestowed honours on the bodhisatta saying that he knew even the minds of animals.

This Jātaka was related by the Buddha regarding the great intimacy between an elderly monk and a lay disciple who had been friends before the monk joined the Saṅgha. Even after he was ordained he used to go to his friend's house every day where he was offered the midday meal, and return to the monastery with the friend and spend the whole day in conversation with him till sunset. And when the friend returned home the bhikkhu would accompany him to the city gate.

This friendship became the topic of conversation among the bhikkhus and the Buddha narrated the Jātaka saying that even in former times they had been great friends. He then identified the characters—the dog was the lay disciple, the elephant, the elderly monk, and he himself was the king's minister.

This Jātaka has been named after a word occurring in the stanza *abhiṇhadassanā* "frequent seeing", referring to frequent seeing of the dog by the elephant (*J.* I, 188-190).

ABHINĪHĀRA is derived from a verb meaning 'to take out' or 'to direct to'. In a doctrinal sense which has grown out of this literal meaning the term denotes, in the commentarial tradition, 'an initial aspiration' (*pubbapatthanā*) or 'first resolve' (*mūlapaṇidhāna*), fundamental to all bodhisattas, or seekers after enlightenment, whether as sammāsambuddha, paccekabuddha or arahant (*AA.* I, 135; *ApA.* 140).

In the *Buddhavaṃsa* (p. 9) where the term occurs in this secondary sense, eight necessary pre-requisites are mentioned for a person seeking complete enlightenment to possess if he is to make a success of his initial aspiration. The stanza indicating these, reads as follows:

Manussattaṃ liṅgasampatti hetu satthāradassanaṃ
pabbajjā guṇasampatti adhikāro ca chandatā
aṭṭhadhammasamodhānā abhinīhāro samijjhati

The *Apadāna* commentary explains these as follows: (1, 2) birth as a human being and as a male, (3) the capacity, if one so wishes, to attain enlightenment as an arahant in the very life in which the aspiration is made, (4) the good fortune of meeting a teacher who has attained complete enlightenment, (5) recluseship, (6) mastery over the eight states of mental absorption (*aṭṭhasamāpatti*) and the five superior spiritual powers (*pañca abhiññā*)[1], (7) dedication of one's life to the enlightened ones[2] and (8) an earnest desire or effort to realise one's objective. These, it is said, comprise the basic qualifications that entitle a person to aspire to complete enlightenment (*BuvA.* 91–92).

1 The *ApA.* however explains *guṇasampatti* as qualities such as the acquisition of skill in attaining mental absorptions (p. 140).

2 *Adhikāra* is explained in the *ApA.* as self sacrifice involving willingness even to risk one's life (p. 140).

The *Buddhavaṃsa* and its commentary have recorded the instances when the bodhisatta who later became the Sakyamuni aspired to Buddhahood under each successive Buddha, beginning with Buddha Dipaṅkara and ending with Buddha Kassapa.

But in the case of one aspiring to be separately enlightened, i.e., as a paccekabuddha, the minimum qualifications he should possess at the moment he so aspires include four of the above (Nos. 1, 2, 7 and 8) and an additional qualification, namely, the sight of dispassionate ones (*vigatāsavadassanaṃ*) which the commentary explains as a capacity to meet such ones as are sammāsambuddha, paccekabuddha or arahant.

And in the case of those aspiring to be ordinarily enlightened as arahants only two qualifications are necessary, namely, a sense of sacrifice that may even involve one's life (*attapariccāga*) and an earnest desire to realise one's goal (*kattukamyatā*).

The initial aspiration must also be continuous for a vast period of time. In the case of those aspiring to be sammāsambuddhas the duration of time should at least (*heṭṭhimaparicchedena*) be four Incalculables (*asaṅkheyya*) and one hundred thousand aeons,[3] in the case of those aspiring to be paccekabuddhas two Incalculables and one hundred thousand aeons,[4] and of those aspiring to be arahants it varies according as to whether the aspiration is to be a chief disciple (*aggasāvaka*) or great disciple (*mahāsāvaka*).

H. S. C.

ABHINĪHĀRA SUTTA (1) mentions four types of persons who in their meditations as regards concentration of mind (*samādhi*) differ from one another thus: the first is skilled (*kusala*) only in concentration (*samādhi*), the second, only in inducing his topic of meditation (*abhinīhāra*), the third in neither, the fourth in both.[1] The last is therefore reckoned the best and noblest of them.

ABHINĪHĀRA SUTTA (2). The contents and pattern of this sutta (*S. Jhāna Saṃyutta*, No. 50) are the same as those of the preceding *Abhinīhāra Sutta*, except that the phrase 'correct performance' (*sakkaccakāri*) is substituted for 'skill in concentration' (*samādhikusala*).

ABHINIMMITA-RŪPĀNI, visual forms through the miraculous power of *ṛddhi* (P. *iddhi*). A good example is furnished in the case of the Buddha when, during his sojourn in the Tāvatiṃsa heaven to preach the Abhidhamma to the gods, he is said to have created daily a figure of his own likeness (*nimmita-Buddha*) which he left behind before proceeding to Uttarakuru for his alms. And the Buddha figure so created is said to have preached the doctrine until the Buddha's return from his alms round (*Visṃ.* II, 391); similarly, the thera Cūlapanthaka is said to have once created a thousand-fold form of his own likeness (*DhpA.* IV, 180 f.). A feat such as the above is, accordingly, termed a 'conditioning through *iddhi*' (*iddhābhisaṅkhāra*). However, it involves no magic, as some have wrongly supposed (*CPD.* p. 358), but implies a capacity to turn or direct the mind to the creation of visual forms, as and when desired.

The creation of forms, in so far as allusion is made to it, according to the *Dīgha Nikāya*, includes the transformation of the creator from a single person to a multiplicity of persons and *vice versa* (*eko pi hutvā bahudhā hoti, bahudhā pi hutvā eko hoti: D.* ii, 87; xi, 4). The same text (ii, 85) also alludes to the creation, out of one's own body, of another body which is mind-made (*manomayaṃ*) but corporeal (*rūpiṃ*) with all its component parts and sense organs intact (*sabbaṅgapaccaṅgiṃ ahīnindriyaṃ*). Although the expression 'display of *iddhi*' is used to describe the former, the same is not said of the latter. An attempt to reconcile this anomaly is found, however, in the *Visuddhimagga* (II, 378) which reckons even the latter as one of ten types of *iddhi* (q.v.).

The capacity to create forms may be acquired only after the attainment of the last of the mental absorptions of the sphere of form, that is, when the mind has become fully tranquillised, cleansed, supple, amenable and steadfast. Under such conditions, the mind may be turned or directed towards the realisation of the superior types of knowledge (*abhiññā*) of which the first, called *iddhividhañāṇa*, is identical with the capacity mentioned above, although that capacity is not confined to the creation of visual forms only.

H. S. C.

ABHINIRHĀRA, the Sanskrit equivalent of the Pali *abhinīhāra*, which is a doctrinal term indicative of the first resolve or aspiration of a bodhisatta to become enlightened. See ABHINĪHĀRA.

ABHINIṢKRAMAṆA SŪTRA, a treatise which, though not preserved in the original Sanskrit, has come down in Chinese translations.

As the title indicates this sūtra or treatise should deal with the departure of the bodhisattva (prince Siddhārtha) from home to pursue his quest for enlightenment. That the theme of the sūtra was not, however, restricted to this subject alone is evident from the following Chinese works which, even if they were not translations of the original Sanskrit work, were at least based on the material contained therein. They are: (1) Fu pen-hsing-chi-ching 佛本行集經 (Nanjio, No. 680) or 'Buddha pūrva-carya-sangraha-sūtra', i.e., 'Buddhacarita' or 'Abhiniṣkramaṇa Sūtra'. This is a work in sixty chapters, and was translated by Jñānagupta

3 *ApA.* p. 139; "*Buddhānaṃ Ānanda heṭṭhimaparicchedena cattāri asaṅkheyyāni kappasatasahassañca . . . .*"

4 *Paccekabuddhānaṃ dve asaṅkheyyāni kappasatasahassañca ito oraṃ pūpunituṃ asakkuneyya* (*ApA.* p. 142). In the case of a chief disciple it is one Incalculable and one hundred thousand aeons (*ekaṃ asaṅkheyyaṃ kappasatasahassañca*) while in the case of a great disciple it is just one hundred thousand aeons (ibid.).

1. *S. Jhāna Saṃyutta* No. 7. The commentary explains *samādhi kusala* as meaning skill in determining the mental factors associated with each of the *jhānas* (*SA.* II, p. 352).

闍那崛多 Shê-na-k'u-to, *c.* A.C. 587) in the Sui dynasty. Moreover, we know from the Chinese catalogue Kái-yuan-shih-chiao-mu-lu (開元釋教目錄) that the Fu-pen-hsing was translated into Chinese from Sanskrit by a monk called Chu-fa-lân (竺法蘭) so early as the eleventh year of the reign of Yung-ping (Ming-ti) of the Hân dynasty, i.e., 68 A.C. (Beal : *Romantic Legend of Sākya Buddha*, p. vi). (2) I-ch'u-p'u-sa-pen-ch'i-ching 異出菩薩本起經 (Nanjio, No. 509) or 'A different translation of the sūtra on the origin or former history of the Bodhisattva', i.e., Abhiniṣkramaṇa Sūtra (?). This was translated by Nieh-tao-chên (聶道眞) of the western Tsin dynasty (A.C. 265 316). (3) Hsiu-hsing-pen-ch'i-ching 修行本起經 (Nanjio, No. 664) or 'Sūtra on the origin of practice (of the Bodhisattva)' i.e., 'Caryā-nidāna Sūtra'. This was translated by Chu-ta-li 竺大力 (Mahā-bala ?) together with K'ang-mêng-hsiang 康孟詳 (A.C. 197) of the eastern Han dynasty. It is a life of Śākyamuni in seven chapters. Chapter i is on 'manifesting a strange (phenomenon)'. Chapter ii is on 'Bodhisattva's causing his spirit to descend' i.e., his coming down from the Tuṣita heaven to be born in this world. Chapter vii is on 'subduing Māra'. (4) T'ai-tzŭ-shui-ying-pen-ch'i-ching 太子瑞應本起經 (Nanjio, No. 665) or 'Sūtra on the origin of the lucky fulfilment of the Crown Prince', i.e. 'Kumārakuśalaphalanidāna Sūtra'. This was translated by Ch'ih-ch'ien (支謙) of the Wu dynasty (A.C. 222–280). It has no division of chapters and the narration reaches only as far as the conversion of the three brothers of Kāśyapa. (5) Kuo-chü-hsien-tsai-yin-kuo-ching 過去現在因果經 (Nanjio, No. 666) or 'Sūtra on the cause and effect of the past and present' i.e., 'Atītapratyutpanna-hetuphala-sūtra'. This was translated by Guṇabhadra, Ch'iu-na-pa-t'o-lo (求那跋陀羅) of the earlier Sung dynasty (A.C. 420–479), and the narration reaches as far as the conversion of Mahākāśyapa. It ends with a Jātaka of the Buddha in which he was a ṛṣi named Shân-hui (善慧, Sumati) at the time of the Tathāgata Samantaprabha.

The following is a very brief analysis of the *Abhiniṣkramaṇa Sūtra* which has been translated into English as 'The Romantic Legend of Sākya Buddha' by S. Beal. The contents of the sixty chapters of this work have been classified by Mochizuki (V. 4478) into five sections. The first section which is represented by chapter i forms a sort of introduction to the entire work. Thus the first chapter purports to excite a disposition to nourish and cherish religious principles. It dilates on the statement that 'only once in the midst of countless kalpas does a Buddha appear'. Śākyamuni's aspiration to the condition of a Buddha is mentioned, and a list of his predecessors is also given by the Buddha, who recalls to his memory the history of all the Buddhas of bygone ages under whom he acquired roots of merit. The second section gives us a list of previous Buddhas ; this is contained in the second chapter which merely continues the enumeration begun in the first chapter. The third section deals with the genealogy of the Sākya family, which is the subject of chapter iii. The fourth section includes those chapters (iv-xxxvii) which speak of the life of the Buddha from his birth up to the time of the first preaching at the Deer Park. It may be noted that these chapters most probably formed the original kernel of the present work, the title of which seems to support this argument. The last section, which covers the rest of the chapters (xxxviii-lx), treats of his many disciples and their previous lives. A large portion of chapter lx is devoted to stories pertaining to the previous birth of Ānanda.

The above Chinese translations have thus transmitted to us the literary traditions pertaining to the life of the Buddha as recorded in the *Abhiniṣkramaṇa Sūtra* which, in all probability, dealt not only with the departure of prince Siddhārtha from his home, but even drew on the entire legend of Śākyamuni, including his previous and subsequent history. The work is, moreover, replete with quotations from the *Udāna*, the *Sutta-Nipāta*, the *Buddhacarita* of Aśvaghoṣa, and some of the Mahāyāna sūtras. That the legends thus drawn upon represented the traditions of several schools is amply indicated by the *Fu-pen-hsing-chi-ching* which concludes with an interesting note relating to the title of the work. It says that the Mahāsaṅghikas call this work the 'Ta-Shih' ; the Sarvāstivādins call it the 'Ta-Chuang-yen' (great magnificence), i.e., *Lalitavistara*, with the details in which chapters x, xi and xiii of the present work are identical ; the Kāśyapīyas call it 'Fu-Wang-yin-yüan' (Buddha's former Nidāna or Avadāna) ; the Dharmaguptas call it 'Shih-chia-mu-ni-fu-pen-hsing' (the former births of Śākyamuni Buddha) ; the Mahīśāsakas call it 'P'i-ni-tsang-ken-pen' (Foundation of the Vinaya Piṭaka).

The *Abhiniṣkramaṇa Sūtra*, however, upheld the point of view of the Dharmaguptas.

A treatise bearing the same title (Tib. 'Mṅon-par-ḥbyuṅ-baḥi mdo') is also found in the Tibetan Kangyur. This was translated into Tibetan, revised, and edited by the Indian scholar Ācārya Dharmaśrībhadra and the great Tibetan translator Rin-chen-bzaṅ-po (ŌM. No. 967 ; TM. No. 301).

T. R.

ABHINIVESA. Although the term is derived from the material abode or house (*nivesa*), its significance has become entirely psychological in the sense of a tendency for settling down in the mind, an adherence to a view, an inclination to a belief. Thus, when it is said that "all things ought not to be adhered to" (*sabbe dhammā n'ālaṃ abhinivesāyā* : *M.* I, 251 ; *S.* IV, 50) the commentary explains that whatsoever belongs to the three worlds of existence is not to be adhered to with a mental obsession. The term is then used in juxtaposition to *parāmāsa*, a contagion, and *gāha*, a mental possession. It is, thus, a mental fixation (*cetaso adhiṭṭhāna*), a prejudice and a bias (*abhinivesānusaya* : *S.* II, 17 ; *S.* III, 135). It is frequently used to describe the attachment to the wrong views of eternalism, annihilationism, &c. (*diṭṭhi-saññojanaṃ gāho patiggāho abhiniveso parāmāso kummaggo micchāpatho* . . . *Dhs.* §§ 381, 1003, 1005, 1117, &c.) ; and it is by the destruction and surrender of this foothold that the mind becomes fully freed (*S.* III, 13).

H. G. A. v. Z.

ABHINIVESA SUTTA. There are two suttas of this name, both occurring towards the very end of the division on the Aggregates (*Khandha Saṃyutta* : *S.* III, 186). The difference is in one word only. The first sutta deals with the bondage of depending upon the fetter of clinging to the five aggregates of existence. This bondage of depending upon the fetters (*saññojanābhinivesa-vinibandha*) is intensified in the subject of the second sutta of this name by *attachment* to the bondage of depending upon the fetters (*saññojanābhinivesa-vinibandhājjhosāna*). The fetters referred to here are not the usual ten fetters (*dasasaṃyojana*) on the breaking of which depends the gradual progress on the path towards arahantship. The fetters under consideration in these two suttas are fetters of clinging to the body (*rūpa*), to sensations (*vedanā*), to perceptions (*saññā*), to mental formations (*saṅkhārā*) and to consciousness (*viññāṇa*). Dependence (*abhinivesa*) on those fetters is a bondage (*vinibandha*), but attachment (*ajjhosāna*) to such bondage makes deliverance well-nigh an impossibility. It is the reflection that these five aggregates of existence are not permanent, that the impermanent is not satisfactory and is subject to change; it is by such reflection that no bondage of dependence thereon can arise and no attachment to such bondage. For him who views things thus there is also the knowledge that for him there will be no further rebirth in this present process of becoming (*nāparam itthattāyāti pajānāti*).

H. G. A. v. Z.

ABHIÑJIKA[1] mentioned in the *Saṃyutta Nikāya* (II, 204-5) as an undisciplined monk who on being admonished by the Buddha repented of his lapse and was apparently reformed.

He was a co-resident of Anuruddha and was engaged in a verbal contest with Bhaṇḍa, a co-resident of Ānanda. They were trying to out-talk each other to find out which of them could speak the more, the better and the longer.

The Buddha was informed of this by Mahā-Kassapa. When the latter was asked by the Buddha to give a religious discourse to the monks, he showed his reluctance by saying that the monks were of evil speech, unruly, intolerant and not eager on receiving instruction. He cited the instance of Abhiñjika and Bhaṇḍa.

The Buddha had them brought to his presence and admonished them. After listening to him, Abhiñjika and Bhaṇḍa repented of their action and promised to cultivate self-restraint in the future.

ABHIÑÑĀ. The normal state of consciousness in which takes place most of our thinking, planning and reasoning with more or less lucidity has, like the solar spectrum with its flanks of infra-red and ultra-violet, two adjoining spheres of infra-conscious perception and ultra-conscious insight. All three spheres are types of knowledge (*ñāṇa*), but perceptive knowledge (*saññā*) may be without full conscious awareness (*viññāṇa*), whereas the intuitive knowledge of insight (*abhiññā*) dispenses with the perceptive and formative types of thought.

Perception (*saññā*), even if it leads to awareness (*viññāṇa*), merely tells us what things look like and, being further guided on to consciousness by ideations or mental formations (*saṅkhārā*), it is necessarily influenced by those earlier acquired leanings. *Abhiññā*, on the other hand, is a kind of direct knowledge which has left behind the physical world of space and time, of perception, of ideation, of causality, of logical reasoning, and is, therefore, psychic in the fullest sense. It is not knowledge of composites, but insight into their nature. Such a complete knowledge becomes an experience which can bring about a total transformation in the relationship between the subject and object of this knowledge. It consists ultimately in seeing things as they are (*yathā bhūtaṃ*), and that is realisation (*abhisamaya*).

Realisation can come along different paths, which, however, have this in common: the subjection of the wandering and distracted mind in concentration of thought (*samādhi*). Various methods to achieve this goal are outlined in many discourses and have been amplified by later commentators, in particular by Buddhaghosa in the *Visuddhimagga*. In short, it is the way to peace of mind (*samatha*), quietude of heart and calming of the passions by means of a process of sublimation whereby a state of trance, or mental absorption (*jhāna*, q.v.), is induced. It is an attempt to bring both body and mind into an intensive alertness or watchfulness (*satipaṭṭhāna*) through a purified receptivity. Through mindfulness (*sati*) is reached mental calm, insight (*abhiññā*), enlightenment, and Nibbāna[2]. It is in this state of the truly open mind that there might be developed psychic powers, which would appear to the average man as supernatural, but which are as yet only supernormal. They are, however, only the by-products of that intuitive understanding through insight (*abhiññā*) which forms the subject of this present article.

The acquisition of these intuitive powers is then one of the aims of concentration (*samādhi*) through the manifold methods of meditation (*bhāvanā*) which is, more literally, mental development or culture. This intuition itself, however, is not the goal, but one of the steps leading to the deliverance of Nibbāna.

The essence of the Buddha's teaching is embedded in the Four Noble Truths (*cattāri ariya-saccāni*) of what is conflict (*dukkha*), the cause of conflict (*dukkha-samudaya*), the solution of conflict (*dukkha-nirodha*) and the way towards solving the problems of conflict (*dukkha-nirodha-gāminī-paṭipadā*). These Four Noble Truths are said to be declared by the Buddha expressly "because they are profitable (*attha-saṃhita*), because they belong to the essence of existence (*dhamma-saṃhita*), because they are the foundations of a pure life (*ādi-brahmacariyaka*) because they are conducive to complete dispassion (*ekanta-nibbidā*), to cessation of desires (*nirodha*), to peace of mind (*upasama*), to direct knowledge-insight (*abhiññā*), to enlightenment (*sambodha*)

[1] [illegible] in a Burmese MS. and Ābhiñjika in two Sinhalese MSS.

[2] *S.* V, 179.

and deliverance (*nibbāna*). "[2] *Abhiññā* is placed in this formula towards the very end, only to be followed by enlightenment itself, thereby indicating its high position of importance.

Satisfaction and happiness (*veda-paṭilābha somanassa-paṭilābha*) can be obtained even in conquest of war, as admitted by Sakka the ruler of the gods, but that is not conducive to peace, to intuitive knowledge, to enlightenment, to Nibbāna (*na upasamāya, na abhiññāya, na sambodhāya, na nibbānāya saṃvattanti*).[3] It is only through peace of mind that intuition can germinate and develop into full enlightenment. This peace of mind, however, should be well understood. For the Buddhist aspirant (*yogāvacara*) to an intensely deep, spiritual life there is no divine spirit with whom he could desire spiritual union, as is the case of the Christian mystic or the Hindu yogi. His striving for a divine consciousness or celestial vision (*dibbacakkhu*) as a momentary substitution of his earthly process of consciousness is never an end in itself, but only a means to spiritual growth and mental culture, to be discarded almost as soon as acquired, to prevent it from taking root or forming a source of attachment. Even the fixation of thought in one-pointedness of mind (*citt'ekaggatā*) is desirable only as a means to overcome the distractions of a wandering mind. For here lies a very actual danger as in the temporary extinction of the fires of lust (*lobha*) and aversion (*dosa*) there is much opportunity for self-complacency in mental fixation. And that would not be conducive to further development of spiritual effort, as it would thereby leave room for stagnation, long before the goal is in sight. The goal is a total extinction of those fires, a complete eradication of those roots of all evil, the attainment of arahantship and perfect enlightenment, which cannot be achieved during an actual state of mental absorption (*jhāna*). The search, therefore, is not for blissful union with the One, but for the Void. It is not in peaceful concentration (*samatha*), but in the contemplation of insubstantiality (*anattā*) and of emptiness (*suññatā*) that the channel of emancipation is open (*anattānupassanā attābhinivesaṃ muñcanti suññatānupassanā nāma vimokkhamukhaṃ hoti*),[4] which frees the mind from the idea of self, an ego, or a soul.

In the same way as the lower stages of mental absorption (*jhāna*) are steps leading to deeper concentration, gradually discarding their individual characteristics of discursive thinking (*vitakka*), sustained application of thought (*vicāra*), zest (*pīti*) and well-being (*sukha*), so the various forms of spiritual achievement on mundane levels (*lokiya*) are to be considered as mere stepping stones to that supramundane power (*lokuttara*), which, in discarding concentration (*samādhi*) and mental absorption (*jhāna*) altogether, reaches out to penetrating insight (*vipassanā*) into the characteristics (*lakkhaṇa*) of all existence, namely, impermanence (*anicca*), conflict (*dukkha*), and insubstantiality (*anattā*). It is this insight alone that can solve the problem of life and its ever repeated cycle of birth and death, by the total annihilation of all greed (*lobha*), aversion (*dosa*) and delusion (*moha*).

Abhiññā, therefore, falls naturally into two main divisions, mundane (*lokiya*) and supramundane (*lokuttara*). The first is attainable through perfection in mental concentration (*samādhi*) and consists of five kinds (*pañc'ābhiññā*) as follows: (1) magical powers (*iddhividhā*) of (*a*) determination (*adhiṭṭhān'iddhi*), (*b*) transformation (*vikubbana iddhi*), (*c*) creation (*manomaya iddhi*), (*d*) penetrating knowledge (*ñāṇavipphāra iddhi*), (*e*) penetrating concentration (*samādhivipphāra iddhi*); (2) divine ear (*dibbasota*); (3) penetration of the minds of others (*ceto-periya-ñāṇa*); (4) divine eye (*dibbacakkhu*) and (5) remembrance of former existences (*pubbenivāsānussati*).

The second type is the supramundane (*lokuttara*) power of intuitive knowledge, which is attainable through penetrating insight (*vipassanā*), viz., the extinction of all mental intoxicants (*āsavakkhaya*) which is the realisation of arahantship.

The two divisions taken together, therefore, constitute the six kinds of psychic attainments usually referred to as *chaḷ-abhiññā*.[5]

One more kind of psychic power is referred to, in which case there are seven (*sattābhiññā*), the additional one being knowledge of the future (*anāgataṃsa-ñāṇa*).[6]

Har Dayal in *The Bodhisattva Doctrine in Buddhist Sanskrit Literature* (pp. 108 ff.) has thrown some light on the process of growth of the formula of the *abhijñā* (*abhiññā*). Although it is generally accepted that *āsavakkhaya-ñāṇa* is the additional sixth item to the earlier group of five (*pañcannam abhiññānam*: *S*. II, 216, §§ 16-29), which is omitted from the *Dharma-saṅgraha* (xx, p. 4.) the *Dasabhūmika Sūtra* (pp. 34-35, J. Rahder, Paris, 1926) and the *Abhidhammattha-saṅgaha* (trsl. p. 209), Har Dayal makes it his point that insight into the destruction of the mental intoxicants belonged to the original set of five super-knowledges, but was relegated to the sixth place by the intruder *ṛddhi-vidhā-jñāna* (*iddhi-vidhā*), supernormal powers.

According to the *Mahāvastu* (chapter on enlightenment, I, 228-9) and the first *Avalokita Sūtra* (II, 283-4) only the celestial eye (*divya-cakṣu*), remembrance of previous lives (*pūrvanivās-ānusmṛti*) and destruction of the cankers (*āśrava-kṣaya*) are mentioned, so following the tradition of the *Sutta-piṭaka* (*M*. I, 22-23). This tradition is also recorded in the *Lalitavistara* (pp. 344-5), but there is nothing to indicate in these works that this group of three is either comprehensive or even collectively called *abhijñā*. Neither does the fact that the *Kassapa Saṃyutta* (*S*. II, 212-3) mentions these three last in order of the six *abhiññā* provide any evidence of the earlier three having been added on later, nor does it prove that these three were "borrowed from the schools of wonder-working ascetics or impostors, that have always flourished in India" (op. cit. p. 110).

Here follows a slightly more detailed exposition of these various types of intuition and psychic

2 *D*. III, xxix, *Pāsādika Suttanta*, p. 137; *S*. II, 223.
3 *D*. II, xxi, *Sakka-pañha Suttanta*, p. 285.

5 *Vbh*. 334.
6 *Abhvt*. 108.

power. The first division is called mundane (*lokiya*) as the types falling under this category are associated with a mental development which has not risen above the mundane level, whereas the second division is called supramundane (*lokuttara*) because of its exclusive connection with the Path of Holiness (*ariya-magga*).

The psychic powers called *iddhi-vidhā* are frequently referred to as magical powers, for they include most of those claimed for modern mediums. The Buddha is represented as saying: "It is because I see danger in the practice of these mystic powers that I loathe and abhor them and am ashamed thereof." [7]

The possession of such magical power is in itself no sign of virtue, for even Devadatta was able to make use of such power in order to win over prince Ajātasattu (q.v.) in his scheming against the Buddha.[8] A display of such powers is reckoned as an offence against the regulations laid down for Buddhist monks,[9] while the claiming to possess such powers without basis of truth is even so serious an offence (*pārājika*) that expulsion from the Order is involved.[10]

These psychic or magical powers (*iddhi*) are treated in detail in the *Visuddhimagga*, *Paramattha-mañjūsā* and *Vibhaṅga*. In the sense of attainment of the supernormal they are called "modes of success" (*iddhi-vidhā*).[11] And they are distinguished by the various kinds of success, such as the following:

Adhiṭṭhāna-iddhi is success by resolve, because by a resolution or an act of will phenomena are produced outside one's body which are mind-made, projected images of oneself: being one, one becomes many.[12] Bilocation or multilocation, although not yet acknowledged as possible by modern physical science does not involve an intrinsic contradiction, as there is no absolute impossibility in the same body being at once circumscriptively in one place and definitively elsewhere. In such a case, however, as local extension (*pathavī*) is an inherent and essential quality (*bhūta*) of matter (*rūpa*), the replications will lack the essential material qualities and will be, therefore, phantasmal replications, or projected images.

Vikubbana-iddhi is the power of transforming one's body into some other form, such as a boy or a serpent, thereby abandoning and altering one's normal form without the duplication of personality. It is this power which was used by Devadatta to win over the young prince Ajātasattu [13]. Mahā Moggallāna referred to this power in particular, when saying:

". . . . I can instantly innumerable times
Create a living shape; skilled to transform myself
As other, yea, all magic power have I at will". [14]

Manomaya-iddhi is the power of creating phenomena produced by the mind in resolution.[15] Such a created visible form has no sensitivity and there is no sex or life faculty in it either.[16] If the possessor of this supernormal power walks up and down, the creation walks up and down there, too. But, if the possessor of such magical power wishes to make his creations different in appearance, he should emerge from the basic state of mental absorption and make a corresponding resolution before re-entering and attaining once more this supernormal field of power.[17]

Ñāṇa-vipphāra-iddhi is the power of pervading through knowledge (*ñāṇa*), thereby intervening in the natural course of events, such as the prevention of death in the case of Bakkula who otherwise would not have reached the path of arahantship.[18]

Samādhi-vipphāra-iddhi is the power of radiating through concentration (*samādhi*), whereby whilst in this state of concentration no pain will be felt and death cannot occur before emerging from the state of mental absorption (*jhāna*). Thus, no harm came to Sāriputta when he received a blow on his shaven head from a wicked spirit, as at that time he was absorbed in concentration.[19]

These two powers of pervading through knowledge and radiating through concentration, are thus means of preventing the normal course of action from taking effect, wherefore they are rightly grouped as supernormal powers (*iddhi*). When the Buddha enumerated to Ajātasattu the fruits of the life of a monk,[20] in the *Sāmañña-phala Sutta*, he elaborated the supernormal power of determination (*adhiṭṭhāna-iddhi*) which elsewhere [21] also is illustrated in great detail: "Being one he becomes many, or having become many, he becomes one again: he becomes visible or invisible; without let he passes through walls, through fences, through mountains, as if they were but air; he penetrates up and down through solid earth, as if it were but water; he walks on water without parting it, as if it were solid ground; cross-legged he travels through the air, as a bird on the wing; he touches and handles the moon and the sun, though they be so potent and mighty; even in this body of his, he scales the heights of the world up to the heaven of Brahmā; just as a clever potter could succeed in making out of clay any shape of vessel he wanted to have".

But although among the kinds of supernormal power only *adhiṭṭhāna-iddhi* is mentioned, the other powers of transformation (*vikubbana*) and creation (*manomaya*) are equally to be counted.[22] The powers named *iddhi* are grouped as one item of supernormal intellection (*abhiññā*) and this one item usually comprises the five powers mentioned so far. But we find further elaborations as follows:[23]

7 *D.* I, 213.
8 *Vin.* II, 185; *DhA.* I, 139.
9 *Vin.* II, 112.
10 *Vin.* III, 91.
11 *Vism.* xii, §§ 20-26, pp. 318-9.
12 *S.* III, 15.
13 *Vin.* II, 185; *DhA.* I, 139.
14 *Thag* verse 1183.

15 *Vism.* xii, § 135, p. 341.
16 *Vism A.* 398.
17 *Vism.* xii, § 67, p. 327; *Vism A.* 390.
18 *MA.* IV, 190; *Vism.* xii, § 27, p. 319.
19 *Ud.* 39.
20 *D.* I, 78.
21 *S.* III, 15-18.
22 *Vism.* xii, § 45, p. 323.
23 *Ps.* I, 112; II, 205; *Vism.* xii.

Ariyā iddhi is the power of the Noble Ones, i.e., of those who have entered the Path of Holiness, who can look upon agreeable objects as disagreeable, and who can view the repulsive with equanimity. It is attained only by those who have mastered their mind.

Kamma-vipākaja-iddhi is the inherent or inborn power which is the result of past action, such as the power of birds to fly through the air without supernormal power.

Puññavato iddhi is not inherent as a power in one's existence, but is acquired subsequently as a result of meritorious deeds in a former life. Thus, abundance and prosperity are " successes " of this kind ; so is the power of levitation in humans, &c.

Vijjāmaya-iddhi is also an acquired power, not as a result of merit, but through knowledge or science. Aviation is a power typically representing this class ; so hypnotism, incantation, &c.

Tattha-tattha-sammappayoga-paccayā ijjhanaṭṭhena iddhi is the power which brings success as the result of the correct use of opportunities. It is the ordinary power which can be exercised by men in ordinary walks of life. Thus the right application of renunciation leads to success in the abandoning of lustful desires.

All these powers (*iddhi*) would constitute the first of the five types of intuitive understanding or direct knowledge-insight (*abhiññā*). But it would not be complete to speak of the various psychic powers (*iddhi*) without referring also to the four bases of psychic power (*iddhi-pāda*) which, if cultivated and developed, do not contribute to so-called further progress either here or beyond,[24] but lead to the annihilation of all becoming. They are the wish-to-act (*chando*), energy (*viriya*), thought (*citta*) and investigation (*vīmaṃsa*). Each of these four bases is said to be accompanied by concentration and struggle (*samādhi-padhāna-saṅkhāra-samannāgata*) with the intention to be neither sluggish nor overstrained, without being inwardly cramped or outwardly distracted, with mind alert and thoughts unhampered.[25] As guides, they indicate the road ; as precursors of success and prior causes thereof, they prepare the path[26] that goes on to the utter destruction of woe.[27]

Iddhi then constitutes the first type of intuitive understanding (*abhiññā*).

The second type of this intuitive understanding or direct knowledge-insight is called the celestial means of hearing (*dibba-sota-dhātu*). It is called celestial or divine, as it is a sensitivity to perceive sounds, consistent with the refined nature of deities, acquired by them through their good karma.[28] As a type of direct knowledge (*abhiññā*) it can be produced through the development of energy and is called an ear-element (*sota-dhātu*), because this type of intuition does not manifest itself in forms and is thus more like the perception of sound. By this means then is acquired the understanding of things, purified and surpassing that of men, sounds both of devas and mankind, both far and near.[29] It is sometimes translated as clairaudience. Being the capacity to hear sounds not belonging to the physical world, it is another psychic faculty. The hearing can be either external or internal. Tones are heard externally even though arising within the head. When voices are heard they seem frequently to make suggestions. But many times, a careful scrutiny of such communications makes it evident that the recipient is self-deluded and is dramatising the contents of his own unconscious mind.[30] The more developed or positive psychic knows that the sounds or words heard by him are only his own natural method of translating the knowledge acquired intuitionally.

The third type of intuitional knowledge (*abhiññā*) may be called " thought-reading " for it is the knowledge of the thoughts of others (*paracitta-vijānana*). " With his own mind he encompasses and knows the thoughts of other beings, other persons (*parasattānaṃ parapuggalānaṃ cetasā ceto paricca pajānāti*[31]). He knows the passionate mind as such, and the mind free therefrom ; the malignant mind, the infatuated mind, and the minds free therefrom ; the cramped and the scattered minds ; the lofty and the vulgar ; the better and the inferior ; the controlled and the dissipated ; the liberated mind and the mind not free." It is truly penetration of minds (*cetopariya*) and penetration of hearts (*cetaso pariya*), and is directed exclusively to the thoughts of other beings, i.e., " of the rest of beings, himself excluded " (*parasattānaṅ ti attānaṅ ṭhapetvā sesasattānaṃ*[32]). Buddhaghosa continues to explain the method of developing such knowledge. From the attainment of mental absorption by means of the light (*āloka*)-device one should observe with the celestial eye (*dibba-cakkhu*) the colour of the blood in the physical heart (*hadaya-rūpa*). The various colours indicate the different kinds of mental states. Thus joy (*somanassa*) is shown to be like the red colour of the fruits of a banyan tree ; while grief (*domanassa*) darkens that colour like that of a rose-apple fruit ; and equanimity (*upekkhā*) gives the golden hue of sesamum oil.

The fourth type of intuitional knowledge is called the celestial eye (*dibba-cakkhu*). This purified vision, which surpasses that of ordinary men, sees " beings faring on and being reborn, some low, some lofty, some beautiful, some ugly, some happy, some miserable. "[33] It is with this supernormal vision that people can be known to pass away from this life according to their works (*yathākammūpage satte pajānāti*), those given over to evil ways in deed, word and thought to be reborn in hell and those who acted rightly in deed, word and thought to be reborn in a happy place of bliss. Thus, it is the kind of knowledge by means of which is known the passing away and the rebirth of beings

(*cutūpapātañāṇa*[34]). This type of knowledge is a cause of purification of view (*diṭṭhi*), for he who sees only the passing away of beings and not their re-appearance assumes an annihilationist's point of view, while he who is aware only of the appearance of beings might conclude therefrom that this existence is their original and only life.[35]

In the same chapter Buddhaghosa makes also certain introductory remarks about the preliminary and the requisite conditions for the development of this faculty. Only three meditation devices (*kasiṇa* q.v.) are said to be suitable in this connection: the fire device (*tejo-kasiṇa*), the white-coloured device (*odāta-kasiṇa*), and the light aperture (*āloka-kasiṇa*).[36] Complete mental absorption (*jhāna*), however, should not be entered upon, as in such a mental state intuitive knowledge will not arise. But, during neighbourhood-(or access-) concentration (*upacārajjhāna*) the meditation device should be made the basis of the development of this supernormal intuitive knowledge of celestial vision. This preliminary work of access-concentration, however, is of short duration, and, if full absorption is not allowed, it will quickly lapse. Hence, this basic meditation for further introspective development (*pādakajjhāna*) has to be repeated again and again, till the light gets gradually consolidated and remains in a predetermined area. Then, physical objects which are not within the focus of the physical eye (*maṃsacakkhu*) will come into the focus of the eye of knowledge (*ñāṇacakkhu*).

Celestial vision may be followed by *yathā-kammūpaga-abhiññā* which is supernormal insight concerning event-according-to-deed, by which a particular event in the *past* history of a particular individual is discerned; or by *anāgataṃsa-abhiññā*, which is intuitive knowledge by which a particular event of his *future* history is discerned.

This last one is not to be confused with the power of prophecy (*anāgataṃsa-ñāṇa*), confined to the Buddha, who alone can take every possible condition into account. This power of prohecy is sometimes counted as an *abhiññā*, in which case there are seven: *sattābhiññā*.[37] The Buddha, while relating his own experiences during the days before his enlightenment[38], remarked on the fading away of apperception, which he found was due in turn to doubts arising in him and disturbing his mental concentration, then to intellectual shortcomings, to flurry and worry, to fear, to excitement, to unchaste thoughts, to excessive effort, or to slackness. Only after he had got rid of each and everyone of these blemishes (*kilesa*), was he able to develop mental concentration in various degrees of observation.

The remembrance of former existences (*pubbenivāsānussati*) is the fifth and last of the five mundane types of intuitive knowledge (*lokiya-pañcābhiññā*). With this supernormal power one can call to mind previous existences through many an aeon of progression (*saṃvaṭṭakappa*) and many an aeon of destruction (*vivaṭṭakappa*), and in each existence remember one's name, clan, caste, experiences of happiness and sorrow, and the full span of life in all detail and circumstance.[39] This psychic faculty, although certainly supernormal, is not special to the followers of the Buddha. Even the commentator admits that this power is found with other sectarians (*titthiyā*[40]), although with certain restrictions and limitations. To develop this a beginner has to trace in reverse order the actions performed in the course of each day. His normal consciousness, being thus trained in the observance of what is evident, will become more sensitive after this preliminary work; and, developed into this intuitive type of knowledge, thought can be brought back beyond the link of rebirth by adverting to " mentalised form " (*nāma-rūpa*) arising at the moment of death. For this reason it is also called knowledge of an individual's death and (subsequent) rebirth (*sattānaṃ cutūpapāte ñāṇa*[41]), in which case it is the same as the celestial eye (*dibba-cakkhu*), but with this difference that remembrance of previous existence applies to one's own past in the round of rebirth (*saṃsāra*), whereas the divine eye scans the rebirths of others at that present moment only.

Four rates of progress (*paṭipadā*) are enumerated, depending on whether progress is difficult (*dukkhā-paṭipadā*) or easy (*sukhāpaṭipadā*), whether direct knowledge-insight comes slowly (*dandhābhiññā*) or swiftly (*khippābhiññā*).[42] This progress is explained in the *Atthasālinī* as referring to progress of development of mental absorption (*jhāna*). Insight which occurs from access-concentration to full absorption is called direct knowledge-insight or intuition or supernormal insight (*abhiññā*). This insight is sluggish, weak and of slow occurrence in some, while in others it is quick, strong and swift. The first take long to attain to the manifestation of the jhāna-factors, while the latter attain them quickly.[43] " It is not a mere intellectual process, but one cultivated in accordance with a certain system of concepts objectively valid. "[44] In this process there is more wisdom than reason, more insight than knowledge, more understanding than learning, more assimilation than information, and hence more application than speculation.

Positive psychism is part of the make-up of the spiritually developed person. But it is only part of that make-up. The pupil is rightly warned against seeking to develop psychic powers as an end in itself. Psychic powers are incidental to the greater quest of truth. There have been instances where the summit of holiness had been reached without any development of these psychic powers. The blind arahant Cakkhupāla is the classical example thereof,[45] whereas Devadatta is the classical example of one who having been in possession of

those powers lost the "magic touch" by his lack of self-control.

But the attainment of the summit of perfection through the extinction of all mental intoxicants (*āsavakkhaya*) is a knowledge of insight (*abhiññā*) which is not only supernormal, but which may also be called supernatural in so far as it has transcended all the limitations and weaknesses of human nature. Thus this knowledge-insight of the total destruction of all mental intoxicants (*āsavānaṅkhaye-ñāṇa*[46]) is frequently included in the list of six supernormal intuitions (*chaḷ-abhiññā*). Such intoxicants (*āsava*) are usually enumerated as four : the intoxicants of sensuous delight (*kāma*), of lust of life or desire for rebirth (*bhava*), of speculative views (*diṭṭhi*), and of ignorance (*avijjā*).[47] The extinction of these intoxicants leads immediately to arahantship which is the supreme fruit of the supramundane path (*lokuttara-magga*). Hence, this sixth kind of intuitive knowledge belongs to the second type of supramundane intuition (*lokuttar-abhiññā*). "Having destroyed the intoxicants one enters and abides in the emancipation of the mind, in the emancipation of insight which is free of the intoxicants and which is realised by one's own knowledge even in this very life" (*āsavānaṃ khayā anāsavaṃ cetovimuttiṃ paññā-vimuttiṃ diṭṭhe va dhamme sayaṃ abhiññā sacchikatvā upasampajja viharati*).[48] This spiritual intuitive knowledge gives comprehension of the five factors of grasping (*pañcūpādānakkhandhā*), i.e., of existence as craving ; it leads to abandonment of ignorance and craving for rebirth; it develops calm (*samatha*) and insight (*vipassanā*) ; it gives the realisation of wisdom and freedom.[49]

Among the forty subjects of meditation, it is especially the ten recollections (*anussati*) of the Buddha, the Dhamma, the Saṅgha, virtue, renunciation, devas, breathing, death, bodily composition and tranquillity, which have been declared by the Buddha to be conducive to intuitive knowledge (*abhiññā*), to perfect enlightenment (*sambodha*) and Nibbāna[50]. The six forms of intuition (*abhiññā*) constitute also part of the eight modes of *vijjā*, the other two being knowledge born of insight (*vipassanā-ñāṇa*) and the potency (*iddhi*) of the mental image. Together they form the states which partake of and which are the associates of wisdom (*vijjābhāgino*),[51] because they arise as parts and portions of wisdom,[52] although only knowledge born of insight is sometimes referred to, instead of the entire series of eight.[53]

Mention is sometimes made (e.g., in *A.* III, 334) of six associated states of wisdom : the conception of impermanence (*anicca-saññā*), of conflict in impermanence (*anicce-dukkha-s°*), of insubstantiality of conflict (*dukkhe-anatta-s°*), the conceptions of renunciation (*pahāna-s°*), of dispassion (*virāga-s°*) and of cessation (*nirodha-s°*). These form a completely different set from the Abhidhamma formula and make no reference to *abhiññā*.

48 *D.* III, 281 ; *A.* III, 19.
49 *A.* II, 246.
50 *A.* I, 30.

The importance of the development of this intuitive knowledge can be gathered from an oft repeated list of virtues, which are described in terms of abandoning even the various stages of spiritual progress, resulting from the gradual abandoning of mental absorption (*jhāna*), and leading up to supreme deliverance through complete dispassion (*ekanta-nibbidā*), fading away (*virāga*), cessation (*nirodha*), peace (*upasama*), direct knowledge-insight (*abhiññā*), to enlightenment (*sambodha*) and to Nibbāna.[54]

H. G. A. VAN ZEYST.

ABHINNĀBHA. As proclaimed by the Buddha Śākyamuni to the five Bhadravargīya monks, Abhinnābha, "Unbroken Light", or "He from whom issues an unbroken stream of light" is the name of one of the thousand Buddhas who will arise in this "auspicious world age" named Puṣpika. Each of them will be possessed of a radiance of twelve yojanas (*Mhvu.* III, 330.13).

ABHIÑÑĀ-PARIÑÑEYYA SUTTA contains only three words in the text (*S.* IV, 29): *sabbaṃ bhikkhave abhiññāpariññeyyaṃ*: everything, O monks, is to be comprehended by intuitive knowledge (as impermanent, unsatisfactory and insubstantial). Everything here means the sense-organs, their objects and contacts, and the consciousness arising therefrom. Comprehending this by intuitive knowledge, the noble disciple will be repelled thereby and realise that for life in these conditions there is no hereafter.

ABHINNAPARIVĀRĀ, the name of one of many hundred thousand Nāga maidens who in addition to many others had assembled at Jetavana in Śrāvasti when the Buddha was residing there (*BHS.* s.v.).

ABHINNARĀṢṬRA, a former Buddha mentioned in a list of names of former Buddhas under whom the Buddha Śākyamuni acquired merit, in the eighth Bhūmi (*Mhvu.* I, 136. 13–141. 16).

ABHIÑÑĀ SUTTA, occurring in the *Catukka Nipāta* of the *Aṅguttara Nikāya* (*A.* II, 246), speaks of intuitive knowledge (*abhiññā*,) as the means whereby the five factors of grasping (*pañcupādānakkhandhā*), namely the material body (*rūpa*), sensation (*vedanā*), perception (*saññā*), mental concepts (*saṅkhārā*) and consciousness (*viññāṇa*) are to be comprehended (*pariññeyyā*).

Intuitive knowledge (*abhiññā*) is also the means by which ignorance (*avijjā*) and craving for rebirth (*bhavataṇhā*) are to be abandoned (*pahātabbā*). Again it is intuitive knowledge which is the means for the culture (*bhāvetabbā*) of tranquillity of mind (*samatha*) and insight (*vipassanā*).

51 *Dhs.* § 1296.
52 *Dhs A.* 50.
53 *D.* I, 76.
54 *D.* III, xxix, *Pāsādika Suttanta*, p. 132 ; *Ps.* I, 47.

Intuitive knowledge is finally the means of realisation (*sacchikātabbā*), of wisdom (*vijjā*) and freedom (*vimutti*).

Under this same name could be classed also a group of 85 suttas which in an extremely condensed form conclude the Book of Fives (*pañcaka nipāta*) of the *Aṅguttara Nikāya* (*A.* III, 277-8). "For the direct insight knowledge (*abhiññāya*) of seventeen evils, viz., passion (*rāga*), hatred (*dosa*), delusion (*moha*), anger (*kodha*), enmity (*upanāha*), hypocrisy (*makkha*), malice (*palāsa*), envy (*issā*), avarice (*macchariya*), deceit (*māyā*), craftiness (*sāṭheyya*), obstinacy (*thambha*), impetuosity (*sārambha*), pride (*māna*), arrogance (*atimāna*), intoxication (*mada*) and indolence (*pamāda*), the following five sets of mental states ought to be developed :

(*a*) perception of the unattractive (*asubhasaññā*), of death (*maraṇasaññā*), of danger (*ādīnavasaññā*), of the perishable nature of food (*āhāre paṭikkūlasaññā*) and of the absence of joy in the entire world (*sabbaloke anabhiratasaññā*); (*b*) perception of impermanence (*aniccasaññā*), of insubstantiality (*anattasaññā*), of death (*maraṇasaññā*), of the perishable nature of food (*āhārepaṭikkūlasaññā*) and of the absence of joy in the entire world (*sabbaloke anabhiratasaññā*); (*c*) perception of impermanence (*aniccasaññā*), of conflict in impermanence (*anicce dukkhasaññā*), of the insubstantiality of conflict (*dukkhe anattasaññā*), of renunciation (*pahānasaññā*) and of dispassion (*virāgasaññā*); (*d*) the five faculties (*indriya*) of trust (*saddhā*), energy (*viriya*), mindfulness (*sati*), concentration (*samādhi*) and insight (*paññā*); (*e*) the five spiritual powers (*bala*) of trust (*saddhā*), energy (*viriya*), mindfulness (*sati*), concentration (*samādhi*) and insight (*paññā*)."

The frequent repetition and overlapping is here all the more noticeable, owing to the extreme condensation of the text.

ABHIÑÑĀ VAGGA, the 26th chapter of the *Catukka Nipāta* of the *Aṅguttara Nikāya* (II, pp. 246–253). It contains ten suttas (Nos. 251–260), the first one of which deals with intuitive knowledge (*abhiññā*) and has given its name to the entire chapter.

The *uddāna* which recapitulates the titles of the suttas at the end of the Vagga reads as follows :

abhiññā pariyesanā saṅgaho Mālukyaputto kulam dve ājaññā balam arañña kammunāti

(Intuition, quests, popularity, Mālunkyā's son, prosperity, two thoroughbreds, power, forest, action).

ABHIÑÑEYYA SUTTA contains only three words of the text (*S.* IV, 29) : *sabbam bhikkhave abhiññeyyam* : everything, O monks, is to be intuitively known (as impermanent, unsatisfactory and insubstantial). It differs from the *Abhiññā-pariññeyya Sutta* (q.v.) only in the last word : *abhiññeyyam* : to be intuitively known; *abhiñña-pariññeyyam* : to be comprehended by intuitive knowledge.

ABHIPĀRAGA, a friend and boyhood companion of the bodhisattva when he was born as the king of the Śibis with his capital at Ariṭṭhapura. In the Pali tradition which is contained in the *Ummadanti Jātaka* (*J.* V, 209–227) and which tells us that he was none other than a former incarnation of Sāriputta, he is known as Ahipāraka. They grew up as friends and at the age of sixteen went to Takkasilā. On returning after completing their education, the bodhisatta became king and appointed Ahipāraka as his commander-in-chief (*senāpati*). The Sanskrit tradition, however, which is contained in the *Jātakamālā* (80–87), says that Abhipāraga was the bodhisattva's minister (*amātya*), a high official (*amātyamukhyaḥ*) of the king. In this connexion, it is significant to note that in the Pali tradition the bodhisatta is made to address his commander-in-chief as *katte* which, according to the commentator, means 'one who acts for the welfare of the king', i.e., a minister (cp. *J.* V, 220 & 225; also *Jātaka Stories*, V, p. 113, n. 1).

Abhipāraga was married to a maiden of captivating beauty, Ummadantī, daughter of Kirīṭavatsa a leading townsman. One day, the bodhisattva while driving through the town, caught a glimpse of her and was immediately overpowered by his love for her. When visiting the king, who had fallen ill because of his love, Abhipāraga, who was skilled in the interpretation of the expression of the face and of such gestures as betray internal feelings (*iṅgitākāragrahaṇanipuṇamatiḥ*), realised that the king had fallen in love with his wife.

Ever regardful of the king's welfare, he wishes to hand her over to him. In his attempts to persuade the king to accept her, Abhipāraga argues that the king will merely be assisting in the performance of a gift, that his acquiescence would only be a favour and not a source of grief to himself; that the king's reputation need suffer no damage as it would merely be a private arrangement between the two of them, and that it would give him the same satisfaction as that obtained by a faithful heart by serving the interest of his master. Nay, his love for the king is so great that he even shows his willingness to command his wife to lead the life of a harlot whom no one is forbidden to woo. He gives the king an assurance that he would himself face all the censure for this action owing to the gladness of mind he would feel for having promoted the king's happiness. The king, however, counters all these arguments and says that it is not possible for him to offend against righteousness.

"Of the non-Buddhistic redactions all agree in this point, that the King at last dies from love, and that the faithful officer then kills himself." (J. S. Speyer : *SBB.* I, 124). But, in adapting this tale to illustrate how "sages of old though ruling a kingdom, whenever lust sprang up in their hearts, passed under its sway for a time, but checked their roving thoughts and were guilty of no improper conduct" (*J.* V, 209), the king and his faithful minister were, no doubt, made to live on, ever striving to maintain control over their senses.

ABHIPAŚYA, a caitya which, according to the *Mahāvastu*, is said to be located in the south (Padma, in *Lal.* cp. *SBB.* XIX, 295, n. 1). It is

referred to as " being always ablaze with splendour and as a place where prayers are always answered ". This caitya is also mentioned among the sacred places whose blessings the Buddha is said to have invoked on the merchants Trapuṣa and Bhallika (Pali : Tapassu, Bhallika) in gratitude for the first meal they offered him after his enlightenment.

ABHIRĀDHANA, one of the three friends of the brāhman Sambhūta who accompanied him to hear the Buddha preach, the other two being Bhūmija and Jeyyasena. It is said that as a result of the sermon Sambhūta entered the Saṅgha (*ThagA*. 1, 47). It is to be inferred that Abhirādhana and the other two also entered the Saṅgha as all four of them are spoken of as noble arahants who had acquired a thorough knowledge of the doctrine.

ĀBHĪRĀ (-lipi), the name of one of the many scripts which are under the control (*nīti*) of bodhisattvas and are listed in the *Mahāvastu* in that portion which deals with the seventh bhūmi or stage of progressive religious development of the bodhisattvas. This script was, most probably, used in the country of the Ābhīras, a tribe of northern India (I, 135. 7 : var. Āpīrā).

ABHIRĀMĀ, one of the three grand palaces befitting the three seasons occupied, for a period of 9,000 years in his last lay life, by Nārada Buddha before his renunciation. The names of these three palaces are listed as Jitā, Vijitā, and Abhirāmā (*Buv.* x, 19) ; Vijita, Vijitāvī, and Jitābhirāmā ; Vijita, Vijitāvī, and Vijitābhirāmā (*BuvA*. 182, 188) ; and also as Jitā, Vijitā, and Bhūrimā (*Buv.* 129, *v.* 8, Colombo 1912 ed.).

ABHIRĀMAŚRĪVAKTRĀ, an actor's daughter, appropriately so named as she was of exceedingly beautiful countenance. She was a previous incarnation of the night goddess (*rātri-devatā*) Samantasattvattrāṇojaḥ-śrī who, in an earlier birth as a cakravartin's daughter Samantajñānaratnārciḥ-padmabhadrābhirāmanetraśrīcandrā by name, made an earnest wish that she be always reborn with a noble complexion such as that assumed by the bodhisattva Samantabhadra for the purpose of disciplining the citizens of Ratnakusumapradīpa who were intoxicated by their own beauty.

The night goddess, Samantasattvattrāṇojaḥśrī, in relating to the noble youth Sudhana how she came to know the bodhisattva-salvation (*bodhisattva-vimokṣa*—a Mahāyāna method of salvation), explains how she gained instruction from five hundred Tathāgatas who were propitiated (*ārāgita*) by her in her former births, and who occupied the world region (*lokadhātu*) Maṇicakravicitrapratimaṇḍitavyūha in the world-age (*kalpa*) named Mahāprabha (*Gvyū.* 281–283). The last of these five hundred Tathāgatas was one by the name of Dharmadhātugaganapūrṇaratnaśikharaśrīpradīpa, and it was during his time that she was born as Abhirāmaśrīvaktrā, the daughter of an actor (*naṭadārikā*). When this Tathāgata was entering the city while a drama was in progress she, by the power of the Buddha (*Buddhānubhāvena*), stood erect in the sky, and, praising him in a thousand verses, went up to him. Her whole body was then illumined by a ray (*raśmi*), Dharmadhātuvidyotitavyūha by name, which he released from his curl of hair (*ūrṇākośa*). It was on account of this ray which touched her whole body that she received the (bodhisattva-) salvation named Dharmadhātunayāvartagarbha.

T. R.

ABHIRĀMAVARTĀ, name of a girl attendant of Subhadrā (q.v.), the daughter of a householder named Mahāprajña. Together with Bhadrā, Dṛdhamatī, Śrībhadrā, Brahmadattā, Śrīprabhā, and Suprabhā, she headed a retinue of five hundred girl attendants (*dārikā*) who accompanied Subhadrā on her visit to Mañjuśrī, the perennially young (*kumārabhūta*), who was residing in the caitya of the grove named Vicitrasāradhvajavyūha which lay to the east of the great city Dhanyākara by name (*Gvyū.* 52. 2).

ABHIRATI, the name of a world region (*lokadhātu*). It is the Buddha field (*buddhakṣetra*, q.v.) of the Tathāgata Akṣobhya (*Gvyū.* 82.9 ; *AsP.* 366.15). Its cosmic location is in the eastern quarter (*Sdmp.* 184.7, ed. N. Dutt, p. 126).

ABHIRŪPA, name of a former Buddha mentioned among the first hundred of the host of Āryans in the ninth bhūmi, in a list of names of former Buddhas under whom the Buddha Śākyamuni acquired merit during his career as bodhisattva (*Mhvu.* I, 139.14).

ABHIRŪPANANDĀ, an arahant therī to whom verses 19–20 in *Therīgāthā* (p. 125) were addressed by the Buddha. From the accounts contained in the *Therīgāthā-Aṭṭhakathā* (p. 24 f.) and the *Apadāna* (II, 608 f.) we have the following information regarding her.

She was born in Kapilavatthu as a daughter to the chief wife of the Sakya Khemaka and was named Nandā. Because of her great beauty she became known as Abhirūpanandā.

The two accounts differ in detail regarding the events which led to her ordination. According to the *Therīgāthā Aṭṭhakathā*, on the day she was to select her husband the Sakya prince Carabhūta (who evidently was to be selected) died and her parents made her enter the Saṅgha against her will. The *Apadāna* has it that she was sought by many Sakyas and there was great trouble among them. Her parents got her ordained so that she might not destroy the Sakyas.

Both accounts continue to say that even after she entered the Order, she, being infatuated with her own beauty, did not go to the Buddha's presence through fear of his contempt. But the Buddha seeing that she was ripe for knowledge devised a method of getting her to visit him. He ordered Mahāpajāpati to have all the bhikkhunīs come to him for instruction. Abhirūpanandā still avoided the Buddha by sending another in her place, but the Buddha refused to recognise the substitute and

she was compelled to go. By means of his miraculous power, the Buddha created a very beautiful woman and shewed her becoming subject to old age and decay, thereby causing emotion to arise in Abhirūpanandā. She became disgusted of saṃsāra. The Buddha addressed her with the verses contained in the *Therīgāthā* (referred to above), advising her to meditate on the impurity of the body. At the end of the *gāthā* she attained arahantship.

The two accounts give information regarding Abhirūpanandā's previous births, too. In the time of Buddha Vipassī she had been born in the city of Bandhumati as daughter to a wealthy householder. She heard the Buddha preach the doctrine and became a devout follower. At the death of the Buddha she offered a gem-studded golden umbrella to the cetiya containing the Buddha's relics. As a result of this she was reborn in various heavens until she was born finally in this Buddha epoch as Abhirūpanandā.

In the *Sutta-Nipāta Aṭṭhakathā* (I, pp. 241 f.) the story of Abhirūpanandā is included in the account of the ordination of the three Nandās which is cited as one of the two occasions when the *Vijaya Sutta*, also called the *Kāyavicchandanika Sutta* in the commentary, was preached.

There has been some confusion in the accounts of Abhirūpanandā. The *Apadāna* quotation given in the account of the *Therīgāthā Aṭṭhakathā* is not the section pertaining to Abhirūpanandā in the *Apadāna* but to Ekapiṇḍadāyikā therī (*Ap.* II, p. 515–516). This same *Apadāna* quotation recurs in the *Therīgāthā Aṭṭhakathā* account of Mettā (*ThīgA.* p. 36), and appears to be more appropriate to her. Among the verses addressed by the Buddha to Abhirūpanandā in the *Apadāna* account, are verses which pertain to Sundarī Nandā (*Thīg.* p. 132; *ThīgA.* pp. 80 f.).

ABHISAJJANĪ VĀCĀ. See ABUSIVE LANGUAGE.

ABHISĀMA, a cakkavatti king who is supposed to have earned this high estate by virtue of an act of piety he performed in a previous life when, in order perhaps to facilitate the washing of feet, he placed a plank and (a vessel of) water near the entrance to a monastery of which he himself might have been an inmate, with the earnest hope that he may attain the noblest weal (*uttamatthassa pattiyā : Ap. I*, No. 231). This wish he is said to have realised in his last life as the thera Udakāsanadāyaka (ibid. p. 318, n. 2).

Note: The Pali Text Society's edition of the *Apadāna* has also recorded a variant form of the name Abhisāma which is said to occur in one manuscript as Aggisāma.

ABHISAMAYA. I. **Introduction and meaning of the word** : As one of the fundamental conceptions of the method of Buddhist meditation ***abhisamaya*** is the practical training towards realisation of truth in Buddhism; and *abhisamaya* has been always connected with the whole process of enlightenment, both in Theravāda and Mahāyāna.

Etymologically *abhisamaya* is derived from *abhi-sam-i*, its verb *abhisamayati* or *abhisameti*, i.e., coming by completely, comprehension, clear understanding, intuition, and so on. The Tibetan translation is *mṅon-rtogs*, while the Chinese translation for abhisamaya 現觀 [1], which means direct observance, is popularly used in China and Japan.

The verb *abhisameti* or *abhisamayati* has in general the Four Noble Truths (*cattāri ariya-saccāni*) as its object. In the Buddhist texts the term is found along with *satya* in such compound forms as *āryastyānām abhisamayāyā* (*Divy.* 654. 24), *satyābhisamaya* (*Bbh.* 38. 12), *saccābhisamayā nicchātā parinibbhutā* (*S.*758), *catusaccābhisamaya* (*Miln.* 214) and so on. This means that *abhisamaya* is directed towards the practice and cognition of truth, especially the Four Noble Truths. Therefore, whenever one speaks of *satya* (*sacca*)–*abhisamaya*, it should be defined as the full understanding of the Four Noble Truths through stages leading to the enlightenment of *śrāvakas* (disciples) and bodhisattvas. On the other hand, the verb *abhisameti* is often accompanied by *abhisambujjhati*, i.e., 'to be awakened to enlightenment'. The Buddha's famous discourse on Dependent Origination[2] (*paṭiccasamuppāda*) shows the content of his enlightenment which is also to be realised by every living being by observing (*passati*), understanding (*abhisameti*) and perfectly awakening (*abhisambujjhati*).

In connection with the realisation of enlightenment (*abhisambodhi*), G. Nishi says:[3] "The idea, 'to obtain the highest Enlightenment', for disciples in early Buddhism, was usually expressed by the verb *pajānāti* from which the noun *paññā* (*prajñā*) is derived. It is likely that the frequent employment of *abhisambujjhati* noticed in the explanation of his Enlightenment was due to the fact that at a later period Buddhists had limited the original expression *pajānāti* to denote only the supreme Enlightenment of the Buddha and thus to show the difference between the Buddha and His disciples". Throughout the Pali canon, *paññā* (wisdom) has been the principal factor of enlightenment, and *abhisamaya* the fundamental way of realising it. From the view point of verbal use, however, both *pajānāti* and *abhisameti* as verbs show the characteristics of enlightenment more clearly than would be shown from their employment as nouns. Besides, as both are closely connected with each other, they show that enlighten-

3 *Studies on Paññā in Early Buddhism* (Japanese Edition. Tokyo, 1955), p. 264.

ment is not merely conceptual but is actually realisable by observation and comprehension of things as they truly are. The Buddha frequently emphasised—*yathābhūtañāṇadassana* (observation or intuition of thus-ness). For instance, the *Saṃyutta Nikāya* states the following about Nirvāṇa (Nibbāna): the Buddha and his disciples who have attained Nibbāna really obtained the cognition of the five elements as they truly are (*yathābhūtam pajānāti*, IV, p. 192), fully understood the Four Noble Truths as they truly are (*catunnaṃ ariyasaccānaṃ yathābhūtaṃ abhisamaya*, V, p. 435) and perfectly acquired the right insight (*yathābhūtaṃ sammappaññā*) in impermanence, suffering and non-self, the characteristic aspects of all elements (III, p. 22).

At any rate, it is most important for those who are striving to attain enlightenment that the truth itself can be revealed by direct and right observation of things as they truly are. *Abhisamaya* bears just such a characteristic. The fact that the Buddha used such ordinary words as "to see" (*passati*) explains what we have just stated above. The following quotations illustrate the fundamental and essential standpoint of the Buddha whose intention was to let his disciples easily understand his thought. 'Whoever sees the dhamma, sees me' (*yo dhammaṃ passati so maṃ passati*: *S.* III. p. 120). 'Whoever sees the Dependent Origination, sees the Dhamma; whoever sees the Dhamma sees Dependent Origination' (*yo paṭiccasamuppādaṃ passati, so dhammaṃ passati, yo dhammaṃ passati so paṭiccasamuppādaṃ passati*; *M.* I, pp. 190-191). From these quotations it will be evident that we ourselves should see, observe, and cognise the truth through wisdom (*paññā*), on which various practices are based. The Buddhist practices have, as their common feature, the practical foundation that every kind of experience, whether connected with empirical or spiritual matters, should have a bearing on our ordinary lives. Even profound and philosophical doctrines have to be regarded as groundless and of no significance, unless they have been studied and practised by direct experience both subjectively and objectively. On *paññā* as practical training the Buddha mentions that there are three such kinds of practice, namely, by hearing (*sutamayā*), by thinking (*cintāmayā*) and by training (*bhāvanāmayā*).

Having dealt with the general meanings of *abhisamaya*, we shall next proceed to mention its special use when applied to the path of *śrāvakas* as a meditation method. Now, we may say that from the time of early Buddhism onwards the paths of training for arahants and disciples consisted in meditation on the Four Noble Truths, and the full understanding of the Four Noble Truths (*saccābhisamaya*) has been regarded as the way to seeing the truth (*dhammānupassanā*, *dhammābhisamaya*) through activities based on insight (*paññā*). Therefore, in a study of *abhisamaya*, it will be necessary (1) to understand *abhisamaya* as being on a par with enlightenment, Nibbāna and Vimokkha, &c., from the point of view of it being a type of enlightenment, (2) to comprehend how *abhisamaya* has played its part in the stages of the training and the meditation method of śrāvakas and (3) to clarify the relation between *abhisamaya* and *paññā* from the aspects of mutual agreement in Mahāyāna and Theravāda.

II. **Saccābhisamaya** is the realisation of truth. The Buddha's fundamental doctrines—the Four Noble Truths, the twelve causalities, the Noble Eightfold Path, &c., have been understood as those which enable śrāvakas to realise truth. By adding the word *anupassanā* or *abhisamaya* these doctrines, systematised as the methods of śrāvaka meditation, have been called the realisation of the Four Noble Truths and the realisation of the twelve causalities. As for the Noble Eightfold Path, from its very content we can call it "the realisation of the Noble Eightfold Path". Meanwhile, there are the enlightenment methods or factors of enlightenment (*bodhipākṣikā dharmāḥ*) regarded as steps in training both in the Mahāyāna and Theravāda paths. These enlightenment methods generally have thirty-seven items in which the Four Noble Truths and the twelve causalities have not been included, though the Noble Eightfold Path is. To this point Mahāyāna thought provides an efficient solution. Why do the *Prajñāpāramitā-sūtras* emphasise the significance of *prajñā* as well as the enlightenment method of śrāvakas? The thirty-seven enlightenment methods (*saptatriṃśad bodhipākṣikā dharmāḥ, sattatiṃsa bodhipakkhiyā dhammā*) of śrāvakas aim at the attainment of arhantship by means of *kṣayajñāna* and *anutpādajñāna*. They also embrace problems relating to *vijñāna* and *jñāna*. The Four Noble Truths, too, which depend as much upon *prajñā*, deal with the discrimination of *vijñāna* and *prajñā*, especially from the standpoint of *prajñā* in the sense of *saccābhisamaya*. Accordingly, there is no doubt that the Four Noble Truths originally included the thirty-seven enlightenment methods. The *Abhidharma-mahā-vibhāṣā* reveals that in connection with its composition and purpose it was compiled from the standpoint of the Four Noble Truths.

Paṭisambhidāmagga, too, explains the forty-four kinds of *abhisamaya* in the third chapter where enlightenment methods are characterised by applying the word *abhisamaya* which means *saccābhisamaya*. From early Buddhism to Abhidharma Buddhism, the most important doctrines—the twelve causalities, the Noble Eightfold Path, the thirty-seven enlightenment methods, &c., were widely taken up and dealt with in the circle of the realisation of the Four Noble Truths.

Enlightenment methods are aids to the realisation of enlightenment. In order to attain enlightenment, the meditation on *dharma* should be practised. Because of the fact that *dharma* is *satya*, the meditation of the Four Noble Truths will be called the realisation of *dharma* (*dhammābhisamaya*, *dhammānupassanā*). Thus, the full understanding of the Four Noble Truths (*saccābhisamaya*) is regarded as the essential means for meditation on truth (*dharma*). This is one of the characteristics of the realisation of truth in Buddhism. Now, the meditation on *dharma* depends upon *prajñā*. The *Abhidharmakośa* gives us the following definition regarding the Four Noble Truths: 'The essence of the sixteen aspects of the Four Noble Truths is nothing but *prajñā*'. The

above interpretation confirms the view that the Four Noble Truths are based upon *prajñā* as the keynote of the realisation of truth or emancipation (*vimokṣa*) in Buddhism. It does not mean that the Four Noble Truths were for the first time clarified here only by the Abhidharma method of discriminating all dharmas.

Further, with regard to the pattern of the Four Noble Truths as the realisation of *dharma*, the original meaning of *abhisamaya* should be considered as being 'to grasp completely the reality for oneself and to see rightly the objects'. As *abhisamaya* is all the time connected with the processes of Truth-cognition from the beginning to the end, [4] it is naturally accompanied by its synonyms such as *passanā, anupassanā, paccavekkhana, samatha, vipassanā, vitakka, vicāra, paññā, yathābhūtañāṇadassana, sati, sammādiṭṭhi, yoga, abhisambodhi, sacchikiriyā, adhigama,* &c. These mutual relations connected with *abhisamaya* we shall mention in detail later. In Mahāyāna, Buddhahood has been discussed mainly from the point of view of the realisation of enlightenment. In that connection, the theory of the five distinctions of the nature of sentient beings (*pañca gotrāṇi*) was supported by the Yogācāra schools in opposition to that of the *Saddharmapuṇḍarīka* and *Gaṇḍavyūha Sūtras*. The *Laṅkāvatāra Sūtra* mentions the *pañca gotrāṇi* as consisting of *śrāvakayānābhisamaya-gotra, pratyekabuddhayānābhisamaya-gotra, tathāgatayānābhisamaya-gotra, aniyata-gotra* and *agotra*. The former three have Buddhahood inherently in each. Here is a good example of the use of the word *abhisamaya* in connection with enlightenment and the path of practice.

III. *Abhisamaya in the Sarvāstivāda School:* 'to gradually understand the Four Noble Truths (*anupūrva-abhisamaya*) by the wisdom of non-defilement on the path of observation.' For śrāvakas who follow the steps according to their gradual mental developments, there are the path of observation (*darśana-mārga*), the path of repeated practice (*bhāvanā-mārga*) and the ultimate path of the arahant (*aśaikṣa-mārga*). As in the previous stages of the path of observation, there are two kinds of preliminary training by which the unenlightened men (*pṛthagjana*) can acquire the wisdom of non-defilement so as to be able directly to enter the first stage of sainthood, i.e., the path of observation.

The first stage of training,[5] i.e., the path of accumulating merit, in which various roots of virtue (*kuśala-mūla*) connected with defilements should be practised, is divided into three degrees : (1) the five kinds of mindfulness, i.e., *asubhabhāvanā-smṛti, maitrī-smṛti, idam-pratyayatā-pratītya-samutpāda-smṛti, dhātu-prabheda-smṛti* and *ānāpāna-smṛti*; (2) the respective contemplation on the four *smṛti-upasthāna* from both their particular and common aspects and (3) the comprehensive contemplation of the four *smṛti-upasthāna* from their common aspects. In the first stage *śamatha* is practised, and *vipaśyanā* is practised over the remaining stages.

The second stage of preliminary training[6] is called the *nirvedha-bhāgīya*, by which is meant that the roots of virtue connected with defilements have an activity that leads to the path of observation. It has four subdivisions, the first being the stage of attainment of heat (*uṣmagata*). This means the rising of the roots of virtue and resembles the previous notice of fire which could burn up defilements in the path of observation, just as heat would be a previous indication of fire. According to the degree of heat, the Four Noble Truths connected with the world of desire (*kāma-dhātu*) and the worlds of form and formlessness (*rūpa-dhātu, arūpa-dhātu*) should be meditated upon by understanding their sixteen aspects, namely the aspects of impermanence (*anitya*), suffering (*duḥkha*), non-substantiality (*śūnya*) and non-self (*anātmaka*) as constituting the truth of suffering (*duḥkha-satya*); aspects of cause (*hetu*), driving force (*samudaya*), process (*prabhava*) and relation (*pratyaya*) constituting the truth of origination (*samudaya-satya*); aspects of extinction (*nirodha*), pacification (*śānta*), perfection (*praṇīta*) and deliverance (*niḥsaraṇa*), constituting the truth of extinction (*nirodha-satya*); aspects of path (*mārga*), method (*nyāya*), attainment (*pratipatti*) and way of deliverance (*niryāṇika*), constituting the truth of the path (*mārga-satya*).

The second, the attainment of the climax (*mūrdhagata*), is a more progressive stage than the former. As the stage producing the most prominent roots of virtue out of other unstable ones it is called the climax, such as is the head for a person or the peak for a mountain. As much as in the stage of heat here, too, the Four Noble Truths and their sixteen aspects can be meditated upon to approach this climax of accumulating virtues.

The stage of steadfastness (*kṣānti*) is a stage of producing the unchangeable roots of virtue caused by a clear cognition of the Four Noble Truths. It has three subdivisions, i.e., the low (*mṛdu*), the intermediate (*madhya*) and the high (*adhimātra*). The first and second stages demand repeated meditation on the Four Noble Truths and their sixteen aspects. In order to deepen the meditation which induces the pure wisdom of non-defilement, the entrant into the stage of the intermediate adopts a method of meditation on the Four Noble Truths, called 'decreasing objects and their aspects'.[7] Thereby one of four aspects belonging

---

4 E. Obermiller, *The Doctrine of Prajñā-pāramitā*, (p. 7, note): 'In the Tibetan tradition abhisamaya and mārga are always spoken of as synonymous—mṅon-rtogs daṅ lam don-gcig.'

5 This stage is called ***dharma-abhisamaya***. cp. ibid. p. 19, note.

6 This stage is called ***artha-abhisamaya. Artha*** is to be understood in the sense of ***pravacana-artha*** (Sa-lam Jig. 5 & 6; cp. ibid. p. 20, note.

7 The intermediate has 32 aspects which multiply the 16 aspects of the 4 truths by 2 (***kāma-dhātu*** and ***rūpa-arūpa-dhātu***). At first, the truth of suffering concerning ***kāma-dhātu*** is meditated on with 4 aspects allotted to the truth of suffering, and taking the following aspects in turn. It comes at the end of the meditation on the truth of the path concerning ***rūpa-arūpa-dhātu***. On this occasion, the last aspect of ***nairyāṇika*** among four aspects should be omitted or decreased. The above meditations are called the first circuit. Then the next circuit begins, but at the last meditation the third aspect of ***pratipatti*** should be omitted. In every 4 circuits, the decreasing of object (each truth) can be done. When 31 circuits, including 7 of decreasing objects and 24 of decreasing aspects, have been held, the aspect of ***anitya*** needs to be meditated on as the last one to enter into the stage of the highest.

- S P C 97040

to the truth of suffering connected with the world of desire can be meditated upon in two moments. Next, the same aspect which should be understood in one moment becomes an object of meditation in the stage of the high.

The fourth stage of highest mundane virtues (*laukika-agra-dharma*) is a state during which there is an accumulation of the highest virtues among the mundane virtues characterised by defilements. As in the former state, one aspect of the truth of suffering can be meditated in one moment. And its following moment will directly lead to the path of observation. These four kinds of virtue according to the above-mentioned stages which next occur during preliminary training consist of the wisdom by practice which is regarded as the origin of undefiled virtues in the path of observation and the other paths following it. Speaking of meditation in connection with the stage of preliminary training, it may be said that *saccābhisamaya*,[8] as a secondary and preliminary method, is to be found in all the stages. However, the true merit and activity of *abhisamaya* could be better appreciated in the path of observation.

According to the theory of the Sarvāstivāda (e.g., *Abhidharmakośa*, chapter vi) there are two kinds of undefiled wisdom (*anāśravajñāna*) by which the Four Noble Truths can be fully understood on the path of observation. One is the cognition of the unimpeded path (*ānantarya-mārga*) which directly removes defiling forces (*prāpti*) without any hindrances. The other is the comprehension of the path of deliverance (*vimukti-mārga*) which takes place as soon as the defiling forces have been removed. The relation between cognition and comprehension is similar to what happens when robbers are first driven away and the door is then closed firmly. From the viewpoint of the objects of meditation on the Four Noble Truths, these two kinds of undefiled wisdom are classified into 'sixteen moments' (*soḍaśa-kṣaṇāḥ*) consisting of eight cognitions and eight comprehensions which are allotted to the world of desire and worlds of form and formlessness. The sixteen moments are meditated upon in the following order. (1) The cognition of the truth of suffering (*duḥkhe dharma-jñāna-kṣāntiḥ*) concerning the world of desire, (2) the comprehension of the truth of suffering (*duḥkhe dharma-jñānam*) concerning the world of desire, (3) the subsequent cognition on the truth of suffering (*duḥkhe'nvaya-jñāna-kṣāntiḥ*) concerning the worlds of form and formlessness, (4) the subsequent comprehension of the truth of suffering (*duḥkhe-'nvaya-jñānaṃ*) concerning the worlds of form and formlessness. Similarly, regarding the truths of origination (*samudaya*), extinction (*nirodha*) and the path (*mārga*), the other moments are respectively allotted to the three worlds.

The last moment, i.e., the 16th, the subsequent comprehension of the truth of the path (*mārge 'nvaya-jñānaṃ*) concerning the worlds of form and formlessness, belongs to the path of repeated practice that is subsequent to the path of observation, since at this moment the meditation on the Four Noble Truths which has already been practised in fifteen moments should be repeated again.[9] These fifteen moments belong to the path of observation. Therefore, in the Sarvāstivāda school, the meditation concerning these sixteen moments is called *satya* (*sacca*)-*abhisamaya*,[10] and the word *abhisamaya* is only combined with the path of observation and is not applied to any paths. From the viewpoint of the classification of the meditator's mental developments, the path of observation belongs to the 'path of stream entering' (*śrota-āpanna*). Regarding the sixteenth moment, however, the 'result of stream-entry' (*śrota-āpatti-phala*) is thereby attained.

There is the theory of three *abhisamaya* which is explained in the *Abhidharmakośa* (chapter on *Ārya-pudgala*). The above mentioned *Saccābhisamaya*, as an aspect of the activity of wisdom (of non-defilement), is divided into three : (1) '*abhisamaya* of seeing' (*darśana-abhisamaya*) which means the Four Noble Truths should be seen by wisdom ; (2) '*abhisamaya* of application' (*ālambana-abhisamaya*) which means that wisdom and the mind and mental function associated with that wisdom apply to the Four Noble Truths as the object of meditation ; (3) '*abhisamaya* of resultant' (*kārya-abhisamaya*) wisdom, the mental function associated with that wisdom, the substantial element without manifestation (*avijñapti-rūpa*) and the four conditioned aspects (birth, stability, decay and extinction) co-operate with each other in performing the four actions of comprehension (*pariññā*), abandonment (*pahānaṃ*), realisation (*sacchikiriyā*) and practice (*bhāvanā*) of the Four Noble Truths. The full understanding of the truth of suffering is always accompanied by these three *abhisamayas* (*darśana*, *ālambana* and *kārya*), while there is on the other hand only the resultant realisation (*kārya-abhisamaya*) in respect of the other three truths. Thus, if there is no *darśana-abhisamaya* of the truth of suffering there will be at that time no understanding of any other truth. And also if there is no application (*ālambana*) to the truth of suffering, the other three truths will not appear as objects.

Similarly, each of the Four Noble Truths may have a threefold *abhisamaya*, in which case there is only the resultant *kāryābhisamaya* in respect of the other three truths.

Now, the *saccābhisamaya* of the Sarvāstivādins is characterised by the theory of *anupūrva-abhisamaya* (gradual understanding). According to the Sarvāstivāda view the Four Noble Truths should be fully understood separately in a gradual order of the sixteen moments. If one maintained the theory of *ekakṣaṇa-abhisamaya* (instant understanding) without meditating in due order on the sixteen moments, it could be said that there is no mistake about this theory even from the view point of *kārya-abhisamaya* (*abhisamaya* of resultant). But, as the aspects of the Four Noble Truths are separated from each other, they should be in turn meditated upon by way of *anupūrva-abhisamaya*

---

8 The path of observation is called *satya-abhisamaya*. cp. E. Obermiller, op. cit. p. 21, note.

9 Pu-kuang (普光): *Chu-she-lun-chi* (俱舍論記), xxiii.

10 *Abhidharmakośa*, vi, *v*. 27 'evaṃ ṣoḍasacitto yam satyābhisamayaḥ'.

which is not the case with *ekakṣaṇa-abhisamaya* or instantaneous realisation from the standpoint of *darśana-abhisamaya* (*abhisamaya* of seeing).

The sixteen moments seem to have been set up as stages of obtaining the undefiled wisdom (*anāśravajñāna*) through the full understanding of the Four Noble Truths. It may be said that these orderly stages were too analytic or abhidharmic to be suitable for practical meditation. This fact, perhaps, could be attributed to the result of strictly analysing the characteristics of *abhisamaya*. One who has attained the 'result of entering the stream of sainthood' (*śrota-āpatti-phala*) is expected to practise meditation in the successive stages of sixteen moments so as to get two kinds of emancipation of which one is *cetovimutti* or that indicating the extinction of defilement by way of cognition (*dharma-jñāna-kṣāntiḥ*), the other *paññāvimutti* which means the extinction of ignorance (*avijjā*) by way of comprehension (*dharma-jñāna*). Nevertheless, if the meditation on the Four Noble Truths has to be gradually practised in sixteen moments, nobody could ever attain arahantship which is regarded as the ultimate result for śrāvakas. If the realisation of enlightenment needs an order of meditating grades and stages or a selection of the periods of meditation according to mental faculties, there will occur various opinions and questions. Generally speaking, enlightenment at least in connection with the meditation on the Four Noble Truths should be combined not with stages for śrāvakas, but with *abhisamaya*. We shall discover valid reasons for this when we discuss other schools. Among schools there existed two characteristic standpoints, i.e., the theory of gradual understanding (*anupūrva-abhisamaya*) and the theory of instant understanding (*ekakṣaṇa-abhisamaya*) which were seemingly in opposition to each other.

IV. **Abhisamaya in the Vibhajjavāda School and Harivarman's standpoint:** 'Advocating the theory of instant understanding (*ekakṣaṇa-abhisamaya*) on the Four Noble Truths':

(1) The *Visuddhimagga* deals with the theory of instant understanding in the section of 'Purification by Knowledge and Vision' (*ñāṇa-dassana-visuddhi-niddesa*). In each one of the four kinds of path-knowledge (the path of stream-entry, the path of once return, the path of non-return and the path of arahantship) there are respectively exercised four simultaneous functions, i.e., comprehension, abandonment, realisation and practice, which occur in one single moment. Then, the Four Noble Truths should be, in one single moment, fully understood. By applying similes such as that of the lamp, sun and boat to the above idea, the *Visuddhimagga* interprets the standpoint of the Vibhajjavādins. As the lamp burns the wick, so his path-knowledge comprehends suffering; as the lamp dispels the darkness, so his knowledge abandons the origin; as the lamp makes the light, so knowledge (as the right view) develops the path, that is, the states consisting in right thinking, &c., by acting as co-nascence, &c. for them; and, as the lamp uses up the oil, so the knowledge realises the extinction, which brings defilements to an end.[11]

Further, the simultaneous comprehension of the Four Noble Truths can be acquired in the sense of the sixteen aspects included as one in the Four Noble Truths as follows: oppression (*pīḷana*), being formed (*saṅkhata*), torment (*santāpa*) and change (*vipariṇāma*) as regards the truth of suffering; accumulation (*āyūhana*), source (*nidāna*), bondage (*saṃyoga*) and obstacle (*paḷibodha*) as regards the truth of origin; deliverance (*nissaraṇa*), detachment (*viveka*), being not formed (*asaṅkhata*) and immortality (*amata*) as regards the truth of extinction; departure (*niyyāna*), cause (*hetu*), seeing (*dassana*) and dominance (*ādhipateyya*) as regards the truth of the path.

For instance, in the case of the truth of suffering, a sickness like a stomach-ache is illustrated. "Origin has the characteristic of *accumulating* as its individual essence; but its *sense of source* becomes evident through seeing Suffering, just as the fact that unsuitable food as a source of a sickness becomes evident through seeing how a sickness arises owing to such food. Its *sense of bondage* becomes evident through seeing Cessation which has no bonds. And its *sense of impediment* becomes evident through seeing the Path, which is the outlet".[12] Following a suggestion in the *Visuddhimagga* about those who insist on *abhisamaya* that the different truths are comprehended separately, they are well mentioned in the *Kathāvatthu* (II, 9: *Anupubbābhisamayakathā*). There is an opinion about gradual understanding which rests incorrectly on such words in the sūtras as that the wise man gradually rubs off his own dirt each moment just as the silversmith removes rust from silver. And, one who is on the path of realising the result of stream-entry abandons a part of defilement through the view of suffering and other parts respectively through the view of origin, extinction and path. On the other three paths, the same matter is repeated. Thus, in these sixteen sections he makes gradually an abandonment of defilement to attain arahantship. Among those who would have such a heretical opinion as that *abhisamaya* should be separately practised in each of the truths (*ñāṇa-abhisamaya*), there are, for instance, the Andhakas, Sabbatthivādins, Sammitīyas, Bhadrayānikas, &c., (*Kathāvatthuppakaraṇa-aṭṭhakathā*, p. 58). Further, regarding *odhisokathā* (*Kvu.* I, iv) Buddhaghosa comments there is an opinion called *odhisokathā*. Among those who at present would have the partial abandonment of defilement, through the view of suffering, &c., which is based on the full understanding of meditation (*jhānābhisamaya*) in the paths of stream-entry, &c., there are Sammitīyas, &c. In order to break down their heretical doctrine, one who asked 'Is there any partial abandonment of defilement?' is of our school. One who answered 'Yes' is of another school as Sammitīya, &c. (ibid. p. 42).

The *odhisokathā*, which is criticised here by Buddhaghosa, is our *anupubbābhisamaya* (gradual understanding).

12 *The Path of Purification* (*Vism.* trsl. Bhikkhu Ñāṇamoli), pp. 810-811.

Among schools belonging to Theravāda, the Vibhajjavādins who had differences with Sarvāstivādins in connection with the *abhisamaya* theory, seem to have been more lacking in its detailed interpretation than the latter. Meanwhile, the Mahīsāsakas (one of two branches of Theravāda) of whom Sarvāstivādins and Dharmaguptas were further divisions, were in opposition to the Vajjiputtakas, regarded as the other branch of the Theravāda. Bhadrayānikas and Sammitīyas, whom Buddhaghosa criticised, belonged to the Vajjiputtakas. According to Buddhaghosa's criticism and records[13] of schism in the Saṅgha, therefore, we may point out that Mahīsāsakas (original), Dhammaguttas and Vibhajjavādins were in close contact with each other. They stand on the theory of instant understanding as much as the Mahāsaṅghikas. The Andhakas who are derived from the Mahāsaṅghikas hold the opposite opinion from the latter.

(2) The *Satya-siddhi-śāstra* (Ch'êng-shih-lun 成實論) written in India about 300 A.C. by Harivarman who was the founder of the Ch'êng-shih Tsung sect (Jōjitsu-shū sect 成實宗), expressed its criticism on the *abhisamaya* theory of the Sarvāstivādins. *Satya-siddhi-śāstra*, referring to the Sarvāstivādins' theory of gradual understanding, gives us interesting disputations from the view point of instant understanding.[14]

By presenting some eight theses, Harivarman tries to criticise one by one the arguments expressed in the *Abhidharmakośa* which consist of three sūtra-quotations and three similes. The Sarvāstivādin says: there is an extinction of the view of non-being as soon as one sees the origination (*samudaya*) in the world, and there is an extinction of the view of being as soon as one sees the extinction (*nirodha*) in the world. Hence the two aspects of origination and extinction are different from each other. Against this he expresses an opposite view, "you fail to recognise your own grounds" and, "the path of enlightenment should not be obtained by only sixteen moments and twelve aspects." On the practice for extinguishing various evils and defilements he repeatedly emphasises that the practice cannot be limited to sixteen moments but it really needs innumerable moments. Further, on the gradual practices he opposes the arguments based on a sūtra thus: there arise the eye of insight (*cakkhu*), knowledge (*ñāṇa*), consciousness (*vijjā*) and wisdom (*paññā*) in each of the truths; there are twelve aspects consisting of the three-fold preaching, and further there are sixteen moments. He answers: the Buddha preached that one can get *cakkhu*, *ñāṇa*, *vijjā* and *paññā* in the Four Noble Truths but never stated that there are sixteen moments which should be gradually taken for practices. Lastly, criticising a sūtra quotation which is taken as the effective ground of the Sarvāstivādins' argument and saying that to gradually understand truths is just like going up a flight of stairs, step by step, Harivarman declares, "I have never learnt this sūtra. Even though there is such a sūtra, it must be laid aside because it does not correspond to the characteristics of dharma (*dharmalakṣaṇa*)."

Harivarman has been influenced by the Suttavāda (which is a sub-sect of Theravāda) as well as the Mahīsāsaka, Dhammagutta, Kassapīya, Vibhajjavāda and so on. According to his opinion of *abhisamaya*, therefore, he seems to have had the same opinion as the Vibhajjavādins so far as the *abhisamaya* theory is concerned.

The theory of gradual understanding (*anupūrva-abhisamaya*) will further show us its developed patterns in Mahāyāna Buddhism especially in the Vijñānavāda, i.e., Yogācāra school.

V. Abhisamaya in the Vijñānavāda School: (1) *The six kinds of Abhisamaya.* The *Vijñapti-mātratā-siddhi-śāstra* explains the five paths of the bodhisattva's practice which are necessary for the attainment of the ultimate meaning of *Vijñaptimātratā*. The paths respectively correspond to the Sarvāstivādins' paths which have already been mentioned. These are as follows: (1) the path of accumulating merit (*sambhāra*) which includes those stages ranging from the stage of aspiration for enlightenment to the stage of the ten kinds of merit-transference. This path is called *mokṣa-bhāgīya* or *ekādhimuktika* from the Vijñānavāda point of view; (2) the path of training (*prayoga*) which corresponds to the stages of heat, climax, steadfastness and highest mundane virtues in the Sarvāstivāda and of which *nirvedha-bhāgīya* or *adhimukticaryābhūmi* is given as another name; (3) the path of penetrating (*nirvedha*) which corresponds to the path of observation (*darśana-mārga*) and also to the first ground of the bodhisattva, i.e., *pramuditā-bhūmi*; (4) the path of repeated practice (*bhāvanā*) ranging from the second ground (*vimalā-bhūmi*) to the tenth ground (*dharmameghā-bhūmi*) of the bodhisattva; (5) the path of ultimate result (*niṣṭhā-mārga*) which is the state of the enlightenment of the Buddha.

In spite of the adoption of the order of paths treated in Sarvāstivāda, the content and the purpose of the above five paths are different from it, since the Vijñānavādin aims at the attainment of Buddhahood through ways of meditation of *vijñaptimātratā* (consciousness only). Every kind of attachment and defilement (*ātma-dharma-grāha* and *kleśa-jñeya-āvaraṇa*) should be abandoned within the five paths to realise the thus-ness (*tathatā*) due to the non-substantiality and to continue the practice of wisdom which is conducive to the attainment of Nirvāṇa and Bodhi. As

14 Chinese translation *Ch'ng-shih-lun* chap. xxvi *anupūrva* (-*abhisamaya*)(?) and chap. xxvii *ekakṣaṇa* (-*abhisamaya*) (?). Harivarman seems to have belonged to Suttavāda and developed the thought of Suttavāda in his *Satya-siddhi-śāstra*. Vasubandhu, in his youth, studied *Abhidharma-mahā-vibhāṣā* at Kaśmīra and wrote *Abhidharmakośa* as a summary of Sarvāstivāda though from a critical viewpoint which has been influenced by Suttavāda. Saṅghabhadra criticised the *Abhidharmakośa* from the traditional interpretation on Sarvāstivāda and then wrote *Abhidharma-nyāyānusāra*. Later Vasubandhu changed over to the Mahāyāna under the guidance of his brother Asaṅga (about A.C. 310–390) and became the systematiser of Vijñānavāda (Yogācāra). Here, we are dealing with the *Abhidharmakośa* as a representative summary of Sarvāstivāda.

abhisamaya has so far been almost connected with the paths of training (*prayoga-mārga*) and observation (*darśana-mārga*), we may here also trace the relation between *abhisamaya* and these two paths in the Vijñānavāda doctrine.

On the path of training (*abhimukticaryā-bhūmi* in Vijñānavāda) there are two kinds of meditation which lead to the path of observation where the bodhisattva may be expected to realise the truth. One is meditation on the four investigations (*catasraḥ paryeṣaṇāḥ*) which is practised in the stages of heat and climax. The other is meditation on the four intuitions of thus-ness (*catvāri yathābhūta-parijñānāni*) which belongs to the stages of steadfastness and highest mundane virtues. The former consists of *nāma-paryeṣana*, *vastu-p°*, *svabhāva-prajñapti-p°*, and *viśeṣa-prajñapti-p°*. Regarding the objects of our cognition, the following four things are to be investigated and cognised: (1) name (*nāma*), (2) matter (*vastu*), (3) own nature (*svabhāva*) and discrimination or attribute of own nature (*viśeṣa*) which are provisional and non-substantial. When these investigations about the four aspects of a thing are first practised in the stage of heat, it can also be done by the meditation of obtaining the light (*ālokalabdhaḥ samādhiḥ*), which brings about signs of an appearance of undefiled wisdom. As for the stage of climax, these investigations are further deepened in this stage through the practice of the meditation of increasing the light (*ālokavṛddhiḥ samādhiḥ*) which is more subtle and higher than the meditation of obtaining the light. The latter, the meditation on intuition of thus-ness is also subdivided into four as follows: *nāma-esanā-gata-yathābhūta-parijñāna*, *vastu-e°*, *svabhāva-prajñapti-e°*, and *viṣeṣa-prajñapti-e°*. These kinds of intuitive wisdom which have been brought about by the four investigations go further on to abandon even the subject itself of meditator which has concentrated on the realisation of non-substantiality of objects at the two previous stages.

In the accomplishment of non-substantiality concerning object and subject there are two meditations needed. One is the meditation of penetrating to a part-meaning of thus-ness (*tattvārthaikadeśānu-praveśaḥ samādhiḥ*) which belongs to the stage of steadfastness where first the non-substantial object is realised in the lowest stage of steadfastness, and secondly, the non-substantial subject is meditated upon in the intermediate and thirdly, the non-substantial subject is realised in the highest stage. The other is the unimpeded meditation (*ānantarya-samādhiḥ*) belonging to the stage of highest mundane virtues. As this stage can produce much higher intuitive wisdom than the stage of steadfastness, at the last moment of this stage the undefiled wisdom called the original wisdom (*mūla-jñāna*) will be brought about in order to understand fully thus-ness and phenomenon as being equal and indiscriminative from one another. This moment leads to the path of penetrating, i.e., the path of observation.

The path of penetrating is divided into two. One is the path of seeing the thus-ness, where the original wisdom (*mūla-jñāna*) can realise thus-ness in its essence, when our acquired knowledge based upon adherence to object and subject will be removed through the way of the so called 'two kinds of non-substantiality in Vijñānavāda meditation'. There, in this case, are the abandonment of defilements at a moment of the unimpeded path (*ānantarya-mārga*) and also the abandonment of the perfuming (potential) power of defilements at a moment of the path of deliverance (*vimukti-mārga*). After this, the other, called the path of seeing the aspects of thus-ness, should be practised by means of the posteriorly acquired wisdom (*pṛṣṭha-labdha-jñāna*) which aims at fully understanding the discriminative aspects of phenomena based on the equality of themselves. Accordingly this is sub-divided into two, i.e., the path of three moments, that is the thus-ness realised by non-substantiality in connection with self and existence (*ātma-dharma-śūnyatā*) should be in three ways meditated upon from the absolute aspect of thus-ness, and the path of sixteen moments, that is the above-mentioned sixteen moments of Four Noble Truths should be meditated upon in the same manner as that of Sarvāstivāda. As there still remains a certain defilement despite the striving for extinction of the acquired defilement, therefore the path of repeated practice is necessarily demanded for the sake of cultivating the original wisdom as was done in the former path, and it is also expected to remove the inherent defilement in order to accomplish the complete abandonment of defilements—even in moral and intellectual hindrances (*kleśa-āvaraṇa* and *jñeya-āvaraṇa*).

Comparing with the *satya-abhisamaya* in Sarvāstivāda, Vijñānavāda (Yogācāra) shows us a considerably different pattern in its five paths of the bodhisattva's practice. As the name itself indicates, the purpose of Yogācāra consists in practical meditations on Yoga, which are divided into object, practice and result. Especially, to master the principles of *vijñaptimātratā* (consciousness only) and *madhyamā-pratipadā* (middle path), the yogic grounds (*yogācārabhūmi*, in the meaning of Vijñānavāda practice) numbering seventeen, have necessarily to be taken by the meditator (*yogācārin*). In spite of the adoption of the system of stages of practice in Sarvāstivāda, generally speaking, the content of the five paths in Yogācāra is quite different from Sarvāstivāda. For instance, the sixteen aspects of the Four Noble Truths which are to be practised in the path of training in Sarvāstivāda have been alternated with two meditations concerning four investigations and four intuitions of thus-ness in Yogācāra. Moreover, the sixteen moments of the Four Noble Truths regarded as the main practice in the path of observation have been merely taken up as a part of the path in Yogācāra. According to the purpose of the path of observation, Yogācāra emphasises the realisation of thus-ness which should be revealed by two kinds of non-substantiality (*śūnyatā*) from the *vijñaptimātratā* point of view. Such a practice has to be continuously repeated till the ultimate result is attained by the meditator. On the other hand, the fact that *nirvedhika, niścaya, viniścaya, paryeṣaṇā* and *yathā-bhūta-parijñāna*, &c., have been dealt with in Yogācāra as being synonymous with *abhisamaya* should be taken into consideration. This is nothing but a proof

showing that *satya-abhisamaya* has been raised to the standpoint of *vijñaptimātratā* through relations between wisdom (*prajñā*) and practical ground of mind (*citta-bhūmi*) in Mahāyāna thought. Nevertheless, the important commentaries of Yogācāra that followed the abhidharma compilation contain various kinds of *abhisamaya*.

Among these classifications,[15] the theory of six kinds of *abhisamaya* such as is referred to in the *Vijñaptimātratā-siddhi-śāstra*, &c., can be considered as a representative example. The six are as follows. (1) *Abhisamaya* of thought: The wisdom consisting of thought (*cintāmayī-prajñā*) accompanied by an acceptance of joy (*saumanasya-vedanā*) can produce a wisdom which is able to observe in the path of training all the common aspects of existence. Then, the wisdom consisting of thought is called *abhisamaya* of thought. (2) *Abhisamaya* of faith: Absolute faith belonging to defilement (*āśrava*) and non-defilement (*anāśrava*) towards the three treasures (Buddha, Dhamma and Saṅgha) is conducive to the activity of *abhisamaya* so as to make it non-regressive. (3) *Abhisamaya* of discipline: The discipline of non-defilement (*anāśrava-saṃvara*) causes a removal of any dirt and makes *abhisamaya* in its action clear and sharp. (4) *Abhisamaya* of wisdom: This consists of two kinds of wisdom which occur in the paths of observation and repeated practice. One is the original wisdom (*mūla-jñāna*) which observes the essence of thus-ness, i.e., the equality of all existences. The other is the posteriorly acquired wisdom (*pṛṣtha-labdha-jñāna*) which, after realising the equality, observes separately aspects of existence in their own discrimination. (5) Wisdom of ending in *abhisamaya*: At the ending of the *abhisamaya* of wisdom, there will be brought about a wisdom belonging to the range of defilement and non-defilement. This can observe the aspect of thus-ness in differentiated modes of existence. This wisdom is also connected with the two paths of observation and repeated practice. (6) *Abhisamaya* of the ultimate path: This *abhisamaya* includes the ten kinds of wisdom that are exercised in the path of ultimate result. Then, the former three *abhisamayas* will be attributed to the category of *abhisamaya* of resultant (*kārya-abhisamaya*) which has been mentioned in Sarvāstivāda, for they are associated with *abhisamaya* to promote or produce its activities. The remaining three will be considered as those which show the own nature of *abhisamaya*, because *abhisamaya* is closely connected with wisdom in its essence. The name of *abhisamaya*, therefore, is something in common throughout the paths of observation, repeated practice, ultimate result and training; the original wisdom and the posteriorly acquired wisdom; defilement and non-defilement; concentration and distraction.

When this is compared with the Sarvāstivāda definition of *abhisamaya*, we can point out considerable differences between the two schools. To the Vijñānavāda *abhisamaya* is not only connected with the path of observation but with the path of training and others, and is common to both defilement and non-defilement. This means that the Vijñānavādins came to a stage where no more traditional definition on *abhisamaya* was necessary for manifesting the true meaning of *abhisamaya* as the result of constant researches for wisdom and its practice, inasmuch as these were to be actually realised by bodhisattvas.

Now, we can return to explain 'Wisdom of ending in *abhisamaya*'. According to Sarvāstivāda opinion, 'ending in *abhisamaya*' means a kind of wisdom relating to defilements which has been brought about by taking mundane things as objects in meditation. That is to say, among the above-mentioned sixteen moments of *abhisamaya*, when the three subsequent comprehensions belonging to the truths of suffering, origin and extinction are about to arise, the wisdom of ending in *abhisamaya* simultaneously takes place. As regards 'Wisdom of ending in *abhisamaya*', it is restricted to the three truths, since it has sometimes exercised its actions of cognition, extinction and realisation in these three truths. It is also far beyond the object of meditation for the subsequent comprehension of the truth of the path, in as much as it has been originally attributed to mundane wisdom, by which the truth of the path cannot be practised at all. Moreover, this wisdom, as the defiled and the mundane, is regarded as one of absolute non-appearance (*atyantānutpāda*) which means that it can never come into existence without a possibility of its being expected to appear in future, so long as extinction independent of the force of wisdom (*apratisāṅkhya-nirodha*) as an unconditioned element (*asaṃskṛta-dharma*) still prevents a present appearance of the wisdom. As against the Sarvāstivāda definition there are different opinions taken by schools such as the Sautrāntika (Suttavāda), Mahāsaṅghika and Vijñānavāda. The Sautrāntika says: "After performing the meditations in the path of observation, there is an appearance of mundane wisdom which is eminently capable of observing the Truths". The Mahāsaṅghika says: "At the very end of the path of observation, there occurs another wisdom which is called one-moment wisdom of ending in *abhisamaya*. This is able to cognise the differentiation in aspects of the Four Noble Truths." On the word of *abhisamayāntika*, a certain Ābhidharmika says: "Besides meditating on the noble truths, Yogācārins acquire wisdom at the same time. Hence this wisdom is called *abhisamayāntika*." The *Mahāyāna-saṅgraha* written by Asaṅga represents quite a different opinion which seems to have been in accord with an idea of Ghoṣaka who remarked that as this wisdom is near to *abhisamaya*, the name of *abhisamayāntika* is given to it. Asaṅga defines *abhisamayāntika* as follows: "Prior to the path of observation, the four samādhis (*ālokalabdhaḥ samādhiḥ*, &c.) to be practised in the path of training are called *abhisamayāntika*."

---

15 Six kinds of *abhisamaya* are given in *Yogācāra-bhūmi-śāstra* (瑜伽師地論), *Hien-yang-sheng-chiao-lun* (顯揚聖教論), *Vijñaptimatrata-siddhi-śāstra* (成唯識論), &c.; four, seven, and eighteen kinds of Abhisamaya in *Hien-yang-sheng-chiao-lun*: ten kinds in *Mahāyānābhidharmasamuccaya* (大乘阿毗達磨集論): eleven kinds in *Mahāyānasaṅgraha* (攝大乘論); eight kinds in *Abhisamayālaṅkāra* will be mentioned in our following section.

Abhisamayāntika in Vijñānavāda, as we have already mentioned, is defined as the wisdom including both the defilement and the non-defilement which has been brought about at the end of performing the *abhisamaya* of wisdom, and is characterised by the function of cognising the concrete aspects of thus-ness.

Accordingly it may be concluded that the Mahāyānistic schools, being opposed to the "wisdom of ending in *abhisamaya*" which was defined as the non-coming into existence, have been obliged to develop its meaning by adding the "wisdom of defilement" which can perform in the cognition of differentiated aspects of thus-ness in association with the "wisdom of non-defilement", because in Sarvāstivāda, the activities of *abhisamaya* were limited to the range of wisdom of non-defilement.

2. *The Eight Kinds of Abhisamaya in Abhisamayālaṅkāra.* Various classifications of *abhisamaya* in the Vijñānavāda school, except the six kinds of *abhisamaya* mentioned above, were made in attempts to discuss the comparative merits of Mahāyāna and Theravāda in connection with their own paths of practice. Let us now deal with the *Abhisamayālaṅkāra* which provides an outstanding example of the Mahāyāna pattern.

The *Abhisamayālaṅkāra* is a commentary by Maitreya-nātha on the *Prajñāpāramitā Sūtra*, and was written at the request of Asaṅga. As we have a detailed interpretation on it called *Abhisamayālaṅkāra-āloka* by Haribhadra (about 8th cent. A.C.) which includes 272 verses composed by Maitreya-nātha and as the *Aṣṭasāhasrikā-prajñāpāramitā Sūtra* has referred to each of the verses, it is possible to understand the practical aspect of the *Prajñā-pāramitā Sūtra* which deals from the first stage of aspiration for enlightenment to the ultimate stage of attainment of Buddhahood. The system of practice treated in the *Abhisamayālaṅkāra* has exercised its influence on Mahāyāna Buddhism in order to make clear the essential differences between Mahāyāna and Theravāda, and also to advocate the Mahāyānist path of practice which was completely based upon the concepts of *prajñā* and *śūnyatā*. The *Abhisamayālaṅkāra* has eight chapters corresponding to eight *abhisamayas* to represent the three meanings of *prajñāpāramitā*. They are as follows: (1) the wisdom of all aspects (*sarva-ākāra-jñātā*), (2) the wisdom of the paths (*mārga-jñātā*), (3) the wisdom of all things (*sarva-jñātā*), (4) the realisation of the wisdom of all aspects (*sarva-ākāra-abhisambodha*), (5) the summit of the full understanding (*mūrdha-abhisamaya*), (6) the gradual full understanding (*anupūrva-abhisamaya*), (7) the instant full understanding (*ekakṣaṇa-abhisamaya*) and (8) the realisation of Dharma-body (*dharma-kāya-abhisambodha*).

The wisdom of all things (No. 3 above) should be practised in order to comprehend the entirety of dharmas in which the five elements and the twelve bases, &c., are included. Next, by practising the wisdom of the paths (No. 2 above), the paths of śrāvakas, pratyeka-buddhas, and bodhisattvas must be understood. In order to grasp completely the reality of all existence, the wisdom of all aspects (No. 1) should be practised. This is regarded as the fundamental wisdom and the central concept of the *Prajñā-pāramitā Sūtra*. These three classifications are derived from the interpretation on a theoretical basis of *prajñā-pāramitā*. Meanwhile, the four following *abhisamayas* (i.e., chs. 4-7) represent the concrete and detailed ways of practice of the six *prajñā-pāramitā*. The realisation of the wisdom of all aspects (4) is a stage to be practised by the bodhisattva in order to obtain freedom through meditation synthesised with the three former wisdoms. The summit of the full understanding (5) needs to be practised in order to acquire the ultimate realisation resulting at the last moment, by means of entering into the path of superiority (*viśeṣa-mārga*). Further, in order to make clear, firmly grasp and put into order the whole content of *abhisamaya* which have been practised so far, the thirteen *dharma* including the six *pāramitā*, the six kinds of mindfulness (*anusmṛti*) and the full understanding of all *dharma* as having no existence of their own being (*sarva-dharma-abhāva-svabhāva-avabodha*) should be gradually understood (6). After this, instant full understanding (7) can be realised in one single moment as a result of practising the four kinds of *dharma* having non-defilement. Last of all, at the second moment, the realisation of *dharma*-body (8) will be brought about as a natural course of practice.

Let us consider several features concerning *abhisamaya* found in this book. Compared with the paths of training of a bodhisattva and a śrāvaka (including pratyeka-buddha), the bodhisattva is superior to the śrāvaka in five points. The four aids to penetration (*vv.* 25-36). The distinctive superiority of the bodhisattva and the protector (the Buddha) over the disciples and pratyeka-buddhas with regard to the degrees of heat (summits, patience and highest mundane dharmas), distinguished as weak, medium and strong, results from: (1) their objects (*ālambana*: *vv.* 27-33), (2) their aspects (*ākāra*: *vv.* 27-33), (3) their causality (*hetutva*) which leads to the attainment of understanding in all the three vehicles (*v.* 27), (4) assistance (*samparigraha*: (*v.* 36) and (5) the connection which, taken in due order, they have with the four kinds of false discrimination (*caturvikalpasamyoga*[16]; *vv.* 34-35). The *Abhisamayālaṅkāra*, from the above standpoint, tries to analyse in detail the essential differences between a bodhisattva and a śrāvaka. Apart from following the traditional interpretation on the practice of śrāvaka such as is mentioned in Sarvāstivāda, the purpose, way and practice in the paths of a bodhisattva are completely coloured with the concepts of *prajñā* and *śūnyatā*. We can verify these patterns in each chapter of the *Abhisamayālaṅkāra*. The sixteen aspects and the sixteen moments, as we have treated so far, have been modified by Mahāyānist interpretations and their own contents have been filled with terms such as *prajñapti-mātratva* (provisionality only), *śūnyatva* (emptiness, non-substantiality), *animittatva* (signlessness), *abhāva-svabhāva* (non-existence of own

---

16 After E. Conze: *Abhisamayālaṅkāra*, p. 13.

being), *anupalambhatā* (non-apprehension), *avikalpanā* (absence of discrimination), *asaṃsthiti* (non-adherence), *prajñā-pāramitā* and so on. It is well said that within the sphere of the wisdom of the paths, the sixteen aspects of the Four Noble Truths, but without taking them as a basis (*anupalambha*), should be known as the path of the śrāvakas (disciples).[17]

The paths of the bodhisattva should be realised step by step on the way of observing the six *prajñā-pāramitā*. It is superior to the paths of a śrāvaka as both these are dealt with in the *Abhisamayālaṅkāra*. Therefore, not being restricted by the interpretation of the Sarvāstivādins in which the word *abhisamaya* has been definitely connected with the Four Noble Truths, *abhisamaya* has now recovered its own original meaning as a result of the elaborate researches on the concepts of *prajñā* and *śūnyatā* which are essential in order to realise the paths of a bodhisattva.

The fact that the *Abhisamayālaṅkāra* uses the word *abhisamaya* as its title no doubt informs us that the Vijñānavāda school made efforts to appreciate highly the true meaning of Buddhist paths of practice through the process of re-organising the traditional paths. In this procedure, the word *abhisamaya* seems to have been regarded as the synonym for the Buddhist path of practice. So far, at least as concerns the *Abhisamayālaṅkāra*, the new expression for Buddhist practice indicates both the creative methods and its contents.

VI. **Enlightenment and Abhisamaya**: As we have frequently stated so far, *abhisamaya* is an expression derived from the practical aspect of enlightenment. Though there have been various kinds of interpretations of *abhisamaya*, the term has been constantly used for clarifying the true sense of the paths of practice since the days of early Buddhism. So far as enlightenment is concerned, the main problem concerning *abhisamaya* was whether enlightenment should be realised gradually or instantly.

Mahāyāna Buddhism, therefore, has faced this problem in an attempt to solve the question. In this connection we shall have to take into consideration the fact that the extinction of defilement, the ways of practice and the content of the realisation of enlightenment, &c., should be dealt with consecutively. We cannot help noticing the disputes about these matters which included two aspects (the gradual and the instant) regarding time, way and mental faculty.

For instance, the Mahāyāna development of the gradual attainment (*anupubba-samāpatti*) and the instant (transcendental) attainment (*samatikkama-samāpatti*) noticed in early Buddhism, the gradual doctrine and the instant doctrine in critical classifications of Mahāyāna Buddhism, the gradually realised bodhisattva and the instantly realised bodhisattva in Vijñānavāda, the instant enlightenment in the Nan-tsung Zen sect, the enlightenment of crosswise leap in the Shin-shū sect, the gradual meditation (*śamatha-vipaśyana*) and the instant meditation in Tendai-shū sect (T'ien-tai Tsung sect), the realisation of the identity of the three-fold truth, the realisation of the middle path with the eight-fold negation, and the bodily attainment of Buddhahood in Shingon-shū sect (Chên-yen Tsung sect) and so on—these are all connected with the above-mentioned two aspects and regarded as the most important doctrines in each of the sects and schools in Mahāyāna Buddhism. Almost all these doctrines stand on the side of the instant realisation of enlightenment, which is based upon the concepts of *śūnyatā* and *prajñā*. It may be said that *abhisamaya* is still kept alive in these doctrines, even if we cannot directly find that word. Being apart from the meaning of *satya-abhisamaya* as treated in Sarvāstivāda, *abhisamaya* has now acquired a genuine and original meaning in its Mahāyānist recovery.

In conclusion, that *abhisamaya* meant the realisation of Dharma and the realisation of Truth has to be repeated again as being one of the basic concepts of the Buddhist practice.

KYŌSHŌ HAYASHIMA.

ABHISAMAYA-HṚDAYA, a Sanskrit text which is extant only in its Tibetan translation, the *Mṅon-par rtogs-pahi sñin-po*, in the Rgyud- Ḥgrel (Tantra) section of the Tibetan Tengyur. The author, Dgon-pa-pa (Āraṇyaka Jñānaśrīmitra) of Kaśmīra, and the Lotsāba Ḥphags-pa Śes-rab translated it into Tibetan (Cordier, III, p. 114 No. 56). The name of the reviser Dpaḥ-bo rdo-rje (Vīravajra) is mentioned at the beginning of the text. This text is, however, not recorded in Tōhoku.

ABHISAMAYA-KATHĀ, the name of the 12th chapter of *Paṭisambhidā*. See PAṬISAMBHIDĀ.

ABHISAMAYA-KRAMA-NĀMA, a Sanskrit text which is extant only in its Tibetan translation the *Mṅon-par rtogs-pahi rim-pa* (*shes-bya-ba*), in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Although the name of the author is not recorded, its translators are given as Upādhyāya Ratnavajra of India, and the Lotsāba Dge-sloṅ Śākya ye-śes (Cordier, II, p. 73, n. 11; TM. No. 1209).

ABHISAMAYĀLAṄKĀRA (1). The *Abhisamayālaṅkāra-nāma-prajñāpāramitopadeśaśāstra* is a commentary to the *Pañcaviṃśatisāhasrikā Prajñāpāramitā* which in 273 verses gives a table of contents of the large *Prajñāpāramitā*. It is ascribed to Maitreyanātha, i.e., to the inspiration of "Maitreya the Saviour", and its human author is unknown. He must have lived about 350 A.C., or in the eighth century of the Buddhist era, and he belonged to the school of the Yogācāra-Mādhyamika-svātantrikas, with whom he shared his interest in the inner, deeper or 'hidden' meaning of the Mahāyāna scriptures, as well as some of his basic categories, such as the 22 forms of the *bodhicittotpāda*, the four bodies of the Buddha, the fourfold *vikalpa*, &c.

The title of this work can be translated as "The Treatise on the Exposition of the Perfection of Wisdom, or Memorial Verses on the Re-union (with the Absolute)", *-abhi-sam-aya* meaning "coming together", "communion", "re-union". The *Abhisamayālaṅkāra* assigns to each section of the *Prajñāpāramitā* its place on the path of spiritual progress which Buddhist tradition had mapped out as the way to Buddhahood. The text of the sūtra is divided into eight sections, these again into 70 sub-sections, and these once more into about 1,200 different items. The whole scheme, both in its general plan and in its particular details, views everything in its relation to the practical realisation of salvation through wisdom.

The names of the eight *abhisamayas*, which head the eight principal sections of the text, are as follows: I. *sarvākārajñatā*, II. *mārgākārajñatā*, III. *sarvajñatā*, IV. *sarvākārābhisambodha*, V. *mūrdhābhisamaya*, VI. *anupūrvābhisamaya*, VII. *ekakṣaṇābhisamaya*, and VIII. *dharmakāyābhisambodha*. A diagram may show their mutual relation:

Method	Path	Fruit
I II III	IV	VIII
	V VI VII	

The approach to enlightenment is first viewed on the three parallel levels (*bhūmi*) on which it is possible, and which are distinguished by the type of person who stands on them, i.e., I. the Buddhas, II. the Mahāyānistic Bodhisattvas, III. the Hīnayānistic Disciples and Pratyekabuddhas. Each one has a particular range of insight—the Buddhas being capable of total, the other types only of limited omniscience. The discussion of these three levels is held to account for more than the first half of the *Prajñāpāramitā Sūtra*, and is summed up in the first three chapters of the *Abhisamayālaṅkāra*.

The next four *abhisamayas* are then devoted to the Path, and to its practical realisation (*prayoga*). Section IV deals with the 173 modes, or aspects, of the three forms of omniscience, and is then further subdivided into: V. "the full understanding at its summit", which concerns the culminating points (*prakarṣa*) of a Bodhisattva's intuition of the Path; VI. the progressive, or gradual (*anukrama*) contemplation of the elements constituting the Path; and VII. the "single-instantaneous" *abhisamaya*, which represents the final conclusion (*niṣṭhā*) of VI, and refers to the final momentary intuition which directly precedes the attainment of Buddhahood.

With VIII we then reach the ultimate result of the Path, which is the realisation of the cosmical body of the Buddha. Here, in all, four "bodies" of the Buddha are distinguished, (1) the *svābhāvikakāya*, (2) the *sāmbhogikakāya*, which displays the 32 *mahāpuruṣalakṣaṇāni* and the 80 *anuvyañjanāni*, (3) the *nairmāṇikakāya*, and (4) the *dharmakāya*. The last forms the principal theme of this section of the *Abhisamayālaṅkāra*, which describes first the [illegible] constituents of the *dharmakāya* (this list also occurs in Asaṅga's *Abhidharmasamuccaya*, pp. [illegible]) and then its 27 functions (*kāritra*).

So far the basic scheme of the *Abhisamayālaṅkāra* is quite simple and intelligible in itself. Its execution is, however, complicated by the endeavour to combine it with the account of the successive stages of the spiritual life which Buddhist tradition had evolved over the centuries. The five Aids to Emancipation (*mokṣabhāgīyā*), the four Aids to Penetration (*nirvedhabhāgīyā*), the 16 moments of the *darśanamārga*, the 81 moments of the *bhāvanāmārga*, the 10 *bhūmis* of the Mahāyāna, the 7 *bhūmis* of the Sarvāstivādins, the four classes of Saints (*ārya*),—all these have to be fitted in somewhere, and a great familiarity with Buddhist tradition, as well as a considerable mental effort is required if one does not want to lose one's way in the resulting maze. Nevertheless, no one who wants to understand the *Prajñāpāramitā* can avoid studying the *Abhisamayālaṅkāra*, which is the only key we possess to its spiritual message, and which has gained its enormous reputation in India, Tibet and Mongolia, not without some reason.

The *Abhisamayālaṅkāra* started a long tradition of exegetical literature, and its brevity called for commentatorial explanation. The commentaries of Asaṅga and Vasubandhu are now lost, and the first link of which we have any knowledge is represented by Ārya Vimuktisena (about 450 A.C.), a pupil of Vasubandhu, whose *Vyākhyā* explains the verses of the *Abhisamayālaṅkāra*, shows their correspondence with the text of the *Pañcaviṃśatisāhasrikā*, and explains difficult words occurring in the quotations it gives of the sūtra. At about the same time someone revised the text of the *Pañcaviṃśatisāhasrikā Prajñāpāramitā* to bring it in line with the scheme of the *Abhisamayālaṅkāra*. This new version, which calls itself *Abhisamayālaṅkārānusareṇa saṃśodhitā*, and which is preserved in Nepalese manuscripts, is marked by a few additions, many transpositions, and innumerable minor alterations.

The next great name is Haribhadra (about 750 A.C.), who made four contributions to the subject: (1) *Abhisamayālaṅkārāloka* gives a detailed commentary to the verses of the *Abhisamayālaṅkāra*, as well as a commentary to the *Aṣṭasāhasrikā*. (2) His *Sphuṭārthā* is a commentary to the verses of the *Abhisamayālaṅkāra*, and the bulk of it is reproduced in the *Āloka*. (3) Haribhadra also tidied up the revised version of the *Pañcaviṃśatisāhasrikā*, and removed a number of discrepancies. This work is preserved in Vols. III to V of the Tengyur, and differs in many details from the text of the Nepalese MSS. (4) Either Haribhadra, or one of his pupils, explained in the *Subodhinī* the *Ratnaguṇasañcayagāthā* in the light of the *Abhisamayālaṅkāra*.

In addition, another 16 Indian commentaries from the Pāla period (750–1150 A.C.) are preserved in Tibetan translation. Eight of these are explanations of *Prajñāpāramitā* sūtras, 2 sub-commentaries to the *Sphuṭārthā*, and 6 straightforward commentaries to the *Abhisamayālaṅkāra*. The Tibetans themselves have continued the commentatorial tradition until the present day. The most authoritative of the Tibetan commentaries are Bu-ston's (1319 A.C.) *Luṅ-gi Sñe-ma*, and bTsoṅ-kha-pa's (about 1400 A.C.) *Legs-bśad gser phreṅ-ba*.

ABHISAMAYĀLAṄKĀRA* (2). The full title of the *Abhisamayālaṅkāra* is the *Abhisamayālaṅkāra-nāma-prajñāpāramitopadeśa-śāstra-kārikā*, and its Tibetan translation is known as the *Śes-rab-kyi pha-rol-tu ṗhyin-paḥi man-ṅag-gi bstan-bcos mṅon-par rtogs-paḥi rgyan she-bya-baḥi tshig-leḥur byas-pa*. It was composed by Maitreyanātha. According to Tibetan tradition he is the Maitreya Bodhisattva who will become a Buddha after Śākyamuni. He composed five śāstras of which the *Abhisamayālaṅkāra* is the first one. Maitreyanātha's works were propagated by Asaṅga, but this book seems to have been circulated at a later time. Therefore the Tripiṭaka teacher, Hsüan-tsang, who is known for his translations of the works of Maitreyanātha and Asaṅga and for his introduction of their theories to China, did not mention it at all. (See article on ABHISAMAYA.)

The *Abhisamayālaṅkāra* is a śāstra commenting on the *Mahāprajñāpāramitā-sūtra*. Composed in the *upadeśa* style, it gives a digest of each of the sections of the sūtra and classifies them into different categories (*padārtha*), without confining itself to a word for word explanation. The *Mahāprajñāpāramitā-sūtra* is complex in content, and Hsüan-tsang's translation of this sūtra is divided into sixteen assemblies or parts, of which the first five parts are the most fundamental ones. What is explained in the *Abhisamayālaṅkāra* corresponds to the second part, viz., the *Pañcaviṃśatisāhasrikā*. This part of the sūtra has slight differences in the various manuscripts circulated at different times, and the digest shown in the śāstra conforms most fittingly to the text of the sūtra circulated at a later time. There is a legend in Tāranātha's *History of Indian Buddhism* stating that Ārya Vimuktisena, a disciple of Vasubandhu, at first found that the śāstra was not in accordance with the text of the sūtra. His doubt was solved at a later time when he saw at Bārāṇasī the *Viṃśatisāhasrikā-prajñāpāramitā-sūtra* (in eight parivartas) which had been introduced from Potalaka in south India. The order of the śāstra primarily agrees with that text of the sūtra. (See the *History of Indian Buddhism*, Sde-dge edition, chap. xxiii, p. 68a.) This sūtra is exactly the same as the extant Sanskrit text of the *Pañcaviṃśatisāhasrikā*. That is why the *ślokas* of the *Abhisamayālaṅkāra* are often inserted at the beginning of the manuscript of this sūtra, the main text of which is divided into sections according to the categories given in the śāstra and is supplied with explanatory notes at the end of each section.

The *Abhisamayālaṅkāra* is divided into eight chapters, consisting of 274 stanzas. Except the stanza of salutation at the beginning of the work, which is in the *śārdūlavikrīḍita* metre, and the five stanzas in the last chapter which adopt *indravajrā*, the rest are all written in *śloka*. The eight chapters, respectively are : (1) on the Wisdom of All Aspects (in 73 *śloka*), (2) on the Wisdom of the Path (in 31 *ślokas*), (3) on Sarvajña, i.e., All Knowing (in 16 *ślokas*), (4) on the Realisation of All Aspects (in 63 *ślokas*), (5) on the Ultimate Clear Understanding (in 42 *ślokas*), (6) on the Gradual Clear Understanding (in 1 *śloka*), (7) on the Clear Understanding in One Kṣaṇa (in 5 *ślokas*), and (8) on Dharmakāya (in 40 *ślokas*). There is one stanza of salutation at the head of each of the eight chapters and there are two concluding stanzas at the end of the work.

The reason for composing this śāstra is given in the first and second stanzas in the first chapter ; in the third and fourth stanzas the eight categories are enumerated to summarize the whole content of the work. From the fifth stanza to the seventeenth one the meanings of the various categories, seventy in number, are elucidated in detail. The above illustration may be regarded as the preface of this śāstra. From here till the end of the work, the minute details of the seventy meanings are explained in the various chapters. There are also included many subdivisions and notes explaining dubious points.

This śāstra is so composed that it deals with the *Mahāprajñāpāramitā-sūtra* entirely from the practical side, viz., the whole process of practising until realising Buddhahood. Therefore it adopts "Abhisamaya", meaning "clear understanding" as its title ; "Alaṅkāra" represents a particular literary style and it also indicates the exposition of truth as it is. (See the *Yogācārabhūmi-śāstra*, vol. LXIV.) According to Haribhadra, the order of the eight chapters so arranged shows that a bodhisattva who aims at the realisation of Buddhahood should know comprehensively all the characteristics of All Dharmas, and thus the Wisdom of All Aspects which belongs to the "stage of attainment" is first of all explained as the object. To accomplish the Wisdom of All Aspects one has to know comprehensively the Path of Śrāvakas, &c., and so the Wisdom which understands the principles of the Path is expounded in the next chapter. As one could achieve the Wisdom of the Path only after knowing all things or beings (*sarvadharma*), the All-knowing is also explained. In order to cultivate with perfect ease these three kinds of wisdom which one has already understood, one has first to-

* This contribution sent by our Chinese Committee is published because it supplements the information given in the preceding article by Dr. Conzé. It is published more or less in the form in which it was received because any attempt to delete from it information already given in the other would have changed the pattern of the contribution.—G. P. M.

realise the insight of all phenomena, which include all characteristics, paths and things or beings. Then through practising the furthermost method, one reaches the edge of the state of supremacy and realises the Ultimate Clear Understanding. Next comes the Gradual Clear Understanding which is realised through the practice of rearranging and consolidating, partially or wholly, the theories which one has already understood. With further practice in a more perfect way, one finally realises the Clear Understanding in One Kṣaṇa. In the next kṣaṇa one realises the ultimate Dharmakāya, Such are the relationships of the eight chapters, which embrace the whole content of the *Pañcaviṃśatisāhasrikā.*

The eight categories may be simplified into six or three categories. This is explained in the last two concluding stanzas of the śāstra. The six categories include the characteristics of the three kinds of wisdom, i.e., the intensified effort for attaining them (*prayoga*) (this signifies the Clear Understanding of All Aspects, which corresponds with the totality of practices), the highest *prayoga* (the summit of *prayoga*), the graduation of *prayoga* (the gradual *prayoga*), the finality of *prayoga* (the Clear Understanding in One Kṣaṇa), and the heterogeneous effect, *vipāka-phala* of *prayoga* (the Dharmakāya). The three categories are much simpler. According to these the eight categories are classified into the "sphere" (the sphere as is cogitated upon by one's wisdom at the time of cultivating the Way of Bodhi), the "practice" (including different sorts of practising the Way of Bodhi) and the "fruit" (which is attained by practising the Way of Bodhi).

The *Abhisamayālaṅkāra* is a work of great value, which systematically explains the whole content of the *Mahāprajñāpāramitā-sūtra* and points out explicitly the complete process of practising the Path of Mahāyāna Buddhism. Moreover, the theories upon which this śāstra is based are different from those shown in the other works of Maitreyanātha, which have orginated from the doctrine of Vijñāna-mātra of the Yogācāra school, that nothing exists apart from the mind. The Prajñā theory of the nature of the Void is employed in many places in the work (such as in ślokas Nos. 28–31 and 72 in chap. i, śloka No. 12 in chap. iii, ślokas Nos. 11, 59, and 63 in chap. iv, ślokas Nos. 18 and 21 in chap. v, &c.). Therefore, Tibetan scholars hold that this śāstra belongs to the doctrine of the Mādhyamika school. bTsoṅ-kha-pa further considers that it coincides with the subsequent view of the Candrakīrti system, viz., the *prasaṅgika* point of view. He also says that though there are commentaries on the *Mahāprajñāpāramitā-sūtra* written by such masters as Diṅnāga and Daṃṣṭrasena, none of their works can be regarded as a fundamental commentary. Only the *Abhisamayālaṅkāra* is of real importance, since it exposes the ways of practice and realisation as are explained in the sūtra, and coincides with the exposition of the nature of the Void in Nāgārjuna's *Mādhyamika-kārikā.*

After its prevalence in India, the *Abhisamayālaṅkāra* was highly esteemed by scholars. At first Ārya Vimuktisena, a disciple of Vasubandhu, wrote the *Pañcaviṃśatisāhasrikā-prajñāpāramitopadeśa-śāstrābhisamayālaṅkāra-vṛtti* to comment on it and, following him, his disciple Bhadanta Vimuktisena also composed a commentary (*ṭīkā*) on the work. Both these commentators lived between the middle of the fourth century and the beginning of the fifth century and preached in central India and its vicinity. Later, during the eighth and ninth centuries king Dharmapāla (reigning about 770–810 A.C.) of the Pāla dynasty in east India showed special esteem to the *Mahāprajñāpāramitā-sūtra* ; and his teacher, Haribhadra, was particularly famous for his studies of the *Mahāprajñāpāramitā-sūtra* and the *Abhisamayālaṅkāra.* He wrote three (or four) commentaries on this śāstra ; of these, the *Abhisamayālaṅkāra-nāma-prajñāpāramitopadeśdśāstra-vṛtti* (also known as the *Sphuṭārtha*) and the *Aṣṭasāhasrikā-prajñāpāramitā-vyākhyābhisamayālaṅkārāloka* are the most important ones. Later expository works on the *Abhisamayālaṅkāra* were mostly based on these two commentaries. During the ensuing four hundred years, till the beginning of the 13th century when Buddhism declined in India, the *Abhisamayālaṅkāra* was always popularly studied. Altogether twenty-one commentaries on it, including the works of Vimuktisena and Haribhadra, were introduced into Tibet and translated into Tibetan—all of them have been collected in the Tengyur part of the Tibetan texts. Such commentators as Ratnākaraśānti and Prajñākaramati all lived at the beginning of the 11th century and they were the *dvāra-paṇḍita* (gate-keepers) of the famous university of Vikramaśīla. Abhayākaragupta (q.v.) who also lived during the 11th century, was the chief lecturer at Vajrāsana, Vikramaśīla and Nālandā at different times. All of them were great teachers of that time, well versed in both the exoteric and esoteric teachings of Buddhism. The fact that all of them wrote commentaries on the *Abhisamayālaṅkāra* proves that it had exerted a great influence upon the teachings of Buddhism. In short, there is no doubt at all that this śāstra occupied an important position in the later period of the history of Buddhism in India.

This work was introduced into Tibet at an early time and according to tradition, about the beginning of the ninth century, i.e., the earlier period of propagation of Buddhism in Tibet, the translator Dpal-brtsegs already rendered it into Tibetan. In the Tengyur part of the Tibetan texts we still have his translations of Haribhadra's *Vṛtti* and Buddhaśrījñāna's *Sañcayagāthāpañjikā.* During the later period of propagation of Buddhism in Tibet, the great translator, Rin-chen bzaṅ-po (958–1055 A.C.) translated Haribhadra's *Āloka* into Tibetan. But the most influential renderings during the ensuing ages are Rṅog Blo-ldan śes-rab's (1059–1109 A.C.) re-translation of the *Kārikā* of the *Abhisamayālaṅkāra* and his corrected versions of the *Vṛtti* and the *Āloka.* Such corrected versions have now become the popular texts used in the Mongolian and Tibetan regions of China. He also wrote a commentary on the *Abhisamayālaṅkāra,* and it marks the beginning of commentaries of this kind written by a Tibetan. His disciple Śes-rab ḥbar and Śes-rab ḥbar's disciple Byaṅ-chub ye-ses

propagated this śāstra in succession in the Tibetan region and composed several commentaries on it. Their works formed a basis for later commentators. Byaṅ-chub ye-śes' disciples, Śes-rab brtson-ḥgrus and Gshon-nu tshul-khrims, and their disciple, Smon-lam tshul-krims, all composed expository treatises; and Smon-lam tshul-krim's treatise dealing with the works of both Vimuktisena and Haribhadra in detail, was all the more influential. Thereafter the *Abhisamayālaṅkāra* became an important work that had to be studied by the different sects of Buddhism in Tibet, and the scholars of each sect had their own commentaries on it. (The above-mentioned translator, Rṅog blo-ldan śes-rab and his disciples belonged to the Bkaḥ-gdams-pa sect, and thus this sect had its special esteem for this śāstra and exerted a deep, far reaching influence on later ages.)

During the 14th and 15th centuries bTsoṅ-kha-pa Blo-bzaṅ grags-pa (1357–1419 A.C.), the founder of the Dge-lugs-pa in Tibet, also held the *Abhisamayālaṅkāra* in great respect and wrote the *Rgya-cher bśad-paḥi legs-bśad gser-phriṅ*, which is the most comprehensive and explicit commentary written by a Tibetan. His chief disciples, such as Rgyal-tshab, Mkhas-grub, Dge-ḥdun grub-pa and others, and many scholars after them, successively composed commentaries on the śāstra. During the 17th and 18th centuries at the time of Ḥjam-dbyaṅs bshad-paḥi rdo-rje (1648–1742 A.C.), there were already about one hundred commentaries on it. He had seen them all, and he supplemented them with two expository works, i.e., the *Rin-chen sgron-me* (also known as the *Phar-phyin skab-brgyad-pa*) and the *Don-bdun-bcu*. All these works have enjoyed a high reputation and exerted a great influence in the Mongolian and Tibetan regions, because, according to the system of learning in the monasteries of the Dge-lugs-pa Sect, the *Abhisamayālaṅkāra* is an essential book in the Prajñā course among the five courses of learning, and these famous commentaries on it have become indispensable works of reference.

Mkhan-po chen-po Abhiyugtaka Dtar-śrīmatra (Mahopādhyāya Abhiyuktaka Tāraśrīmitra), and the Lotsāba Dge-sloṅ Chos-kyi śes-rab (bhikṣu Dharmaprajña) translated the work into Tibetan (Cordier, III, 279; TM. No. 3796).

ABHISAMAYĀLAṄKĀRA-KĀRIKĀ-VṚTTI-SUDDHIMATĪ(-NĀMA), a Sanskrit text which is extant only in its Tibetan translation, the *Mnon-par rtogs-paḥi rgyan-gyi tshig-leḥur byas-paḥi ḥgrel-pa dag-ldan (shes-bya-ba)*, in the Mdo-Ḥgrel (Sūtra) section of the Tibetan Tengyur. Its author was Ḥphags-pa Ḥjam-dpal-gyi dṅos-grub brñes-pa Mkhas-pa chen-po Rin-chen Ḥbyuṅ-gnas shi-ba (Ārya Mañjuśrīsiddhisampanna Mahāpaṇḍita Ratnākaraśānti). Paṇḍita Śrī Subhūti-śānti of India, the Lotsāba Dge-sloṅ śākya blo-gros (bhikṣu Sākya-mati), and Dge-sloṅ Dge-bahi blo-gros (bhikṣu Śubhamati) translated the work into Tibetan on the orders of the king Khri bkra-śis ḥod-lde btsan or Hod-lde, who was contemporary of Dīpaṅkaraśrījñāna (982-1054 A. C.) and a disciple of Rin-chen bzaṅ-po. It was revised by Mahāpaṇḍita Śāntibhadra and the Shu-chen-gyi lotsāba. Ta-nag Khug-pa Lhas-btsas (Deva-sūta), of 'Gos (Cordier, III, 281; TM. No. 3801).

ABHISAMAYĀLAṄKĀRĀLOKA. This, as indicated by its very title, is a treatise which throws light on the *Abhisamayālaṅkāra* (q.v.) the entire text of which it paraphrases. This great work of Haribhadra is thus an exegetical commentary of the *Aṣṭasāhasrikā-prajñāpāramitā*, in accordance with its tenet expounded by Maitreyanātha in his *Abhisamayālaṅkāra*, and adopts as its foundation all the previous exegetical literature on the subject. This was translated into Tibetan by Rin-chen-bzaṅ-po (958–1055 A.C.) and also by the Lotsāba Rṅog Blo-ldan-ses-rab and thus became one of the texts most frequently studied in Tibetan monasteries.

ABHISAMAYĀLAṄKĀRA - NĀMA - PRAJÑĀPĀRAMITOPADESA-SĀSTRA-KĀRIKĀ, a Sanskrit text which is extant only in its Tibetan translation, the *Ses-rab-kyi pha-rol-tu-phyin-paḥi man-ṅag-gi bstan-bcos mṅon-par rtogs-paḥi rgyan shes-bya-bahi tshig-leḥur-byas-pa*, in the Mdo-Ḥgrel (Sūtra) section of the Tibetan Tengyur. Its author was Byams-pa (Maitreya). Go-mi hchi-med and Blo-ldan śes-rab (1059–1109 A.C.) translated it into Tibetan (Cordier, III, p. 273: *Abhisamayālaṅkāra-nāma-kārikā-prajñāpāramitopadeśa-śāstra*; TM. No. 3786). It is one of the five works of the Yogācāra school, the fundamental work (*mūla*) for the study of the Path (*mārga*).

ABHISAMAYĀLAṄKĀRA-NĀMA-PRAJÑĀPĀRAMITOPADESA-SĀSTRA-VṚTTI, a Sanskrit text which is extant only in its Tibetan translation, the *Śes-rab-kyi pha-rol-tu-phyin-paḥi man-ṅag-gi bstan-bcos mṅon-par rtogs-paḥi rgyan shes-bya-baḥi ḥgrel-pa*, in the Mdo-Ḥgrel (Sūtra) section of the Tibetan Tengyur. Its author was Seṅ-ge bzaṅ-po (Haribhadra). Vidyākaraprabha and Dpal brtsegs translated it into Tibetan, while Go-mi ... med and Blo-ldan śes-rab (1059–1109 A.C). revised it (Cordier, III, p. 278; TM. No. 3793).

ABHISAMAYĀLAṄKĀRA-NĀMA-PRAJÑĀPĀRAMITOPADESA-SĀSTRA-VṚTTI-DURAVABODHĀLOKA-NĀMA-ṬĪKĀ, a Sanskrit text which is extant only in its Tibetan translation, the *Śes-rab-kyi pha-rol-tu-phyin-paḥi man-ṅag-gi bstan-bcos mṅon-par rtogs-paḥi rgyan shes-bya-baḥi ḥgrel-pa rtogs-par dkaḥ-baḥi snaṅ-ba shes-bya-baḥi ḥgrel-bśad*, in the Mdo-Ḥgrel section of the Tibetan Tengyur. Its author was Chos-kyi grags dpal (Ācārya Dharmakīrtiśrī) of Gser-gliṅ also known as Suvarṇadvīpa (modern Indonesia). The work was composed in the reign of Lha Dpal Go-chaḥi rgyal-po (Deva Śrī Varmarāja) of Gtsug-gi nor-bu (Cūḍāmaṇi), or Lha-khaṅ gtsug-nor (Cūḍāmaṇi-maṇḍapa; in the Ri Malaya: Malayagiri), at Rnam-par rgyal-baḥi groṅ (Vijayanagara), in Gser-gliṅ. Dīpaṅkaraśrī-jñāna or Atiśa (982–1054 A.C.) and Rin-chen bzaṅ-po (958–1055 A.C.) translated the work into Tibetan (Cordier, III, 278: var. *Durbodhāloka*°; TM. No. 3794).

ABHISAMAYĀLAṄKĀRA-VṚTTI-KĪRTI-KALĀ(-NĀMA), a Sanskrit text which is extant only in its Tibetan translation, the *Mṅon-par rtogs-paḥi rgyan-gyi ḥgrel-pa grags-paḥi cha (shes-bya-ba)* in the Mdo-Ḥgrel (Sūtra) section of the Tibetan Tengyur. Ratnakīrti who is the author of the work, and the Lotsāba Chiṅs Yon-tan ḥbar (Guṇa-jvāla) translated the work into Tibetan (Cordier, III, p. 280; TM. No. 3799). It is a commentary on the *Abhisamayālaṅkāra*.

ABHISAMAYĀLAṄKĀRA-VṚTTI-PIṆḌĀRTHA, a Sanskrit text which is extant only in its Tibetan translation, the *Mṅon-par rtogs-paḥi rgyan-gyi ḥgrel-paḥi bsdus don*, in the Mdo-ḥgrel (Sūtra) section of the Tibetan Tengyur. The author of this work was Nub-kyi sgo-glegs-pa Dpal Mkhas-pa chen-po Śes-rab ḥbyuṅ-gnas blo-gros (Aparadvāra-kapāṭapa Śrī Mahāpaṇḍita Prajñākaramati), guardian of the western gate of the monastery of Vikramaśīla. Mahāpaṇḍita Sumatikīrti and the Lotsāba Blo-ldan śes-rab or Blo-pdan śes-rab (Dhīmat-prajña, 1059–1109 A.C.) translated it into Tibetan (Cordier, III, 279; TM. No. 3795). It is an abridged commentary on the *Abhisamayālaṅkāra* summary of Haribhadra's *Sphutārthā* by Prajñākaramati.

ABHISAMAYA-MAÑJARĪ, a Sanskrit text which is extant only in its Tibetan translation, the *Mṅon-par rtogs-paḥi sñe-ma*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. The author of this work was Slob-dpon chen-po Dge-baḥi ḥbyuṅ-gnas sbas-pa (Mahācārya Śubhākaragupta). Paṇḍita Dānaśīla of eastern India translated it into Tibetan (Cordier, II, 63; TM. No. 1582).

ABHISAMAYA-MUKTĀMĀLĀ(-NĀMA), a Sanskrit text which is extant only in its Tibetan translation, the *Mṅon-par rtogs-pa mu-tig-gi phreṅ-ba (shes-bya-ba)*, in the Rgyud Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was Rnal-ḥbyor-gyi dbaṅ-phyug chen-po Mitraḥjogi (Mahāyogeśvara Mitra-yogin). Paṇchen Don-yod rdo-rje or rDo-rje gdan-pa (Mahāpaṇḍita Amogha-vajra) translated this work into Tibetan (Cordier, III, 230). It is, however, not recorded in Tōhoku.

ABHISAMAYA-NĀMA-PAÑJIKĀ, a Sanskrit text which is extant only in its Tibetan translation, the *(Dpal) Mṅon-par rtogs-pa shes-bya-baḥi dkaḥ-ḥgrel*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. The author of this work was Grub-thob chen-po La-baḥi na-bzaḥ-can-gyi rjes-su ḥbraṅs (Mahāsiddha Kambalāmbarānusārin) Mahācārya Prajñārakṣita. Upādhyāya Sumatikīrti of India, and the Lotsāba Dge-sloṅ Blo-ldan ses-rab (bhikṣu Dhīmat-prajña: 1059–1109 A.C.) translated it into Tibetan (Cordier, II, 41; TM. No. 1465).

ABHISAMAYA SAṂYUTTA consists of a group of eleven discourses delivered by the Buddha when he was residing at Sāvatthi (*S.* II, 133–139). Their purpose, except in the case of the last, seems to be to indicate that the suffering which a noble disciple who is possessed of right views (*diṭṭhisampanna*), and established in truth (*abhisametāvī*), is destined to endure, at the most, for a period of seven lives (*sattakkhattuṃ paramatā*), will not constitute even a hundredth, a thousandth or a hundred thousandth fraction of the total suffering from which he has already rid himself. The allusion evidently, as is corroborated by the commentary, is to a *sotāpanna* (one who has attained to the first fruit of enlightenment).

Each discourse has two parts: the first a comparison and the second about the *sotāpanna*. The second remains the same in all discourses, whereas the comparison varies.

The discourses have been named on the basis of the comparisons as inserted in the first part of each discourse. They occur in the following order: *Nakhasikhā*; *Pokkharaṇī*; *Sambhejja* (1), (2); *Paṭhavī* (1), (2), *Samudda* (1), (2); *Pabbatūpamā* (1), (2), (3).

But, in the last discourse (*Pabbatūpamā*: 3) where some difference is noticeable, the comparison is between the respective attainments (*adhigama*) of a noble disciple possessed of right views, and of recluses, brāhmans and wandering mendicants professing a different creed (*aññatitthiya-samaṇa-brāhmaṇa-paribbājakānaṃ*). And here too the attainments of the latter are said to be not equal to even a hundredth, a thousandth, or a hundred thousandth fraction of the former. The last discourse, therefore, appears to be incongruous with the others which have a different purpose in view. It also differs in its concluding sentence: "Thus, O monks, great is the attainment of a person possessed

of right views, great his higher knowledge", whereas in the others, it is said: "Thus, O monks, of great benefit is the realisation of the Dhamma, of great benefit the attainment of the eye of the Dhamma."

The discourses of the *Abhisamaya Saṃyutta*, excepting the last, are also almost identical with those of the *Abhisamaya Vagga* of the *Sacca Saṃyutta*. The latter follow the same sequence and pattern, and have the same purpose as the former. They differ only stylistically, e.g., in the absence of an introductory sentence, or in the use of certain words in sections containing the comparison, or in the substitution of a final sentence of exhortation to monks. This last is a characteristic of the discourses of the *Abhisamaya Vagga*.

Unlike the *Abhisamaya Saṃyutta* which has eleven discourses, the *Abhisamaya Vagga* has only ten. But the missing discourse, which is the last of the *Abhisamaya Saṃyutta*, appears towards the end of the *Papāta Vagga*. And the *Papāta Vagga* is, in fact, the *vagga* immediately preceding the *Abhisamaya Vagga*. Here, the discourse is exactly the same as that at the end of the *Abhisamaya Saṃyutta*. It is preceded by two other discourses (*Pabbatūpamā*: (1) & (2) and these, together, follow the same order of sequence as the last three discourses of the *Abhisamaya Saṃyutta*. But neither in the *Abhisamaya Saṃyutta* nor in the *Papāta Vagga* does the last of these discourses fit into the general scheme and purpose of the other discourses. Thus, it is incongruous with the rest probably because of some displacement, although it is not clear from where.

ABHISAMAYA VAGGA, the sixth chapter of the *Sacca Saṃyutta* (*S.* V, pp. 460-5). It comprises ten suttas, all of which are concerned with the disciple who has realised the truth. A little dust on the tip of a finger-nail is the ill that remains for him who has realised the truth; a drop of water on a blade of grass; a little ball of clay of the size of a seed; a grain of sand. But for him who has not so comprehended, the mass of woe that awaits him is like this mighty earth, like the five great rivers in confluence, the mighty ocean, the Himālaya, lord of mountains.

The similes in this chapter are all identical with those in the *Abhisamaya Saṃyutta* (*S.*II, pp. 133-39).

ABHISAMAYA-VIBHAṄGA (-NĀMA), a Sanskrit text which is extant only in its Tibetan translation, the *Mṅon-par rtogs-pa rnam-par-byed-pa* (*shes-bya ba*), in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its authors were Rual-ḥbyor-gyi dbaṅ-phyug chen-po Lūyi-pa (Mahāyogīśvara Lūhipāda) and Mahāpaṇḍita Dīpaṅkaraśrījñāna (Atiśa: 982–1054 A. C.). Tōhoku, however, mentions only Dīpaṅkaraśrījñāna as the author. Dīpaṅkaraśrījñāna and the Lotsāba Dge-sloṅ Tshul-khrims rgyal-ba (bhikṣu Jayaśīla or Nag-tsho Lotsāba: *circa* 1011) translated this work into Tibetan (Cordier, II, 45; TM. No. 1490).

ABHISAMAYA-VṚTTI, a Sanskrit text which is extant only in its Tibetan translation, the *Mṅon-par rtogs-paḥi ḥgrel-pa*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Dpaḥ-bo rdo-rje (Vīravajra) is recorded as the author of this work. According to Cordier, it is, nevertheless, possible to consider Āraṇyaka Jñānaśrīmitra as the author, and Vīravajra as the reviser of this text, as in the case of the *Abhisamaya-hṛdaya*. Ḥphags-pa Śes-rab translated the work into Tibetan. It is, however, not recorded in Tōhoku (Cordier, III, 114–115).

ABHISAMBODHI-ALANKĀRA, a narrative ballad in Pali stanzas of the events of the first and the last lives of the bodhisatta which eventually culminated in his enlightenment as the Buddha. That explains its name as Adornment of Enlightenment.

By 'first life' is meant the bodhisatta's life as the ascetic Sumedha when, for the first time, he was assured by the Buddha Dīpaṅkara of complete enlightenment, while by 'last life' is meant his life as Siddhattha Gotama, which witnessed the realisation of that assurance. But, as regards the twenty-three intervening lives when the bodhisatta is said to have successively received assurances of enlightenment from twenty-three other Buddhas, no events are here recorded except to say that those Buddhas, named in their order of sequence, actually gave him such assurances. But the ballad constitutes an uninterrupted narrative.

What is most commendable about the narrative is that it does not vex the reader. The narrative is punctuated with descriptions that are never too long and contains a variety of metre which does not make the reading monotonous. The descriptions include the entire episode of the ascetic Sumedha leading up to the assurance given by Dīpaṅkara Buddha, the miracles attendant upon the birth of prince Siddhattha, the auspicious marks possessed by the infant prince, the beauty of Yasodharā, the Bodhi tree, the heavenly attendants who came to witness the enlightenment, and Māra's unsuccessful attacks on the bodhisatta. These descriptions are given with a restraint such as one seldom finds in the poetical works of this period or that immediately preceding it. And, except in a single instance, the artificialities of language and style one meets, for instance, in the *Samantakūṭavaṇṇanā*, are absent. The single instance is a reference to Siddhattha's father "the noble king Suddhodana whose feet, lotus-like, are kissed by other rulers' crowns that resemble bees" (revd. ed. 1897, stanza 19). But this ballad, too, has its quota of conventional similes and metaphors; yet, they are neither jarring nor ridiculous.

The author of this ballad was Väliviṭa Piṇḍapātika Saraṇaṅkara who is remembered in Ceylon both for the revival of learning that he caused in the eighteenth century as well as for the introduction of the Siamese Order of monks into the island.

According to the *Saṅgharājasādhucariyāva* (a biography of Saraṇaṅkara), this ballad was composed when the author was a twenty-year old novice (ed. K. Sumangala, 1916, p. 29). The date of Saraṇaṅkara's birth is given in the *Saṅgarājavata* (p. 6) as the seventh day in the dark half of the month of Poson in the Saka year 1620, which corresponds to 1698 of the Christian era (cp.

D. B. Jayatilaka: *Saraṇaṅkara*, &c. p. 5). The *Abhisambodhi-alaṅkāra*, therefore, would have been composed twenty years later, i.e., in 1718 A.C.

The ballad ends with Saraṇaṅkara's aspirations, the fulfilment of which he desires by reason of the merit of his having extolled the virtues of the Exalted One. And the most important of these aspirations is that he might be born in the Tusita heaven thence to return to earth to see the Buddha Metteyya when the latter appears in this world.

A statement contained in the *Saṅgharājasādhucariyāva* (p. 8) suggests that Saraṇaṅkara might have made use of the contents of the *Abhisambodhi-alaṅkāra* to silence a pretentious brāhman who had made a deep impression on the reigning king of the time. Saraṇaṅkara is said to have offered to preach in three languages, Sinhalese (here called Eḷu), Pali and Sanskrit, which he did, both in the presence of the king and the brāhman. And he is supposed to have commenced his theme "from the initial assurance of enlightenment which the bodhisatta received at the feet of the Buddha Dīpaṅkara". That is how the *Abhisambodhi-alaṅkāra* also commences. And this preaching not only silenced the brāhman but it also endeared Saraṇaṅkara to the king who later appointed him Saṅgharāja.

H. S. C.

ABHISAMBODHIKRAMOPADEŚA, a Sanskrit text which is extant only in its Tibetan translation, the *Mṅon-par byaṅ-chub-paḥi rim-paḥi man-ṅag*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was Ḥphags-pa lha (Ārya-deva). Upādhyāya Śraddhākaravarman of India, and Dge-sloṅ Rin-chen bzaṅ-pa, 958-1055 A.C. or bhikṣu Ratnabhadra translated this work into Tibetan (Cordier, II, 136). This text is recorded in the Tōhoku Catalogue under the name *Abhibodhikramopadeśa* (No. 1806).

ABHISAMBUDDHA GĀTHĀ, the name given to the verses uttered by the Buddha after his enlightenment and contained in some of the *Jātakas*, as distinguished from the more common verses spoken by him while he was yet the bodhisatta (*J.* I, p. 104, 109; II, 245, 432, 451). They are in the nature of narrative verses often inculcating a moral and are found towards the conclusion of the Jātaka. They are frequently introduced with an expression like: *Satthā imaṃ atītaṃ āharitvā abhisambuddho hutvā imā gāthā avoca.* (The Teacher related the past story and being perfectly enlightened, uttered these verses.) Hence the name Abhisambuddha-gāthā. See also JĀTAKA.

ABHISAMMATA, the name of a world ruler (*cakkavatti*) possessed of the seven treasures and of great power who, sixty-three aeons later, became the thera Pāṭalipupphiya (*Ap.* I, No. 78).

Ninety-two aeons ago he had worshipped a Buddha by the name of Tissa, with a *pāṭali* flower, and it was this act of piety that had enabled him to be a *cakkavatti* ruler.

ABHISAMMATAKA, a yakkha general who figures in the story of a former life of thera Upavāna in the time of Buddha Padumuttara (*Ap.* I, pp. 72 f.; *ThagA.* II, p. 56; *ApA.* p. 567). When Buddha Padumuttara passed away, a great and magnificent thūpa was built by the different classes of beings, enshrining his relics. It was the yakkha general Abhisammataka who was appointed by the devas to keep guard over the offerings to the cetiya. He used to honour the cetiya with a banner or a garland of flowers while he himself remained invisible. And the people, pleased at this amazing sight, would go to heaven as a result of their good thoughts. Many people came to worship at the cetiya in order to see this miracle [1].

Thera Upavāna was born at this time in a very poor family. He made an offering of his clean *uttarāsaṅga*[2] at the cetiya by hoisting it like a banner. Abhisammataka took it and went round the cetiya three times, while he himself remained invisible. This act of Abhisammataka caused great pleasure to the devotee and he enjoyed much happiness in later births.

ABHISAṂSKĀRA, Sanskrit form of the Pali term ABHISAṄKHĀRA (q.v.), planned activity, frequently synonymous with KARMA (q.v.).

ABHISANDA SUTTA. There are quite a number of suttas in the *Aṅguttara* and *Saṃyutta Nikāyas* either by this name or under its longer title *Puññābhisanda Sutta*. Three are listed as *Abhisanda Sutta* in the *Sotāpatti Saṃyutta*, but the entire 4th chapter which has taken its name from these three opening suttas is called *Puññābhisanda Vagga*: On the Yields of Merit (*S.* V, 391–2). The fifth chapter is called *Sagātha Puññābhisanda Vagga*, because verses (*gāthā*) are attached to the text, and, here again, the first three suttas are entitled *Abhisanda*, but with a subtitle *sayhaka* (*S.* V, 399–402). F. L. Woodward (*Kindred Sayings*, V, 342, n. 1) suggests 'capacious', but *sayha* being the gerund of *sahati*, 'that which can be endured', its connection with *abhisanda*, which suggests an overflowing yield, is not clear.

The *Aṅguttara Nikāya* has two suttas with verses attached on this subject of Yields of Merit (*A.*II. iv, 54–56) in the Book of Fours, one in the Book of Fives (*A.* III, 51) and one in the Book of Eights (*A.* IV, 245). As regards the merit yielded by various actions, there is a fair degree of uniformity among these ten different suttas, where the yield is described as a flood of good things that bring happiness which cannot be measured, but can only be described as boundless (*S.* V, 400) happiness leading heavenward and conducive to what is pleasing, lovely, precious and beneficial (*A.* II, 54; *A.* IV, 245). But, as to the actions which

1 This extra information is found in the *Apadāna* account. The other accounts only say that Abhisammataka was appointed guard.

2 A piece of cloth worn on the left shoulder on top of the other garments. (PED: an upper robe.)

cause these abundant yields of merit the suttas fall into two groups. All the six suttas in the *Saṃyutta Nikāya* speak of four causes, the first three of which are always given as loyalty to the Buddha, to his Doctrine and to the Order. Regarding the fourth item, the two groups, of three suttas again, agree with the internal change in each group. Thus, the three suttas in the fourth chapter give each a different cause : unbroken virtue, delight in giving and possession of insight ; and these three are repeated in the same order in the three suttas of the fifth chapter of the *Sotāpatti Saṃyutta*. This same set of four, viz., loyalty to the Buddha, the Dhamma, the Saṅgha and unbroken virtues, is met with in the *Aṅguttara Nikāya* in the Book of Fours (*A*. II, 56–57), while the last item of virtue is expanded into five by listing the five moral abstinences from taking life, stealing, lustful evil ways, lying and the use of intoxicants together with the threefold loyalty to the Buddha, Dhamma and Saṅgha, in the Book of Eights (*A*. IV, 245).

The other category of causes of yields of merit are only found in the *Aṅguttara Nikāya*, where in the Book of Fours (*A*. II, 54) floods of merit (*puññābhisanda, kusalābhisanda*) are guaranteed to him who provides the four requisites of robes, food, lodging and medicine to a monk who thereby is able to attain and continue in unbounded mental concentration (*appamāṇa-cetosamādhi*). These same four requisites are expanded into five in the Book of Fives (*A*. III, 51) by the division of ' lodging ' into ' dwelling place ' and ' furniture '. The verses attached to some of these suttas are not found there exclusively. Thus, the verses comparing these yields of merit, derived from offerings, to broad rivers flowing down to the mighty ocean are found in *A*. II, pp. 55–6 and *S*. V, pp. 400–1, while the verses in praise of the Buddha and his Order are attached not only to the *Abhisanda Sutta* at *A*. II, p. 57 and *A*. III, p. 54, but also to other suttas, e.g., the *Dussīlya Sutta* (*S*. V, 384), the *Sagāthaka Sutta* (ibid. 405) of the chapter on Discretion (*Sappañña Vagga*), the *Dalidda Sutta* of the *Sakka Saṃyutta* (*S*. I, 232) and are ascribed to Sirimitta when testifying to his attainment of arahantship (*Thag*. *vv*. 507–8).

ABHISAṄKHĀRA occurs frequently in combinations, e.g., *gamiyābhisaṅkhāra* (*A*. IV, 179) an inclination or preparation to set out on a journey, *iddhābhisaṅkhāra* (*D*. I, p. 106), the working of supernormal powers, which, although strongly censured in the code of discipline (*Vin*. III, 80), is yet mentioned in several instances even with the sanction of the Buddha himself (*S*. V, 270). The term, as it is employed, is more than an intensification of *saṅkhāra* (q.v.), which originally would have indicated a preparation or disposition for action. It is the cumulative effort stored up in the preparation for action and released in the act. Hence the term is used for the kamma formations in the past which condition rebirth. Such formation may be wholesome and meritorious (*puññābhisaṅkhāra*) or the opposite (*apuññābhisaṅkhāra*), and a corresponding rebirth will result. They may even be " of no significance " (*ānenjābhisaṅkhāra*) without disturbing the smooth continuum of the process of becoming (*bhavaṅga-sota*). According to the teaching of dependent origination (*paṭicca-samuppāda*), these kamma formations are always conditioned by ignorance (*avijjā*). And " once all ignorance and craving are extinguished, no karma formations, good, evil or neutral, are produced and no further rebirth-consciousness will arise " (*S*. II, 81).

An essential distinction seems to be made between *kamma* and *saṅkhāra*, whenever in a discourse on causal bases (*nidāna*) preference is given to the latter term to indicate the formations of kamma, as planned action. This is brought out clearly in the following passage : " A man who is ignorant plans an act (of merit, demerit or of no significance), and consciousness is on its way ; but when ignorance is banished and wisdom has arisen he does not plan action. Not planning, not willing, he does not grasp, is unperturbed and entirely freed " (*S*. II, 82).

Abhisaṅkhāra, then, is the planning of action, and is used synonymously with the willing or volition thereof : *anabhisaṅkharonto anabhisañcetayanto na kiñci loke upādiyati* : not planning action, not willing, he does not cling to anything in the world (ibid.).

It is used also in connection with consciousness (*abhisaṅkhāra-viññāṇa*) by Buddhaghosa (*DhsA*. p. 357) as that which prepares new birth, not to be confused with relinking consciousness (*paṭisandhi viññāṇa*) which is a kamma resultant type of consciousness, arising at the moment of conception.

H. G. A. v. Z.

ABHISAÑÑĀNIRODHA. Just as in the case of words like *āsrava, brāhmaṇa* or *nirvāṇa*, so too the term *abhisaññānirodha* was admitted into Buddhism from a common stock of doctrinal or philosophical terms which had gained currency and recognition since pre-Buddhist times. This term evidently denoted the cessation of consciousness, a subject that had engrossed the minds of almost all the founders of the different systems of Indian philosophy. In the Yoga system of Patañjali it was called *asamprajñāta-samādhi*. In Buddhism, however, it became better known as *saññāvedayitanirodha* meaning ' the cessation of percepts and feelings '.

The earliest instance of the use of the term *abhisaññānirodha* seems to be in the *Poṭṭhapāda Sutta* of the *Dīgha Nikāya*. The sutta narrates that the brāhman Poṭṭhapāda in his anxiety to know how *abhisaññānirodha* occurred was prompted to enquire about it from the Buddha, whom he extolled as one " who knows its original nature " (*pakataññū abhisaññānirodhassa*).[1] And the Buddha before explaining to him the method by which one attains to this state, remarked that both the arising and cessation of consciousness were determined by a cause or condition (*sahetu sappaccayā*) which he further observed to be none other than a type of training (*sikkhā*).[2]

1 *D*. I, p. 180.
2 ibid. p. 181.

This training initially involves the regulation of a person's conduct in such a way as would enable him to attain the first stage of mental absorption (*jhāna*) and, secondly, skill and mastery in attaining to seven other successive stages of mental absorption which are progressively finer until gradually and consciously all activities of the mind are halted (*anupubbābhisaññānirodha-sampajāna-samāpatti*).[3]

Now, to induce mental absorption a person must be resourceful in four ways each of which is characterised as noble (*ariya*). These include (1) proper conduct (*sīla*), (2) restraint in regard to the senses (*indriya-saṃvara*), (3) attention and awareness (*sati-sampajañña*) and (4) contentment (*santuṭṭhi*).[4]

Of these, proper conduct—so far as it pertains to the life of a monk—must always accord with the rules contained in the *Pātimokkha*, the transgression of which will make him liable to punishment according to the gravity of the offence he has committed. It involves the cultivation of the ten precepts, the renunciation of a number of comforts associated with a life of ease, forbearance from all manner of contemptible talk, and abstinence from trades and professions likewise contemptible. Moreover, it involves the proper and careful consideration of the dangers which even the most trivial fault may evoke. He who conducts himself properly should be pure both in his actions and speech ; and a life so cultivated eventually conduces to his inward enjoyment of a sense of comfort that is blameless (*ajjhattaṃ anavajjasukhaṃ paṭisaṃvedeti*).[5]

Restraint in regard to the senses, which is the second noble quality, obliges a person to guard his sense organs lest unwholesome and unprofitable thoughts associated with lust or ill-will should arise. With the senses so guarded, one inwardly experiences bliss that is unaffected (*ajjhattaṃ avyāsekasukhaṃ paṭisaṃvedeti*).[6]

Thirdly, there should be cultivated the twin qualities of attention and awareness in all one's acts or postures, however trivial, even that of drawing in or stretching a limb.[7]

Finally, there is the noble quality of contentment which obliges the monk cultivating it to be contented with the robes he wears and the alms he begs, both of which he may take with him wherever he goes even as a bird shall carry its wings '.[8]

A person in whom these four noble qualities have come to reside permanently may be deemed to possess the necessary training that would conduce to mental absorption. He should seclude himself and having selected a suitable topic of meditation should fix his attention on it with the idea of concentrating his mind. By such concentration he should temporarily inhibit a set of unwholesome mental qualities called 'the hindrances' (*nīvaraṇa*). These include : (1) lust (*kāmacchanda*), (2) ill-will ([illegible]), (3) sloth and torpor (*thīna-middha*), (4) flurry and worry (*uddhacca-kukkucca*) and (5) doubt (*vicikicchā*).[9] With the suppression of these mental qualities the yogin becomes detached from sensual ties (*vivicceva kāmehi*) and, as a result soon enters and abides in the first stage of mental absorption (*paṭhamajjhānaṃ*), which is rapturous and joyful (*pītisukhaṃ*), which springs from aloofness (*vivekajaṃ*) and is accompanied by thought that is discursive and sustained (*savitakkaṃ savicāraṃ*).[10] The attainment (*appanā*) is preceded by four fleeting (*javana*) thought moments of the sensual sphere (*kāmāvacara*) ; the first of these thought moments is preliminary (*parikamma*) to the attainment, while the second and third are merely accessory (*upacāra, anuloma*) to it. The fourth, metaphorically called ' the suppression of one's line ' (*gotrabhū*), heralds the moment when the yogin transcends the limitations of the sensual sphere and concentrates his mind in quietude of the sphere of form (*rūpāvacara*).[11]

This then is the manner in which a person of ' slow intuition ' (*dandhābhiñña*) attains to the first stage of mental absorption. In the case of one of ' quick intuition ' (*khippābhiñña*) only the last three thought moments precede in regular succession while the fourth coincides with the attainment itself. Subject only to this difference in their frequency the fleeting thought moments precede every successive attainment of mental absorption, whether of the sphere of form or the formless (*arūpāvacara*).

The yogin next rises from this first stage of mental absorption and enters and abides in the second stage which is also rapturous and joyful, though, unlike the former, it springs from concentration (*samādhijaṃ*) and is not accompanied by thought that is discursive or sustained.[12] In this stage of mental absorption he stops the activity of all the factors of mind associated with speech (*vacīsaṅkhārā niruddhā*).[13]

Thence, with equanimity (*upekkhako*) he enters and abides in the third stage of mental absorption ; but being both attentive and aware (*sato sampajāno*) he experiences in his person (*kāyena paṭisaṃvedeti*) that joy of which the noble ones say : ' Joyful lives he who has equanimity and is mindful ' (*upekkhako satimā sukhavihārī*).[14]

From this stage he progresses on to the fourth which is the last in the stages of mental absorption of the sphere of form. This he attains by ridding himself of joy and anguish and the cessation of his former pleasures and sorrows. And on attaining this stage which is characterised by equanimity, attention and purity (*upekkhā-sati-pārisuddhi*)[15] he stops the function of those factors of mind associated with respiration (*assāsa-passāsā niruddhā*) and thereby empties his mind of a totality of twenty types of consciousness, eight wholesome and twelve unwholesome, pertaining to the sensual sphere.[16]

In this fourth stage of mental absorption the yogin's mind becomes fully concentrated (*samāhita*), pure (*parisuddha*), cleansed (*pariyodāta*), free from taints and defilements (*anaṅgana, vigatupakkilesa*), supple (*mudubhūta*), amenable (*kammaniyathita*) and steadfast (*āneñjappatta*).

Nevertheless, he tempers it still more by allaying all perceptions pertaining to the sphere of form; and with the cessation of such perceptions as may conflict with his purpose he precludes the mind from advertence and investigation, whereupon a spatial image evoked from memory enables him to concentrate his mind on the notion that space is infinite (*ananto ākāso*). The result is that he now becomes attuned to a new plane of thought called the formless (*arūpāvacara*) and thus enters and abides in the fifth stage of mental absorption (*ākāsānañcāyatana*).[17]

The yogin thereupon concentrates his mind further on the notion that the spatial image with which he has toyed by expanding or contracting it at will[18] is none other than consciousness (*sabbaṃ viññāṇaṃ*).[19] Thus, with his mind concentrated on the notion of consciousness he enters and abides in the sixth stage of mental absorption (*viññāṇañcāyatana*).

And on further reflection it becomes clear to him that here, too, there is nothing of permanent value; with this conviction he enters and abides in the seventh stage of mental absorption with his mind concentrated on nothingness (*ākiñcaññāyatana*).[20]

This stage is more properly called 'the summit of perception' (*saññagga*) because it is the highest of those attainments which conduce to worldly purposes.[21] It also denotes the highest level up to which a yogin could clearly distinguish between the varieties of empirical percepts associated with each successive attainment. And for that very reason this and the six stages immediately preceding have been characterised as 'stages of perceptual attainment' (*saññā samāpattiyo*).[22]

The yogin must, however, not underestimate the importance of this seventh stage of mental absorption. On arising from this stage he must perform four preliminary duties (*pubbakicca*)[23] without which all efforts to attain to *nirodha* would be futile. The real purpose of these duties is to ensure the wholesome continuance and termination of the yogin's absorption in *nirodha*. Firstly, therefore, he should resolve that as long as he remains absorbed in *nirodha* nothing of such property as he may possess but whose ownership may properly vest in another should suffer the slightest damage (*nānābaddha-avikopana*). Secondly, he must resolve that he should emerge from *nirodha* before he is sent for by the community of monks on all occasions that the community may deem his presence necessary (*saṅgha-paṭimānana*) and, thirdly, if and when the master should look for him (*satthupakkosana*).[24] And, fourthly, he must determine the duration (*addhāna-paricccheda*) of his absorption in *nirodha* which, however, should under no circumstance exceed seven days.

On his fulfilment of these preliminary duties he enters and abides in the eighth stage of mental absorption which is described as one of neither perception nor non-perception (*nevasaññānāsaññāyatana*). It is said that in this stage the percepts are so fine and subtle that none save a Buddha could distinguish them separately. Hence it is not reckoned as a stage of perceptual attainment, but as one where only residuary mental formations obtain (*saṅkhārāvasesa-samāpatti*).[25]

The yogin, however, does not remain in this stage of mental absorption for more than one or two thought moments;[26] thereafter his mind ceases to function and he becomes fully absorbed in *nirodha*. The process of meditation from *nevasaññānāsaññāyatana* to *nirodha* has been compared to the movement of a person who is obliged to pass through one house wherein he does not tarry, to enter that of which he is really in search. And this attainment, besides, is not one that is within easy reach of yogins. It has been stated very emphatically by Buddhaghosa that only anāgāmins and arahants who have complete mastery and skill in the eight successive stages of mental absorption may attain to *nirodha*.[27] This progression successively from one stage to another may be by way of *samatha*, or *vipassanā* or both.[28]

Buddhaghosa has also defined *nirodha* as "the discontinuance of (all types) of mind and mental factors by way of (their) gradual cessation".[29] In the *Dīgha Nikāya*, as noted earlier, *nirodha* has been described as the conscious attainment of the gradual cessation of perceptions. These definitions seem to imply that there is purposive thought activity up to the halting of percepts and the condition which obtains thereafter constitutes no experience to the person who has attained to it, unless it were possible to have such an experience without the participation of the mind. Buddhaghosa mentions that there were some who thought that the attainment of *nirodha* constituted a conscious experience. He, however, warns the reader not to grasp the letter but the spirit of what is stated.[30] The tendency in the Buddhist tradition has also been to regard this condition as one that is indeed pleasant so that it may be enjoyed even for a whole week.[31] And it is also believed that death does not smite a person while he is absorbed in *nirodha*. In

24 Although the actual reference to, and enumeration of, these duties is to be found only in the commentaries, it is possible that they all hark back to a period as old as that of the Buddha, as is suggested by the expression "Master's calling" (*satthu-pakkosana*) which, despite the death of the Buddha, has since remained unaltered. This view may be further supported by a statement according to which these duties have been alluded to in a passage in the *Cūlavedalla Sutta* (*MA.* II, p. 365).
25 *Vibh.* p. 263.

31 ibid. p. 366.

case it is impossible to avert death the absorption in *nirodha* terminates sooner than the period intended.[32]

Buddhaghosa also mentions that this attainment is only possible within that sphere of existence where the five sense organs predominate (*pañca-vokārabhava*).[33] While a person remains absorbed in *nirodha* only his life (*āyu*) and temperature (*usmā*) are said to continue and function.[34] The function of life ordinarily is to condition the arising of *arūpadhammas* which include all mental phenomena. But just as when a flame is put out, this action is halted throughout the period that a person is in *nirodha*. Yet, life's potentiality is unimpaired, even as when glowing embers are separated from the ashes and laid aside in order to rekindle a flame when necessary. Life and temperature are said to be mutually dependent. In fact, they form two out of a set of three salient characteristics which apparently distinguish a person in *nirodha* from a dead body. The third is that the sense organs of the person in *nirodha* are also not dead. The qualities which a person in *nirodha* shares with those of a dead body include the stopping of respiration and the absence of speech and thought activity.[35]

Now, if all thought activity ceases during *nirodha* the question next arises whether this condition is the same as or analogous to the condition of dreamless sleep when a person's mind is said to lapse into *bhavaṅga*. The commentaries, however, have nowhere dealt with this question comparatively, but from a few instances where they have discussed these subjects separately, it is possible to conclude that the two are fundamentally different and possess nothing in common. *Bhavaṅga* and *nirodha* are poles apart, being essentially the opposites of one another. *Bhavaṅga* is the original condition of the mind when it is inoperative within the context of existence, that is, when it is not disturbed by impressions that impinge on it through one or the other of the sense doors. It is certainly not a condition which obtains in a sentient being while he is conscious, whereas the condition of *nirodha* is one which he actively and purposely induces. This inducement, besides, is only possible through the successive stages of mental absorption outlined above, by which the mind becomes progressively finer so that it becomes lifted up from its original nature which it acquired at the moment of that individual's conception and refined to a degree that transcends all three planes of existence (*kāma-bhava, rūpa-bhava, arūpa-bhava*). In other words, this progressive refinement of the mind cuts at the very basis of existence which is represented by *bhavaṅga* and evokes a condition whose very essence is *Nirvāṇa*. That, indeed, is why this condition has been described as (a state of) Deliverance in one's own lifetime (*diṭṭhadhammanibbānaṃ*).[36] The essential quality that it is rooted in Deliverance finds expression even at the moment of termination of this attainment, whereby the yogin becomes re-established in the third or fourth fruit of enlightenment, depending on whether he was an anāgāmin or arahant.[37] And as he emerges from *nirodha* there will in due order occur to him mental formations (*cittasaṅkhārā*), respiration (*kāyasaṅkhārā*) and the factors of mind associated with speech (*vacīsaṅkhārā*).[38]

ABHISAPANA, cursing. An entire Jātaka story (No. 497) called *Mātaṅga Jātaka*, after the principal figure, is given to illustrate the evil of abusing and cursing. As an extreme kind of harsh language (*pharusā vācā*) it falls under this class of evil speech, which again together with lies (*musāvādā*), slander (*pisuṇā vācā*) and frivolous talk (*samphap-palāpa*) forms the group of four unskilful actions by word of mouth, in the triad of deed, word and thought (*kāya, vācā, citta*).

A curse, which became immediately effective, was uttered by the snake king against a would-be ascetic (Devadatta in a previous life) who had vilely betrayed the confidence placed in him:

"Informer, traitor, that wouldst slay
A guileless friend ! Be thy head riven
By this my act of truth, I pray,
Piecemeal, all into fragments seven." (*Paṇḍara Jātaka : Jātaka* translation by H. T. Francis, V, p. 47).

ABHIṢECANĪ, var. ABHISECAVATĪ, a bodhisattva dhāraṇī (*Mvyut*. 4239), i.e., a magic formula, mantra or incantation leading to intellectual receptivity (*kṣāntilābhāyadhāraṇī*) in a bodhisattva.

ABHIṢECANĪ-NĀMA-DHĀRAṆĪ, name of a Sanskrit text which is extant only in its Tibetan translation, the *Ḥphags-pa dbaṅ-bskur-ba shes-bya-baḥi gzuṅs*. This work, which was translated into Tibetan by Jinamitra, Dānaśīla, and Ye-śes sde, is preserved in the Rgyud-ḥbum and the Gzuṅs-ḥdus sections of the Tibetan Kangyur (*TM*. Nos. 569, 859).

ABHIṢEKA. I. Meaning of the term and various appellations. The term abhiṣeka (Pali, *abhiseka*: Tib., dbaṅ-bskur) is transcribed in Chinese characters in many ways. It means "sprinkling water on the top of the head", which was the most important part of the accession ceremony of an Indian monarch or of the investiture of the heir-apparent. (See Pl. IV.) Later, it came to symbolise the attainment of Buddhahood. In esoteric Buddhism a preceptor performed the rite when he introduced his disciple to the esoteric doctrine. In the case of the latter the water symbolises the five kinds of wisdom of the Buddha (五智 go-chi=*pañcajñāna*, which are: 1. *dharmadhātusvabhāva-jñāna*, 2. *ādarśa-jñāna*, 3. *samata-jñāna*, 4. *pratyavekṣaṇā-jñāna*, and, 5. *kṛtyānusthāna-jñāna*).

II. Origin. The *Hien-yu-king* (賢愚經 *Dama-mūrkha-nidāna-sūtra,* 13th chap., Mūrdhagata-rājā) describes the accession of king Māndhātri (Mūrdhagata) as follows: "Many subordinate princes went to Māndhātri and said, 'The great king has passed away. Pray, do succeed to the throne'. 'If I am lucky enough to be a king', answered Māndhātri, 'let the four guardian deities and Indra, lord of heaven, come to receive me. Then I shall ascend the throne.' When he made this vow, the four deities at once alighted there. Each of them took a precious vessel full of fragrant water and sprinkled it on him, and Indra, the lord of heaven, brought a precious diadem and put it on his head, praising the new king" (Taisho, IV, 439, c).

Chapter 8 of the *Śuraṅgama Sūtra* says that a king of a country who wanted to entrust his son with political affairs, waited until his son grew up and made him attend the ceremony of head-sprinkling (Taisho, XIX, 142, b). The *Tien-t'ai-ssen-kiao-yi-chi-chieh* (天台四教儀集注 part II, 21, a) comments that the term signifies taking water from the four oceans into a golden vessel and sprinkling it on the head of a prince.

Chapter 15 of the commentary on the *Mahāvairocana Sūtra* gives a more minute description. "Take, for example, the class of warriors who sprinkle water on the head of the heir-apparent so that they may not fail in obtaining a successor. They take the water of the oceans into four highly ornate vessels. They adorn the person of the prince completely. The vessels are set on the back of a large bedecked elephant. The prince is seated on a dais surrounded by his subjects. Then the water is poured from above the tusks of the elephant on to the head of the prince. This having finished, they proclaim loudly three times 'Take notice that the prince has ascended the throne. Henceforth you should obey his command'." (Taisho, XXXIX, 736, b).

It is stated, in the chapter named "Pure conduct" of the old *Avataṃsaka Sūtra,* that when one takes a bath the mind is thereby purified and an immense amount of light is produced. The Indian habit of taking baths in rivers and ponds was thus gradually spiritualised, until it was adopted in such a ceremony. It came to be regarded in esoteric Buddhism as the most important religious rite, the key-point of the doctrine being the initiation of their disciples by the patriarchs.

III. Head-sprinkling described in Buddhist Texts. (1) *Head-sprinkling in the Mahāyāna.* Chapter 27 of the old Chinese translation of the *Avataṃsaka Sūtra* named Daśabhūmi (Ten Stages) says: "When a son of the supreme sovereign (cakravarti-rājā) is qualified to be the successor to the throne, the king puts his son on the golden throne. Water is brought from the four oceans. The room is adorned with screens, banners and streamers and fine music is played. The king takes the golden vessels and sprinkles the fragrant water on the head of the prince. He is called 'the great king who was sprinkled with water'. He is also called 'the supreme sovereign' because he is expected to practise the ten kinds of good conduct. So also a bodhisattva who aspires to Buddhahood is sprinkled on the head by the Buddhas with water which symbolises their wisdom. He is then called 'the king of the law who has been sprinkled'. Because he is possessed of the ten supernatural powers of the Buddha, he is admitted among the Buddhas. This is the stage of great wisdom attained by the bodhisattva. Once he is in this stage he is thereby regarded as having suffered immeasurable penance and austerity. Now when he has completed this stage, he stays in the tenth stage called 'Law-cloud-land' (*dharma-megha-bhūmi*) and can increase his wisdom and merit immeasurably." (Taisho, IX, 572, b.)

But the 8th chapter of the same *Avataṃsaka Sūtra,* called the Ten Stages of the Bodhisattva, says, referring to the highest stage, that the veritable son of the Buddha who has been sprinkled can hold everything, every excellent law (Taisho, IX, 448, c). The chapter entitled Titles of Saints, in Book I, or, *P'ou-sa-ying-lo-pen-ye-king* (菩薩瓔珞本業經), refers to the forty-two sacred spiritual stages of the bodhisattva, the tenth of which is called the stage of abhiṣeka in its Chinese equivalent (Taisho, XXIV, 1011, b). The same word can be found in *T'ien-t'ai-sseu-kiao-yi-chi-cheh* (天台四教儀集注, part II, 21, a).

The section on the ten positions (十住品) in chapter 11 of Book 5 of *Houa-yen-king-t'an-hiuan-ki* (華嚴經探玄記) says that wisdom is accomplished at the end of the ten positions and the "Law-water" of the Buddhas is sprinkled on his head; hence the tenth position is called head-sprinkling. Because the bodhisattva attains enlightenment by this head-sprinkling, according to the *Avataṃsaka Sūtra,* no further stages of practices, such as the ten deeds (十行 jū-gyō), the ten merit-transferences, the ten stages and so on, are necessary (Taisho, XXXV, 197, b).

Thus head-sprinkling is mentioned at the end of both the ten processes (of the mind) and the ten stages of the practice in the course of the bodhisattva's progress. If the head-sprinkling of the ten processes is admitted, the course after the ten deeds cannot be admitted, while if that of the ten positions is recognised, that of the ten processes becomes meaningless. But the same *Avataṃsaka Sūtra* gives these two contradictory statements.

(2) *Head-sprinkling described in esoteric Buddhist literature.* Explaining the term head-sprinkling, the *Pi-ts'ang-chi* (祕藏記), introduced into Japan by Kōbō-Daishi or Kūkai (774-835 A.C.), says that sprinkling symbolises the great compassion of the Buddhas, and the head means the climax. Gradually proceeding from the first stage, the bodhisattva attains the stage of enlightenment and finally supreme enlightenment. Then, the Buddhas sprinkle his head with water which symbolises the great compassion of the Buddhas. It is then that the religious practice is completed and Buddhahood is attained. This is the climax. (The Complete Works of the Shingonshū Sect, IX, 24, b.) Chapter 15 of the commentary on the *Mahāvairocana Sūtra,* named the Secret Maṇḍala, forbids its followers to learn the sacred formulas (*mantra*) and the manual signs (*mudrā*), unless they have finished the head-

sprinkling. The teacher should not deliver the Law to his disciples until then, for it would be a gross blunder (Taisho, XXXIX, 736, a). This serves to show the great stress laid on the abhiṣeka.

After having described the head-sprinkling of the prince, chapter 15 of the commentary on the *Mahāvairocana Sūtra* goes on to say that the Tathāgata, the king of the Law, sprinkles the elixir of the Law on the head of the "Son of the Buddha" in accordance with mundane custom, so that the lineage of the Buddhas may not be interrupted. He succeeds to the position of the king of the law and never retires from the position of supreme enlightenment. If he is confident that he will never make a mistake as regards any rite, sacred formula (*mantra*), manual sign (*mudrā*) and meditation (*samādhi*), all the saints will thenceforth revere him (Taisho, XXXIX, 736, b). It is also said that when all the Buddhas sprinkle water and exert influence upon the practiser (*yogin*) simultaneously, he attains Buddhahood. This means that he attains the great Maṇḍala by means of great compassion (Taisho, XXXIX, 731, c). The first volume of the *King-kang-ting-yi-ts'ie-jou-lai-tchen-che-cho-ta-tch'eng-hien-tcheng-ta-kiao-wang-king* (金剛頂一切如來眞實攝大乘現證大教王經) consisting of three fascicules, says that the *yogin* gets water sprinkled on him in order to be king of the three worlds, which is to be compared with wearing the diadem of all the Buddhas (Taisho, XVII, 207, a). The first volume of the *Tchou-fo-king-kiai-chö-tchen-che-king* (諸佛境界攝眞實經) says that the *yogin* gets water sprinkled on him by all the Buddhas, which is the diadem (ibid. 270, a). Thus head-sprinkling is regarded as being of the highest importance among the religious practices of bodhisattvas.

IV. **Kinds of Abhiṣeka.** Chapter 5 of the *Mahāvairocana Sūtra* named Secret Maṇḍala (祕密曼荼羅品第五) mentions five stages of the Buddha. In the first stage the *yogin* gets the *samaya* (the aspiration to enlightenment in accordance with the vow of the Buddha) by seeing the maṇḍala, but he can get thereby neither the true words (*mantra*) nor the sacred manual signs (*mudrā*). In the second stage he gets into the maṇḍala and looks at the assembly of the saints. The third stage is attained by practising the rite of worship and manual signs (*mudrā*) according to instruction. In the next stage he is admitted to receive the Law and accomplishes self-concentration, but he cannot yet attain the spiritual head-sprinkling nor does the esoteric wisdom appear to him. Therefore, it is said that the practiser (*yogin*) who belongs to esoteric Buddhism could get the abhiṣeka only in the fifth (Taisho, XVIII, 33, a). [Details are given in chapter 15 of the commentary on the *Mahāvairocana Sūtra* (Taisho, XXXIX, 736, b) and in chapter 51 of the En-nō-shō (演奧鈔, Taisho, LIX, 505, c, ff.)]

Chapter 7 of the *Mahāvairocana Sūtra*, named the Remembrance of Rules (持誦法則品), describes the head-sprinkling of the preceptor and the remembering of sacred incantations (*dhāraṇī*). The former is performed after arranging various conditions and instruments, while the latter consists merely in getting sacred spells (Taisho, XVIII, 52, c; 53, a). The *Kin-kang-ting-king-dai-yu-k'ie-pi-mi-sin-ti-fa-men-yi-kiue* (金剛頂經大瑜伽祕密心地法門儀軌) mentions the illumination, the ambrosia, the letters, the manual signs (*mudrā*) of wisdom, and the meaning of the term. The first signifies that the *yogin* is helped by the illumination of great wisdom and the great compassion of the Buddhas and the bodhisattvas. The second means that he is helped by the scented water under the effect of the sacred formula (*mantra*) of the great founder (Vairocana Buddha). The third is the rite of visualising on the person of the *yogin* the letters characterising the merits of the divinity in each section of the maṇḍala. The fourth explains how to be helped by the manual sign (gestures) of the main divinity of each section. The fifth is the rite of how to visualise and arrange on the person of the *yogin* the sacred formulas (*mantra*) of the main divinity (Taisho, XXXIX, 818, a). This explanation deals with the follower of the Mantrayāna who has finished the head-sprinkling in order to learn the sacred charms, but not for the purpose of acquiring the esoteric law.

The chapter named Distinguishing Homa rite (分別護摩品 fun-betsu-go-ma-bon), or the second chapter of the *Guhya Sūtra*, speaks of four kinds of head-sprinkling, i.e., transmission of the truth (傳法 den-bō), cessation of calamity (除難 jo-nan), increase of benefit (增益 zō-yaku), and subjugation of demons (降魔 gō-ma) in connection with entering the maṇḍala (Taisho, 770, c). It also speaks of four other kinds of head-sprinkling, viz., removal of disaster (除難 jo-nan), accomplishment (成就 jō-ju), increase of benefits on oneself (增益 zō-yaku), attainment of the preceptorship (得阿闍梨位 toku-a-ja-ri-i: Taisho, XVIII, 772, a). The first head-sprinkling for the transmission of the truth (傳法 den-bō) is connected with the fourth, attainment of preceptorship (得阿闍梨位 toku-a-ja-ri-i: Taisho, XVIII, 772, a).

The *P'i-t'sang-chi* tells of three kinds of head sprinkling, i.e., the laying of the hand on the head (摩頂 ma-chō), prediction (授記 ju-ki, vyākaraṇa) and shining (放光 hō-kō). The first means that the Buddhas lay their hands on the head of the follower and make a prediction that he will soon obtain Buddhahood. The second is the prediction of the future by the Buddhas. The third is shedding of light by the Buddhas, giving him benefit. (The Complete Collection of the Shingon-shū Sect, IX, 25, a.) This is the practice of preceptors who have gone beyond the first of the ten stages of spiritual development and are versed in deep religious activity. It is the degree of the spiritual head-sprinkling to which an ordinary man is not admitted. The chapter named the Law of the chief divinity of head-sprinkling (本尊灌頂品 hon-zon-kan-jō-bon), part II of the *Susiadhikara Sūtra*, makes mention of the head-sprinkling to be performed in order to increase the dignity and virtue of the chief divinity (Taisho, XVIII, 620, a).

When the preceptor teaches his disciple about the five sections of the Buddha (佛部 butsu-bu, Buddhakula), the thunder-bolt (金剛部 kon-gō-bu, vajrakula), the lotus (蓮華部 ren-ge-bu, padmakula), the jewel (寶部 hō-bu, ratnakula) and the action (羯磨部 fiatsu-ma-bu, karmakula), head-sprinkling

belonging to each section must be performed. Sometimes head-sprinkling belonging to three sections out of the five mentioned above is spoken of: the Buddha, the lotus and the thunderbolt.

Other kinds of head-sprinkling include the following: Yogi head-sprinkling (瑜伽灌頂 yu-ga-kan-jō) explained in the *Yogi Sūtra*, three kinds of head-sprinkling named the virtuous vase, secret and wisdom as expounded in the *Śrī-Sarvatathāgata kāyavākcitta-rahasyadvinirgama śrī guhyasamājasya mahātantrarājasya purvārddhaḥ* (Taisho. XVIII, 508, c), and later, that of personal attainment of Buddhahood to explain the deep meaning of the doctrine of attainment of Buddhahood in one's person (卽身義灌頂 soku-shin-gi-kan-jō),—the title of a work by Kōbō-Daishi or Kū-kai; that of the will of Kōbō-Daishi to explain the deep mystery of his will (御遺告灌頂 go-yui-koku-kan-jō); that of the Sanskrit alphabet; that of Shintoism. That which is performed on the accession of the Japanese emperor is called the head-sprinkling of the accession (御卽位灌頂 go-soku-ikan-jō).

But the most important of them are as follows: the ceremony of worshipping the maṇḍala and its altar, that is, the head-sprinkling of 'having a view of the maṇḍala' (一見灌頂 ik-ken-kan-jō); 'the permission head-sprinkling' which is given to the disciple to permit him to learn the esoteric Buddhist doctrine (許可灌頂 kyo-ka-kan-jō); that of the Vajradhātu (金剛界灌頂 kon-gō-kai-kan-jō) to practise in accordance with the law of the sūtras of Vajradhātu; that of the Garbhadhātu (胎藏界灌頂 tai-zō-kai-kan-jō), to practise in accordance with the law of the Garbhadhātu; that of compound practice of both laws; that of the Susiddhi (蘇悉地灌頂 Susiddhi-kan-jō), attainment of supernatural powers by the *Susiddhikara Sūtra*. (This is practised chiefly in the Japanese Tendai-shū sect.) There are three other kinds, of finding connection with the Buddhas, of the receiving of the sacred incantation and of the transmission of the law. Again, another sūtra speaks of three other different kinds of head-sprinklings: 'Manual sign' (印法灌頂 in-bo-kan-jō), 'Supplied with tools' (事業灌頂 ji-gō-kan-jō) and 'Spiritual' (以心灌頂 i-shin-kan-jō).

And, last of all, there are the five kinds of the *samaya* (the aspiration to the attainment of Buddhahood). All these are the appellations generally used. The appellations of 'finding connection' (結緣灌頂 kechi-en-kan-jō), 'receiving of sacred incantation' (持明灌頂 jī-myō-kan-jō) and 'transmission of the law' (傳法灌頂 den-bo-kan-jō) are those classified according to the various rites. They are nowhere written together. These and the five kinds of the *samaya* are classified by the capacity of the recipients. The doctrines received by them are different. The three kinds of 'Permission', 'Transmission of the law' and 'Secrecy' are not given together in one place. These terms are, however, convenient for practical purposes.

The terms such as 'the rule of manual signs' (印法 in-bō), 'action' (事業 ji-gō) and 'spiritual' (以心灌頂 i-shin-kan-jō) are distinguished one from another according to whether the *yogin* practises a certain ritual or not. 'Finding connection with the Buddha' (結緣灌頂 kechi-en-kan-jō), 'the reception of the secret formula' (受明灌頂 ju-myō-kan-jō) and 'transmission of the law' (傳法灌頂 den-bō-kan-jō) are the head-sprinklings accompanied with tools and many kinds of offering. Elaborate tools and utensils are prepared specially in the head-sprinkling of the 'Law-Transmission''. Thus, it is sometimes called 'the head-sprinkling supplied with tools' (事業灌頂 ji-gō-kan-jō). That of the 'manual sign' (印法灌頂 in-bo-kan-jō) is the 'transmission of the Law' which is performed when the recipient is of a superior capacity fit to hold the esoteric doctrine, but too poor to prepare many kinds of tools. The spiritual head-sprinkling is the fifth *samaya*, which is the ultimate truth conferred on the recipient of superior wisdom, well-versed in the Yoga (intercommunion with the Buddha). In this case, the altar is not built but the person of the preceptor himself is supposed to be the maṇḍala on which to perform the ceremony.

V. **The ceremony of head-sprinkling.** The giving of the head-sprinkling as mentioned above is called 'entering the altar' (入壇 nyū-dan). One who enters the altar is called the recipient of head-sprinkling (入壇灌頂者 nyū-dan kan-jō-sha). The name given then is the so-called 'diamond-title' (金剛名號 kon-gō-myō-gō). The teacher who introduces the recipient into the sacred hall, teaches the ritual and tells him how to behave in the ceremony is called 'the instructor of head-sprinkling' (灌頂教授師 kan-jō kyō-ju-shi). One who confers and teaches the esoteric law (truth) is called 'the Great Preceptor of head-sprinkling' (灌頂大阿闍梨 kan-jō dai-a-ja-ri). Generally, it is customary to perform in the morning the ceremony of conferring the commandments of esoteric Buddhism, which is called 'Samaya commandments' (三昧耶戒 samaya-kai), and to teach the Law early and late at night. The Esoteric Law consists of the Garbhadhātu and the Vajradhātu. If the former is taught early at night, the latter is delivered late at night, or *vice versa*. In the Japanese Tendai-shū sect, the altar for the Law of Susiddhi (supreme accomplishment) is taught in addition to the two mentioned above. In any case, the preceptor who teaches the Law, the recipients and an assistant are needed. Therefore, the place and the date of the ceremony to be performed should be decided, publicised and preparations should be made. The Samaya commandments must be delivered in secrecy, in a place surrounded with a curtain called 'the substitute wall' (壁代 kabe-shiro) to prevent others from peeping into it. All the necessary arrangements of the holy hall, are made beforehand. Early in the morning the recipients take water to be used for the ceremony on that day in accordance with a certain rule.

When the day comes those who are concerned assemble in the monastery where the ceremony is to take place. They purify themselves by bathing in scented water. In due course, they perform a solemn ceremony. As soon as they enter the sacred hall, the preceptor goes behind 'the substitute wall' and then the recipients enter. After explaining the confession and the commandments, the preceptor introduces into the water scented powder, flowers, incense and light, by the force of the supernatural power of the Buddha. He instructs

the recipients how to make offering to the Buddhas. He performs the ritual of the 'diamond cord' (金剛線 kongō-sen), 'water of the vow' (金剛誓水 kongō-sei-sui), 'the sworn statement' (啓白 kei-byaku), and 'the tooth-stick' (歯木 shi-moku, dantakāṣṭha) to instruct the disciples therein. The 'diamond cord' symbolises the eternity of the successive transmission of esoteric truth, 'the water of the vow' makes the recipients swear not to transgress the Law, and 'the tooth-stick' indicates that the recipients will be qualified successors of the Law by eschewing every evil.

When the programme of the rites comes to an end, they retire to another room (outside the sacred hall of the night) where they go on reciting the sacred formulas (*mantra*) until they enter the sacred hall again, at night. The rite, at night, early and late, begins with the 'practice' of the preceptor, who introduces his disciples at an appropriate moment to the maṇḍala altar in the inner sacred compartment. Introducing them, he says, "Let me block the door from every evil in the world and open the pure five eyes (the eyes of the five wisdoms of the Buddhas which are inherent in man)". Then he covers the eyes of the recipients with red or white cloth. He makes the disciples cross over an elephant purified with incense, which implies riding on the back of elephant at the entrance to the sacred precincts. The disciples go to the maṇḍala altar and throw flowers to decide on which specific Buddhas to choose. The preceptor or the instructor takes off the cloth which covers the face of the recipients and lets them take a look at the maṇḍala. After other rites the *yogins* are introduced to the enlightenment altar, wearing on their persons the diadem and bangles of the Buddha. They are shown the mystic manual signs (*mudrā*) and sacred incantations (*dhāraṇī*), and the rite of attainment of Buddhahood. The preceptor takes a fly-whisk (拂子 fossu) in hand and with it expels the impurity of the recipients. He then stands up and takes five water vessels (of holy water of five sorts of wisdom, 五智の瓶水 go-chi-no-byō-sui) one by one from the great altar and recites the sacred formula of each of the five Buddhas, Vairocana, Akṣobhya, Ratnasambhava, Amitābha and Amoghasiddhi, making circumambulation three times around the great altar. He moves the five water vessels to the enlightenment altar, where he sprinkles water over the disciples. That includes conferring by the preceptor of the five-pronged bolt which symbolises the five wisdoms (五智 go-chi, pañca-jñāna), a metal spatula, a bright mirror for removing the membrane of ignorance covering their mind, the 'metal wheel of wisdom' and the conch-shell, used in preaching the Law. While the preceptor and the recipients stand up and ambulate around the great altar, the instructor carries a canopy.

After they have taken their seats at the small altar, the preceptor gives each of them a five-pronged bolt (五鈷 go-ko, vajra) symbolising the inherent qualities of the Buddhas. When the recipients have been recognised they take off the diadem and bangles and go out of the inner sacred hall. They return to their original seats and wait until the rite of the preceptor is over, reciting sacred formulas (*mantra*). While the rite in the inner sacred hall is being conducted, they recite hymns and gently beat a cymbal in accordance with the order of the instructor. The rites practised early and late at night are almost the same except that the former is based on the *Garbhadhātu* and the latter on the *Vajradhātu*.

Apart from the rite mentioned above a fire altar is arranged to burn fire for the recipients, and offerings are made on the 'god-offering altar' to the twelve gods, the lords of the constellations. The rite held late at night being over, the preceptor goes down to the altar, salutes the maṇḍala and the patriarchs of esoteric Buddhism and goes out, accompanied by the recipients. When they have taken their seats in an appropriate place, the preceptor gives some instruction to which the recipients answer. Then the three robes of the instructor are given together with 'the mystic manual signs' (*mudrā*), 'sacred formulas' (*mantra*) and the paper on which is written the lineage of the traditional successors of esoteric Buddhism (血脈 kechi-myaku). The rite mentioned above may or may not be accompanied with another rite called 'permission' (許可灌頂 kyo-ka-kan-jō). The Samaya commandments may be performed with or without an elaborate rite in the court called 'the court ceremony for ascending the temple' (上堂の庭作法 jōdō-no-niwasahō). The court ceremony will be performed on the morning following the delivery of the Law, when they return from the holy hall. This is named 'the ceremony of the next morning' (後朝の式 kōchō-no-shiki).

At Kōyasan, the head-sprinkling of the preceptor is performed in order to establish the status of the preceptor. This includes an elaborate court ceremony, hence it is called 'the court ceremony head-sprinkling' (庭儀灌頂 teigi-kanjō). In this case, all the recipients go to the sacred precincts accompanied by the instructor and receive the supreme secret of the school in the great stūpa. They then enter "the Hall of the Portrait of the Founder" (御影堂) with a glass of purified water in the instructor's hand and they are considered as receiving the sacred law directly from the great founder of the sect himself. This is a spiritual head-sprinkling, and, therefore, no one else is allowed to see it. In this case they receive at first the 'Permission' (許可 kyo-ka) rite and then the rite of 'the arrangement of the tools' (事業 ji-gō) to prepare various tools and utensils—and congratulation on the connection of the teacher and his disciples in succession.

VI. **Tools used in head-sprinkling.** Tools in general were described in the preceding section. Others are used for the rites in the sacred hall. In the hall in which the ceremony of the Samaya commandments is performed are needed 'the substitute walls' (used in four quarters) and the rods to hang them from; high desks in front, to the right and left of the seat; a bell with five-pronged bolt (五鈷鈴 go-ko-rei) on the desk in front; a square plate of wood called 'orishiki' (折敷) on the desk to the right on which are placed terracotta bowls filled with holy water, powder-perfume, incense and a candle-stick. Powder-perfume and a dish of water which symbolise the Buddha's vow for the recipients

are placed on the desk to the left together with prescribed water to be sprinkled, a wand to sprinkle it, and a paper pack.

A case to hold the text of the commandments containing a 'diamond-cord', tooth-sticks, a case to hold an incense-burner with handle and a wand, a case containing three monastic robes and the text of the programme for the preceptor are prepared. When the rite is performed, disciples called "The Ten Disciples" carry these cases with the seat. The case containing the text of commandments is placed on the desk in front and to the right of the preceptor, the case with the incense-burner on the desk to the right, and the case with the three robes on the desk to the left.

Below the front desk, to the right, are arranged a water vessel, a small basin, and a tiny straw mat and, apart from them, small mattresses and a gong stand for the recipients. The mattresses must be as many as the number of the recipients. Another mattress, twice as thick as the ordinary one, should be made for the preceptor.

In the front of the sacred hall a maṇḍala (either of the Garbhadhātu or the Vajradhātu) is suspended from a hanger. A painting of the maṇḍala is spread over a sheet of cloth on the great altar. Two bowls of water, bowls of powdered perfume and of flowers and an incense burner on a tripod are placed on each side of the square altar. An artificial flower in a vase, balls of boiled rice in five colours, three-pronged bolts crossing each other, and its stand, are put at each of the four corners. In the centre are placed a flower vase, a Wheel of the Law, and a stūpa. In front are arranged as usual a five-pronged bolt, a bell, a three-pronged bolt, and a one-limbed bolt on a three-footed metal plate. The four boundary posts are connected by means of the 'diamond-cord'.

A small desk and a seat are set in front of the altar. On the left side of the desk are water to be sprinkled, a wand for sprinkling it, packed offering to the Buddhas, packed perfume, and a case of three robes. A gong-stand is to the right side, and a small and deep box to put a flower in and a sprinkling wand is on the opposite side of it and beneath the altar. A case containing the incense burner is in front, near by.

The enlightenment altar (the small altar) is surrounded with a chair for the preceptor, a case of esoteric tools such as a diadem and bangles, a circular tray for five artificial flowers, incense and a candle. The seat of the recipient is set in front of the desk, which is encircled with a paper screen. A canopy is prepared for the circumambulation of the recipient. Images of the patriarchs (or of the twelve gods) should be properly arranged. An elephant purified with incense must be set at the entrance of the hall. A high desk, water for sprinkling, powdered perfume, a sprinkling wand, cloth for covering the face of the recipients are prepared for use when they are to be 'influenced' by the force of the supernatural power of the Buddha. Outside the corners of the great altar and on the small altar are lighted candles on candle sticks. Where the complicated court ritual is to be performed many other tools must be prepared.

KŌJUN ŌYAMA.

ABHIṢEKA, meaning "anointing" or "consecration" (by sprinkling water), is the name given in the *Mahāvastu*[1] to the 10th bodhisattva-bhūmi or stage of progressive religious development, which is elsewhere always referred to as *Dharmameghā* (q.v.).

It was most probably so named because "when the bodhisattva reaches his last stage of self-discipline, he is anointed by the Buddhas with their own hands and formally inaugurated as one of them".[2]

ABHIṢEKAKARMASŪCI, name of a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-gi las-tho,* in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. It probably forms one of the six chapters (*paṭala*) of the *Guptābhiṣekapaṭalaṣaṭka* which was composed by Bde-ba gsal-mdsad, or Sukhaprakāśa (Cordier, III, p. 159).

ABHIṢEKANIRUKTI, a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ bskur-baḥi ṅes-pa* (Cordier has *rim-par) bstan-pa,* in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was Rin-chen ḥbyuṅ-gnas shi-ba (Ratnākara-śanti). Mahopādhyāya Śāntibhadra of India and the Lotsāba Tshul-khrims rgyal-ba, Nag-tsho Lotsāba (*circa* 1011 A.C., Jayaśīla) translated this work into Tibetan (Cordier, II, 253 ; TM. No. 2476).

ABHIṢEKAPIṆḌĀRTHA, name of a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-don bsdus-pa,* in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. It probably forms one of the six chapters (*paṭala*) of the *Guptābhiṣekapaṭala* which was composed by Bde-ba gsal-mdsad, or Sukhaprakāśa (Cordier, III, p. 159).

ABHIṢEKA-PRAKARAṆA, a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-gi rab-tu byed-pa,* in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was Mahāpaṇḍita Abhayākaragupta. The author and Śes-rab-dpal (Prajñā-śrī) translated this work into Tibetan (Cordier, II, 47 ; TM. No. 1499).

Cordier (II, 155), however, records yet another work which bears the above title and which is extant in its Tibetan translation, the *Dbaṅ-bskur-baḥi rab-tu byed-pa.* This work, too, is recorded in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was Slob-dpon

1 I. 76. 18 ; 124. 20 ; 193. 6 (Abhiṣekavatī).

2 Suzuki : *Studies in the Laṅkāvatāra-sūtra,* p. 384 (Dharmameghābhiṣekabhiṣiktas tathāgatapratyāmabhūmim adhigamya).

Mkhas-pa chen-po Bsod-Sñoms-pa Dge-sloṅ Ḥod-sruṅs gshon-nu (Ācārya Mahāpaṇḍita Paiṇḍapātika Bhikṣu Kumāra-kāśyapa). Paṇḍita Tathāgata-rakṣita and Rin-chen bzaṅ-po (958-1055 A.C.) translated this work into Tibetan.

ABHIṢEKAPRAKRIYĀ, name of a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-gi rab-tu-byed-pa*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was Dgaḥ-baḥi rdo-rje. Mar-me-mdsad and Ba-ri translated this work into Tibetan (TM No. 1886).

ABHIṢEKA-RATNĀLOKA, a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ rin-chen snaṅ-ba*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author is Rnal-ḥbyor-pa chen-po Dpal Śes-rab gsaṅ-baḥi shabs (Mahāyogin Śrī Prajñā-gupta-pāda). Mkhan-po Dpal Śes-rab gsaṅ-baḥi shabs (Upādhyāya Śrī Prajñā-gupta-pāda who is the same as the author according to Tōhoku) of India, and the Lotsāba Dge-bsñen Chos-kyi ye-śes (Upāsaka Dharmajñāna) of Kam, translated this work into Tibetan. It was revised by Phyugs-mtshams Dbaṅ-phyug rgya-mtsho (Īśvarasāgara). In Tōhoku, however, he too is mentioned as a translator (Cordier, II, 96 ; TM. No. 1333).

(ABHIṢEKA-) RATNAMĀLOPADEŚA, a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ rin-chen phreṅ-baḥi man-ṅag*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. The author, Slob-dpon chen-po Śesrab dpal gsaṅ shabs (Mahācārya Prajñā-śrī-gupta-pāda) or Śes-rab gsaṅ-ba (Prajñā-gupta), himself translated the work into Tibetan (Cordier, II, 97 ; TM. No. 1338).

ABHIṢEKĀRTHA-NIRBHEDA, a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-gi don ṅes-par ḥbyed-pa* in the Rgyud-Ḥgrel section of the Tibetan Tengyur. Its author was Slob-dpon chen-po Saṅs-rgyas gsaṅ-ba (Mahācārya Buddhaguhya). The translator's name has not been mentioned (Cordier, III, 132).

ABHIṢEKĀRTHA-NIRUKTI, name of a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-gi don ṅes-par brjod-pa shes-bya-ba*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was Rgyal-ba bzan-po dpal sbas-pa. Avadhūtī-pa and Śākya brtson-ḥgrus translated this work into Tibetan (TM. No. 2477).

ABHIṢEKĀRTHA-VIBHAṄGA, name of a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-don rnam-par ḥbyed-pa*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. It probably forms one of the six chapters (*paṭala*) of the *Guptābhiṣekapaṭalaṣaṭka* which was composed by Bde-ba gsal-mdsad, or Sukhaprakāśa (Cordier, III, p. 159).

ABHIṢEKĀRTHA-VISTARAVIVEKA, name of a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-don rgya-cher ḥbyed-pa*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Bde-ba gsal-mdsad (Sukhaprakāśa) was its author. This work probably forms one of the six chapters (*paṭala*) of the *Guptābhiṣekapaṭalaṣaṭka*.

ABHIṢEKA-TANTRA-MŪLA-VṚTTI, a Sanskrit text which is extant in its Tibetan translation, the *Dbaṅ rgyud rtsa ḥgrel*, in the Rgyud-Ḥgrel section of the Tibetan Tengyur. The author of this work was Vimala (Cordier, III, 150).

ABHIṢEKAVATĪ, name of the tenth bodhisattva-bhūmi (*Mhvu.* I, 193.6).

ABHIṢEKA-VIDHI, a work on late Buddhistic ritual found in a manuscript dated 1440 A.C. It begins with an invocation of Śrī Vajrasattva, and the statement that the entrance into the maṇḍala is not to be made for the sake of prosperity in this world, nor in the next, but for the proper attainment of the threefold desire of Tathāgatas (*Tathāgata-kāmatrayasamyakprāptaye*), for, on achieving this, prosperity in this world and in the next will surely follow.

The divisions of the work are not numbered. The following, however, may serve as some clue to its contents :—Dantakāṣṭ(h)apātana, Śiṣyādhivāsanāvidhi, Ācāryapraveśavidhi, Āveśavidhiḥ, Sāmvapaṭa(?)śiṣya-praveśavidhi, Mālābhiṣekaḥ, Puṣpapātanavidhiḥ, Udakābhiṣekavidhiḥ, Mukuṭābhiṣekavidhiḥ and so on.

At the end of this manuscript a few lines of prayer to various deities have been added by the scribe (Bendall, pp. 179 f.).

ABHIṢEKA-VIDHIKRAMA-NĀMA, a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-gi cho-gaḥi rim-pa shes-bya-ba*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was the scholar Ratnaśrī or Bde-baḥi rgyal-po (Sukharāja), of Kaśmīr. It was translated into Tibetan by Śrī Parahita and Śes-rab rgyalmtshan (bhikṣu Prajñādhvaja) of Nag-tsho (Cordier, p. 53–54 ; *TM.* No. 1535). Yet another work bearing the title *Abhiṣekavidhikrama* (Tibetan ' Khrus-kyi cho-gaḥi rim-pa ') has been recorded by Cordier (p. 335). The names of the author and the translator of this work are not noted.

ABHIṢEKAVIDHI-RATNAMĀLĀSAṂNIBHA-NĀMA, a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ-bskur-gyi cho-ga rin-chen phreṅ-ḥdra shes-bya-ba*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. Its author was Rdo-rje dril-bu-pa (Ācārya Vajraghaṇṭa). The translator's name is not recorded (Cordier, III, p. 211).

ABHIṢEKA-YUGAPADAVATĀROPADEŚA, the name of a Sanskrit text which is extant only in its Tibetan translation, the *Dbaṅ cig-car ḥjug-paḥi man-ṅag*, in the Rgyud-Ḥgrel (Tantra) section of the Tibetan Tengyur. The names of its author and translator are not mentioned. However, according to the *Index tibétain*, the author of this work was Vimala (Cordier, III, p. 142).

ABHIṢIÑCANĪ-NĀMA-DHĀRAṆĪ (Tib. *Ḥphags-pa dbaṅ-bskur-ba shes-bya-baḥi gzuṅs*). A magic formula (*dhāraṇī*) found in the Tibetan Tengyur. This was translated into Tibetan, revised, re-revised and edited by the Indian paṇḍits Jinamitra and Dānaśīla, and the great Tibetan translator Ye-ces-sde (ŌM. No. 301 and 484 fragment).

ABHISŪRYA. As proclaimed by the Buddha Śākyamuni to the five Bhadravargīya monks, Abhisūrya[1] or " Superior to the Sun ", is the name of one of the thousand Buddhas who will arise in this auspicious world age (Bhadrakalpa) named Puṣpika, and who will be possessed of a radiance of four yojanas.

ABHIṬHĀNA. The term literally means 'that which stands out' and, in a somewhat technical sense, it is employed with reference to six grave offences which are said to be incapable of being committed (*abhabbo kātuṃ*) by a person possessed of right views[2], namely, one who has attained the first fruit of enlightenment (*sotāpatti*).

The commentary explains this term to mean 'instances of debasement' (*oḷārikaṭṭhānāni*: *KhpA*. I, p. 189) which include matricide (*mātughāta*), parricide (*pitughāta*), killing an arahant (*arahantaghāta*), spilling the blood of a Buddha (*lohituppāda*), causing schism in the community of monks (*saṅghabheda*) and professing the doctrines of a teacher other than the Buddha (*aññasatthāruddesa*, ibid.). But the same commentary has also recorded yet another interpretation which, though somewhat unusual, has not been rejected as erroneous but merely ascribed to some (*ekacce*), according to whom the six grave offences consisted in the violation of each of the five precepts and the professing of the doctrines of an alien teacher.[3]

Of these two sets of offences, the former has also been mentioned in the *Aṅguttara Nikāya* along with many others as acts that a person having right views shall not commit. And there, each of the offences has been introduced not as an act 'that stands out' (*abhiṭhāna*) and therefore grave, but as an impossibility (*aṭṭhāna*: *A. Ekanipāta, Aṭṭhāna vagga*). Such differences in terminology for a common set of offences was probably due to the way in which these offences were viewed in relation to two types of persons who differed essentially, one as 'the person of right views' and the other a worldling (*puthujjana*). Reckoned again from a different angle, the first five of these offences have been collectively referred to as *pañc'ānantariya kamma*, meaning the five acts that result in retribution immediately on the death of their perpetrator (*AA*. II, 4 f.).

H. S. C.

ABHIVINAYA. Like the word *abhidhamma*, the word *abhivinaya*, too, so far as it occurs in the early Buddhist discourses, never appears as nominative but as locative, i.e., as an oblique case form. Thus along with the corresponding case form of the word *abhidhamma*, it occurs in such expressions as *abhidhamme ca abhivinaye ca sikkhitabbaṃ*, meaning thereby that one should train oneself both in respect of the doctrine (*dhamma*) and the discipline (*vinaya*). The prefix *abhi* in that context merely meant 'in respect of', or 'in regard to', or 'concerning'; but it did not bear out the sense of 'higher' which, even if it were possible in the case of the word *abhidhamma* by virtue of its employment as the name of a distinct canonical division was, however, not permissible in the case of the other owing to the absence of a corresponding division known as *abhivinaya**.

Certain commentaries have nevertheless tried to make out such a division by a classification of the canon as *dhamma*, *abhidhamma*, *vinaya* and *abhivinaya*. According to this classification which is met with both in the Dīgha and Aṅguttara commentaries, *abhivinaya* either meant the Khandhaka and Parivāra[4] sections of the Vinaya, or was synonymous with the task of allaying the defilements.[5]

ABHIYA, a monk who lived about a hundred thousand *kalpas* ago in the time of Sarvābhibhū Buddha. He was a previous incarnation of Śākyamuni Buddha.

In the *Mahāvastu*[6] it is stated that when Mahā Maudgalyāyana was on a visit to the Śuddhāvāsa devas a certain deva narrated the story of Abhiya in illustration of the statement, " it is so hard to attain the unsurpassed, perfect enlightenment, for it takes a hundred thousand kalpas to do so ".

A hundred thousand kalpas ago, in the city of Vasumata lived a virtuous merchant, Uttiya, who believed in Sarvābhibhū Buddha and was devoted to Nanda, Abhiya and other monks. Uttiya's daughter was the wife of a householder in Vasumata, and she was especially devoted to Nanda. Now, when Nanda and Abhiya visited Uttiya, Nanda was paid every respect, but not so Abhiya. Therefore Abhiya made a false accusation of adultery against Nanda. The people in Vasumata decided that Nanda should no longer be honoured. Later Abhiya repented and asked forgiveness of Nanda and confessed his sin to the Buddha Sarvābhibhū. He went to Uttiya and, on intimating his desire to make an offering to Sarvābhibhū Buddha and his disciples, received much gold not only from him but from other rich householders as well.

Now in Vasumata lived two dealers in perfume devoted to Abhiya. Abhiya went to them and bought *keśara*[7] essence for 100,000 pieces (of gold). He then entertained Sarvābhibhū and his disciples to a splendid meal. When the Buddha had finished his meal Abhiya scattered the *keśara* essence on him and his disciples and made the mental aspiration

7 A perfume prepared from the flower of that name.

of becoming a Buddha. The Buddha, aware of Abhiya's vow, assured him that his wish would be fulfilled. The three thousand worlds trembled and devas and brahmās shouted with joy. Hearing this, the two perfume dealers made the vow to be Abhiya's two chief disciples when he became a Buddha.

But Uttiya's daughter made a vow that she would slander Abhiya until he attained enlightenment.

Uttiya the merchant is identified with the Suddhāvāsa deva, but a lacuna in the MS. prevents the identification of Uttiya's daughter. The tenor of the story suggests Ciñcā-Māṇavikā.

ABHYAVAKĀŚA, open space. See ABBHOKĀSA.

ABHYUCCADEVA, or Atyuccadeva, name of a bodhisattva.

ABHYUCCAGĀMIN, name of a former Buddha. See ATYUCCAGĀMIN.

ABHYUDDHARA, a bodhisattva whose name occurs in a list (*Gvyū.* 443. 5) of future Tathāgatas enumerated by Māyādevī (q.v.) who tells the noble youth Sudhana that inasmuch as she was the Buddha Vairocana's mother she was also the mother of all past Buddhas, and will be the mother of future Buddhas such as Maitreya, Abhyuddhara, and others (ibid. 438. 8).

ABHYUDGATA, a Buddha whose name is mentioned among those of an unbroken line of *jinas* (conquerors) who were propitiated as her preceptors by the night goddess Samantasattvatrāṇojaḥśrī, while striving to gain the bodhisattva-salvation named Sarvalokābhimukhajagadvinayanidarśana (*Gvyū.* 284. 12).

ABHYUDGATĀBHA, a Buddha whose name is mentioned among those of an unbroken line of *jinas* who were propitiated as her preceptors by the night goddess Samantasattvatrāṇojaḥśrī while striving to gain the bodhisattva-salvation named Sarvalokābhimukhajagadvinayanidarśana (*Gvyū.* 285. 10).

ABHYUDGATAKARMAN, a bodhisattva whose name occurs in a list (*Gvyū.* 443. 8) of future Tathāgatas enumerated by Māyādevī (q.v.) who tells the noble youth Sudhana that inasmuch as she was the Buddha Vairocana's mother she was the mother of all past Buddhas, and will be the mother also of future Buddhas such as Maitreya, Abhyudgatakarman and others (ibid. 438. 8).

ABHYUDGATAPRABHAŚ(I)RI, a Buddha whose name is mentioned among those of an unbroken line of *jinas* who were propitiated as her preceptors by the night-goddess Samantasattvatrāṇojaḥśrī while striving to gain the bodhisattva-salvation (*bodhisattva-vimokṣa*) named Sarvalokābhimukhajagadvinayanidarśana (*Gvyū.* 285).

ABHYUDGATARĀJA, the name of the epoch in which the Tathāgata Sālendrarāja will be born, according to the forecast made by the Tathāgata Jaladharagarjitaghoṣasusvaranakṣatrarājasaṅkusumitābhijña, regarding the future birth of the king Śubhavyūha, who became a convert to his Dhamma. The *Saddharmapuṇḍarīka* (375) gives a detailed account of the events which led up to this forecast. See further KALPA, ŚUBHAVYŪHA.

ABHYUDGATOṢṆĪṢA, name of one of the eight Uṣṇīṣarājānaḥ who are mentioned in the (*Ārya-*) *Mañjuśrīmūlakalpa* (41.10) as to be depicted in a particular rite (*BHS.* Dictionary s.v. Abhyudgatoṣṇīṣa).

He is known in Chinese as Kao fo t'ing (高佛頂), Kao t'ing wang (高頂王), Kuang shêng fo t'ing (廣生佛頂), Chi kuang shêng fo t'ing (極廣生佛頂), Tsui kao fo t'ing (最高佛頂), Huang sê fo t'ing (黃色佛頂), or Kuang ta fa shêng fo t'ing (廣大發生佛頂). In Tibetan his name reads Mṅon-par ḥphags-paḥi-gtsug-tor. According to Mochizuki (II, p. 1083) he is one of the five (or sometimes eight) udgatoṣṇīṣas and can be found occupying the fourth position to the right of Śākyamuni in the Śākyamuni section of the *garbhadhātumaṇḍala*. His body is yellow in colour. He is represented as sitting on a red lotus with his face inclined to the right, while his left hand bears a lotus upon which is placed a green jewel (*maṇi*). 'Śrūṃ' or 'trūṃ' are given as symbols of his Buddha-nature (i.e., *bīja*). His characteristic representation (*samaya*) is through the medium of either only a full blown lotus or a full blown lotus upon which is situated a jewel or maṇi. On the eight Uṣṇīṣarājānaḥ, see UṢṆĪṢA.

T. R.

ABIOGENESIS, the theory of life originating from non-living matter. It is not the same as "spontaneous generation", understood in the Buddhist texts as apparitional rebirth (*opapātika*, q.v.) which is rebirth without parents in certain higher celestial spheres, e.g., when an individual dies after having broken the five lower fetters (*saṃyojana*), but is still burdened with the five higher fetters. The Buddhist doctrine of rebirth is not primarily concerned with the process of physical procreation, as in the true sense man's own actions (*kamma*) are his parents (*janaka*). Volitional activity (*cetanā*) is the factor which provides for the continuation of the process of becoming in saṃsāra. The teaching of kamma and rebirth is, therefore, not affected by any scientific stand regarding the possibility of abiogenesis, whether a living organism can be produced by non-living matter.

ABLUTION. The religious significance of an ablution is a spiritual cleansing, symbolised by a physical washing which is sometimes a complete ritual of bathing or a mere token thereof, as in baptism by sprinkling. The efficacy of such an ablution is not so much in the medium, water, &c., as in the spiritual value attached to this medium and the ritual. An ablution then becomes a purification of the inner nature through the washing of the outer.

In tropical countries, where water is scarce, sometimes sand, but more frequently ashes, have been used for ablution. Especially the sacred ashes, remaining from a sacrificial fire, are even now in great demand and applied on the forehead and upper arms by the followers of the rites of Śaivism, "a bath sacred to fire".[1] But whatever the medium or the ritual, religious ablutions indicate a vicarious purification.

Now, one of the essential tenets of the teaching of the Buddha is that each one has to be a lamp (or island) and refuge for himself (*attadīpa attasaraṇa*[2]). Reliance on rituals (*sīlabbataparāmāsa*), moreover, is one of the lower fetters (*saṃyojana*) which prevent an individual from entering into the stream (*sotāpatti*) or path of holiness (*ariya magga*). It is not surprising, therefore, that the *Dhovana Sutta*[3] censures the occasion of a cleansing ceremony in the southern districts, accompanied by eating, drinking, dancing and singing, as being "low, common, vulgar, ignoble and useless". But the commentarial description of this "bone-washing ceremony" (*aṭṭhidhovana*) seems to be open to doubt. "In those districts people do not cremate the dead bodies of their relatives, but they dig a pit and bury them in the ground. Later, the bones of the putrefied mass are dug up, washed, then one by one raised, honoured with perfumes and flowers, and set aside. At the auspicious time these bones are taken up and a festival is celebrated with weeping and lamenting."[4]

Here, the washing does not seem to be so much a ceremonial ablution, as a necessity for disposing of decomposing matter; for the washing does not form part of the celebrations at the auspicious time. Further, whereas the text of the sutta refers to a cleansing ceremony with eating, drinking, singing and dancing, the commentary mentions only weeping and lamentation. Moreover, in the commentary no reference is made to the supposed efficacy of the ritual. But that the ceremony was considered to be useful is clear from the Buddha's condemnation thereof on this very score (*anatthasaṃhita*).

Not content with mere destructive criticism, the Buddha continues his discourse[5] with his view of a noble ablution (*ariya-dhovana*) which conduces to disgust with worldly life (*nibbidā*), waning of passions (*virāga*), ending of desires (*nirodha*), tranquillisation (*upasama*), comprehension (*abhiññā*), insight (*sambodhi*) and deliverance (*nibbāna*). This noble ablution consists in the practice of the Noble Eightfold Path (*ariya aṭṭhaṅgika magga*), for it is only through right understanding (*sammā-diṭṭhi*) that wrong views can be expunged together with all their evil consequences and unprofitable states; likewise it is only correct thinking (*sammā saṅkappa*) which can purify all evil intention; right speech (*sammā vācā*) corrects the evil of lying words, slander, harsh language or frivolous talk; right action (*sammā kammanta*) can undo the evil effects of so-called sin; right living (*sammā ājīva*) cancels the destruction of wrong methods of livelihood; right effort (*sammā vāyāma*) can cleanse the unwholesome effects of either fanatical zeal or criminal negligence; right mindfulness (*sammā sati*) and right concentration (*sammā samādhi*) obliterate the undesirable effects of directing the mind to unsuitable objects of awareness and contemplation. To these eight sections of the Noble Path are added two more noble ablutions through right knowledge or insight (*sammā ñāṇa*) and right release (*sammā vimutti*), all of which lead to various profitable conditions (*aneke kusalā dhammā*) and the fulness of culture (*bhāvanā-pāripūrī*). This, indeed, is the "ariyan" ablution whereby beings whose nature it is to be reborn, to decay and to die, are released from birth, decay and death with all the accompanying conflict and woe.

That "inner cleanliness comes first", was well understood by Nandaka, a minister of the Licchavī whose conversation with the Buddha was interrupted by an attendant, reminding him that it was time for his bath. "Enough of this outward bathing. This inner cleansing (*ajjhattaṃ nahānaṃ*) through adherence to the Buddha shall be enough for me."[6] Unfortunately, the sutta ends with this remark, and so we shall never know whether Nandaka was persistent in his refusal to see to his physical needs.

Even pleasure, when overdone, can become hardship. And so a daily bath, when practised by going down into the water even for a third time in the evening (*sāya-tatiyakam pi udakorohanānuyoga*)[7] irrespective of the seasonal changes, was rightly counted as a form of self mortification (*nijjhāmā paṭipadā*: the practice of burning away[8]). It was thought that evil deeds done in youth or old age could be annulled by such frequent ablutions. But even a domestic slave girl, Puṇṇikā, was able to point out to a brāhman, who believed in purification through bathing, that in such a case all fishes, tortoises, frogs, watersnakes, crocodiles, and all that live in water would go straight to heaven.[9] The brāhman saw the point, gave up his practice, became a monk in the Order of the Buddha, and not long after became truly cleansed (*nahātako*[10]). Another brāhman, Saṅgārava, believing in purification by water, washing off his evil deeds of the day by his evening bath and his evil deeds of the night by his morning bath, was shown by the Buddha himself a purification by means of the practice of his teaching, compared to a clear and undefiled lake with virtue as its shore, where wise men come to bathe and cross over to the other shore unsoiled (*anallīnagattā va taranti pāraṃ*[11]).

This consistent refusal to have anything to do with external ablutions to symbolise or to effect a moral purification is a clear indication of an evolution of moral refinement. As long as morality, perfection and sanctity are supernatural and

depending on divine influence or grace, the means to perfection will have no proportionate relation to the desired effect: water can cleanse the body, and, by the grace of God, even the soul. But in Buddhism, which has outgrown the belief in God as the absolute creator, and in soul as the eternal principle of human life, we find the development of morality solely dependent on the individual, and perfection becomes an individual quality. An arahant is not a saint saved by supernatural grace, but an individual who has realised the truth for himself, by himself and in himself, that, as he had become enslaved to worldly possessions and sensuous pleasures through his own actions of greed and lust, so he is set free from those bonds through understanding their true nature. Understanding (*sammā diṭṭhi*), insight (*paññā*), release (*vimutti*), enlightenment (*bodhi*) are the keynotes of individual purity. It is not a goal of perfection or an ideal of holiness which is aimed at, but comprehension of actuality (*yathābhūta-ñāṇa-dassana*). For the understanding of an action and its effect will prevent evil action (*akusala kamma*) to arise, and thereby true virtue (*sīla*) will grow. This growth (*bhāvanā*) is, therefore, a mental process and not a ritualistic cult. Mind culture (*samādhi*) then will follow the development of virtue (*sīla*) and blossom out in true insight (*paññā*). These are the three stages of virtue (*sīla*), concentration (*samādhi*) and insight (*paññā*) which constitute the path of purity (*visuddhi-magga*), along which all impurity, defilements (*kilesa*) and fetters (*saṃyojana*) are naturally discarded. It is a mental awakening to the nature of defilement. The perfect one is, therefore, not so much the purified one, as the enlightened one. A purified mind is a free mind (*cetovimutti*). A comprehending mind will naturally abstain (*virati*) from what it sees as evil and unwholesome (*akusala*) and will avoid all hindrances (*nīvaraṇa*) in its way to purity and perfection.

H. G. A. v. Z.

ABŌ (Japanese *Abō* 阿傍, or *A-p'ang* in Chinese) is said to be the transcription of a Sanskrit word. It is, however, not possible to get at this original word. Sometimes simply written as *bō* or *p'ang*, it is said to signify the name of a demon in a hell. In chap. xiii of *Damamūka-nidāna Sūtra* (Nanjio, No. 1322) occurs the statement the crime of murder is to be punished with suffering in hell for thousands of years; and that the murderer should be shot at with bows and arrows by the demons with deer-, goat-, and rabbit-heads. The *Devadūta Sūtra* (ibid. No. 561) says: "The demons of the *devadūta* hell are called 'p'ang' (or 'bō'). They bring the dead men to be judged at the court of king Yama." The *Wu-k'u-chang-chü-ching* (五句章句經 ibid. No. 730) says that the demons in a certain hell are called 'a-p'ang' (or 'a-bō'), and describes them as being ox-headed, and possessed of human hands and ox feet. They always keep iron spears and, as for their strength, it is said that they could even support a mountain. As is well known, in Sanskrit an ox-headed god is called *vṛsabha-sīrṣa* (*-mukha*) or *gava-sīrṣa* (*-mukha*). It is, however, not possible to identify any one of these terms with 'a-bō' or 'a-p'ang'.

Only among the primitive religious of Africa, do we find a goat-headed god called 'bō' or 'abō'. But its relationship, if any, with that of India, is completely unknown. (See *ERE*. IX, pp. 276-279, A. F. Mockler-Ferryman on Negroes and W. Africa.)

ABODES (1) (*sattāvāsā*) of sentient beings are usually enumerated as nine, and described as stations of consciousness (*A*. IV, 401), i.e., places of rebirth-consciousness (*D*. III, 263). The first sphere in which beings differ in body as well as in perceptive power includes human beings, some celestials (*devā*) and some who are destined to suffering in purgatory (*vinipātikā*).

The second abode is reserved for celestials of the Brahma world who are reborn there as a result of having practised here concentration with mental absorption (*jhāna*) of the first degree and who, although differing in body, are similar in perceptive power.

The third abode is for the so-called radiant devas (*Ābhassarā devā*), who differ as regards their power of perception, but are similar in body form. Those who are similar both in body and in mind live in the fourth abode, and are called the 'lustrous celestials' (*Subhakiṇṇā*).

Then, there are beings without feeling or perception. These unconscious beings (*asaññāsattā*) abide in the fifth sphere. The sixth abode is inhabited by beings concentrating on the infinity of space, by transcending all perception of form, by the annihilation of the perception of sense-reactions and by turning their attention away from the manifold distinctions in perception. Transcending this perception of infinite space, the dwellers of the seventh abode appear to realise the boundlessness of consciousness. But even this is transcended in the eighth abode, where the thought occurs: 'there is nothing (*n' atthi kiñci*)'. This thought, too, can be transcended and the process of the mind become so subtle that perception becomes imperceptible (*nevasaññā-nāsaññā-yatana*), which constitutes the ninth and final abode of conscious thought.

H. G. A. v. Z.

ABODES (2) of monks fall into several categories and will be dealt with at greater length under their separate headings.

The general name *āvāsa* or dwelling place appears to focus the attention more on the fact of residing, while the term *vihāra* indicates the type of habitation for a Buddhist monk. Thus, we have an abode in the forest (*arañña-vihāra*), a remote dwelling or hermitage (*dūra-vihāra* : *Sn*. 220), or even single rooms in a monastery, one for each monk (*yathāvihāra* : *A*. III, 299).

While originally huts for monks were built outside the town limits in quiet places like

parks belonging to wealthy citizens, such residences obtained their names from the owners of the parks, e.g., Jetavana-ārāma. Cave-dwellings (*kandara*) have always been favoured by those seeking solitude for meditation, physical seclusion (*kāya-viveka*) being a great help to singleness of mind (*citta-viveka*), leading to detachment from all clinging (*vikkhambhana*), the equivalent to Nibbāna (*Vism.* 113). But even they were considered a luxury by those who undertook the various practices, akin to asceticism, although vastly different in purpose. According to the *Visuddhimagga*, they are means of shaking off mental defilements. Of these 13 *dhutaṅga* (q.v.), living in a forest (*āraññikaṅga*), living under a tree (*rukkhamūlikaṅga*), living in the open air (*abbhokāsikaṅga*), living in a cemetery (*susānikaṅga*), refer to dwelling, which is one of the four standard requisites (*paccaya*) or necessaries of the bhikkhu's daily life, viz., clothing, food, dwelling and medicine.

Just as the acceptance of an invitation for a complete meal was allowed, although the ideal practice was the gathering of alms-food from house to house, so it was allowed to reside in buildings, huts made of palm leaves and in caves, although the ideal dwelling wherewith a monk should be content was the foot of a tree.

H. G. A. v. Z.

ABODES (3) in meditation. The English word "abode" is singularly apt to connote the various types of "abiding", physically, metaphorically and mentally, which on different occasions are expressed by the Pali word *vihāra*. For the word connotes not only the physical dwelling place of a monk (*vihāra, āvāsa*), neither does it merely describe a mode of living, synonymous with behaviour (*iriyā*), continued existence (*vattana*), living (*pālana*), sustenance (*yāpana*), conduct (*caraṇa* : *Vbh.* 94), but also the mental or spiritual, abiding states in the process of meditation. Especially when concentration has surpassed the initial efforts of discursive thinking (*vitakka*) and when sustained application of thought (*vicāra*) makes the mind dwell on its object (*kammaṭṭhāna*), these stations of concentration become actual abodes of mental rest, a supreme condition of emotional quiescence, which is so humanly supernormal that it is called heavenly (*dibba-vihāra* : *Miln.* 225 ; *Vism.* vii, sec. 63, p. 175). There are, however, certain "divine abodes" which have acquired this name not only descriptively, but which are also formally and collectively known as the divine abodes or *brahma-vihāra*. These four divine abidings are loving kindness (*mettā*), compassion (*karuṇā*), sympathetic gladness (*muditā*) and equanimity (*upekkhā*) which, when developed to become all-embracing, lead to various stages of mental absorption (*jhāna* q.v.). (*Vism.* iii, sec. 105, 107, p. 89 f.). Apart from these divine abodes (*brahma-vihāra*) and the heavenly abodes (*dibba-vihāra* : ibid. vii, sec. 63, p. 175) which refer to the states of mental absorption (*jhāna*) acquired by reflection on one or other of the concentration-devices (*kasiṇa*), we have the noble way of abiding (*ariya-vihāra*) which is the name given by the Buddha to intense concentration on in-breathing and out-breathing (*ānāpānasati samādhi*), when he related the experiences of his three months' residence in the jungles of Icchānaṅgala, not allowing anyone to visit him except a single person to bring him food (*S.* V, p. 326). It is the "abiding" of a Buddha (*Tathāgata-vihāra*).

The three types of abode are found together in the *Saṅgīti Suttanta* (*D.* III, Sutta 33) and referred to as deva-consciousness (*dibba-vihāra*) or the conscious experience of the "eight attainments" (*samāpatti*), divine states (*brahma-vihāra*) or the four concentration-exercises in sublime emotion, and the Ariyan state (*ariya-vihāra*) or the attainment of the fruitions on the Path of Sainthood (*ariya-magga-phala*). The attainments (which are abidings of the celestial type) comprising the four states of mental absorption (*jhāna*) and the four immaterial realms of infinity of space, of infinity of consciousness, of nothingness, and of imperceptible perception, together with the ninth attainment of cessation of perception and sensation, are collectively called the gradual attainments (*anupubba-vihāra*), ascending stages by means of which the highest aim of meditation is attained, and which are also called the successive stages of "fading away" (*anupubba-nirodha*). The opposition between abiding (*viharati*) and ceasing (*niruddhati*) is only apparent as the development of one leads to the cessation of the other, as follows :

The attainment of the first stage of mental absorption with its initial and sustained application of thought (*vitakka-vicāra*) leads necessarily to a cessation of sensuous perception (*kāma-saññā*). The second stage with its chief characteristic of zest (*pīti*) overcomes all discursive tendencies of the mind. This is followed by the third grade of absorption, characterised by ease (*sukha*) which has calmed the enthusiasm of the former grade. The fourth stage recognises ease (*sukha*) and disease (*dukkha*) merely as different aspects, and thus surpassing joy and sorrow the mind is fixed in equanimity (*upekkhā*) which seems even to cause a cessation of the process of breathing (*catutthajjhānaṃ samāpannassa assāsa-passāsā niruddhā honti* : *D.* III, p. 266, No. 33, 3. 2. vi). The fifth abode is that rapt ecstasy which is prevailing in a sphere of awareness of infinite space (*ākāsānañcāyatana*) and which leads to the cessation of the perception of material things (*rūpa-saññānaṃ samatikkamā*), the annihilation of the perception of sensory reaction (*paṭigha-saññānaṃ atthagamā*) and the non-attention to the idea of multiformity (*nānatta-saññānaṃ amanasikārā* : *D.* III, p. 262). The sixth abode is that state of mental absorption which is an awareness of the infinitude of thought itself (*viññāṇañcāyatana*), whereby one passes entirely beyond the consciousness of the infinitude of space. The seventh abode is that state of ecstasy, which regards thought itself as nothing (*akiñcaññāyatana*), thereby surpassing wholly the sphere where consciousness was thought to be limitless. The eighth abode is a rapturous state which is so subtle that it cannot be called perceptible, although it is not inconceivable (*neva-saññā-nāsaññāyatana*), when even the concept of the nothingness of thought has been surpassed. And finally the ninth abode is a state which cannot be called rapturous or ecstatic, as mental absorption

is so complete that both perception and sensation have fully ceased (*saññā ca vedanā ca niruddhā honti*). These nine successional abodes (*anupubba-vihārā*) are the mental states which should be known or mastered through experience (*dhammā abhiññeyyā*), while the nine successive cessations (*anupubba-nirodhā*) are the mental states which should be realised by oneself, and, as it were, seen with one's own eyes (*dhammā sacchikātabbā* : *D.* III, p. 290, No. 34).

Thus the abodes (*vihāra*) successively lead to cessation (*nirodha*), which in stages produces the various emancipations (*vimokkha*) in the ultimate attainment (*samāpatti*) of Path and Fruition (*magga-phala*) of Perfection and Deliverance.

H. G. A. v. Z.

ABODHABODHAKA, a Sanskrit text preserved in its Tibetan translation, the *Ma-rtogs-pa rtogs-par byed-pa,* in the Rgyud-ḥgrel section of the Tibetan Tengyur. Its author was Slob-dpon chen-po Dpal Gnis-med rdo-rje (Mahācārya Śrī Advayavajra). Mkhan-po Phyag-na rdo-rje (Upādhyāya Vajrapāṇi), and the Lotsāba Chos-ḥar (Dharmajvāla) of Rḥma translated this work into Tibetan (Cordier, II, 226 ; Tōhoku, No. 2297).

ABORTION is medically defined as the expulsion of a not yet viable foetus, i.e., in the human species, before the end of the seventh month of pregnancy, during which period the foetus is not capable of maintaining an independent existence. It is synonymous with miscarriage, the more colloquial term for premature delivery.

There are various types to be distinguished, all of which do not fall, however, within the scope of this article, which is primarily interested in the Buddhist ethical viewpoint. Thus, abortion may be accidental, i.e., caused by an accident, for which reason it will have no moral implications. It may be even contagious, due to a disease. This too, of course, is outside the field of ethics. An incomplete abortion is that in which the placenta is retained, irrespective of the cause of abortion, which alone can determine its moral value ; whereas a missed abortion is in the true sense not an abortion at all, as the dead foetus is retained in toto.

Here we are concerned only with artificial abortion, deliberately induced, and with the moral aspect of such action, whether it is an intentional therapeutic production in order to save the mother's life or an illegal action with criminal intent.

Buddhism, both as a philosophy and as an ethical system, being entirely devoid of supernaturalism, it is almost obvious that we should find more than a fair amount of agreement between the Buddhist ethical code in this respect and the natural law as observed in social habits among primitive communities throughout the ages. The destruction of the human embryo does not appear to have ever had a social appeal, even when such practice was dictated by abject poverty rather than by degenerated sexual morality. The most frequent ground for inducing abortion will be a conception outside regular wedlock, together with a comparatively easier disposal of a partly developed foetus than of a full-grown child. The concealment of the woman's shame will also be less embarrassing if confined to the earlier stages, whereas once the child is born in the natural course of things, the mother's affection is bound to play a predominant part in the abstention from the crime of infanticide.

Although abortion by artificial means has always been considered unnatural, as any interference with the working of nature must be, it has not always been thought of as criminal. Plato recommends (*Republic*, V, 460) that no child be allowed to be born, once the parents have passed the age-limit fixed for procreation.

Throughout the ages there has been plentiful speculation as to the biological value of the embryonic life. The Romans regarded, with some basis of factual truth, the unborn child merely as part of the mother, as the fruit is part of the tree until it falls ; and they distinguished, therefore, between foeticide and infanticide in much the same way as modern gynaecologists view the matter. In this distinction much is dependent on the views and theories of embryonic animation. Aristotle, whose speculations form the general background of mediaeval Thomian philosophy and theology, was of opinion that the fertilised ovum at the time of conception was endowed with a vegetative soul only, to be in-formed by an animal soul after some days, and only later by a rational soul. This theory was further detailed by his followers who held that the male embryo was animated forty days after conception, the female eighty days. Although this fanciful discrimination has been abandoned, the general distinction between the animate and the inanimate foetus is clearly upheld by Canon Law even in modern times.

But according to the aphorisms of the Sacred Law of the Āryan Hindus, the *Dharmasūtra* of Āpastamba (I, 7, 21), no such distinction is made ; and the causing of abortion, being of equal criminal value with homicide and incest, is enumerated as an act which causes loss of caste, a penalty more severe in its implications than capital punishment. Also in the Institutes of the Sacred Law, the *Dharmaśāstra* of Gautama (xxi, 9) a woman becomes an outcast by procuring abortion.

In the teachings of the Buddha a similar stand can be observed as in the Vedic literature where one single term *bhrūṇahan* describes the killing of an embryo as well as the killing of a learned brāhman, i.e., any mean murder. For, according to the Vinaya (*Suttavibhaṅga* : III, 72), the existence of a human being (*manussa-viggaha*) is counted from the mind's first arising, i.e., from the first moment of the reinstatement of the mind (*paṭhamaṃ paṭisandhicittaṃ* : *VinA.* 437), from the time of consciousness becoming first manifest in the foetus in a mother's womb until the time of death. This re-linking consciousness is the very first thought in a new existence, immediately following the expiring last thought of a dying individual (*cuti-viññāṇa*). Hence there is no doubt about the Buddhist view of the starting point of life in an individual life span. The deprivation of life being

defined as the cutting off and destruction of the faculty of life, harming its duration (*Vin.* III, 72), there is, therefore, no ethical distinction between foeticide and infanticide, or any other intentional killing of a human being. As in all moral transgressions the full weight of responsibility for an action is on the intention.

Among the four transgressions of rules of discipline for Buddhist monks involving excommunication (*pārājika*) from the Saṅgha is the intentional taking of human life, even as regards the destruction of an embryo (*antamaso gabbhapātanaṃ upādāya*[1]). A certain woman whose husband was living away from home became with child by a lover (*jāra*[2]). From a monk who was dependent for alms on her family she asked and obtained an abortive preparation, with the result that the foetus died. Although the monk was remorseful thereafter, he was declared defeated (*pārājika*) as regards the object of the monastic life, and was therefore excommunicated (*asaṃvāsa*), i.e., placed outside the rule, training and communion of the Saṅgha (*eka kammena, ekuddesena, samasikkhātāya n'atthi*[3]).

The importance of the intention is brought out clearly in a similar case, in which, however, the abortive preparation resulted in the death of the mother—which was not intended—whereas the life of the foetus was preserved. Although from a disciplinary viewpoint the offence of the monk was ranked as grave (*thullaccaya*[4]), yet there was no offence involving excommunication (*pārājika*), as the mother's death was incidental and not intended.

Other incidents in connection with the procurement of abortion (*gabbhapātana*) are of interest in so far as methods other than medicinal preparations are mentioned. When the queen of Bimbisāra was with child, she developed a chronic longing to drink blood from the right knee of the king. As this was interpreted by the court astrologers to mean that the child would kill his father and seize the kingdom, the queen lost her affection for the unborn child, and endeavoured several times to bring about a miscarriage by causing her womb to be massaged and heated by steam (*kucchiṃ maddāpeti sedāpeti*[5]). Notwithstanding all her efforts the child was born in due course, and according to the forecast he grew up, killed his father, and thus succeeded to the throne with the name Ajātasattu, i.e., 'enemy while still unborn'.

Methods of abortion through crushing (*madditvā*) and scorching (*tāpetvā*) are elsewhere mentioned as successful operations and the monk who gave advice was excommunicated, although he does not appear to have taken any active part in the operation.[6]

Hence, there is no doubt about the unequivocal attitude of the Buddha's teaching in respect of life from the very inception of conception, i.e., from the moment of penetration of the ovum by the spermatazoon, thereby placing artificial and intentional abortion in the same category as wilful murder. Although modern legislation adheres to much the same view, it is less severe upon foeticide than upon infanticide, while medical practice is on the whole in favour of sacrificing the foetus, " whenever the interests of the mother demand such a sacrifice " (H. Ellis[7]). In Buddhism, however, " he who transgresses this law is no disciple, is not a follower of the Buddha " (*assamaṇo hoti asakyaputtiyo*[8]).

H. G. A. van Zeyst.

ABRAHMACARIYĀ, that which is not the higher, nobler mode of life. A positive concept, negatively described in relation to its more vital opposite: *brahmacariyā*. It is generally used to refer to the household life of a layman who does not observe the vow of celibacy. In Buddhist monastic discipline it replaces the concept of *kāmesu micchācārā* of the *sīlas* of the layman. See BRAHMACARIYĀ.

ABṚHA(T), a brahma-world. See AVṚHA.

ĀBṚṂHAṆA. Derived from ā + √bṛh or ā + √vṛh this term primarily means "instrument for extraction" (of thorns, splinters, &c.), and has been used in its various verbal inflexions in the figurative sense of 'plucking' or 'pulling out' or 'withdrawal of' the shaft or sting of sorrow, lust or craving. It is thus that N. Dutt establishes the similarity in meaning of the terms *āvarhaṇa*, *āvrīḍha* in '*āvrīḍhaśalya*' (*Mvyut.* 7216), and *abbhāna* which refers to the 'withdrawal of' offences committed by a monk (*GM.* III, part 3, p. 74, n. 3). This is further supported by the Tibetan rendering of this term which reads *phyuṅ-ba dbyuṅ-ba*.

The Pali equivalent of this term (*abbāhana, abbūhana*) occurs in its various verbal inflexions (*abbulhana, abbūlha*, &c.) in the above figurative sense and is very often associated with the word *salla* meaning arrow or dart whether it be of sorrow (*soka*), lust (*rāga, kāma*), doubt (*vicikicchā*) or craving (*taṇhā*). The commentaries which use such words as *uddharitvā, uppāṭetvā, santhanaṃ*, and *nimmathanaṃ* to express the meaning conveyed by this term, help us to establish the import thereof.

The following examples are representative of the various figurative usages of the above. Thus, in the *Dīgha Nikāya*, Sakka speaks of the dart of doubt and perplexity which has been extracted by the Buddha (*yañ ca pana me vicikicchā-kathaṅkatha-sallaṃ tañ ca Bhagavatā abbūḷhan ti* : *D.* II, 283); while the *Dhammapada* commentary speaks of the 'shaft of sorrow imbedded in the heart' (*sallaṃ sokaṃ hadayanissitaṃ* : I, 30); and the *Aṅguttara Nikāya* describes the learned Ariyan disciple as 'one who has drawn out' the poisoned dart of sorrow with which the unlearned average man torments himself (*abbuyhi savisaṃ sokasallaṃ*

1 *Mahāvagga* : *Vin.* I, p. 98.
2 *Suttavibhaṅga* : *Vin.* III, 83.
3 Ibid. p. 74.
4 Ibid. p. 84.
5 *J.* III, 121-122.
6 *Suttavibhaṅga* : *Vin.* III, 84.
7 *Studies in the Psychology of Sex* : vi, 605.
8 *Mahāvagga* : *Vin.* I, p. 97.

yena viddho assutavā puthujjano attānaṃ yeva paritāpeti : *A*. III, p. 56). In the *Saṃyutta Nikāya* Godhika is spoken of as having passed entirely away, 'tearing out' craving and the root of craving (*S*. I,121 : cp. Comm. *Sāratthappakāsinī*, I, p. 184 : *samūlaṃ taṇhaṃ abbuyhāti, avijjā mūlena samūlakaṃ taṇhaṃ arahatta maggena uppāṭetvā . . . parinibbuto*. Also cp. ibid. II, 264 : *abbuyhāti arahattamaggena taṃ samūlakaṃ uddharitvā*). It is in this sense that the *Cullaniddesa* speaks of the pulling out of the sting of craving as one of the achievements of a *mahesī* (503 : *taṇhā-sallassa abbulhanaṃ*.) It is in like manner that the *Suttanipāta* speaks of "the rankling barb, within man's heart. Transfixed, the victim runs astray ; but when it is out he strays no more nor sinks in sloughs" (*Sn*. 938 and 939. cp. *Sn*. 592, 593 and 779. Also *DhpA*. III, 404 : *salla santhanan ti rāgasallādīnaṃ santhanaṃ nimmathanaṃ abbāhanaṃ*. Similarly, *Paramatthadīpanī Theragāthā Atthakathā*, II, p. 172 and *Paramatthajotikā* II, vol. 2, p. 518). Hence the admonition : "by zeal and knowledge pluck the barbed arrow from your rankling wound" (*Sn*. 334).

In Buddhist Sanskrit literature, too, the above usage of the term prevailed. This is clearly indicated by the recording of the phrase *āvṛīḍha-śalya* (Tib. 'Zug-rnu byun-ba'; *Mvyut*. 7216). Thus, the *Gaṇḍavyūha* describes a *kalyāṇamitra* as one who 'plucks out evil thorns' (*samābṛmhayitāro duḥśalyānāṃ* : 462.23). It also holds that a state of continuous plucking out of thorns (i.e., evils ; *anuśalyasamābṛmhaṇatā* : 491.22) constitutes the activity of a true man (*satpuruṣa*). The term *ābṛmhaṇa*, however, as meaning an instrument for extraction has been very aptly used in describing the *bodhicitta* or thought of enlightenment which is said to be of the nature of an instrument for extracting the thorn of the false notion of personality (*ābṛmhaṇabhūtaṃ satkāyaśalyasamābṛmhaṇatayā* : *Gvyū*. 495.13).

T. R.

ABRUPT DOCTRINE, (*tun chiao*) 頓教 a doctrine of Mahāyāna, by which is meant 'the training without word or order, directly appealing to one's own insight, by virtue of which one can attain perfect enlightenment, all at once'.[1] In other words 'Abrupt Doctrine' teaches the trainee to reach sudden illumination, that is, to attain Buddhahood immediately, without having to pass through a progressive teaching or training pursued through innumerable kalpas.

This doctrine belongs to several Chinese and Japanese schools, but the earliest formulation found is based on the philosophy of the *Gaṇḍavyūha*. Hui-kuan (383–453),[2] exponent of the *Gaṇḍavyūha Sūtra*, in classifying the miscellaneous teachings of Buddhism as superior and as inferior, grouped the teachings of the *Gaṇḍavyūha Sūtra* as the only superior doctrine of Buddhism. For, according to him, only this sūtra explains the abrupt way of attaining Buddhahood, while all the other sūtras advocate the gradual way. But, according to Shan-tao (613–681), the founder of the Chinese Pure-land Sect, only the Pure-land (Sukhāvatī) doctrine teaches the way of attaining Buddhahood abruptly. In Chinese Chan Buddhism, the 'Southern School' (Nan-tsung) founded by Hui-nêng (638–713), an eminent disciple of Hung-jên (643–716), is based on the principle of attaining Buddhahood abruptly, while the 'Northern School' (Pe-tsung) founded by Shên-hsiu (605–706), the other eminent disciple of Hung-jên, adheres to the gradual way. Although all of the Japanese sects belong to the Southern School[3] in Japanese Zen Buddhism, the Rinzai Sect (Rinzai-shū) founded in Japan by the Japanese monk Eisai (1141–1215, under the name of the celebrated priest Rinzai who illustrated it in China) advocates an 'abrupt doctrine', while the Sōtō Sect (Sōtō-shū) founded in Japan by Dōgen (1200–1253) advocates a 'gradual doctrine'. The difference here is that the former does not believe in speculating during meditation, while the latter does.

Although some of the doctrines that are truly representative of particular schools, as well as others that are common to all schools, may well be traced to the intellectual ability of individuals by whom these were inspired, yet neither the schools nor the individuals have ever made claims to originality. Rather have they maintained that it was the teaching of the Buddha that they have throughout been expounding. If it was pointed out that the discourses of the Buddha contained a different teaching, then they explained it as a teaching meant only for the people of low intelligence and inferior endowments. Accordingly, the schools that advocate the 'Abrupt Doctrine' claim to be expounding the teaching of Buddha.

Siddhārtha Gautama became the Buddha, the Enlightened One, as the result of a profound spiritual experience, an abrupt knowledge of Reality, which he realised under the famous Bodhi Tree near Gayā in northern India. This knowledge, being ineffable, could never be put into words ; and all the verbal teaching of the Buddha was simply an indication or suggestion of its nature, a mere device (*upāya*) for awakening men to real insight. The knowledge itself was, however, directly and mysteriously passed on to Mahākāśyapa, the Buddha's chief disciple, and thence through a line of patriarchs to Bodhidharma, the twenty-eighth patriarch of India, who brought the doctrine to China.

Bodhidharma (470–534), according to the Chinese patriarchal system, was the first patriarch. His immediate successor was Hui-kè (487–593). The third patriarch in this line was Tsêng-tsan (? –606) who was succeeded by Tao-hsin (580–651), the fourth patriarch. The fifth patriarch Hung-jên (643–716) had two able pupils, namely Hui-nêng and Shên-hsiu. The regular succession fell on Hui-nêng (638–713), the sixth patriarch, the founder of

[2] Not Hui-kuan (Ekwan), the Korean pupil of Chi-tsang, who came to Japan in 625 A.C. and taught the Sanron doctrine at the monastery Gwangōji in Nara

[3] J. Takakusu : op. cit. p. 160.

the southern school of Abrupt Enlightenment, which gave birth to all the Japanese sects.

Hui-nêng's school is known as ' Nan-tsung ' (southern school) while Shên-hsiu's school is called ' Pei-tsung ' (northern school), for the former flourished in the south while the latter in the north. Hui-nêng's school is also known as Tun-chiao (Abrupt teaching) in contradistinction to Shên-hsiu's Chien-chiao (Gradual teaching), for the former upheld the intuitive functioning of *prajñā*, which occurs abruptly, that is, immediately, without any ratiocination, while the latter tended to value learning and practical discipline. This brings out the real distinction between the two schools, for the difference between them is not purely geographical, but historical and temporal.

The Abrupt Doctrine, " the Truth of the highest order " of Mahāyāna, as stated in Hui-nêng's *Tan-Ching*, " is taught to people of great intelligence and superior endowments. If people of small intelligence and inferior endowments happen to hear it, no faith would ever be awakened in their minds . . . . due to the heaviness of hindrance caused by false views and to the deep-rootedness of the passions ".[4]

" All beings cherish in themselves confused thoughts, they seek the Buddha by means of external exercises, and are unable to see into their self-nature." [5]

" The truly religious man ", in the words of Lin-chi, " has nothing to do but go on with his life as he finds it in the various circumstances of this worldly existence. He rises quietly in the morning, puts on his dress and goes out to his work. When he wants to walk, he walks ; when he wants to sit, he sits. He has no hankering after Buddhahood, not the remotest thought of it ",[6] for he knows, as a wise man of old has said, that if he strives after Buddhahood by any conscious contrivances, his Buddha is indeed the source of eternal transmigration.

Therefore, " those beings who, listening to the ' Abrupt ' doctrine, do not take themselves to external exercises, but reflecting within themselves raise this original nature all the time to the proper viewing [of the Truth], remain [always undefiled by] the passions and the innumerable follies ; and at that moment they all have an insight [into the Truth] ".[7]

" When the mind penetrates through This Instant ", as Daishu, one of the chief disciples of Hui-nêng, says, " what is before and what is after are manifested at once to this mind ; it is like the past Buddhas at once facing the future Buddhas ; the ten-thousand things (concur) simultaneously. Where all things are known in one thought, this is the spiritual field, for all-knowledge is attained here." [8]

All these things are possible only when one's mind is awakened to the Absolute Present—for the past was only real when it was the present moment and the future will only be real when it becomes it—not as a logical conclusion, but as *satori* which comes abruptly when reasoning has been abandoned as futile, and, psychologically, when the will-power is brought to a finish.

Prajñā acts intuitively, and what it perceives is perceived at once, without any mediation or deliberation or interrupting process. " There no distinction between Dhyāna and Prajñā": so says Hui-nêng, " Dhyāna is the body of Prajñā, and Prajñā is the function of Dhyāna. When you have Prajñā, Dhyāna is in Prajñā ; when you have Dhyāna, Prajñā is in Dhyāna. " [9]

Abrupt Doctrine, as Hui-nêng interprets it, is established on the foundation of the unconscious (*wu-nien*), formlessness (*wu-hsiang*) being its body and not-abiding-anywhere (*wu-chu*) being its root. (Here, to be unconscious means to be innocent of the working of a relative mind ; by formlessness is meant not to get attached to form, while admitting it ; and by not-abiding-anywhere is meant the original nature of a living being.) So he says, " He who understands the teaching of the Unconscious has a most thoroughgoing knowledge of all things He who understands the teaching of the Unconscious sees into the spiritual realm of all Buddhahood. He who understands the ' abrupt ' teaching of the unconscious reaches the stage of Buddhahood ".[10]

ABRUPTNESS is the expression of a disordered temper in a mental upset (*pakatibhāva-vijahanatthena*: *DhsA*. 258), occasioned by hate or malice (*dosa*), of which it is almost a synonym. This abruptness (Pali : *asuropa*, according to *PED*. probably a haplological contraction of *asura-ropa*) refers, according to the commentary (*DhsA*. 258), to the broken utterance of a man in rage, and is synonymously described also as hostility, churlishness and disgust of heart (*Dhs*. §§418 and 1060). The absence of abruptness is one of the characteristics of patience (*khanti* : *Dhs*. §1341).

ABSENCE. Absence-condition (*natthi-paccaya*) is one of the twenty-four conditions (*paccaya*, q.v.) on which the arising of a mental state depends. This particular condition is the cessation of the immediately preceding thought. For, as two mental states cannot occur at the same time, the cessation of the previous one is a necessary condition for the arising of the following state of consciousness. See NATTHI-PACCAYA.

ABSOLUTE.* Meaning and nature. Whatever is absolute is free from any kind of restriction. Hence in philosophical terminology the Absolute stands for that which is complete in itself and which exists without the support of any condition. This

* In view of the importance of the subject, contributions were invited from more than one scholar. Their contributions are being presented more or less as received, without much attempt at editing, so that each writer could develop his theme without undue restriction.—G. P. M.

indicates at once the dual aspect of the Absolute : the positive aspect of internal coherence and self-sufficiency, and the negative aspect of the absence of relationship and dependence. It is interesting to note in connection with the following observations that the word *absolute* has itself etymologically a negative meaning of detachment, hence, transcendence and exclusiveness, while its positive aspect would be of inclusiveness and self-sufficiency which, however, are notions derived from the original concept. A negative qualification would seem to imply a positive ground, but as the Absolute does not require a *raison d'être* the negative aspect of being without qualification is always more satisfactory from the purely philosophical viewpoint. Pure philosophy, however, with its natural, abstract view of things has no appeal to human emotions on which most relationships are built. For the satisfaction of such emotions, therefore, the Absolute is viewed positively, which necessitates its being seen in relationship—the very opposite and denial of the Absolute.

Its true nature is the absence of relationship and of any supplementary factors. This can be understood (or misunderstood) in two ways. Either the Absolute is all-inclusive, in which case no relationship is possible because there is no existence outside the Absolute, or the Absolute is entirely self-sufficient and does not require any supplement in its existence. The all-inclusive absolute leads direct to pantheism : all is God and God is all ; nature and God are identical ; reality is one and divine. This again shows a dual aspect and approach. If the foundation is a religious belief, the thought moves from God to all, God becomes the only reality and the cosmos becomes an illusion. This view is perhaps the oldest religious view known to us ; it is the view of the Vedas as expressed in many sayings of the Upaniṣads such as " Thou art that " (*Tat tvamasi*) which we may term immanent pantheism, where the absolute transforms itself into the universe which is an appearance, God's " play " without meaning or purpose. Thus the individual *ātman* is the delusive form which hides the all-pervading *paramātman*. God does not *exist in* the universe, but God *is* the universe. God is absolute, in the truest sense : God is not immanent in the world, but the world is immanent in God ; there is none but him ; he is one, without a second. It is the unqualified, unrelated, unconditioned Absolute : the unconceived and inconceivable, apart from which all else is but a wrong concept.

This is indeed the only consistent form in which the term can be used, although common usage has less rigorously employed other ways.

In Vedānta terminology it is the Brahman, the all-pervading Reality apart from which all is illusion or Māyā, or appearance of the Real. Only when the veil of illusion is lifted, the Absolute shows itself in its true nature and all distinction between subject and object disappears.

This doctrine of Vedānta philosophy in so far as it does not admit any form of dualism is called *advaita*. From this non-dualistic standpoint, which is still negative, to a monistic positivism is but a short distance, although the two appear as opposites. And from monism to theism (be it pantheism or monotheism) it is again but a few strides of development.

Buddhism, however, has withstood the impulse towards the positive, and has preserved its unconditioned and negative standpoint.

The historical basis of Buddhism can be found in the discovery by prince Siddhattha of human suffering, old age and death, for this discovery set him on the path of thought. And although he employed originally the wrong method of self-inflicted mortification, the solution of the problem of sorrow remained the goal of his search, till he attained supreme enlightenment in the realisation of the cause of woe and conflict. Then he formulated his Four Noble Truths, and the fact of suffering (*dukkha-sacca*) has remained ever since the cornerstone in the fundamental structure of his teaching.

> One thing only do I teach :
> Woe, and how its end to reach !
>
> *dukkhañceva paññāpemi*
> *dukkhassa ca nirodhaṃ* (*M.* I, xxii, p. 140).

There is no philosophic speculation in those essentials, but the religious world which his teaching was to encounter was thriving on speculation, debates, theorems and views of hair-splitting subtleties, and losing sight of the actual problems of human life. It is obvious that for him, to whom the solution of the inner conflict in man was the chief concern, all conflicting theories about the creation of the world and the nature of its creator were as so many escapist theories, merely adding to the prevailing confusion. Absolute non-being as well as absolute being, the eternity and perfection of reality, were so inefficient in solving the problems of human suffering and conflict, that the concept of a first cause of both good and evil was completely discarded in Buddhism. Conflict, frustration, opposition, sorrow, suffering, woe, cannot appear as a matter of choice or creation on the part of any entity, be it called Brahmā, God, or Absolute. For there can be no co-existence between the absolute and the relative, the eternal being and the continuous process of conflict of opposites. Thus, having taken his standpoint on the facts of life rather than on the speculations of the transcendental, the very concept of an absolute God-creator was rejected by the Buddha from the beginning.[1]

Various schools in Buddhism have gone to different lengths in their exposition of the Absolute till even a philosophy of the Void (*Śūnya-vāda*) was developed. However, it has been constantly maintained by all schools that this should not lead to annihilationism.

Only that which *is*, can cease to *be*, and thereby be annihilated. But, in a process of change, where there is no *being* (entity), but only *becoming*, the cessation of the process of becoming is not an annihilation. Where there is no being, the question of non-being does not arise. Existence is a process

1 *Brahmajāla Suttanta, D.* I, 1.

of becoming (*bhava*) and non-existence would, therefore, merely be the cessation of the process of becoming (*bhavanirodha*) which is the most concise and precise definition of *Nibbāna*. But annihilationism (*ucchedadiṭṭhi*) is emphatically denied and condemned by the Buddha, as this would presuppose the existence of an entity to be annihilated.

The term *absolute* can perhaps best be understood from the use of contrasting terms, such as relative, comparative, conditioned. The contrast between relative and absolute is that between what expresses a relationship and what does not. Thus when a function indicates some definite relationship in which the object stands to some other object, the term must be described as relative. The term Creator, therefore, is a relative term as a relationship is indicated with creation. Consequently a term which indicates no relationship is called absolute.

This raises an immediate objection as to whether any term can be called absolute, for first of all, the terming or determination of an object (be it material or ideal, factual or conceptual) would in itself already constitute a relationship between the termed " object " and the determining " subject". If the object is absolute, the fact of its being termed would make it subjective and relative. Therefore, from a relative viewpoint the Absolute is unknowable, which is the conclusion arrived at by Kant, for whatever is known and as soon as it becomes known, also becomes relative.

It is at this interesting stage that the Buddhist doctrine of becoming (*bhava*) reveals its importance. All existence is in a process of becoming (*bhava*) which includes, of course, the process of unbecoming or ceasing (*a-bhava*). As this process is not self-sufficient it is dependent in its arising and cessation on other factors which are equally subject to the same process. This process of dependent simultaneous origination (*paṭicca-sam-uppāda*) includes the conditions as well as the effects. It is only when the effects cease to become further conditions, that this process of becoming ceases. Whatever is ruled by this process is therefore conditioned (*saṅkhata*) and the cessation thereof would be the unconditioned (*asaṅkhata*) or the Absolute. And that is Nibbāna.

There is not, and there cannot be, any knowledge of this Absolute, for knowledge is of particulars and hence relative. Comprehension, however, is of essentials and need not relate to particulars, and hence is absolute.

Thus the knowledge of conflict (*dukkha*) leads to sorrow, suffering and craving to be free therefrom. But the comprehension of the nature of conflict is the perfect understanding or comprehensive insight into the nature of the cause of conflict, which is the fictitious opposition of self and other-than self. Once the unreality of this opposition is comprehended, the cause of conflict ceases to be, and all conflict has come to an end. Not only this or that particular conflict but all conflict, because the essential nature of conflict, which is opposition, has been absolutely dissolved. And thus, comprehension is absolute.

This comprehension is not a thought process in the sense of mental action, for mental action binds, whereas comprehension is full awareness and sets free. This liberating full awareness is the absolute comprehension of the ultimate reality. But when this ultimate reality is conceived as a positive entity it becomes a subjective relation, dependent on mental conditions within the process of becoming in dependent origination.

Hegel's logical wholeness, Hamilton's metaphysical completeness, Bosanquet's aesthetic completeness, Royce's moral perfection, are but new terms describing Plato's substance and the Aristotelian-Thomistic view of the soul as the vital principle or essence, as the formal cause of action. They all come round to the reality of the ego-centre, be it the individual or the cosmos, be it the incomplete substance which needs phenomena for the purpose of expression, or the total human nature, composite of matter informed by the soul.

All these are the outcome of the various positive aspects of the Absolute which were all carefully avoided by the Buddha, who only speaks of the unborn (*ajāta*), the unproduced (*abhūta*), the uncreated (*akata*), the unconditioned (*asaṅkhata*), the unrelated (*appaccaya*), the non-transient (*accuta*), the unaffirmed (*animitta*), the cessation of becoming (*bhava-nirodha*), the cessation of delusion (*nir-vāṇa*). Yet, the positive aspect cannot be entirely excluded, as the negative to a certain extent includes the positive. Thus Nibbāna, being the stilling of all conflict (*dukkha-nirodha*), is also described as the highest bliss (*paramaṃ sukhaṃ*). But, this notion of bliss definitely excludes all blissful feeling (*sukhavedanā*) and experience, which would make it relative.

Without relation, without opposition, the Absolute must mean the whole. And that is, in fact, the Buddha's position, since all conceptual opposition to this Absolute (*asaṅkhata*) is declared a delusive composition (*saṅkhāra*). This delusiveness of all compounds or conditioned things does not affect their nature, in so far as they have no nature of their own, having merely a conditioned existence. Thus, it may be said that this conditioned existence which is actuality, i.e., nature in action and reaction, is delusion as long as its conditioned existence is not comprehended. In the comprehension of this actuality is Reality, which is deliverance from delusion; Nir-vāṇa, the Absolute.

This comprehension of Reality appears to bring the Absolute within the range of experience as seen from certain utterances, in the *Theragāthā* and *Therīgāthā*, of those who are said to have attained Nibbāna as arahants. This conclusion would certainly be justified. The expressions of the experience of relief and freedom are found almost everywhere :

" Gone are the chains, the barriers all behind " ..	..Ānanda[2]
" The heavy load laid down "	..Saṅkicca
" Cut are the cords "	..Nandaka
" Fear cometh never more "	..Bhalliya

2 For references, see under their names.

" No bond is there for those who understand " ..	.. Sīvaka
" Gone out all fire within "	.. Rakkhita
" As flame in water "	.. Kātiyāna
" Rescued from every bond and set at liberty "	.. Senaka
" The net of craving wholly torn away " ..	.. Dhammika
" *What* and *that* ' I am' is snapt in twain " ..	.. Migajāla
" Crossed is the flood "	.. Aññā Koṇḍañña

The careful avoidance of any self-reference in these statements of experience, however, is revealing. It is not a self or soul which has escaped prison, but the prison bars have gone. In other words, the fettering delusion of an individual self has disappeared " as flame in water ". In the awakening from a nightmare it is not the waking state which is important but the cessation of the dream. To see things as they are (*yathā-bhūta-ñāṇa-dassana*) is this falling away of delusion, the cessation of seeing permanency and an abiding entity in that which is but change and appearance. The relief experienced, when escape from everlasting and unchanging boredom is realised, cannot be related to anything particular, cannot even be truly expressed : it is absolute, it cannot be cultivated, it cannot be made to grow, it cannot cease.

It is not death, nor annihilation, but life in the purest and highest sense, unaffected by attachment (*lobha*) or by opposition (*dosa*) or by lack of comprehension (*moha*). It is absolute reality in which things are what they are, whether they be material or mental phenomena in the constant flow of life, in which there is neither birth, nor death.

There is no denial of the sum total of experience, commonly known as Saṃsāra, for although all experiences (sensations, perceptions, ideations) are conditional and without independent existence, they are certainly not purely imaginary. Knowledge, however, gathered through experience, is actual and reactionary, i.e., it reflects the individual's reaction (*parikappa*).[3] But the object of this reaction does not possess absolute independence either, for its real nature, apart from its activity on reactionary sense organs, is a process of dependent origination and cessation in its own material sphere. From the point of view of the sense sphere, however, as long as there is no contact, there is no interdependence either. This absence of actuality in respect of the senses constitutes a kind of reality, or functioning of its own, which, however, is never entirely independent or absolute. This conditional reality (*paratantra*) forms the basis of all relative knowledge, and in this relativity it becomes actuality, coloured by the figment of imagination (*parikalpita-lakṣaṇa*). The usual comparison is the one of the snake and the rope. When the latter is mistaken for a snake, the surmise is entirely fictitious, although the two may have some external resemblance. It is not abiding by an assumption[4] which makes a person incompetent to discuss matters. But when a person realises his mistake and sees the actual rope, divested of imaginary colouring, the object contributes to his relative knowledge by revealing its particular process of momentary existence. It is concrete, factual, but, of course, not independent, and hence not absolute. The rope is seen as a rope, as it actually contacts the sense organs; but this knowledge remains relative and, therefore, reveals only the relative nature (*paratantra-svabhāva*). The insight into absolute nature (*pariniṣpanna-svabhāva*[5]) with its completely perfected characteristic as it is in itself, without dependence or relation, is the accomplishment (*nipphanna*) of Nibbāna. It is this last perfection which has been frequently misunderstood. The Andhakas held that causality was thus absolute (*parinipphanna*) or predetermined in respect of each term in the chain of dependent origination (*paṭicca-samuppāda*) but this was refuted by the Theravādins.[6] The Uttarā-pathakas and the Hetuvādins held that everything was relative (*aparinipphanna*), except ill (*dukkha*), for which thesis they quoted the verses of the bhikkhunī Vajirā :

> " Nought beside ill it is that doth become,
> nought else but ill it is doth pass away."[7]

But they too were refuted by the Theravādins. And thus the term which was used for accomplished, perfected, determined, absolute (*nipphanna*) acquired the further meaning of determined as conditioned, which is the very opposite of the unconditioned (*asaṅkhata*), absolute Nibbāna.

Admitting the fact that any " concept " of the Absolute is intrinsically a misconception, and that therefore the Absolute cannot be defined, determined or even described in any positive terms—which leaves us with no other alternatives than negations such as the absence of delusion, the absence of conflict—yet this very negation of ill is so real, so absolutely real, that a positive transition from relative consciousness to pure insight into the real nature of things (*yathā-bhūta-ñāṇa-dassana*) is the closest " approach " to a " concept " of " reality ".[8]

From this it will be evident that the Absolute is real but not actual, that Nibbāna, although a negation of all values, yet is not annihilation.

Thus the Buddha said : " There are some . . . . who misrepresent me . . . . falsely saying : The recluse Gotama is a nihilist, he lays down the cutting off, the destruction, the annihilation of the existent. But this is just what I am not, this is just what I do not say . . . . Formerly as well as now I teach the fact of sorrow and the annihilation of sorrow " (*Alagaddūpama Sutta : M.* I, 22).

The Absolute then, being unconditioned and unrelated, cannot be a standard of goodness, of beauty, of truth. And yet we may say that whenever a thing, a mental state, an action, or a process acts, i.e., expresses itself, according to its nature,

3 *DhsA*. 308.
4 *A*. I, iii, sutta 67, p. 197 *parikappe na saṇṭhati, puggalo akachcho hoti.*
5 *Laṅk*. 67. 15 : *Mhvyut*. 1662-5.
6 *Kvu*. xi, 6.
7 *S*. I, p. 135.
8 All these nouns are placed within quotation marks to indicate our difficulty in trying to express the inexpressible.

such an action would be good and true. Here no judgement can be passed on whether such an act is a perfect expression of such nature, for that would be a subjective judgement and hence of no value. It is the nature of fire to burn, and such action would be a good and true action, without implying any moral value thereto. Similarly speaking, the truth cannot be wrong, although of course an individual's idea of actual truth may be based on a misconception.

It should be clearly understood that there is not and cannot be any relation between the Absolute and Morality. Morality postulates moral *values* and therefore indicates relationship. Good and evil are relative concepts, and both should be transcended in the realisation of the Absolute. " Not only evil but even good should be left behind in order to cross the flood ", said the Buddha (*dhammā pi vo pahātabbā pageva adhammā*: *M.I*, 22, *Alagaddūpama Sutta*). Moreover, the concept of good has no immediate connotation of morality, and whereas a good man may indicate a morally well-behaved gentleman, a good meal indicates far different values. Thus goodness means the perfection in relation to some particular nature, and hence absolute goodness is meaningless. Goodness cannot be absolute, and the Absolute cannot be good. The Absolute is without attributes, which are always limiting and conditioning.

In this sense it could be said also that there is no relationship between the Absolute and truth. If the Absolute is without attributes, it cannot be true either, which seems rather paradoxical. Yet, it will be obvious that if truth is thought of as a correspondence between a " view " and a " fact ", it cannot be absolute, as the Absolute is unconditioned by and independent of the relationship of correspondence. There are no " views " in the Absolute, and the expression " absolute truth " has no more meaning than " absolute goodness "

Views are factors of the mental process and they arise and cease, dependent on a multitude of conditions of which environment and education are two of the more prominent ones. They play their part in the process of thinking and thereby contribute to the nature of the mind. In any search for truth by speculative means a discussion on the nature of mind is usually involved, an analysis of the process of discursive thought, of the character of what is universal, of thought in activity, contrasting the process of perception and conception with feeling or sensation.

This is indeed a narrow view which assumes that thought is activity of the mind, thought being the actuality and mind the reality. If there be any truth at all, we must begin with the mind in action without idealising about the mind when inactive. The actual is the thinking mind, it is the beginning of all investigation, and it is also the ultimate beyond which thought cannot go. This does not mean that mind has no capacity to reach final truth, or to penetrate beyond appearance, for the mental process is not limited to relational or discursive thinking. And thus, creative art in its endeavour to express that which is sensed by intuition is as much a striving for the ultimate comprehension of the absolute as a discursive process of ratiocination reaching for truth, and again as the absorption in contemplation for the attainment of good. That which is capable of raising a problem should also be capable of solving it, for the comprehension of limitations contains the possibility of transcending them, although perhaps in a different sphere.

If in the thought process it is understood that the distinction between the self-subject and the object is made by itself and that it falls, therefore, within the thought process, the metaphysical supposition of the reality of universals remains an unproved hypothesis, and the thought process will see in this differentiation but a phase in the process of evolution through receptive sensation (*vedanā*), perceptive assimilation (*saññā*) and conceptive differentiation (*saṅkhārā*) leading to conscious awareness (*viññāṇa*). This understanding is not a process of reasoning. Reasoning would lead to the acceptance of a self-subject as the ultimate reality in which all objects are contained ; the mind will then be the substance or soul, the " absolute soul " (*paramātma*). This epistemological or metaphysical solipsism obviously leads to moral or practical solipsism : from self-regard to self-love, self-satisfaction and self-conceit.

On the other hand, the understanding of the thought process, which obviously cannot be achieved through a process of discursive thinking that would only contribute new material to the process without analysing the actual process—the understanding of this process can be achieved by mindfulness, awareness, alert watchfulness of the process itself. This method of mindfulness (*satipaṭṭhāna*) does not contribute to the process, but slows the process down by reflection, whereby the contributing factors are laid bare, actuality ceases to act and reality reveals itself. This reality cannot be communicated as it does not belong to the " self ". Actuality is the domain of the " self ", of delusion. It divides, it isolates, it creates opposition and conflict, and hence where actuality is slowed down, is understood and finally ceases, there will be the cessation of conflict (*dukkha-nirodha*) which is the real and the absolute cessation of delusion (*nir-vāṇa*).

H. G. A. van Zeyst.

ABSOLUTE. Development of the concept. I. Preface. 1. *Definitions:* " Absolute " is opposed to " relative ", and means " not restricted by any " and " not relying or dependent on others (*nirapekṣa, nir-apekkha, a-para-paccaya*) ". From that, " the absolute " is defined as the eternal and infinite being that stands above all restrictions, such as time and space, the self-identical and self-causal being, the perfect and universal one, and so on. The principle recognising the absolute is called " absolutism ", and the principle denying it is called " relativism ".

2. *The relation between the absolute and the relative:* From the outset, one problem has to be faced : the absolute, if opposed to the relative, would not be the real absolute or the absolute

absolute, but the relative absolute. Accordingly, the various definitions given above, for instance, that of the infinite being as opposed to finite beings, or the one as opposed to the many, will not fully represent the absolute. For that reason, in determining the absolute, negative words are often used. Moreover, it is sometimes said that defining the absolute by means of words and concepts is impossible, because it is above and beyond these.

On the other hand, there are those who maintain that the absolute is not opposed to, but in close touch with the relative, for the former transcends also opposition to the latter.

As to the concrete relations between the absolute and the relative, it is said that the former is the creator of the latter, or is the source from which the latter emanates, or else the essence which lies in the latter. But, each of these relations comprises many complicated problems. Besides, it is also a subject for debate whether the absolute is of personality, or of principle.

II. The growth of the idea of the absolute in the history of Indian thought. 1. *Brahman and Ātman as the absolute principle :* In the age of the Ṛg-veda, gods were interchangeable one with another, and the relation between gods and human beings was reciprocal. But at the end of that age, the one god above gods (*deveṣu adhideva ekaḥ*) (*ṚgV.* x, 121.8) was singled out, and the one, the origin of the universe, was suggested even to be the absolute, standing above the relation between being and non-being (*ṚgV.* x, 129.1).

In the age of the Brāhmaṇas, Prajāpati the creator ruled over the world. The conception of this god was not based on folklore beliefs but brought about by abstract thinking, and so the more abstract and theoretical the thoughts became, the more his personality faded, till he was replaced by the fundamental principle of brahman and ātman.

In the age of the Upaniṣads, brahman became the highest universal principle, and ātman the essential principle controlling various factors of human beings: then the two were thought to be absolutely identical. In addition, many endeavours were made in order to remove the conception of relativity from the absolute, brahman-ātman. One of them was to express it in contradictory words as follows : " It moves and does not move. It is far and near. It is in all and out of all" (*Īśa Up.* 5)—after all, it is unknowable and indescribable, and there is nothing for it but to say " No, no (*neti, neti*) " (*Bṛhadāraṇyaka Up.* III, 9.26,&c.).

2. *The idea of the absolute in Vedānta philosophy :* Later, the idea of brahman-ātman became more profound through the Vedānta school of philosophy. One problem, however, remained, which arises whenever premising the absolute one we regard the world as created by it, or as emanating from it—that is, why do various phenomena, the material world and the imperfect human race filled with sufferings, grow out of the absolute one that is the real entity (*sat*), the pure spirit (*cit*), and the ideal joy (*ānanda*) ?

Śaṅkara (about 700-750 A.C.), one of the Vedānta philosophers, tried to solve that question by considering brahman as the sole real entity and the phenomenal world as an illusion (*māyā*) which resulted from our ignorance (*avidyā*) placing restriction (*upādhi*) on brahman in various ways. His doctrine was called Māyā-vāda, or Vivarta-vāda (the doctrine asserting the phenomenal world to be a mere illusion). Bhāskara (about 750–800 A.C.), objecting to the doctrine of *māyā*, insisted that brahman was to phenomena as gold was to golden ear-rings, both of them being really existent. Rāmānuja (1016–1091 A.C.) insisted that as brahman, the absolute, had many relative attributes in itself, various phenomena emanated from it. Śaṅkara was censured that he was a Buddhist in disguise (*pracchanna bauddha*), because his Māyā-vāda had been influenced by Mahāyāna Buddhism. But he did not change his attitude of premising the absolute one and of starting from it and so we should say there is a radical difference between the Buddhist standpoint and his.

3. *The growth of relativism :* The philosophy of brahman-ātman, the absolute, developed as stated above. On the other hand, schools opposing such absolutism existed in centres in the east of India about the 6th century B.C. The schools of the six heterodox teachers are particularly famous.

Sañjaya Belaṭṭhiputta, one of them, gave no clear answer to metaphysical problems, and performed a kind of "suspension of judgement". The *avyākṛta* (Pali : *avyākata*) mentioned in Buddhism is thought to have been influenced by Sañjaya's views. Another of the six teachers, Nigaṇṭha Nātaputta, the founder of Jainism, based his teaching on a kind of relativism (*anekānta-vāda*) or the " Maybe-theory " (*syādvāda*). He insisted that one should recognise all, as limited. " from some point of view (*syād*) ", and not give an absolute and one-sided conclusion.

III. The idea of the absolute in Buddhism. 1. *The standpoint of the Buddha.* The Buddha denied a creator, did not premise the absolute, and abstained from giving answer to metaphysical problems (*avyākata, avyākṛta*). He tried to find a solution by going forth into the actual world and by observing it as it is (*yathābhūtam, yathātathā*), and came to the conclusion that everything is impermanent (*anicca, anitya*), devoid of ego (*anattā, anātman*), empty (*suñña, śūnya*), of mutual relativity (*paras-para-apekṣa, anyonya-sāpekṣa*), and of dependently co-ordinated origination (*paṭicca-samuppāda, pratītyasamutpāda*). In this thought, there is no room for premising the one, absolute and essential, by which all are created, or from which all emanate, and to which all revert.

Those outside the sphere of Buddhism made a charge against the Buddha that he was a nihilist (*nāstika*). The thought of 'nothing' in him, however, is that something which does not stop at nihilism but penetrates through it and, in consequence, grasps the absolute world (*nibbāna, nirvāṇa*) as transcendence of the relative relation between being and non-being, establishing the absolute truth (*dhamma, dharma*).

This " dharma " had been already established in ancient times, but not till the Buddha's appearance

did it take the place of brahman-ātman. Dharma in Buddhism is not the absolute principle, aloof from this world, but the truth belonging to this world (*sandiṭṭhika* : *D.* II, 93), and seen in *paṭicca-samuppāda* itself (*M.* I, 190). It is of interest that such a character as that of dharma was called "suchness" (*tathatā*) later on.

2. *Emptiness (śūnyatā) and the absolute* : After the Buddha's parinibbāna, Buddhists made efforts to systematise the *dharma*. The Sarvāstivādins looked upon it as substantial and as real through the three ages, past, present, and future. Against that view the Mahāsaṅghikas, and the Sautrāntikas who separated from the Sarvāstivādins, raised an objection that *dharma* is real only in the present. Their tributary schools asserted that even in the present *dharma* is of nominal reality only, and that its true character is emptiness. But this theory is the theory of non-being set up against the theory of being, and so the Mahāyāna school directed its criticism against this doctrine, saying that it was the theory of analytical emptiness and of simple emptiness, and hence nihilism. Mahāyāna Buddhists insisted on general and absolute emptiness.

Originally, the word *suñña*, *śūnya* (empty) signifies that there is no absolute being, unchangeable and eternal, and that all things, correlating mutually, appear and disappear under the law of causation. Accordingly, the conduct of *śūnyatā* was considered as relativism, and sometimes as a kind of nihilism by outsiders. But Mahāyāna Buddhists, criticising not only the thought of being in Sarvāstivāda but also the thought of non-being in Mahāsaṅghika and in Sautrāntika doctrines, established the concept of true and absolute emptiness (*paramārtha-śūnyatā*) which transcends both being and non-being. Thus the concept of emptiness (*śūnyatā*) in Mahāyāna does not stop at relativism, much less at nihilism, but reveals the absolute positively.

Nāgārjuna (about 150–250 A.C.) is the most outstanding exponent of the concept of "emptiness". Taking over the terms : Emptiness is also emptiness (*śūnyatā-śūnyatā*) in the *Prajñāpāramitā-sūtra*, he treated both *śūnyatā* (non-being or emptiness) and its opposite *a-śūnyatā* (being or non-emptiness) as *śūnyatā*, and advocated the absolute *śūnyatā* which transcends both *śūnyatā* and *a-śūnyatā* (*Mādhyamaka-kārikā*, 13. 8: *Mahāprajñāpāramitā-śāstra*, xxxi). He emphasised that it is through such *śūnyatā* that we can realise the absolute world (*nirvāṇa*), the absolute truth (*dharmatā*), and the reality beneath all things (*tattvasya lakṣaṇam* : *Mādhyamaka-kārikā*, 18, 7, 9). Needless to say, the absolute realised through such *śūnyatā* is not the entity premised against the relative in this world. He said, "There is no difference between the absolute and the relative." (ibid. 25. 19). Elsewhere he has said that the absolute is neither being nor non-being, as it stands above the relative relation between being and non-being (ibid. 25.10).

Later on, such a character as the absolute was called "the true non-being or emptiness, and the excellent being". The meaning of that saying is that the true non-being or emptiness is the emptiness (*śūnyatā*) of non-emptiness (*a-śūnyatā*) or the absolute emptiness standing above the one-sided and simple emptiness, and it is identical with the excellent being which is the being of non-being or the absolute being standing above the one-sided and simple being. Nāgārjuna called such a concept "the Middle Way" (*madhyamā pratipad*, ibid. 24. 18), which we may define as the absolute absolute.

3. *From the absolute to the relative* : After the question of the absolute was settled as above, the next consideration was devoted to its systematisation, and then to expressing it in positive and affirmative words. Meanwhile, as the "absolute" was raised higher, the various "relatives" in this world also rose. In consequence, it became an important problem how to explain the relative world, coming back to the relative from the absolute.

As the typical school that made efforts to solve this problem we may give the Vijñānavāda or Yogācāra. That school established three types of concept. One is the concept of relative and dependent existence (*paratantra-lakṣaṇa*), another is the concept of the daily world, the unenlightened relative world, brought about by mistaking the above existence for the eternal entity (*parikalpita-lakṣaṇa*), and the third is the concept of the complete and perfect reality, the true absolute that appears when we look straight at relative and dependent existence, sweeping off our illusion and our adherence to the daily world (*pariniṣpanna-lakṣaṇa*). Each of these concepts was regarded as neither the thing itself nor something apart.

In the next place, as for the *Ta-ch'êng-ch'i-hsin-lun* (大乘起信論 : Discourse on the Awakening of Faith in the Mahāyāna), it called the absolute of equality "the soul as suchness" (心眞如 *hsin-chên-ju*) and the relative of difference "the soul as birth and death" (心生滅 *hsin-shêng-mieh*). The latter was born of ignorance (*avidyā*), but if the former stood against the latter, it would be the relative absolute, not the true absolute, nor the absolute of equality. So we should regard the two as mutually identical. The *Ch'i-hsin-lun* (起信論) says that the former is to the latter as water is to the wave. When the absolute absolute or suchness (*tathatā*) is confronted with the relative, it is expressed in words, e.g., eternal, permanent, pure, absolute (*tathatā* within words), but originally *tathatā* is the absolute absolute that transcends even the word "tathatā or the absolute" (*tathatā* outside of words). If we dare express it in words we have no other words in which to express it except to say, "All things are equally tathatā or the absolute".

As for enlightenment (覺 chiao), three types of enlightenment are mentioned. One is the absolute enlightenment *a priori* (本覺 pen-chiao), another is the relative enlightenment *a posteriori* (始覺 shih-chiao), and the third is non-enlightenment (不覺 pu-chiao). The three are contrasting with one another, but because there is enlightenment *a priori*, there is non-enlightenment, and because there is non-enlightenment, we can speak of enlightenment *a posteriori*, so each of the three should be regarded as mutually identical.

Hua-yen's (華嚴) philosophy adopted the concept of the *Ch'i-hsin-lun* (起信論), besides the concept of the *Avataṃsaka-sūtra*. According to that philosophy, the relative world of difference (事法界 shih-fa-chieh) and the absolute world of equality (理法界 li-fa-chieh) are mutually identical and become one world (理事無礙法界 li-shih-wu-ugai-fa-chieh). Here, we should not regard the various relatives as things which emanate from the one absolute or as things which possess the absolute in portions. The world is a manifestation of the absolute nature which each of all things has originally (性起 hsing-chih), and so for one speck of dust, that one speck is nothing but the absolute and the whole universe. Thus, it may be said that the world is the realm in which each phenomenon is freely and infinitely related to and identical with all other phenomena (事事無礙法界 shih-shih-wu-ugai-fa-chieh). After all, the daily world of illusion results from our covering the world with the cloud of *avidyā*, spiritual ignorance, and if we remove that cloud, each of all things in the relative world instantly becomes a manifestation of the absolute.

The Tien-tai (天台) philosophy insists that there is originally the absolute in the relatives as they are, and there are originally the relatives in the absolute as it is. Here, relativity of the relative is not made absolute or affirmed by the absolute, but remains alive as that which is to be denied by the absolute, and yet we see the absolute not apart from the relative. Contrariwise, the absolute remains alive as the absolute, and yet it holds relativity in itself. For instance, Hell remains Hell, and yet originally holds the virtue of the Buddha in itself (性善 hsing-shan). Contrariwise, the Buddha remains as the Buddha, and yet originally holds the vice of Hell (性惡 hsing-é). After all, the relative and the absolute are opposed to each other, deny each other, and yet are mutually identical.

T'ien-t'ai-ta-shih Chih-i (天台大師智顗：538–597 A.C.) speaks of the two absolutes: the relative absolute (相待妙 siang-tai-miao) and the absolute absolute (絕待妙 tsüeh-tai-miao) in the *Fa-hua-hsuan-i* 法華玄義. The relative absolute is the absolute (妙 miao) established by means of denying (廢立 fei-li) the relative (麁 tsu), and the absolute absolute is the absolute established by means of opening and enveloping (開會 kai-hui) the relative. So, the latter is the absolute that transcends the relative relation between the relative and the absolute. But we should pay attention to the fact that Chih-i (智顗) does not give up the relative absolute—that is to say, he is looking at the absolute at the very place where the relatives are denied as relative. Judging from this standpoint, we may say that his philosophy is relativism and yet absolutism, while the Hua-yen (華嚴) philosophy is inclined to absolutism. The two disputed each other, exerting influence on each other.

The Shingon (眞言) philosophy may be considered as having positively applied the absolutism of Hua-yen's (華嚴) philosophy to the daily world. Kūkai (空海, 774–835 A.C.) absorbing Hua-yen's philosophy, established Shingon philosophy. The Tendai (天台) philosophy in Japan, after Saichō (最澄, 767–822 A.C.), adopted Esoteric Buddhism in order to illuminate Shingon philosophy, and, in consequence, that philosophy was inclined to the absolutism which affirms the daily world as it is. In it, the thought of enlightenment *a priori* of the *Ch'i-hsin-lun* (起信論) the thought of Hua-yen's philosophy, and the thought of Zen (禪) philosophy are united together.

In trying conclusions with others, the Tendai philosophers, taking their stand on the relative absolute, insisted that only their philosophy was true and absolute, and denied other schools. But as a view of the world, taking their stand on the absolute absolute they affirmed all as absolute and, moreover, stated that the daily relative world is just the absolute, a moment is just eternity, and the ordinary man is just Buddha. Before long their philosophy became endangered by corruption.

It was the new Buddhist sects of the Kamakura period (鎌倉) that arose from criticism against such a tendency in the Japanese Tendai philosophy. New Buddhism in the Kamakura period took up the relative absolute, and made it its base in some way. For instance, the Buddha was described by Hōnen (法然 1133–1212 A.C.) as the Absolute who helps us into the Pure Land, the opposite side, and we are described as the vilest sinners. Dōgen (道元, 1200–1253 A.C.) directed criticism against the theory of the sameness between the Buddha and the ordinary man or between training and enlightenment, and he himself insisted on the ordinary man's training. Nichiren (日蓮, 1222–1282 A.C.) advocated the eternal Buddha as the transcendent one, and discriminated the Buddha's law from the king's or worldly law, insisting on the absoluteness of the Buddha's law.

It may be thought that toward the arising of new Buddhism in the Kamakura period, the phases of degeneracy from the end of the Heian (平安) period to the Kamakura (鎌倉) period were helpful. It is needless to say that the actual phases of those days, filled with transient and vicious matters, could not by any possibility be affirmed as absolute. But we must not forget that they were originally grounded on the view of the absolute absolute—e.g., the sameness between the Buddha and the ordinary man—though they actually insisted on the relative absolute. As for the eternal Buddha, he is originally different from God, the absolute one such as is seen in Christianity. We can grasp the difference through the medium of the doctrine of Shinran (親鸞, 1173–1262 A.C.) on the two bodies of the Buddha, the body as the absolute absolute and the body as the relative absolute. On the Pure Land, the same doctrine as above was advanced.

New Buddhism in the Kamakura period, being grounded on the absolute absolute, took up the relative absolute that is preserved in the former, and founded its practice on the latter. Dōgen encouraged people to practise training, saying that as training and enlightenment are identical, there is enlightenment when there is training. Nichiren, standing on the relative absolute of

the absolute absolute, confronted himself against the daily world.

IV. **Comparison between Buddhism and Western Philosophy on the view of the Absolute.** It was Kitarō Nishida (1870-1945 A.C.) in Japan that made a unique systematisation of philosophy, by uniting Buddhism with western philosophy. The absolute in him was expressed in the word " Basho (場所, topos, place)". " Basho" (place) itself is non-being, in which all beings exist. Though non-being, it is not non-being as opposed to being, but " the absolute nothing " that is " absolutely contradictory self-identity " between being and non-being, the one and the many, the absolute and the relative, &c. Western philosophy may be said to have advanced from the philosophy of being to the philosophy of non-being or nothing, through him.

The concept that God is non-being or nothing occurred in western philosophy a long while ago, but is analogous to the view of the absolute in Vedānta philosophy—that is, non-being or nothing in that case means being or thing not subject to any limitation. The existence of God as the absolute is premised to the very end.

Hegel (1770–1831 A.C.) dialectically unified the absolute and the relative, negation and affirmation, being and non-being, &c., but he regarded the world as the self-development of Idea or Spirit, the absolute, and said that the absolute is a continuous substance, which is to submerge into the simply self-identical absolute. It was Nishida's philosophy that criticised Hegelian philosophy through the medium of Buddhism, and established " the absolute dialectics ", the philosophy of the absolute nothing that is continuity of non-continuity and contradictory self-identity. Nishida's philosophy was influenced mainly by the view of emptiness (*śūnyatā*) in Mahāyāna Buddhism, but directly by the Zen (禪) thought through Daisetsu Suzuki. Hajime Tanabe inherited Nishida's philosophy, but he concentrated his thinking on how to come back to the relative from the absolute nothing.

Besides, we should pay attention to the growth of existentialism through the nihilism of Nietzsche (1844-1900). In that philosophy, God, the absolute, died out and the actual world, the relative, has taken his place. Accordingly, we can say that nihilism or existentialism is coming towards the original point of Buddhism. Nietzsche predicted even that " the second Buddhism " was about to visit Europe. But whereto does existentialism go from that intersection ?—that is the question.

YOSHIRŌ TAMURA.

ABSOLUTE, as the unconditioned. The Absolute is defined as that which is not conditioned by anything else and which is not other than self-dependent. It is for this reason that the Absolute forms the basis for every system of philosophy.

By means of inductive inference the thinker raises himself from certain given aspects of the surrounding phenomenal world to this source which he is able thereby to discern and define little by little.

Then, by means of a reverse process of thought, he reconstructs the entire world system by a deductive way of reasoning from the Absolute known to him as said before. This Absolute will be, e.g., the Supreme Good for Plato, God for Descartes, the Brahman-ātman for the Upanishads, Tao for Lao-tse. The determination of the Absolute is, therefore, of primary importance in the study and understanding of any system of philosophy. This is particularly so in the case of Buddhism, which has for a long time baffled Western scholars precisely because they failed to discover the principle on which Buddhism is based, and for which reason they described Buddhism as a nihilistic, an atheistic system, &c.

Let us examine the basic doctrine of Buddhism, the Four Noble Truths, the exposition of which is a pertinent example of inductive logic : (1) Everything is sorrow : life, old age, illness, death, &c., are sorrow-fraught. It is the starting point, based on every-day experience. (2) The origin of sorrow is greed, greed to be reborn, to know new existences, where one will have to pass through renewed sorrow again. Here we find the search for the cause of the given fact, which cause could have taken the place of the Absolute, if Buddhism had been a purely speculative and objective doctrine, and not an active one, aiming at the well-being of people. (3) The cessation of sorrow is effected by the cessation of its cause, that is, of greed, and its triple offspring : lust, hate and delusion. By choosing the contrary of the established cause, the Buddha at the same time defined the Absolute in his doctrine, which is, as we see, expressed right from the beginning in a negative form : the absence or the cessation of lust, hate and delusion. (4) The way that leads to the cessation of sorrow is of interest only to those concerned with soteriology. In short, it is an inductive dialectic with a practical view which we may overlook for the present purpose.

The same dialectic is found in a very ancient sutta (*Udāna*, VIII, 3) where the Buddha expresses himself as follows : " There is, O monks, a non-born, a non-arisen, a non-made, a non-compound, for if there were no non-born, no non-arisen, no non-made, no non-compound, then no escape would be known from what is born, what has arisen, what is made, what is composed ". Here, in fact, we find the justification for the transit from the second to the third Noble Truth which rests on an act of faith which is, strangely enough, analogous to the well-known " gamble " of Pascal.[1] Further, the final term quoted here, the " non-composed " (*asaṅkhata*), serves all along in the history of Buddhism in India to express the concept of the Absolute : *asaṅkhata* is that which is not made of component parts. Let us note that this is a negative term, a negation of the characteristic properties of the given fact.

This negative aspect we shall find again in almost all the passages where this Absolute is mentioned,

1 The gamble of life rests on the prospects of a future eternal salvation. (Translator-Editor).

for it is emphasised that it has no relation to this world of sorrow or to future lives, neither to good nor to evil, neither to matter nor to mind, no relation to any of the stages of concentration. And yet, it is not nothingness, as people have believed sometimes. In an old sutta it has been defined as the safe refuge, the island, the other shore, the place where finally has been reached the shelter from sorrow and the vicissitudes of this world. In the suttas only one Absolute is mentioned, namely Nibbāna, the cessation of sorrow. It transcends the world with which it has no relation and of which it is a direct negation. In opposition to the world it is permanent, it has no birth, neither change nor ending.

Other than the Theravādins and the Vātsīputrīyas who have always accepted only one Absolute, Nibbāna, the other early sects have multiplied the *asaṅkhata* of which they give occasional lists of three to nine items.

First of all, they divided Nibbāna into *pratisaṅkhyānirodha* and *apratisaṅkhyānirodha*. The first which is obviously identical with Nibbāna, is defined as the suppression of the roots of past and present evil. The second is the suppression of the roots of evil which would arise in the future, but for the non-existence of those conditions which otherwise would have given rise to them.

The third Absolute is space, the void and infinite space in which material objects move. This is not surprising, for, at the bottom of the Buddhist concept of Nibbāna, and as a matter of fact more generally of the concept of the Absolute, is found the concept of space. Here we are dealing, not with stellar space, with the help of which we arrive at the concept of nothingness and which causes fear, but with space which as light inspires joy, confidence and calm. As such it has truly haunted the minds of Buddhist thinkers. This explains among other things why the Theravādins, in rejecting a plurality of Absolutes, find support in this unique argument, that if there were various Absolutes, various Nibbānas, there would be between them a demarcating limit, one here and the other there, &c.

Apart from these three Absolutes accepted *e.g.*, by the Sarvāstivādins, one encounters the *paṭiccasamuppāda* or rather the essence thereof, i.e., the law by which all beings are chained to the wheel of continued and repeated existence, a law which is inexorable for everyone except for the Buddha and his arahants.

This law which binds all life has all the characteristics of a law in physics as known by modern science. Moreover, the same word *dhamma* indicates both a law proclaimed by a sovereign and a law which governs nature, such as the universal laws of impermanence, of origination and cessation.

It is important to note that certain ancient schools of Buddhist thought have recognised the absolute character of the universal laws to which all beings are subject. Then, side by side with the law of dependence, the law of deliverance preached by the Buddha is also admitted to the list of *asaṅkhata*.

The argument in support of the absolute character of the Law of Dependent Origination rests on a sutta where it is said : " Whether a Tathāgatha arises, or whether a Tathāgatha does not arise, this is a certain fact, this is the constant nature, this is the fixed order, this is a condition of everything. . . . Thus, o monks, this reality, this non-dissemblance, this non-variance, this universal conditioning is called the *paṭiccasamuppāda* " (*S.* II, 25).

Therefore, because this law is stable, permanent, unchangeable and always the same, this great law of the *paṭiccasamuppāda* is considered absolute.

Relying on the same sutta, it was further accepted that this stability of conditionality (*dhammaṭṭhitatā*) or better still, its reality (*tathatā*) are *asaṅkhata*. This amounted to the recognition of the absoluteness of essences and led on to that type of idealism which so strongly influenced the metaphysical teaching of Mahāyāna.

Apart from these Absolutes, the importance of which is too irrelevant to discuss further, we find other elements in the lists which have been derived from ethical aspects of the Buddhist doctrine, such as the Four Noble Truths, the four successive stages of Deliverance, the two higher degrees of meditation, &c.

One might ask why one does not encounter the time element in this list of absolutes side by side with space.

The principal reason is that ancient Buddhism did not have as we have it, a concept of time as an entity. The word " time " (*kāla*) is practically absent from its vast literature. On the contrary, thinkers are frequently speculating on past, present and future, however, not as on things in themselves, but as ordinary aspects of existence, analogous to concepts of far and near, large and small, subtle and gross.

Yet, presumably under the influence of non-Buddhist sects which recognised the absoluteness of time as well as that of space, certain schools began to consider time as a thing in itself, permanent and hence absolute and distinct from beings. They built up this notion on the same plan as empty space, which is shown by the illustrations used : beings are in time, as men in a house, leaving the room of the past to enter that of the present and finally that of the future. The concept of absolute time is even more abstract than that of absolute space and, in fact, neither of them makes an appearance in Western philosophy until Newton. It is entirely to the credit of ancient Indian thought, both Buddhist and non-Buddhist, to have developed these two concepts and discussed and analysed them with clarity.

A concept which seems akin to that of *asaṅkhata* is that of *parinispanna* which indicates a reality complete in its sphere, and which appears also to be associated with the concept of permanence, a main characteristic of the Absolute. Thus, certain schools consider sorrow as *parinispanna*, a quality which they do not attribute to matter, to thought, to sensations, &c. . . . Others make even material stability, impermanence, old age and death into such complete realities. But in these schools we see a tendency to allow greater reality

to abstractions, to universal laws than to concrete things. This tendency we find later again in Mahāyāna sects, particularly with the Mādhyamikas.

It is characteristic of the doctrine of the later schools that it is centralised round ontological problems, a doctrine based on the *Prajñāpāramitā Sūtra*, and more particularly on the doctrine of the universal void according to which all beings are devoid of, "empty" of individuality. This void, which is an essential characteristic of all reality, culminated in becoming a fundamental principle and absolute.

In fact, the Mādhyamika system has been developed on different planes. At its lowest level, we find the doctrine of ancient Buddhism, called Hīnayāna, i.e., the Small Vehicle, for it is considered to be an inferior means of progress towards deliverance, which the Buddha was good enough to teach to men with lesser developed minds. Above that is found another plane, where that which in Hīnayāna is shown as the Absolute and the relative, Nibbāna and Saṃsāra respectively, is pointed out as sheer fancy, and where a new Absolute is installed, transcending all, and which is called the "essence of reality" (*bhūta-tathatā*). This also disappears on the still higher third plane, leaving room only to the universal void (*śūnyatā*).

In this we can clearly recognise the idea of empty and infinite space. The entire learned philosophy of Nāgārjuna, the founder of the Mādhyamika school, has no other object in view than to clear this fundamental concept in Buddhism: the Absolute conceived in the framework of empty space.

On the other hand, the thinkers of Mahāyāna, and above all Nāgārjuna, clearly saw the close relationship which existed in Buddhism between the problem of the Absolute and the problem of existence, which the earlier masters do not appear to have been quite aware of. They endeavoured, therefore, to define their Absolute in a sense which is transcendental both in respect of being and of non-being. This explains then the persistence, in their trend of thought, of the concept of empty space, for nothing could give a better idea of what may be found on the boundary between being and non-being.

The other great school of Mahāyāna, the later school of the Yogācāras, allows a much greater place to the Hīnayāna system. Here seems to be established a final synthesis between the thesis of Hīnayāna and the antithesis as represented by the doctrine of Nāgārjuna. Not only does Asaṅga build his system on the vast philosophical foundation of the Sarvāstivādins, which he expounds throughout apart from some minor modifications, but he further completes it on a higher plane by an Absolute which is more refreshing to the human mind than the all too subtle void. This Absolute is the receptacle of consciousness (*ālayavijñāna*), a kind of universal consciousness in which (to use a comparison from one of his treatises) beings, all of a spiritual nature, play about as material objects in space. Once more we find here the concept of empty space.

With his choice of idealism, Asaṅga has, therefore, effected a synthesis between the extreme realism of the Sarvāstivādins and the giddying heights of the "void" of the Mādhyamikas. He offers to the mind, tired in its effort to keep for two or three centuries its balance on the narrow borderline between being and non-being, a basis on which it finally can rest and refresh itself, but at the same time he takes great care that this basis should not be loaded with pseudo-material realities, so dear to the Sarvāstivādins. Nevertheless, he preserves the theory of the various planes of reality and he places on an intermediate plane a combination of eight *asaṅkhatas*, all borrowed from Hīnayāna schools, though not from the Sarvāstivādins who recognised only three. Properly speaking, the various schools of ancient Buddhism had all the same conception about the Absolute, namely, that which is thought of according to the concept of empty space, luminous and infinite. And all ideas, which have been formed thereafter, are ultimately branches of this fundamental concept. As it would be difficult to support oneself by such an ethereal and enigmatic Absolute, speculations thereon were little by little charged with reality, substantiality and hence with impurity. And so, from time to time one comes across attempts of expurgation of the idea of the Absolute in Buddhism, of which attempts the most important and the most successful was the one of Nāgārjuna.

This concept of the Absolute, however, does not wholly rest on purely metaphysical speculations, but is to a large extent determined by speculations of a mystical order. As a matter of fact the practical search of deliverance, and hence of the Absolute, is based in Buddhism on a set of methods which are designed to concentrate and subsequently to purify and empty the mind of every content. The first series of meditations frees the mind in succession of reasoning, of investigation, of joy, of satisfaction, and leads on to perfect equanimity. The second series asks the observer (meditator) first to fix his mind on the infinity of space, then on the infinity of consciousness, on nothingness and finally on the absence of both perception and non-perception. In these last four concentrations we find clearly again the concept of empty space. By thus emptying the mind of every content, one makes it necessarily free from all impurities which hinder it, and which hold the being bound to the cycle of continued existence and sorrow, by means of their grip on one's psychic life.

This explains, therefore, why this fundamental Absolute in Buddhism which is always identified with supreme deliverance, is always thought of as empty, on the border of being and non-being. But, let us note well, it is an attractive void, bright as the sky on a clear day, seen from a lofty peak. This also explains why it is difficult to understand, not only for Westerners, but also for Easterners. Yet it has influenced even non-Buddhists, it has been the main reproach laid at the door of Śaṅkara, although he was one of the greatest Indian opponents to Buddhism, by some of his Hindu co-religionists. In the West, Hegel too has shown, though starting from diffierent grounds, that pure being, being emptied of all limitations, to which thinkers like to compare the Absolute, is but the reverse side of nothingness. We have doubtless to see in this ingenious discovery the most important contribution of Buddhism to universal metaphysics.

André Bareau.
(*translated*)

ABSOLUTION, in so far as it is connected with the idea of forgiveness of sin, has no place in Buddhism, as each one is ultimately responsible for his moral actions only to himself. The idea of sin is, therefore, foreign to Buddhism. An action may have an unwholesome effect (*akusalavipāka*), but there is no offence apart from the transgression of the laws of nature, which will vindicate themselves by an unwholesome reaction, such as indigestion as a result of eating unripe fruit.

Life in society, however, is so interrelated that it is practically impossible to perform any action which will not affect somebody else to some degree at least. Thus, while an evil thought works out its undesirable consequences, it is the sower who will reap the fruits; and unless by counteractive karma (*upapīḷaka kamma*) he prevents those seeds from germinating, the unwholesome effect will be experienced in due course. That this experience might be shared by other individuals living in close contact, physical or mental, forms an actual part of that other individual's process of karma.

Even so, there is room for restoration of proper relationship which would require admission of the wrong deed. A wrong deed is not a sin in the meaning of offence, but a failure to succeed (*aparādha*) in doing the correct thing. In so far as this failure has upset the balance or smooth working of the entire process, one might crave for the indulgence of those affected thereby.

Among Buddhist monks this is done in a most general way: " Please, endure all my shortcomings (*sabbaṃ aparādhaṃ khamatha me bhante*) ", is the confession; whereupon he will be asked: " Do you see where you failed ? " And, on his admission, he will be told not to do it again.

This applies only to transgressions of the rules of monastic discipline, and hence evil thoughts do not form part of this confession and absolution, another indication that moral failures are as much an individual's property as his acquired virtue.

H. G. A. v. Z.

ABSORPTION. Mental—(*jhāna, dhyāna*), a meditation exercise of concentrating the mind upon a single thought. Mental absorption is attained when the consciousness of the separate subject altogether disappears and only objective awareness of concentration—thought—remains. It has an important place in Theravāda Buddhism where the various spheres of celestial rebirth correspond to the attainments of mental absorption (*jhāna* q.v.). In Mahāyānā Buddhism the scope of meditation has been much enlarged, and the perfection thereof (*dhyāna-pāramitā*) is the only way for a bodhisattva. Thus, meditation has outgrown in importance both morality (*sīla*) and knowledge (*prajñā*), till it has become the most essential part of the entire teaching of Zen.

ABSTINENCE is the basis of Buddhist morality and exists in the deliberate abstention (*virati*) from wrong speech, wrong bodily action and wrong livelihood. The abstention is not a simple non-occurrence of these evil things, but a mental disposition of detachment (*vi-rati*) preventing the evil from arising. See further under SĪLA.

ABTAI-KHAN (1534–86), one of the chief princes of north Mongolia and a descendant of Chinggis-khan in the 18th generation.

The Yellow Faith which spread in Tibet had considerable influence on Mongolia in the 16th century. Altan-khan, of the Tümed tribe in south Mongolia, accepted and propagated the Yellow Faith. In 1577 he invited to Kökö-khoto the Dalai Lama, the head of the Yellow Faith of Tibet. On hearing this, Abtai-khan went to Kökö-khoto and was received by the Dalai Lama whose name was bSod-nams rgya-mtsho. He accepted the Yellow Faith and expressed his wish to spread Buddhism in north Mongolia. He presented the Dalai Lama with a felt tent covered with sables, a thousand horses, various objects, and 10,000 skins, including sables.

The Dalai Lama greatly approved of Abtai-khan's plans to spread Buddhism and gave him the title of *Vacirai-sayin-khan*, as well as holy images, and endorsed his plans to build monasteries. In 1585 Abtai-khan built the monastery of Erdeni-jū on the site of the ancient Mongol capital Khorin balgasun (Karakorum) on the banks of the Orkhon river, invited Buddhist monks, and thus caused the Yellow Faith to spread. Erdeni-jū was the first Buddhist monastery in Mongolia. Later, Abtai-khan paid a visit to Lhasa and was received by the Dalai Lama.

On his return to Mongolia he established philosophic schools and greatly fostered Buddhism. Abtai-khan made Buddhism the national religion and persecuted shamanism. The stone foundation of his felt tent is still preserved in Erdeni-jū. Many legends about him are still current among Mongols. The account given below is one of them.

When Abtai-khan visited Lhasa, he requested the Dalai Lama to give him an image of a protecting deity. Said the Dalai Lama, " Take from among these images one which you like best ". Abtai-khan had a look at the many images in meditative posture holding cups with *amṛta*, flowers and drinking cups, but none attracted his attention. He then noticed in a corner of the temple the image of Mahākāla with open mouth, showing his teeth, six-armed, holding a battle axe, a sword and other weapons, and wearing a tiger skin. He was greatly struck by the fierce appearance of this deity and took the image to Mongolia. On his way, he dismounted from his horse on a pass called Ubashiyin dabagā. He placed the image on the ground, but it stuck to a stone and could not be torn off. Abtai-khan became angry and exclaimed, " Let the bottom remain, the chest we shall take away ". He then cut the image into two at the waist and took the upper part to Mongolia. The lower part was left at Erdeni-jū. After that the Ubashi-yin dabagā was renamed " Burkhan bügsetü-yin dabagā (The Pass of the Image's Bottom) ".

G. N. Roerich.

ABUDHABODHAKA-(NĀMA-) PRAKARAṆA, a Sanskrit text preserved in its Tibetan translation, the *Ma-rtogs-pa rtogs-par-byed-pa shes-bya-bahi rab-tu-byed-pa,* in the Mdo-Ḥgrel section of the Tibetan Tengyur. Its author was Klu-sgrub (Nāgārjuna). Ānanda (or Jayānanda) and the Lotsāba Grags-ḥbyor śes-rab (Kīrtibhūtiprajña) translated this work into Tibetan (Cordier, III, 294 ; Tōhoku, 3838).

ABURAYAMA, MOUNT (油山), the name of the hill to the south of Fukuoka city, Kyūshū, Japan.

Aburayama, literally, means the " Mountain of Oil ". There are two traditions concerning the origin of this name. One is as follows : In the period of the emperor Shōmu (聖武 701–756 A.C.) the pious and powerful Buddhist king of ancient Japan, Shōga (聖賀), established seven temples in this area (Ido District of Fukuoka Prefecture), and he ordered artisans to stay on this mountain to make sesamum oil for the use of these temples. The other tradition tells us that Shōga himself stayed there and himself made the lamp oil for the use of the five imperial temples (chokuganji 勅願寺), in this prefecture, namely, Ikazuchizan Ryōjuji (雷山靈鷲寺), Ikkizan Igiji (一貴山夷魏寺), Someizan Ryōjuji (染井山靈鷲寺), Kōraiji (高麗寺), Seburizan Tōmonji (背振山東門寺).

This mountain is divided into two parts : west and east Aburayama. On west Aburayama stands the Tempukuji (天福寺) temple. On east Aburayama is the temple known as Sempukuji (泉福寺). The former had 360 branch temples and the priests of these temples erected a shrine for Ryūju Gongen (龍樹權現, Nāgārjuna seen as a Shinto god) who was their guardian. Thus the temple flourished for a long time, but later the resident priests fought with the monk soldiers of the Tōmonji temple, each group destroying the temple of the other till at last both temples ceased to exist. At present, only the Ryūju Gongen shrine remains at the foot of Mount Aburayama.

The Sempukuji temple was built by Heiden Jikin (平田慈均) of the Shōdenji (承天寺) temple, Hakata, Kyūshū. The main object in the worship of this temple is the image of Āryāvalokiteśvara bodhisattva made by Gyōgi (行基 668–749). This temple is also said to have had 360 branch temples under it. But these gradually declined and came to ruin. In 1694 Taisen Enjun (大川圓詢) of Shōdenji temple built a new temple there, and named it Shōkakuji (正覺寺) and enshrined in it the image of Āryāvalokiteśvara bodhisattva. Later, this temple was selected as one of the 33 famous temples in Fukuoka Prefecture, Kyūshū. In 1191 A.C. Shōkō (聖光) was appointed the head teacher of this temple where he established an academic monastery. It is thought that at that time this temple probably belonged to the Tendai shū (天台宗) sect. (See Shōkō Shōnin den 聖光上人傳 or the Biography of Shōkō.)

Now no oil-making temple exists there, but only a memorial at the foot of the Avalokiteśvara temple of Higashi Aburayama Mountain.

SHŪYŪ KANAOKA.

ABUSIVE LANGUAGE (*abhisajjanī vācā*) is a form of harsh speech (*pharusā vācā*). This last term is explained by the Buddha to Cunda : " Whatever speech is rough, cutting, bitter, abusive, provoking wrath and conducive to dissension, is called harsh language " (*A.* V, 265). And this harsh language in turn is classed among the fourfold defilement by speech, elsewhere called " un-ariyan " modes of speech (*D.* III, 232). It is, thus, the very opposite of the speech of the Tathāgata, who was " gentle in his words which were pleasant to the ear, amiable, heart-stirrring, polite, agreeable and charming to the masses " (*D.* I, 4).

As an example of abusive language may be given the remark made by the brāhman Ambaṭṭha, taking offence at a number of Sākiyas who, in their own hall amusing themselves, failed to pay respect and offer a seat to him. He complained to the Buddha and called the Sākiyas a " rough and rude breed ", " mere menials" (*D.* III, 90-91). But the Buddha pointed out to him that it was not worthy of him to feel abused by such a trifle. The meaning of the word *abhisajjati* in this text is clear enough from the context. Yet Buddhaghosa found it necessary to provide some compromise explanation " to hang on to (such a trifle) under the influence of anger " (***kodha-vasena laggati*** : *DA.* I, 257), following the derivation ***abhi*** + ***sañj*** < ***abhisaṅga*** : adhering to ; although in the ***Khaggavisāṇa Sutta*** the word *abhisajjanā* is preceded immediately by *vācābhilāpo* : ' objectionable speech and abusive language' (*Sn.* 49).

H. G. A. v. Z.

ABYĀKATA, less frequent spelling of AVYĀKATA (q.v.), the unexplained, unanswered, undeclared, undecided, indeterminate, undefined, with special reference to karmic action which is not determined as regards its effect (*vipāka*), which is neither wholesome (*kusala*), nor unwholesome (*akusala*), and therefore neutral or a-moral. Also certain questions, whether the world is eternal or not eternal, whether the Tathāgata exists after death or not, &c., were left unanswered (*abyākata*) by the Buddha, because they were not connected with the goal of a life of renunciation (***M.*** **I, 431**). See also AGNOSTICISM.

H. G. A. v. Z.

ACALA (1), name of a future Buddha. The circumstances which led to the prediction regarding his appearance in the world as a perfected and fully enlightened one are thus related in the *Avadāna Śataka.* (I, 47-53 ; *AMG. XVIII*, 446).

Once, when the Buddha together with his company of disciples was residing at Jetavana in Anāthapiṇḍada's grove there lived in Śrāvastī two merchants. One believed in the Tīrthika (fordmaker) Pūraṇa, while the other believed in the Buddha. Thus in the course of their conversations the lay disciple of Pūraṇa claimed that Pūraṇa and five other teachers were more distinguished than the Buddha ; and the lay disciple of the Buddha held that his master was the more distinguished.

They even wagered all their possessions in support of their respective views. Having heard of this, king Prasenajit ordered his ministers to make inquiries. The ministers arranged for a public debate between the two. There Pūraṇa's disciple began by making an appeal to the truth of his faith (*satyopayācana*), "If it be true that the six teachers such as Pūraṇa are the best in the world, then may these flowers, this incense and this water present themselves to those teachers." Even as he uttered these words, the flowers fell on the ground, the fire went out, and the water having fallen on the ground dwindled and was absorbed into the ground. Thereupon, the disciple of the Buddha made an appeal to the truth of his faith, "If it be true that the Blessed One is foremost among beings, then may these flowers, this incense, and the water present themselves to the Blessed One." Even as he spoke, his wish was fulfilled. The multitude who saw this miracle gathered round the Buddha who preached the sūtra entitled the Three Proclamations of Superiority, the substance of which is that of all beings, whatsoever, the Tathāgata is considered the foremost. Of all dharmas, whether conditioned or unconditioned, the dharma of non-attachment (*virāga-dharma*) is the foremost. Of all communities, whether it is a *saṅgha*, *gaṇa*, *pūha*, or *pariṣad*, the community of disciples of the Tathāgata is the foremost. Those who have faith in the Tathāgata, in the (*virāga-*) dharma, and in the community of disciples of the Tathāgata could expect the best results.

At the end of this discourse, Pūraṇa's disciple gained faith in the Tathāgata, and falling at his feet, declared his aspiration to become a Buddha. At this the Blessed One's face showed a smile and, in reply to Ānanda's question, the Buddha announced that the aspirant, having acquired wisdom (*bodhi*), would through three asaṅkheyya-kalpas become a fully enlightened one named Acala.

ACALA (2), name of a *samādhi*, which appears in the tenth and eighteenth chapters of the *Pañcaviṃśati-sāhasrikā-prajñā-pāramitā-sūtra* (*Nanjio*, No. 3) as one of its 108 kinds of *samādhi* (*Śspp.* 1421. 19 & *Mhvyut.* 580). It is translated into Chinese as pu-tung (不動), pu-pien-i (不變異) or pu-pien-tung (不變動), each of which means 'immovable', 'unchangeable'.

It symbolises the state of calmness and immobility of the practisers of this *samādhi*, as a realisation of an essential doctrine of the *Prajñāpāramitā-sūtra*.

ACALA (3), one of the ten *krodha* or personifications of wrath. It is invoked in the *Siddhaikavīra Sādhana* (*Sādh.* 137) along with the *krodha* Ṭakkirāja. The *Dharmasaṃgraha* (v. 11), however, while enumerating the ten *krodhas*, takes Acaraṭarkirāja (for Acalaṭakkirāja) as the name of a single *krodha*; and Edgerton (*BHS.* s.v.) indicates the Āryoṣṇīṣa-vijayā-sādhana for the occurrence of such a name. Nevertheless, it may be pointed out that the compound which occurs there could as well be resolved to read: Acala, Ṭakkirāja, Nīladaṇḍa and Mahābala in the east, south, west and north, respectively (*tataḥ pūrvadakṣiṇapaścimottareṣu acalaṭakkirājanīladaṇḍamahābalāḥ*: *Sādh.* p. 418. 6–7).

ACALA (4), one of the celebrated theras who assembled at the foundation ceremony of the Suvaṇṇamāli cetiya (*Dpv.* xix, 8; *MhvA.* II, 526). According to the *Thūpavaṃsa* (p. 73) on this occasion Acala along with ten other theras surrounded thera Siddhattha who stood in front of the full pitcher (*puṇṇaghaṭa*), facing the east. A slightly different version is contained in the Sinhalese *Thūpavaṃsaya*: Acala and the other ten theras are said to have stood on this spot surrounded by their respective following of bhikkhus (p. 85).

ACALA (5), mentioned in the *Vaṃsatthappakāsinī* (*MhvA.* II, p. 535) as the assistant to the master builder Sirivaḍḍhaka who worked on the Suvaṇṇamāli cetiya. The *Mahāvaṃsa* does not mention him, but the *Extended Mahāvaṃsa* refers to him as Bhaddaka (xxx, 26).

ACALĀ (1), Tibetan: *mi-gyo-ba* (immovable, steadfast), Chinese: *pu-tung* (不動), is the name given to the eighth bodhisattva-bhūmi [1] or stage in the progressive religious development of a bodhisattva. The *Mahāyāna-sūtrālaṅkāra* explains that this bhūmi is so called because herein a bodhisattva cannot be disturbed by the two ideas of cause and absence of cause (*dvayasaṃjñāvicalanād acalā ca nirucyate, dvābhyāṃ saṃjñābhyāṃ avicalanāt. Nimittasaṃjñayā animittābhogasaṃjñayā ca*).[2] According to the *Daśabhūmika-sūtra*, however, this bhūmi is also called the Avivartya or Stage without Return; the Durāsāda or Stage which is difficult to attain; the Kumāra or Stage of the Royal Prince; the Janma (cp. Janmanidośa below); the Pariniṣpanna or Stage of Perfection; the Pariniṣṭhita or Stage of Accomplishment; the Nirmāṇa or Nirvāṇa because the bodhisattva herein truly realises his vows; the Adhiṣṭhāna or Stage of Laying the Foundation and the Anābhoga or Stage of Spontaneity.[3]

2 p. 182. Cp. *Bbh.* p. 23. in Appendix to *Dbhg.* Tad yathācalāyāṃ bhūmau pūrvakābhisaṃskārāpagamād anābhogaṃ niścalavāhimārgasamārūḍhaṃ tac cittaṃ tasyāṃ bhūmau pravartate. Tasmāt sā bhūmir acalety ucyate. *Dbhg.* p. 71: . . . acalety ucyate 'saṃhāryatvāt. *Mahāyāna-Sūtrālaṅkāra*, 78b, 4: nimitta-ābhoga akampatvād acalā bhūmiḥ, quoted by E. Obermiller in "The Doctrine of Prajñāpāramitā", *Acta Orientalia*, XI, p. 56.

3 *Dbhg.* 71; cp. also *ERE.* II, 747–8.

The appliances (*parikarma*) for the attainment of this stage are eight in number, viz., *sarvasattvacitta-jñāna, abhijñākrīḍana, buddhakṣetraniṣpatti, buddhasevā, divyacakṣuṣoniṣpatti, jinakṣetrapariśuddhi, māyopamāvasthāna* and *saṃcintyabhavādānā*.[4] These appliances correspond to the characteristic qualities which, according to the *Śatasāhasrikā-prajñāpāramitā*, a bodhisattva must acquire when in the eighth bhūmi (no name assigned). A bodhisattva in this bhūmi can read the thoughts of all creatures, acquires the super-knowledges (*abhijñā*), sees all the Buddha-fields, serves the Buddhas by serving all beings, and obtains true insight into the nature of the Dharmakáya or cosmic Spiritual Body. He acquires the sovereignty of the universe and then renounces it. He knows the higher and lower powers of all, purifies the Buddha-fields, and performs all actions without being attached to anything. He has now acquired the *kṣānti*, called *anutpattika-dharma-kṣānti* (i.e., receptivity to the fact that states of being have no origination). The Buddhas initiate him into infinite knowledge: otherwise, he would enter into Nirvāṇa instead of persevering in his efforts to gain *bodhi* for the good of all. He understands the process of the evolution and involution of the universe. He knows the exact number of atoms in the different elements of which the universe is composed. He assumes different bodies and shows them to the people as he thinks fit (*svakāyavibhaktim ādarśayati*). He acquires the ten powers (*vaśitā*). He especially cultivates the perfection of aspiration (*praṇidhāna*) without neglecting the others, and pervades the whole world with the feeling of friendliness.[5]

The *Mahāvastu*, however, calls this bhūmi Janmanideśa or ascertainment of birth and gives the details thereof in the section which deals with the fourth bhūmi.[6] Here it is said that the bodhisattvas having reached the beginning of the eighth bhūmi do not lapse. They definitely cultivate good karma and are filled with compassion for the worlds. Since they are not liable to lapse they do not pass into a hell, nor are they reborn in a brute state (*tiryagyoni*). It is from the eighth bhūmi that bodhisattvas begin to renounce all they possess and make difficult sacrifices. They are to be looked upon as perfect Buddhas. Henceforth they are masters of the profound meditations. They abhor the pleasures of sense and extol release. Bidden by the Buddhas they train many to be arhats; many to qualify for discipleship. Henceforth, devas, asuras, and brahmas allured by their virtues come to them with hands joined in adoration.[7]

This bhūmi is especially associated with the wisdom of the dhyāni-buddha Akṣobhya.

The *Anābhoga-nirnimitta-vihāra* or the station of the unconditioned without mental effort or thought of the bodhisattva-bhūmi is said to correspond to the eighth bhūmi, Acalā, of the *Daśabhūmika-sūtra*. In this vihāra a bodhisattva's actions are perfectly pure, whereas they were not so in the preceding stations. He obtains infallible knowledge of the past, present and future. He comprehends that all things are really undefinable and indescribable. There can be no origination and no causation. Thus he acquires the *kṣānti* that is called *anutpattika-dharma-kṣānti*. He is now exhorted by the Buddhas and obtains the ten powers (*vaśitā*). He can enjoy the dhyānas that he wishes to experience. He can obtain material objects like food and drink merely by thinking of them. All his desires are automatically fulfilled. He can know everything that he wants to know. He is never deprived of communion with the Buddhas.[8]

T. Rajapatirana.

ACALĀ (2), one of eleven rākṣasīs who, according to the *Saddharmapuṇḍarīka* (p. 400), appeared before the Tathāgata with their children and relatives and declared that they would protect those preachers who keep the Dharmaparyāya (q.v.) of the Lotus of the Good Law. She is also mentioned in the *Mahāmāyūrī* as a rākṣasī. See also KUNTĪ.

ACALĀ (3), a Sanskrit word, literally meaning 'non-moving'. The word appears in certain sūtras as a name of female. One of them is in the *Gaṇḍavyūha*, where she appears as one of the fifty-five wise advisers. Sudhanaśreṣṭhi-dāraka, a boy who visited these teachers one by one in order to get true instruction in the Buddhist way of life, visited her at his twentieth call. According to the interpretation of the Chinese commentator her special teaching to him is in connection with the bodhisattva's ten deeds. Here her name is translated into Chinese as Pu-tung (non-movement) and into Tibetan as Mi-gyo-ba (*Gvyū*. 173. 13, 178. 1 ff.).

Another place where the word appears as a name of a female is in the *Saddharmapuṇḍarīka*. Acalā is one of the ten rākṣasī or female guardians of Buddhism, said to be daughters (sometimes colleagues) of Hāritī (Pl. XXVI), the most famous female guardian of Buddhism. She is mentioned as the seventh of them and her special duty is to protect Buddhist scriptures against heresy. Her appearance is that of a beautiful heavenly female; the colour of her costume is light green. (All others have their own fixed colour of costume.) According to Nichiren, the famous Japanese practiser of this sūtra, these spirits are demons of the highest class. These demons of the highest class take the spirit of human beings, the lower ones take the internal organs, while the lowest ones take the fæces or urine of human beings (*Sdmp.* p. 336). The Chinese equivalent of the name means non-tiredness and the Tibetan is *Me* (i. e., nil).

ACALĀBHISAMAYA-SURATĀBHIDHĀNA, a Sanskrit text which is extant in its Tibetan translation, the *Mi-gyo-baḥi mṅon-par rtogs-pa rab-tu dgaḥ-bar mṅon-par brjod-pa*, in the Rgyud (tantra) section of the Tengyur. Its author was Nags-kyi rin-chen (Vanaratna). Gshon-nu-dpal translated the work into Tibetan. Sometimes the Sanskrit title is given as *Acalābhisamaya hṛṣṭābhidhāna* (*TM*. 1783).

ACALACAKRA, a Sanskrit text which is extant in its Tibetan translation, the *Mi-gyo-baḥi ḥkhor-lo*, in the Rgyud-hgrel (tantra-commentary), section of the Tengyur. Although its author is not mentioned, the names of Chos-kyi rdo-rje (Dharmavajra) and Nam-mkhaḥ rdo-rje (Gaganavajra) are recorded as having translated this work into Tibetan (*Cordier*, III, p.192, No. 65).

ACALA CETIYA, the name given to the place where all the Buddhas first set their right foot, on their descent from the deva-world after spending a year there. It is at the entrance to Saṅkassa (*DhpA*. III, p. 227).

ACALADEVA, a bodhisattva whose name occurs in a list of future Tathāgatas enumerated by Māyādevī (*Gvyū*. 443. 6–7) who tells the noble youth Sudhana that in as much as she was the Buddha Vairocana's mother she was also the mother of all past Buddhas, and will be of future Buddhas such as Maitreya, Acaladeva, and others (ibid. 438.8 : Sarvabodhisattvajinajanetrī).

ACALĀGRA VIDYĀRĀJA (FUDŌ-MYŌ-Ō 不動明王). The word *Fudō* (不動) is a translation of the Sanskrit word *Acala*. The Tibetan term is *Mi-gyo-ba*. Fudō is the chief of the five great vidyārājas (*Myō-ō* 明王) or the eight great vidyārājas, and was established by the order of the Tathāgata Mahāvairocana. The image of Fudō is placed at the southern corner of Jimyō-in (持明院) in the Garbhakośadhātu-maṇḍala. The mystic names of this god are Jōjū-kong (常住金剛), permanent diamond, and Jigo-kongō (慈護金剛) diamond guardian of compassion. Fudō is also placed in the Sonshō (尊勝) maṇḍala, mentioned in the *Jên-wang-ching* (仁王經), and in the Maitreya-maṇḍala, mentioned in the *Rokuji-kyō* (六字經). This god has his origin in the Indian god Śiva and represents one of the seven gods. The unabbreviated form of his name is Acalanātha-vidyārāja, the Japanese translation being Fudō-inu-myō-ō (不動威怒明王) and Fudō-myō-ō is its abbreviated form. He is also called Fudō-son (不動尊), Mudō-son (無動尊), Mudōsōn bodhisattva (無動尊菩薩), Fudō-shisha (不動使者) and Mudō-shisha (無動使者). By the order of Tathāgata Mahāvairocana this deity manifests anger. Seated in the fire-producing *samādhi* he burns out all defilements and obstructions. He also destroys all enemies and tempters, and also serves the Tathāgata Mahāvairocana by attending to his miscellaneous tasks. He guards and protects the practiser at all times and bestows on him long life, recovering from him, as offering, food that is left over. He is the god who completes the *bodhi* of the practiser. His partaking of the food which is left over signifies the extinction of all defilements. The form *acala* signifies the strong and immovable *bodhicitta* which exists within the great Buddha-wisdom, unswayed even by the relativity of existence and voidness. He is called a vidyārāja because he destroys all defilements such as attachment, while at the same time protecting the teaching of the Tathāgata. He is called Shisha (servant) because he serves the Tathāgata. Though he is represented as a servant, he is, nevertheless, one who is originally enlightened. He is the chief of all the vidyārājas, ruling eight great child servants and 48 other servants.

Original Buddha of the Acalāgra. There are four theories concerning the original Buddha of Acalāgra.

(1) The primordial *Buddha-kāya* of Acalāgra is the Tathāgata Mahāvairocana. This is the first theory.

In the first volume of the *Ti-li-san-mei-ya-pu-tung-tsun-shêng-chê-nien-sung-pi-mi-fa* (底哩三昧耶不動尊聖者念誦祕密法), it is said that Acalāgra is the discriminating wisdom-body of Mahāvairocana Tathāgata. The *Shêng-wu-tung-tsun-an-chên-chia-kuo-têng-fa* (聖無動尊安鎮家國等法) says : In order to save all beings I manifest the unrestricted virtuous body in the three worlds with the name Fudō-kongō-myō-ō (不動金剛明王). In this quotation " I " refers to the Tathagata Mahāvairocana. Again in the *Shêng-shun-pu-tung-ming-wang-ssŭ-shih-pa-shih-chê-pi-mi-ch'êng-chiu-i-kuei* (勝軍不動明王四十八使者祕密成就儀軌) it is said that five Vidyārājas are produced from the mind of Mahāvairocana and therefore all the five rājas : Fudō (不動), Gōsanze (降三世), Gundari (軍荼利), Daiitoku (大威德) and Kongōyasha are incarnations of the Tathāgata Mahāvairocana. In the three commentaries mentioned above there is clear evidence that the Tathāgata Mahāvairocana is the original body of Acalāgra.

(2) The original Buddha of Acalāgra is Śākyamuni Buddha. This theory originates in the *Ti-li-san-mei-ya-pu-tung-tsun-wei-nu-wang-shih-chê-nien-sung-fa*.

(3) The original body of Acalāgra is Vajrasattva bodhisattva. This theory is attributed to the *Chin-kang-shou-kuang-ming-kuan-ting-ching-tsui-shêng-li-yin-shêng-wu-tung-tsun-ta-wei-nu-wang-nien-sung-i-kuei-fa-p'in* (金剛手光明灌頂經最勝立印聖無動尊大威怒王念誦儀軌法品).

(4) The original body of the Acalāgra is Jogaishō bodhisattva (除蓋障菩薩). This theory is derived from the contents of the *Ta-miao-chin-kang-ta-kan-lu-chun-na-li-yen-man-ch'ih-shêng-fo-ting-ching* (大妙金剛大甘露軍荼利焰鬘熾盛佛頂經). Of the four theories mentioned above, the most common is the first theory, namely, that the primordial body of Acalāgra is the Tathāgata Mahāvairocana.

Representations and Images of Acalāgra. There are various representations of the images of Acalāgra. Plate IV shows one of them.

(A) There is the figure which bears one face and two arms. Several varieties of this type of image have been found.

(1) The figure is that of a child, exposing a fat body and a face showing anger. The body is reddish-yellow or bluish-black in colour, and the garments are red and clay-coloured. A blazing fire burns around the image which holds a sword in the right hand and a noose in the left. Seven strands of plaited hair are seen on the head, one of them hanging down to the left shoulder. There is a squint in the left eye ; the figure is shown as biting the right edge of the upper lip slightly with the lower teeth, and thrusting out the left half of the lower lip. A symbol of a wave is seen on the forehead. This representation of Acalāgra is the most popular among the Acalāgra images which are enshrined and worshipped. The representation of Acalāgra as mentioned above is referred to in the *Mahāvairocana Sūtra*, chapter one, *Taizō-shibu-giki* (胎藏四部儀軌), chapter 5 of the commentary of the *Mahavairocana Sūtra*, and others. In some representations the symbols carried in the hands are interchanged. In some the eyes are open, as in the case of Acalāgra of the five great vidyārājas which still remains in the Kyō-ō-gokoku temple (教王護國寺) at Kyōto, as well as in the image of Acalagra brought from China by Enchin (圓珍) In the *Taizō-hakkan-shidai* (胎藏八卷次第) it is said that the image with the eyes open is a better representation than that with the eyes closed. Some images wear crowns of lotus flowers on the heads. Reference to these lotus flowers is found in the phrase " eight lotus leaves on the hair " which occurs in the *Shê-wu-ai-ta-pei-hsin-ta-t'o-lo-ni-ching-chi-i-fa-chung-ch'u-wu-liang-i-nan-fang-man-yüan-pu-t'o-lo-hai-hui-wu-pu-chu-tsun-têng-hung-shih-li-fang-wei-chi-wei-i-hsing-shih-chih-ch'in-san-mo-ya-p'iao-ch'ih-man-t'u-lo-i-kuei* (攝無礙大悲心大陀羅尼經計一法中出無量義南方滿願補陀落海會五部諸尊等弘誓力方位及威儀形式執持三昧耶幖幟曼荼羅儀軌). Since Acalagra destroys the defilements and desires of all beings, he holds a sword in one hand and in the other he carries a noose, in order to catch and bind the people who cannot be destroyed and are very difficult to be taught. The noose here signifies the expediency of the *bodhicitta* and the sword the cutting off of the karmic life by means of Buddha-wisdom, thereby introducing them to the great Voidness. When the seed of the karmic life is removed, then word-play or false words will cease to be, and for this reason Acalāgra always keeps his mouth shut. For the purpose of observing all beings equally, he shuts one eye slightly and observes beings with the other eye, while at the same time manifesting the ugliness of his figure with the intention of frightening those who are difficult to be taught. The seven curls of the hair stand for the virtues of the seven *bodhi-aṅga*, and one curl of hair hangs down to his shoulder to show compassion. His sitting on the heavy stone signifies immovability or steadfastness in extinguishing the great defilements ; and the heavy stone, the act of sitting safely and securely in the *bodhicitta*. Stone or rock produces all varieties of precious stones. Therefore, the large stone or rock here symbolises the *bodhicitta* which is the repository of various Buddha-virtues. He sits in the fire-producing *samādhi*. A blazing fire surrounds his whole body. The fire signifies the fire of wisdom which burns out all the ignorance and defilements of beings. He is represented as a child in order to show his readiness to serve all beings. The bluish-black colour of his body signifies his ability to conquer all tempters, and the reddish-yellow colour the non-duality of the wisdom-virtue, the 'Fire-Great', Ka-dai (red), and the 'Earth-Great', Chi-dai (yellow) as the principle virtue. The wave-marks on the forehead signify the waves of defilements in the seventh consciousness. The deeper meaning of this mark is ordination, or the sprinkling of the water of wisdom equally on all beings so that they may attain Buddhahood. Projection of the right fang implies the frightening away of heavenly tempters. The biting of the left side of the upper lip implies that he embraces all beings with his compassion and that he teaches all beings without exception.

(2) In this type of image Acalāgra is depicted as wearing red, clay-coloured clothes. His hair hangs down to the right shoulder. He squints his eyes, holds a sword in his left hand, a noose in the right hand, and sits on a jewelled lotus ; his eyebrows are contracted and his face shows anger. This type of image differs from the one described above only in one point. Here Acalāgra sits on a jewelled lotus, while in the first he sits on a heavy stone. This is described in the *Ti-li-san-mei-ya-pu-tung-tsun-wei-nu-wang-shih-chê-nien-sung-fa.*

(3) In this type of image Acalāgra wears red, clay-coloured clothes, the hair hangs down to the left shoulder, his eyes squint and the figure is that of a child. He holds a diamond pestle in the right hand close to his heart, and a jewelled stick in the left hand. He sits on a lotus. The eyes are slightly reddish in colour, the face shows anger. A blazing fire surrounds the body. The symbols he carries in his hands and the object on which he sits are different from those mentioned in the first type. This image is described in the *Ti-li-san-mei-ya-pu-tung-tsun-wei-nu-wang-shih-chê-nien-sung-fa.*

(4) In this type of image Acalāgra wears red, clay-coloured clothes. His hair hangs down to the left shoulder. His eyes squint. The figure is that of a child. He holds a diamond pestle and a jewelled stick in his hands, and sits on a stone. His eyes are slightly reddish, his face shows anger, and flames of fire surround his body. The object on which he sits is here different from that of the third kind of image. The commentary here is not quite clear with regard to the objects carried in his hands. This type of image is described in the *Ti-li-san-mei-ya-pu-tung-tsun-shêng-chê-nien-sung-pi-mi-fa* (vol. II).

(5) The body of this type of image is reddish-yellow in colour. It wears a blue upper garment and a red skirt. The hair, which is the colour of a black cloud, hangs down to the left shoulder. The figure is that of a child. He holds a diamond pestle in his right hand and a noose in the left. His fangs slightly protrude from both ends of his mouth. His red eyes show anger, and he sits on a stone surrounded by flames of fire. This image is described in the *Pu-tung-shih-chê-t'o-lo-ni-pi-mi-fa* (不動使者陀羅尼祕密法). This commentary also describes an image which holds a sword in the right hand.

(6) This type of image is blue-black in colour. In this image Acalāgra wears blue clothes, his hair hangs down to the left shoulder, his eyes are slightly reddish, and the figure is that of a child. He holds a *śakti* (short spear) or a *vajra* (diamond pestle) in the hands and sits on the rock-mountain. This type of image is described in the *Chin-kang-shou-kuang-ming-kuan-ting-ching-tsui-shêng-li-yin-shêng-wu-tung-tsun-ta-wei-nu-wang-nien-sung-i-kuei-fa-p'in*.

(7) This image holds a single-pronged *vajra* in the right hand and a noose in the left hand and sits cross-legged on a rock. This image is described in the *Kakuzenshō* (覺禪鈔), but is not mentioned in the sūtras or the commentaries.

(8) The above-mentioned images are all sedent images. Generally speaking, however, standing images are more popularly enshrined than sedent images. In this type of image, Acalāgra stands on a rock, the figure and the symbols are the same as those of the first type. According to the *Besson-zōki* (別尊雜記), this image stands on a round jewel which is placed on the rock. Standing images are not clearly defined in the sūtras or in the commentaries.

(9) In the commentary to the *Mahāvairocana Sūtra* (9th chapter) it is said that by order of Tathāgata Mahāvairocana Acalāgra conquered Maheśvara who is the greatest king of the three worlds. The same story is given in the *Ti-li-san-mei-ya-pu-tung-tsun-shêng-chê-nien-sung-pi-mi-fa* (volume I). In *Kakuzenshō* it is mentioned that in this type of image Acalāgra treads on the head of Maheśvara with his left foot and on his wife Umā with the right foot. This type of image is also mentioned in the *Besson-zōki*. Generally speaking, the deity who treads on Maheśvara and his wife Umā is Gōsanze vidyārāja (降三世明王); and, therefore, passages from the commentary of the *Mahāvairocana Sūtra* (chapter 10) and the fifth chapter of *Dainichikyō-gishyaku* (大日經義釋) another commentary of the *Mahāvairocana Sūtra* are quoted in *Kakuzenshō*, as proof of Acalāgra and Gōsanze being the same vidyārāja. But, Acalāgra and Gōsanze are generally considered to be two different vidyārājas. According to the ancient traditions, there are several types of standing images of Acalāgra in which he has one face and two arms. (cp. *Taishō-shinshū-daizōkyō zuzō*, Vol. 6.)

(B) This type has one face, four arms and two legs. It holds a sword in the lower right hand and a noose in the lower left hand, the two upper hands are placed at the ends of the mouth. Anger is shown on the face. The body is dark blue in colour. Sharp fangs protrude from the mouth. This type of image is mentioned in the *Shêng-wu-tung-tsun-an-chên-chia-kuo-têng-fa*. According to this commentary Acalāgra appears in this particular form as the chief of the deities. It is also mentioned in the *Kakuzenshō* that Acalāgra with four arms is the head of deities, and Acalāgra with two arms is the servant of the Tathāgata.

(C) This type of image has four faces, four arms and two legs. This image is described in the *Ti-li-san-mei-ya-pu-tung-tsun-shêng-chê-nien-sung-pi-mi-fa* (volume I) and in the *Ti-li-san-mei-ya-pu-tung-tsun-wei-nu-wang-shih-chê-nien-sung-fa*, but in these commentaries the symbols carried in the hands are not mentioned. The body is of a yellow colour, the mouth has protruding fangs, the face shows violent anger, and flames of fire surround the body. According to the illustration in the *Kakuzenshō*, three profiles are drawn on the original face, and the symbols carried in the four hands are the same as those of the image described above (B). According to the commentaries this type of image is drawn on banners used in order to check the movements of the enemies and tempters.

(D) This type has four faces, four arms and four legs. This image is also described in the *Kakuzenshō*. It wears Aśra's skin, and skeletons as accessories. The hair hangs down on the left shoulder and the eyes are reddish in colour. The fangs protrude and the mouth opens wide. He stretches the two upper arms, holds a sword in the lower right hand and a noose in the lower left hand, and sits on a rock with two of his legs crossed while the other two hang down. He emits innumerable rays of light from the pores of his skin.

(E) This type has three faces and six arms. In the second chapter of the *Māyā-jāla-mahā-tantra-rāja Sūtra* (瑜伽大敎王經) it is mentioned that this image wears a crown on the head, it has three faces and six arms. Each has three eyes, the centre face wears a smile, the right face is yellow in colour, it shows anger, and emits a red flame from the mouth, the left face bites the lip with white teeth, showing violent anger. The first right hand holds a sword the second a diamond pestle, and the third an arrow. The first left hand holds a noose, the second a scroll of the *Prajñāpāramitā Sūtra*, and the third a bow. He emits a red light from his body and sits on a lotus flower, with one leg hanging down. Under his seat there is a great treasure mountain. The same description is given in the *Huan-hua-wang-ta-yu-ch'ieh-chiao-shih-fên-nu-ming-wang-ta-ming-kuan-hsiang-i-kuei-ching* (幻化網大瑜伽敎十忿怒明王大明觀想儀軌經; cp. vol. 6 of *Taishō-zōkyō-zuzō*).

(F) This type has four faces and six arms. It is mentioned in the *Kakuzenshō* which quotes from *Shugo-kokkai-hō* (守護國界法), but not in the sūtras and the commentaries. Here Acalāgra shows anger on his face, the colour of the body is red like the rays of the sun, the hair stands on end, the upper right hand holds a sharp sword, the second a diamond arrow, and the third a golden ring. The upper left hand holds a noose, the second a jewelled bow, and the third a diamond pestle. He rides on a golden lion, and the eight great servants surround the image.

(G) This type has one face, six arms and six legs. It is mentioned in the *Kakuzenshō* which quotes a passage from the *Shêng-wu-tung-tsun-kuei* (聖無動尊軌). In the *Ashabashō* (阿娑縛鈔), it is said that this image is derived from the *Shêng-wu-tung-tsun-nien-sung-i-kuei* (聖無動尊念誦儀軌). Nevertheless, the description of this image is not found in the existing commentaries. According to the passage quoted in the *Kakuzenshō* this image shows anger on its face, its body is the colour of a black cloud, one of the seven strands of hair hangs down to the left shoulder. The first right hand holds a sharp

sword, the second a jewelled stick, and the third an iron axe. The first left hand holds a noose, the second a diamond arrow, the third a thin stick, and the figure is seated on the rock. Also in the *Kakuzenshō* it is mentioned that according to the oral tradition of *Kaimyō-bō* (開明房) there is another image which has three faces, six arms and six legs. And this image holds a ring in the second left hand instead of a diamond arrow.

As already mentioned, there are several types of images of Acalāgra vidyārāja. (Cp. Besson-zōki, Kakuzenshō, Shikeshō-zuzō (四家鈔圖像). Daigo-jibon-fudō-myō-ō-zuzō (醍醐寺本不動明王圖像), Tōjibon-fudō-myō-ō-zuzō (東寺本不動明王圖像), all of which are included in the Zuzō of the *Taishō-shinshū-daizōkyō*.

There are many excellently sculptured images, cast images and painted images of Acalāgra in Japan. Among them, those which are enshrined in the following temples are famous, namely, a painted image of the Ki-fudō in the Onjō-ji, a painted image of the Aka-fudō in the Myō-ō-in at Kōyasan, and sculptured images of Acalāgra in Shōgo-in, Hanju-in, Sanzen-in, Kyō-ō-gokokuji, Kōryūji, Henshōji in Kyōto, Tōshōdaiji, Hasedera in Yamato, Ishiyama-dera, Enryakuji in Ōmi, Kongōji, Kanshinji in Kawachi, Kongōbuji, Shōchi-in, Renjo-in, Nan-in at Kōyasan, and Denjōji in Bungo. Further there are the books which contain collections of painted images of Acalāgra in Daigoji and Kanchi-in of Tōji in Kyōto.

The Maṇḍala of Acalāgra Vidyārāja. There are two kinds of *maṇḍala* of Acalāgra, one (A) is the maṇḍala which originated from the *Mahāvairocana Sūtra*, and the other (B) is the maṇḍala whose origin can be traced to the commentaries.

(A) The maṇḍala which originated in the *Mahāvairocana Sūtra*. According to the explanation given in the *Ashabashō* and the *Gyōrinshō* (行林鈔), there are several representations of this maṇḍala: (1) In which Acalāgra is placed at the south-west part of the great Garbhakośadhātu-maṇḍala. Here, Acalāgra is not the main image. (2) In which Acalāgra is the centre image. Here Tathāgata Mahāvairocana occupies the place occupied by Acalāgra in the Garbhakośadhātu-maṇḍala. (3) In which Acalāgra is the centre image; various holy beings are placed in the second circle, and deities are in the third circle. (4) In which Acalāgra is the centre image, various *vajras* are placed in the second circle and deities are in the third circle. (5) Which is derived from the *Mahāvairocana Sūtra* (chap. 2) and its commentary (chap. 9). The *vajras* in the second circle of this maṇḍala are taken from those mentioned in the *Mahāvairocana Sūtra*.

(B) The maṇḍala whose origin is in the commentaries. There are several types of these: (1) In which Acalāgra is enshrined in the centre and the eight great servants surround him. The eight great servants are Ekō, Eki, Anokudatsu (Anavatapta), Shitoku, Ukubhaga, Shōjō bhikkhu, Kiṅkara and Ceṭaka. They are enshrined respectively to the east, the south, the west, the north, south-east, south-west, north-west and north-east of Acalāgra. Of these the first four are manifestations of the four kinds of wisdom, the other four being manifestations of four *pāramitā*. This maṇḍala is mentioned in the *Shêng-wu-tung-tsun-i-tzŭ-ch'u-shêng-pa-ta-t'ung-tzŭ-pi-yao-fa-p'in* (聖無動尊一字出生八大童子祕要法品). (2) The maṇḍala which is enshrined as the main object of worship. According to the tradition of Tō-mitsu (Shingon esotericism), Acalāgra who has one face and four arms is placed at the centre of this maṇḍala, and the heavens belonging to the eight directions are placed in the second circle. Therefore, this is a double maṇḍala. On the other hand, in Tai-mitsu (Tendai esotericism), the golden image of Acalāgra who has one face and two arms is placed at the centre of the maṇḍala, eight images of the bluish-black Acalāgra who has one face and four arms are placed in the second circle, and the heavens of the eight directions are drawn in the third circle. Therefore, this is a threefold maṇḍala. It is derived from the *Shêng-wu-tung-tsun-an-chên-chia-kuo-têng-fa*. (3) In the centre circle of this maṇḍala is placed an image of the yellowish coloured Acalāgra with two arms (the right hand holds a sword and the left hand a noose) and the eight images of Acalāgra with one face and four arms are placed in eight circles which surround the centre circle. Four jewelled pots are placed at the corners of the maṇḍala. This maṇḍala is illustrated in the *Fudō-maṇḍala-shū* (the collection of maṇḍalas of Acalāgra) which is found in Kanchi-in of Tō-ji and is included in the 6th volume, of *Taishō-shinshū-daizōkyō-zuzō*. (4) In which the image of Acalāgra with two arms (the right hand holds a sword and the left hand a noose) is in the centre. Eight vidyārāja images, whose faces show anger, are drawn in the eight directions or corners, radiating from the centre circle. This is also shown in the *Fudō-maṇḍala-shū*, mentioned above. (5) In the centre of this maṇḍala is enshrined a two-armed Acalāgra seated on the eight-leaved lotus. He holds a sharp sword in the right hand and a noose in the left hand. At the four corners of this maṇḍala are drawn various figures of Acalāgra. The authority of this maṇḍala is not clear, but it is also shown in the *Fudō-maṇḍala-shū*. (6) In the centre image of this maṇḍala is the image of Acalāgra with a sharp sword in the right hand and a noose in the left hand. He sits on a golden stone, with both legs hanging down. Images of Kiṅkara and Ceṭaka are drawn on either side of Acalāgra, and the four heavenly kings are drawn at the four corners. The authority for this maṇḍala is not given, though this maṇḍala is shown in the *Kakuzenshō*. (7) Acalāgra or five great vidyārājas are drawn in the inner part of this maṇḍala and 12 deities in the outer part. This maṇḍala is generally called Jūni-ten-maṇḍala (maṇḍala of 12 deities), but sometimes it is called Fudō-maṇḍala (maṇḍala of Acalāgra) because the centre image of this maṇḍala is Acalāgra (Fudō). (8) In this maṇḍala Śākyamuni is drawn in the centre, Mañjuśrī bodhisattva is at his left side, and Vajrasattva bodhisattva on his right. The picture of Acalāgra is never drawn below the image of Vajrasattva. This picture is derived from the contents of the *Ti-li-san-mei-ya-pu-tung-t'sun-wei-nu-wang-shih-chê-nien-sung-fa* and the *Pu-tung-shih-chê-t'o-lo-ni-pi-mi-fa*; but strictly speaking this cannot be admitted as a maṇḍala.

Disciples and Servants of Acalāgra. (1) The eight great Dōji (child servants). In the *Shêng-wu-tung-tsun-i-tzŭ-ch'u-shêng-pa-ta-t'ung-tzŭ-pi-yao-fa-p'in* it is mentioned that the four bodhisattvas, Ekō, Eki, Anokudatsu and Shitoku and the four servants, Ukubhaga, Shōjō bhikkhu, Kinkara and Ceṭaka, are given as disciples and servants of Acalāgra. They are drawn in the Tōjibon-fudō-myō-ō-zuzō (mentioned above) and the *Kakuzenshō.* (2) The 48 servants and disciples of Acalāgra. Twenty-four of them, the Kurikara dragon king and others stand to the left of Acalāgra, and the other 24, such as the Vajra Aśra king, stand on the right side. Their names are given in detail in the *Shêng-chün-pu-tung-ming-wang-szŭ-shih-pa-shih-chê-pi-mi-chêng-chin-i-kuei.* They are the various deities and kings who are provided by Acalāgra in order to protect the practiser day and night.

The Symbolic Instruments of Acalāgra. (1) The noose and the sword. They are explained in the 13th chapter of the commentary of the *Mahāvairocana Sūtra.* They are the same as the symbols carried by the Acalāgra with two arms. The sword depicted here is a double-edged sharp sword. (2) *Kulika.* A sharp sword round which a black dragon is coiled. In the *Chü-li-chia-lo-ta-lung-shêng-wai-tao-fu-t'o-lo-ni-ching* (俱利伽羅大龍勝外道伏陀羅尼經) it is mentioned that Acalāgra incarnates himself as the *kulika* dragon king when he argues with 95 heretics in order to dispel heretical ideas. This *kulika* dragon king is popularly worshipped. He has four legs and, according to the sūtra, the four legs are manifestations of the four great vidyārājas: Gōsanze, Gundari, Dai-itoku and Kongō-yasha. Another point of view is that the dragon coiled round the sword signifies the noose and, therefore, this *kulika* signifies the non-duality of the symbols, the sword and the noose. Yet another opinion is that the dragon is the scabbard of the sword and, therefore, the symbol of Acalāgra is the sword. Or again, the sword is the manifestation of the Buddha's wisdom, and the dragon is the manifestation of the three great defilements and, therefore, this *kulika* shows that Buddha's wisdom and the defilements are not separated. (3) The sword. (4) The one-legged pestle. This also signifies sound and firmly based wisdom which can remove all kinds of obstructions.

The Original Seed of Acalāgra. (1) *Hmmāṃ.* This character is the compound of Hāṃ and Māṃ. According to the explanation given in the commentary of the *Mahāvairocana Sūtra* (chap. 10), this *bīja* possesses the quality of frightening away defilements by its strong, pure and unmovable nature and practice. (2) *Hāṃ.* This *bīja* is derived from the passages "one-true-word is the seed of Acalāgra" and "Hāṃ is the essence of Acalāgra" which occur in the *Mahāvairocana Sūtra* (chap. 2). In the *Shêng-wu-tung-tsun-i-tzŭ-ch'u-shêng-pa-ta-t'ung-tzŭ-pi-yao-fa-p'in,* also this Hāṃ is regarded as the *bīja* of Acalāgra. (3) *Hūṃ.* This character possesses the meaning of destructive ability, and corresponds to the conquering ability of Acalāgra. It is, therefore, regarded as the *bīja* of Acalāgra. This *bīja* had the origin in the passage "If the practiser chants the sound Hūṃ, showing anger and forming the sign in his mind, then all evil clouds are removed" (*Ti-li-san-mei-ya-pu-tung-tsun-shêng-chê-nien-sung-pi-mi-fa*).

Mudrā (Symbolic Gestures) of Acalāgra. Fourteen kinds of symbolic signs of Acalāgra are explained in the following sūtras and commentaries, namely, the *Chin-kang-shou-kuang-ming-kuan-ting-ching-tsui-shêng-li-yin-shêng-wu-tung-tsun-ta-wei-nu-wang-nien-sung-i-kuei-fa-p'in,* the *Ti-li-san-mei-ya-pu-tung-tsun-wei-nu-wang-shih-chê-nien-sung-fa,* the *Ti-li-san-mei-ya-pu-tung-tsun-shêng-chê-nien-sung-pi-mi-fa* and the *Pu-tung-shih-chê-t'o-lo-ni-pi-mi-fa.*

These fourteen kinds of symbolic gestures are generally called the fourteen essential mudrās of Acalāgra. The order in which they are taken up and their method of formation are not always the same. In the sequel each of the fourteen signs will be explained according to the order and methods of formation prescribed in the *Li-yin-kuei.* (立印軌). (1) The essential mystic mudrā. This is also called the needle sign, the one-legged sign, the essential body gesture, the essential *samaya* ('coming together') mudrā or the essential mind mudrā. The method of forming this sign is as follows: Join both hands together, the thumbs touching the inner sides of the ring fingers, bend the tips of middle fingers to the thumbs, and raise the forefingers pressing them together. (2) Treasure mountain mudrā: Join hands together and put thumbs into the hollows of the hands. (3) Head mudrā: Clench the fists, turn the right fist up and cover it with the left fist. (4) Eyes mudrā: Join hands together, put thumbs into the hollows of the hands, raise the forefingers, and place them on the eyes or the eye-brow. (5) Mouth mudrā: Cross the little fingers with the palms facing each other; touch the little fingers with the ring fingers; raise the middle fingers; touch the back of ring fingers with the thumbs; touch the back of the middle fingers with the forefingers, and place them on the mouth. (6) Mind symbol: Join hands together; and make circles with the forefingers and thumbs. This sign is the most mysterious of the fourteen symbolic gestures and it has many deep meanings. (7) The name of the seventh manual sign is not mentioned in the *Li-yin-kuei,* but it is generally called the *Shisho-kaji-in* (the manual sign which protects four places) or the *Kō-in* (the back manual sign): Join hands together, raise the middle fingers; with the tips of the forefingers touch the first joints of the middle fingers, make the treasure-form with the ring fingers by joining them; raise the little fingers and the thumbs without letting the tips touch each other. Touch the mouth, both shoulders and the throat with this sign. The method of forming the back manual sign is as follows: Put the forefingers and the ring fingers into the hollows formed by the hands and raise the other six fingers with the tips touching each other.. (8) *Shishi-funjin* manual sign resembles a lion at bay: To form this mudrā swing the right forefinger out without changing the form of the seventh manual sign. (9) Fire-flame manual sign: Touch the back of the right middle and ring fingers by means of the right thumb, raise the right forefinger, and grasp

the right forefinger with the left hand. (10) *Kaen-rinshi* manual sign symbolises the cessation of the fire: Clench the fists, put out the tips of the thumbs between the forefinger and the middle finger, and join the backs of the fists together. (11) *Śaṅkha* manual sign: Touch left ring finger by means of the left thumb, touch right little finger with the right thumb, raise up and join middle fingers together, touch the joint of the right middle finger with the right forefinger, and raise up the left forefinger without joining tips together. (12) *Khadga* (sword) manual sign: This is also called the sign which removes disasters. To form this manual sign stretch the left forefinger and the middle finger; touch the back of the left ring finger and the back of the little finger with the left thumb; make the same form with the right hand. Now, the left hand is the scabbard and the right hand is the sword. Then turn the left hand upwards, and insert the forefinger and the middle finger of the right hand in the hollow formed by the fingers of the left hand. (See S. Toganoo, *Studies in Esoteric Practices*, p. 320, Illustration No. 31.) (13) Noose manual sign: Touch the back of the right middle, ring and little fingers with the thumb, stretch and put the forefinger into the hollow of the left fist, grasp the right forefinger with left middle, ring and little fingers, and make a circle with left thumb and forefinger. This sign symbolises the noose which Acalāgra holds in his hand. (14) Three-legged diamond manual sign: Touch the back of right forefinger with right thumb, point out the other three right fingers, and make a form like a three-legged pestle.

Besides the above mentioned symbolic gestures various other mudrās are mentioned in the commentaries, and many mysterious manual signs are transmitted in Japan.

Shingon ('True Words' or Skt: Mantra) of Acalāgra. Many kinds of the 'true words of Acalāgra' are shown in the commentaries but the main *shingon* are the following four: (1) *Ichiji-shingon* (the one character 'true word' or mantra). This shingon is explained in the *Futsū-shingon-zō* (普通眞言藏) chapter of the *Mahāvairocana Sūtra*. *Namaḥ samanta vajrāṇām hāṃ* is this 'true word'. The last word *hāṃ* is the essence of this mantra, and the other words are an explanation of reliance on Acalāgra. Therefore, this *shingon* is called the 'one-word-*shingon*'. This mantra possesses the faculty of accomplishing all kinds of achievements and, therefore, it can be used with all symbolic gestures (*mudrā*). (2) *Jikyū-ju* (the mystic 'true words' or mantra of compassion and salvation). This is also explained in the *Futsū-shingon-zō* chapter of the *Mahāvairocana Sūtra*. *Namaḥ samanta vajrāṇāṃ caṇḍa mahāroṣaṇa sphaṭaya hūṃ toraka hāṃ māṃ* is this 'true word' or *shingon*. The 'true words' possess the power to remove all kinds of obstructions for the *shingon* practisers. In the *Mahāvairocana Sūtra* it is mentioned that this 'true word' is chanted when the 12th of the manual signs, namely, the *Khadga* mudrā, is formed. (3) *Kakai-ju* (the mystic 'true word' of the fire world). This is mentioned in the *Li-yin-kuei*, *Genpōji-giki* (玄法寺儀軌) and the *Seiryūji-giki* (靑龍寺儀軌) and reads as follows: *namaḥ sarva-tathāgatebhyaḥ sarva mukhebhyaḥ sarvathā traṭ caṇḍa mahāroṣaṇa khaṃ khahi sarva vighnāṃ hūṃ traṭ hāṃ māṃ*. It possesses the power to burn out all kinds of defilements and obstructions, and is chanted when the essential one-legged mudrā is formed. (4) *Se-zanjiki* 'true word' (the true words of the remaining-food-offering). This is explained in the *Ti-li-san-mei-ya-pu-tung-tsun-wei-nu-wang-shih-chê-nien-sung-fa*. In some commentaries several words are added to this 'true word' or mantra. This *shingon* is: *namaḥ samanta vajrāṇāṃ traṭ amogha-caṇḍa mahāroṣaṇa sphaṭaya hūṃ tramaya tramaya hūṃ traṭ hāṃ māṃ*. This 'true word' indicates the meaning that Acalāgra destroys all defilements living in the great-anger-samādhi. He protects all the practisers, even those who live in impure places and eat remaining scraps of food. He himself is given remnants of food, and by partaking of them, Acalāgra manifests the non-duality of purity and impurity.

Fujikan (*intuitive concentration through symbolic characters placed on various parts of Acalāgra's body*). This is the way of intuitive concentration by which the practiser perceives that, having accomplished the superior bodily marks of Acalāgra, he identifies himself with Acalāgra by applying each of the 19 characters to the different parts of his body. This is the most important form of intuitive concentration of the various concentrations on Acalāgra. It is said that the use of 19 characters in this concentration has its origin in the 19 vajras. This is given in the *Jūshinbon* (住心品) chapter of the *Mahāvairocana Sūtra*. This method of intuitive concentration is described in the *Li-yin-kuei* as "the concentration or mental state in which all the heavenly deities and asuras, and even the bodhisattvas of the tenth stage cannot move". According to the contents of the *Li-yin-kuei*, the 19 characters and the different parts of the body to which they are applied are as follows: *khāṃ*, top of the head; *khiṃ*, the whole head of hair; *khi*, bound hair; *khāṃ*, the twist of hair on the forehead; *hī*, diamond ears; *traṭ*, eyes (the right eye is indicated by *tra* and the left eye by *ṭ*); *hūṃ*, nose; *ho*, mouth: *haṃ*, diamond tongue; *mā*, shoulders; *maṃ*, throat; *taṃ*, breasts; *maṃ*, mind; *ṭaṃ*, navel; *ṭoṃ*, chest sides; *ṭa*, waist; *haḥ*, both thighs; *haṃ*, knees; *hāṃ*, both feet. In the *Li-yin-kuei*, it is also mentioned that in the 'true words' or *shingon* certain words, 'words of reliance', are added to each one of the 19 characters and these formulas are chanted when the characters are applied to the various parts of the body.

The Intuitive Concentration of 19 Excellent Marks. The subject of intuitive concentration is dealt with in the *Denju-shū* (傳受集) where the corresponding passage is quoted. This is the method of perceiving the 19 features of Acalāgra, the general figure, sword, the 16 servants, Kiṅkara and Ceṭaka and others.

The Virtues and the Efficacy of Acalāgra. The inner enlightenment of Acalāgra vidyārāja is born of the pure *bodhicitta* which is immovable and firm. He can, therefore, accomplish and fulfil the vows of the practisers. Further, as he is a servant of the Tathāgata Mahāvairocana, he can terminate disasters resulting from disease, poison and fire, he can conquer enemies and tempters, make people wealthy, and bring peace into their homes.

There are, therefore, four forms of worship, the method of worship differing according to the purpose for which the supplication is made, i.e., to terminate disasters, to increase wealth, to pay homage, or to conquer an enemy. Of these four forms of worship that which is most popularly practised is the supplication made to terminate or avert disasters. Of all the Buddhist deities Acalāgra is, therefore, regarded as the most important guardian deity. The Acalāgra body was produced by the order of the Tathāgata Mahāvairocana. Therefore, in Japan, the worship of this Acalāgra is often practised to ensure the well-being of the imperial family and also of other noble families. Even among the common people there is very great faith in this Acalāgra. For example, at the present time the Acalāgra image at Shinshō temple in Naritasan, Chiba Prefecture, draws a very large number of followers from all parts of the country. Besides this image, there are other images of Acalāgra in various parts of Japan. They are enshrined and worshipped by a large number of followers. The method of worship of Acalāgra is prescribed in the *Kakuzenshō*, *Ashabashō* and other works. Again, in the *Fudō-myō-ō-reiō-ki* (不動明王靈應記), four volumes written and compiled by Sōsan of the Kakujō temple in Sanuki, are included 49 mysterious and miraculous stories of Acalāgra.

The Sūtras and Commentaries concerning Acalāgra. The *Mahāvairocanābhisambodhi-vikru-vitādhiṣṭhāna-vaipulya-sūtrendra-rāja-nāma-dharma-paryāya-sūtra*, the *Chin-kang-shou-kuang-ming-kuan-ting-ching-tsui-shêng-li-yin-shên-wu-tung-tsun-ta-wei-nu-wang-nien-sung-i-kuei-fa-p'in* (金剛手光明灌頂經最勝立印聖無動尊大威怒王念誦儀軌法品), one volume, translated by Amoghavajra; the *Ti-li-san-mei-ya-pu-tung-tsun-wei-nu-wang-shih-chê-nien-sung-fa* (底哩三昧耶不動尊威怒王使者念誦法), one volume, translated by Amoghavajra; the *Ti-li-san-mei-ya-pu-tung-tsun-shêng-chê-nien-sung-pi-mi-fa* (底哩三昧耶不動尊聖者念誦祕密法), three volumes, translated by Amoghavajra; the *Pu-tung-shih-chê-t'o-lo-ni-pi-mi-fa* (不動使者陀羅尼秘密法), one volume, translated by Vajraprajña; the *Shêng-wu-tung-tsun-an-chên-chia-kuo-têng-fa* (聖無動尊安鎭家國等法), one volume; the *Shêng-wu-tung-tsun-i-tzŭ-ch'u-shêng-pa-ta-t'ung-tzŭ-pi-yao-fa-p'in* (聖無動尊一字出生八大童子秘要法品), one volume; the *Shêng-chun-pu-tung-ming-wang-ssŭ-shih-pa-shih-chê-pi-mi-ch'êng-chiu-i-kuei* (勝軍不動明王四十八使者秘密成就儀軌), one volume; the *Chü-li-chia-lo-ta-lung-shêng-wai-tao-fu-t'o-lo-ni-ching* (俱利伽羅大龍勝外道伏陀羅尼經), one volume; the *Shuo-chü-li-chia-lung-wang-hsiang-fa* (說矩里迦龍王像法), one volume; the *Chü-li-chia-lo-lung-wang-i-kuei* (俱力迦羅龍王儀軌), one volume, translated by Vajraprajña and others.

Reference books concern[ing A]calāgra. The 5th, 9th and 16th chapters of the commentary of the *Mahāvairocana Sūtra*, the *Taizō-shibu-giki* (胎藏四部儀軌), the *Shosetsu-fudō-ki* (諸說不同記), the *Byakuhō-ku-shō* (白寶口鈔), the *Besson-zōki* (別尊雜記), the *Kakuzenshō* (覺禪鈔), the *Hakusō-ketsu* (薄草決), the *Hishō-mondō* (秘鈔問答), the *Ashaba-shō* (阿娑嚩鈔), the *Gyōrin-shō* (行林鈔), the *Keiran-shūyō-shū* (溪嵐拾葉集) and others.

JISHŪ ODA.

ACALAKALPA-TANTRARĀJA, a Sanskrit text which is extant in its Tibetan translation, the *Ḥphags-pa mi-gyo-baḥi rtog-paḥi rgyud-kyi rgyal-po* in the Rgyud-ḥbum (100,000 tantra) section of the Kangyur. This work, was translated into Tibetan by Atuladāsavajra, and Mar-pa chos-kyi dbaṅ-phyug grags-pa (*TM.* No. 432; *ŌM.* No. 71).

This 'unshakable judgement' on deliverance was pronounced by Śākyamuni after his victory over Māra. It contains also instructions for the preparation of maṇḍalas, performance of ceremonies and repetition of mantras (*AMG.* II, 297).

ACALAKRODHARĀJASTOTRA, two Sanskrit texts bearing the above name, composed by Dīpaṅkaraśrījñāna (Atiśa: Mar-me-mdsad ye-śes). They were translated into Tibetan by the author himself and Tshul-khrims rgyal-ba of Nag-tsho, and as such are found under the title *Khro-boḥi rgyal-po ḥphags-pa mi-gyo-ba-la bstod-pa* in the Rgyud-ḥgrel (tantra-commentary) section of the Tengyur (*Cordier*, II, p. 356, Nos. 121, 122; *TM.* Nos. 3060, 3061).

ACALAMAHĀGUHYATANTRA, a Sanskrit text which is extant in its Tibetan translation, the *Ḥphags-pa mi-gyo-baḥi gsaṅ rgyud chen-po*, in the Rgyud-ḥbum (100,000 tantra) section of the Kangyur. The name of the translator is not recorded (*TM.* No. 434; *ŌM.* No. 72). It deals with certain ceremonies and mantras (*AMG.* II, 297).

ACALA-MAHĀ-KRODHA-RĀJASYA SARVA-TATHĀGATASYA BALĀPARIMITAVĪRA-VINAYASVĀKHYĀTA-NĀMA-KALPA, name of a Sanskrit work, translated into Tibetan by Ulaśamarakṣita and Glan dar-ma blo-gros under the title *De-bshin-gśegs-pa thams-cad-kyi khro-boḥi rgyal-po ḥphags-pa mi-gyo-ba deḥi stobs dpag-tu med-pa rtul phod-pa ḥdul-bar gsuṅs-pa shes-bya-baḥi rtog-pa.* The translation was revised by Chos skyoṅ-bzaṅ-po (Ānandamaṅgala) and incorporated in the Rgyud-ḥbum (100,000 tantra) section of the Kangyur (*TM.* No. 495).

ACALAMATI, name of a son of Māra, mentioned in the *Lalitavistara* (313). He is depicted as being favourable to the bodhisattva.

ACALA-NĀMA-DHĀRAṆĪ, a Sanskrit text which is extant in its Tibetan translation, the *Ḥphags-pa mi-gyo-ba shes-bya-baḥi gzuṅs,* in the Rgyud-ḥbum (100,000 tantra) section of the Kangyur. This work was translated into Tibetan by Dharmaśrīmitra and Chos-kyi bzaṅ-po (*TM.* No. 631 ; *ŌM.* No. 318).

It contains instructions by Śākyamuni regarding the preparation of his maṇḍala and the completion of the connected ceremonies, such as the various positions of the fingers during the ceremony, offerings to be made, various mantras to be recited and their efficacy (*AMG.* II, 326).

Another work bearing the above title is also extant in its Tibetan translation, the *Ḥphags-pa khro-bo mi-gyo-baḥi gzuṅs shes-bya-ba,* in the Gzuṅs-ḥdus (dhāraṇī) section of the Kangyur. This work was translated into Tibetan by Dharmatāśīla and Chos-kyi bzaṅ-po (*TM.* No. 963).

ACALA-PĀTĀLA, one of the seven lower regions, enumerated in the *Dharmasaṅgraha* (123 ; var. Acana).

ACALA-SĀDHANA. As many as five texts bearing the above title are found in their Tibetan translations under the title *Ḥphags-pa mi-gyo-baḥi sgrub-thabs shes-bya-ba,* in the Rgyud-ḥgrel (tantra-commentary) section of the Tengyur. One was composed by Gser-gliṅ-pa (probably Mitra-pa Chos-grags, i.e., Mitrapāda Dharmakīrti) and translated into Tibetan by Dīpaṅkaraśrījñāna (Atiśa) and Dbaṅ-phyug rgyal-mtshan or Īśvaradhvaja (*Cordier,* II, p. 356, No. 120 ; *TM.* No. 3059). Another was both composed and translated by Dānaśīla of eastern India (*Cordier,* II, p. 357, No. 126 ; *TM.* No. 3065). The third work was written by Aśokaśrī (Mya-ṅan med-paḥi dpal) and translated into Tibetan by Dharmaśrīmitra and Chos-kyi bzaṅ-po (i.e., Dharmabhadra) of Ḥgar (*Cordier,* II, p. 280, No. 19 ; *TM.* 2609). Yet another work bearing the above title was composed by Prabhākarakīrti and translated into Tibetan by Don-yod rdo-rje (Amoghavajra) and Ba-ri, i.e., Khams-pa Rin-chen grags or Ratnakīrti (*Cordier,* III, p. 13, No. 52 ; *TM.* No. 3357). The fifth work is recorded by Cordier (III, p. 253, No. 20) but the names of its author and translator are not mentioned.

ACALASKANDHA, a bodhisattva whose name occurs in a list of future Tathāgatas enumerated by Māyādevī (*Gvyū.* 443). He tells the noble youth Sudhana that inasmuch as she was the Buddha Vairocana's mother she was also the mother of all past Buddhas, and will be of future Buddhas such as Maitreya, Acalaskandha and others (ibid. 438.8 : *Sarvabodhisattvajina-janetrī*).

ACALAŚRĪ, name of one of many hundred thousand kiṃnara maids who had assembled with many other classes of beings at Jetavana, the grove of Anāthapiṇḍada in Śrāvastī, when the Buddha was residing there (*Kvyū.* 6. 2).

ACALAṬAKKIRĀJA, name of a *krodha.* See ACALA (3).

ACALA VIDYĀRĀJA, Fudō Myōō, one of the five great Venerable Ones. See ACALĀGRA VIDYĀRĀJA.

ACALENDRARĀJA, a bodhisattva mentioned in a list of names of bodhisattvas headed by whom about five thousand bodhisattvas reside in Śrāvastī along with the Bhagavat in the pinnacled dwelling of great splendour in Jetavana, the hermitage donated by Anāthapiṇḍada (*Gvyū.* 4.7).

ACALITASUMANA(S), name of a former Buddha. Some time after the cremation of the Buddha a 'council of dharma' was held in the Saptaparṇa cave on the northern slope of Mount Vaihāya (*Mhvu.* I, 70). Now, in the course of the proceedings at this meeting, Mahā Kāśyapa asked Mahā Kātyāyana what were the names of the Buddhas under whom the Buddha Śākyamuni acquired merit while he was advancing from the first to the seventh bhūmi. Mahā Kātyāyana replied, giving the names of the powerful and renowned Buddhas under whom this Exalted One of the Śākyan royal family acquired the root of virtue. A list of names, most of which seem to occur only here, now follows (ibid. 136.13 – 141.16). This list is not confined to the Buddhas of the first seven bhūmis, but goes on to enumerate those of the eighth and ninth as well (*Mhvu.,* trsl. Jones, I, p. 108, n. 3, 4).

The name Acalitasumana occurs in the enumeration immediately following that of the second hundred of the host of Āryans in the ninth bhūmi (*Mhvu.* I, 141.16).

ĀCĀMADĀYIKĀ. The story of the 'rice-scum giver' occurs in the *Stories of the Mansions* (*Vvu.* 17).

In the time of the Buddha a family in Rājagaha was afflicted with plague (*ahivātaroga*). Everybody in that family died, except one woman. She fled through a breach in the wall, that being the customary method of avoiding the infection. She went to a friend's house and stayed at the back of it. The inmates of the house gave her scraps of food that were left over.

At that time Mahā Kassapa, arisen from a seven-day trance, saw with his divine eye (*dibba-cakkhu*) this woman who was approaching death and about to be born in hell. He appeared before her, asking for alms. Thereupon Sakka, king of the gods, came in disguise and offered him divine food (*dibbāhāra*) which he rejected. The woman, seeing the thera and thinking that the food she had was not good enough, asked him to go further. Then the inmates of the house brought him alms which, too, he declined. Then she knew that the thera had come there to help her and with a glad heart offered him the rice-scum which was all she had. Mahā Kassapa ate it and said that she had been his mother in the third life before the present one.

She died during the first watch of that same night and was reborn in a *vimāna* among the Nimmānarati (*VvuA.* 99 ff.).

ACARAṬARKIRĀJA (var. Acalaṭakkirāja), name of a *krodha*. See ACALA (3).

ACARIN SUTTA occurs in the *Catutthavagga* of the *Dhātu-Saṃyutta* (*S.* II, 171), and was preached by the Buddha to the monks in Jetavana. Therein the Buddha declares that, as he walked about in quest of the satisfaction (*assāda*) and misery (*ādīnava*) of the earth element (*pathavī-dhātu*) and the escape (*nissaraṇa*) from it, he found them and saw them well through his wisdom (*paññā*). He also fully comprehended that the satisfaction, the misery and the escape similarly exist in the other three elements also, of water, of heat and of air.

ĀCARIYA, teacher. See ĀCĀRYA.

ĀCARIYAVĀDA, literally, 'teachers' expositions'. In the post-canonical commentarial literature the term is frequently employed to mean the body of expositions, interpretations and opinions of well-known teachers of the past, i.e., orthodox and traditional commentarial matter. But, paradoxically enough, it later came to mean varieties of teachings and interpretations, considered heterodox and sectarian from the Theravāda point of view. This is evident from the fact that in the Pali commentaries and Ceylon chronicles which uphold the Theravāda tradition, all the Buddhist schools except Theravāda are called *ācariyavādas* (schools of teachers).

According to Buddhaghosa *ācariyavāda* is but another name for the commentaries—*ācariyavādā nāma aṭṭhakathā* (*DA*. II, 567). This commentarial matter had been preserved mainly in the Sinhalese language (*Sīhalaṭṭhakathā*). Its beginnings can be traced to the earliest stratum of Buddhist literature. It is not the work of a single author but the final product of a continuous process of growth and accretion. Its authorship, therefore, has to be attributed to a long line of distinguished teachers. This is evident also from the fact that *ācariyavāda* in the *Milinda-pañha* is explained as *ācariyavaṃsa*, which means the line of teachers.

The Theravādins attached great importance to *ācariyavāda* as embodying the most authentic interpretation of the Buddha's teachings. Thus, according to *Milinda-pañha* it constitutes the third of the five criteria which should be adopted in judging the meaning of a term. Moreover, in the *Sumaṅgalavilāsinī* (*DA*. p. 568) Buddhaghosa opines that in regard to the degree of authenticity, it is second only to canonical texts. But, if any views expressed in the *ācariyavāda* do not agree with the suttantas, they are to be rejected.

Similar in significance to *ācariyavāda* are *ācariyamata*—opinions of teachers which are individual opinions advanced by well-known teachers distinguished for their scholarship in the Dhamma. They are different from the *ācariyavāda* which represents the whole body of orthodox commentarial matter, handed down from generation to generation. In degree of authenticity, therefore, *ācariyavāda* is given priority over *ācariyamata*. Buddhaghosa says categorically that if the individual opinions of the teachers are not corroborated by the text or the commentary, the former are not to be regarded as correct.

Y. KARUNADASA.

ĀCĀRYA. Where man reached a certain stage of cultural development, even in very early times, some sort of educational system was evolved. Such systems came into existence in the spheres of religion, science, or of arts and crafts. In India, where religion always played a predominant role, a remarkable system of education took shape within the religious circles, and detailed records of its development have come down to us.

An educational system naturally involves social relations between teacher and pupil, between companions, and so on. Besides these social relations education is also concerned with the content, scope, method and financial requirements of such method. In India, the terms used for 'teacher' or 'master' and 'pupil' or 'disciple' have acquired in the course of history special significance. Words like *ācārya* (Pali, *ācariya*) and *upādhyāya* (Pali, *upajjhāya*) were used not only in Brāhmanism but in Buddhism, too, and were introduced through Buddhism into central Asia and China, and then from China into Japan, where they are still used in their original form.

The Japanese language contains a number of ancient Vedic words, and *ācārya* is one of them. The meaning of this word is indeed simple, but a study of the cultures in which it has been used will give us a survey of the historical development of some important Buddhist practices such as the receiving of precepts and the cultivation of religious virtues.

Ācārya and Upādhyāya in Brāhmanism. Yāska (circa 500 B.C.), in his book *Nirukta* (I, 4), explains the term *ācārya* as "he who makes the student understand the proper course of conduct (*ācāra*), or he who collects wealth from the student, or he who increases one's intelligence." Here, Yāska derives the first meaning from *ācāra*, an Aryan word meaning 'good conduct', the other two definitions being based on the results of teaching. The *Āpastamba* (I, 1, 13), the oldest of the *Dharma-sūtras*, says, "He from whom the pupil gathers (*ācinoti*) the knowledge of his religious duties is called the *ācārya*."

The Code of Manu (II, 140) distinguishes three spiritual teachers: *ācārya*, *upādhyāya* and *guru*. "A twice-born who initiates his disciple and instructs him in the way of the *Veda*, *Kalpa*, and *Yahasya* is called the *ācārya* (of that disciple)." "One who teaches the Veda in part, or the Vedāṅga, to make his living, is called the *upādhyāya*" (II, 141). And, "one who administers sacraments such as the impregnation ceremony (*garbhādhāna*) according to the manual of rites, and brings up disciples providing for their material wants is the *guru*" (II, 142). *Upādhyāya* in this case is a noun derived from *upa* + *adhi* + *i*, and means one who is gone close up to, that is, a sub-teacher. *Guru* literally means 'heavy' and here it means 'father and master'. Manu, in making this distinction, holds the *ācārya* in particular esteem. In general, however, the three words are used as synonyms.

The Code prescribes in detail, among other things, what requirements these teachers should meet, how disciples should serve, how the yearly Vedic term should be observed, and how offences committed by teacher or pupil should be dealt with.

Ācariya and Upajjhāya in early Buddhism. The Buddhist fraternity (*Saṅgha*) consisted of seven groups: (1) bhikṣu, (2) bhikṣuṇī, (3) śikṣamāṇā, (4) śrāmaṇera, (5) śrāmaṇerikā, (6) upāsaka, and (7) upāsikā. The first two of these were adult members of the Order of either sex over twenty years of age, who had received the higher ordination (*upasampadā*); the third was the śrāmaṇerikā at the age of eighteen; the fourth and the fifth were minors of either sex respectively, aspiring to full ordination, but who have not received the *upasampadā*; the sixth and the seventh were devout laymen and laywomen, respectively.

These components of the Saṅgha got their names from the fact that they received for observance their respective precepts, 227, 10, 8, 5 in number. One who administered these precepts to them was called *upajjhāya*. In Brāhmanism, as we have seen, the *ācārya* occupied the chief place. But in Buddhism it was the *upajjhāya* who held this rank. Now, in the chapter-meeting at which the precepts were administered, the ancient rule was that in the central regions, the presence of ten monks was required, but in the outlying areas, five would do. Of the ten monks the first was the *upajjhāya*; the next was the *anusāsaka*, the reciter of the *kammavāca*; and then a person who taught the rules of the ceremony. These three were regarded as being especially important. The remaining seven were only witnesses.

Gishō Nakano.

In Pali Buddhism. The term *ācariya* has a wide connotation in Pali Buddhism, firstly as a 'teacher' and next a spiritual teacher in specific application. An *ācariya* is a guide in general, a friend and counsellor, a teacher who guides the younger members of the Order giving them instruction in Buddhist doctrine and practice. The texts also give numerous instances of the term being used with reference to teachers of heterodox schools, to heretical teachers, to scholars in general or applied to an authority on any form of sacred lore or tradition or one versed in secular arts requiring skill of any sort, in short, to any one who trains pupils in his special art and is looked upon as a master in his own field. However, *ācariya*, as an important member of the close-knit Buddhist monastic organisation, is of special significance here. The texts abound in references to him, particularly the *Vinaya Piṭaka*, while the *Samantapāsādikā*, its commentary, (as well as the Vinaya Ṭīkā literature consisting of its sub-commentaries) and the post-canonical Vinaya literature, such as the *Vinaya Vinicchaya* and *Uttara Vinicchaya*, shed a good deal of light on the precise rôle of the *ācariya* as the teacher par excellence in monastic life. He is the one who trains a pupil in good conduct and ethical behaviour (*VinA*. 985; cp. *Sāratthadīpanī*, I, 124; *PvuA*. 252; *JA*. IV, 179; etc.), and in transcendental virtues (*VinA*. 964; *MA*. II, 189; *ApA*. 238). He is the custodian of the traditional knowledge ensuring its safe transmission and continuity (*Vism*. 80). He is the one who teaches the doctrine leading to emancipation (*DhpA*. I, 90). He guides one on the path to emancipation and is looked upon as a 'noble companion' (*Miln*. 373) whose guidance a pupil receives as long as he lives (*Vin*. I, 302). The person who receives the guidance is called *antevāsī* (q.v.) which term has a secular origin in the resident apprentices under a master craftsman. The term *ācariya* is defined (at *VinA*. 48) as he who establishes one in the principles that one should have a training in, in this *sāsana*, while the parallel term *upajjhāya* is defined as: he who urges one on and makes one remember (correctly) when he sees one's continued wrong behaviour (ibid. 47). The *ācariya* is the special instructor and guide chosen by a younger monk in addition to the *upajjhāya*, 'a preceptor' who generally takes precedence over the *ācariya*. The *Mahāvagga* (*Vin*. I, 60) states that sometimes when the *upajjhāyas* had gone elsewhere or left the Order, or had died or had gone over to a heretical sect, the monks themselves being denied the benefit of having a teacher and receiving no friendly advice or counsel went about their duties ill-clad, ill-robed, lacking in mien and deportment, which all led to the disapproval of the laity. It was under these circumstances that an *ācariya* was sanctioned by the Buddha. The relationship between teacher and pupil is that between father and son. Both attain to progress, growth and prosperity in the *sāsana*, living with mutual respect and confidence, sharing a common ideal (loc. cit).

The above instance, dealing with the conditions under which an *ācariya* is sanctioned, suggests that the *ācariya* is in effect a substitute for the *upajjhāya* and leaves room to believe that the 'teacher' who mattered most in the monastic organisation was the *upajjhāya*. Furthermore, the account in the Vinaya (loc. cit.) of the procedure for obtaining an *ācariya*, the relationship that exists between him and the *antevāsika*, consisting of the *nissaya* (q.v.), 'the guidance' prescribed for ten years, the mutual duties and obligations between teacher and pupil, etc., are all modelled on the section dealing with the *upajjhāya* (*Vin*. I, 44 ff.). The special duties of the *ācariya* and the *upajjhāya* are more or less taken for granted in the Vinaya but the commentaries represent the *ācariya* as teaching and interpreting the sacred texts, while the *upajjhāya* functions as the chief disciplinary authority. The seemingly inferior position of the *ācariya* to the *upajjhāya* was the essential outcome of the emphasis laid on the moral precepts in the Buddhist coenobium.

This emphasis continued to remain so throughout the history of Theravāda Buddhism, but other extraneous circumstances, entirely beyond the control of the Saṅgha, necessitated the monks taking adequate steps to ensure the preservation of the teaching. In the early centuries it was a matter that was more or less taken for granted. The competition from other sects, political upheavals, famines and other natural calamities, and the lack of sympathy towards Buddhism on the part of some

kings made the handing down of the teaching by oral tradition a difficult task. Under these circumstances the rôle of the teacher who interpreted and transmitted the teaching became as important as that of the *upajjhāya* whose speciality was the disciplinary aspect of monastic life. As a rule, the *ācariya* is a *dhammadhara* or an *ābhidhammika*, while the *upajjhāya* was a *vinayadhara* (*DhpA.* I, 298 etc.). The repetition of the general pattern of rules regarding an *ācariya* in more or less the same words as those for an *upajjhāya* in no way places the former in an inferior position to the latter. The Vinaya, in describing their more general, paternal duties to a pupil, in identically the same words, accepts by implication their equality of status in spite of the fact that, to begin with, the *ācariya* was meant to deputise for an *upajjhāya* (*Vin.* I, 60 ff.). Though their special duties are taken for granted in the texts, by the time of the commentarial epoch, for the aforementioned reasons, there is an open acceptance of the equality of status of the *ācariya* with the *upajjhāya*. The transmission of the teaching loomed so large in the eyes of the monastic community that the commentaries have given a special place to the *ācariyaparamparā* (see the introductory chapters of *VinA.*, *DhsA.*, etc.). The scope and content of the teacher's rôle had by this time become almost unlimited as may be seen in frequent references to him in the commentaries and in the *Visuddhimagga* (for references see *CPD.* s.v.). In fact, the picture presented by the *Visuddhimagga* is that of the entire monastic life centering round the *ācariya* who assumes a rôle even superior to that of the *upajjhāya* in the particular context of a *yogāvacara's* progress in the *sāsana* (*Vism.* 81, etc.) [1].

The relationship that exists between the *ācariya* and *antevāsika* is termed the *nissaya*; it is an essential link between them and consists of the guidance the pupil receives (*Vin.* I, 60 ff.). The *nissaya* should be given by a competent monk who possesses various sets of five attributes (*Vin.* I, 62 ff.) and not be given by one who has the shortcomings consisting of their absence. There are also six nullifications of guidance mentioned in the same context (also cp. *VinA.* 986 ff.). There are also conditions under which the *nissaya* can be refused (*Vin.* III, 25 ff.).

Ācariyas are described in different terms. For the distinction between various types of *ācariya* see *VinA.* 1085 (4 kinds), ibid. 1379 (5 kinds); *AA.* II, 194 (8 kinds), ibid. 205 (4 kinds); *Vism.* 76 (4 kinds), cp. *VinA.* 985.

N. A. JAYAWICKRAMA.

In Mahāyāna Buddhism. As Mahāyāna Buddhism developed, some precepts and rules of its own appeared and underwent certain changes. It must be said that neither Mahāyāna nor the esoteric doctrines that came later has left any *Vinaya-piṭaka* like that of original Buddhism, and it is not known as yet whether the one or the other ever possessed an independent fraternity in India. Nevertheless, in Mahāyāna, precepts came to be administered and practised, especially as a means of spiritual enhancement.

The Mahāyāna precepts and rules were handed down in a number of traditions, although in later times there were complications and syntheses of various kinds. One outstanding authority we may cite is Maitreya's *Yogācārabhūmi-śāstra.* This book in its 40th chapter explains three sorts of precepts (*trividhāni śilāni*): (1) *saṃvara-śīla*, or the formal precepts numbering 5, 8, 10, and the rest; (2) *kuśala-dharmasaṅgrāhaka-śīla*, or precepts aiming at goodness; and (3) *sattvārtha-kriyā-śīla*, or precepts meant for the welfare or salvation of sentient beings. Of these three, the first comprises those disciplinary rules which the seven groups of the Saṅgha were required to observe, and would seem to be a transplantation of the Theravāda precepts, but the attitude adopted towards them was said to be Mahāyānist. The second and the third are evidently pertinent to the bodhisattvas of the Mahāyāna.

The present article is not concerned with the precepts and rules in their detail. Its scope is limited to a description of the teacher and the pupil, especially the former. The Mahāyāna rite of administering the precept is traditionally based on the *Kuan-p'u-hsien-p'u-sa-hsing-fa-ching* and certain other writings. In these, the 'three masters' are as follows: the Śākyamuni is regarded as the preceptor (*upādhyāya*); the bodhisattva Mañjuśrī is in the position of the master of procedure (*karma-ācārya*); while the bodhisattva Maitreya is the teaching *ācārya*. Besides, all the Tathāgatas are regarded as the witnesses, and all the bodhisattvas the candidate's companions in study. It is to be noted that here the actual names of the masters are introduced. The rôle of *upādhyāya*, however, is assigned to a real, not a fictitious, teacher.

In Esoteric Buddhism. As Buddhism gradually developed into esotericism, it came to have, like the Mahāyāna, a particular type of precept formed on the synthesis of earlier precepts. This new precept was called the *samayaśīla*, the implication being that the mind, the Buddha, and the mortal are one and equal. In what manner its rite was conducted in India is not clear, but presumably in a manner not much different from what Śubhākarasiṃha propagated in Chang-an, China. That is to say, the three masters are invited as follows: (1) four Buddhas, namely, Akṣobhya, Ratnasambhava, Amitābha, and Divyadundubhimeghanirghoṣa, as the *upādhyāya*: (2) four bodhisattvas, namely, Samantabhadra, Maitreya, Mañjuśrī, and Sarvanīvaraṇa-viṣkambhin, as the *karma-ācārya*: and (3) Samantabhadra-vajra and Avalokiteśvara as the teaching *ācārya*. Besides, all the Tathāgatas in the ten directions are invited as witnesses. It is needless to add that an actual living *ācārya* is required to be present.

---

1 In chapter 13 of the *Ta-chih-tu-lun* (the *Mahāprajñā-pāramitā śāstra*, *Nanjio*, No. 1169), a work of the second century A.C., it is stated, "If any devout layman comes and wishes to be ordained, two masters should be asked to attend. The first is the *upādhyāya* and the second is the *ācārya*. The former is like the father and the latter is like the mother."

In esoteric Buddhism, another usage of the word *ācārya* is that it is applied to all those who have received the Dharma-transmission *abhiṣeka* after being instructed in the knowledge of the maṇḍalas, the mudrās and the mantras of the Honoured Ones. Regarding the qualifications of the *ācārya*, the *Mahāvairocana Sūtra* in its Chü-juan chapter (No. 2) enumerates thirteen virtues. Some of these are in common with the virtues required of Buddhists in general: firm aspiration for enlightenment, possession of wisdom and love, keeping in faith, constant practice in yoga, etc. Others are characteristically specific requirements of esoteric teachers: understanding the true meaning of mantras, receiving the Dharma-transmission *abhiṣeka* and understanding the pictures of maṇḍalas deeply, attaining to firm conviction in the practice of mantras and the rest. It may be added that sometimes the term *ācārya* was applied, by extension, to Buddhas and bodhisattvas, and there were instances where Vajrasattva and even Vairocana were called by this name.

In China. Although the *Vinaya-piṭaka* of the Vibhajjavādins in Ceylon was not introduced into China, all the *Vinaya-piṭakas* of what we call the five Hīnayāna schools were brought to China and translated into Chinese. Of these, the Dharmaguptaka version was the one most popularly studied, and by the effort of the vinaya-master Tao-hsüan there arose the Lü-tsung (Vinaya school) in China. This school exercised its influence over China and Japan for a long time. A study of the Dharmaguptaka version throws much light on the understanding of the Pali *Vinaya-piṭaka* because of the close similarity that lies between them.

The treatises of Tao-hsüan and his disciples on the Dharmaguptaka version contain some passages which enumerate the various types of *ācārya*. One passage mentions five kinds of *ācārya*: a caretaker of novices, an administrator of precepts, a teacher of ceremony, a teacher of texts and a 'master for dependence'. Another passage gives six kinds: (1) the *ācārya* for shaving (the head of the candidate), (2) the *ācārya* for ordination, who administers the ten precepts to the candidate at the time of his ordination, (3) the *ācārya* for teachings who reads or explains sūtras, and from whom the disciple receives and learns a four-phrase *gāthā*, (4) the *ācārya* for instruction, who teaches discipline at the time when the candidate receives the higher ordination (*upasampadā*), (5) the *ācārya* who performs the ceremony, i.e., conducts the meeting at the upasampadā ordination, and (6) the '*ācārya* for dependence', the master on whom the disciple can depend and under whose roof he can have a night's lodging. It would seem that this list of *ācāryas* has disregarded the *ho-shang* (*upādhyāya*). The Chinese word *ho-shang* seems in its origin a transliteration in Chinese through *pwajjhaw*, a corruption of *upādhyāya* in the Kuccha language, or else through *zosa*, another corruption found in the Uigur language.

The Mahāyāna Precepts and Rules. The *Trividhāni śīlāni* (three types of śīla) of the *Yogācāryabhūmi-śāstra* was introduced, translated and practised in China, and there were, parallel with it, other Mahāyāna precept-sūtras in use, such as the *P'u-sa-ying-lo-pên-yeh-ching*, the *Chan-ch'a-shan-ko-yeh-pao-ching*, and the *Fan-wang-ching*. Above all, the ten major and forty-eight minor precepts of the *Fan-wang-ching* exercised a great influence on later times.

The rite of administering the Mahāyāna precepts, particularly in China, is said to have been conducted in accordance with Chan-jan's *Shou-p'u-sa-chieh-i*. Since, in Mahāyāna, the rôles of the *upādhyāya*, the *karma-ācārya*, and the *ācārya* for instruction are all held by invisible hosts of Buddhas and bodhisattvas, some actual teacher is asked to attend and preside. Quite naturally, such a teacher is required to have such virtues as the following five: observing the precepts himself; having been in the holy order for more than ten years; being able to understand the vinaya; being well-practised in meditation; and having attained to profound wisdom.

The Esoteric Samaya Precept. It is true that the idea and the rite of the esoteric samaya precept took shape in India, but they were most clearly expounded in China, chiefly by Śubhākarasiṃha in his commentary on the *Mahāvairocana-sūtra* (*Ta-jih-ching-shu*) and the 'Principles of Meditation' (*Ch'an-yao*). The 'three masters' invited are as mentioned above. The precepts are the three types of *śīla*, the four all-embracing virtues, the rejection of four grievous sins, the ten grave prohibitions. These precepts are in name the same as the precepts of the Hīnayāna and the Mahāyāna, but there is a great difference in substance and in attitude. The actual teacher should be an *ācārya* who has received the Dharma-transmission. And, at the rite of receiving the esoteric precept, mudrās are formed and mantras are recited, practices which are lacking in the case of the Hīnayāna or Mahāyāna.

Introduction of the Lü-tsung (Vinaya school) in Japan. It was in 754 A. C. that a formal rite of administering precepts was conducted for the first time in Japan. It took place at the Tōdai temple, Nara. The visiting Chinese monk Chien-chên presided, his disciples were witnesses, and the higher precepts (of *upasampadā*) as well as the bodhisattva-precepts were those taken from the Dharmagupta *Vinayapiṭaka*; the 'three masters' and 'seven witnesses' did not fail to make due inquiries of the candidates about the 'thirteen hindrances' and the 'ten obstacles'. This strict method was followed all through the Heian period.

The Fan-wang bodhisattva-precept adapted from the *Brahmajāla Sūtra* was also administered by Chien-chên for the first time to Japanese monks and laymen. The purpose was originally to accumulate merit or turn delusion to enlightenment. Properly speaking, this precept was not meant for ordained monks. It was Saichō who gave independence to the 'Complete and Immediate Bodhisattva Precept' as the precept for monks in the Mahāyāna, and decisively forswore Hīnayāna precepts. This was a step unprecedented in the history of precepts and rules. He followed Chan-jan in the matter of the rite, and in idea Chi-i's 'Commentary on the Bodhisattva Precept'. The Jōdo sect also is said to follow this method in administering the precepts. Further, the presence of an actual precept-giver was essentially required, but when such a person could

not be found anywhere in the region, it was permissible to undertake the precepts for oneself before an image of the Buddha.

The Precepts in the Zen Sect. The discipline for receiving the precepts in the Zen sect is expounded in Dōgen's *Shōbōgenzō*, in its chapter of Receiving Precepts. At the meeting, the candidate is made to promise observance of the three refuges, the three types of *śīla*, and the ten grave prohibitions. For attaining Buddhahood by witnessing one's own nature, which is the essential characteristic of Zen, a master's guidance is of course necessary, and for that matter the relationship between master and disciple is extremely close.

The Precept rite in the Nichiren Sect. The method followed in the Nichiren sect is totally different from those mentioned above. In this case, the *upādhyāya* is the Śākyamuni of Eternal Presence in the Great Mandala made by Nichiren; the *karma-ācārya* is the Tathāgata Prabhūtaratna; the *ācāryas* for instructions are the Viśiṣṭacāritra-bodhisattva and Nichiren; the witnesses are all the manifestations of the Śākyamuni in the ten directions; the companions are the bodhisattvas here and elsewhere, and saints and mortals in the netherworld. First the candidate reverently prays to the Great Mandala. Then the precept-giver reads the commentaries on the chapter on Eternal Life or on other chapters of the *Saddharmapuṇḍarīka Sūtra*, and asks the candidate to undertake the observance of the precept never to kill, thereby assuring him the spiritual status of becoming a Buddha with this very body.

The Ācārya in the Tai-mitsu and the Tō-mitsu. The Tai-mitsu is the esoteric teaching of the Tendai sect whose chief temple is on Mt. Hiei, and the Tō-mitsu is the esoteric doctrine of the Shingon sect developed around the Tō temple in Kyōto. These two originate from Saichō and Kūkai respectively. In the Tai-mitsu, the *samaya* precept is based on the 'Principles of Meditation' (*Ch'an-yao*) of Subhākarasiṁha. In the Tō-mitsu, Kūkai's precept-rite, a slight modification of the above, is followed. There is not much difference between the two.

Formerly, there had been different ways of attaining the status of *ācārya* by the practice of esotericism, but they were brought to synthesis in the Tai-mitsu and Tō-mitsu. By practising the 'four kinds of practice' and then receiving the *abhiṣeka*, one becomes an *ācārya*. Then, by setting up his platform and administering the precepts on others, he is called a great *ācārya*. The 'four kinds of practice' are: (1) worship by eighteen consecutive courses, (2) worship of the Mandala of Garbhadhātu, (3) of Vajradhātu, and (4) the Homa, or fire oblation. These four practices have been an established rule since the middle of the Heian period (994–1192). When one has completed them and become rich in religious experience, one is regarded as able to instruct others as freely as should be desired.

It is to be noted that, as mentioned above, the precept-giver, who is present in person, holds an important position. In esotericism, further, the *ācārya* of Dharma transmission is held in high esteem. Whenever discrepancies are found among sutras and manuals, as they often are, and there is no knowing which authority to follow, the *ācārya*'s way of thinking is usually taken as final. Incidentally, Lamaism has the *lama* in addition to the three treasures of the Buddha, the Dharma, and the Saṅgha, and holds firmly that when this *lama* is lacking, the three treasures themselves would be unable to exercise their spiritual power. *Lama* is a Tibetan word standing for the Sanskrit *guru*.

Additional Remarks. *Upādhyāya* and *ācārya* are sometimes used as respectful appellations applied to ordained monks, apart from any function in the administration of precepts. In this sense, *upādhyāya* seems to be the one used in most of the Buddhist sects, and *ācārya* in esotericism. In Japan, the word that corresponds to *upādhyāya* has various pronunciations. In Nara, it is pronounced *wajō*; on Mt. Hiei, *kwashō*; and in the Zen sect, *oshō*. All these pronunciations are corruptions of *upajjhāya* through Uigur.

Ācārya was sometimes the title of certain government officials, although in India there does not seem to have been any such practice. An instance in Japan was that in 836 A. C. *ācāryas* were appointed by the government and placed on the 'seven high mountains' to offer up prayers for good crops. *Ācāryas* of this kind were placed in various districts of the country and their vacancies duly filled.

As a result the importance given to the Dharma-transmission-*abhiṣeka*, another category of government-appointed *ācāryas* came into being. To take a few examples, Shinshō was appointed Dharma-transmission *ācārya* in 843 A. C.; Shōun was appointed *ācārya* of the Three Great Sorts of Law (*San-bu dai-hō dai ajari*) in 876 A. C.; and Jōsai, *ācārya* of the Two Great Sorts of Law (*Ryō-bu dai-hō dai ajari*) in the same year. There was also *Isshin ācārya*. This was an appellation attached to monks who, hailing from the aristocratic class, were appointed *ācārya* of Dharma-transmission *abhiṣeka* for the duration of their lives.

Upādhyāya, too, was used as a name for some government officials. The title of *Great Upādhyāya* was conferred on Chien-chên, mentioned earlier. Three grades of *upādhyāya* were instituted in 846 A. C.

In the countries east of India, there seems to have been a great number of personages called by the venerable name of *ācārya*, but very few who bore it as a fixed title as, for instance, in the case of Śaṅkara Ācārya. The same thing may equally be said of the great masters of esotericism in the past. Wu-wei (Subhākarasiṁha) and Pu-k'ung were *San-tsang*[2]; I-hsing was *Zen-ji*[3]. One outstanding

2 *San-tsang* is a literal translation of *Tri-piṭaka*; but in this case it is used as an honorific to a monk who is well versed in the *Tripiṭaka*.

3 *Zen-ji* in Japanese, or *Chan-shih* in Chinese, literally meaning 'teacher in dhyāna' (meditation), is used in the sense of 'superior monk'.

example was Hui-kuo (Amoghavajra), who was *ācārya*. Yet, when we think of the fact that the life in Buddhist fraternities hinges on the administration of precepts, on the ceremony of Dharma-transmission, and on the master-disciple relationship, it would be quite possible to say that there was practically no one who was not an *ācārya*.

GISHŌ NAKANO.

ĀCĀRYA-KAMALAŚĪLA-PRAṆIDHĀNA-DVAYA-VIDHĀ, name of a Sanskrit work ascribed to Kamalaśīla, which in its Tibetan translation under the title *Slob-dpon ka-ma-la-śī-laḥi smon-lam mu-gñis-ma* has been incorporated in the Sna-tshogs (miscellaneous) section of the Tengyur (*TM*. No. 4393).

ĀCĀRYA-NĀGĀRJUNA-BHĀṢITA-AVABHEṢAJAKALPA, a Sanskrit text composed by Klu-sgrub (Nāgārjuna) and extant in its Tibetan translation, the *Slob-dpon klu-sgrub-kyis bśad-pa sman a-baḥi cho-ga*, in the Gso-rig-pa (medicine) section of the Tengyur. The translator's name has not been recorded (*TM*. No. 4308 ; *Cordier*, III, p. 469, No. 3).

ĀCĀRYA-VĪRAVAIROCANA-GĪTIKĀ, a Sanskrit text which is extant in its Tibetan translation, the *Ātsārya-dpaḥ-bo-rnam-par snaṅ-mdsad-kyi glu*, in the Rgyud-ḥgrel (tantra-commentary) section of the Tengyur. The names of its author and its translator are not recorded (*Cordier*, II, p. 233, No. 25).

ACCAYA (1), death. As with all (ancient) religions and philosophies the teaching of the Buddha, too, is greatly concerned with the problem of death. Sometimes death is personified, generally as Māra (q.v.), but most often it is described as a phenomenon, as part of the process of life, the cessation of the natural functions of life. According to the Buddha, to a human being life is the most precious possession and also the most difficult to obtain (*dullabha* [1]). Yet old age and death are moving along like a great mountain high as the sky, crushing every living thing in the way. What is there that one could do in the face of such mighty destruction but to live righteously and justly and work good deeds ?

" None can evade, or play the truant here
Th' impending doom o'erwhelmeth one and all. " [2]

The inevitability of death, however, is never shown as an event externally imposed as punishment but as a necessity forming an integral part of the process of existence. "Even the Blessed One's life was suddenly quenched by the avalanche of death, as a great mass of fire is extinguished by a downpour of water . . . . ,

Not due to fear, nor due to shame
Did death hold over him his sway.
For, all, though free from guilt and dread,
Are crushed, (and none can stay)." [3]

Death is the end of the present life, but not a complete cessation of everything. It is a going beyond (*accaya*) certain limits, hence a fulfilment of time (*kālakiriyā : M.* II, 108 ; *A.* I, 22), a dissolution of the combination which constituted life (*jīvitakkhaya : J.* I, 222) or a laying down of the bodily form (*deha-nikkhepana : Vism.* 195), the ending of this physical existence (*maraṇa*). When birth is seen as manifestation (*upapatti*), death is considered as a falling-away (*cuti : D.* I, 162 ; *S.* II, 3, 42). It is the end of a season, like the end of the rainy season (*vassānaccaya*) or of the winter (*himaccaya*), holding within its folds the promise of a new spring. For, as birth leads to death, so death is the condition for new life. There is no punishment, but only a loss, which for many may be greater than the loss of wealth (*atthaccaya : J.* III, 158, 25), but for some, very few indeed, the solution of the problem, the laying down (*nidhāna*) of a burden at the completion of the task (*kataṃ kattabbaṃ*), for those " who in cessation have found deliverance, in victory leaving death behind " (*nirodhe ye vimuccanti, te janā maccuhāyino : Sn.* v. 755). The solution of the mystery of death lies in the solution of the problem of birth. For death is as natural to anything that is born, as disintegration is to whatever is composed (*sabbe saṅkhārā aniccā*). It is the inherent nature of the process of existence to arise and to cease. " Death is inevitable for what is born . . . . Just as the risen sun moves on towards its setting and never turns back even for a little while . . . . . so a living being travels on towards death from the time he is born ".[4] And once the process of becoming (*bhava*) has been set in motion through the functional activity of the mind (*kamma-bhava*), the ensuing process of rebirth (*upapatti-bhava*) is but the conditional result. The cessation of this resultant process (*bhava-nirodha*) will be final only if the flame of passion is not being fed anew. Without the addition of new karmic activity the process of existence will run its course to its natural end, when death indeed will be a vanishing (*cuti*). Death, therefore, is but a natural function of life. But as long as life is being revitalised by its own reproductive activity, death will be the ending of this physical existence (*pāṇaccaya*), only to become the threshold of a new lease of life, a passing over, but not a final passing away.

The last thought of a living being is considered to be of very particular importance in respect of the immediately following life-span, for it is this last dying thought which provides the rebirth-condition to its successor. Hence, if the last thought lingers over a wholesome object, its effect will be felt in the new thought-process, inaugurating the new life, in a wholesome (*kusala*) manner. The reverse, of course, also holds good : a dying thought clinging to an undesirable object is the condition inducing an occasion for the arising of undesirable circumstances in the resultant, immediately following life-span. This does not mean that only the last thought of a dying man is

1 *Kosala Saṃyutta*, *S.* I, p. 101.
2 *Kindred Sayings*, I, 127.
3 *Vism.* viii, § 23, p. 193.
4 *Vism.* viii, §§ 10–11, p. 190.

effective, for previous actions of intentional commission and omission retain their accumulative power, awaiting the opportune occasion to produce their effect. For details see under KARMA.

Life, existence, is so full of activity that it cannot be viewed as static; it is always a coming into being, a process of becoming, without a finality of attainment in existence. The fullness of life is in living, not in being, but in becoming. It is dynamic actuality. And within that process, the aspect which is called death is but a phase of becoming; it is the passing over, the transition of a series of phenomena. At death this transition is more phenomenal, but in actuality the same passing over occurs at every thought. "It is the continually repeated dissolution and vanishing of each momentary physical-mental combination, and thus it takes place every moment".[5] "In the ultimate sense (*paramatthato*) the life moment of living beings is extremely short, lasting just for one single moment in the evolution of a thought (*ekacittappavattimatto*). Just as a cart-wheel, whether rolling or standing, touches the ground only at one point of its circumference, so the life of living beings is measured by only one conscious moment (*ekacittakkhanikaṃ sattānaṃ jīvitaṃ*). And when that thought has ceased, that being also is said to have ceased (*tasmiṃ citte niruddhamatte satto niruddho 'ti vuccati*). In a past conscious moment a being lived; in a future conscious moment one will live; but it is only in the present conscious moment that one does live . . . . When consciousness dissolves, the world is dead" (*cittabhaṅgāmato loko : Vism.* viii, § 39 p. 197). In the ultimate sense, when a process of thought reaches its dissolution after the vanishing of the impulsive moments (*javana-citta*) in the process of consciousness (*citta-vīthi*, q.v.) it has the same position as death-consciousness (*cutiviññāṇa*). And hence, in the ultimate sense, life lasts but for the duration of a thought.

But, as regards the major change in the process of existence, which involves the breaking up of the body (*kāyassa bheda*) and the abandonment of the mental aggregates of clinging (*upādinnakkhandha-pariccāga*), death is the termination of a life, a dissociation of the constituent physical and psychical elements. Because their previous association, which formed a so-called individual, was of an impermanent nature, for "every composition is decomposable" (*sabbe saṅkhārā aniccā*), this dissolution is a natural phenomenon, not produced by any external agency, but by the inherent nature of any compound. "For the born there is no such thing as not dying" (*n'atthi jātassa amaraṇaṃ :* [illegible]). And so death comes about as the natural exhaustion of a life-span (*āyukkhayena maraṇa*), i.e., through termination of the destiny attained (*gati-*) or through expiry of the time-limit (*kāla-*) or through termination of the process of nutrition, (*āhārādi-sampattiyā abhāvena*). Life will also end when the moral conditions of reproductive karma (*janaka kamma*) which brought forth this particular existence are running out, i.e., through cessation of moral force (*puññakkhayena*). All this is a natural or timely death (*kālamaraṇa*). But, although death is always a natural result of being born, it may occur prematurely. Such an untimely death (*akālamaraṇa*) comes about through karma interrupting other life-producing karma (*kammupacchedaka kammavasena*), i.e., karma cutting off the prevailing vitalising karma. Thus a life-process (*santāna*), which still has sufficient energy and vitality to make one move and act, may be cut off through some external exertion which overtakes one in consequence of former actions.[6] Accidents, homicides, suicides, fatalities in war are cases of such untimely death. In all cases, however, it is the breaking up of the aggregates which is known as death.

It is this contemplation that "only formations break up; it is the death of formations; there is nothing else" [7] which leads to insight and ultimate deliverance.

No study of the concept of death can be complete without a contrasting study of the concept of life. (For this, see JĪVITA and JĪVITINDRIYA.) This faculty of vitality has nothing in common with a principle of life or soul, for it is one of the seven general mental properties (*sabba-citta-sādhāraṇa-cetasika*) which, together with contact (*phassa*), sensation (*vedanā*), perception (*saññā*), volition (*cetanā*), one-pointedness of mind (*ekaggatā*) and attention (*manasikāra*), are common to every class of consciousness and every single act of thought. It is the dynamic principle without which no thought-concept could evolve, in a similar way as no evolution of matter could take place without the constituent physical element of caloricity (*tejo*). But, in Buddhist terminology death is the opposite not of life but of birth, being the other extreme of an individual process of existence. With the advent of death, life does not come to an end, for it spells the beginning of a new life. Death is merely the ending of this combine of physical and psychical factors, which in dissolution will recombine with variations and permutations, reproducing certain essential characteristics with equally essential modifications. From another view-point, death may even be said to be identical with birth, as the exit from one life-span is the entrance to a new one. And, with regard to final deliverance, birth, old age and death are just suffering, woe, conflict, which is the process of life.

A physical death is but a phase in that process, leading on to the next phase. By the severance of the ligatures of the joints in all the limbs, the body at death gradually withers like a green palm leaf wilting in the heat of the sun. When the faculties of the physical senses have ceased to function, the faculties of mind and life stil remain as inner consciousness focussed on some action which presents itself owing to its importance or weightiness, or to the frequency of former repetition, or to the proximity of the performance of such action. When, at this stage, craving and ignorance have

5 [illegible]

6 cp. *Vism.* viii, §§ 2-3, p. 189.

7 *Vism.* xxii, § 118, p. 598: *saṅkhārā va bhijjanti, saṅkhārānaṃ maraṇaṃ, na añño koci atthi.*

not been fully abandoned, craving bends the stream of consciousness in further grasping the familiar object, the dangers of which are concealed by ignorance. Thus, this dying consciousness " abandons its former support, like a man who crosses a river by hanging on to a rope tied to a tree on the near bank ". The act of letting go is death, the act of grasping to cross over the gap is the beginning of the next existence.[8] The chief characteristic of the phenomenon of death is a passing away or falling off (*cutilakkhaṇa*). The function is to separate (*viyogarasa*). And it manifests itself in the absence of the sphere in which rebirth took place (*gati-vippavāsa-paccupaṭṭhāna*).[9] It is, therefore, an entirely negative aspect, which is best expressed as a passing away (*accaya*).

H. G. A. van Zeyst.

ACCAYA (2), offence. The literal meaning of the word indicates a passing over (*acceti*), but has acquired a figurative meaning of 'transgression' of the law. Thus in the formula used by Buddhist monks on Uposatha days they confess in public in general terms their physical transgressions (*accayo maṃ accagamā : D.* I, 85). It is not used for a karmic unwholesome action (*akusala-kamma*) which may be an evil thought, but only for a breach of the rules of discipline (*Vin.* I, 315).

Once the offence is confessed, i.e., the transgression acknowledged as such, it will be accepted by the congregation (*accayato paṭiganhāti : D.* I, 85) and thereby pardoned. There is no absolution of sin or wrong intention, for the law of karma is one's own individual responsibility. The transgression in as far as the community is involved is rectified by the acceptance of the admission of the fault.

ACCAYA AKODHANA SUTTA. In this sutta the Buddha condemns the person who does not accept an apology (*S.* I, p. 239).

Two monks have a dispute in the course of which one monk gives offence to the other. Realising this he confesses his transgression to the other and asks for forgiveness but the latter refuses. When the incident is reported to the Buddha he declares that there are two types of fools in this world, one who does not recognise his offence and the other who does not accept an apology. They are wise men who recognise their offence and accept another's apology. The Buddha also quotes the words of Sakka to the Tāvatiṃsa devas advising them against giving way to anger and evil speech.

This sutta typifies the Buddha's attitude in the case of a transgression. One should confess one's guilt and refrain from such conduct in the future. Hence the formula of confession met with in the canon : *Accayo maṃ bhante accagamā* .... *Tassa me bhante bhagavā accayaṃ accayato paṭiganhātu āyatiṃ saṃvarāyā 'ti* (Transgression has overcome me, Sir, ... May the Blessed One accept this my confession for restraint in the future : See *D.* I, p. 85 ; *M.* I, p. 440 ; *S.* II, p. 205 ; *Vin.* II, p. 192).

In the *uddāna* (list of titles at the end of the chapter) this sutta is referred to as *Accayena-akodhano* (gentleness at offence).

L. R. G.

ACCĀYIKA SUTTA occurs as the 91st sutta in the *Tika-nipāta* (*A.* I, 239) and deals with the three urgent duties (*accāyikāni karaṇīyāni*) of the cultivator : ploughing, sowing and irrigating. But, however efficiently and quickly he may perform these duties and complete them (*sīghasīghaṃ*), it is not within his power to ripen the crop in a day. This requires the course of the season (*utuparināma*).

Likewise the monk has three urgent duties to perform : he has to cultivate a threefold code (*sikkhā samādāna*), of high living (*adhisīla*), of high thinking (*adhicitta*) and of deep insight (*adhipaññā*). And the monk, too, should not expect his mind to be released within a day. But he must awaken a keen desire (*tibbo chando*) and apply that to his course of training.

ACCENTI SUTTA, included in the *Naḷa Vagga* of the *Devatā Saṃyutta* (*S.* I, p. 3). Once a deva appeared before the Buddha in Jetavana and declared that hours pass by and the stages of life in turn overtake and desert man. Seeing this fear of death one should do meritorious deeds that would bring happiness. The Buddha agreed that time does pass by, but his advice to the one who observes this approach of death is to reject worldly gain and strive after the final peace, Nibbāna. The sutta is named after the first word of the stanzas. The first two lines of the stanzas in this sutta are found in the verse portion of the *Hatthipāla Jātaka* (*J.* IV, No. 509).

L. R. G.

ACCESS CONCENTRATION (*upacāra samādhi*). During the transitional period from normal consciousness to the supernormal there occur usually four moments of apperception (*javana*), namely, a preliminary moment (*parikamma*) of preparation, followed in turn by approximation (*upacāra*), adaptation (*anuloma*) and regeneration (*gotrabhū*). The concentration of thought including these four moments which precede the supernormal state of consciousness known as mental absorption (*jhāna*) is collectively known as access concentration (*upacāra samādhi*). For explanation of the entire process see s.v. JHĀNA.

ACCHAGALLA, a vihāra at which king Vaṭṭagāmaṇi of Ceylon (1st cent. B. C.) had a festival celebrated in honour of the Buddha. In this he received the aid of the thera Mahātissa of Kuppikala Vihāra (*Mhv.* xxxiii, 67). It was founded by Marupiyatissa (i.e., Devānampiya Tissa, 3rd cent.

8 cp. *Vism.* xvii, § 163, p. 473.
9 *Vism.* xvi, § 47, p. 427.

B. C.) and was situated southwards from Anurādhapura near an Ākāsa Cetiya (*MhvA.* 424). Kurunegala District has been suggested as the location; here, at Paramākanda, there are inscriptions which are ascribable to the time of founding. The inscriptions refer to the place as *Acagirikatiśapavata* (Acchagirika-tissa-pabbata); one of the two towns mentioned in them is *Acanagara* (*CJSc.* II, 93 and Müller: *Ancient Inscriptions in Ceylon*). Accha Vihāra in Rohana has also been suggested as another name for it (*JCBRAS.* New Series, II, p. 140, and VI, Special No. p. 64).

D. T. D.

ACCHAGALLAKA (or Acchagiri), a vihāra founded by king Sūratissa (*circa* 200 B. C.) to the east of Anurādhapura, Ceylon, near Rahagallaka (or Rohagallaka). Later, it came to be called *Puriveṇacchagallaka*, in order to distinguish it from the Accha Vihāra built by Devānampiya Tissa, an earlier king (*Mhv.* xxi, 6; *MhvA.* p. 424). See also ACCHAGALLA.

ACCHARĀ, the Pali equivalent of the Vedic apsarases, celestial nymphs inhabiting the heaven of Sakka. Sakka is shown in the canonical literature as sending them to earth to seduce ascetics who by the force of their virtue, threaten his suzerainty in heaven, e.g., in the *Alambusa Jātaka* (V, 152). In the *Guttila Jātaka* (II, 253) they are depicted as being sent by Sakka to aid the bodhisatta in a musical contest, by dancing to the tune of his lyre. They figure frequently in Jātaka tales. See APSARAS.

ACCHARĀ SUTTA, a *gāthā* in the *Samyutta Nikāya* (I, 33) consisting of four couplets, the first of which is addressed to the Buddha, the other three being the Buddha's reply to the question raised therein. The commentary (*SA.* I, 85) connects the question with a bhikkhu, who dies while meditating. He is reborn in a state of meditation in the heaven of the Thirty-three Gods (*Tāvatimsa*) and is received as their lord by the nymphs of that world. In spite of their celestial song and music-making, he still remains unaware that he has ceased to be a bhikkhu and is now a god, until he is shown his divine figure in a full-length mirror. Disappointed with his new world, he comes, accompanied by his heavenly retinue, to the Buddha and, telling him that its delights are mere delusions, asks him the way to release therefrom. The celestial park named Nandana, the bhikkhu-god says, is hardly what its name signifies, 'delight', but a veritable haven of deceptive joys, illusions, which could more fitly be called *mohana*—meaning 'delusion'. Its inhabitants are nymphs but they, he says, are in truth, fiends—perhaps because they bar the way to salvation. "From this world of delusion", he asks, "how shall there egress be?"

The Buddha's answer is couched in an elaborate image of a traveller upon a chariot. The road to salvation, the Buddha replies, is the straight one whose destination is called 'Free From Fear', i.e., 'The Fearless State'. To reach this goal, the chariot must run silently upon the wheels of righteous effort (*dhammacakkehi samyutto*, so interpreted by Buddhaghosa), driven by the chariteer, the Dhamma, and piloted by right views (*sammādiṭṭhipurejavam*). The image of the chariot is extended to include a number of Buddhist virtues: conscience or modesty is the leaning-board (*apālamba*), heedfulness is the drapery (*parivārana*), etc. "And be it woman, be it man," the Buddha says, "for whom such chariot doth wait, by that same car into Nibbāna's presence shall they come" (*Kindred Sayings*, I, 45).

According to Buddhaghosa the road and the chariot are both to be interpreted as the Eightfold Path.

An interesting comparison of this sutta, particularly with reference to the bhikkhu-god's comments on Nandana, is found in the *Nandana Vagga* of the same Nikāya (*S.* I, 2, § 1). Compare also *S.* I, 3, § 9.

B. J.

ACCHARIYA-ABBHUTA-DHAMMA SUTTA. There are in all five discourses bearing this name. Of these, four are in the *Aṅguttara Nikāya* and one in the *Majjhima Nikāya*. The subject with which they are all concerned is that of the wondrous and miraculous (*acchariy' abbhutadhamma*) as applicable to qualities or incidents connected with the life of a great being such as a Buddha, or one of his worthy disciples, or a world-ruler. In the Mahāyāna, however, as recorded by the Tibetan historian Bu-ston[1], this class of discourse has for its subject-matter the miraculous faculties of śrāvakas, bodhisattvas and Buddhas. In the Theravāda these suttas refer to a bodhisatta. They are concerned only with the last birth of Siddhattha who became Gotama the Buddha.

Of the four discourses in the *Aṅguttara Nikāya* the first[2] enumerates four wondrous and miraculous happenings in regard to the appearance of a fully enlightened one. An incomparable splendour fills the universe when the bodhisatta descends from the Tusita realm and enters the womb of his mother consciously. Even in the Lokantarika hells, which are normally engulfed in total darkness, beings born there see one another and find consolation in the thought that there are others as well. Similar miracles occur when the bodhisatta issues from the womb of his mother, when he attains complete enlightenment as a Tathāgata, and when the Tathāgata "turns the Wheel of Righteousness", i.e., preaches the doctrine for the first time.

The next discourse[3] enumerates four other wondrous happenings consequent to the appearance of a fully enlightened one. Of these, the first is that people attached to pleasures and delighting in pleasures give ear to the Tathāgata when he

1 *The Jewellery of Scripture*, p. 33.
2 *Ahaya vagga, catukka nipāta*, sutta No. 127.
3 ibid. sutta No. 128.

S.P.C. 97040

preaches, with the result that their minds become established in knowledge. The same is said of people attached to or steeped in pride, non-tranquillity and ignorance.

The third discourse[4], though supposed to deal with four wondrous qualities possessed by Ānanda, the attendant of the Buddha, mentions only three. The first is that the sight alone of Ānanda was sufficient to make any congregation feel happy and delighted. Secondly, if Ānanda were ever to preach the doctrine, it would certainly delight any congregation. Thirdly, if the congregation is dissatisfied, then Ānanda would remain silent.

The fourth discourse[5] is a repetition of the above but with this difference, that the qualities possessed by Ānanda are compared with identical qualities residing in a world-ruler.

The fifth, which is a discourse in the *Majjhima Nikāya*[6], enumerates twenty-two wondrous and miraculous qualities possessed by a Tathāgata. It is said that the first nineteen of these qualities were recalled by Ānanda in the presence of the Buddha, and the last three were added on the Buddha's own instructions. And of these qualities, what strikes one most is that nineteen pertain to the period immediately prior to the enlightenment of the bodhisatta.

The wondrous qualities as recalled by Ānanda are as follows: (1) The bodhisatta, at the time of his birth in the Tusita realm, enters it knowingly and consciously. (2) He is also conscious and aware while he remains there. (3) He remains there for the full span of his life. (4) Consciously and knowingly, he leaves the Tusita realm and descends into the womb of his mother. (5) An incomparable splendour arises at the time of his entry into the womb of his mother and illumines even the Lokantarika hells. (6) Once the bodhisatta has entered the womb of his mother four devas keep guard on the four sides. (7) The mother, from the entry of the bodhisatta into her womb, becomes virtuous and abstains from evil deeds. (8) She entertains no lustful thoughts in respect of men. (9) She becomes the recipient of objects belonging to the five senses. (10) She is not afflicted by any ailment, but is happy and unfatigued. She even sees the bodhisatta in her womb. (11) She dies seven days after the birth of the bodhisatta and is reborn in the Tusita realm. (12) Unlike other women, she gives birth only after ten months of pregnancy. (13) She gives birth standing. (14) The bodhisatta is first received by devas and then only by men. (15) As soon as the bodhisatta is born he alights on the ground. Four devaputtas then receive him and place him before the mother saying, "Be happy, queen, that a great son is born to you." (16) The bodhisatta is pure and clean at the moment of his birth and is not smeared with physical impurities. (17) Two streams of water, one hot and the other cold, rain down from the skies and bathe him and his mother. (18) He stands firmly on his feet and walks seven steps to the north. He looks round in all five directions while a white canopy is held over his head, and says the following words, "I am the chief of the world, the noblest of the world, the greatest of the world. This is my last existence, there shall be no more rebirth for me." (19) An incomparable splendour arises also at the time of the bodhisatta's birth and the ten thousand world systems quake and tremble.

To the above, the Buddha is said to have added three other qualities, which are as follows: All feelings (*vedanā*) have always been successively experienced by him. And the same is then said of percepts (*saññā*) and discursive thoughts (*vitakkā*).

The *acchariy'abbhutadhammā* are, however, not confined to the five discourses here discussed. Such wondrous and miraculous qualities occur in other discourses as well, as for example in the *Bakkula Sutta*[7] where a number of such qualities are attributed to the thera Bakkula. Then, in the *Udāna*[8], for instance, eight wondrous and miraculous qualities of the great ocean are compared with eight similar qualities of the *Dhammavinaya.* This fact, that qualities of the *Dhammavinaya* have also been admitted in the category of the wondrous and miraculous, indicates that the *acchariy'-abbhutadhammā* were not confined to qualities pertaining to individuals. The contents of these other discourses, however, will be discussed under their respective titles.

H. S. Cooray.

ACCHARIYA SUTTA, contained in the second *vagga* of the *Asaṅkhata Saṃyutta* of the *Saṃyutta Nikāya* (IV, 371). The Buddha preaches on the Wonderful (which refers to Nibbāna) and the Path leading thereto. This sutta, in forty-five sections, is a reiteration of the rest of the suttas of the *vagga* starting with *Asaṅkhata Sutta*

ACCHA VIHĀRA, in Ceylon. See ACCHAGALLA.

ACCHILA, name of a nāga king mentioned in the *Mahāmāyūrī* (274 : *BHS.* s.v.).

ACCHIMATĪ (var. Acchimutī), one of the five daughters of Vessavana. She was married to Sakka along with her four sisters Latā, Sajjā, Pavarā and Sutā.

ACCHINNADHĀRA. In a confused account of the origin and decay of the four elements, which shows some influence of the genesis story of the Pali suttas (e.g., *Aggañña Sutta*), the Sanskrit work, *Sikṣāsamuccaya*, refers to Acchinnadhāra (247) as one of four rain-deities, who, each for a period of five ages (*kalpa*, q.v.), cause rain to fall from the clouds which gather over the world at the beginning of its existence. These deities are thus responsible for the element of water on earth. To Acchinnadhāra belongs the third period of the five ages, the

5 Ibid. sutta No. 130.

6 *M.* sutta No. 123.

7 *M.* sutta No. 124.

8 *Ud.* 53–4.

first, second and fourth belonging to Īśādhāra, Gaḍaprameha and Sthūlabinduka, respectively. The result of this activity of theirs is that the earth expands up to Brahmaloka, covered with water.

It is interesting that, literally, the word Acchinnadhāra means 'unbroken flow' and the word Sthūlabinduka, 'large drops'.

B. J.

ACCIMANTASELA, a mountain in Suraṭṭhajanapada of ancient India. It occurs in a story (No. 21) of the *Sīhaḷavatthupakaraṇa* written by Dhammanandi thera some time prior to Buddhaghosa. The location of the mountain is unknown but would appear to have been near Ujjeni, whose king (unnamed) is one of the chief persons in the story.

As the text is extremely rare and was published in Ceylon only in 1959 (by A. P. Buddhadatta thera), the story is briefly given here: An arahant lived in a cave in Accimanta rock which was surrounded by an animal-infested forest. A she-elephant which lived in this forest gave birth to a young one, but a she-goblin who had been an enemy in a previous birth ate up the calf. The same thing happened several times. The mother elephant, thereupon, came to the mouth of the cave, when her next baby was due, dropped it in the sight of the monk and picking it up laid it before him. The goblin came again for her prey, but the monk prevented her. The young one thus saved grew up and became a constant companion of its saviour. A hunter who noticed this mentioned it to the king of Ujjeni. At the king's command he trapped the animal and brought it to the king. The monk, discovering the loss, presented himself before the king and pleaded for the release of the animal, giving as his reason that he considered the animal his pupil and it would surely die if parted from him. The king was greatly impressed by the tale and released the beast.

D. T. D.

ACCIMUKHĪ (variant Accimukhī), a nāga princess mentioned in the *Bhūridatta Jātaka* (*J.* VI, 157 f.) as the daughter of the nāga king Dhataraṭṭha and the half-sister of the bodhisatta Bhūridatta. When the snake-charmer Ālambāna took the bodhisatta into captivity, his brother Sudassana was assisted in the rescue by Accimukhī, who assumed the shape of a frog and, accompanying her brother, terrified Ālambāna by shooting flames from her mouth and spitting the deadliest poisons.

The Buddha identifies Accimukhī with the bhikkhunī Uppalavaṇṇā of his own time.

ACCOMPLISHMENT. When referring to the accomplishment (*sampadā*) of an individual in the course of his religious development, it may relate to his moral attaintment (*sīla-sampadā*) by which is understood the whole body of morality (*sīlakkhanda*) which forms the first constituent of the entire range of attainments, virtues of observance and of avoidance, either temporary or lifelong, mundane or supramundane, belonging to the discipline of a noble disciple, a layman or an adept (*asekha*), to the discipline of monkhood, of sense restraint, of pure living, or to the various degrees of purification. (Details see s. v. SĪLA.)

The accomplishment of concentration (*samādhi-sampadā*), although defined as onepointedness of mind (*cittassa ekaggatā : M.* I, 301), comprises the guarding of the senses, self-control, spiritual contentment, emancipation from the five hindrances and attainment of the four states of mental absorption. (Details s. v. JHĀNA, NĪVARAṆA, SAMĀDHI.)

The accomplishment of insight (*paññā-sampadā*) is the blessing of higher knowledge, the code of intellectual duties and practice of the attainment of the highest cognition, connected with supernormal faculties, leading to arahantship and culminating in final emancipation and the extinction of all causes of rebirth. (Details s.v. IDDHI, NIRODHA, PAÑÑĀ.)

The accomplishment of deliverance or emancipation (*vimutti-sampadā*) is the attainment of release of will and mind, or heart and intellect (*ceto-vimutti, paññā-vimutti*), which is the state of arahantship whilst alive in this human existence.

And finally, there is the accomplishment of the knowledge of the attainment of emancipation (*vimutti-ñāṇa-dassana-sampadā : A.* III, 118).

Except perhaps for this last accomplishment, these attainments cannot be called perfections in the true sense. To speak of religious *successes* would be more accurate though less usual, but the idea of *achievement* would agree well with the underlying thought of effort in the working out of one's own salvation (cp. *appamādena sampādetha*).

Different sets of accomplishments are met with in the canonical writings, when they are sometimes not so much a success attained as a profit or blessing obtained : kin, wealth, health, virtue, and right views (*ñāti, bhoga, ārogya, sīla, diṭṭhi : D.* III, 235 ; *A.* III, 147). These right views (*diṭṭhi*) are frequently interchangeable with insight (*paññā*) of the earlier set, whereas the earlier concentration (*samādhi*) is sometimes replaced by mind (*citta : A.* I, 269), with the result of two parallel sets of three accomplishments : *sīla, samādhi, paññā*, and *sīla, citta, diṭṭhi*. Three others are found as faith, virtue and insight (*saddhā, sīla, paññā : A.* I, 287) which are enlarged as a set of five : faith, virtue, learning, charity and insight (*saddhā, sīla, suta, cāga, paññā : A.* III, 118) ; and as a set of eight achievements in alertness, wariness, good company, right living, in faith, in virtue, in charity and in insight (*uṭṭhāna, ārakkha, kalyāṇamittatā, sammājīvitā, saddhā, sīla, cāga, paññā*), the first four bringing worldly happiness, and the last four leading to future bliss.

In his commentary on the *Dhammapada* (*DhpA*. III, 93-4) Buddhaghosa speaks of four blessings (*sampadā*), of a foundation for merit (*vatthu-s°*), of means of salvation (*paccaya-s°*), of good intentions (*cetanā-s°*) and of a high degree of virtue (*guṇātireka-s°*). And a completely different set of seven is found in the introduction to the *Junha Jātaka* (No. 456)

where Ānanda is said to have gained by his continually attending upon his Master the following seven blessings: the blessing of the doctrine (*āgama-sampadā*), of the knowledge thereof (*adhigama-s°*), of the knowledge of past causes (*pubbahetu-s°*), of enquiring into one's own good (*attatthaparipucchā-s°*), of dwelling in a convenient place (*tiṭṭhavāsa-s°*), of methodical attentiveness (*yoniso-manasikāra-s°*) and of the assurance of enlightenment (*buddhūpanissaya-s°*).

Depending, therefore, on the context, the term *sampadā*, which has the basic meaning of obtaining (Skt. *prāpti*), acquiring, gaining, has to be rendered as accomplishment, attainment, profit, merit, blessing, success, good fortune.

Thus, we find a series of suttas in which the possession of virtue (*sīla-sampadā*), of desire to do good (*chanda-s°*), self-possession (*atta-s°*), the possession of right understanding (*diṭṭhi-s°*), of earnestness (*appamāda-s°*) and of systematic attention (*yoniso-manasikāra-s°*) are spoken of as forerunners and harbingers of the arising of the Noble Eightfold Path, just as the dawn is the harbinger of the rising sun (*S.* V, pp. 30-8). For, with such possessions, headed by a noble friendship (*kalyāṇamittatā*), one may be expected to cultivate the Noble Path, based on seclusion, on dispassion, on cessation leading to self-surrender, ending in the restraint of lust, hate and delusion.

H. G. A. v. Z.

ACCUMULATIVE ACTION (*kaṭatta-kamma*, q.v.) is a species of karma, classified according to its efficacy (*pākadāna-pariyāsena*). Its grouping occurs only in mediaeval Pali literature, e.g., the *Abhidhammattha-saṅgaha* (p. 23), although it is mentioned in the *Dhamma-saṅgaṇi* (§ 431) as karma which has been stored up, and explained by Buddhaghosa in the *Atthasālinī* (p. 262), as referring to the heaping up of karma, the development thereof, as a cause of the arising of cognition, but he makes no attempt at classification. See KARMA.

ACCUTA (1), was one of the two chief attendants of Buddha Kakusandha, the other being Sumana (*Buv.* xxii, 35). He was a wealthy treasurer and built a monastery about a league in extent for the Buddha on the site where later Anāthapiṇḍika built the Jetavanārāma for Gotama Buddha. Accuta purchased the site for as many golden tiles as were needed to cover the land (*DA.* II, p. 424; *J.* I, p. 94; *ApA.* p. 98; *VmA.* VI, 1221).

ACCUTA (2), name of a paccekabuddha mentioned in the *Isigili Sutta* of the *Majjhima Nikāya* (III, sutta 116). It is again referred to in the commentary (*MA.* IV, 129) to this sutta as well as in another list of such names contained in the commentary to the *Apadāna* (*ApA.* 129).

ACCUTA (3), an ascetic, a previous incarnation of Sāriputta (*J.* VI, 593). He lived in a hermitage in the Vaṅka forest. The brāhman Jūjaka (Pl. XXV) was directed to him by Cetaputta, the beguiled forest guard, to ask the way to Vessantara's dwelling in Vaṅkagiri. Suspecting his evil intentions, Accuta rebuffed Jūjaka at first, but when the latter lied to him that his mission was well-intended, he showed him the way. Accuta is described as having 'dirty teeth, a dusty head and matted hair, hide-clad, sleeping on the ground and worshipping the fire (*J.* VI, 532-40).

ACCUTĀ, name of a devatā mentioned in the *Mahāsamaya Sutta* and its commentary as one of many celestial beings who visited the Tathāgata and the community of monks (*D.* II, p. 260; *DA.*II, 690).

ACCUTADEVĀ, a class of gods mentioned as being among the assembly of divine beings who came to hear the Buddha's preaching in the *Mahāsamaya Sutta* (*D.* II, 260). They are referred to as Acyuta in the *Mahāsamayasūtra* (Waldschmidt, *Kl. Turf.* 185: 18).

ACCUTAGĀMA occurs in a nominal list of paccekabuddhas given in the commentary to the *Majjhima Nikāya* (*MA.* IV, 129). But the *Apadāna* commentary gives it as Accutagāmi (*ApA.* 129). The former reading would be correct if this name is to be traced to the combination of two names Accutagāma and Byāmaka that appears as Accutagāmabyāmaka.

ACCUTAGĀMABYĀMAKA, mentioned in a versified list of names of paccekabuddhas contained in the *Isigili Sutta* of the *Majjhima Nikāya* (III, No. 116). The versification precludes us from determining whether this consists of one or two names. But the commentary (*MA.* IV, 129) to this sutta construes it as a combination of two names of paccekabuddhas, Accutagāma and Byāmaka, while in the romanised edition of the *Apadāna* commentary (*ApA.* 129) these have been separated as Accutagāmi and Byāmaka. The Sinhalese edition, however, has regarded it as just one name.

H. S. C.

ACCUTA VIKKANTA, a king of south India of the 5th century A.C. He is described as a Kaḷabhra, a title given to Kali kings. ('Kalambakula', suggested as Kadambas, *BM.* 140.) He was most probably the king who is reputed to have kept three others in confinement (*Tamil Nāvalar Caritai*, *vv.* 154–7; see also K. A. Nilakanta Sastri, *The Colas*, I. 121 and 129). Some songs about him are quoted by Amitasāgarar, a tenth century author. Accuta Vikkanta was the Buddhist patron of Buddhadatta who was probably the first *ācariya* of that name.

D. T. D.

ACELAKA (or *acela*) literally means 'unclothed' and refers to an ascetic who took on the practice of nudity. The references to the Acelakas in the Buddhist literature would indicate that they were naked heretical ascetics practising severe austerities.

There is no account of the Acelakas as a separate sect and the references to them are vague and conflicting. This has led to the promulgation of different theories. Jacobi [1] expressed the opinion that by the term Acelaka the Buddhists mean the Ājīvikas (q.v.). In more recent times, however, Barua and Basham have given a wider connotation to the term and their view seems more acceptable.[2] They are inclined to believe that the word Acela is used quite loosely and refers to any naked ascetic rather than a member of any single organised religious sect.[3]

An analysis of the references shows that, whereas in a few instances the word Acelaka is used synonymously with a member of a definite religious body like the Ājīvikas, for the most part the Acelakas referred to are individual and independent naked ascetics.[4]

The references to Acelakas in Buddhist literature in the main fall into three types :

(i) There is a stock description of the austere ascetic practices beginning with *acelako hoti, muttācāro hatthāpalekhano*, etc. (he goes naked, he has unrestrained habits, he licks his hands clean, etc.) which occurs in two contexts in the Nikāyas. In the first it is applied to (*a*) individual naked ascetics, (*b*) to the Ājīvika leaders, Nanda Vaccha, Kisa Saṅkicca and Makkhali Gosāla, and (*c*) to the Buddha himself before his enlightenment, in the *Mahāsīhanāda Sutta*.[5] The Buddha is describing to Ānanda his fruitless austerities in search of the truth, and there occurs this passage with reference to the ascetic practices he pursued.

The other context is where on several occasions the Buddha classifies people into broad groups and the same passage is employed in describing one of them. Thus, it is applied to people who are self-tormenters,[6] to those who undertake *dhamma* that brings suffering both in the present as well as in the future,[7] and to those who are pierced by the arrow of false views.[8]

(ii) There are references to individual naked ascetics often with the appellation of Acela, rather than Acelaka, before their names, e.g., Acela Kassapa, Acela Guṇakassapa. There were also among them some who took on further austerities such as the 'dog vow' and 'cattle vow' (behaving like a dog and a bull respectively). Such were Acela Seniya Kukkuravatika and Acela Korakkhattiya Kukkuravatika.[9] Incidentally, the two last-named Acelakas would definitely fall outside the pale of the Ājīvikas as the 'dog-vow' and 'cattle-vow' have not been advocated by Makkhali Gosāla.

(iii) Next, there are references to various religious groups among which figure the Acelakas. These references are often contradictory and conflicting, sometimes the word Acelaka being used synonymously with other religious groups like the Ājīvikas and at other times clearly distinguished from them.

Thus, in the *Vinaya* (in *Pācittiya* xli) Acelaka and Ājīvika are used synonymously.[10] But in the *Dhammapadaṭṭhakathā*, a person with an unsettled mind is compared to one who starts as an Acelaka, then in turn becomes an Ājīvika, Nigaṇṭha and Tāpasa.[11] In the same work is related an incident where the monks consider the Nigaṇṭhas who wore a piece of cloth as better than the completely unclothed Acelakas.[12] Further a record in the *Udāna* of a visit to the Buddha by Pasenadi Kosala says that there were near the Buddha seven Jaṭilas, seven Nigaṇṭhas, seven Acelas, seven Ekasāṭas and seven Paribbājakas.[13] In the *Mahavyutpatti* the Acelakas seem to be distinguished from the Nigaṇṭhas in the list of heretics, while no mention is made of Ājīvikas.[14] But, in the *Dhammapadaṭṭhakathā*, the naked ascetics, whose devotee Migāra was before he became a follower of the Buddha, are called indiscriminately Acelaka, Nigaṇṭha and Ājīvika.[15] Again, in the *Mahānārada-kassapa Jātaka*, Acela Guṇakassapa is described as an Ājīvika and called an *ucchedavādin*.[16] But, in the *Neru Jātaka*, people respect in turn a bhikkhu, some *sassatavādins*, *ucchedavādins* and *acelakas*.[17] Thus, there is no consistency in the use of the term Acelaka and it seems to have had a very wide connotation including various groups of naked ascetics of different religious practices, but not confining itself to any one of them.[18]

The stock descriptive passage of the self-mortifying ascetic practices already referred to has *acelaka* as the key-word. It is the first of several adjectives applying to the self-tormenting ascetic in general, but it may be assumed that the ascetic, who took such an austere attitude regarding clothing and gave it up altogether, had a similar outlook

1 *SBE*. Vol. 45. (*Jaina Sūtras*—Part II) pp. xxix f.

2 Barua; *Pre-Buddhistic Indian Philosophy*, p. 297. Basham. *Ājīvikas*, pp. 96, 107.

3 This conclusion is also borne out by the definitions of *acela* found in Pali literature. These broadly explain the meaning as naked ascetic with no mention of a sect or leader. *Acelako'ti niccelo naggo* (*AA*. II, 383 ; *MA*. II, 354). *Acelo'ti nagga-paribbājako* 43; *DA*. II, (*DA*. II, 349). *Acelako nāma yo koci paribbājakasamāpanno naggo* (*Vin*. IV, 92).

4 e.g. Acela Kassapa (*D*. I, 166); Acela Korakkhattiya (*D*. III, 6); Acela Pāṭikaputta (*D*. III, 12 f.) ; Acela Seniya (*M*. I 387) ; Acela Kosambhiya (*J*. V, 76); Acela Guṇakassapa (*J*. VI, 222).

5 (*a*) *D*. I, 166; (*b*) *M*. I, 238; (*c*) *M*. I, 77.

6 *A*. I, 295; *A*. II, 206.

7 *M*. I, 307.

8 *Mahāniddesa*, II, 416.

9 See n. 4. A striking factor is that in the accounts of the Buddha's meetings with these Acelas, not one of them speaks of his teacher or leader; and this would confirm that they were independent ascetics.

18 The Acelakas are conspicuous by their absence in the list of the Buddha's contemporary religieux contained in *Aṅguttara* III, 276–7.

regarding his food and bedding and other requirements as well. The practices enumerated in this passage show how all forms of decency have been sacrificed in the pursuit of self-torment. His habits are abnormal, he licks his hands clean after meals rather than wash them in water. He is meticulously scrupulous regarding the conditions under which he should accept alms. He refrains from fish, meat, liquor and even rice gruel. He does not take regular meals but "takes food only once a day, or once every two days, or so on up to once every seven days........" He feeds on the most unpalatable, unnutritious and even repulsive food. In spite of his being called an *acelaka* (unclothed) to begin with, there follows a description of various forms of scanty and uncomfortable clothing that he wears. He plucks out his hair and beard. He sleeps on thorns and he remains in the same posture for a long time. He bathes three times a day to wash away his sins. Thus in numerous ways he torments himself.[19]

The strict practice of begging and rules pertaining to food and meals are to be found among the Ājīvikas and the Jains, too. Jacobi has discussed their close resemblance to the practices among the Jains. "All the rules of the Acelakas are either identical with those of the Jains or extremely like them and dictated so to say by the same spirit".[20]

The Ājīvika in the *Lomahaṃsa Jātaka* is unclothed and lives on refuse like the Acelaka of the stock passage. Basham has pointed out that the Ājīvikas followed some of the practices enumerated in the passage, though not all of them, and is of opinion that this passage contains "a catalogue of habits of non-Buddhist mendicants of all types and cannot have applied *in toto* to the Ājīvikas". [21]

There is a reference to lay devotees of the Acelakas. In a passage giving Makkhali Gosāla's *chaḷābhijātiyo*, sixfold classification of human beings (s.v. CHALĀBHIJĀTIYA SUTTA), the fourth category in the order of ascendancy is explained as *gihī-odātavasanā acelasāvakā* (white-clad lay devotees of naked ascetics).[22] The Acelakas themselves do not find a place in the classification and no reference is made to the lay followers of the Ājīvikas. For this reason, and from the favourable position given to the *gihī-acela-sāvakā*, it is very likely that they referred to the lay devotees of Makkhali Gosāla's Ājīvikas.

There is a reference to an *acelaguru* (teacher of the Acelas or naked teacher). This occurs in a fairly late work, the *Śikṣāsamuccaya*, of about the 8th or 9th century A. C.[23] The editor of the text, Bendall, has identified *acelaguru* with Makkhali Gosāla. The correctness of this identification, however, is doubtful in view of the occurrence of the term Ājīvika soon afterwards, which in the context would imply a sect different from that of *acelaguru*.

There are also references to *acelakaladdhi* (view of the Acelakas) and *acelakavāda* (doctrine of the Acelakas).[24] But there is no discussion of the beliefs held by the Acelakas in general (apart from such definite sects as Ājīvikas and Jains): the description is only of their practices.

The Buddha's attitude to Acelakas was one of contempt. He denounced both extremes of self-indulgence and self-torment and in the latter category came the practices of the Acelakas. In the *Cūḷadhamma-samādāna Sutta* [25] the Buddha's opinion of the Acelakas is clear—their conduct leads to suffering both in the present and the future. Again, when he was asked to predict the future bourn of Acela Korakkhattiya Kukkuravatika, the naked ascetic who had taken the 'dog-vow', the Buddha said that he would be born among the lowest of the asura-demons, and so it came to pass.[26] In the *Kukkuravatika Sutta*, too, the Buddha is constrained to predict a very dismal future for Acela Seniya Kukkuravatika, if his 'vow of dog-behaviour' was fulfilled he would be born in the company of dogs, if it was not fulfilled, he would be born in the *niraya*.[27]

This ascetic practice of nudity has come down through the centuries. Naked ascetics of various types are to be found in India even in modern times.[28]

LAKSHMI R. GOONESEKERE.

ACELA KASSAPA, or Kassapa, the naked ascetic, regarding whose conversion to the teaching of the Buddha and ordination differing versions are to be found in the suttas. It is not possible to say whether they refer to more than one Acela Kassapa, or to one and the same in spite of the variations. All Acela Kassapas under reference become arahant theras.

According to the *Kassapa Sīhanāda Sutta* of the *Dīgha Nikāya* (I, 161), he encounters the Buddha at Ujuññā in the Kaṇṇakatthala deer park and asks him whether it is true that the Buddha condemns all asceticism and ascetics leading an arduous life. The Buddha denies this and enters into a discussion on asceticism at the end of which he convinces Acela Kassapa of the superiority of the Buddha's teaching. Kassapa is pleased with his exposition and asks for ordination. As a former member of a heretical school he is kept under probation for four months and then given the ordination and higher ordination in due course. According to the commentary, however, the Buddha, seeing Acela Kassapa's eager desire for ordination, waives this regulation and has him ordained forthwith (*DA*. II, 363). This slight variation is also repeated in the text and commentary of the *Acela Sutta* in the *Nidāna Saṃyutta* (*S*. II, 18 f. and *SA*. II, 37). He becomes an arahant soon afterwards.

28 J. Campbell Oman discusses his personal experiences with some naked ascetics in his *Mystics, Saints and Ascetics in India*.

According to the *Acela Sutta* of the *Nidāna Saṃyutta* (II, 18) his conversion and ordination took place after the Buddha had discoursed on *dukkha* and *paṭiccasamuppāda*.

The Acela Kassapa in the *Bakkula Sutta* of the *Majjhima Nikāya* (III, 124) enters the Saṅgha after a discourse from his old friend, thera Bakkula, whose conduct and achievements greatly impress him.

In the *Acela Sutta* of the *Citta Saṃyutta* (IV, 300) Acela Kassapa meets his old friend Citta, who has been a lay disciple of the Buddha for thirty years. He himself had been a wandering ascetic for thirty years but finds that Citta, a lay disciple, is capable unlike him of certain spiritual experiences. He seeks ordination and Citta takes him to a bhikkhu who has him ordained.

L. R. G.

ACELAKA VAGGA (1), the last chapter (*vagga*) of the *Tika Nipāta* of the *Aṅguttara Nikāya*. It consists of thirteen sections and is named after the first of these which deals with the severe austerities of the Acelaka or naked ascetic.

The first two sections mention the three practices —that of the sensualist who held the view that there is no harm in sensual desires, that of the self-tormentor who went about unclothed and followed severe ascetic practices, and the middle path which avoided these two extremes and was the one recommended for the bhikkhu. Certain faculties which should be cultivated by the bhikkhu set on the middle path are explained. These can be identified with the thirty-seven *bodhipakkhiya-dhammas*.

The next ten sections deal in turn with the circumstances that lead to *niraya* (hell) and those that lead to *sagga* (heaven). The former are to be identified with the *dasa akusala kamma* (the ten evil deeds) and the latter with the *dasa kusala kamma* (the ten good deeds).

The last section speaks of the three kinds of *samādhi* (concentration, viz., *suññato* : empty, *animitto* : signless, and *appaṇihito* : aimless) to be cultivated for the full comprehension and destruction of evil tendencies.

ACELAKA VAGGA (2), the fifth of the nine *vaggas* (chapters) of the *Pācittiya* (rules of expiation) of the *Suttavibhaṅga* of the *Vinaya Piṭaka* (*Vin.* IV, p. 108; an abstract is contained in the *Parivāra* at *Vin.* V, 19-21 and 39–40). It includes the ten *pācittiya* rules (41–50), the first of which, dealing with an incident involving an Acelaka (a naked ascetic who in this case is an Ājīvika), has given the title to the entire *vagga*.

As with the other chapters, this *vagga*, too, is not the result of a systematic grouping of the *pācittiyas*. While a connection is seen between some of the *pācittiyas*, others dealing with the same subject or person are found scattered outside this *vagga*. But within the *vagga* itself, rules of a related character are arranged in sequence.

Like the rest of the *Suttavibhaṅga*, this *vagga*, too, has Sāvatthi as the locus of the majority of its rules. Vesāli, Rājagaha and Kapilavatthu are the scene of one rule each.

The critics, as a result of whose complaints the *pācittiya* rules came to be formulated, are in most cases the contented monks (*appicchā-bhikkhū*) who often report to the Buddha what the lay people talk about. But, in the first *pācittiya* (41) the lay followers complain to the Buddha direct.

Of the ten *pācittiyas* included in this *vagga*, the first (41) disallows a monk to give alms with his own hands to a naked ascetic or male or female wandering mendicant, the second (42) deals with a monk's conduct with a brother monk on an alms round, the third, fourth and fifth (43, 44, 45) with a monk's relations with lay families and women, the sixth (46) with a monk's visits to lay families before and after meal-time. The seventh (47) contains various conditions under which a monk may accept a layman's invitation to obtain a requisite. The eighth, ninth and tenth (48, 49, 50) deal with the conditions under which a monk may visit and stay with an army.

Ānanda and an unnamed monk figure in the first *pācittiya*. The erring monk in the next five is Upananda and in the last four the offenders are the 'group of six monks' (*chabbaggiyā bhikkhū*). But these do not exhaust the *pācittiya* offences in which Upananda and the 'group of six monks' are involved. (See 59, 89 for Upananda, 2, 3, 4, 7, 16 etc., for the group of six monks.)

A connection is seen between the fourth and the fifth *pācittiyas* (44, 45) and the two *aniyatas* (undetermined offences).

Throughout the *Pācittiya* instances are common where it has been found necessary to revise the original rule after subsequent events. In this *vagga*, the fastidious adherence to a rule has led to amendments in *pācittiya* 46, 47 and 48. On the other hand, the evasion of an existing rule has resulted in the addition of a new clause in *pācittiya* 46, and the abuse of a concession has given rise to further rules—*pācittiya* 49 and 50.

L. R. G.

ACELA SENIYA, a naked ascetic who later became an arahant thera, mentioned in the *Kukkuravatika Sutta* of the *Majjhima Nikāya* (I, 387 ff.). He was a naked ascetic who also observed the vow of behaving like a dog (*kukkuravata*). With his friend Puṇṇa, who practised the vow of behaving like an ox (*govata*), Seniya met the Buddha at the Koliyan town of Haliddavasana. (The commentary describes how Seniya sat on the ground like a dog and greeted the Buddha in the manner of a dog.) When they pressed the Buddha to declare their future destiny the Buddha said that they would either be born in the company of animals or in *niraya*. Thereupon they both burst into tears. Puṇṇa requested the Buddha to preach the doctrine so that they might give up their useless practices.

The Buddha spoke to them of the four kinds of deeds—the bright with bright results, the dark with dark results, the bright and dark with bright

and dark results, and lastly the neither bright nor dark deed with corresponding results and which conduces to the destruction of deeds.

Puṇṇa became a lay disciple of the Buddha while Seniya asked for ordination.

When the Buddha reminded him of the probationary period of four months that a former member of a heretical school had to undergo before he joined the Saṅgha, Seniya expressed his willingness to be on probation for even four years. But, the commentary states that in view of Seniya's keen desire for ordination, the Buddha waived this requirement and had him ordained by a bhikkhu forthwith and the Buddha gave him the higher ordination. The sutta concludes that soon afterwards Seniya attained arahantship.

L. R. G.

ACELA SUTTA (1) deals with the conversion of a naked ascetic Acela Kassapa to the teaching of the Buddha and his ordination (*S.* II, 13–22). It is not known whether this Acela Kassapa was the same as the famous Acela Kassapa of the *Kassapa-Sīhanāda Sutta* of the *Dīgha Nikāya*, or Acela Kassapa of any of the other suttas, because the stories of their conversions are different (s.v. ACELA KASSAPA).

In this sutta, Acela Kassapa meets the Buddha when the latter enters Rājagaha for alms and begs his leave to ask him a question. But Kassapa is put off for the third time by the Buddha, with the remark that the time is inopportune as he had just entered the village, but, at last, the Buddha agrees to hear him. In the commentary the reason for Buddha's refusal to be readily questioned is given. It was to create respect for the Buddha and his words (*SA.* II, 35).

Kassapa's question is on suffering. In turn he asks the Buddha whether suffering is brought about by oneself, by another, both by oneself and by another or by mere chance. To each of these the Buddha's reply is in the negative. In desperation Kassapa asks him whether in that case suffering does not exist. When the Buddha says that it does exist, Kassapa wonders whether the Buddha does not know or see suffering. The Buddha's reply is that he both knows and sees it.

At Kassapa's request the Buddha gives a discourse on suffering. He declares that he avoids the two extremes, the Eternalist theory that one and the same person both acts and experiences the results and the Annihilationist theory that one acts and another experiences ; his method of teaching the Dhamma is by a middle way. He proceeds to expound the *paṭiccasamuppāda* theory of Dependent Origination and explains the origin and ceasing of suffering.

Kassapa is greatly impressed by the Buddha's discourse and asks for ordination. When he hears that a former member of a heretical school usually has to remain on probation for a period of four months before he is ordained, he offers to wait for four years. According to the commentary (*SA.* II, 37), however, in view of Kassapa's ardent zeal for ordination this condition is waived and he is ordained forthwith. In due course he receives the higher ordination and not long afterwards he becomes an arahant.

L. R. G.

ACELA SUTTA (2) deals with the meeting of the two old friends, Citta the householder and Acela Kassapa the naked ascetic, as a consequence of which the latter enters the Saṅgha (*S.* IV, pp. 300–2). It is not certain whether this Acela Kassapa is to be identified with his namesake figuring in several other suttas, as the accounts differ regarding the circumstances of Acela Kassapa's conversion. (See ACELA KASSAPA.)

The sutta records that Citta the householder, on hearing that his old friend Acela Kassapa has come to Macchikasaṇḍa, goes to meet him. They become engaged in a conversation. Acela Kassapa has been an ascetic for thirty years while Citta has been a lay disciple of the Buddha for about the same period. On Citta's questioning him, Acela Kassapa admits that during the thirty years of his asceticism he had come by no "superhuman experience, nor any truly āryan excellence of knowledge and insight, nor any comfortable life, nothing but nakedness and a shaven crown and dusting away the gravel" (before he sits on the ground). Citta declares that he is capable of attaining the four jhānas (trances), if he so desired, and that there was no fetter left by which he could come back to this world.

Kassapa is amazed that a householder should be capable of such extraordinary achievement and expresses his wish to join the Saṅgha. Citta takes Kassapa to some elders for ordination and offers to supply him with the four requisites of a bhikkhu. Not long after his ordination and higher ordination Kassapa became an arahant.

L. R. G.

A-CH'A-MO-P'U-SA-CHING, a translation into Chinese from the Sanskrit text which is presumably lost. See AKṢAYAMATI-NIRDEŚA-SŪTRA.

A-CH'A-P'O-CHÜ-KUEI-SHÊN-TA-TSIANG-SHANG-FO-T'O-NI-(SHÊN-CHOU-) CHING, a sūtra in the Ching-tsang (Sūtra-piṭaka) section of the Chinese Buddhist Tripiṭaka. The sūtra consists of a dhāraṇī which is said to be the one presented to the Buddha by the general of asuras, A-ch'a-p'o-chü. The sūtra is believed to be of Sanskrit origin. It is not known as to who translated the sūtra into Chinese. However, the translation is assigned to the Liang dynasty, 6th century A.C. (*Nanjio*, No. 474 ; *Taishō*, No. 1237 ; cp. *Taishō*, No. 1238).

A-CHIU-LIU-CHING, a sūtra in the Ching-tsang (Sūtra-piṭaka) section of the Chinese Buddhist Tripiṭaka. The sūtra deals with the merchant Akuru. The Chinese translator of the sūtra is not recorded. But, it is believed that the Chinese translation was done under the Eastern Han dynasty (*Nanjio*, No. 704 ; *Taishō*, No. 259).

A-CH'U-FO-KUO-CHING, a translation into Chinese from the Sanskrit text which is presumably lost. See AKṢOBHYA-TATHĀGATASYA-VYŪHA-NĀMA-MAHĀYĀNA-SŪTRA.

ĀCIṆṆA KAMMA (habitual action) is one of the four kinds of karma when classified in respect of its efficacy (*pākadāna-pariyāyena*). Together with this habitual or chronic action are classed the so called weighty (*garuka*) actions of telling effect, such as the serious crimes of wounding a Buddha, killing an arahant, parricide and causing a schism in the Saṅgha; further, death-proximate (*āsanna* or *maraṇāsanna*) action, immediately preceding death, and residual or accumulative action (*kaṭattā-kamma*).

There is a subtle difference between habitual and accumulative action, for habitual action does not reserve its full strength, awaiting the opportunity to become reproductive (*janaka*), as in the case of accumulative action. Habitual karma merely strengthens an existing tendency thereby facilitating a repetition of a similar act for good or for evil.

It is a psychological distinction which is not found in the early writings on Buddhism, even though the term is sporadically met with. Thus in the *Upāli Sutta* [1], e.g., the word *āciṇṇa* is used merely to denote that "it is not the *custom* of the Nigaṇṭha Nātaputta", "it is not the *custom* of the Tathāgata" to speak of action and of punishment. And again in the *Aṅguttara Nikāya* [2] we find a description of those "who proclaim what was not practised by the Tathāgata as his *practice*."

Even the comparatively late *Visuddhimagga* [3] does not use the word in a special technical meaning, when referring to "the object on which the mind dwelt formerly" (*āciṇṇārammaṇa*).

As an action which forms the main concern in the shaping of the future, the term is found in the *Maṭṭakuṇḍali-vatthu* [4], although not exactly with the significance of habit, but as originating in an action, skilfully performed to perfection (*āciṇṇa-samāciṇṇa-kusalamūlaka*). For, it was a single act of gladdening his mind (*manaṃ pasādesi*) which provided the youth with a celestial rebirth. Still, the efficacy of the act is illustrated, the result being compared to the shadow which never parts (*chāyā va anapāyinī* [5]).

Many are the stories which show the power of habit which might even make a saint act in a manner seemingly incongruous with his supreme virtue and self-control. A *deva* in the celestial world of the thirty-three (*Tāvatiṃsa*) had a voice which carried a distance of sixteen leagues even if he whispered, because in a previous existence he was, as a dog, greatly attached to a paccekabuddha and used to bark loud at him, out of sheer affection, whenever it saw him [6].

Also, the doubt which arose in the Buddha's mind shortly after his enlightenment, when he considered the difficulty of the truth realised by him, the doubt concerning the feasibility of proclaiming this teaching to others, that too is said to arise habitually (*āciṇṇa*) in the mind of every Buddha [7]. And again, when on the occasion of the Buddha's first visit to Rājagaha, he went with his begging-bowl from house to house and was censured on this account by the king, his father, the Buddha replied, "Such is our custom, o king!" (*cārittam etaṃ mahārāja amhākaṃ*), referring to all the previous Buddhas who had made it their habit to live on alms [8].

It is the constant repetition of an act which, indulged in (*ācarati*), becomes a regular pattern of behaviour (*cāra, ācāra*), a manner of conduct (*cāritta*); and the action which is thus indulged in (*āciṇṇa kamma*) becomes a habit. The selfish and callous man is born, as the immediate fruit of his evil, in a despised family, stupid and without enquiring tendency, as is the habit of dogs and the like (*kukkurādivatāciṇṇo* [9]) and such is his companionship. For, it is habitual karma which is usually the decisive factor in this and any subsequent life. Of the sixteen kinds of karma as enumerated and classified in later Buddhist literature [10], habitual karma seems to be the most fearful. For even the weighty action (*garuka kamma*) of parricide with its unavoidable immediate reaction, is but a single action with effect, whereas the accumulative force of habit results in a piling up of deeds and their consequences which would have a truly crushing effect on many lives to come in many aeons. It is this incalculable amassment of dues which causes that agitation (*saṃvega*) of fear and anxiety in anyone who contemplates the miseries of the worldly life with its repeated round of birth, old age, illness and death, the miseries of the sufferings in an unhappy rebirth, the miseries of *saṃsāra* (q.v.), past, present and future.

But, the formation of a habitual action does not necessarily involve a major part of time or practice. In the *Saṅkha Sutta* [11], a certain headman, the son of Asibandhaka, both followers of the Nigaṇṭhas, declared to the Buddha that the doctrine of their leader Nātaputta was that "according as a man habitually lives, so goes he forth to his destiny." The expression used here is *yaṃ bahulaṃ yaṃ bahulaṃ viharati*, indicating a life devoted to certain actions. This doctrine is refuted by the Buddha's remark that as no murderer spends the greater part of time of his life in actually murdering people, and thus cannot be said to be living habitually murdering people, he would not go forth to the destiny he deserves. In fact, nobody would ever go to an evil destiny, as evil is performed only from time to time (*samayā samayaṃ*).

A habit is determined by association of ideas, and hence characters of the lowest level are actuated in their behaviour by habit and routine. The faculty of association of ideas, which is also found in the animal kingdom, does not betray much intelligence. It is, therefore, not correct to suggest that a bad habit should be sublimated by a good habit. Only through understanding can one's life be regulated in such a way as to exclude all habit and routine. This is done in the Buddha's method of mindfulness (*satipaṭṭhāna*) with full conscious awareness of the arising and cessation of every sensory reaction in body and mind, without suppression, without approval, till the very concepts of good and evil, of 'I' and 'mine', vanish, and volitional activity (*kamma*) of the process of grasping has given way to pure action (*kriyā*) which is purposeless, but full of understanding and insight leading to deliverance.

H. G. A. v. Z.

ACINTEYYĀNI. The *Aṅguttara Nikāya* (II, 80) mentions four subjects which should not be thought about (*na cintetabbāni*) ; whoever thinks of them, says the text, would drive himself mad or cause his own ruin. The subjects so tabooed are the range of enlightenment of the Buddhas (*buddha-visayo*), the range of contemplation of one who is in a state of mental absorption (*jhānavisayo*), the fruition of actions (*kammavipāko*) and speculations about the world (*lokacintā*). See also AGNOSTICISM.

Of these, the first is explained in the commentary as meaning both the incidence (*pavatti*) and potency (*ānubhāva*) of such qualities as omniscience that Enlightened Ones possess. The second refers to the range of the higher mental absorptions, while the third applies to the result of actions which, for instance, might have to be experienced in the present life. The fourth is said to comprise such speculations as 'by whom were the sun and moon created, the great earth and the great ocean ; by whom are beings begotten ; by whom are mountains created and by whom trees like the mango, and palms like the palmyrah and coconut ?' (*AA*. III, 108-9).

H. S. C.

ACINTIKA-MADHYABUDDHI-VIKRĪḌITA, name of a bodhisattva (*Mhvyut*, 733), meaning sporting in enlightenment into a circle that is incomprehensible by thought.

ACINTITA SUTTA (*Apaṇṇaka Vagga: A*. II, 80), dealing with the four kinds of unthinkables (*acinteyyāni*), preached at Gijjakūṭapabbata in Rājagaha. The Buddha told the monks that there were four things which should not be thought of, namely, the sphere or scope of the Buddhas (*buddha-visaya*), of one who is in a state of mental absorption (*jhānavisaya*), the fruition of actions (*kammavipāka*) and the thoughts about the world (*lokacintā*). By thinking of these four things one's mind gets distracted (*ummāda*) and distressed (*vighāta*). See also ACINTEYYĀNI.

ACINTYA-BUDDHAVIṢAYA-NIRDEŚA, a Sanskrit text, extant in its Tibetan and Chinese translations. The Tibetan text is the *Bsam-gyis-mi-khyab-pa-bstan-pa*, in the Dkon-brtsegs (Ratnakūṭa) section of the Kangyur. The Indian Pandit Jinamitra, Dānaśīla and a Tibetan translator Ye-śes sde translated the work into Tibetan (*TM*. No. 79 ; *OM*. No. 760.35).

There are two corresponding Chinese works. One is the *Wên-shu-shih-li-so-shuo-pu-szŭ-i-fo-ching-chieh-ching* (文殊師利所說不思議佛境界經), translated by Bodhiruci in 693 A. C. (*Nanjio*, No. 46 ; *Taishō*, No. 340). The other is the 35th assembly of Ratnakūṭa Sūtra, viz., *Shan-tê-t'ien-tzŭ-hui* (善德天子會) by the same translator (*Nanjio*, No. 23.35 ; *Taishō*, No. 340).

ACINTYA-GUṆĀNUTTARADHARMA-GOCARA, a bodhisattva whose name occurs in a list (*Gvyū*. 443.9) of future Tathāgatas enumerated by Māyādevī. She tells the noble youth Sudhana that inasmuch as she was the Buddha Vairocana's mother she was also the mother of all past Buddhas, and will be the mother of future Buddhas such as Maitreya, Acintya-guṇānuttara-dharma-gocara and others (ibid. 348.8 : Sarvabodhisattvajinajanetrī).

ACINTYA-KRAMOPADEŚA-NĀMA, a Sanskrit text extant in its Tibetan translation, the *Bsam-gyis mi-khyab-paḥi rim-paḥi man-ṅag shes-bya-ba*, in the Rgyud (tantra) section of the Tengyur. Its author was Tog-tse-pa (Kuddālīpāda), while Bde-baḥi myu-gu (Kṣemāṅkura) and the Lotsāba of Ḥgos, i.e., Lhas btsas or Devasūta, translated this work into Tibetan (*Cordier*, II, p. 213, No. **13** ; *TM*. No. 2228).

ACINTYA-MAHĀMUDRĀ-NĀMA, a Sanskrit text extant in its Tibetan translation, the *Phyag-rgya chen-po bsam-gyis-mi-khyab-pa shes-bya-ba*, in the Rgyud (tantra) section of the Tengyur. This text was composed at Groṅ-khyer grags-pa skyon (Kīrtipāla-pura ?) by Tilli-pa (Tailikapāda). The translator's name has not been recorded (*Cordier*, III, p. 108, No. 32 ; *TM*. No. 2305).

ACINTYAMATIDATTA, a famous bodhisattva in esoteric Buddhism. The word literally means 'the giver of the unthinkable wisdom'. Tibetan *blo-gros-bsam-yas* is a literal translation of it ; likewise, is Chinese *pu-szŭ-i-hui-pu-sa-ching*.

His position in the maṇḍala differs according to the various sources which explain it. Thus, in the *Mahāvairocana-sūtra* (fasc. V) he is said to occupy the south side of the Garbha-dhātu-maṇḍala. It is there stated as follows : "On the southern side of the maṇḍala is a division called *Sarva-pratihata-praśamita* (Ch'u-hai- chang-yüan 除蓋障院) or the division where every kind of hindrance is excluded . . . (Here) Acintyamatidatta sits on a lotus flower holding a jewel called the Cintāmaṇi in his left hand ".

But, according to the *Hsüan-fa-szü-i-kuei* (玄法寺儀軌) which was composed at the Hsüan-fa temple, and the *Ching-lung-szū-i-kuei* (青龍寺儀軌) which was composed at the Ching-lung temple (both of which, though rather late, are traditional commentaries on the *Mahāvairocana-sūtra*), he sits in the centre of the mandala. The earlier Chinese commentaries such as the *Shê-ta-i-kuei* (攝大儀軌), *Kuang-ta-i-kuei* (廣大儀軌) etc., however, place him at the west end of the above-mentioned division of the mandala.

These changes may be accounted for by the strong faith and high regard in which this bodhisattva was held by his many followers in China and Japan, who thus desired to bring his position up to the centre from the west or the south end of the division of the maṇḍala.

He is represented as bearing the usual features of a Mahāyāna bodhisattva ; features such as long hair, beautiful costumes and keyūras, all of which were, in fact, borrowed from what was considered fashionable by the Indian layman of the upper class. His whole body is yellowish-white in colour. The mudrā in which Acintyamatidatta is portrayed may be described as follows : His right arm which is bent at the elbow has the palm held straight up. The ring-finger and the little finger are bent inwards, while the thumb presses against the ring-finger. This is known as the mudrā of the sword. His left arm which is also bent at the elbow has the hand made into a fist and placed against his chest. It holds a lotus flower on which is kept the Cintāmaṇi gem. But yet another source, the *Tai-tsang-tu-hsiang* (胎藏圖像, 'Illustration of garbha-dhātu-maṇḍala'), describes him differently as follows : His right hand is held in an erect position, with the palm turned inwards and all the fingers stretched out. His left hand, holding in its fist a lotus flower with the cintāmaṇi, is made to rest on his knee. In this, however, he resembles Chandraprabha bodhisattva who occupies the west side of this same maṇḍala.

His *bīja* or 'seed of Buddhahood' is the letter 'ū', while his mantra is *namaḥ samanta-buddhānāṃ sarva-āśa-paripūra svāhā* (i.e., Obeisance to all Buddhas, you who will satisfy our every wish ! Svāhā !). I-hsing, explaining the significance of this *bīja* in his *Ta-jih-ching-i-chieh* (大日經義釋 a commentary on the *Mahāvairocana-sūtra*), states, "The symbolic sound or *bīja* 'ū' of Acintyamatidatta stands for the idea of 'non-genesis samaya' (chi-wu-hsing 極無性 samaya). All phenomena of this world are completely similar. The differences amongst them are only in their appearances and not in their substantiality, if any. This bodhisattva realises and shows us the truth of this fundamental sameness of the phenomena of the world. If one realises this, one could conduct oneself even as a Tathāgata free from all endeavour to shut out *kleśa* and bad actions. Moreover, it is such a one who could receive the Sukhā of the Traidhyāna world. Therefore, it is called the wisdom of the unthinkable (*acintyamati*). If we obtain this wisdom we could even live a secular life in this world without any kind of pain whatsoever." This mantra is further described (fasc. XIII) as being capable of affording the satisfaction of every wish of mankind, in the same way as the Cintāmaṇi, which this bodhisattva is represented as holding in his left hand.

ACINTYA-PARIBHĀVANĀ-NĀMA, also known as *Acintabhavita-paribhāvanā*, a Sanskrit text extant in its Tibetan translation, the ***Bsam-gyis mi-khyab-pa bsgom-pa shes-bya-ba***, in the Rgyud (tantra) section of the Tengyur. Its author was Rāhula (Tib. Sgra-gcan hdsin). The translator's name is not recorded (*Cordier*, II, p. 241, No. 73 ; *TM*. No. 2399).

ACINTYA-PRABHĀSA-BODHISATTVA-NIRDEŚA-SŪTRA or *Pu-szū-i-kuang-p'u-sa-so-shuo-ching* (不思議光菩薩所說經) was originally entered in *Ch'ih-yüan-lu* (至元錄), fasc. 3, fol. 19 a.

It was translated by Kumārajīva of the later Ts'in dynasty, 384–417 A. C. It consists of one fascicule. The Tibetan version is extant in the Sde-dge edition (*TM*. No. 103) under the title of *Hphags-pa khyehu snaṅ-ba bsam-gyis-mi-khyab-pas bstan-pa shes-bya-bahi chos-kyi-rnam-graṅs*. It was translated by Jinamitra, Dānaśīla and Ye-śes sde early in the ninth century.

In the Peking edition the same work occurs under the title of *Khyehu snaṅ-ba bsam-gyis-mi-khyab-pas bstan-pa shes-bya-bahi chos-kyi rnam-graṅs*, translated by Surendrabodhi and Ye-śes sde (*ŌM*. No. 771).

Both Tibetan translations omit the word 'bodhisattva', unlike the Chinese translation by Kumārajīva mentioned above. It agrees with the title of the lost Chinese translation by Dharmakṣetra, i.e., *Wu-szū-i-hai-tung-ching* (無思議孩童經) which entered the word 'boy' (*hai-tung*) in place of 'bodhisattva' (*p'u-sa*). See *Nanjio*, No. 396 & *Taishō*, No. 484.

S. K.

ACINTYA-PRABHĀSA-NIRDEŚA-NĀMA-DHARMAPARYĀYA, a Sanskrit work which is extant in its Tibetan and Chinese translations. The Tibetan text is the *Khyehu snaṅ-ba bsam-gyis-mi-khyab-pas bstan-pa shes-bya-bahi chos-kyi rnam-graṅs*, in the Mdo (sūtra) section of the Kangyur. The Indian Pandit Surendrabodhi and a Tibetan translator Ye-śes sde translated the work into Tibetan. It agrees with the Chinese translation *Pu-szū-i-kuang-p'u-sa-so-shuo-ching* (不思議光菩薩所說經) of Kumārajīva, some time between 402 and 412 A. C. (*Nanjio*, No. 396 ; *Taishō*, No. 484 ; *TM*. No. 103 ; *ŌM*. No. 771).

ACINTYA-PŪJĀVIDHI, a Sanskrit text extant in its Tibetan translation, the *Bsam-gyis-mi-khyab-pahi mchod pahi cho-ga*, in the Rgyud-hgrel (tantra-commentary) section of the Tengyur. The names of its author and its translator are not recorded (*Cordier*, II, p. 310, No. 74).

ACINTYARĀJA (NĀMA-MAHĀYĀNA-) SŪTRA, a Sanskrit Mahāyāna sūtra extant in Chinese and Tibetan translations. A bodhisattva, named Acintya-rāja, explains the various days and aeons (*kalpa*) in the different mansions and provinces of the Buddhas, commencing with the residence of Śākyamuni which is called Saha-loka-dhātu or the universe. Sometimes, however, Brahmā is also called the lord of the universe (*AMG.* II, 272). Of the Chinese translations one is by Hsüan-tsang of T'ang dynasty (A. C. 618–907), the *Hsien-wu-pien-fo-t'u-kung-tê-ching* (顯無邊佛土功德經 : *Nanjio* No. 95, *Taishō*, No. 289). According to Nanjio this is a translation similar to chapter 26 of *Mahāvaipulya-buddhāvataṃsaka-sūtra* (*Nanjio*, No. 87), and chapter 31 of the other translation of the same work (*Nanjio*, No. 88). The other is the (*Fo-shuo-*) *chiao-liang-i-chich-fo-ch'a-kung-tê-ching* (佛說) 較量一切佛刹功德經 (*Nanjio*, No. 881 ; *Taishō*, No. 290) by Fa-hsien (Dharmabhadra). Nanjio points out the difference between the above two works, viz., the principal speaker of the former is the Tathāgata and that of the latter is the bodhisattva Acintyaprabhāsarāja. The Tibetan translation is named *Bsam-gyis-mi-khyab-pahi rgyal-pohi mdo*. Neither the author's, nor the translator's names are given (*ŌM* No. 934 ; var. *Bsam-gyis-mi-khyab-pahi rgyal-po-shes-bya-bahi mdo* : *TM.* No. 268).

ACINTYAŚRĪ, a bodhisattva whose name occurs in a list of future Tathāgatas enumerated by Māyādevī (*Gaṇḍ.* 443 7).

ACINTYASTAVA (var. Acintastava), a Sanskrit text extant in its Tibetan translation, the *Bsam-gyis-mi-khyab-par bstod-pa*, in the Bstod-tshogs (stotra, hymns of praise) section of the Tengyur. It was composed by Klu-sgrub (Nāgārjuna) and translated into Tibetan by Tilaka and Pa-tshab Ñi-ma grags or Sūryakīrti (*Cordier*, II, p. 6, No. 19 ; *TM.* No. 1128).

ACIRAVATA, a novice to whom the *Dantabhūmi Sutta* (*M.* III, No. 125) was preached by the Buddha.

When Aciravata was in a forest-hut near Veḷuvana Jayasena (the son of king Bimbisāra, according to the commentary) visited him and asked him if it was true that the diligent and ardent bhikkhu could achieve concentration. On Aciravata replying it was so, the prince requested him to teach the doctrine. But the novice was reluctant, fearing the prince might not understand him. On being pressed, however, Aciravata preached the doctrine but it was lost on Jayasena who went away protesting that it was not possible for a bhikkhu, though active and earnest, to attain concentration. The novice reported the matter to the Buddha who remarked that there was no good in preaching to Jayasena whose heart was set after pleasure. Then the Buddha preached the *Dantabhūmi Sutta*. Aciravata rejoiced in the Buddha's exposition.

Both the Buddha and Jayasena address him as Aggivessana, the name of his clan.

L. R. G.

ACIRAVATĪ, one of the five great rivers (*pañca mahā-nadī*) mentioned in Buddhist texts, the others being Gaṅgā, Yamunā, Sarabhū and Mahī (*Vin.* II, 237). In the *Aṅguttara Nikāya*, these rivers are said to originate from the region of the five great lakes which constitute their joint source (*A.* IV, 101), but in the commentaries all of them are traced to a single source, the lake Anotatta (*AA.* IV. 197 ff.). From the Himālayas these rivers flowed eastwards into the ocean (*S.* V, 39). The Chinese pilgrim Hsüan-tsang refers to the Aciravatī as A-chi-lo and ascribes to it a south-east course past the city of Śrāvastī (Watters, *On Yuan Chwang*, I, 398 f.). The river could be seen from the terrace of the palace of king Pasenadi of Kosala (*Vin.* IV, 111 f.). At Sāvatthi an *udumbara* (*ficus glomerata*) grove grew on its banks (*SnA.* I, 19) and to the north of the Kosalan village of Manasākaṭa was a mango grove where the Buddha preached the *Tevijja Sutta* on the futility of mere knowledge. The Aciravatī is used here in three similes to point out the folly of pursuing the wrong path to reach the goal : invoking the gods for this end is as futile as it is for a man wishing to cross the Aciravatī, to stand on one bank and invoke the other bank to come over (*D.* I, 235 ff.). Once Pasenadi arranged for a religious discourse with Ānanda on the bank of the Aciravatī (*Bāhitika Sutta*, *M.* II, 113 ff.). While on his way to the Himālayas with five hundred bhikkhus Sīvali is said to have stopped on the bank of this river (*AA.* I, 248).

According to the *Saṃyutta Nikāya* the Aciravatī had a vast expanse of water, to measure which was no easy task (*S.* V, 401). History was created on its banks when Viḍūḍabha, the son of king Pasenadi routed the Sakyas (*DhpA.* I, 359 f.). There was great disaster when the river was in full spate, and not long after the slaying of the Sakyas, Viḍūḍabha and his army were swept into the sea (loc. cit.). Despite its being a source of great disaster people were in the habit of burying treasures on its banks. Once during the floods Anāthapiṇḍika, the great benefactor of the Buddha, lost eighteen crores of his wealth that he had buried on its banks (*DhpA.* III, p. 10).

There were many bathing spots in the river where monks and brāhmans used to bathe (*Vin.* IV, 161). An instance is recorded when Sāriputta bathed there (*AA.* II, 127). While staying in the Kosalan village of Daṇḍakappa situated near the river, Ānanda bathed in its waters with several other monks (*A.* III, 402). Other spots there were in which courtesans bathed naked, and some bhikkhunīs including the Chabbaggiya nuns did likewise until a rule was passed making it an offence for a bhikkhunī to bathe unclothed (*Vin.* I, 293 ; IV, 259 f., 278). In this same river the frivolous Chabbaggiya monks went to disport themselves by

clutching the horns, ears, necks or tails of cows that waded across, or by springing on the backs of these animals (*Vin.* I, 190 f.). The Sattarasa-vaggiya monks were in the habit of going to the river for water-sports until a rule was passed prohibiting it (*Vin.* IV, 111 f.).

The people on the banks cast nets for fish (*UdA.* 366). They were in the habit of stowing away rafts they had made, on this river (*Vin.* III, 63). An elephant was once tamed on its banks (*DhpA.* IV, 5). It was in the Aciravatī that Paṭācārā's child was drowned (*DhpA.* II, 264). Two instances are recorded when erring monks hit in the eye swans flying over the river (*J.* I, 418; II, 365). Kapila was reborn as a fish in its waters in consequence of his evil deeds (*DhpA.* IV, 41 ; *SnA.* I, 308). We are told that in the time of Kassapa Buddha the Aciravatī flowed round Sāvatthi and into a vast lake where separate bathing spots were demarcated for the king, the people, the Buddha and the Saṅgha (*MA.* II, 166).

This river has now been identified with the modern Rāpti in Oudh (Law : *Historical Geography of Ancient India*, p. 61). Aciravatī literally means 'short-lived' or 'not lasting long'. In the *Avadāna Śataka* (i, 63 ; ii, 69) the name occurs as Ajiravatī and I-tsing takes it to mean the river of the Aji (dragon : I-tsing, *Travels*, p. 156). Whatever its meaning and however great this river may be, it would endure, according to the *Aṅguttara Nikāya* (IV, 101), until the birth of a third sun, when not only its waters but those of the other great rivers as well would dry up and exist no more.

ACITTAKA, a stage of infatuation, in which one fails to comprehend anything. Tibetan 'sems-med-gñid' is a literal translation of the Sanskrit term. But in Chinese it is translated as *chi-chung-shui-min* (極重睡眠), *chi-shui-min* or *chi-chung-shui*, all of which mean 'extremely sound sleep'. This is one of the five stages of infatuation, in which no kind of consciousness is awakened.

In the Vijñānavāda, sensation or consciousness is supposed to arise on account of the six sense organs (*indriya*), and depending upon their respective objects (*āyatana*). The actual sensation or consciousness which thus arises is called *pravṛtti-vijñāna*, which, however, cannot arise independent of pure consciousness (*ālaya-vijñāna*). This actual consciousness (*pravṛtti-vijñāna*) cannot, however, arise in the next five spiritual stages. The five spiritual stages are as follows : *asaṃjñika*—unconsciousness (wu-hsiang-t'ien 無想天), *asaṃjñi-samāpatti*—attainment of unconsciousness (wu-hsiang-ting 無想定), *nirodha-samāpatti*—attainment of suppression (mieh-chin-ting 滅盡定), *acittaka*—the stage of infatuation (chi-chung-shui-min 極重睡眠), *mūrchā*—the stage of convulsion (chi-chung-mên-chueh 極重悶絕).

It will be seen from the above that *acittaka* is also one of them. In this stage actual consciousness cannot arise at all because of the absence of *ālaya-vijñāna*. See Fasc. VII of the *Vijñapti-mātratā-siddhi* of Hsüan-tsang (*Taishō*, No. 1585; cp. *Nanjio*, No. 1197).

The condition of a person in the *acittaka* stage should be carefully distinguished from that of a sleeping man. In normal sleep, which is one of the five obstacles (*pañca āvaraṇāni*), the sub-conscious remains alive. But in this 'extremely sound sleep' no kind of consciousness can arise. Thus, it is different from normal sleep. Nevertheless, this stage is induced by sleep and bears all the other characteristic features of normal sleep. That is why this stage is translated in China as 'extremely sound sleep'.

ACTA ORIENTALIA, an oft cited periodical devoted to Oriental studies and issued from publishing houses in the continent of Europe. It originated in the desire of members of several academic societies in Denmark, Norway and Holland for a common medium for their researches. The journal was first issued in 1923 from the press of the firm E. J. Brill (Leiden, Holland). The first editorial board comprised F. Buhl, C. Snouck Hurgronje, Sten Konow and Ph. S. van Ronkel, who had severally specialised in Egyptian, Islamic, Indo-Iranian and East Asian studies. The chief editor was Sten Konow. The articles were in the three most widely current European languages, namely, English, French, German.

Some numbers contained comprehensive articles on Buddhist subjects (or interest), while others invariably made valuable references to Buddhism. In Vol. III, for instance, J. Rahder had a long article on *Daśabhūmika Sūtra* and P. Tuxen another, entitled 'Zür Darstellung der Indischen Philosophie' (on the position of Indian philosophy), where the author had made a comparative study of Buddhism and Indian philosophy ; J. J. L. Duyvendak wrote on the 'Buddhistic festivals of all Souls in China and Japan' (Vol. V), and E. Obermiller (Vol. IX) had translated a work of Ārya Maitreya under the title 'The Sublime Science of the Great Vehicle to Salvation'.

In Vol. XI Johs. Pederson joined the editorial board and it is in this volume that Obermiller had two long articles on the 'Doctrine of Prajñāpāramitā as exposed in Maitreya's *Abhisamayālaṅkāra*'. Three general editors were responsible for Vols. XV—XX. Vol. XV contained a translation (by E. H. Johnston) of eight cantos (Nos. 15–22) of the *Buddhacarita* of Aśvaghoṣa, while Vol. XVII had a valuable article by Rahder on Mahāyāna. After Vols. XVIII (1940) and XIX (1943), occurred an interruption, Vol. XX appearing in 1948, after a lapse of five years. Upon the death of Sten Konow, in the last-named year, K. Grønbech became the editor-in-chief. A new editorial

board consisting of C. C. Berg, Georg Morgenstierne, H. S. Nyberg and Johs. Pedersen, issued Vol. XXI in 1953. From this issue the journal came under the press of the Copenhagen firm, Ejnar Munksgaard. Vol. XXII appeared in 1955 and from XXIII (1959) C. E. Sander-Hansen has continued to be the editor-in-chief, upon the death of Gronbech. In the last-named volume appeared an article from the pen of Eric Haarh entitled 'Contributions to the study of Mudrā and Maṇḍala'; it is of considerable importance in Tantric studies. Vols. XXIV—XXVI were published respectively in 1959, 1960 and 1961.

Acta Orientalia, from its very first number, has been considered a journal of high academic value and it is consulted by writers on Buddhist subjects.

S. K. NANAYAKKARA.

ACTION. General Aspects. From various viewpoints this will be considered under respective headings. For action can be considered in respect of its moral implications: good and evil actions (*kusala-akusala kamma*), which is really not a view of action, but of the consequences of action, the result (*vipāka*).

Apart from good action (*kusala kamma*) there is right action (*sammā-kammanta*) which is a constituent of the Noble Eightfold Path (*ariya aṭṭhaṅgika magga*) and which refers to bodily actions only, right action being the abstinence from killing, stealing and wrong indulgence in the senses. In the wider sense of action as karma, it is also right thought (*sammā-saṅkappa*) and right speech (*sammā-vācā*) which have to be classified under *kusala kamma*; for action in its comprehensive meaning is volitional activity which may lead to mental, verbal or physical activity. This volitional aspect (*cetanā*) is the most essential characteristic of karmic action, and without such intention there would be no karmic responsibility, even if there were physical activity. Action then can be viewed as the cause of the effect (*vipāka*) and will be accordingly classified; for it cannot be a good cause which produces an evil effect. From this point of view, action and its result can be considered from the time-aspect, i.e., the duration required for action to ripen in this life itself (*diṭṭha-dhamma-vedanīya-kamma*), or in an immediately following birth (*upapajja-vedanīya-kamma*), or in some further distant, future existence (*aparāpariya vedanīya-kamma*). Again, without taking into consideration the effect itself, one can discuss the intrinsic efficacy of action, its reproductive force (*janaka-kamma*), its supportive activity (*upatthambhaka kamma*), counteractive (*upapīlaka kamma*) or even destructive force (*upaghātaka kamma*), or in other words the function or power of action to generate, to maintain, to suppress and to destroy.

From the seriousness of the result, action can be classified as weighty (*garuka kamma*) and un-[illegible]lable, as habitual (*āciṇṇa kamma*) or accumulated (*kaṭattā-kamma*), which will bide its own time to produce its fruit, if conditions permit. And if all that fails, it remains mere action spent, action that was (*ahosi kamma*) and that will never bear fruit.

A very special reference must be made here to the identity of the actor and the action, the doer and his deed. For, this constitutes the most essential and characteristic teaching of Theravāda Buddhism, the doctrine of *anattā*, no separate self-entity, which refutes the heresy of individuality (*sakkāya-diṭṭhi*).

Karmic action being always intentional, there is a purely psychological conclusion to be drawn, viz., that only full-grown thoughts with volitional discrimination entail karmic responsibility; while mental processes which have not grown beyond the stage of sensory reactivity (*vedanā*) or perceptivity (*saññā*) and which do not possess the active power of discrimination which moulds (*saṅkhāra*) a thought with likes and dislikes—such processes are not action, but reaction.

Finally, there is known that action which is born from the understanding of a need, and not from the hunger of greed. Action grown from greed (*taṇhā*) and misunderstanding (*avijjā*) is karma which will result in rebirth. But action, which springs from the necessity of understanding, has no further motive and does not project itself into a future existence. It is action, pure and simple (*kriyā*).

All the above aspects of action will be dealt with under the headings of the technical terms which have been mentioned here.

Doctrinal Aspect of Action.[1] One frequently meets in Buddhist writings with two statements which seem to stand in glaring contradiction to one another. One is that there is nothing but movement and change (*sabbe saṅkhārā aniccā*), and the other is that things do not move, because matter and form disappear as soon as they appear (*ruppatīti kho tasmā rūpan ti vuccati*: *S.* III, 86). The contradiction is only apparent as long as things are associated with entities. According to the Buddha's teaching of *anattā* there are no abiding entities, no lasting substances, no permanent existence, no souls; only passing phenomena appear and disappear in a process of impermanence and change; hence there is nothing but movement. Again, this movement does not belong to abiding entities and hence there are no things that move, and whatever movement there is, is not of things; things do not move. Just as existence is not something added to the existing thing, so is motion, or change, not something added to a thing, whereby it moves and changes.

That motion is something different from the thing moving was the view of the Vaiśeṣikas[2] who attributed to existence the three realities of substance, quality and motion. But the orthodox Buddhist view is distinguished from these views by the fundamental theory which denies the existence of any substance. When, therefore, action takes

1 For the moral aspect of ACTION, see s.v. KARMA.

2 *Vaiśeṣika-sūtra* I, 2, 7–8, quoted by Stcherbatsky, *Buddhist Logic* I, p. 99.

a prominent place both in the psychology and in the ethics of Buddhism, it is not a denial of empirical action, but a denial of action as something separate from the actor. "An actor there is not, but only action can be seen" (*kārako na, kiriyā va vijjati* [3]).

> "There is no actor of the deed,
> No reaper of the fruit in sight,
> Phenomena alone flow on;
> This is the only view that's right."
>
> *kammassa kārako n'atthi*
> *vipākassa ca vedako,*
> *suddhadhammā pavattanti,*
> *ev'etaṃ sammadassanaṃ.* [4]

In Buddhism action does not require a medium to act, whereas in science the forces of action in nature are considered as the forces of definite elements, whatever their inherent constitution may be.

Action in Buddhism is not latent, is not a concealed force, awaiting the opportune moment to burst forth into action. For, action is actuality, i.e., arising from moment to moment, dependent on conditions both in arising and in ceasing, but never abiding, subsisting, enduring in any form of energy whatever.

In physics it is not energy which can be observed or measured but the effect in the form of motion or heat. The existence of energy is deduced from phenomena which are considered to have been caused thereby. Similarly action can only be observed in actuality when it is seen as reaction. This reactionary actuality comes into play in dependence (*paṭicca*) on certain conditions, but does not require some static energy behind it to set the chain of reactions going through some ultimate first cause.

It is absolutely essential for the proper understanding of Buddhism that this idea about the intrinsic nature of action being reaction is comprehended, for on this depend the understanding of the Buddhist denial of 'God' and 'soul', the comprehension of the laws of dependent origination (*paṭicca-samuppāda*, q.v.), the doctrine of karma, the infinity of the process of evolution, the entire concept of existence as becoming.

Action, then, is entirely conditional, such as sensation being totally dependent on the function of organs, the proximity of objects and the actual contact of both. This does not mean that sensation is latent in the senses, except in a very wide meaning, according to which it would be equally accurate to say that sensation is latent in the sense-object, too.

The Buddhist concept of energy does not admit the idea of a static body of energy. Action can only be understood in action, never in isolation. It is as a reflection which cannot be observed in itself and apart from the reflecting agency. Thus, action cannot be admitted as result of energy and apart from it; neither can energy be thought of, unless in action. In other words, there *is* no energy, but energy arises in action; and action arises in dependence on conditions which make it reactionary. That these reactions are not purely mechanical is shown by the fact that the conditions on which a certain action recoils may be entirely negative: the dissociation (*vippayutta*), the absence (*natthi*), the disappearance (*vigata*) of conditions are all aspects which negatively influence the arising of mental and physical phenomena.

Action does not operate by latent or static energy becoming dynamic, but by accord. It means that there is not a flow of energy, path or beam, passing on from there to here, but a harmonious adaptation. The readers of this article will react to the ideas here expressed. If these ideas were conveying an impulse, the reaction in the readers ought to be similar. But the various readers may react vastly differently, in agreement or in total dissent, which cannot be inherent in those concepts, but are conditioned by the temperament, education, background, beliefs, etc., etc., of each individual. And thus each one's reaction becomes his own individual action; and it is such individual action which forms the individual.

When reaction is explained by latent energy coming into operation, the door of speculation is opened wide and one illogical supposition is followed by a more absurd contradiction. A 'soul' with all the qualities of 'ether' is invented to explain the opposing phenomena: infinite in the future although with a beginning in the past; a substantial entity, yet entirely spiritual; a principle of thought and life of the body, yet not able to procure eternal physical life, not able to prevent acts of utter thoughtlessness; controlling all actions, and yet subject to the desires and passions of the flesh.

From the Buddha's standpoint, however, there is no actor apart from his action, whether this be physical or mental. Actions are conditions for reactions; and reactions are the events of life as experienced, forming the background and the mould in which further events are cast and shaped. Such are the mental formations (*saṅkhārakkhandhā*), the concepts of consciousness; such are the formations of actuality (*saṅkhārā*) which shape the process of thought, of becoming, and of rebirth.

Right Action (*sammā-kammanta*) is the fourth section (*aṅga*) of the Noble Eightfold Path (*ariya aṭṭhaṅgika magga*) which, together with the second and third sections: right thought (*sammā-saṅkappa*) and right speech (*sammā-vācā*), covers all human activity from an ethical viewpoint. These three sections contain the usual ten skilful or wholesome actions (*kusala kamma*) of thought, word and deed. The right activity of physical deeds is given (*A.* V, x, 28, 176; *M.* sutta 114) as the three abstinences from taking life (*pāṇātipāta*), stealing (*adinnādāna*) and wrongful indulgence of the senses (*kāmesu-micchācāra*), this last one with particular, though not exclusive, reference to prohibited sexual intercourse.

H. G. A. van Zeyst.

ACTUALITY.

The mental and material, both are here in fact,
A human substance though cannot be found;
Void it is, set up like a machine,
A mass of conflict, like a bundle of grass and sticks.

Nāmañ ca rūpañ ca idh'atthi saccato
na h'ettha satto manujo ca vijjati,
suññam idaṃ yantam ivābhisaṅkhataṃ,
dukkhassa puñjo tiṇakaṭṭhasādiso.[1]

With this verse, quoted by Buddhaghosa from 'the Ancients' (*ten'āhu Porāṇā*), the doctrine of actuality is expounded, which together with the doctrine of insubstantiality (*anattā*) forms the basis of the entire structure of the philosophy of Buddhism, psychological as well as ethical. "As a puppet walks and stands through a combination of wood and strings, although it is empty, without life, without impulse, so this contraption of mental and material factors, void, without soul, without free will, can walk and stand, as if it had will and work of its own" (*sa-īhakaṃ sabhyāpāraṃ viya*[2]). In this three concepts are involved: the ideal, the real and the actual.

Idealism considers the two factors, mind and matter, as two ultimate substances in an idealistic dualism of the type of Plato's and Descartes'; or it finds in this dual aspect a synthesis, claiming with Hegel that mind alone is the basic stuff of existence. Idealism is supernaturalism, based on subjectivism.

The reaction to this is a materialistic objectivism, which originated in a naive form among the Greek philosophers of the sixth century B. C., later developed by Democritus and the Atomists. This reaction, too, knows its extremists who have given to matter the status of an independent absolute, whose laws govern the universe. Scientific laws, however, do not govern the world, but are expressions of man's comprehension of natural phenomena, of the behaviour of matter.

Here we have, therefore, a mental conception of the action of matter; and that is actuality. The knowledge of activity is essential for such activity to become actual; without that knowledge there is either speculative idealism or ignorance which in gross materialism endeavours to exclude the mental. Hence it is said that mind is the forerunner of all, that all is made by mind (*manopubbaṅgamā dhammā, manoseṭṭhā, manomayā*[3]). Mind is not a spiritual entity observing the events of a passing world, not a battlefield where conflicting armies clash and are conquered, but it is the battle itself, the actual conflict in which the forces of grasping for an ideal stand revealed in opposition to the reality of nature. Not reality is experienced, but only the mind's reaction to reality; and that reaction is actuality. It is the subject and the object of all Buddhist investigation, not to be grasped at in a purely conceptual analysis, not to be accepted in a dogmatic so-called realistic fashion, but to be actually experienced, over and over again, with each shifting standpoint, with each changing view, till ultimately the futility of all views (*diṭṭhi*) is fully comprehended and the possibility of any standpoint is finally discarded: "Unstayed and unstriving did I cross the flood" (*appatiṭṭhaṃ anāyūhaṃ oghaṃ atari*[4]), declared the Buddha.

Yet, there is no cleavage between the actual and the real. Nowhere in the Buddha's teaching is there a denial of reality. The higher knowledge and insight of reality or the comprehension of the actual state of things (*yathābhūta-ñāṇa-dassana*) is one of the eighteen chief kinds of intuitive understanding which expose the truth of all corporeal and mental phenomena of existence. Even in the further developed doctrine of the void (*suññavāda*) we do not meet with a universal illusion on the Vedāntic lines of *māyā*, as a denial of the existence of the empirical universe, which was necessitated by the conception of an all-pervading *ātman* as the only reality to the exclusion of everything else: "the *ātman* is above and below, behind and in front. The *ātman* is all the world".[5] In Vedānta as a system of non-duality (*advaita*) the phenomenal world does not exist. In the Buddha's teaching the *ātman* is denied both as an individual soul or substance and as a universal spirit. Hence, there is no denial of the world of phenomena, but the universe is deprived of a permanent nature, and hence only phenomena roll on (*suddhadhammā pavattanti*[6]).

The constitution of nature being phenomenal and without abiding essence or substance, it is intrinsically a process of becoming (*bhava-santati*). The viewing of this process as a constant, as an unvarying quantity under the same conditions, has given rise to a concept of a permanent substratum, which remains unchanged even when conditions and phenomena alter. Such a view does not represent the real nature of things, but is the actual response or mental reception, a re-actual perception in a dualistic state of mind. This illusion comes from the mind's attempt to be both itself and its concept of itself. It is thinking with a split mind, one part as the passive observer of actuality, the other part standing aside to interfere with and to control the observed, to assert itself in its splendid isolation, to absorb the observed in admiration and to repel in condemnation. This illusion becomes the great delusion whereby the individual process of life asserts permanency and substantiality, and whereby the ground is prepared for the arising of conflict. To the reality of the void in the process of becoming is given an ideal reality of being, which constitutes the eternal conflict arising in the mind, and created

5 *Chāndogya Upaniṣad*, VII, xxv 2.
6 *Vism.* xix, § 20, p. 517.

by the mind. To bring this delusion to an end, the mind must cease to act upon its stream of experience (*bhavaṅga sota*) from the isolated standpoint of a self or ego. The experience itself is actuality, but there is no ego apart from experience. "Whoever holds views about the body, feelings, perceptions, ideations or consciousness, all of which are impermanent, in conflict and without entity—views such as 'I am better, or equal, or worse' (than others), what else is such a person but blind to actuality?".[7]

Actuality then is the action which is both impression and expression, a communication in the most literal sense of the word, wherein the objective event has become unified with the reactor. It is, however, the appropriation of such a reaction by a misunderstanding subject which causes the conflict. In actuality, the subject is not less phenomenal than the object; through interconditionality they arise, support one another and break up. "The process of becoming with its five constituents of materiality and mentality moves on through interdependency of those factors (*aññamaññaṃ nissāya pavattati*), each one giving the other the support without which both will fall (*ekasmiṃ patamāne itaram pi patati*[8])." This process of actuality, which is life, is like the fire of which the Buddha spoke in the *Ādittapariyāya Sutta*[9], the fire of the senses, their contact, their action and reaction, burning with grasping, fed by the fuel of birth and death in ignorance, resulting in the heat of inflamed passions, leaving behind the charred remains of grief and sorrow, while moving on to further fields to set ablaze, always restless, always grasping, always springing up afresh, drawing all into itself, consuming all, constant in its inconstancy, purposeful in its inconsistency, a living contradiction, because living on death.

This doctrine of actuality is not claimed as a dogma based on the Buddha's authority, for he himself said, "Monks, whether a Tathāgata arises, or does not arise, this fact prevails, regarding that on which all natural phenomena are based and in respect of which they are fixed in the mind, that all phenomena are impermanent, unsatisfactory and without substance"[10]: *uppādā vā bhikkhave Tathāgatānaṃ anuppādā vā Tathāgatānaṃ, ṭhitā vā sā dhātu dhammaṭṭhitatā* (= *sabhāvaṭṭhitatā*[11]) *dhammaniyāmatā* (= *sabhāvaniyāmatā*[11]), *sabbe saṅkhārā aniccā*, °*dukkhā*, °*sabbe dhammā anattā*. In other words it is in the natural composition of all world-events as well as of all individual concepts that they are passing events, that they, therefore, cannot provide lasting satisfaction, and that they have no abiding entity, but arise and cease in dependence of conditions. It is a process of 'conditioned existence' (*paṭicca-samuppāda*), in which 'to be' does not last longer than its actual 'becoming' which is a dependent relationship (*idappaccayatā*[12]). As the natural order of things is thus, whether this truth has been discovered or not, there is no need and, in fact, no scope for authority and dogma. The facts speak for themselves and can be seen by anyone who cares, provided he sees with an unprejudiced mind.

This teaching of actuality, instead of giving cause for mental depression in its negation of everlasting life, is rather the joyous proclamation of deliverance from the bonds of delusion, whereby the misconceived 'I' (*sakkāya-diṭṭhi*) is fettered to conflict and woe (*dukkha*). Thus the twin doctrines of actuality and of no-self are complementary and are frequently but different angles of the one truth.

Actuality is the main foundation on which the doctrine of action (*kamma*) is built. For the *kamma* of the Buddha's word is, unlike its forerunner, the *karma* of the Upaniṣads, not a property of the soul, for no doer (*kāraka*) is discoverable, but only doing (*kiriyā*[13]). There is no experiencer (*upabhuñjaka*[14]) of the fruit of action, no one who feels (*vedaka*[15]). But there is action with volition (*cetanā*) which is the reaction of the individual to actuality. Not all reaction evolves into a future result, but only such which grasps at actuality in ignorance of its true nature. For grasping is self-projection; and when self is a delusion, such projection can only lead to conflict with actuality itself, which is woe.

Existence then is actuality, and as such it is not just being, but action. Action does not arise spontaneously, but in dependence on conditions. The human mind has tried to bind this actuality down to a law of cause and effect, but in doing so made the mistake of postulating a beginning, a first beginning, an origin, a creator, a God. This view originated in the misconception of existence as 'being' instead of 'becoming', as an ideal entity instead of an actual process, which *has* no beginning, but which *is* beginning always. "The beginning of things cannot be known" (*na paññāyati*) just because it is impossible to point out the beginning of an action which grows out of a world of actuality. Actuality is action and reaction; it has no fixity, no limits of time or space; it cannot be considered, therefore, in analysis or in isolation, for that would kill the process. Views, opinions, concepts, all stand condemned as erroneous, because they take up a standpoint which is ideal and not actual. A search becomes possible only if the object of the search is known. Said God to Pascal, "Thou would'st not seek me, if thou had'st not found me". And so a search for truth becomes impossible; it is at most a search for an ideal which is a mere concept, born from desire. And he who only looks for what he wants to find, is a bad truth seeker. For, truth is not a dogma, a view (*diṭṭhi*), an opinion, but a fact, an event, the embodiment of nature (*bhūta-kāya*) as a result of becoming (*bhava*). Hence, truth is not static, but actual; and the realisation of truth is the discovery of actuality (*yathābhūta-ñāṇa-dassana*). But, wherever

actuality is discovered it is within the process of thought, not necessarily discursive thought or logic. Thinking itself is the most actual of the entire build-up of actuality, for actuality in word or deed is the mere result of the actuality of thought. And in this process of thinking lie both the entire problem of actuality and its solution. It is the egg within its unbroken shell which contains the germ of life which has to develop within itself and from within, then break its confinement, and live. Reality or nature exists everywhere, but it is known only within the shell of conceptual thinking; or rather, it is only the shell of conceptual thinking about reality, which is known. And whatever may be said or thought about reality, it still remains conceptual thinking, and not reality. The only point where reality can be touched is the shell itself, i.e., the process of thinking, for that, too, is nature. But to think about thinking is mere speculation of thought; it is not grasping the real. Hence the only way to grapple with the problem is not a search for the real, but the understanding of the actual. Again, this understanding cannot be a process of logic, but must be an understanding which is comprehension through insight (*ñāṇa-dassana*). It is not in thinking that the process of thought can be understood; but through patient watchfulness and through minding (*yoniso mana-sikāra*) it will be possible to follow the ways of thinking, the subtle expedients and evasions which constitute the mask (*persona*), the shell, which hides and binds reality, all of which form actuality. For actuality is the form, the pattern of action, a pattern which is made by the mind, a mould in which the mind endeavours to capture and to shape reality, and in doing so gets caught itself. When once a mask is seen to be only a mask, it has no further power to instil fear; it can be seen as a mask, perhaps as a piece of art, but it cannot communicate a living emotion, just because it is an empty shell.

The task of the mind is to understand actuality, and not to seek reality. For a search of the unknown is but a quest for the ideal, which is unreal.

H. G. A. van Zeyst.

ACYUTA (1). Some time after the cremation of the remains of the Buddha, says the *Mahāvastu* (113.14), a 'Council of dharma' was held in the Saptaparṇa grotto on the northern slope of the Mount Vaihāya. There, questioned by Mahā Kāśyapa, Mahā Kātyāyana enumerated the names of the Buddhas worshipped by the Exalted One when he was in his fifth bhūmi. Among these was the Buddha named Ratanaparvata, during whose time the Buddha of the present age was the world ruler Acyuta. Having worshipped the Buddha, Acyuta said to him, " O thou elephant among men, I have eighty-four thousand palaces. These in all splendour I give to thee and thy community of disciples." The Buddha Ratanaparvata accepted them and Acyuta made this vow, " By the merit of this good deed may I become an unfailingly strenuous performer of good deeds which heap up merit and a protector of the unprotected."

ACYUTA (2), the name of a class of gods mentioned in the *Mahāsamājasūtra* (*Kl. Turf.* IV, 185), the same as Accutā in the corresponding Pali *Mahā-samaya Sutta* (*D.* II, 259). See ACCUTADEVĀ.

ACYUTA (3), a nāga-king, given as the 65th in a list of names of eighty-one nāga-kings (*Mhvyut.* 3292).

AḌAKĀVATĪ (var. Aṭakāvatī and Alakāvatī), referred to in the *Lalitavistara* (p. 202), the *Suvarṇa-bhāsottamasūtra* (p. 116) and the *Mahāmāyūrī* (228) as the capital of the Yakṣas, is presumably the Alakā of classical Sanskrit and Āḷakamandā of Pali literature. Edgerton prefers Aḍakavatī (*BHS.* s.v.).

ADALIDDA SUTTA, the seventh sutta of the *Cakkavatti-vagga* in the *Saṃyutta Nikāya* (V, 100). The term refers to a rich or well-to-do person. But, in this sutta an attempt has been made to define the term from an ethical point of view. It is said that one is called 'rich' or 'well-to-do' only if one has cultivated and made much of the seven constituents of supreme wisdom (*bojjhaṅga*).

ADAM'S PEAK, a widely current name for the most conspicuous peak in Ceylon, famed for the Buddhist tradition (*Mahāvaṃsa*, 1, 77) of the Buddha having left the imprint of one foot upon it. See SUMANAKŪṬA.

ADANA, name of a nāga king found in the *Mahā-māyūrī* (264.25 : *BHS.* s.v.).

ĀDĀNA-VIJÑĀNA. Sanskrit *ādāna* (same in Pali) literally means 'taking', 'seizing', 'receiving', 'drawing near to one's self', etc., and the Tibetan is a mere literal translation of the word. But, in Chinese, several translations are found for this term, generally meaning: to adhere to. *Ādāna-vijñāna*, however, is the name given to the seventh or the eighth of the categories of consciousness listed by the Vijñānavāda.

Many Buddhist commentators are at variance as to whether this particular consciousness belongs to the seventh or the eighth category, and on the whole it is not possible to come to a definite conclusion. For example, in the first fascicule of the *Sandhinir-mocana-sūtra* (*Nanjio*, 247) it is stated, " This consciousness is designated *ādāna-vijñāna*. Why is it so called ? Because this consciousness adheres to the body. Besides this, it is also called *ālaya-vijñāna*. Why is it so called ? Because this consciousness is kept in the body." Also, in the third fascicule of the same work it is further stated. " This *ālaya-vijñāna* is designated as *ādāna-vijñāna*, because it can afford to sustain the seeds (*bīja*) of elements (*dharma*) and can also afford to maintain the sense-organs (*indriya*) and the sense-fields (*āyatana*). " These passages show that *ādāna-vijñāna* was used as merely another name for *ālaya-vijñāna* which, too, has the meaning of 'adherence'.

But, in some other works, *ādāna-vijñāna* is characterised as the seventh consciousness in its own right, and is sharply distinguished from the eighth consciousness, i.e., *ālaya-vijñāna*. Asaṅga, the founder of the Vijñānavāda theory, made this assertion in his works such as the *Vidyāpravartana-śāstra* (*Nanjio*, No. 1214) and the *Vidyānirdeśa-śāstra* (*Nanjio*. No. 1217). In them a distinction is made between *ādāna* and *ālaya-vijñāna* which represent the consciousness of 'corrupt adherence' and the 'pure store-consciousness', respectively. Here, the term *ādāna* is interpreted as 'unintelligible' while *ālaya* is 'intelligible'.

It was this diversity of interpretation that led to much of the confusion or argument among Chinese commentators. The arguments concerning this problem flourished especially among the Chinese translators, who were at the same time the systematists of the new sect in China. Generally speaking, the so-called old translators, such as Paramārtha, Hui-yüan, Chih-i and Tao-chi who belonged to the Ti-lun, the Shê-lun and the T'ien-t'ai sects, respectively, rendered it as the seventh consciousness.

As mentioned above, the term *ādāna* has the meaning of adherence. Thus it was rendered as the seventh consciousness which means the consciousness of self-adherence. On the other hand, the so-called new translators like Hsüan-tsang and K'uei-chi, who were the founders of the Fa-hsiang sect, established a distinction between the seventh and the eighth *vijñāna*. They considered that *ādāna-vijñāna* was only another name for *ālaya-vijñāna*, and that the seventh *vijñāna* ought to be called *manas-vijñāna*.

But it may be briefly stated that the *ādāna* and the *ālaya* must not be regarded as separate because, etymologically, both these words have the meaning of 'adherence' and 'store' at the same time.

S. K.

ADANTA SUTTA. "I do not know, O monks, of any other single thing which, if untamed (*adanta*), conduces to so much harm, namely, the mind. It is the untamed mind, O monks, which leads to extremely great loss" (*A*. I, 6). This is entire sutta (4th vagga, *eka-nipāta*) which is so clear that no comment is necessary. In subsequent suttas synonyms are given for the untamed mind, viz., uncontrolled (*agutta*), unguarded (*arakkhita*) and unrestrained (*asaṃvuta*).

ADANTA VAGGA, the fourth chapter in the *eka-nipāta* of the *Aṅguttara Nikāya* (I, 6–7), comprising ten very short suttas, of which only the first and second deal with *adanta* and *danta*, respectively, the mind untamed and tamed. It is the first sutta which has given its name to the entire chapter.

Other suttas in this chapter differ from one another only in the key-word of the common formula. Thus the mind is discussed as uncontrolled (*agutta*) and controlled, unguarded (*arakkhita*) and guarded, unrestrained (*asaṃvuta*) and restrained.

It is the tamed, controlled, guarded and restrained mind which is said to conduce to great profit (*mahato atthāya saṃvattati*), whereas the Buddha states that he does not know of any other thing which leads to so much harm (*anatthāya*) than an untamed, uncontrolled, unguarded and unrestrained mind.

ADAPTABILITY (*kammaññatā*) is a characteristic common both to body and to mind. Physical adaptability (*kāya-kammaññatā*) is the workableness and wieldiness of matter, such as that of sandalwood (*candana*); and mental adaptability (*citta-kammaññatā*) is compared therewith, when the mind is made pliable in mental culture (*bhāvitam bahulīkatam cittaṃ : A*. I, 9). As a physical phenomenon it is one of the 24 derived (*upādā*) or secondary material attributes. See RŪPA.

As a mental formation (*cetasika*) adaptability (*kammaññatā*) belongs to the group of 19 phenomena which occur in all wholesome mental states (*kusala citta*) and is distinguished in that group as adaptability of the mental faculties working through the physical senses (*kāya-kammaññatā*) and adaptability of consciousness (*citta-kammaññatā*). See CETASIKA.

H. G. A. v. Z.

ADAPTATION, or the moment in which the mind qualifies itself for mental absorption (*jhāna*). See ANULOMA.

Insight of adaptation (*anuloma-ñāṇa*) equips the meditator with mental qualifications for the Path. See ÑĀṆA.

ĀDARŚA JÑĀNA. The wisdom known by the name of *ādarśa*. or, more fully, *ādarśa-jñāna* which in its Tibetan equivalent, reads as 'me-lon lta-bahi ye-ses', was originally conceived by the Vijñānavāda. In China it is commonly called 'the wisdom of a mirror' or 'ta-yüan-ching-chih'.

It is a well known fact that the term 'wisdom' when used in Buddhism conveys a somewhat different meaning from what it usually does when used in modern terminology. In the Buddhist texts it means the application of the mind to the knowledge of the truth, i.e., to the knowledge of what is (*tattva*). By a direct effort it destroys false views concerning self and nature, and its complete possession is identical with the state of Nirvāṇa. Only at the stage of fruition (*phalabhūtā*) do Buddhas possess it; bodhisattvas cultivate its germ (*hetubhūtā prajñā, bījabhūtā* : L. de la Vallée Poussin in *ERE*. II, p. 753). The doctrinal connection with this transcendental wisdom has been examined and established more in detail through the efforts of the Vijñānavāda. In the course of their long history of speculations on the different types of wisdom they arrived at a definite scheme regarding them. According to this scheme four kinds of wisdom are visualised (*catvāri jñānāni*). They are *ādarśa-jñāna, samatā-jñāna, pratyavekṣaṇā-jñāna* and *kṛtyānuṣṭhāna-jñāna*.

A large number of works such as the *Mahāyāna-sūtrālaṅkāra* (*Taishō*, 1604; cp. *Nanjio*, 1190), the *Mahāyāna-saṅgraha* (*Taishō*, 1594; cp. *Nanjio*, 1247), the *Vijñaptimātratā-siddhi* (*Taishō*, 1585; cp. *Nanjio* 1197) and the *Buddhabhūmi-upadeśa* (ibid. 1195) of the Vijñānavāda mention this classification. In it *ādarśa-jñāna* occupies the foremost place and is explained as a pure wisdom gained by the sublimation of the eighth stage of consciousness, or *ālaya-vijñāna*. On attaining this wisdom everything in the world, of the past, the present and the future, appears before one as vividly as in a mirror. Hence its appellation ' mirror-like wisdom '. According to the Vijñānavāda this wisdom appears as the fruition of Buddhahood, and the three subsequent and lower wisdoms are classified as the results of the seventh and the sixth stages of consciousness and of the five physical sensations, respectively.

In the esoteric philosophy, however, this supreme wisdom lost its position of primary importance and was superseded by a new and higher wisdom which is designated as the *dharma-dhātu-svabhāva-jñāna*; and is considered as the wisdom of the ninth stage or *amala-vijñāna* (q.v.) in this esoteric system.

In the *Bodhicitta-śāstra* attributed to Nāgārjuna (*Taishō*, 1665; *Nanjio*, 1319), the five wisdoms (*pañca-jñāna*) of this school are explained thus: Amongst the thirty-seven deities in the Vajradhātu-maṇḍala, the five greatest Buddhas represent the five jñānas respectively. Akṣobhya, the Buddha of the East, is also called the Buddha of *vajra-jñāna* since he realises *ādarśa-jñāna*. Ratnasambhava, the Buddha of the South, is also called the Buddha of the *abhiṣeka-jñāna* since he realises *samatā-jñāna*. Amitābha, the Buddha of the West, is also called the Buddha of the *padma-jñāna* or Dharma-cakra-pravartana since he realises *pratyavekṣaṇā-jñāna*. Amoghasiddhi, the Buddha of the North, is also called the Buddha of *karma-jñāna*, since he realises *kṛtyānuṣṭhāna-jñāna*. Vairocana, the Buddha of the Centre, is the foundation of all since it is he who realises the *dharma-dhātu-svabhāva-jñāna*.

Kūkai in his *Hizōki* gives an interesting illustration of these forms of wisdom using the metaphor of water as follows: The clear surface of water can represent everything in the same way as could a mirror. This will correspond to *ādarśa-jñāna*. The figures of everything reflected on the surface of water are completely equal without a higher or a lower. This will correspond to *samatā-jñāna*.

As stated above, the five wisdoms appear to correspond to the five Buddhas respectively. Later, in the Segaki ceremony (of alms-giving to the pretas), these five Buddhas (or five wisdoms) were given other names and worshipped as the main deities of this ceremony. The following table shows the inter-relation amongst the five wisdoms, the five Buddhas, and the five deities of the Segaki ceremony.

Wisdoms	*Buddhas*	*Directions*	*Deities*
five jñānas	Śākyamuni or Amoghasiddhi	North	Abhayaṅkara
6th jñāna	Amitāyur	West	Amṛtarāja
7th jñāna	Ratnasambhava	South	Prabhūtaratna
8th jñāna	Akṣobhya	East	Surūpakāya
9th jñāna	Vairocana	Centre	Vipulakāya

As is well known, the Segaki ceremony has become popular especially in China and Japan. Sources for its practice, however, could not be found in India, although a fragment of the *Ullambana-sūtra* (*Taishō*, 685; *Nanjio*, 303) was found in central Asia. Nevertheless, in some of the later Indian Tantric works (e.g., *Sādhanamālā*) we do find an almost identical classification as follows:—

Buddha	*Colour*	*Gesture*	*Vehicle*	*Symbol*
Amoghasiddhi	green	abhaya	garuḍa	viśva-vajra
Amitābha	red	samādhi	peacock	lotus
Ratnasambhava	yellow	varada	horse	jewel
Akṣobhya	blue	bhūsparśa	elephant	vajra
Vairocana	white	dharma-cakra	dragon	cakra

S. KANAOKA.

ĀDARŚAMAṆḌALANIRBHĀSĀ, name of a world-region (*lokadhātu*), occurring in a list of regions, the Tathāgatas in which are said to come within the range of the vision of the guild-leader Muktaka as he strives for and accomplishes the Tathāgata-salvation (Tathāgatavimokṣa) named Asaṅgavyūha. In this world-region he sees the Tathāgata Candrabuddhi (*Gvyū.* 82.10.).

ĀDARṢAMUKHA (1), the bodhisattva in a previous birth as the youngest of the five sons of a king named Ānanda (*GM.* Vol. III, pt. I, 114 f.). He had gentle and endearing qualities while his four elder brothers were all rough and ill-mannered. Ādarśamukha could solve many difficult problems through his wisdom, but none of the others could do so. Ānanda therefore, wished Ādarśamukha to be his successor and devised a plan to get his wish fulfilled. Speaking to his ministers about his successor the king stipulated that the successor should have a pair of bejewelled sandals and a crown to fit him exactly. He also gave a set of six problems which the future king should be able to answer. After the king's death, only Ādarśamukha came successfully through all the tests and was consecrated.

One day a brāhman named Daṇḍin was brought before the king by five persons, each of whom charged him with some injury done by him

unwittingly. In an ingenious way he secured the acquittal of Daṇḍin and also answered six questions sent through Daṇḍin by six persons who had met him on the way.

To distribute alms to the needy he had halls built at each of the four city gates. During a famine that lasted for twelve years several lakhs of people received alms from these halls. And that, said the Buddha who related this story, was but the tiniest fraction of what he had done to realise supreme Buddhahood.

For the Pali version of the story see s.v. GĀMAṆICAṆḌA JĀTAKA.

C. W.

ĀDARŚAMUKHA (2), name of a nāga king (*Mhvyut.* 3297), probably the same as Adarśamukha (*Mahāmāyūrī*, 247) which, Edgerton suggests (*BHS.* II, p. 11), is probably a misprint or error for the above.

ĀDARŚANA-JÑĀNA, one of the five kinds of knowledge (*jñāna*) of a Tathāgata. See ĀDARŚA-JÑĀNA.

ĀDARŚAPRASĀDA-NĀMA-TĀRĀBHAṬṬĀRIKOPADESA, a Sanskrit text which is extant in its Tibetan translation, the *Rje-btsun ma sgrol-maḥi man-ṅag me-loṅ draṅs-pa shes-bya-ba*, in the Rgyud-hgrel (tantra commentary) section of the Tengyur. It was composed by Rtag-paḥi vajra (Śāśvatavajra) and translated into Tibetan by the Lotsāba of Ba-ri, i.e., Rin-chen grags or Ratnakīrti (*Cordier*, II, p. 124, No. 62).

ĀDĀSAMUKHA, a prince, the bodhisattva in a previous life, presumably the same as Ādarśamukha (1). See GĀMAṆICAṆḌA JĀTAKA.

ĀDĀSAPAÑHA, a type of divination performed with the aid of a mirror (*ādāsa*). Its method, which is all that the commentary has to say about it, is to cause a god to descend into a mirror and then question him (*DA. Brahmajālasutta-vaṇṇanā*, section : *Mahāsīla*). It is mentioned in the *Dīgha Nikāya* as an occupation practised by certain recluses and brāhmans as early as the time of the Buddha (*D.* I, p. 11). But the Buddha condemned it as a low kind of art (*tiracchāna vijjā*) and a wrong means of livelihood (*micchājīva*).

A somewhat similar form of divination ('light-foretelling') is practised by some people in Ceylon. Here, instead of a mirror, some ointment smeared on a flat surface is used, and the god Hanuman is generally invoked.

The *Dīgha Nikāya* also mentions other systems of divination akin to *ādāsapañha*, such as *kumāripañha* and *devapañha*. According to the commentary earlier referred to, the former involved the questioning of a god through a maiden who could serve as medium, while in the latter the medium always had to be a *devadāsī* or nautch girl.

In Buddhism, the abstinence from each of these occupations constitutes a *mahāsīla* or a virtue highly rated.

H. S. C.

ADASSANĀ SUTTA occurs in the *Vacchagotta Saṃyutta* of the *Khandha Vagga* of the *Saṃyutta Nikāya* (III, 260). The wandering mendicant Vacchagotta asked the Buddha why such diverse speculative views as whether the world is eternal or not, whether the Tathāgata exists after death or not, etc., should arise in this world. The Buddha answers that it is because of the failure to see (*adassanā*) each of the five aggregates (*khandhas*), viz., body (*rūpa*), feeling (*vedanā*), perception (*saññā*), mental formations (*saṅkhārā*) and consciousness (*viññāna*)—their origin, their cessation and the path leading to their cessation.

This sutta forms a group of five where the five aggregates are dealt with individually.

ADATTĀDĀNA, stealing. See ADINNĀDĀNA.

ADBHUTADHARMA (Pali *abbhutadhammā*, q. v.), one of the limbs (*aṅga*), containing descriptions of marvellous phenomena, included in the ninefold or, according to the Sanskrit tradition, the twelvefold division of the teachings of the Buddha. See AṄGA.

ADBHUTA-DHARMA-PARYĀYA, a text extant in Chinese and Tibetan.

Its Chinese translations are three, viz., (1) the *Shên-hsi-yu-ching* translated by Hsüan-tsang of the Tang dynasty in 649 A.C. (*Nanjio*, 261; *Taishō*, 689), the *Wei-ts'êng-yu-ching* translated under the Eastern Han dynasty (25–220 A.C.) by an unknown scholar (*Nanjio*, 260; *Taishō*, 688), and the first chapter of the *Wu-shang-i-ching* or the Sūtra of the Highest Reliance translated by Paramārtha of the Liang dynasty 502–56 A.C. (*Nanjio*, 259; *Taishō*, 669).

The Tibetan translation is the *Ḥphags-pa rmad-du byuṅ-ba shes-bya-baḥi chos-kyi rnam-graṅs* in the mdo-sde (sūtra) section of the Kangyur division. Jinamitra and Surendrabodhi of India and Ye-śes sde of Tibet translated the text into Tibetan. It is preserved both in the Sde-dge and the Peking editions (*TM.* 319; *ŌM.* 985). The Ōtani catalogue shows us a corresponding table of the two Chinese translations and two editions in Tibetan, as follows :

Tibetan :	Peking ed.	203a⁶–206a⁷
	Sde-dge ed.	folio Sa 194a¹–196b⁷
Chinese :	by Hsüan-tsang	782a–783 ult.
	by an unknown translator	781a–782c ult.

The original title of the work can be gauged only from that which was preserved in the Tibetan translation, where the word *sūtra* is not found at the end of the title and, instead of that, *nāma* is added. Therefore, here is shown only the body of the title, leaving out both the *nāma* and the first *Ārya* for the sake of simplicity.

This sūtra stands on the level of Mahāyāna idealism or Vijñānavāda. The third translation in Chinese is often quoted in Vasubandhu's and Sthiramati's work and has helped to form their Buddhakāya and Buddhatā theories.

According to the text, for sentient beings the highest reliance is nothing but the world of the Tathāgata, which is neither rebirth nor decease, which exists in the very body of all sentient beings. In order to understand the reality of *bodhi*, the text offers the idea of the original purity of the mind (*cittaviśuddhi*) and identifies defilement and truth. In short, the fundamental idea of the text is the identification of noumena and phenomena, sacred and mundane.

S. K.

ADBHUTA-HETU-PARYĀYA SŪTRA, a text which is extant in Chinese and Tibetan translations. The Chinese translation is known as the *Wei-ts'êng-yu-yin-yüan-ching*, translated by T'ang ching of the Chi dynasty (479–502 A.C.). It is in two fascicules. It agrees with the Tibetan version (*Nanjio*, 400).

ADDHABHŪTA SUTTA occurs in the *Sabba Vagga* of the *Saḷāyatana Saṃyutta* of the *Saṃyutta Nikāya* (IV, 20–1), preached by the Buddha at Kalañkanivāpa in Veḷuvana. It declares that everything is afflicted—the sense-organs of sight, taste and touch, their sense-objects, consciousness, contacts and sensations, and the mind and all that is connected with it—afflicted with birth, decay, death, sorrow, grief, woe, lamentation and despair. Seeing this, the learned disciple is repelled by the sense-organs and the mind, and all that has to do with them, becomes detached from them, is freed from them and attains arahantship.

The commentary has the title *Addhabhūta* while the text has *Andhabhūta*, blinded. In the Burmese manuscripts of the text, too, throughout the sutta the word *addhabhūta* appears instead of *andhabhūta*.

L. R. G.

AḌḌHACANDIYA, an arahant thera who in a former life offered a bunch of *dharaṇīruha* flowers in the shape of a half-moon (*aḍḍhacandaṃ*) at the *bodhi*-tree of the Buddha Tissa. As a result of this good deed he knew of no woeful existences. Twenty-five *kappas* ago he was born a *cakkavatti* king by the name of Devapa (*Ap.* I, No. 363).

AḌḌHACELAKA, an arahant thera whose personal name is not known. In a previous birth he was born into a poor family and he offered half a garment (whence the name) to the Buddha Tissa. As a result of this good deed he knew much happiness after death. He enjoyed heavenly birth and was thirty-two times born as *cakkavatti* king under the names of Samanta and Odana (*Ap.* I, No. 93). The commentary gives his past lives in greater detail and adds that in this Buddha-age he was born in a rich family and, having heard the Buddha preach, he entered the Saṅgha and before long became an arahant.

AḌḌHAKĀSĪ. During the lifetime of Kassapa Buddha she had been a bhikkhunī. Once she had found fault with an elder bhikkhunī, who was already an arahant, and abused her, calling her a prostitute. After a due expiatory period she was born in the dispensation of the Buddha Gotama. But although she was born in a well-to-do family, the persistent effect of her former slanderous remark made her become a street-walker herself. Still, she was able to restrain herself from sin and began to lead a life of renunciation. When, however, she wanted to go to Sāvatthi to receive the higher ordination from the Buddha himself, certain men of low behaviour blocked her road. The Buddha came to hear of this and allowed, as a very special case, the ordination to be conferred by a single bhikkhunī as a representative of the Saṅgha, if she were learned and competent (*Vin.* III, *Cullavagga* 22), although the ordinary rule required not less than ten persons of senior age. She developed a disgust for all beauty, and in dispassion rejected all further life in saṃsāra. In due course she became an arahant. Her verses are recorded in the *Therīgāthā* and the *Apadāna* (*Thīg. vv.* 25–6; *Therī-Apadāna*, 37).

AḌḌHAMĀSAKA, a king identified as Ānanda in a previous birth. His story is contained in the *Gaṅgamāla Jātaka* (*J.* III, No. 421).

He was born a poor man in Bārāṇasī and earned his living by carrying water. He had saved a half-penny (*aḍḍhamāsaka*) which he concealed among the bricks in the northern gate. His wife, too, had saved a half-penny. Once there was a festival in the city and they decided to take part in the revelry with their joint savings. The northern gate was twelve leagues away but the water-carrier cheerfully set out to fetch his half-penny. At mid-day he had covered half the distance and reached the palace court. The reigning king Udaya was amazed to see him walking on the burning sand, singing happily. Udaya had him summoned and enquired whether the scorching heat did not affect him. His reply was that it was not the sun but desires that burnt him. The king was surprised to learn that the treasure he was undergoing all this hardship to fetch was only a half-penny. He offered the man that amount requesting him to give up his journey in the hot sun. But while accepting the king's money he would not give up his own half-penny. Udaya increased his offer to a penny and then gradually to great treasures and high posts, even up to the position of viceroy, if only the man would not proceed further. Only when the king raised his offer to half the kingdom did he agree. It is said that through love for his half-penny he chose the northern half of the kingdom. He became known as king Aḍḍhamāsaka. The two kings ruled amicably. Once while sporting together in the park, Aḍḍhamāsaka was seized by a wicked thought to kill Udaya and gain the entire kingdom for himself, but thinking of his deep debt to Udaya he checked himself. Again and again the thought arose and fearing that the desire might get the better of him, he threw away the sword and asked Udaya for forgiveness for his murderous thought. Udaya not only forgave him but even offered his whole kingdom agreeing to become the viceroy. But Aḍḍhamāsaka, realising the danger of craving, rejected the offer and declared his intention to renounce the world. He handed over his half of the kingdom to Udaya, preached to the people of

the evils of desire and left for the Himalayas. He became an ascetic and attained *jhāna* (mental absorption) and *abhiññā* (higher knowledge).

This episode forms part of the *Gaṅgamāla Jātaka*. The Buddha identifies Aḍḍhamāsaka as Ānanda and Udaya as himself. A variation of this is found in the *Gaṅgapāla Jātaka* of the *Mahāvastu*, but with major differences (III, pp. 182 f.). There Aḍḍhamāsaka figures as Upaka. There is also a reference to king Aḍḍhamāsaka and his curbing of desire in the *Kāma Jātaka* (*J.* IV, No. 467, p. 174).

L. R. G.

AḌḌHA SUTTA. Two suttas of this name occur in the *Sotāpatti Saṃyutta* (*S.* V, 402). The Buddha preached them to the monks at the Nigrodhārāma in Kapilavatthu.

The noble (*ariya*) disciple who is endowed with the four qualities of perfect faith (*aveccappasāda*) in the Buddha, in the Dhamma and in the Saṅgha, and virtues which are held in esteem by the noble disciples, is rich (*aḍḍha*), is of great wealth (*mahaddhana*), of great resources (*mahābhoga*) and of great fame (*mahāyasa*).

The two suttas are identically the same and sometimes go by the name of *Mahaddhana Sutta*.

ADDHA VAGGA. The seventh chapter of the *Devatā Saṃyutta* of the *Saṃyutta Nikāya* (I, 39–41). The text calls it *Addha Vagga* evidently after the word *addhabhavi* of the first sutta while the commentary has *Anva Vagga* and *anvabhavi*.

It consists of ten suttas, uniform in style, each comprising a pair of verses, the first being a query and the second its answer.

A connection is seen in the subject-matter of the suttas, too, particularly in suttas two to ten. They each deal with an item by which the world is affected. The first sutta is not unconnected with the rest. for here, too, the subject is that which overrides everything (in the world, it is to be understood). Repetitions are also found in the different suttas.

Two methods appear to have been followed in naming the suttas. Where the sutta deals with a single subject it has been named after that item, e.g., (1) *Nāma*, (2) *Citta*, (3) *Taṇhā* and (9) *Icchā*. Where there is more than one subject, the first verb or its derivative has given the title to the sutta, e.g., (4) *Saṃyojana*, (5) *Bandhana*, (6) *Abbhāhata*, (7) *Uḍḍito*, and (8) *Pihito*. But neither of these two methods has been adopted in the last sutta which is named *Loka*, a title which could equally well apply to any of the suttas from two to nine. The only reason that may be adduced for this deviation is that the last sutta forms the climax and deals with the very arising of the world, while the preceding ones deal with an aspect in which the world is affected.

AḌḌHA VAGGA, the thirty-eighth chapter of the *Jātakaṭṭhakathā* and the third and last section of the *Pañcanipāta* (*J.* III, pp. 211–27). It includes the five jātakas, Nos. 371 to 375 (***Dīghitikosala, Migapotaka, Mūsika, Culla-dhanuggaha*** and ***Kapota***). Unlike in the case of most of the vaggas where the first jātaka—often its title and sometimes a word contained in its verse or narrative—has given the name to the vagga, the title of this vagga shows no connection with its first jātaka. It has been named Aḍḍha (half) probably because it contains only half the number of jātakas that a vagga usually contains.

ADEPT (*asekha*), one who does not require any further training (from: *sikkhati*) and who is, therefore, perfect, very often in the meaning of an arahant. He has abolished the five hindrances (*nīvaraṇa*, q.v.) of sensuous desire, ill-will, physical and mental sluggishness, excitement plus worry, and perplexity; whereas he possesses the five qualities of an adept, viz., his morals, his proficiency in concentration, insight, emancipation, together with knowledge and vision pertaining to the insight of an accomplished one (*S.* I, 99). In the Vinaya *Mahāvagga* (I, 62) this same group of five qualities is required in a monk, if he is to receive someone as a novice in the Saṅgha, that he may give instruction to him, and be attended on by him. In the same chapter several more groups of five qualities are mentioned, all of which go into the making of a teacher. Thus, apart from the qualities which have made him an adept, he should be a man possessed of and inspiring confidence, ashamed of doing wrong, cautious, energetic and full of mindfulness; he also should uphold moral habits, good habits, right views, be well informed and intelligent; he should know when an act is a transgression of discipline, and when not, when it is a slight or a serious offence, and have been a fully ordained monk himself for at least ten years.

Ceasing to be a learner, such a monk passes, beyond the realm of Māra, for after this life there will be for him no further birth and hence no death; and in respect of the group of virtue, concentration and insight (*sīla-samādhi-paññā*) he is regarded as a Master (*asekha*: *It.* 51).

The *Saṅgīti Suttanta* (*D.* III, 218) mentions without explanation three kinds of persons, to wit, the learner (*sekha*), the adept or accomplished one (*asekha*) and the person who is neither, i.e., the average person or man of the world (*puthujjana*). This distinction is repeated in the *Puggala Paññatti* (I, 23–5). The seven types of learners are called those restrained through fear, whereas the accomplished arahant has completely uprooted fear and is, therefore, not restrained from sin through fear (*abhayūparato*: ibid. 11–12).

The clearest distinction between a learner (*sekha*) and an adept (*asekha*) is given by Buddhaghosa, when he associates the virtue of a learner with the four paths (*magga*, q.v.) and the first three fruitions (*phala*) of sainthood, whereas the virtue of an accomplished one (*asekha*) is associated with the fruition of arahantship, the final stage on the path of sainthood (*Vism.* i, § 37, p. 12).

H. G. A. v. Z.

ĀDESANĀ-PĀṬIHĀRIYA, the marvel of thought-reading or, literally, of declaring (another's mind). This is the second of three 'marvels', enumerated as the marvel of psychic power (*iddhi-pāṭihāriya*), the marvel of thought-reading (*ādesanā-pāṭihāriya*) and the marvel of teaching (*anusāsanī-pāṭihāriya*).

The marvel of thought-reading consists in declaring what is in someone else's mind (*citta*), the contents thereof (*cetasika*), mental reflections (*vitakkita*) and considerations (*vicārita : D.* I, 213). This thought-reading is actual reading of a fourfold manifestation of the other person's thought through some visible sign (*nimittena*), through some sound, human or non-human (*manussānaṃ vā amanussānaṃ vā devatānaṃ vā saddaṃ sutvā*), through hearing a rational sound made intelligently and deliberately (*vitakkayato vicārayato vitakkavipphāra-saddaṃ sutvā*), or through concentration which is free from discursive thinking (*avitakkaṃ avicāraṃ samādhiṃ : D.* III, 103 f.). In other words, thought-reading takes place through deduction, through inspiration, through inference or through intuition.

When the Buddha asked the brāhman Saṅgārava what he thought of this marvel of thought-reading, the reply was that it appeared to him to be of the nature of an illusion (*māyā-sahadhamma-rūpaṃ : A.* I, 171). An unbeliever might not accept this power of thought-reading as a spiritual development, but as a performance through the efficacy of a charm (*maṇiko nāma vijjā : D.* I, 214). And for that reason, although the Buddha acknowledged possessing this power, and not he alone but also more than five hundred of his monks (*A.* I, 172), at the same time perceiving danger in the practice thereof, the Buddha said that he was disturbed, vexed and that he disapproved of this marvel of thought-reading (*ādesanā-pāṭihāriyena aṭṭiyāmi harāyāmi jigucchāmi : D.* I, 214).

Nevertheless it was Sāriputta who exhorted and instructed the monks with dhamma-talk by means of an instruction on the wonders of thought-reading, and Moggallāna who exhorted and instructed the monks with dhamma-talk by means of an instruction on the wonders of psychic power (*Vin.* II, *Cullavagga*, vii, 199). As a result of these talks by the two chief disciples five hundred schismatic monks who had been siding with Devadatta returned to the Buddha.

H. G. A. v. Z.

ĀDEYYA-VACANA, acceptable speech or words to be taken up (from *ādāti*). Such were the words of Anāthapiṇḍika which 'carried weight' (*Vin.* II, 158), for his speech would he taken up by many people thinking, 'It seems he should be heard' (*VinA.* 1220). The term is used again by Nāgasena (*Miln.* 110) in describing a man who was high in office near the king, of great reputation, wealth and property, whose word was held of weight (*ādeyya-vacana*) and whose influence was great [1].

[1] The reference of *PED.* to *J.* VI, 243 seems without grounds, as does also the note of T. W. Rhys Davids in the *Questions of King Milinda* (p. 166, n. 2), *Puggala Paññatti* (iii, 12), loose talk (*vikiṇṇa vāca*), paraphrased as thoughtless talk (*asaññata vacana : PugA.* 217).

ADHAMMA (1) the negation of *dhamma*. The two terms are frequently used together in opposition as good and evil : the evil deed leads on to hell, the good one wins a happy birth (*adhammo nirayaṃ neti, dhammo pāpeti suggatiṃ : Thag.* 304).

Adhamma is also used in opposition to *dhamma* in the meaning of wrong and right doctrine, together with wrong and right discipline, when wrong doctrine (*adhamma*) and wrong discipline (*avinaya*) are mentioned as causes of schism in the Saṅgha (e.g., *A.* V, 73).

When qualifying passion as unholy (*adhamma-rāga*) it is synonymous with lawless lust (*visama-lobha : D.* III, 71). Adverbially also it is frequently found in the meaning of unjustly (*adhammena* : e.g., *S.* I, 57), or against the rule, e.g., (*Vin.* IV, 37) not properly, falsely. He who is reproved unjustly (*adhamma-cudita*) should yet maintain himself without regret, but he who rebukes without fairness (*adhamma-codaka*) has fivefold reason to repent (*A.* III, 196–7).

In the *Dakkhiṇā-vibhaṅga Sutta* (*M.* III, 257) *adhamma* is used synonymously with *pāpadhamma* and *dussīla* : evil and vice ; while in the *Cakkavatti-Sīhanāda Sutta* (*D.* III, 61) the ariyan (noble) duty of a world ruler is, among others, not to let wrong prevail (*mā te vijite adhammakāro pavattittha*).

One who sees evil in what is right is called a fool, but he who sees evil in what is wrong (*adhamme adhammī : A.* I, 85) is said to be wise. Wise men blame one for evil deeds towards one's parents (*adhammacariyāya mātāpitūsu paṇḍitā.......... garahanti : A.* II, 5) ; and the unrestrained in lusts are said to be led by evil (*adhammagāravā : A.* II, 19).

ADHAMMA (2), a deity of the sense-sphere (*kāma-loka*), Devadatta in a previous birth. On full moon days he went about in his chariot named Adhammayāna and admonished the people of Jambudīpa to practise the ten evil deeds. There was another deity named Dhamma (the bodhisatta) who in the like manner admonished the people to practise the ten good deeds. Once, going in opposite directions, their vehicles met and, in mid-air, the two deities had a discussion as to which of them should have the right of the way. At the end Adhamma fell from his chariot and plunged headlong into hell (*Dhamma Jātaka : J.* IV, 100–3).

ADHAMMA SUTTA. A series of three suttas describing *dhamma* and *adhamma* and their different qualities, in the *Paccorohaṇi Vagga* of the *Aṅguttara Nikāya* (V, 222 ff.).

The Buddha addresses the monks on the bank of the lotus pond at Gaggarā in Campā and admonishes them ; they should understand what is dhamma and what is not dhamma, and aim and not-aim. Knowing dhamma and not-dhamma, and aim

and not-aim, one should live according to dhamma and aim. This being the theme of all the three suttas, the Buddha repeats it in all three places.

The first sutta describes not-dhamma and not-aim, as being the ten detrimental deeds, namely, wrong view, wrong thinking, wrong speech, wrong action, wrong living, wrong effort, wrong mindfulness, wrong concentration, wrong knowledge and wrong release. Dhamma and aim are the tenfold virtues which are the opposites of the former, i.e., right views, etc.

In the second sutta, the Buddha explains in detail that the ten detrimental deeds are *adhamma*, by the practice of which one will be subject to diverse evil and unprofitable states. On the other hand, by practising the tenfold virtues there will be diverse good and profitable states.

In the third sutta, having admonished the monks for the third time the Buddha departs. Thereupon the monks, not knowing the detailed meaning of the Buddha's pronouncement, go to Ānanda to have it explained. After listening to him they approach the Buddha and convey to him Ānanda's explanation. Then the Buddha approves it and asks the monks to bear it in mind.

I. K.

ADHAMMA VAGGA. The tenth chapter of the *Eka-nipāta* of the *Aṅguttara Nikāya* (I, pp. 16–9), consisting of 42 suttas preached at Jetavana. They deal chiefly with the harm (*anattha*) that would arise, if the monks were to declare what is not *dhamma* as *dhamma* and *vice versa*.

In the first thirty-two suttas the Buddha says that negligence (*pamāda*), indolence (*kosajja*), wanting much (*mahicchatā*), discontent (*asantuṭṭhitā*), unsystematic attention (*ayoniso manasikāra*), discomposure (*asampajañña*), friendship with the evil (*pāpamittatā*) and devotion to things evil (*anuyoga-akusala-dhamma*), and non-devotion to good things (*ananuyoga-kusala-dhamma*), are conducive to great loss. Also, they bring about confusion (*sammosa*) and disappearance (*antaradhāna*) of the true dhamma (*saddhamma*).

On the other hand, the practice of their opposites, such as earnestness (*appamāda*) and energetic effort (*viriyārambha*), is conducive to great gain. These factors are conducive to the establishment and the permanence of the true Dhamma.

In the last ten suttas the Buddha says that there will be disappearance of the true Dhamma, if monks were to point out, what is not dhamma as dhamma, what is not discipline as discipline, what is discipline as not discipline, what is not uttered and proclaimed by the Buddha as having been uttered and proclaimed by him, what is not practised by the Buddha, as having been practised by him, what is practised by the Buddha as having not been practised by him, what is not ordained by the Buddha as having been ordained by him and what is ordained by the Buddha as having not been ordained by him.

Such conduct by the monks would not benefit people and would be a cause of misery to devas and men. Further, such monks would accumulate great demerit and cause the disappearance of the true Dhamma.

I. K.

ADHAMMIKA SUTTA of the *Catukka-nipāta* in the *Aṅguttara Nikāya* (II, 74) speaks of the causes and consequences of unrighteousness and sums up in verse form: If those who are leaders among men do not live rightly, the others, too, will go astray, as the herd follows the bull when crossing a ford. But, if he who is reckoned best among men lives righteously, his ministers will live likewise; and so the brāhmans and householders in town and in village. And there will be happiness and prosperity in the entire realm, for the devas will be pleased; they will send rain in the proper season to make the crops ripen in time, whereby men become strong and free from illness.

The concluding verses are found also elsewhere (*J.* III, 111).

ADHAMŪRDHAVA, (*adha* + *ūrdhava*), upside down, name of a *lokadhātu* (*Gvyū.* 518; *Laṅk.* 28).

ĀDHĀRADĀYAKA, an arahant thera, who in a previous birth offered a stool (*ādhāraka*) to the Buddha Sikhī, whence his designation. Twenty-seven *kappas* ago he was born as *cakkavatti* king four times, by the name of Samantavaruṇa (*Ap.* I, No. 209).

ĀDHĀRA-MUDRĀ, name of a samādhi. Sometimes it is also written as *ādhāraṇa mudrā*. It difficult to determine which term is original or older in its strict sense. One may, however, say that the majority of the older texts represent this samādhi as *Ādhāra-mudrā-samādhi*, while the somewhat later texts use the word *Ādhāraṇa*. For example, an old *Prajñāpāramitā Sūtra* (i.e., *Śatasāhasrikā-prajñāpāramitā*, 1416.20) uses Ādhāra and not Ādhāraṇa.

But, generally speaking, there is not much difference in their meanings, especially when these are viewed in connection with their translations from the Chinese. Ādhāra (or Ādhāraṇa) means 'bearing', 'holding', 'supporting', but, more closely, in this case, it means that which is holding *dhāraṇī* or spell. Mudrā is, as well known, the name of particular positions or intertwinings of fingers commonly practised in tantric worship, in Buddhist as well as in non-Buddhistic sects. Therefore, the term *Ādhāra(ṇa)-mudrā-samādhi* can be rendered as a concentration of a condition which can be compared with that of practising the mudrā of spell.

This samādhi is included in the third and fifth fascicules of the *Pañcaviṃśati-sāhasrikā-prajñāpāramitā Sūtra* (*Nanjio*, No. 1), and repeated in the forty-third and forty-seventh fascicules of the *Mahāprajñāpāramitā-śāstra* (*Nanjio*, No. 1169). There, it is mentioned as one of the 108 kinds of samādhi. Later on, this samādhi is also included into the *Mahāvyutpatti* (No. 525).

Concerning its detailed contents, however, these sources do not give any references. They only mention a list of names without stating their meaning or contents just as the other Mahāyāna sūtras do, e.g., fifty-one kinds of samādhi of the same work, more than one million kinds of samādhi of the *Avataṃsaka Sūtra* (only some of the names are given), 103 kinds of samādhi of the same work, ten thousand kinds of samādhi of the same work and so on.

Thus we can only conjecture about the varieties of concentration stated in the system of Buddhist psychology.

S. K.

ĀDHĀRAṆĪ, name of a goddess in the *Mahāvyutpatti* (525).

ADHAŪRDHVADIGJÑĀNĀVABHĀSA, a Tathāgata whose name occurs in a list (*Gvyū.* 309. 18–19) of hundred names of Tathāgatas who, while leading (*tadbuddhaśataṃ pramukhaṃ kṛtvā*) all the Tathāgatas in the world-region Dharmārcinagaramegha in the world-age Vimalaprabha, equalling in number the particles of dust in Sumeru, were propitiated by the night-goddess (*rātridevatā*) Sarvanagararakṣāsambhavatejaḥśrī.

ADHICCA-SAMUPPANNA, arisen without a cause (*D.* I, 28) in the sense of neither self-originated nor created by others (*Ud.* vi, 5). See OPAPĀTIKA.

ADHICCA-UPPATTI, spontaneous origin, i.e., without visible cause (*DhsA.* 238). See OPAPĀTIKA.

ADHICCHATTIYA, an arahant. The *Apadāna* (I, No. 141) and its commentary contain the following information about him. In the time of the Buddha Atthadassī he was born a householder but failed to see the Buddha. At the passing away of the Buddha he repented of his lapsed opportunity and in order to make his life fruitful he offered a series of parasols (*chattādhichattam*—literally: parasols one on top of the other) at the thūpa containing the Buddha's relics. From time to time he worshipped at the thūpa and again offered a canopy of flowers over the parasol. As a result of this good deed he enjoyed happiness among devas and men. (This is according to the commentary. The *Apadāna* has it that he was not born among men.) For one thousand seven hundred *kappas* he was king of the devas. In this Buddha-age he entered the Saṅgha. Firmly set on meditation, before long he became an arahant. He is called Adhicchattiya in the *Apadāna* while the commentary has the variant forms Chattādhichattiya and Adhichattiya.

He is to be identified with Sāmidatta of the *Theragāthā* (*v.* 90), whose previous life, as described in the *Theragāthā Aṭṭhakathā*, agrees with that of Adhicchattiya. We have the following further information in the *Theragāthā Aṭṭhakathā*. In his last life he was born in a brāhman family in Rājagaha and was named Sāmidatta. After he entered the Saṅgha he did not readily strive towards the goal. Because his knowledge was immature, he remained slack for a while, but later, on listening to the Buddha preach he became alert and attained arahantship.

L. R. G.

ADHICITTA, higher thought in the sense of more intensified application of thought in concentration and contemplation. In the process of developing this higher consciousness (*adhicittaṃ-anuyutto* : *A.* I, 254) one discovers the impurities in one's deed, word and thought, abandons them and takes precautions that they do not recur. And again it is said (*A.* I, 256) that the monk who is devoted to developing higher consciousness must attend to the characteristic of concentration by preserving his energetic grasp of mind (*paggāha*) without faltering, and yet with equanimity (*upekhā*), not allowing it to contract or to expand. Exclusive attention to the developing of higher consciousness might lead the mind to indolence ; exclusive attention to the growth of energetic application might lead to distraction ; exclusive attention to the maintenance of equanimity might not keep the mind perfectly poised for the destruction of the mental intoxicants (*āsava*). But timely attention, properly directed, will make the mind pliable, radiant and not stubborn, but perfectly poised for the destruction of the mental intoxicants. And to whatever branch of special knowledge he may direct his mind, he has personally within him the power of realisation (*A.* I, 257).

Adhicitta is usually found in combination with *adhisīla* and *adhipaññā*, which form together the course of training and spiritual discipline (*sikkhā*), comprising the observance of the precepts (*sīla saṃvara*), culture of mind concentration (*samādhi*) and spiritual insight (*paññā*). This trilogy is frequently referred to in the Vinaya texts (e.g., I, 70 ; III, 23) and in various discourses (*D.* I, 181 ; *D.* III, 219 ; *A.* I, 229 ; *S.* III, 83 ; etc.). Throughout *adhicitta* is the mind under discipline, which makes it of a higher order than the uncontrolled thought-process of the average man (*puthujjana*). It is the concentrated mind of the monk who, with hands and feet properly washed, after his meal sits down in the cool shade intent on higher thought (*sudhotahatthapādaṃ manuññaṃ bhojanaṃ bhuttāviṃ sītāyā chāyāya nisinnaṃ adhicitte yuttaṃ* : *M.* I, 451).

H. G. A. v. Z.

ADHICITTA SUTTA forms in the text (*A.* I, 256) part of the sutta concluding the *Loṇaphala Vagga* in the *Tika-nipāta* of the *Aṅguttara Nikāya*, but is treated in the commentary as a fresh sutta. It deals with the three characteristics to be attended to from time to time by the monk who devotes himself to developing higher consciousness (*adhicitta*, q.v.). These are concentration (*samādhi*), energetic application (*paggāha*) and equanimity (*upekhā*). Exclusive attention to any one of these

three would probably make the meditator liable to indolence, to distraction and to unpreparedness respectively. Hence all three characteristics have to be attended to 'from time to time', to keep the mind pliable, workable, radiant, not stubborn, but perfectly poised for the destruction of the mental intoxicants (*āsava*).

He should be like a goldsmith in the act of purifying gold, who from time to time blows on it through a blow-pipe in the crucible, but not continuously, lest it burn up. Then from time to time he sprinkles water on the gold, but not all the time, for that would make it cold. And again, from time to time he will take the gold out of the crucible to examine it closely. But if he would be examining it all the time, the gold would never become purified.

ADHIGAMA signifies attainment in the widest sense of 'coming into possession of' (*adhi + gacchati*). Hence, acquisition of skill (*kusala dhamma : D.* I, 224), of understanding and distinction (*visesa : D.* I, 229), attainment of Nibbāna (*S.* I, 22) and the deathless (*amatapada : Pvu.* iii, 7). Sometimes, even the process of acquisition of learning, i.e., study itself, is indicated, as well as the knowledge or information acquired thereby : One should grow .... in knowledge of the texts and study (*āgamādhigame .... vaddhitabbaṃ : Miln.* 388). It is also said that the decline of attaining an intellectual grasp of the doctrine is one of the ways of disappearance of such doctrine ; for, with the cessation of attainment of an intellectual grasp even the man with right conduct has no clear understanding thereof, and without such understanding even the outward form of conduct will decline (ibid. 133–4).

Attainment is frequently to be understood as the process of progress which is not a final attainment of the ultimate goal, but rather an actual attainment at every stage. And as such, progressive attainment is frequently contrasted with decline. Hence, the energy (*viriya*) to acquire, to attain the unattained, to realise the unrealised (*appattassa pattiyā, anadhigatassa adhigamāya, asacchikatassa sacchikiriyāya : D.* III, 255 ; *A.* II, 145 ; IV, 332 ; *S.* I, 217 ; II, 29) is as a basis of alertness (*akusīta vatthu*) an attainment in itself.

But attainment in the highest and most perfect sense is, of course, the attainment of the Noble Path, of perfect insight, the supreme attainment of the fruits of arahantship (*arahattaphalādhigamam anuttaraṃ : Miln.* 358), which is the highest and best of the attainments to be gained in the world (*loke adhigama-vipulavara sampattiyo* : ibid. 362).

H. G. A. v. Z.

ADHIGAMA SUTTA occurs in the *Chakka-nipāta* of the *Aṅguttara Nikāya* (III, 431) and deals with attainment (*adhigama* q.v.) of skill in the Dhamma and increase of that skill, if already attained. In this connection there are six things which will prevent such attainment or the increase thereof, namely, if a monk is unskilled in entering, in leaving and in approaching, if he has no wish to attain, or does not preserve the skill already acquired, or does not take the necessary action to persevere. But the contrary also holds good, for if a monk is not possessed of these six things, he is sure of attaining skill and the increase thereof.

ADHIJAYĀJITĀ-SĀDHANA, a Sanskrit text which is extant in its Tibetan translation, the *Lhag-par rgyal-ba mi pham-maḥi sgrub-thabs*, in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. The names of the author and the translator are not given. In *TM.* the author's name is given as Śes-rab skyoṅ, and the translator is stated as Dānaśīla (*Cordier*, II, p. 185, No. 47 ; *TM.* 2065).

ADHIKARAṆA, subject of discussion or dispute : a legal question. Four kinds of legal questions are enumerated in the *Cullavagga* of the *Vinaya Piṭaka*, viz., *vivādādhikaraṇa* (legal questions arising from disputes) ; *anuvādādhikaraṇa* (legal questions arising from censure) ; *āpattādhikaraṇa* (legal questions arising from offences) ; and *kiccādhikaraṇa* (legal questions arising from obligations).

All disputes arising out of certain specified subjects which may be summarised as doctrine (*dhamma*), discipline (*vinaya*), teachings, practices and ordainments of the Tathāgata, and the nature of an ecclesiastical offence (*āpatti*) are called *vivādādhikaraṇa*. Friendly and family disputes are excepted. If a monk is charged for falling away from morals (*sīla-vipatti*), conduct (*ācāra-v°*), right views (*diṭṭhi-v°*) or right livelihood (*ājīva-v°*), any question arising from it is called an *anuvādādhikaraṇa*. Again friendly and family disputes are excepted. A legal question arising from any of the five classes (*pañca-āpattikkhandha*) or the seven classes of offences (*satta-āpattikkhandha* —See ĀPATTI) is an *āpattādhikaraṇa*, while a *kiccādhikaraṇa* is that arising out of a formal act of the Saṅgha (*saṅghakamma*) or from any of the duties and obligations of the Saṅgha. However, the duties of an *ācariya* (teacher), *upajjhāya* (preceptor) or a fellow pupil cannot be a subject for a *kiccādhikaraṇa*.

The six sources of disputes (*vivādamūla*), the three roots of unskilled action (*akusala-mūla*) and the three roots of skilled action (*kusala-mūla*) are named as the source of *vivādādhikaraṇa*. The six sources of disputes are anger (*kodha*) and ill-will (*upanāha*) ; hypocrisy (*makkha*) and malice (*palāsa*); jealousy (*issā*) and avarice (*macchariya*) ; treachery (*saṭha*) and deceit (*māyā*) ; evil desire (*pāpiccha*) and wrong views (*micchā-diṭṭhi*): worldliness (*sandiṭṭhiparāmāsa*) and stubbornness (*ādhā-agāha*). If a monk, overcome by any of those evil qualities, shows no respect to the Teacher, the Doctrine or the Saṅgha and does not fulfil his training, then that can become the source for a legal question, which will be of great harm to the many. A covetous mind (*luddhacitta*), a corrupt mind (*duṭṭhacitta*) and an erring mind (*mūḷhacitta*) are the three roots of unskilled action, while the opposite states of mind are the three roots of skilled action. The same factors, together with the body (*kāya*) and the speech (*vācā*) are the source of *anuvādādhikaraṇa*. By 'body' is meant all sorts of bodily defects, such as bad colour, blindness, a lame foot or a

paralysed side. A hoarse, surly or stuttering speech, which may give rise to comment, is meant by the word 'speech'. The sources for *āpattādhikaraṇa* are six in number, namely, body, speech and mind taken singly and in pairs. Only the Saṅgha can be the source for a *kiccādhikaraṇa*. Further, it is said that legal questions of dispute, censure and obligation can be wholesome, unwholesome or indeterminate, depending on the motive of the person who raises the question. But, a legal question of offence can be only unwholesome or indeterminate and never wholesome.

Seven methods have been prescribed for the settling of these four kinds of legal questions (See ADHIKARAṆA-SAMATHA). Of them, two, *sammukhāvinaya* (verdict in the presence of) and *yebhuyyasika* (majority decision), can be used in settling a *vivādādhikaraṇa*. Here, *sammukhāvinaya* alone or it together with *yebhuyyasika* may be used. It should be noted that *sammukhā-vinaya* is a necessary condition in the settling of any legal question even when other methods are used. When a legal question of dispute arises in a monastery the monks there should try to settle it among themselves by *sammukhā-vinaya* for which these four things should be present: (1) The presence of the Saṅgha, i.e., as many monks as are competent for a formal act (*kammappatta*) have arrived, the consent (*chanda*) of those monks entitled to send their consent is brought, and when face to face they do not protest (*napaṭikkosanti*). (2 & 3) The presence of the *Dhamma* and *Vinaya*, which means the settling of a legal question in accordance with the *Dhamma*, the *Vinaya* and the words of the Teacher (*satthusāsana*). (4) The presence of the individuals (*puggala*), i e., both parties in a dispute.

A verdict of *sammukhā-vinaya* is not legally valid if it is settled by unrighteous monks against the righteous, but if the righteous settle it against the unrighteous then it is legally valid. Any one who tries to re-open a case that is legally settled or who criticises it after giving the consent is guilty of a *pācittiya* offence.

If the monks in the monastery cannot settle the case, then it should be taken to another monastery where there are more monks. They have yet another chance of settling it, while on the way, which also is legally valid. When the monks of the other monastery are requested to settle a case they must take it over only if they can settle it according to the dhamma, vinaya and the words of the Teacher and only if the others are ready to inform them of the facts regarding the origin of the case. They also must make the others agree to accept their decision. In case no decision is arrived at by this method, the case can be handed over to a committee (*ubbāhikā*).

To be appointed to a committee a monk should possess ten qualities, which in brief would be: virtue (*sīla*), knowledge of the doctrine preached by the Buddha, knowledge of both *pāṭimokkhas*, cleverness in discipline, competence to reconcile rival factions, skill in settling a legal question, knowledge of what a legal question is, its origin, its settlement, and the course of action leading to its settlement. In appointing a committee, first the monks should be informed, and then their names should be placed before the Saṅgha in the form of a resolution (*ñatti*, q.v.) for its approval. If there be in a committee a monk who is an instructor in the dhamma (*dhamma-kathika*) but who does not know the rule (*sutta*) and the analysis of the rule (*sutta-vibhaṅga*), or who knows the rule but not the analysis, and he holds back the meaning (*attha*) under the shadow of the letter (*vyañjana*) in his ignorance, such a person can be removed by means of a *ñatti*, before carrying out the business. Apart from this, no other rules regarding the working of a committee are forthcoming. But we find an account of the working of the committee of eight monks appointed at the historic Second Council in Vesāli.[1] There the thera Revata questioned the thera Sabbakāmi on each of the controversial points and when the latter decided them Revata announced each decision to the others and cast the ballot accordingly (*idam paṭhamaṃ salākaṃ nikkhipāmi*, etc.). At the end Sabbakāmi was again questioned amidst the whole Saṅgha and the case was settled. In all these cases the settlement is by *sammukhā-vinaya*.

Upon failure to reach a settlement by *sammukhā-vinaya*, resort can be had to *yebhuyyasika*. The voting is done by the distribution of voting tickets (*salāka*) which are made distinct by different marks. A polling officer (*salāka-gāhāpaka*), who should be of unimpeachable character, as the post carries with it a heavy responsibility, has to be selected by means of a *ñatti*. He should be a person who will not fall into a wrong course of conduct through lust (*chanda*), hatred (*dosa*), delusion (*moha*) or fear (*bhaya*) and he should know how to conduct a ballot (*gahitā-gahitaṃ*). He can conduct the ballot in one of three ways—secret ballot (*gulha*), whispering in the ear (*sakaṇṇa-jappana*) or the open ballot (*vivaṭa*). The commentary says that the first method is resorted to when the majority are unconscientious (*alajjussanna*), the second when the Saṅgha is composed of unintelligent monks (*bālussanna*) and the third when the modest monks are in majority (*lajjussanna*). When the secret ballot is used the polling officer can call upon the members to take the marked voting tickets, telling them the significance of the marks and asking them to keep the ballot secret. In the second method the instructions are whispered in the ear. But according to the commentarial view, here the polling officer can try to influence the monks who have voted with the unrighteous by advising them to take the voting tickets of the righteous. At the end the tickets are counted and the decision announced, but the polling officer can reject a whole voting if he finds the unrighteous have won. This he can do thrice, says the commentary, each time announcing that the improperly taken (*duggahita*) ballot should be rejected. At the end of the third time if he still finds the unrighteous in majority he can postpone the voting to another day. The method of open ballot is used when the majority are righteous.

1 *Vin*. II, pp. 305 f.

There are ten instances when the distribution of voting tickets is not valid, viz., when the legal question is trifling (*oramattaka*), when it has not gone its due course (*nagata gataṃ* [2]), when it is not remembered or caused to be remembered (*na sarita saritaṃ* [3]); when it is known that the unrighteous are in the majority; when the polling officer thinks that the unrighteous may be in the majority; when he knows that the Saṅgha will be divided; when he at least thinks that the Saṅgha may be divided; when the tickets are not taken according to rule (*dhammena*), e.g., one person takes two tickets; if, in groups (*vaggā*) [4], they take the tickets or when the tickets are not taken according to the views (*yathādiṭṭhāya*)—changing the views to be on the winning side. If the opposite conditions are present then the ballot is legally valid.

An *anuvādādhikaraṇa* can be settled by *sammukhā-vinaya, sati-vinaya* (verdict of innocence), *amūḷha-vinaya* (verdict of past insanity) or *tassa-pāpiyyasika* (act of specific depravity). A *sati-vinaya* is granted to a monk, who is accused of an unfounded offence and, being fully conscious of his innocence (*sati-vepullappatto*), repudiates the charge, and pleads for a grant of a verdict of innocence. Only when a person is accused of an offence and he pleads for a *sati-vinaya* and not otherwise should it be granted. Once the request is made it has to be placed before the Saṅgha in the form of a *ñatti*. For a *sati-vinaya* to be legally valid five conditions must be fulfilled; the monk should be pure (*suddha*) and free from offence (*anāpatti*), they should charge him (*anuvadenti*), he should request (*yācati*) for a *sati-vinaya*, the Saṅgha should be ready to grant it, and it should be by *dhamma* and by a full assembly (*samagga*). According to the commentary only an arahant and not even an *anāgāmin* is entitled to a *sati-vinaya*.

Accused of an offence committed while he was out of his senses, and which he cannot remember, a monk can ask to a grant of *amūḷha-vinaya*. The procedure to be adopted is as in the case of *sati-vinaya*. In three cases such a verdict is not legally valid, i.e., when a person, while remembering, says he cannot remember an offence committed by himself, or says that he can remember it as though from a dream, or not being mad, he pretends to be mad and asks others to imitate him. In case of opposite conditions being present, the *amūḷha-vinaya* becomes legally valid.

When a monk, interrogated at a trial, prevaricates, e.g., when charged with an offence, having denied he again acknowledges it, or having acknowledged he again denies it, or tries to shelve a question by another or tells a conscious lie, an act of *tassa-pāpiyyasika* can be passed against him. As in the other cases, the approval of the Saṅgha has to be obtained by means of a *ñatti*. The act becomes legally valid only if the monk is impure (*asuci*), unconscientious (*alajjī*), fault finding (*sānuvāda*), and if the Saṅgha carries out the act, according to the dhamma, in full assembly. An act of *tassa-pāpiyyasika*, carried out in his absence (*asammukha*), without interrogation (*appaṭipucchā*) and without acknowledgement (*apaṭiññāya*), is not legally valid. If the Saṅgha so desires, an act of this type can be passed against a monk who is a maker of disputes and legal questions, who is a fool and inexperienced, and who lives in unbecoming association with the laity. A person, against whom an act of *tassa-pāpiyyasika* has been passed, should not grant higher ordination (*upasampadā*) or give guidance (*nissaya*). He should not be attended by a novice, nor should he consent to an agreement to exhort nuns or even if he is agreed upon, he should not exhort nuns and, lastly, he should not quarrel with monks.

An *āpattādhikaraṇa* can be settled by *sammukhā-vinaya*, by *paṭiññā* (acknowledgement) or by *tiṇavatthāraka* (covering up with grass). On the one hand, a monk accused of an offence must acknowledge it before an act of censure (*tajjanīya*), guidance (*nissaya*), banishment (*pabbājanīya*), reconciliation (*paṭisāraṇīya*) or suspension (*ukkhepanīya*) is passed against him. A monk cannot also be punished for an offence other than the one he is charged for, even though he acknowledges it. On the other hand, a monk guilty of a light (*lahuka*) offence can confess it to a single monk, a number of monks or a Saṅgha and ask for absolution. In all three cases the monk can be discharged with a warning against future occurrence of the same nature. The *ñatti* form is not resorted to in these three cases and in the second and third cases a single monk out of the group has to carry out the act of absolution with the permission of the others.

An *āpattādhikaraṇa* that might lead to harshness (*kakkhala*), trouble (*vāla*) or schism (*bheda*), when dealt with by *paṭiññā*, can be settled by *tiṇavatthāraka*. After informing the Saṅgha, a representative from each of the rival factions should inform his side that he will confess his own offences and those of his colleagues before the Saṅgha and thus settle their legal question by *tiṇavatthāraka*. Then the request for a settlement by *tiṇavatthāraka* should be placed before the Saṅgha in the form of a *ñatti*, which should be preceded by a confession of the offences. Once the verdict is given all the monks present become absolved of their sins—committed from the moment of *upasampadā*, says the commentary—except of grave offences (*thulla-vajja*), those involving laymen (*gihipaṭisaṃyutta*), and those of persons who make open confession (*diṭṭhāvi-kamma*) of their dissatisfaction. Those persons who remain in their cells after giving their consent are also not absolved. The act should be carried out in an assembly where all the monks are present. Even the sick monks have to be brought to the assembly, says the commentary, and they cannot merely send their consent.

A *kiccādhikaraṇa* can be settled solely by *sammukhā-vinaya*.

C. WITANACHCHI.

[2] Vin. A. VI. p. 1192: *na ca gatigatanti dve tayo āvāse na* [illegible] *tattha tattheva vā dvattikkhattuṃ avinicchitaṃ.*

[3] Loc. cit. *na ca sarita sāritanti dvattikkhattuṃ tehi bhikkhūhi* [illegible] *sāritaṃ vā aññehi sāritaṃ vā na hoti.*

[4] Ibid. p. 1193: *Vaggā gaṇhantī'ti dve dhammavādino* [illegible] *dhammavādī salākaṃ gaṇhonti.*

ADHIKARAṆA-SAMATHA, eighth and final section of the *Pātimokkha.* It consists of seven rules for the settlement of legal questions (*adhikaraṇa*). Thus the *Sutta Vibhaṅga* (*Vin.* IV, p. 351) says that for the deciding, for the settlement of legal questions arising from time to time, a verdict in the presence of the offender (*sammukhā-vinaya*) may be given, or a verdict of innocence (*sati-v°*), or a verdict of past insanity (*amūḷha-v°*), which may be carried out on his admission (*paṭiññāya-kāretabbaṃ*); this is done by decision of the majority (*yebhuyyasika*), a decision of specific depravity (*tassa-pāpiyyasika*) or the covering up (as) with grass (*tiṇavatthāraka*).

The *Mahāvyutpatti* agrees with the Pali version of the seven rules. The corresponding Sanskrit terms being *sammukha-vinaya*, *smṛti-v°*, *amūḍha-v°*, *pratijñā-kāraka*, *tatsvabhāvaiṣiya*, *yadbhūyasikīya* and *tṛṇaprastāraka*. Apart from this work, the *Prātimokṣa* of the Dharmaguptika, Mahāsaṅghika, Kāśyapīya, Sarvāstivāda, Mūla-Sarvāstivāda and the Mahīśāsaka schools, found in their Chinese translations, and the Tibetan *Mūla-Sarvāstivāda Vinaya*, also agree with the Pali version of the *adhikaraṇa-samatha*.

The section on the *adhikaraṇa-samatha* lays down only certain methods that should be generally adopted in dealing with legal questions. The other sections of the *Pātimokkha*, on the other hand, deal with specific offences for each of which a penalty also is laid down. But as this section of the *adhikaraṇa-samatha* deals only with methods of settling legal questions, the interrogatory part found after each section does not seem to suit here. However the *Kaṅkhāvitaraṇī* (p. 156) says that the question here is whether a monk has done anything that should be settled by the *adhikaraṇa-samatha*.

According to S. Dutt (*Early Buddhist Monachism*, p. 94) this section must have been a later addition to the *Pātimokkha*, made when the need was felt for a law of procedure, not laid down in the earlier sections.

ADHIKARAṆA VAGGA. The second chapter of the *Duka-nipāta* of the *Aṅguttara Nikāya* (*A.* I, 52–8) comprises ten suttas of which only the fifth one speaks of disputes (*adhikaraṇa*), giving its name to the entire chapter. And, even in this sutta, the theme is not of disputes proper but of the conduct to be observed both by the offending monk and the reproving one. Only by the practice of strict self-examination will it be possible in a dispute to avoid contention and strife, enabling the monks to live at ease.

The other suttas in this vagga deal with the power of computation (*paṭisaṅkhāna-bala*), i.e., careful consideration of the evils of immorality, and the power of culture (*bhāvanā-bala*), of the seven factors of enlightenment (*bojjhaṅga*) and the four stages of mental absorption (*jhāna*). Evil and right conduct are shown by the Buddha as the causes of an evil or happy rebirth, respectively. The right expression of the letter of the Dhamma and the right interpretation of the meaning thereof are said to be conducive to the establishment of the true Dhamma.

ADHIKARAṆA-VASTU (Tib. *Rtsod-paḥi-gzhi*), the sixteenth section of the *Vinaya-vastu* (*Ḥdul-ba-gzhi*) of the *Dulva* (Tibetan Vinaya) which probably belongs to the Mūla-Sarvāstivāda school (A. C. Banerjee, *Sarvāstivāda Literature*, 80). It appears in the Vol. Ga. folios 365^b–418^b of the Snarthang edition and in folios 222^a–255^b of the Sde-dge edition. In it are related events that led to the formation of the Order of nuns and also the story of Mu-ting-can, the daughter of a king of Ceylon (Siṅ-ga-laḥi-glin), to whom the Buddha is said to have sent, through some merchants, a symbol and a few verses eulogising the holy life and the fundamentals of his doctrine. But the main purpose of this section is to explain the rules relating to the settlement of disputes among monks. Hence, it corresponds to the *Samathakkhandhaka* of the Pali *Cullavagga*. The term *Adhikaraṇa-vastu* occurs in the *Mahāvyutpatti* (9115) but this section is not found in the *Gilgit Manuscripts.*

The modes of settling disputes are seven in number, just as in Pali, and are identical with them (for details s.v. ADHIKARAṆA) The corresponding Tibetan terms are Mṅon-sum-du-ḥdul-bar-ḥos-pa (*sammukhā-vinaya*); Dran-pas-ḥdul-bar-ḥos-pa (*smṛti-vinaya*); Ma-myos-par-ḥdul-bar-ḥos-pa (*amūḍha-vinaya*); Gaṅ-tshul-śin-maṅ-po-sbyin (*yadbhūyasikīya*); Dehi-ṅo-bo-ñid-tshol-du-gzhug-par-ḥos-pa (*tatsvabhāvaiṣīya*); Rtsba-bkram-pa-lta-bur-ḥos-pa (*tṛṇaprastāraka*); Khas-blaṅs-bar-ḥos-pa (*pratijñākāraka*) (ibid. 236 ff.).

C. W.

ADHIKĀRA-SAṄGRAHA-NĀMA, a Sanskrit text which is extant in its Tibetan translation, the *Spyir-btaṅ-ba yaṅ-dag-par bsdus-pa shes-bya-ba*, in the Sgra-mdo (Śabda-vidyā) section of the Tengyur. Although the name of its author is not given, it is recorded that this work was translated at Ye-raṅ-gi groṅ-khyer (Lalitapattana) by Dpal-ldan Blo-gros brtan-pa (Śrīmat Sthiramati) of Dpaṅ (*Cordier* III, p. 459, No. 5; *TM.* No. 4273).

ADHIMĀNA, an undue estimate of oneself. It is one of the compounds descriptive of conceit (*māna.* q.v.) or haughtiness of mind (*cittassa unnati* : *Nd.* II, 226) in an intensified degree with the prefix super- (*adhi-*). It is this kind of over-conceit, whereby a person regards his own value with undue estimate as truth, thinks that he has attained to what he has not won, thinks that he has achieved what he has not done, thinks that he has accomplished what he has not begun. And then he declares in his over-conceit to have attained perfect insight (*adhimānena aññaṁ vyākaroti*) : " Rebirth has been conquered, the holy life is lived, all duty is done. I am assured of no more life in these conditions " (*A.* V, 162).

The cause of such over-conceit is traced by Mahā Kassapa to the fact that even though a man has deep learning and bears in mind the entire teaching of the Buddha, still his heart is obsessed by covetousness; he is fostering ill-will (*vyāpāda*), he allows the growth of physical and mental indolence (*thīnamiddha*), of indecisiveness (*uddhacca*) and doubt (*vicikicchā*). These are all symptoms of self-complacency, the negative effects of over-conceit. Or, such a person may feel the urge to show off the good qualities he imagines to possess or which he actually possesses to some extent; and then he becomes a busybody who finds his delight in doing things (*kammārāma*), in disputation (*bhassārāma*), in society (*saṅganikārāma*). And as a result of all this, there is in him no further progress, notwithstanding his attainments. But half-way attainment (*antarā-vosāna*) is a falling off in the teaching and discipline of the Buddha (ibid. p. 164).

On another occasion Sunakkhatta, a son of the Licchavis, asked the Buddha whether not some of the bhikkhus who declared having gained supreme insight, whether at least not some of them made such a declaration with an exaggerated opinion of themselves (*M.* II, 252). The Buddha admits that while some have really completed their task so that for them rebirth is no more, there may be others making a similar profession without having actually attained supreme deliverance "in the mistaken belief that there is nothing poisonous left behind" (*visadosaṃ sa-upādisesaṃ anupādiseso ti maññamāno*). In the end, however, lust will degrade their mind (ibid. 257) which will lead them either to death or to deathly woe. Pride goeth before the fall!

H. G. A. v. Z.

ADHIMĀTRAKĀRUṆIKA. In the *Saddharma-puṇḍarīka* (167), the Buddha mentions Adhimātrakāruṇika (literally meaning 'exceedingly compassionate') as one of the Mahā Brahmā who, with his host, invited the Tathāgata Mahābhijñājñānābhibhū to preach the first sermon. The story there related is that, on the attainment of enlightenment by this Buddha, among other wondrous events that took place, a great light spread throughout the fifty thousand myriads of *koṭis* of spheres in each of the ten directions, even up to Brahmaloka. As a result there was great commotion there, these deities wondering what the cause of the light could be. Having a premonition that it heralded the arising of a Buddha, the chief of the Brahmās of the east Sarvasattvatrātri hastens to the Brahmās of the west. They together see that a Buddha has attained enlightenment under the Bodhi-tree, and, appearing before him, they invite him to preach the doctrine. In the same manner, the chief of the Brahmās of the south-east, Adhimātrakāruṇika, Sudharma of the south, and Sikhin of the nadir, each with his Brahmā-host, and the brahmās of the south-west, west, north-west and north go to the corresponding opposite quarter, appear before the Buddha, and invite him to turn the Wheel of the Law. The invitation to preach is accepted by the Buddha, as in the case of Brahmā Sahampati, of which episode the present story seems to be an elaborate version (See **BRAHMĀ**.)

Kern (*SBE.* XXI, 161, n. 1) suggests that Sarvasattvatrātri, (which, incidentally, means saviour of all beings) is probably a veiled name of the regent of the eastern quarter, Indra, one of whose epithets is Sutrāman. He also notes (ibid. 167, n. 1) that Sudharma stands for Dharma, Yama, the regent of the south, deriving the name here applied from Sudharma taken as Yama's hall. The four names certainly merit comparison with the lokapālaka devas.

B. J.

ADHIMOKKHA (Skt. *adhimokṣa*) resolve, decision. The term, derived from the intensifying directive *adhi* and the root *muc* (*muñcati*), to release, signifies an 'abandoning' of the present position with a 'going forth' in a new direction. Such resolve, therefore, has in it a liberating force which leads to emancipation (*vimokkha*), although with this specific connotation it would rather be considered as a perfection of determination (*adhiṭṭhāna-pāramī*).

In its basic function, resolve will be found in many a deed, word and thought, for without decision no new activity would arise. Hence, *adhimokkha* is one of the six particular mental factors (*pakiṇṇakā*) which go into the making of a thought, good, evil or indifferent. In itself, it is a purely psychological factor of non-moral import, but becomes moral or immoral according to its combination in a moral (*kusala citta*) or immoral thought (*akusala citta*).

Adhimokkha implies a release from the wavering state of mind between two courses of action. But, although it is the factor (*cetasika*) which chooses to attend to *this* rather than to *that*, it cannot be called a deciding factor, in the sense of passing judgment. Judgment is not formed until the process of thought has composed a synthetic concept out of the different component parts (*samudāyaggahana*) and has classified it after relating it (*sambandha*) to the conventional marks or ideas. It is this discrimination which is the process of judgment (*vinicchaya*) and which completes the act of external perception.

This determination (*votthappana*) or arranging of the investigated material is a phase in the process of consciousness. But *adhimokkha* is merely a factor contributing to the resolve of indecision, which may obtain already in any purely presentative process in which an unknown object is presented for the first time and which, therefore, does not admit of any form of comparison, as in the case of judgment between two known concepts. At most it is one of the more conspicuous elements in the process of judgment, but not judgment itself.

Its nature of decisiveness is made clear by its absence in the mental state predominated by the mental property of perplexity (*vicikicchā-cetasika*). Mutually exclusive, *adhimokkha* cannot combine with *vicikicchā*. For perplexity is the awareness of an unsettled state of mind, whereas resolve is the freedom from such unrest and a decision to act in a particular way, without, however, discerning the complicated nature of such action, this being reserved for judgment proper. "With the absence of perplexity, resolve arises (*vicikicchāya abhāvena*

pan'ettha adhimokkho uppajjati : *Vism*. xiv, § 178, pp. 398 f.). But a combination of resolve with agitation (*uddhacca*) is possible. And thus the two thoughts rooted in delusion (*mohamūla*), which are formed either with the inclusion of perplexity or of agitation, differ in their constituents also with the absence or presence of resolve (*adhimokkha*) respectively. It is said that, because of the presence of resolve, concentration is stronger in a thought-process associated with agitation (*uddhacca-sampayutta* : loc. cit).

Coming to descriptive definitions of the nature of *adhimokkha*, we find on the one hand that resolve is the act of being convinced (*adhi-muccana*) about an object, not as trusting (*VismA*. 489). It has the characteristic of conviction (*sanniṭṭhāna-lakkhaṇa* : *Vism*. xiv, § 151, p. 395). On the other hand, resolve is said to be faith (*adhimokkho 'ti saddhā* : ibid. xx, § 118, p. 546). For, strong faith arises in such a one, in association with insight in the form of extreme confidence of consciousness and its concomitants.

And again, the acquisition of the faculty of confidence is dependent on the intensity of resolve, for whether in meditation a person comprehends all component things as impermanent, as conflicting, or as insubstantial, when he emerges on the Path while contemplating on impermanence, " all three acquire the faculty of confidence, since they have great resolve " (*tayo pi janā adhimokkhabahulā honti, saddhindriyaṃ paṭilabhanti* : ibid. xxi, § 89, p. 568).

This apparent contradiction of *adhimokkha* being described as conviction and as faith is cleared in the *Dhammasaṅgaṇi* and its commentary the *Atthasālinī*, where the faculty of faith (*saddhindriya*) is explained as a believing attitude of mind (*saddahanā*), as putting one's trust in (*okappanā*) and as a sense of assurance (*abhippasāda*), i.e., a development from faith to conviction (*Dhs*. 12; *DhsA*. 145).

An interesting, because unusual, reference is made to *adhimokkha* in the *Vibhaṅga* (165), where it replaces the customary term ' clinging ' (*upādāna*) in the stereotyped formula of dependent origination (*paṭicca-samuppāda*) : dependent on sensation arises craving, dependent on craving arises decision, dependent on decision arises becoming (*vedanā-paccayā taṇhā, taṇhā-paccayā adhimokkho, adhimokkha-paccayā bhavo*, etc.). The commentary, *Sammoha-Vinodanī* (p. 209), is not very helpful, but makes a suggestion in respect of this substitution : No clinging can possibly originate from craving in mental states free from wrong views (*diṭṭhivippayuttesu taṇhāpaccayā upādānaṃ n'atthi*) and hence the term clinging has been replaced by firmly rooted decision (*upādānaṭṭhāne upādānaṃ viya daḷhanipātinā adhimokkhena padaṃ pūritaṃ*). This substitution takes place, according to the commentary, not only in mental processes which are dissociated from wrong views (*diṭṭhi-vippayutta*) as stated above, but also in the mental states which are accompanied by grief (*domanassa-sahagata*), when craving (*taṇhā*) is substituted by repulsion (*paṭigha*), and in those mental states which are associated either with perplexity (*vicikicchā-sampayutta*) or with agitation (*uddhacca-sampayutta*), in which cases craving (*taṇhā*) is replaced by those two properties, respectively. The interesting point here then is that decision (*adhimokkha*) is made in dependence on such varying conditions as craving (*taṇhā*) and repulsion (*paṭigha*), produced by, but not co-existent with perplexity (*vicikicchā*) and agitation (*uddhacca*).

It is noteworthy, however, that the term *adhimokkha* is hardly ever used in the older canonical texts, whereas in the *Paṭisambhidāmagga* the term is used practically synonymous with *saddhindriya*, the faculty of trust and faith (*Ps*. I, 16, 19, 116 ff.; II, 26, 84, 86, 88, 216).

In the *Anupada Sutta* (*M*. III, 25–8) we find *adhimokkha* among the sixteen concomitants of the first stage of mental absorption (*jhāna*), all of which qualities are ascribed by the Buddha to Sāriputta. Similarly, in the description of the second, third and fourth stages of mental absorption in the spheres of form (*rūpa-jhāna*), resolve (*adhimokkha*) is found with the usual concomitants, intention (*chanda*), energy (*viriya*) and others. And so again in the formless spheres of mental absorption (*arūpa-jhāna*) on infinity of space, infinity of thought and nothingness. But in the most subtle sphere of neither-perception-nor-non-perception, and where both feeling and perception are extinct (*saññā-vedayita-nirodha*) the vision of the old qualities is now changed, so that there is neither leaning to nor aversion from them. No further resolve is needed or mentioned, for to the mind detached (*vippamutta*) and the heart untrammelled (*vimariyādikata cetasa*) there is no further refuge and no further growth.

H. G. A. v. Z.

ADHIMUKTI, resolve, decision. See ADHIMOKKHA.

ADHIMUKTI-CARYĀ-BHŪMI, one of the seven (or twelve) spiritual stages of a bodhisattva, or the first of a list of six bodhisattva-bhūmis (*Bodhisattva-bhūmi* ed. by U. Wogihara, 84.23) or the second of seven (367.4). Edgerton translates the word as ' stage of zealous conduct ' and renders the word *adhimukticaryā* as ' course of conduct determined by (religious) zeal '. For example, he mentions the *Sūtrālaṅkāra*, i, 13 and quotes the interpretation of S. Lévi stating that it is ' conduite par croyance ' (note I). But according to the explanations and interpretations of Chinese and Tibetan commentators, the word is not accepted in the sense above referred to. The Chinese equivalent for the word is *chieh-hsing-ti*, which literally means and has been explained as the stage of deed through interpretation or comprehension. In Tibetan it is rendered as *mos-pa spyod-paḥi sa* or the stage of interpretation and deed.

As is well known, the doctrine on the spiritual stages of a bodhisattva has developed from its primitive form. According to the *Bodhisattva-bhūmi*, this stage is said to be not of a bodhisattva's ten stages (*daśabhūmi*) but a stage earlier than that or the stage of a *tribhadra* bodhisattva. In the third chapter of this text it is stated as

follows: The bodhisattva who dwells in *Adhimukticaryā-bhūmi* performs the *caryā* (deed) of *adhimukti* (comprehension); the bodhisattva who dwells in *Śuddhyadhyāśaya-bhūmi* performs the deed of *Śuddhyadhyāśaya* (or pure mind). Also, in the ninth chapter of the same text it is stated that when a bodhisattva is awakened through faith but has not yet attained the stage of pure mind (*Śuddhyadhyāśaya-bhūmi*), he is called a bodhisattva of *Adhimukti-caryā-bhūmi*. In short, this is the stage of a bodhisattva who trains himself by means of the power of intelligence.

Besides these, two other points are noteworthy. One is that this stage corresponds to the spiritual stage of awakening faith. In the *Mahāyāna-śraddhotpāda-śāstra* the word *adhimukticaryā-śraddhotpāda* (chieh-hsing-fa-hsin) is mentioned. The other point worthy of note is that the state corresponds to two of the five stages of Vijñānavāda, i.e., *sambhāra-mārga* and *prayoga-mārga* of a bodhisattva. It is also mentioned in the *Vijñaptimātratāsiddhi* (*Taishō*, No. 1585; cp. *Nanjio*, 1197).

S. K.

ADHIMUKTITEJAS, an abbreviated form (used in verse) of the name of the Tathāgata Vipuladharmādhimuktisambhavateja(s). (*Gvyū*. 428.10).

ADHIMUTTA (1), an arahant thera. His name is spelt differently in the various sources. The majority of them refer to him as Adhimutta (*Thag. vv.* 705–25, *ThagA*. III, 12–18, *Ap*. I, No. 36, *SA*. I, 56–7, and in the *Dhammapadaṭṭhakathā* account according to the Burmese edition). He is also called Atimuttaka (*DhpA*. II, 252–3) and Adhimuttaka (*SA*. I, 56–7 and in the *Dhammapadaṭṭhakathā* account according to the Cambodian edition).

The different accounts are agreed that he was a novice under Saṅkicca, who was also his uncle. The latter sent him to his parents for their permission for his higher ordination. On the way he had to go through a forest and was seized by a gang of robbers, who, however, were eventually converted by him. But the accounts differ in the details.

According to the *Theragāthā Aṭṭhakathā* Adhimutta was an arahant while still a novice and the highwaymen who seized him as a suitable sacrifice to their deity were greatly impressed by his fearless demeanour. They not only released him but inquired about his teacher and his doctrine. Some became lay disciples, while others asked for ordination. Adhimutta first went to his mother and, having obtained her permission for his own higher ordination, returned to the converted thieves and had them ordained. He gave them a topic of meditation and, not long after, they became arahants.

In the *Dhammapadaṭṭhakathā*, the narrative differs regarding the encounter with the thieves and their conversion. Here Adhimutta wins his release by preaching to them. They set him free on the undertaking that he should not mention them to anyone. He keeps to his promise and does not tell even his parents who take the same road. When oppressed by the thieves, the parents accuse Adhimutta of conniving with them. To their astonishment the thieves realise how faithfully Adhimutta has kept his word. They not only release Adhimutta's parents but also seek ordination. There is no mention of Adhimutta or the former thieves becoming arahants.

The *Saṃyutta* commentary has different details. Adhimutta first goes to his sister to find out his age for the higher ordination, and she directs him to their mother. When he meets the thieves he has still to attain arahantship and therefore he thinks of a ruse to escape them. He wins them over by means of a parable which convinces them. The account of his release, the attack on his parents and the conversion and ordination of the thieves, is similar to that of the *Dhammapadaṭṭhakathā*, but with a little more detail. It is further stated that Adhimutta and the five hundred thieves became arahants.

In the time of the Buddha Atthadassī, Adhimutta is said to have been born in a wealthy family. After the Buddha's passing away he made a pavilion with sugar-canes and held a great almsgiving for the Saṅgha. As a consequence of this good deed he escaped all evil births. He excelled among devas and men until his last birth as Adhimutta (*Ap*. I, No. 36; *ThagA*. III, p. 12).

Adhimutta is mentioned as an example of one who shone among his relatives (*SA*. I, p. 56).

L. R. G.

ADHIMUTTA (2), an arahant thera, the author of *Theragāthā*, *v*. 114 which he addressed to some corpulent monks among his fellow-dwellers. He rebuked them for paying more attention to the growth of the body than to the perfecting of recluseship.

According to the commentary he was a brāhman of Sāvatthi and in due course became proficient in brāhman learning but was dissatisfied with it and looked elsewhere for refuge. Being impressed by the majesty of the Buddha at the presentation of Jetavana, he entered the Saṅgha and, developing insight, attained arahantship. It was after he became an arahant that he admonished his fellow dwellers with the stanza.

In the time of the Buddha Padumuttara he was a learned brāhman who renounced worldly life and became an ascetic in the forest. Having heard of the appearance of the Buddha he left the forest to meet him and spread his bark-garment at the Buddha's feet. The Buddha, knowing his mind, stood on it. The hermit offered him fragrant sandal-wood and sang a eulogy in ten verses. The Buddha prophesied that in the time of the Buddha Gotama, the hermit would join the Saṅgha and win arahantship. As a result of his honouring and eulogising the Buddha Padumuttara the ascetic enjoyed happiness among devas and men until he was finally born as Adhimutta.

15. S.P.C. 97040

He is to be identified with Sabbakittika of the *Apadāna* (I, No. 390) where the two accounts coincide and vary only in some details.

L. R. G.

ADHIMUTTI SUTTA, thus called in the text (*A.* V, 36) and the *uddāna*. *Adhimutti* means resolve or intention, and has no bearing on the contents of this sutta which speaks of the perfect comprehension of the Buddha in the ten fields of knowledge. The commentary, on the other hand, appears to read *adhivutti*, expressed opinion or doctrinal view: *adhivuttiyo ti diṭṭhiyo vuccanti, diṭṭhi-dīpakāni vacanāni.*

The sutta deals with the ten powers (*dasa-balāni*) of the Tathāgata in the various fields of knowledge: the knowledge of a thing as it really is with its causal origination; the knowledge of the fruits of action, past, future and present; the knowledge of the direction of each practice; the knowledge of the world in its divers shapes and forms; the knowledge of the divers characters of beings; the knowledge of the nature of the faculties of others; the knowledge of the corruption, purification, emergence from mental absorption, attainment of deliverance and concentration; the knowledge of remembrance of previous lives; the knowledge of the spheres of rebirth after people's deaths; the knowledge of realisation that by unaided power the mental intoxicants have been destroyed.

Surpassing these, the Buddha declared, there is no other knowledge of greater excellence.

ADHIPAÑÑĀ. The intensification and specialisation of knowledge (*ñāṇa*) comprises the higher faculties of cognition and intellect in their purest form of insight (*paññā*). But, in a way similar to the process of thought and the culture of virtue, where higher thought (*adhicitta*, q.v.) and higher virtue (*adhisīla*, q.v.) are recognised, there is also a higher kind of insight (*adhipaññā*). Insight of higher understanding of mental phenomena (*adhipaññā-dhamma-vipassanā*) is described as knowledge of the mental object as matter, etc.; and as understanding not only that object as dissolved, but the identifying consciousness thereof as well; and as apprehending emptiness in that dissolution, as follows: Mental forms break up; this is the end of mental formations, besides which there is nothing else. This makes it both higher understanding and insight in mental phenomena, and it is called insight of higher understanding of mental phenomena. Adherence and clinging to the concept of an essence is abandoned through the clear understanding of the absence of a permanent substance and of an essence of self (*Vism.* xxii, § 118, p. 598). In support of this the following stanza is quoted:

With fixed attention on the object
He ponders o'er its breaking up,
Arising from its emptiness:
Such is deep understanding's insight.

(*ārammaṇañ ca paṭisaṅkhā bhaṅgañ ca anupassati, suññato ca upaṭṭhānaṃ, adhipaññāvipassanā*: *Ps.*i, 58.)

This higher understanding (*adhipaññā*) thus forms one of the eighteen principal objects of insight (*vipassanā*, q.v.), a list found in later commentaries and treatises (*Vism.* xx, § 90, pp. 539–40; *VismA.* 506–7), where *adhipaññā* is explained as insight that occurs by knowing an object consisting of visible phenomena, and by seeing the dissolution of this conscious thought with its object, and by apprehending the voidness thereof through its dissolution.

It is through this understanding with insight (*vipassanā-paññā*) that investigation of the truth (*dhamma-vicaya*) as a factor of enlightenment (*bojjhaṅga*) becomes possible.

Adhipaññā is the concluding term of the set of three higher instructions (*adhisikkhā*) in which moral conduct (*adhisīla*) is taught through the Vinaya, deeper thought (*adhicitta*) through the Suttas, and comprehensive insight (*adhipaññā*) through the study of Abhidhamma.

(For details, see the commentary on Part vii, § 6, of the *Abhidhammattha-saṅgaha* in the *Abhidhammattha-vibhāvanī.*)

H. G. A. v. Z.

ĀDHIPATEYYA, sometimes found in the form *ādhipacca*, meaning supreme power, from *adhi* + *pati*: over-lord. This supreme power of absolutism is so much above the ordinary human power that it is rightly called divine (*issarādhipaccaṃ*: *A.* II, 205; *dibbena ādhipateyyena*: *D.* III, 146; *A.* III, 33). It is the divine right of kings and universal monarchs, who rule with sole power among the clans (*kulesu paccekādhipaccaṃ*: *A.* III, 76).

Even so, the provision of such absolute power and the establishment of one's own parents in such supreme authority and absolute rule of the entire world would not suffice to pay off one's debt of gratitude to them (*A.* I, 62). For, after all, even a rāja, holding such divine lordship (*issariyādhipaccaṃ*) and supreme dominion over the four continents, is thereby not yet released from rebirth in lower spheres, from the way of woe (*S.* V, 342).

Sovereignty over the sixteen provinces (*solasa-mahājana-padā*) is said to be not worth one sixteenth of the value attached to the observance of the eight precepts on an uposatha day (*A.* I, 213–4; IV, 252). And a poor thing indeed is human sovereignty when compared to heavenly bliss (loc. cit.).

The only lordship (*ādhipateyya*) which is praiseworthy and worth striving for is virtue, dominantly influenced by self-regard (*attādhipateyya*), dominantly influenced by the censure of the world (*lokādhipateyya*) and dominantly influenced by desire to honour the true doctrine (*dhammādhipateyya*: *A.* I, 147–9; *Vism.* i, § 34, p. 12). This self-regard is said to be inspired by conscientiousness which is the subjective sense of shame (*hiri*); and desire to ward off the censure of the world is influenced by the objective fear of blame (*ottappa*: *DhsA.* 125). In this threefold dominance evil is abandoned, goodness cultivated and utter purity attained.

H. G. A. v. Z.

The corresponding Hybrid Sanskrit term *aupacayika* means 'dominant influence or factor' or 'based on accumulation'. This has been translated into Chinese as *tsêng-shang* (增上), meaning 'increase' or 'influence', while in Tibetan it is literally translated as *rgyas-pa-las-ḥbyuṅ-ba*, meaning 'originating from increase'.

Generally speaking, these technical terms are analogous to modern words like 'increasing power' or 'dominant influence'. In fact, the words were used in innumerable ways, corresponding to almost all the meanings of 'power' or 'potence.'

The classification of this word in its strict sense was done by the efforts of the commentators of the Sarvāstivāda (or Vaibhāṣikas), and was taken over and expounded by the Vijñānavāda. These classifications seem complicated and scholastic, but on further examination it will easily be seen that all these classified powers can be divided into two parts. One is the increase of power itself, and the other is the cause of that increase of power and dominance. Strictly speaking, however, *ādhipateyya* or *aupacayika* only represents the former sense, while the latter is signified by *adhipati-paccaya* (q.v.).

It may be stated that the classifications of power originated in the speculations of the Vaibhāṣikas and they were expounded more and more minutely through the efforts of the Vijñānavādins. In the *Abhidharma-mahāvibhāṣā-śāstra* (fasc. xxi: *Nanjio*, No. 1263) there are mentioned only three kinds of *aupacayika*, i.e., dominance by oneself (*tzu-tsêng-shang* (自增上), dominance by the world (*shih-tsêng-shang* (世增上), and dominance by the dharma (*fa-tsêng-shang* (法增上). The first one is a power which is inherent in or gained by oneself, like the influence of ethical progress, not to commit an evil deed. The second one means the power or influence by the people of this profane world, like public criticism. The third and last one is influence gained through belief of the truth, or, in other words, this is the power of the dharma itself.

The interpretation given above is mainly concerned with the difference of the powers themselves. Another classification of power is made according to the difference of the powers corresponding to the instruments or the faculties of human beings (the 22 *indriyas*). Seven kinds of *ādhipateyya* are given and their classification is based on the difference of the *indriyas*. The seven *ādhipateyyas* are as follows: *chü-tsêng-shang* (取增上) or the capacity of perception of eyes, ears, etc.: *shêng-tsêng-shang* 生增上) or the productive potency produced from the genital organs of both male and female; *chu-tsêng-shang* (住增上), literally meaning the dwelling power, or the power of life embodied in the human body; *shou-yung tsa-jan-tsêng-shang* (受用雜染增上) or the power of perception, or desire; *ching-cheng tsêng-shang* (淸淨增上), or the capacity or wish for purification; *tien-tseng-shang* (田增上) or the common power of karma in this world; *chih-shou-tsêng-shang* (執受增上) or the power of the elements (*mahābhūta*) in the modification of phenomena (*rūpa*).

Besides these, some other classifications with regard to the dominance of dharma are found in the teachings of the Vijñānavāda.

S. K.

ĀDHIPATEYYA SUTTA is the concluding sutta of the *Devadūta Vagga* in *Tika-nipāta* of the *Aṅguttara Nikāya* (I, 147–50) and deals with the threefold dominant influence by oneself (*attādhipateyya*), by the world (*lokādhipateyya*) and by the teaching (*dhammādhipateyya*). No amount of twisting can produce a 'self' as the master in this 'overlooked Pali Sutta' (C. A. F. Rhys Davids: *JRAS*. 1933, pp. 329–34). For the first form of dominance is not *by* a self but *of* oneself, in mind-control, which is self-control. The thought of self (*atta*) is introduced as the subjective factor, in opposition to the outer world (*loka*) as the objective factor, in consideration of which a monk puts forth energy to calm his body and control his mind.

Self-control (*attādhipateyya*) is brought about by reflecting on the unworthiness of pursuing the desires of the flesh and the spirit after having renounced a worldly life. It is the subjective approach of awakening conscience which brings about a sense of inner shame (*hiri*) and makes one abandon evil and cultivate what is good.

Control out of regard for the world (*lokādhipateyya*) is brought about by more external reflections on the reactions of one's fellows in the holy life, or fear of public opinion. Thus, fear of blame (*ottappa*) makes one lead a blameless life.

Finally, the culture of what is good, the abandonment of what is blameworthy and the preservation of utter purity may be originated and dominated by consideration of certain qualities of the teaching (*dhammādhipateyya*), how it is well-proclaimed by the Blessed One, becoming effective in this very life, not involving the element of time, inviting deeper investigation, guiding onward and to be comprehended with true understanding by anyone's personal effort.

H. G. A. v. Z.

ADHIPATI-PACCAYA, one of the twenty-four conditions (*paccaya*, q.v.) in the system of correlation (*paṭṭhāna-naya*). It refers to a relation in which the conditioning factor exerts an influence over what is conditioned thereby, by way of dominance. Hence it is called *adhipati* or dominance-condition. There are two kinds of this relation, namely, *ārammaṇādhipati-paccaya* (object as dominance-condition) and *sahajātādhipati-paccaya* (co-nascent states as dominance-condition).

In the case of the former a mental object exercises a dominating influence in bringing into existence another mental state. The object may be either a type of consciousness (*citta*) or a mental concomitant (*cetasika*). But, only such objects as are most lovable and worthy of attention can serve as a condition in this connection. Therefore, the four types of consciousness accompanied by hatred (*dosa*) and delusion (*moha*), the tactile consciousness accompanied by pain and the mental concomitants associated with all these, cannot possibly serve as

an *ārammaṇādhipati-paccaya*. Consequently, any of the remaining types of consciousness or psychic factors, when they are capable of evoking pleasure, function as a condition by way of dominance.

Sahajātādhipati-paccaya, on the other hand, refers to a relation in which a concomitant mental event exerts an overwhelming influence in bringing into being either a type of consciousness, or a material quality. There are four such concomitants, namely, concentrated intention (*chanda*), energy (*viriya*), consciousness (*citta*) and reflective investigation (*vīmaṃsā*). These four mental conditions are included in the dominance-condition, since they exercise a dominating influence over the consciousness, mental concomitants and the material qualities with which they are associated. But, it should be noted here, that only one of these four conditions can be predominant at any single time.

Y. K.

This condition of dominance corresponds to the last causal condition (*hetu*) of the six, i.e., *kāraṇa-hetu*. As regards the identity of this condition (*adhipati-pratyaya* in Sanskrit; *tsêng-shang-yüan* 增上緣 in Chinese; *bdag-poḥi-rkyen* in Tibetan) with the *kāraṇa-hetu*, many scholastic speculations and arguments were made among the teachers of the Sarvāstivāda and the Vijñānavāda. Briefly stated, the question is mainly concerned with the relation of *adhipati-pratyaya* with *kāraṇa-hetu* and with *ālambana-pratyaya*, respectively. After a long and complicated discussion, the *Abhidharma-mahāvibhāṣā-śāstra* (fasc. 7, *Nanjio*, No. 1263) gives its conclusion as follows: the essence or the body of *adhipati-pratyaya* and *kāraṇa-hetu* is the same, hence the essence of both *pratyaya* and *hetu* is tantamount to all the elements (*sarve dharmāḥ*). But, their efficiencies are different; that of the former is stronger than that of the latter. The power of *adhipati-pratyaya* is not only to do away with hindrances but to give powers to the other dharmas. On the other hand, the efficiency of the *kāraṇa-hetu* is confined to getting rid of hindrances. With respect to the relation of *adhipati-pratyaya* and *ālambana-pratyaya*, it is stated that the former is wider than the latter, hence the former can cover all the elements including *saṃyukta-* and *sahabhū-dharmas*, while the latter cannot cover these two dharmas.

Therefore, at least in the list of the Sarvāstivāda, the *Bodhisattva-bhūmi*, this *pratyaya* is defined as *kāraṇa-hetu* (and the corresponding *phalas* are *adhipati-* and *visaṃyoga-phalas*)[1]. Later interpretations, however, somewhat differ from this. In the *Bodhisattva-bhūmi*, this *pratyaya* is defined as *upāya-hetu* (*BHS*. s.v.).

As mentioned above, the efficiency of *adhipati-pratyaya* is divided into two, i.e., that of removing hindrances and that of increasing the power of the other dharmas. According to the 127th fasc. of the *Abhidharma-mahāvibhāṣā-śāstra*, the power of increasing the efficiency of other dharmas is drawn from the close connection of this *pratyaya* and the other elements in this very world, while that of removing hindrances is to be gained from the remote connection of the two, the latter of which is to be in the other world.

Later, in the Vijñānavāda, this *adhipati-pratyaya* came to be considered as a general *pratyaya*, which is superior to the other three *pratyayas*. (See the 7th fasc. of the *Vijñapti-mātratā-siddhi*.) In this school, concrete examples of this *pratyaya* also came to be given in detail. Such an account can be found, e.g., in the fifth fasc. of the *Mahāyāna-abhidharma-samuccaya*. For details see s.v. ĀDHIPATEYYA.

Further, in the doctrine of Pure Land Buddhism in China which was founded by Shan-tao this *pratyaya* is defined as the power of Amitābha Buddha through which all sentient beings are to be led to the Pure Land, which is his abode. This idea was accepted and expounded in the Pure Land Buddhism of Japan.

S. K.

ADHIPATI-PHALA or dominant effect occurs in connection with the Sarvāstivāda exposition of causality (*AbhK*. II, 49 ff.). The Sarvāstivādins established several kinds of causal relations between the elements (*dharma*). Accordingly, in their exposition of psychological phenomena, they held that the sense of vision (*cakṣurindriya*), which they considered to be the raison d'être (*kāraṇa-hetu*), produces a visual sensation (*cakṣurvijñāna*), a result which they termed *adhipati-phala*. This relation is absent in the case of an inefficient condition of the sense organ (*indriya*). Thus, visual consciousness or sensation is the dominant effect of the visual organ (*indriya*). The same holds true with regard to the other sense organs. Thus, whatever effect comes into existence from a cause which exerts a dominating influence on it is called *adhipati-phala* (*Bbh*. 102.18 and 130.5 ff.).

In the Mahāyāna *Sūtrālaṅkāra* of Asaṅga five fruits (*phala*) of compassion (*karuṇā*) are enumerated, out of which the attainment of supreme knowledge (*uttamabodhi*) is the dominant fruition (*adhipati-phala*). Compassion is said to be the seed (*bīja*), out of which the tree of enlightenment sprouts (p. 124).

The term *adhipati-phala* is not found in the Theravāda Abhidhamma. The Theravādins who disliked the analysis of the causal process into two water-tight compartments such as cause (*hetu*) and effect (*phala*)—an analysis which could not stand the assault by the dialectic of Nāgārjuna—laid emphasis on the concatenation of several conditions (*paccaya*) producing an effect which they termed *paccayuppanna-dhamma* (*Tikap*. I, 27).

D. J. KALUPAHANA.

ADHIPRAJÑĀ, superior wisdom or insight, Sanskrit form of the Pali *adhipaññā* (q.v.) with the same meaning.

1 Th. Stcherbatsky, *The Central Conception of Buddhism*, 106.

ADHISĪLA (Skt. *adhisīla*), higher morality or conduct of a type superior to that of the moral obligations of an average man in the world. It is virtuous conduct based on the monastic rules of discipline (*vinaya*) and forms thereby part of the three types of higher training (*adhisikkhā*) based on the three divisions of Buddhist texts: higher morality (*adhisīla*) based on the Vinaya, deeper thought (*adhicitta*) based on the suttas, and the wisdom of insight (*adhipaññā*) based on the study of Abhidhamma.

The training for higher virtue (*adhisīla-sikkhā*) is placed at the beginning, for "virtue that is quite purified is the beginning of all profitable things" (*S.* V, 143). But, this higher virtue is neither the volition to fulfil one's duties, nor the restraint to abstain from transgression, but rather the moral basis for mental concentration, absorption and insight. Thus, the restraint following from mindfulness (*satisaṃvara-sīla*) guards the eye-faculty (*rakkhati cakkhundriyaṃ*) and becomes thereby the preliminary to concentration (*D.* I, 70; *Vism.* i, § 17, p. 7). For only when "endowed with morality, does concentration bring great fruit and blessing (*sīla-paribhāvito samādhi mahapphalo hoti mahānisaṃso* : *D.* II, 81). Endowed with concentration does wisdom bring great fruit and blessing. Endowed with wisdom, the mind becomes freed from all mental intoxicants (*āsava*), of sensuality (*kāma*), of thirst for existence (*bhava*), of attachment to opinions (*diṭṭhi*) and of ignorance (*avijjā*)."

It is this threefold training in higher morality, higher thought and higher wisdom, which entitles one to be called a pupil (*sekha* : *A.* I, 230–1). This higher morality is not the observance of a greater number of precepts (as *pañcasīla, aṭṭhasīla, dasasīla*), but a training of one's higher nature and character which is the basic meaning of *sīla*. The highest virtue is that of the Noble Path, and it is to this highest degree of conduct that the Buddha referred in the *Kassapa-Sīhanāda Sutta* (*D.* I, p. 174), "There are some monks and brāhmans, Kassapa, who place great emphasis on conduct, and speak in various ways in praise of virtuous conduct. But, Kassapa, as regards the most noble and highest virtue (*ariyaṃ paramaṃ sīlaṃ*) I am not aware of anyone who therein equals myself or transcends me. I have gone further in this respect, and that is supreme virtue (*adhisīla*)."

H. G. A. v. Z.

ADHIṢṬHĀNA, determination, resolution, resolve. See ADHIṬṬHĀNA.

ADHIṢṬHĀNA-KRAMA, a Sanskrit text which is extant in its Tibetan translation, the *Byin-gyis brlabs-paḥi rim-pa*, in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. Its author is Dpal-ḥdsin chen-po (Mahāśrīdhāra). Darpaṇācārya of east India and Prajñāratna of Glo-bo translated the work into Tibetan (*Cordier*, II, p. 182, No. 123; *TM*. 2024).

ADHIṢṬHĀNA-MAHĀKĀLA-GUHYA-SĀDHANA-NĀMA, a Sanskrit text composed by Klu-byaṅ (Nāgabodhi) and extant in its Tibetan translation, the *Byin-gyis brlabs-paḥi nag-po chen-poḥi gsaṅ-paḥi sgrub-thabs shes-bya-ba* in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. The name of its translator is not mentioned (*Cordier*, III, p. 201, No. 96).

ADHIṢṬHĀNA-MAHĀKĀLA-SĀDHANA-NĀMA, a Sanskrit text which is extant in its Tibetan translation, the *Byin-gyis brlabs-paḥi nag-po chen-poḥi sgrub-thabs shes-bya-ba*, in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. Its author is Dpal-ldan Tābara-pa (Śrīmad Ajapālitapāda). Atayavajra (Advayavajra) of India and a Tibetan Tshul-khrims mgon (Śīlanātha) translated the work into Tibetan. But in the Sde-dge edition the author's name is given as Śabari-pa and the translator's name is not recorded (*Cordier*, III, p. 200, No. 95; III, p. 205, No. 107; *TM*. 1762).

ADHIṬṬHĀNA (Skt. *adhiṣṭhāna*), determination, resolve, resolution. As the word 'determination' is used in different contexts with various meanings, it may prove useful to set out here in brief their distinction as technical terms. Thus, determination as resolve (*adhiṭṭhāna*) is a resolution towards a certain type of action which is thereby stimulated. Determination as decision (*adhimokkha*) is a steadfastness in choice, whereby the mind is freed from wavering between two courses of action. Determination as fixing (*voṭṭhapana*) is the arranging of the investigated material during the representative process of cognition. Here we shall deal only with the first term: *adhiṭṭhāna*.

A firm mental determination usually precedes a heroic act of self-sacrifice or renunciation, and thereby becomes the basis of further action. 'Basis' is the fundamental concept of *adhiṭṭhāna*, which is sometimes found in its original meaning, e.g., when a Buddha, preaching the *Saddharmapuṇḍarīka*, makes his disciple, the bodhisattva Sarvasattvapriyadarśana, the 'basis' of his exposition, i.e., he preached for his special benefit (*Sdmp.* 405). In architecture the Sanskrit term is used as the physical foundation or basement of a building, the base of a pillar, the prop of a railing (*Mhvyut.* 5591; *Divy.* 221; *Mhvu.* i, 195; III, 2227; *BHS.* s.v. 4).

The *Saṅgīti Suttanta* (*D.* III, 229) enumerates four kinds of *adhiṭṭhāna*, distinguished by their objects. Here, too, the basic meaning of 'foundation' is to be understood; they are the four foundations explained in the *Dhātuvibhaṅga Sutta* (*M.* III, 240) as insight not to be neglected (*paññaṃ nappamajjeyya*), truthfulness to be safeguarded (*saccaṃ anurakkheyya*), liberality to be fostered (*cāgaṃ anubrūheyya*) and tranquillity in which to train oneself (*santiṃ sikkheyya*). The foundation of insight (*paññādhiṭṭhāna*) is then explained by the commentary (*MA.* V, p. 52) as the insight of concentration and meditation (*samādhivipassanāpaññā*) which, through development of the stages of mental absorption, leads to the insight of the fruit of arahantship (*arahattaphalapaññā*). The foundation of truthfulness (*saccādhiṭṭhāna*) is the supreme truth of Nibbāna, which cannot deceive (*paramaṃ ariyasaccaṃ, yadidaṃ amosadhammaṃ nibbānaṃ* : *M.* III, 245). The foundation of liberality (*cāgādhiṭṭhāna*) is the

renunciation of all ties to existence (*sabbūpadhi-paṭinissagga*). The foundation of tranquillity (*upasamādhiṭṭhāna*) is the quelling of greed, hate and delusion (*rāgadosamohānaṃ upasamo*). Established on these foundations, a man is truly called a tranquil sage (*muni santo ti vuccati : M.* III, 246), i.e., one who has destroyed in himself all intoxicants and is free (*khīnāsava-muni santo nibbuto : MA.* V, 60).

A resolution may be merely based on the right of a monk, e.g., to dispose of his robes (*tricīvarādhiṣṭhāna : VinMS.* ii, 91), although more often it is a supernormal strength of will-power as a result of meritorious action in the past (*puṇyavipākādhiṣṭhānādhiṣṭhitās : Lal.* 48). But, the predetermining of the duration of mental absorption (*jhāna*) before its induction requires cultivation (*adhiṭṭhānavasitā*), and is, therefore, neither normal in the sense of attainment within the reach of the everyday man, nor supernormal in the sense of belonging to the transcendental attainments of the Path (*lokuttara magga*). Neither should it be thought that determination is always good in the ethical sense; for that depends on its object, which may well turn a resolved mind into an obstinate and prejudiced one, and thereby place it in the same category with lust, craving, attachment to opinions, heretical views and religious bias (*adhiṭṭhānābhinivesānusaya : S.* II, 17; III, 10, 135).

Adhiṣṭhāna may acquire the meaning of *power* of control, over and above the *right* to control or determine. Thus, we hear of the force of the supernatural power of Maitreya bodhisattva (*Maitreyasya bodhisattvasyādhiṣṭhānabalena : Gvyū.* 512). The continuation of the rolling of the Wheel of Righteousness also is assured through the supernatural power of all the Buddhas (*sarvabuddhādhiṣṭhānāvilopitaṃ : Laṅk.* 415). It is on account of the fixed determination of the Buddha to discipline creatures that are subject to evil rebirths, that the Wheel of his teaching cannot be turned back (*akṣana-sattva-vinayādhiṣṭhānāpratyudāvartya-cakraṃ : Lal.* 423).

Thus, a close connection may be observed between a resolution (*adhiṭṭhāna*) and an asseveration of truth (*saccakiriyā*, q.v.), which is a solemn statement of truth by the strength of which (*saccādhiṭṭhāna*) supernormal phenomena occur. This could actually be grouped under *adhiṭṭhāna-iddhi*, one of the psychic supernormal powers, by which a person could multiply his personality (see ABHIÑÑĀ), if he resolved to do so.

The determined resolves of the individual (*puggalādhiṭṭhānā*) are, according to the *Vibhaṅga*, revealed by the positive progress in meditation, of conceptive ideation in its initial application (*vitakka*) and the sustained application of discursive thought (*vicāra*). But, even in the ordinary thought process (*citta-vīthi*) the factor of resolve forms a very important link. In the process of the development of a thought, which is the process of consciousness (*viññāṇa-kicca*) from the moment it is a mere disturbance (*calana*) in the unconscious (*bhavaṅga*) entering the field of presentation, till it loses itself in the stream of living after a final moment or two of registration (*tadārammaṇa*)—which, perhaps, will allow it to survive as a memory—in that entire process of a maximum of seventeen moments the most important is the stage of full cognition or apperception (*javana*) when sensory perceptions are interpreted, appropriated and assimilated. It is the stage of full awareness and responsibility, when thought (*citta*) acquires karmic liability through a volitional reaction (*cetanā*) to the passively accepted impressions in the senses. These moments of apperception (usually seven) are sometimes called the impulses of resolve (*adhiṭṭhāna-javana*), for it is here that the will is fixed in the process of acquiring some supernormal power (*iddhi*). The fifth and final state of mental absorption (*jhāna*) is then called the basis for the fixation of will (*adhiṭṭhāna-pādaka-jhāna*), for this state of mental absorption forms then the basis of the 'willing' process (*Compendium of Philosophy*, p. 62); and the seven moments of volitional apperception are then known as *adhiṭṭhāna-javana*.

Adhiṭṭhāna is perhaps best known in later literature as a *pāramī*, one of the ten perfections to be developed in the highest degree by a bodhisatta during numerous lives and æons in preparation for the supreme enlightenment of Buddhahood. "With unshakable resolution they work for the welfare and happiness of beings" (*tesaṃ hitasukhāya avicalādhiṭṭhānā honti : Vism.* ix, § 124, p. 270). Thus we read of the bodhisatta as king Saṅkhapāla (*J.* No. 524, V, pp. 162–77), yielding himself up as a sacrifice, firm in his resolution not to open his eyes and regard his torturers with anger. It must be noted here, however, that only the later literature of the Theravāda (e.g., *Jātaka*, *Mahābodhivaṃsa*, *Cariyāpiṭaka*) speaks of these perfections, when ten *pāramī* are enumerated with *adhiṭṭhāna* in the eighth place. But in the texts of the Sarvāstivādins and the Mahāsāṅghikas only six are mentioned, and *adhiṭṭhāna* does not find a place there. On the other hand, no inference can be drawn from the absence of the ten perfections (*dasa pāramī*) in the Book of Ten of the *Aṅguttara Nikāya*, for the Four Noble Truths are not found in the Book of Fours; neither is the Noble Eightfold Path in the Book of Eights.

H. G. A. van Zeyst.

ADHIṬṬHĀNA-IDDHI, supernormal or magical power of determination, i.e., the power of manifesting oneself in many places. "Being one by nature he turns his mind towards many forms . . . and determines to assume so many forms." The psychic power displayed thereby is called the supernormal power of determination (*adhiṭṭhāna-iddhi*), as it is accomplished through resolve (*adhiṭṭhānavasena nipphannattā : Vism.* xii, § 23, p. 318). This psychic power is the first of ten kinds (*dasa iddhiyo*), which, as a group, constitute one of the six kinds of higher spiritual knowledge. See ABHIÑÑĀ.

ADHIVACANA-PRAVEŚA, name of a samādhi. It appears in the tenth and eighteenth chapters of the *Pañcaviṃśatisāhasrikā-prajñāpāramitā-sūtra* (*Nanjio*, No. 3) as one of the 108 kinds of samādhi.

Its Chinese equivalent can be found either from the translation of the text itself or from its commentary (*Mahāprajñāpāramitā-śāstra*, fasc. 43 & 47, *Nanjio*-No. 25) and from another translation (*Mahāprajñāpāramitā-śāstra*, fasc. 414, *Nanjio*, No. 1) : namely, *Ju-ming-tzŭ* (入名字), *Shih-ming-tzu* (釋名字), *Têng-ju-tsêng-yū* (等入增語) and so on.

In Sanskrit *adhivacana* means 'designation', 'appellation', 'name' or 'term', while *praveśa* means 'entering'. So the literal meaning of the term *adhivacana-praveśa* is 'entering into a term'; it may indicate the attempt of getting into the real meaning of the word (*paramārtha*), apart from the ordinary meaning of the word (*prapañca*), by means of this meditation (*samādhi*).

The sources above mentioned, however, do not help one to get any information about the contents of this samādhi, since they only give an account of the numeration of many samādhis. At any rate, it is evident that this samādhi is one of the epithets of *śūnyatā* which is a principal tenet of Prajñāpāramitā teaching.

Even in later materials, the name of this samādhi occurs along with those of some of the other samādhis (e.g., *Mhvyut.* No. 523).

S. K.

ADHIVĀSANA, endurance, one of the seven methods by means of which the four spiritual corruptions or mental intoxicants (*āsava*, q.v.) are to be got rid of. He who endures cold and heat, hunger and thirst, wind and sun, insects and unpleasant speech, who can endure his own bodily feelings in acute pain, will not be subject to the arising of the intoxicating corruptions of sensuality (*kāmāsava*), of attachment to life (*bhavāsava*), of attachment to wrong views (*diṭṭhāsava*), and of ignorance (*avijjā*) of the Four Noble Truths. Thus, through endurance these destructive and consuming cankers will not arise. See also SABBĀSAVA SUTTA (*M.* I, 10).

Endurance added to virtue and skill is also said to be the sure way to do good to one's friends and all to one's enemies (*J.* II, 236).

ADHOPUPPHIYA, an arahant thera. In a previous birth in the time of the Buddha Sikhī he was a sage of great psychic power and lived in a hermitage in the Himalayas. Once when Abhibhū, the chief disciple of the Buddha Sikhī, came to the Himalayas, the sage went through the air to the spot taking a flower and offered him seven flowers in all. On his return to the hermitage he was devoured by a boa-constrictor. He died thinking of his good deed and he knew of no unhappy birth thereafter (*Ap.* I, No. 84).

The commentary repeats this information with greater detail and adds that after death the sage enjoyed birth in the brahma world and the deva world. In this Buddha age he was born in a certain family and having heard the Buddha preach he entered the Saṅgha. Before long he became an arahant. In later life he was known as Adhopupphiya thera because of his former good deed. His personal name is not known.

ADHOVĀNA, one of the many mountains that the prince Sudhana had to cross on his way to the dwelling place of Manoharā, the kiṃnara-maid (*Divy.* 450, 455). It lies to the north of Himavā, the king of mountains. In the *Mūla-Sarvāstivāda Vinaya* the same mountain is called Adhunāna (*GM.* III, part I, 144, 152).

ADHUNĀNA, name given in the *Mūla-Sarvāstivāda Vinaya* (*GM.* III, Part I, 144, 152) to the mountain Adhovāna (q.v.).

ADHVAN (in Pali *addhan*), a stretch of time, also a lifetime, usually applied to a mode of time, past, present and future. Of these, the past (*atīta*) and the future (*anāgata*) are the most commonly used. The present is usually expressed as "that which has arisen just now (in Pali *paccuppanna* : *M.* I, 370 ; *D.* III, 216 ; in Sanskrit *pratyutpanna* : *Sdmp.* 42.1). In compounds it loses the earlier significance of a division of time, and may come to mean merely a very long time (*ciraṃ dīrghaṃ adhvānaṃ* : *Mhvu.* I, 52 ; *dīghaṃ addhānaṃ saṃsāraṃ* : *A.* II, 10).

Sometimes the idea of a stretch is also applied spatially to a road or a journey (*addhāna-magga* : *D.* I, 79).

ADHYĀHĀRIṆI-LIPI, a kind of script mentioned in the *Lalitavistara* (126.9) which, conceivably, was a form of writing of consonants alone, without vowels. Edgerton suggests 'suppletive script', from the name which contains *adhi* : augmentation, which is supported by the Tibetan name *bla-thabs-su-bsnam-pa* (superior-augmentation to a higher means ?).

ADHYARDHAŚATAKA, one of the most important texts of Tantric Buddhism. It is also called *Adhyardhaśatikā-prajñāpāramitā* or *Prajñāpāramitā-naya*. Its full name is referred to variously by scholars, for example, Nanjio gives it as the *Mahāsaukhya-vajrāmoghasatyasamaya-prajñāpāramitā-buddhi-sūtra* (*Nanjio*, No. 1034) while Mochizuki represents it as the *Prajñāpāramitā-naya-śatapañcā-śatikā* (*Moc.* p. 3451). According to the Sanskrit title given in its Tibetan translation it is written as in *Moc.*, which literally coincides with its Tibetan title *Hphags-pa śes-rab-kyi pha-rol-tu-phyin-pahi tshul-brgya-lṅa-bcu-pa* (*TM.* No. 17, No. 489). Nanjio's Sanskrit title appears to be derived from its Chinese title, viz., *Ta-lê* (mahāsaukhya) *chin-kang* (vajra) *pu k'ung* (amogha) *chên-shih* (satya) *san-mo-yeh* (samaya) *pan-jo* (prajñā) *po-lo-mi-to* (pāramitā) *li-chü* (buddhi ?) *ching* (sūtra). But the title preserved in the Sanskrit fragment found by M. Petrovsky only shows the above heading, *Adhyardhaśataka*, which therefore seems preferable.

The Sanskrit fragments and a north aryan manuscript of the sūtra do not give a complete version, the former, found by Petrovsky, has 15 leaves in all, and the latter, collected by Hoernle, only 2 leaves. Both have been critically edited by Leumann and published under the name of *Zur nordarischen Sprache und Literatur* (1912). In 1917

Togānō and Izumi published these together with a Tibetan and five Chinese translations under the title of *Bonzōkan-taishō-hannyarishukyō* (or the collective edition of Sanskrit, Tibetan and Chinese verses of the *Prajñāpāramitā-naya sūtra*). In 1930 Leumann translated the north aryan dialect portion of this sūtra into German and published it as *Adhyardha-śatikā-prajñāpāramitā* in the 6th and 7th fascicule of the *Taishō-daigaku-gakuhō* (or the Bulletin of the Taishō University, Tokyo). These orthodox and dialectal Sanskrit verses coincide well with the extant translations both in Chinese and Tibetan. But, here, for the sake of the complete explanation of the contents, it would be better to deal with the translations along with the references to the originals.

As it will be seen from its titles, this sūtra represents, on one hand, the esoteric tenets and, on the other hand, shows that it stands on the level of the *Prajñāpāramitā Sūtras*. In fact, both in Chinese and Tibetan translations, the sūtra is classified both in the Prajñāpāramitā section and the Guhya (secret) section. In Chinese, one is in the Prajñāpāramitā section as the 10th assembly (or separate chapter) of the *Mahāprajñāpāramitā sūtra* (*Taishō*, No. 220 ; *Nanjio*, No. 1) and the other is in the Guhya section (*Taishō*, No. 243 ; *Nanjio*, No. 1034). Likewise, in the Tibetan Kangyur, one is in the Śes-phyin (or Prajñāpāramitā section) and the other is in the Rgyud-ḥbum (100 thousand tantras) section (*TM*. Nos. 17 & 489).

This fact clearly explains the characteristic of this text which, on one side, comes from Mahāyāna tradition, and, on the other side, has developed as an accomplishment of Vajrayāna (or Tantric) Buddhism. The work is said to be the sixth volume of the greater version of the *Vajraśekharayoga-sūtra* (q.v.). But another scholar, Pu-k'ung, says this is the thirteenth volume of the said sūtra. So far there is no definite proof of this work being a part of the greater version of the *Vajraśekharayoga-sūtra*. But it is certain that the work comes from the lineage of some Yogācāra school of Mahāyāna.

The contents of the work are as follows: according to Pu-k'ung's Chinese translation (the various translations will be referred to later on), it consists of 17 chapters. The first chapter is called the *Ta-lê-pu-k'ung-chin-kang-sa-to-ch'u-chi-hui p'in*, where Mahāvairocana-bodhisattva explains his samādhi in the state of his own spiritual condition, i.e., that of Vajrasattva-bodhisattva. He discourses on the seventeen pure states in the Paranirmita-vaśavartin abode. The eight great bodhisattvas, i.e., Vajrapāṇi, Avalokiteśvara, Ākāśagarbha, Vajramuṣṭi, Mañjuśrī, Sacittotpāda-dharma-cakra-pravartin, Gagana-gañja, Sarvamāra-pramardin, and various demons and human beings were his audiences. When these seventeen spiritual stages are fulfilled by a person, he will be able to obtain the truth (*naya*), or the identity of desire and enlightenment. Lastly, he utters the mantra *Hūṃ*.

The second chapter is the *P'i-lu-chê-na-li-chü-hui p'in*, where the Tathāgata Mahāvairocana sits in the concentration of *Prajñāpāramitā-nayaḥ sarva-tathāgata-śānta-dharmatābhisambodhi-nirhāraḥ* and explains the identity of *vajra-samatā, artha-samatā* and *dharma-samatā*. Finally, he utters the mantra *Āḥ*.

The third chapter is the *Chiang-san-shih-p'in* (Trailokya-vijaya), where the Vajrapāṇi-bodhisattva or the Śākyamuni Tathāgata sits in the samādhi of the Trailokya Tathāgata, who is described as the incarnation of that bodhisattva, and discourses on the equality of all phenomenal matters and events, i.e., *sarva-dharma-samatā - vijaya - saṅgraha - nāma - prajñā - pāramitā-nirhāraḥ*. He explains this truth with the fourfold, unexplainable, reality (*aprapañcatā*), i.e., *rāgāprapañcatā, dveṣāprapañcatā, mohāprapañcatā* and *sarvadharma-aprapañcatā*. Finally, he utters the mantra *Hūṃ*.

The fourth chapter is the *Kuan-ts'u-tsai-p'u-sa-po-jo-li-chü-hui-p'in* (Avalokiteśvaraprajñāpāramitā-nayasaṅgama). Here the Tathāgata Mahāvairocana sits in the samādhi of Svabhāva-śuddha-tathāgata or the Avalokiteśvara-bodhisattva, and explains how to observe freely the equality of all the phenomenal world, i.e., *sarva-dharma-samatāvalokiteśvarajñāna - mudrā - nāma - prajñā - pāramitā - nayaḥ*. He explains this reality with the fourfold stage of purity (*viśuddhitā*), i.e., *sarva-rāga-viśuddhitā, sarvamala-v°, sarva-dharma-v°* and *sarvajñāna-v°*. Finally, he utters the mantra *Hrīḥ*.

The fifth chapter is the *Hsü-k'ung-tsang-p'in* (Ākāśagarbha). Here the Tathāgata Mahāvairocana sits in the samādhi of the Sarvatraidhātukādhipati-tathāgata or the incarnation of Ākāśagarbha-bodhisattva. He explains the truth of the real wisdom which anoints the head of every Tathāgata, i.e., *sarva-tathāgatābhiṣeka-sambhava-jñāna-garbha-nāma-prajñā-pāramitā-nayaḥ*. The fourfold *dāna* which consists in the contents of the said truth is *abhiṣeka-dāna, artha-d°, dharma-d°* and *āmiṣa-d°*. Finally, he utters the mantra *Trāṃ*.

The sixth chapter is the *Chin-kang-ch'üan-li-chü-hui-p'in* (Vajramuṣṭiprajñāpāramitā-naya). Here the Tathāgata Mahāvairocana sits in the samādhi of Śāśvata-sarva-tathāgata-jñāna-mudrā-prāpta-sarva-tathāgata-muṣṭi-dhara-tathāgata and explains the symbol of wisdom of all the Tathāgatas, i.e., *sarvatathāgata-jñāna-mudrādhiṣṭhāna-vajra-nāma-prajñāpāramitānayaḥ*. He explains this truth with the four *mudrās*, i.e., *sarvatathāgatakāya-mudrā, vāṅ-m°, citta-m°* and *vajra-m°*. Finally, he utters the mantra *Aḥ*.

The seventh chapter is the *Wên-chu-shih-li-li-chü-p'in* (Mañjuśrī-naya-praṇidhāna). Here the Tathāgata Mahāvairocana sits in the samādhi of Sarvadharmāprapañca-tathāgata or Mañjuśrībodhisattva and explains the truth of the fourfold wheel of the truth (*cakrākṣaraparivarta-nāma-prajñāpāramitā-nayaḥ*), i.e., *śūnyāḥ sarva-dharmāḥ, nirmittāḥ sarva-dharmāḥ, apranihitāḥ sarva-dharmāḥ, aprakṛti-prabhāsvarāḥ sarva-dharmāḥ*. Finally, he utters the mantra *Aṃ*.

The eighth chapter is the *T'sai-fa-i-p'u-sa-li-chü-p'in* (Sacittotpādadharma-cakra-pravartin-naya-praṇidhāna). Here the Tathāgata Mahāvairocana dwells in the samādhi of Sarvatathāgata-cakrāntargata-tathāgata or Sacittotpādadharma-cakrapravar-

tin-bodhisattva, and explains the reality of entering into the great world or the Vajradhātu maṇḍala, i.e., *mahācakrapraveśa-nāma-prajñāpāramitā-nayaḥ.* This spiritual state is also said to consist of the fourfold equality, i.e., *vajra-samatā*, *artha-s°*, *dharma-s°* and *sarva-s°*. Finally, he utters the mantra *Hūṃ.*

The ninth chapter is the *Hsü-k'ung-k'u-p'u-sa-li-chü-p'in* (Gaganagañja-naya-praṇidhāna). Here the Tathāgata Mahāvairocana dwells in the samādhi of the Tathāgata Sarvapūjāvidhivistara-bhājana of the Gaganagañja bodhisattva, and explains the truth of how to complete the end of reverence (*pūjā*), i.e., *sarvapūjāgrya-nāma-prajñāpāramitā-nayaḥ.* The contents of this highest reverence are said to consist of the following four kinds of reverence, viz., *bodhicittotpādanatā*, *sarvasattvadhātuparitrāṇatā*, *saddharma-parigraha* and *prajñāpāramitā*. Finally, he utters the mantra *Oṃ.*

The tenth chapter is the *Ts'ui-i-ch'ieh-mo-p'u-sa-li-chü-p'in* (Sarva-māra-pramardin-bodhisattva-naya-praṇidhāna). Here the Tathāgata Mahāvairocana sits in the samādhi of the Tathāgata Sarvavinaya-samartha-tathāgata or the Sarva-māra-pramardin-bodhisattva, and explains the truth of how to destroy all kinds of evils, i.e., *jñānamuṣṭiparigraha-sarva-sattva-vinaya-jñānagarbha-nāma-prajñāpāramitā-nayaḥ.* This supreme spiritual stage is said to consist of the following four aversions to evil, viz., *krodha-samatā*, *krodha-vinayanatā*, *krodha-dharmatā* and *krodha-vajratā*. Finally, he utters the mantra *Haḥ.*

The eleventh chapter is the *Chiang-san-shih-chiao-ling-lin-p'in*, where the Tathāgata Mahāvairocana sits in the samādhi of the Tathāgata Sarvavinaya-samartha-tathāgata, or the bodhisattva Samantabhadra. He explains the equality of all kinds of elements in this world, i.e., *sarvadharmāgrya-nāma-prajñāpāramitā-nayaḥ.* It is said to consist of the following fourfold equality, viz., *sarvasamatā*, *sarvārthatā*, *sarvadharmatā* and *sarvakarmatā*.

The twelfth chapter is the *Wai-chin-kang-hui-p'in*, where the Tathāgata Mahāvairocana sits in the samādhi of the miscellaneous deities of the outer Vajradhātu maṇḍala and explains the truth of how to maintain all sentient beings, i.e., *sarvasattva-adhiṣṭhāna-nāma prajñāpāramitā-nayaḥ.* This truth is also said to consist of the following fourfold store of wisdom (*jñānagarbha*), i.e., *tathāgata-garbha*, *vajragarbha*, *dharmagarbha* and *karmagarbha*. Finally, he utters the mantra *Tri.*

The thirteenth chapter is the *Chi-mu-t'ien-chi-p'in.* From this chapter to the fifteenth chapter the work is full of adorations offered by many male and female deities to this sūtra. This chapter is that which is offered by the following mother deities, i.e., Mahākālī, Raudrī, Brāhmī, Vaiṣṇavī, Kaumārī, Kālī, Mahā-kālī, Bhakṣaṇī and Rakṣasī.

The fourteenth chapter is the *San-hsiung-ti-chi-hui-p'in* or the chapter of adoration offered by the following three brother deities, i.e., Brahman, Nārāyaṇa and Maheśvara.

The fifteenth is the *Szū-tzū-mei-chi-hui-p'in* or the chapter of adoration offered by the following four sister deities, i.e., Jayā, Nijayā, Ajitā and Aparājitā.

The sixteenth chapter is the *Szū-po-lo-mi-pu-ta-man-t'u-lo-p'in* (or the Caturpāramitā-apāramitā-mahāmaṇḍala-parivarta). Here the Tathāgata Mahāvairocana sits in the samādhi of the Tathāgata Anantāpariyantāniṣṭha and explains the truth of how to complete the identity of the eternal world and the sentient beings, i.e., *sarvadharma-samatā-pariniṣṭhādhiṣṭhāna - vajra - nāma - prajñāpāramitā-nayaḥ.* The truth is said to consist of the following fourfold reality, i.e., *prajñāpāramitānantatā*, *prajñāpāramitāparyantatā*, *sarvadharmanaikatā* and *sarvadharmāpariniṣṭhatā*.

The seventeenth and last chapter is the *Wu-chung-mi-mi-san-mo-ti-p'in* (Pañcaguhya-samādhi-parivarta). Here the Tathāgata Mahāvairocana sits in the samādhi of the Tathāgata Mahāsukhavajrāmogha-samaya - dharmatā - prāpta - sarvadharmāprapañca, and explains the truth of the great equality of the great rejoicing and non-voidness or the reality as solid as diamond, viz., *Mahāsukhavajrāmogha-samaya-nāma-vajrāmoghadharmatā-prajñāpāramitā-mukhaḥ.* The truth is said to consist of and to be complete with the following five secret yogas, i.e., *mahārāga*, *mahāsukha*, *mahābodhi*, *sarvamahāmāra-pramardana* and *sakalamahā-traidhātukaiśvarya*. The last portion is full of praise of this sūtra as is the case with other Mahāyāna texts.

Again, at the end of each chapter the mudrā and maṇḍala of each Tathāgata represents the idea of each secret samādhi symbolically. Based on this statement a great number of maṇḍalas and images were painted or carved out in China and Japan.

There are five Chinese translations, viz., by Hsüan-tsang, which is in the tenth meeting of the *Mahāprajñāpāramitā-sūtra* (*Nanjio*, No. 1), by Bodhiruci (*Nanjio*, No. 18), by Vajra-prajñā (*Nanjio*, No. 1033), by Dānapāla (Shih-fu : *Nanjio*, No. 862) and by Dharmabhadra (*Nanjio*, No. 1037). All these are extant and critically edited and published in the seventh and eighth volumes of the Taishō Tripiṭaka.

Among the Chinese commentaries that by Ch'i-k'uei is the one most highly esteemed and preserved. In Japan, many commentaries were written particularly by the Shingon-shū monks ; for example, Kūkai, Seisen, Kakuban, Kaiye, Raiyu, Dōhō, Gushin, Gohō, Genshō, Raiyo, Yūgi, Genkō, Raikei, Chōei, Ryotai, Eigaku, Jōgon, Ryōjō, Jiun, Ryoko, Tokū and so on.

Among the modern studies on the work, besides those referred to already, is S. Toganō's *Rishukyō no kenkyū* (or the Study on the Adhyardhaśataka).

SHŪYŪ KANAOKA.

ADHYARDHAŚATIKĀ-PRAJÑĀPĀRAMITĀ, a Sanskrit Buddhist work. See ADHYARDHA-ŚATAKA.

ADHYĀŚAYA (Sanskrit), or *ajjhāsaya* (Pali), means mental disposition, purpose, intent, determination and so on. Translators in China and Tibet gave wide translations for it, such as ***shên-hsin*** (深心) and ***lhag-paḥi bsam-po***, both

of which mean the superior or deep thought or mind. This signifies intent to practise various kinds of merit and keen desire to get emancipation. The connotation of this term is as wide as that of the English term 'faith'. Numerous definitions can be extracted from Mahāyāna works, but it is difficult to fix a formula for this term.

For example, the *Vimalakīrtinirdeśa* (*Nanjio*, No. 146) formulates *adhyāśaya* as a spiritual state of the bodhisattva's Pure Land. Similarly in the 24th fascicule of the old Chinese translation of the *Avataṃsaka-sūtra* (or 60 fascicules *Avataṃsaka*, *Nanjio*, No. 87, trsl. by Buddhabhadra, 418–21 A.C. the term is described as an indispensable spiritual practice in obtaining the bodhisattva's third stage (*bhūmi*), where it is divided into ten spiritual faculties, i.e., pure mind, fierce mind, mind of hatred (for unrighteousness), mind free from avarice, indomitable mind (*avivartanīya*), firm mind, frank mind, discontented mind, active mind and broad mind.

Further, we have to realise the fact that this *adhyāśaya* is not only a single spiritual practice for obtaining the fruits of enlightenment. In the *Sukhāvatīvyūha* (*Nanjio*, No. 198), it is described as one aspect of the threefold mind, by which sentient beings enter into Amitābha's Pure Land, or Sukhāvatī. In the *Mahāyānaprasāda-prabhāvana* (*Nanjio*, No. 1249) it is mentioned as one of the three conversions as well as that of Sukhāvatīvyūha.

Based on the definitions above referred to, many interpretations have been made, mostly by Chinese Buddhist scholars. These interpretations can be classified into three.

The first is the common and rather earlier interpretation. It defines *adhyāśaya* as intent to practise various kinds of merit and a wish to win emancipation by practising these merits. This is found in Sêng-chao's *Chu-wei-mo-chieh-ching* (註維摩詰經) and Yüan-hsiao's *Chi-hsin-lun-shu-chi* (起信論疏記), Chih-i's *Kuan-wu-liang-shou-fo-ching-shu* (觀無量壽佛經疏), Chêng-kuan's *Hua-yen-ching-shu* (華嚴經疏) and also in the works of some other Chinese commentators.

The second is the description of *adhyāśaya* as devotional faith, something like *bhakti*. The *Avataṃsaka-sūtra*, *Mahāprajñāpāramitā-śāstra*, Hui-yüan's *Wei-mo-ching-i-chi* (維摩經義記) and others state this interpretation.

The third and the last is the most important. It defines *adhyāśaya* as intent to be born in the Buddha's Pure Land. There the *adhyāśaya*, or *shên-hsin* (深心) is identified with *shên-hsin* (深信) or the sound faith of the *Sukhāvatīvyūha-sūtra*. Hereafterwards *adhyāśaya* became an important concept especially among the followers of Pure Land Buddhism. Shan-tao first formulated this interpretation in his *Kuan-ching-san-shan-i* (觀經散善義 or Essence of Sukhāvatīvyūha), and it was expounded by Japanese monks of the Pure Land sect, among which Shinran's *Gutokushō* is considered to be the most important.

S. K.

ADHYĀŚAYA-SAÑCODANA SŪTRA, name of a Sanskrit work mentioned in the *Śikṣā-samuccaya* (pp. 13, 97, 104, 351 : *BHS*. s. v.), dealing with mental dispositions and tendencies. A Tibetan translation was effected by Jinamitra, Surendrabodhi and Yes-śes sde under the title *Ḥphags-pa lhag-paḥi-bsam-pa bskul-ba shes-bya-ba theg-pa chen-poḥi mdo*, which is now grouped in the Dkon-brtsegs (Ratnakūṭa) section of the Kangyur (*TM*. No. 69).

The Chinese translations of this sūtra are found in the Sūtra-piṭaka of the Chinese Buddhist Tripiṭaka. Jñānagupta of the Sui dynasty (589–618 A.C.) translated the sūtra into Chinese under the title *Fa-chiao-ching-hsin-ching* (*Taishō*, No. 327 ; *Nanjio*, No. 37). *Fa-shêng-chih-yao-hui* by Bodhiruci of the T'ang dynasty is a later translation of the sūtra ; and is mentioned in *Nanjio* as the 25th sūtra in a collection of forty-nine under the name of *Mahāratnakūṭa Sūtra* (*Nanjio*, No. 23 ; *Taishō*, No. 310).

ADHYAYANA-PUSTAKA-PĀṬHANA-PRASKRIYĀ-VIDHI (var. *pur askriyā-*), a Sanskrit text which is extant in its Tibetan translation, the *Kha-ton daṅ glegs-bam bklag-paḥi sṅon-du-bya-baḥi cho-ga*, in the Mdo-ḥgrel (sūtra-commentary) section of the Tengyur. Its author is Dpal Mar-me mdsad ye-śes (Śrī Dīpaṅkarajñāna or Atiśa). In *Cordier* and *TM*. two translations are mentioned, but the translator's name is not given of either (*Cordier*, III, p. 335, No. 19 & p. 341, No. 23 ; *TM*. 3975 & 4487).

ADHYEṢAṆĀ (Pali : *ajjhesanā*), request for instruction, either from the Buddha (*buddhādhyeṣaṇā* : *Mhvyut*. 861) or from a teacher.

It was a Great Brahmā who entreated the Buddha Vipassī to preach the truth to beings whose eyes were only dimmed with the dust of ignorance, and who would perish through not hearing the truth (*D*. II, 38). And again, after ninety-one aeons history repeated itself, when Brahmā Sahampati's request (*ajjhesanā*) was presented to the Buddha Gotama (*Vin*. I, 6).

The request may sometimes be for something much less spiritual as in the case of the woman in the *Vātagga-sindhava Jātaka* (*J*. II, 337) who, consumed by her passion, lay hugging her bedstead until her neighbours entreated the handsome landowner to pay her a visit. But the meaning developed in a technical sense as 'entreaty for instruction'

ADHYUPEKṢAṆA (Pali : *ajjhupekkhaṇa*), care, diligence, attention to the actual merits of a case ; hence the impartiality wherewith the Tathāgata imparts his instruction or admonition at the opportune time (*BHS*. s.v.).

ĀDIBRAHMACARIYAKA-SĪLA, morality of genuine, pure conduct, consisting in three sections of the Noble Eightfold Path : right speech (*sammā-vācā*), right action (*sammā-kammanta*) and right livelihood (*sammā-ājīva*). See AṬṬHAṄGIKA-MAGGA.

ĀDI-BUDDHA. General. The concept of the Ādi-Buddha is one that arose as part of the development of what has come to be described as theistic[1] Buddhism, in the latest stages of the Mahāyāna and under the influence, chiefly, of Śaivite thought. It is found mainly in Nepal and Java, a distribution which has been taken to signify that it originated in Bengal and was exported from there[2].

Since the time of B. H. Hodgson whose writings on Nepalese religion are well-known, the worship of the Ādi-Buddha, or an original divine Buddha practically equivalent to God, has often been described as a special characteristic of Nepalese religion. Such a worship does undoubtedly exist, but it is not unduly prominent nor can it be considered a distinct type of 'monotheistic' Buddhism. In modern Nepal the chief temple dedicated to the Ādi-Buddha is on the hill of Svayambhū ('the Self-Existent') near Kathmandu. According to a legend given in the *Svayambhū Purāṇa*, a special divine manifestation occurred in ancient times on an adjoining lake: a miraculous lotus appeared on its surface, holding within it an image, over which a caitya was subsequently erected. This shrine is held in great veneration, but the Ādi-Buddha or Svayambhū does not differ essentially from other miraculous images in India which are believed to embody in some special way the nature of deity. What is significant about Buddhism in Nepal is not so much its new developments as its fusion with Hinduism and the results which ensued from this fusion.

It is in the Buddhist Kālacakra or Vajrayāna literature that the doctrine of the Ādi-Buddha reached its full development. It has been suggested by Sir Charles Eliot (*Hinduism and Buddhism*, III, 387) that it possibly represents a last effort of central Asian Buddhism to contend with Islam whereby instead of denying the bases of the Prophet's teaching, it tried to show that monotheism (like everything else) could also be found in Buddhism. The fundamental feature of this doctrine is that of a primordial Buddha from whom all other Buddhas are ultimately derived. The Kālacakra adopted all the extravagances of the Tantras and even provided the principal Buddhas and bodhisattvas with spouses, giving one to the Ādi-Buddha himself. This, of course, is not much more than the Hindu idea that the Supreme Being became male and female for the purpose of producing the universe. There is thus nothing new or really important in the doctrine of the Ādi-Buddha, for to the Indian mind it is implied in the Trikāya (q.v.) doctrine of Buddhism, the Sambhogakāya ('Body of Enjoyment') being virtually a Hindu Deva and the Dharmakāya, the pantheos or Brahmā. The lamas who followed the Kālacakra did not become theists in the sense of worshipping one Supreme God but they identified with the Ādi-Buddha some particular deity, varying according to their sects.

Modern scholars (e.g., L. de la Vallée Poussin, *ERE.* I, 93 ff.) think that there are at least *two* Ādi-Buddha systems. One belongs to what Hodgson (*Essays*, pp. 110 f.) has described as the Aiśvarika doctrine (q.v.) of Nepal, half theistic, half pantheistic. In this there is an Ādi-Buddha or Paramādibuddha, i.e., first Buddha, primary Buddha, Buddha from the beginning (*ādau Buddha*: *Nāmasaṅgīta*, 100), Buddha unoriginated (*anādibuddha*), *urubuddha* or Buddha of the Buddhas. He is also addressed (e.g., in the *Svayambhūpurāṇa*) as Ādinātha ('first protector') and Svayambhūlokanātha ('self-existing protector of the world')[3]. He appears at the beginning of time, at the commencement of the *kalpa*, the 'crystal in the lotus' (*maṇi. . . . . . padme*). He issues from the Void (*Śūnyatā*) and his names are innumerable. He is sometimes called Viśvarūpa ('he who assumes every form'). He is in nirvāṇa and, being pure light, is never seen. It is said that, though he is worshipped, prayers are never addressed to him. By his contemplative power he produces five dhyānibuddhas ('Buddhas of contemplation')[4].

It is not said that the Ādi-Buddha actually creates these Buddhas, but, rather, that he is made up of the parts of the five Buddhas. They are described as being in the world of becoming (*pravṛtti*). By their twofold power of knowledge and contemplation, they give birth to dhyāni-bodhisattvas (Samantabhadra, Vajrapāṇi, Ratnapāṇi, Avalokita or Padmapāṇi, and Viśvapāṇi, respectively). These are said to be the actual creators of the physical universe, but the worlds which they create are perishable. Three such creations have already perished; the fourth is that of which we form part. It is the creation of the fourth dhyānibodhisattva, Avalokita or Padmapāṇi. The *Kāraṇḍa-vyūha*[5] (in its verse edition) relates how the original Ādi-Buddha (also called Svayambhū and Ādinātha) appeared at the beginning in the form of light and produced Avalokita by meditation and how Avalokita, in turn, produced the universe

1 As an illustration of this stage of development in contrast with the earlier stages, it is pointed out that, while in the latter the formula commonly accepted reads, "Of all that proceeds from causes, the Tathāgata has explained the cause," in 'theistic' Buddhism this is made to read, "Of all that proceeds from causes, the Tathāgata *is* the cause."

2 For the prevalence of the doctrine in mediaeval Bengal see B. K. Sarkar, *Folklore Element in Hindu Culture*, though only a few precise references are given. Attention has also been drawn to the fact that the Dharma or Nirañjana of the *Śūnya Purāṇa* seems to be equivalent to Ādi-Buddha.

3 The term *svayambhū* is an old epithet of Buddhas because Buddhas attain enlightenment without any external help.

4 Vairocana, Akṣobhya, Ratnasambhava, Amitābha and Amoghasiddhi. Sometimes a sixth is added, Vajrasattva, though according to Getty (*Gods of Northern Buddhism*) Vajrasattva is the Ādi-Buddha himself. There are 5 human Buddhas (*mānuṣibuddhas*) who correspond to the five Dhyānibuddhas. They are not incarnations of them but, rather, 'reflexes (*pratibimba*) or 'magical projections' (*nirmāṇukāya*). G. Tucci regards the teaching about the Ādi-Buddha and the five Tathāgatas which developed from it (the Dhyāni-Buddhas) as quite comparable with the Manichaean Father of Light and its five light aeons (*Mélanges chinois et bouddhiques*, III, pp. 345 ff.).

5 This, which is a late work, says that in the pores of Avalokita's body are woods and mountains where dwell saints and gods.

with its gods. The special Buddha of this fourth creation is Amitābha, while its instructor is the Śākyamuni.

It is difficult to determine when the concept of Ādi-Buddha or Paramādi-Buddha first made its appearance. According to Csoma Körösi the name and the system to which it is attached are closely connected with the *Śrīkālacakra-tantra*, a tantra 'openly Śaivite in its inspiration' and assigned to about the 10th or 11th century. But, the word *ādibuddha* appears as a name of Mañjuśrī in the *Nāmasaṅgīti*, a book considered earlier than the 10th century since it is believed that a commentary on it was written as far back as the 7th century (Tāranātha, p. 152). There are many good reasons for ascribing to Mañjuśrī the character of an Ādi-Buddha. He is, for example, the personification of the knowledge whence Buddhas originate, and being a 'Jñānasattva', he is more than a bodhisattva. But, beyond all this, Mañjuśrī is Ādi-Buddha because he is the king of the Prajñā, which is 'the mother of the Buddhas'. In Tibetan Buddhism, Vajra-dhara (the indestructible or steadfast holder of mystic power) is the name given to the Ādi-Buddha by the Kargyut-pas (followers of the apostolic succession) and the Gelugs-pas (the established church of Buddhism popularly called the Yellow Caps), while the Nyiṅg-ma-pas (the 'old-style' church or the Red Caps) call him Samantabhadra. The heaven of the Ādi-Buddha is called *'Ogamin* (Skt. *Akaniṣṭha*), whence Nirvāṇa may be attained without return to earth. The meaning of the word is 'No-Down', or 'Without (returning) Downward'. It is possible from there to escape from repeated births in *saṃsāra*, wholly and for ever. It is the last outpost of *saṃsāra*.

There is no great difficulty in tracing the evolution of the concept of the Ādi-Buddha from the teachings of early Buddhism. According to the canonical texts of the Theravāda, the Śākyamuni entered into final Nirvāṇa at the age of eighty, but they go on to add, almost immediately, that he could, if he so desired, have continued to live as a human being for a whole aeon (*kalpa*). In this final Nirvāṇa he has passed beyond the ken of devas and men, into a state which is undefinable and beyond the grasp of intelligence, but it is certainly not annihilation or nothingness. From early times there seems to have been the belief that the Buddha continued to live though he was invisible. According to the *Sukhāvatī* (section 2), a Buddha lives for a hundred thousand *niyutas* (millions) of *kotis* (10 millions) of kalpas or more. According to the *Lokottaravāda* of the Vetulyaka school the Śākyamuni did not appear in person in the world but deputed an image of himself to represent him. The *Mahāvastu* would have us believe that countless ages ago, at the very beginning of time, the Śākyamuni became Buddha; his appearance on earth in this age, his entry into Nirvāṇa, etc., are purely magical apparitions, phenomena of the *nirmāṇakāya* (q.v.). The same doctrine appears in the *Suvarṇaprabhāsa*. In the orthodox theory of the Vibhajjavādins, too, the Śākyamuni on becoming Buddha, entered into *sa-upadisesa-nibbāna* (Nirvāṇa with residue), the residue being the body, without any active 'soul', which continued to live and speak. But no speaking was possible when the Buddha was in dhyāna (which he often was); therefore, his body was only 'magical'. "Very probably", says de la Vallée Poussin (*ERE*. I, 96a), "the Buddhists soon came to believe that Śākyamuni during the whole of his earthly existence had only been the magical substitute of the real Śākyamuni, who had long since entered into eternal Buddhahood". As time went on, the idea that developed was not of the personality of the Śākyamuni but the fact that he was one of several successive Buddhas, who for convenience might be counted as four, seven or twenty-four, but who really formed an infinite series extending without limit backwards into the past and forwards into the future, many of them apparently not belonging to this world at all, but ruling various points of the compass or regions described as Buddha-fields, till we are dazzled by an endless panorama of an infinity of universes with an infinity of shining Buddhas illuminating infinite space with the Ādi-Buddha at their head[6].

It would be a complete misconception to consider the Ādi-Buddha as just another version of the God Creator. That would be an absolute reversal of the Buddhist point of view which essentially and fundamentally denies the notion of a god creator. The conception of the Ādi-Buddha should rather be regarded as an attempt to express the universality of experience, the essential oneness of Saṃsāra and Nirvāṇa which has played so important a part in the development of the Mahāyāna. The Ādi-Buddha has sometimes (e.g., Evans-Wentz, *The Tibetan Book of the Great Liberation*, p. 130, n. 3) been explained as the personification of the One Cosmic Mind. It would, perhaps, be better to describe it as the personification of Reality.

(A detailed description of the development of the concept of the Ādi-Buddha and the literature connected therewith follows.)

G. P. Malalasekera.

Development. The Sanskrit name Ādi-Buddha is translated into Chinese as Pên-chu-fo (本初佛), which literally means the original, primordial Buddha. There is another name, Paramādi-Buddha, which is translated into Chinese as Shêng-chu-fo (勝初佛), meaning the incomparable, first Buddha. In Tibetan it is translated as Daṅ-poḥi-saṅs-rgyas, Mchog-gi-daṅ-poḥi-saṅs-rgyas, or Thog-maḥi-saṅs-rgyas, all of which indicate the Buddha of all Buddhas, who originally appeared, as the

6 In the *Sūtrālaṅkāra* (IX, 77) the doctrine of the Ādi-Buddha is condemned on the ground that no one can become a Buddha without an equipment (*sambhāra*) of merit and knowledge. Such an equipment can only be obtained from a previous Buddha. Therefore, there can be no *first* Buddha.

very first: *Paramādi-buddhoddhṛta-śrī-kālacakra-nāma-tantrarāja* (*TM.* 362) and *Jñānasattva-mañjuśryādi-buddha-nāma-sādhana* (*TM.* 2604).

Development of the concept. The concept of, and the belief in, Ādi-Buddha originated not in the exoteric teachings, but in esoteric Buddhism. The term seems to have come into use in an early period of Buddhist history, but the belief in such a concept probably arose only later, when esoteric Buddhism came into contact with the mysticism of Indian Tantrism, resulting in their mutual influence. The esoterical aspects of Buddhism made their appearance prior to those of Hinduism, but when the latter came into being they influenced esoteric Buddhism, and gradually the system and the form of both movements became almost identical because of interchange. The history of the 'doctrine for the initiated' has to be mentioned here, because the development of the concept of, and the belief in, Ādi-Buddha are closely involved therewith. It is convenient to divide this history into three periods: (i) the origin, (ii) the development, and (iii) the propagation of esoteric Buddhism; and they may be described as the mixed, the pure and the later esoteric periods, respectively.

(i) The first period, of mixed esoteric Buddhism, comprises its origin and establishment, in two kinds of systems, namely, the Mādhyamika and the Vijñaptivāda. During this period only the embryo of esoteric thought can be found in the doctrines of either system. Various rules of religious ceremonies as well as pictures and images of various Buddhas can be found in the esoteric sūtras (*kalpa*), separately established, incomplete, and showing a haphazard arrangement.

(ii) The second period, that of pure esoteric Buddhism, regulated and systematised these first beginnings and gave them a philosophical significance. Here are found the two different systems of Mādhyamika and Yoga. While the Mādhyamika systematises both the ceremonial rules and the philosophic concepts, the Yoga system discusses only matters of philosophic import. Up to this stage, esoteric Buddhism was a much earlier development than the esoteric developments of Hinduism and other religions.

(iii) The third period, that of later esoteric Buddhism, sees the emergence of heresy after the establishment of pure esoteric Buddhism. Heretical ideas gradually contaminated the purity of esoteric doctrines, by the philosophy of non-duality regarding the physiological functions of the body, and by the philosophical observations of Yoga. This developed into the practice of intercommunication of two root-concepts, designated as the lotus (*padma*) and the diamond (*vajra*).

This classification into three periods can be applied to typical examples of the four divisions of esoteric sūtras, namely, *kriyā*, *caryā*, *yoga* and *anuttara-yoga*. The *Susiddhikāra Sūtra* (蘇悉地經: *Taishō*, 893; *TM.* 807) and the *Subāhu-paripṛcchā Sūtra* (蘇婆呼童子經: *Taishō*, 895; *TM.* 805) are esoteric sutras of the *kriyā* type and belong to the first period. Such sūtras seldom possess a philosophical significance and are consequently called *dhyānottarapaṭalakrama* (上禪定品: *TM.* 808). The *Mahā-Vairocanābhisambodhi Sūtra* (大日經: *Taishō*, 848; *TM.* 494) is also in the *kriyā-sūtra* classification, but belongs to the second, pure, period. Also pertaining to the period of pure esoteric Buddhism are the *Tattvasaṅgraha Sūtra* (眞實攝經: *Taishō*, 882; *TM.* 479) of the *caryā* division and the *Paramādi Sūtra* (理趣經: *Taishō*, 224; *TM.* 487 and 488) of the *yoga* division. Various voluminous esoteric sūtras were composed in the later esoteric period. The *Guhya-samāja Sūtra* (秘密集會經: *Taishō*, 885; *TM.* 442 and 443) may be regarded as one of the fundamental sūtras of that period. The concept of, and the belief in, the Ādi-Buddha have not, as yet, been found among the esoteric sūtras of the first period.

Background of the concept. The development of the concept of Ādi-Buddha can be traced only by scrutinising closely the statements of the esoteric sūtras. As mentioned above, the sūtras which belong to the pure esoteric period are well systematised. In the *Mahā-Vairocanābhisambodhi Sūtra* the activities of the Buddha are referred to from the standpoint of the three mysteries of body (*kāya*), speech (*vāk*) and thought (*citta*). The body is called the matrix from which issues the maṇḍala of the Great Compassion, speech is called the maṇḍala which turns the Wheel of Words, and thought is called the Secret Maṇḍala. Among these, the basic maṇḍala is the body-maṇḍala, namely, the maṇḍala of the Great Compassion. The universe is manifested by the maṇḍala of the Perfect Wheel. Buddhas and bodhisattvas, existing in this universe, are manifestations of each one of the countless virtues of Mahā-Vairocana-tathāgata, who is the lord of the universe. They are classified into three groups: Buddha, Padma (lotus) and Vajra (diamond). In the chapter on relationship (*Guen*: 具緣) of the *Mahā-Vairocana Sūtra*, thoughts are classified into five kinds of *samādhi*, namely, the samādhi of the Buddha, bodhisattva, śrāvaka, pratyeka-buddha and man. The *Mahā-vīrasamādhi* chapter describes the Mahā-Vairocana-tathāgata who represents the Buddha as follows: The Buddha's wisdom is inconceivable and incomparable. Those who are freed from all kinds of defilement and who have realised the truth by self-awakening will find fulfilment of all their desires (*Taishō*, xviii, 9 b; Tib. Hattori edition, p. 86). 'Those who are self-awakened' is in the Tibetan text a translation of the Sanskrit *svayambhū*, which is translated in Chinese as *tzŭ-jan-chih* (自然智: naturally-produced-wisdom). This word *svayambhū* is used as another name for Ādi-Buddha in a later period and possesses an important significance. In the *Buddhaguhya* commentary on the *Mahā-Vairocana Sūtra* the meaning of the word *ādi-buddha* is explained as follows: Those who are self-awakened are bodhisattvas higher than the eighth grade. They are not guided by others, but attain their awakening by themselves (*TM.* 2663, 332 b 6, restored text). And, again, in the chapter on the 'maṇḍala which turns the wheel of the world' in the *Mahā-Vairocana Sūtra*, the Tathāgata describes himself as follows: I am called the world's most revered one as I am the very first (*lokādi*) who preached the highest, originally established and

incomparable Dharma (*Taishō*, xviii, 22 b-c; Tib. Hattori ed. p. 211). According to the commentator of the *Buddhaguhya*, the term *lokādi*, which is used here, is explained as follows: There are two kinds of very first, the pure and the impure. Among the pure are included bodhisattvas higher than the first grade and the first enlightened ones in the world. The impure means Brahmā and Indra who were born at the very first when the world was established after the destruction of the first kalpa. It must be noted that the word 'first' is the same as the Sanskrit *ādi* of Ādi-Buddha. The word used for the most revered one of the world is *lokanātha*.

In the *Tattvasaṅgraha Sūtra* (眞實攝經), which belongs to the later period of pure esoteric Buddhism, the three mysteries mentioned in the *Mahā-Vairocana Sūtra* were further developed. The actual entering into the three mysteries, called the divisions of action (*karma*), and the three mysteries are classified into four parts, namely, *mahā*, *samaya*, *dharma* and *karma*. They are thus, respectively, called *mahā-maṇḍala* (body), *samaya-maṇḍala* (thought), *dharma-maṇḍala* (speech) and *karma-maṇḍala* (action). They are symbolised by adding the word *mudrā*, as *mahā-mudrā*, *samaya-mudrā*, *dharma-mudrā* and *karma-mudrā*. This order is changed in the *Trailokyavijaya Sūtra* (降三世軌), which is the fourth 'meeting'[7] of the *Kongocho Sutra* (金剛頂經), into *mahā*, *dharma*, *samaya* and *karma*. In the *Kalpasamuccaya-yoga Sūtra* (敎集瑜伽軌), which is the third meeting of the *Kongōchō Sūtra*, the karma-division is further divided into *karma* and *ratna* (寶部), making five divisions (*pañcakula*) in all. In the *Tattvasaṅgraha Sūtra*, the first meeting of the *Kongōchō Sūtra*, the origin of these divisions and the various Buddhas and bodhisattvas are explained as follows: After Vajradhātu-mahāsattva himself realised the enlightenment of all the Tathāgatas, he became Vajradhātu-tathāgata and entered into the Diamond Being (*vajra-sattva*) which is the basic nature of five types of insight: the pure insight of *dharma-dhātu*, mirror-like insight, insight into the nature of oneness, marvellous insight and deed-accomplishing insight. All Tathāgatas appear in this *vajra-sattva*. Each can converse with the others and in reality is one with them, having no differences. One sits on the lion-seat of all Tathāgatas, the others facing the four quarters, and thus the four Buddhas, who are the essential natures of the four types of wisdom, arise. These Buddhas are Akṣobhya (east), Ratnasambhava (south), Amitābha (west) and Amoghasiddhi (north). Further there are 36 saintly 'issues' which include the four śaktis representing the four pāramitās, sixteen great bodhisattvas who are disciples of the four Tathāgatas, four inner disciples, four outer disciples and four guardians (*Taishō*, xviii, 208 a–216 a, 227 a–336 a, 342 b–351 b; cp. *Taishō*, Nos. 870, 871, 872; *TM*. 479).

From a comparison of the explanations of the *Mahā-Vairocana Sūtra* and the *Tattvasaṅgraha Sūtra* given above, it will be clear that the former only classified and unified the various holy beings of the first period of mixed esoteric Buddhism, while the latter explained that the 36 holy beings originate from the one Buddha Vajradhātu-tathāgata, which is a much more developed doctrine than that which is shown in the former. As mentioned earlier, in the *Tattvasaṅgraha Sūtra* there are four chapters, *Vajradhātu*, *Trailokya-vijaya*, *Pari-abhicāra* and *Sarvārtha-siddhi*, each of them manifesting the *mahā-*, *samaya-*, *dharma-* and *karma-maṇḍala*, respectively. As each also manifests the other three, they are mutually related like the net of Indra's palace. The above mentioned *vajra-sattva* (diamond being) is explained in the Vajra-sattva chapter of the *Paramādi Sūtra* (理趣經: *Taishō*, No. 243; *TM*. 17 and 489), which is considered the sixth meeting of the *Kongōchō Sūtra* and regarded as similar to the first meeting of the same. It is stated that the words *ādya-mahā-vajra*, the original first Great Diamond, indicate the sign of the Vajra-sattva (*TM*. 487). Therefore, the *Paramādya-nāma-mahāyānakalpa-rāja-sūtra* (佛說最上根本大樂不空三昧大教王經) explains in its seven volumes the innate enlightenment of the Vajra-sattva, for which reason the word *paramādi* (supreme and first) is attached to the title of the sūtra (*Taishō*, No. 244; *TM*. Nos. 487, 488). Thus, the name of Vajra-sattva is Paramādi and its sign is Ādya-mahā-vajra. All three terms are equal and form the essential, basic nature of the five types of wisdom (*pañca-jñānātmaka*), called the five-divisional Diamond (*pañca-śekhara-vajra* or *pañcāriya-vajra*: *Buddhaguhya* commentary on the *Mahā-Vairocana Sūtra*: *TM*. No. 2663, 344 a). When a disciple is given the *kanjā* ceremony or ordination by the sprinkling of water, in esoteric Buddhism, he is considered an *ācārya*. At that time the five-divisional Diamond is given to him by the teacher while chanting the following śloka: This is the nature of all Buddhas, and it rests in the hand of Vajra-sattva. Do thou receive and always uphold his resolute precepts (*Taishō*, xviii, 223 b, 251 c, 359 b; *TM*. 479, 35 a). In this verse it is shown that the practiser of Shingon is identical with the Vajra-sattva, the Diamond Being.

In the *Guhya-samāja Sūtra* (秘密集會經), which is the fifteenth meeting of the *Kongōchō Sūtra* and the basic sūtra of esoteric Buddhism of the later period, the following question and answer are shown:

Question: How many kinds of true nature are there, and how many kinds of mystery? What is the great mystery? and how many kinds are there in the highest class of all?

Answer: It must be understood that there are five kinds of true nature and three kinds of mystery. The original enlightenment is the great mystery and

---

[7] There are eighteen 'meetings' of Tathāgatas, bodhisattvas, etc., each one with a separate name of a sūtra, grouped together in the *Kongōchō Sūtra*. Such assemblies are thus known by the name of the sūtra, and the sūtra is referred to as 'meeting'.—G. P. M.

there are a hundred kinds in the highest class of all (*Taishō*, xviii, 506-7; *GOS*. LIII, 150–3; *TM*. No. 443, 148–50).

The contents of the concept of Ādi-Buddha, especially as conceived in esoteric Buddhism of the later period, will now be explained. The meditative body of Void (*viveka-kāya*) which has passed the final step of meditation in the vehicle of supreme yoga (*anuttarayoga-yāna*) is the original basic Void and the great Bliss (*mahāsukha*). It is divided into twenty parts, namely, five aggregates, four domains, six worlds and five sense-objects. These twenty are ruled by five Buddhas, and as each Buddha has those twenty parts, the twenty become one hundred parts. Each division is of primordial enlightenment itself, and thus the doctrine of the *viveka-kāya* of the highest hundred classes was established. The true nature of the *viveka-kāya* of these highest hundred classes is sub-divided into five classes: Vairocana, Ratnasambhava, Amitābha, Amoghasiddhi and Akṣobhya. These five classes are further subdivided into three *vajras*, which are the self-nature of body, speech and mind. This is understood as the mysterious *viveka-kāya* of the three classes. These three *vajras* of body, speech and mind are combined and united into one personality which is the Vajradhara-Buddha and the great mysterious *viveka-kāya* of one class, as the true essence of Vajra-sattva.

In short, the hundred classes are united into five groups and again combined into three vajras of body, speech and mind. Vajradhara-Buddha includes all these virtues within his one body, which is the Ādi-Buddha. The totality of these concepts within the Vajradhara-Buddha, considered as the Ādi-Buddha, is in a worldly sense the *māyādeha*, the body of illusion, which is formed only by the smallest essence of ether (*vāyu*) and mind (*citta*). He dwells in *māyopama-samādhi*. This is also called the *vajra-kāya* which is in a true sense unobstructed, a free state of mind apart from any idea of relativity. In other words, the above mentioned true-nature of *viveka-kāya* of five classes may be called the *Pañcadhyāni-Buddha* 五禪定佛). Comparing this *Pañcadhyāni-Buddha* with the *Pañca-Buddha* of the first meeting of the *Kongōchō Sūtra*, the word *dhyāni* was probably added on in the later period of esoteric Buddhism. In some cases six Buddhas are mentioned by adding to the Pañcadhyāni-Buddha the Vajra-sattva as the Ādi-Buddha ruling the five Buddhas. In the *Pañcakrama* (五次第) this Vajra-sattva as the Ādi-Buddha is explained as follows: He is the self-originated Svayambhū Bhagavat and the only essence of the supreme self (*TM*. 1802, 53–4; *Subhāṣita-saṅgraha*, p. 9). It is clear that the word *Svayambhū* indicates the Vajra-sattva as the Ādi-Buddha, and it is noteworthy that in such ways the Buddha-personality of the Ādi-Buddha was established in esoteric Buddhism of the later period. In the middle of the later esoteric period the Vajra-sattva is actually called Ādi-Buddha. This can be found in the *Nāmasaṅgīti* (名集論) where various virtues of the Vajra-sattva as the Ādi-Buddha are praised by divisional classifications such as the five Buddhas and the five types of wisdom. The title of this chapter is the *Mañjuśrī-jñānasattvasya paramārtha-nāma-saṅgīti* (文殊智薩埵勝義名集: *Taishō*, Nos. 1187–90; *TM*. No. 360). The reason why the name Mañjuśrī is used here instead of Vajra-sattva, is that Mañjuśrī is a manifestation of the originally enlightened body of Samantabhadra, which is another name for Vajra-sattva. This is considered a kind of Indian kathenotheism. As mentioned earlier, there is the expression 'Mañjuśrī-prajñāsattva-ādi-buddha' in this commentary and also the statement that the *prajñā-kāya* of Mañjuśrī-prajñāsattva is self-originated (*svayambhū*: *Taishō*, xx, 820). Here the term *svayambhū* is used as another name for Ādi-Buddha. From these facts it can easily be seen why the name Mañjuśrī is used instead of Vajra-sattva. Although there are three kinds of *sattvas*, namely, *samaya*, *jñāna* and *samādhi*, the basic *sattva* is the wisdom-being (*jñāna-sattva*). Therefore, Vajra-sattva is called Mañjuśrī, as he manifests wisdom.

In the same *Nāmasaṅgīti* commentary the very name Ādi-Buddha is mentioned and praised as follows: The Buddha has no beginning and is endless in time. The Ādi-Buddha is immaterial and invisible (*Taishō*, xx, 822; *TM*. 360). This innate enlightenment is the sound-letter A, indicating the life of the universe. It is the same as the *Mahāvīra-samādhi* which is explained in the *Mahā-Vairocana Sūtra* as follows: The uncreated dharma which I have realised is separate from any sense of *word* expression and has no faults and, therefore, it is separate from any direct or indirect causes. The wisdom of voidness is the same as the universe (*Taishō*, xviii, 9). On the other hand, in the *Nāmasaṅgīti* it is explained as: In such ways the Buddha, Bhagavant and Sammāsambuddha are born from the sound-letter A. It is the most excellent of all vowels and letters and possesses a vast significance. It is also the great uncreated life apart from any word. Therefore, it is the most excellent root of all words and makes their meaning clear (*Taishō*, xx, 809, 815, 820).

According to Toganoo, the contents of the concept of Ādi-Buddha are as follows: the Ādi-Buddha is the highest spiritual doctrine, while it is also at the same time the highest material origin. It is the name for the essence-body which is not separate from either material or spiritual, and is material and spiritual at the same time. It is eternal and imperishable. This is the origin of all things in the universe, because the universe is produced and developed by it. This is the one-great-life-body of the universe and is itself separate from both production and destruction. It is the origin of all things and exists in the inconceivable state. Everything is ruled by it.

The last sūtra in which the concept of Ādi-Buddha is mentioned is the *Kālacakra Sūtra*. According to the Tibetan tradition the original (*mūlatantra*) of this sūtra does not exist at present, but an abbreviation thereof is extant as the *Raghutantra*. The full name of this sūtra is *Paramādi-buddhoddhṛta-śrī-kālacakra Sūtra*, and as is seen from the title, this sūtra has stemmed from the Ādi-Buddha. Its contents cannot be explained in detail here. But in the

Buddhist History by Padma-dkar-pa the following explanation about Ādi-Buddha is found: Those who do not know the Ādi-Buddha do not know the *Kālacakra Sūtra*, those who do not know the *Kālacakra Sūtra* do not know how to explain the sign rightly, those who do not know how to explain the sign rightly do not know the wisdom-body (*jñāna-kāya*) of Vajradhara, those who do not know the wisdom-body of Vajradhara do not know the vehicle of the mantra (*mantra-yāna*); and all those who do not know the vehicle of the mantra are illusioned people and are parted from the path of the Bhagavant and Vajradhara. Therefore, all masters of the vehicle of the mantra must teach this supreme first Buddha (*paramādya Buddha*) to their disciples. And all disciples of the *mantra-yāna* who want to realise enlightenment must listen to this exposition of the *paramādya Buddha*.

SHINTEN SAKAI.

Ādi-Buddha in Tibetan Buddhism. Tibetan Buddhism can be divided into two periods, namely, the earlier period and the later period. In the Nyiṅg-ma-pa, a school of the earlier period, the Ādi-Buddha is regarded as Samantabhadra or Vajrasattva. Samantabhadra and Vajrasattva possess the natures of *pravṛtti* (phenomenal world) and *nirvṛtti* (essential world). Bhagavan (the Lord) was born in this world as a bodhisattva and attained enlightenment, and after him, the Enlightened-One who preaches to all beings is Samantabhadra in the Bodhisattva-yāna, and Vajrasattva in the Vajra-yāna. It is thought that both possess the same nature and that they produce the dhyāni-Buddhas in order to make manifest the contents of their enlightenment in the form of *dhyāna*. It is mentioned in the *Deb-del-goṅ-po* that the Nyiṅg-ma-pa established the five dhyāni-Buddhas or the three dhyāni-Buddhas. It is known that these Buddhas originated from the doctrines of the *Mahā-Vairocana Sūtra* and the *Tattvasaṅgraha Sūtra*, i.e., the concept of three dhyāni-Buddhas stemmed from the *Mahā-Vairocana Sūtra* and the five dhyāni-Buddhas from the *Tattvasaṅgraha Sūtra*. In order to save various beings in the state of *dhyāna*, the Ādi-Buddha produces five dhyāni-Buddhas, and each of them possesses the Vajra, Mahāmudrā and Kula. All schools of Tibetan Buddhism in the later period, namely, the Kargyut-pa, the Khadam-pa and the Sa-skya-pa regard the *Guhyasamāja* as the essential doctrine. According to the *Deb-del-goṅ-po*, the term *Guhyasamāja* means the three aspects of the body, speech and mind which are called *guhya* or hidden, and their group is called *samāja* or assembly. This group symbolises all the Buddhas. For this reason the transcendental body, speech and mind of the Buddhas are called *guhya* or hidden, because they were hidden from the śrāvakas and pratyeka-buddhas, and even from those of the followers of Mahāyāna who are deprived of the highest bliss. The body which manifests itself as a pair (*sku-thugs*) represents by its nature an assembly of all the Buddhas. This was called the Great Vajradhara or the All-Buddha. Here the word 'Buddha' does not mean the Buddhas who dwell in a particular sphere and preach individually to a group of disciples. The meaning of this term Vajradhara, according to the *Pradīpodyotana-nāma-ṭīkā*, is the essence (*ātman*) of all the families (*kula*) of Buddhas, i.e., the five families known as Padma, Vajra, Ratna, Karma and Vairocana, without beginning and end, the Ādi-Buddha, the great consciousness manifested in a living form, the body of wisdom (*jñāna-kāya*), by nature endowed with a luminous character, by nature possessed of the three bodies (*tri-kāya*), by nature possessed of the three vehicles. And in this ṭīkā, the Ādi-Buddha is the Vajradhara or the Vajrasattva just as in the Nyiṅg-ma-pa. But, here the *Sarvatathāgata-tattvasaṅgraha-mahāyāna Sūtra* is regarded as the outer tantra and the *Guhyasamāja* is regarded as the inner tantra.

Ādi-Buddha in Japanese Buddhism. The Ādi-Buddha in Japanese Buddhism is the Mahāvairocana Tathāgata as the essential body, and is called the *dharma-kāya* of the Six Great Ones. It is the essential body of the non-duality of matter and mind, noumenon and wisdom. All Buddhas, bodhisattvas and other incarnated beings are the reflected bodies, or reflexes, or the incarnate bodies of the Ādi-Buddha. The Ādi-Buddha is the 'whole' Buddha and a dhyāni-Buddha is a 'partial' Buddha, and they are respectively called 'universal-gate' and 'one-gate'. And, moreover, all the gods of the Japanese folk religions are considered as the reflected bodies of the essential *dharma-kāya*, and thus the Shingon doctrine established in Japanese thought the theory that the fundamental body manifests the reflected body (本地垂迹說). According to the explanation of Kōbō-Daishi, the Mahāvairocana Tathāgata as the *dharma-kāya* taught the Shingon doctrine, and his incarnate or reflected bodies taught the exoteric teachings. The *dharma-kāya* teaches the Shingon doctrine, living in the essential world, and therefore the sūtras of the Shingon doctrine are the teachings of the essential world. On the other hand, the incarnate bodies live in the phenomenal world and teach the relevant doctrines to the beings of this world as the masters of the exoteric teaching, while the essential world is regarded as the Tathāgata which cannot be expressed by the exoteric teaching. According to the *Kenmitsu-nikyō-ron* (顯密二教論) of Kōbō-Daishi, it is emphasised that all the Buddhas, bodhisattvas and heavenly beings are the reflected bodies, or the dhyāni-Buddhas, of the *dharma-kāya*, Mahāvairocana Tathāgata, and the *dharma-kāya* itself is the Ādi-Buddha. Two theories of the dual doctrine and the non-dual doctrine have arisen concerning the relation between the Ādi-Buddha and the *dharma-kāya*, Mahāvairocana Tathāgata; and the difference between the *dvaya-dharma-kāya* and *advaya-dharma-kāya* were discussed frequently as the most important problem in Japanese esoteric doctrine. The *dvaya-dharma-kāya* theory admits the two essences of the body and the mind, but the *advaya-dharma-kāya* theory admits only one essence in the *dharma-kāya* of the Six Great Ones. Both *dharma-kāyas* are the Ādi-Buddha; in the phenomenal world the Ādi-Buddha manifests the *dvaya* aspect, and in the essential world the Ādi-Buddha manifests the *advaya* aspect.

Difference between the Tibetan and Japanese Ādi-Buddha concepts. In Tibetan interpretation the Ādi-Buddha is the Samantabhadra or the Vajradhara, but in Japanese interpretation the Ādi-Buddha is the *dharma-kāya*, Vairocana. The reason for the arising of such difference is as follows: The Tibetan Ādi-Buddha concept originated from the philosophy of Buddhaguhya, Ānandagarbha and Śākyamitra, while, on the other hand, the Japanese Ādi-Buddha concept originated from the philosophy of Śubhākarasiṃha, Amoghavajra, Keika and Kūkai (Kōbō-Daishi). The difference of the concepts arose from the difference of the way of interpretation of the *Mahāvairocana Sūtra* by Śubhākarasiṃha and by Buddhaguhya, respectively. According to the interpretation of Śubhākarasiṃha, the central Buddha is Mahāvairocana, the first group are the inner disciples, the second group are various great disciples who teach the sentient beings, and the third group are the other disciples and holy beings. Thus the central Buddha is the *dharma-kāya*, the first group are his self-reflected bodies, the second group are his other reflected bodies, and the third group are his incarnate bodies. The central Buddha, the *dharma-kāya*, produces the first group, and then the second and the third successively. The practiser of the Shingon teaching enters into the third group at first, and then the second and the first in turn and at last he can enter and see the central Buddha, namely, the *dharma-kāya*. On the other hand, Buddhaguhya's interpretation is as follows: the central Buddha is the triangle-mudrā, the first group are the Samaya-mudrā, Vajrasattva and Samantabhadra, the second group is the Śākyamuni Buddha, and the third group are Mañjuśrī and others. The central Buddha is the state of the *dharma-kāya* and this is the state where Vajrasattva and Samantabhadra enter when they realise enlightenment. The second group is the Śākyamuni Buddha, the incarnate body, who gives the teaching to the sentient beings of this world, and the third group are Mañjuśrī and other bodhisattvas who await enlightenment. These are the manifestation of the three aspects of Vajrasattva's and Samantabhadra's present-enlightened body. Thus, the central Buddha is the state in which they see the *dharma-kāya* in the present-enlightened body, and the second is the state which manifests the present-enlightened body in the outer world, and the third is the state of bodhisattvas who await the present-enlightened body. Therefore, according to Śubhākarasiṃha, the Ādi-Buddha is the central Buddha, namely, the *dharma-kāya*, Mahāvairocana; but on the other hand according to Buddhaguhya, the Ādi Buddha is the present-enlightened body of the first group, namely, Samantabhadra, Vajrasattva and others. In Buddhaguhya's commentary on the *Tattvasaṅgraha Sūtra*, the facts above mentioned are well explained. Such difference in the interpretation of the Ādi-Buddha probably originates from the difference between the *tri yāna* (three vehicles) interpretation and the *eka-yāna* (one vehicle) interpretation of the Ādi-Buddha.

Conclusion. It was Hodgson who first mentioned the Aiśvarika in the Svabhāvavāk school of Nepal in connection with the Ādi-Buddha. And after him Getty mentioned the Tibetan and Japanese Ādi-Buddha concepts in her work *The Gods of Northern Buddhism*. Dasgupta also introduced the concept of Ādi-Buddha in his *An Interpretation of Tantric Buddhism*. He explains, in his book, the way of Tibetan thinking about the Yab and Yum, and the Japanese interpretation of the concepts of Ādi-Buddha (shown by the right hand finger) and Dhyāni Buddha (shown by the left hand finger), etc. But he came to the conclusion that the Ādi-Buddha in Tibetan Buddhism is the Vajradhara or Samantabhadra (*Kun-tu-zang-po*) essentially, and the Ādi-Buddha in Japanese Buddhism is the *dharma-kāya*, Vairocana, or the *dharma-kāya* of the Six Great Ones.

KANYŪ KABESE.

ĀDICCABANDHU (1), an often-used epithet of the Buddha, meaning 'kinsman of the sun'.

ĀDICCABANDHU (2), name of a paccekabuddha found only in the commentaries.

A story has been spun round this name to describe how he exhorted a prince who had become a recluse to emulate the life of a paccekabuddha. The story is contained in the commentaries to the *Suttanipāta* and *Apadāna* (*ApA.* 181), to explain an allusion to the word *ādiccabandhu* occurring in a verse of the *Khaggavisāṇa Sutta* that is commented upon in both (*Sn. v.* 20). Now, the exact meaning of this word really depends on whether we construe it as a proper name, as the two commentaries have done, or as a rare but appropriate epithet of the Buddha meaning 'kinsman of the sun'. Moreover, the fact that the word occurs in the *Khaggavisāṇa Sutta* is also of some significance, because each stanza of that sutta is traditionally believed to have been the utterance of a pacceka-buddha. And this same tradition obtains also in the *Mahāvastu* (Jones' trsl. Vol. I, p. 305, n. 1), but there the *Khaḍgavisāṇa Sūtra* (as the text is there called), contains five hundred stanzas and not forty-one stanzas as in the Pali tradition. If this tradition is accepted, then the reference is to another paccekabuddha whose personal name was Ādiccabandhu. But if, on the other hand, the *Khaggavisāṇa Sutta* is taken as a composite whole and not as a disjoined collection of separate stanzas, and if the legends associated with each stanza are of comparatively late origin, then it is very likely that the allusion is to no other than the Buddha whose 'solar ancestry' warranted the epithet 'kinsman of the sun'

H. S. C.

ĀDICCA SUTTA, the eighth sutta of the *Cakkavatti-vagga* in the *Saṃyutta Nikāya* (V, 101).

It lays stress on the close connection to be found between the friendship with the good (*kalyāṇa-mittatā*) and the cultivation of the seven constituents of supreme wisdom (*bojjhaṅga*, q.v.). Hence, it is remarked that just as the dawn is the forerunner, the harbinger, of the arising of the sun, even so friendship with the good is the forerunner, the harbinger, of the arising of the *bojjhaṅgas*.

ĀDICCUPAṬṬHĀNA JĀTAKA (*J*. II, No. 175), narrated by the Buddha in reference to a certain hypocrite.

The bodhisatta was a very learned brāhman of Bārāṇasī who took to asceticism and attained higher knowledge. He lived in the Himalayas, the leader of a large following of sages. Once, in need of salt and seasoning, they came to a border village. While the ascetics went out for alms, a mischievous monkey would enter their hermitage, overturn the jars of water, break the pots, dirty the entire place and even pollute the fire-cell.

At the end of the rainy season the ascetics informed the villagers that it was time for them to return to the Himalayas. The latter requested them to wait until the following day when they would bring them the meal, to which they agreed. It was a hearty meal that the villagers brought. The monkey, seeing it, devised a means of propitiating the villagers and getting some food for himself. He pretended to be practising asceticism and stood close by, worshipping the sun.

The people were much impressed and concluded that the monkey had become holy as a result of living near the virtuous sages. They uttered a stanza to the effect that the virtuous are to be found among all types of beings, as this sun-worshipping monkey would demonstrate. The bodhisatta, in a second stanza, revealed to the unsuspecting people the misdeeds of the monkey. On realising his deceitful nature the villagers pelted him with sticks and clods of earth and gave the alms to the ascetics. After partaking of the food the sages returned to the Himalayas and were later reborn in the Brahmaloka.

The Buddha identified the monkey as the hypocrite, the following of ascetics as the Buddha's following of bhikkhus and their leader as the Buddha himself.

ĀDIKAMMIKA, according to its general usage, means a beginner. Thus, it is used in the *Visuddhimagga* (p. 241) to refer to a person who develops a subject of meditation for the first time. But as specially used in the Vinaya, this term refers to a monk or a nun who transgresses a monastic rule before it was actually laid down as a training-precept. Sudinna, for example, whose indulgence in marital relations with his former wife led to the prescription of the first *pārājikā* (q.v.), is called an *ādikammika*. Such a member of the Buddhist Order, it is said, is not guilty of any transgression, since he commits it before it is actually prescribed as a Vinaya rule. According to the *Vinaya Vinicchaya* (p. 225) there were altogether thirty such *ādikammikas*, such as Sudinna among monks and Thullanandā among nuns. See also ĀDIKARMIKA.

ĀDIKARMA-PRADĪPA, a Mahāyāna treatise describing the various and manifold acts of devotional worship, recitation, offerings, symbolic formulas, etc., to be performed by a beginner (*ādikarmika*), such as the daily eightfold supreme offering (*aṣṭavidha-anuttara-pūjā*), including confession, resolution, transfer of merit. (Edited and translated by L. de la Vallée Poussin in *Bouddhisme : Études et Matériaux*, London, 1898, pp. 162–282.)

ĀDIKARMIKA, a beginner or an inexperienced person. According to the *Rāṣṭrapāla-paripṛcchā* a novice (*navaka*) or a monk who has not been in robes for a long time (*acira-pravrjjita*) is an *ādikarmika*. The term, however, is generally used to signify a beginner-bodhisattva, who has just entered the Great Vehicle (*Mahāyāna-samprasthita : Śikṣ* 60). A bodhisattva who has accumulated the root of merit and led the higher life (*brahmacariyā*) under many hundred thousands of Buddhas and is skilled in all the methods of true law (*dharma-naya*) is not an *ādikarmika* (*Sdmp*. 65. 2 f.). The *Ugradatta-paripṛcchā* indicates that an *ādikarmika* in the Great Vehicle is still strongly attached to the world and cannot make up his mind at once to give away any object he possesses (*Śiks*. 10). The Buddha is like a caravan leader (*sārthavāha*) to the beginner-bodhisattvas (*Mhvyut*. p. 32) who are nourished by the discourse of the Tathāgata preached in praise of the bodhisattvas (*Gvyū*. 503). In the tantric works a distinction is made between the perfect yogin who has reached the supreme and final *niṣpanna-yoga* and the beginner who practises the *ādikarmika-yoga* (Poussin : *Bouddhisme*, p. 179.)

Unlike the perfect sage who is above morality in the common sense of the term, the beginner is bound by the rules of discipline as described in the first chapters of the *Bodhicariyāvatāra* (ibid. 182). In the *Śikṣāsamuccaya*, too, there are a number of instructions laid down for the beginner-bodhisattvas. Accordingly they should avoid greed of gain and honour, eschew taking pleasure in society and in talk, slumber and useless actions (*Śiks*. 1046). There are eight serious offences (*mūlāpatti*) that should bring great disaster to an *ādikarmika*, viz., preaching the deep and profound doctrine of void (*śūnya*) to persons of immature wisdom lest it should frighten them away from Mahāyāna; dissuading one from practising the *pāramitā* (perfections) by preaching the ideals of Hīnayāna; dissuading people from observance of *prātimokṣa* rules and advising them to read only the Mahāyāna texts; unduly disparaging the Śrāvakayāna (Vehicle of the Disciples); reading, teaching or preaching Mahāyāna for the sake of gain and honour and speaking ill of others to lessen their gains and to increase one's own; being proud of and boasting of one's own knowledge of Mahāyāna; being instrumental in punishing the monks (*bhikṣus*) and thus compelling them to commit offences against the Saṅgha; and giving out false doctrines, thereby tainting the morals of the monks and thus discrediting them in the eyes of the householders (ibid. 60 ff.). An *ādikarmika* who commits these offences will taint all his former roots of merit. He will be deprived of his wealth and all happiness, whether human, divine or derived from following Mahāyāna. Devoid of good friends, he will roam about in *samsāra* for a long time. However, a bodhisattva can absolve himself from all these sins by simply worshipping the bodhisattva Ākāśagarbha (ibid. 64). Further among other things, an ādikarmika-bodhisattva promises not to break faith in the Buddhas; not to speak disparagingly of a

bodhisattva, whether monk or layman, to be ready to sacrifice even the highest of worldly gains to fulfil the vows taken, to be of a humble mind like an outcaste, to go even a great distance to avoid wrangling, to conceal one's virtues and confess one's faults (ibid. 97 f.). According to tantric works, an *ādikarmika* binds himself to a form of yoga (ibid. 183), which employs the use of maṇḍalas (charmed circles), and in which he has to perform various *vidhis* (methods). An *ādikarmika* who repeats eight thousand times the spell (*mantra*) named the ' Heart of Tathāgata ' (*Tathāgata-hṛdaya*) can achieve for all beings the immeasurable activity of a Buddha (*anantaṃ Buddha-kṛtyaṃ* : ibid. 139). The *Ādikarma-pradīpa* is a tantric work which explains in detail the ceremonies, ritual and formulas that form the daily practice of an ādikarmika-bodhisattva. See also ĀDIKAMMIKA.

C. W.

ĀDIKARMIKA-BHŪMI-PARIṢKĀRA, a Sanskrit text which is extant in its Tibetan translation, the *Las-daṅ po-paḥi sa sbyaṅ-ba*, in the Mdo-ḥgrel (sūtra commentary) section of the Tengyur. Its author is Dgra-las rgyal gsaṅ-ba (Guhyajetāri). Kṛṣṇa-pa (Kṛṣṇapāda) and Chos-kyi-śes-rab (Dharmaprajñā) translated the work into Tibetan. In *Cordier* and *TM.* two similar works are recorded (*Cordier*, III, p. 326, No. 7 & p. 342, No. 30; *TM.* 3945 & 4494).

ĀDIKARMIKA-SAMBHĀRAKRIYĀKRAMA-SAṄGRAHA, a Sanskrit text which is extant in its Tibetan translation, the *Las-daṅ-po-paḥi tshogs-bya-baḥi rim-pa mdor-bsdus-pa*, in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. Its author is Srid-gsum rnam-par dag-paḥi rdo-rje (Tribhuvanaviśuddhavajra). The translator's name is not recorded. In the Sde-dge edition (*TM.*) the work is omitted (*Cordier*, III, p. 94, No. 58).

ĀDI-MUKHA, name for certain structures, four of which were recorded to have been erected at the Abhayagiri stūpa in the 2nd cent. A. C. Possibly they were the same as *ayaka* and the modern *vāhalkaḍa*.

ADĪNAGĀMIN, a former Buddha, mentioned in a list of former Buddhas under whom Śākyamuni while in the ninth bhūmi acquired merit (*Mhvu.* I, 141.12).

ADĪNAKUSUMA, a bodhisattva whose name occurs in a list of future Tathāgatas (*Gvyū.* 443.2). For details see MĀYĀDEVĪ.

ĀDĪNAVA, misery or wretchedness, is the object of contemplation of one of the eighteen kinds of nsight-knowledge, named *ādīnavānupassanā-ñāṇa*. (See VIPASSANĀ.) A class of five evils are groupeu together, being the loss which the evil-doer suffers through his deviation from righteous conduct (*pañca ādīnavā dussīlassa sīla-vipattiyā : D.* II, 85) : sloth will make him poor ; his bad name will become notorious ; with diffidence he will enter good society ; bewildered he will face death ; and after death he is due for an unhappy rebirth.

In a graduated discourse, slowly preparing his listener step by step from the elementary talk on generosity (*dānakathā*), the Buddha softens and uplifts the heart of Pokkharasādi by speaking of right conduct (*sīlakathā*) and its reward in heaven (*saggakathā*) ; from there on he makes him see the danger of sense-pleasures (*kāmānaṃ ādīnava*), their vanity (*okāra*) and defilement (*saṅkilesa*), in order to lead him to the advantages of renunciation (*nekkhamme ānisaṃsa : D.* I, 110). Here, we find *ādīnava* as danger and loss in direct opposition to *ānisaṃsa* as advantage and blessing. Elsewhere, the wretchedness of sensations (*vedanānaṃ ādīnava : D.* I, 39) is placed in opposition to the sweet taste thereof (*assāda*) ; both of which are well known to the Tathāgata, who is free from both.

The various evils (*ādīnava*) which may beset a young man are enumerated as 36 in the *Sigālovāda Suttanta* (*D.* III, 182–4). They are the results of drinking intoxicants, roaming the streets at unseemly hours, visiting fairs, gambling, associating with evil company and idling.

H. G. A. v. Z.

ĀDĪNAVĀNUPASSANĀ-ÑĀṆA is the knowledge consisting in and arising from contemplation and realisation of the danger or disadvantage of following any of the five ways of evil conduct (*dussīlassa sīla-vipattiyā ādīnava*). It is one of the eight kinds of insight. See VIPASSANĀ.

ADINNĀDĀNA. Taking what is not given (Skt. *adattādāna*) also referred to as *theyya* (Skt. *steya*) or theft, is a legal as well as a moral offence which not only disrupts the social order but also bars the spiritual progress of the individual. On this account Buddhism considers the abstinence from it a virtue that should be cultivated by all, by laymen as well as by monks. The idea, however, is not original to Buddhism. Brāhmanism considered it one of the deadliest sins a twice-born could commit with the heaviest legal or spiritual punishment as the consequence. In the *Chāndogya Upaniṣad*, ' stealing of gold ' is ranked with ' taking of spirits ', ' murdering of brāhmans ' and ' dishonouring the guru's bed ', as one of the sins bringing one's downfall. The law books of Gautama, Baudhāyana, Vasiṣṭha [1] and Manu [2] confirm the idea. According to the *Yoga-sūtras* of Patañjali, non-stealing (*asteya*) is one of the sub-divisions of *yama*, the first of the eight accessories of *yoga* [3]. Restraint in taking another's property (*paradhana-haraṇe saṃyamaḥ*), according to Bhartṛhari's

1 S. Tachibana, *The Ethics of Buddhism*, p. 58.

2 G. A. Chandavarkar, *A Manual of Hindu Ethics*, p.45.

3 ibid. pp. 30–1.

Nītiśataka, helps one to reach happiness [4]. Just as a Jaina lay devotee is expected to keep the vow of abstinence from taking what is not given (*adattādānā viramana vrta*) [6], so is a Jaina monk expected to observe the vow of non-stealing (*asteya-vrta*), for wealth is the outward life of a man [5].

Ethical discipline being an essential condition of the Buddha's path to deliverance, the necessity for abstaining from taking what is not given, as well as from other evil actions, was laid down by him with a new emphasis absent in early Brāhmanism. Thus, it is one of the five moral precepts (*pañca-sīla*) which constitute the 'permanent morality' (*nicca-sīla*) [7] of a layman. It has also been included in other classifications of moral precepts, e.g., the eight precepts (*aṭṭhaṅga-sīla*), the ten precepts (*dasa-sīla*) and the *Pātimokkha*. Stealing also is one of the ten unwholesome actions (*akusala-kamma*); so is the abstinence from stealing one of the ten wholesome actions. One who treads the Noble Eightfold Path has to abstain from stealing, in fulfilling 'right action' (*sammā-kammanta*) which is one of its eight factors.

The commentaries (e.g., *DA*. I, p. 71) define *adinnādāna* as 'the taking, with the intention of stealing, of an object belonging to another person, which can be used by him as he desires without being censured or punished'. The object stolen may be anything material but in a wider sense may include even immaterial things, e.g., the infringement of another's rights, unasked interference with another's business, waste of time by an employee, neglect of duty, or evasion of responsibility [8]. The methods used in stealing vary. One can do it by one's own self (*sāhatthika*) or get it done by another (*āṇattika*). Magic (*vijjā*) or psychic power (*iddhi*) can be used; a trader may use false weights and measures or a false balance; a robber may use physical force. Whatever the method used or whatever the object taken, as far as it is done with the intention to steal, there is an offence entailing unpleasant consequences. Yet, for the act of stealing to be complete and for it to bear the fullest consequences, there should be five conditions, viz., the fact that the object taken is another's, the knowledge that it is another's, the intention to steal, the use of some method or the exertion of effort, and, the actual taking of the object (*DA*. I, p. 71; *KhpA*. p. 31). The gravity of the offence, however, increases with the value of the object stolen and, to steal from a more virtuous man is a greater offence than to steal from a man of less virtue (*DA*. I, p. 71). A thief has to face the evil consequences of his actions in this life as well as in after-lives. Here, he will have to undergo severe punishment for breaking the law of the state (*A*. III, 209). Moreover, he will have no self-confidence (*KhpA*. p. 33) and on hearing the grave consequences of stealing will experience great pain and grief (*M*. III, p. 163). Stealing is called a fear (*bhaya*), a hatred (*vera*); it breeds fear and hatred and produces mental pain and grief both here and hereafter (*A*. III, p. 205). After his death, a thief would be reborn in an unhappy state and, if reborn in a happy state, poverty and misery will be his share [9]. On the other hand, he who abstains from taking what is not given has self-confidence and is free from those evil qualities consequent on stealing. After death, he will be reborn in a happy state with great and immeasurable wealth, quite safe from any danger, as the reward for his noble actions (*KhpA*. p. 33).

A Buddhist monk has only a very few personal belongings. Other things used by him are communal property belonging to the Saṅgha. His aim is to destroy all craving for things material as well as immaterial. Therefore, not only should he refrain from taking even a blade of grass that is not given (*Vin*. I, p. 96), he should not even covet any thing belonging to another (*M*. III, p. 49). According to the *Sāmaññaphala Sutta*, a monk, "having abandoned taking what is not given, abstaining therefrom, taking and expecting only what is given, lives with a mind honest and pure" (*D*. I. 63). The reason is found in the *Majjhima Nikāya*. An ariyan (noble) disciple strives for the destruction of those fetters (*saṃyojana*) which have stealing as their cause. Hence, if he takes anything that is not given, not only will his own conscience upbraid him, the intelligent, too, will blame him. Stealing is a fetter, a hindrance (*nīvaraṇa*). One who steals not is free from the consuming cankers (*āsava*) [10] which result from it (*M*. I, 361). Therefore, has it been ranked one of the four deadliest offences a monk can commit, entailing defeat or expulsion from the Order (*pārājikā*, q.v.: *Vin*. III, p. 46).

With monks, however, only theft of important (*garuka*) objects worth five *māsakas* or more, is punishable by expulsion (*Vin*. II, 54). If the object is unimportant (*lahuka*) and worth less than five and more than one *māsaka*, the offence is a *thullaccaya* (q.v.). To steal an object worth one *māsaka* or less is a *dukkaṭa* (q.v.) offence. Not only to take an object, but even to touch or move something belonging to another, to seek an accomplice, evasion of the payment of taxes or customs duties, and any other such action, done with the intention of stealing, is in the Vinaya a punishable offence. The gravity of the offence depends upon the value of the object and value has to be estimated before punishment is meted out. There are five things to be carefully considered before punishing an offender and of these the last four are helpful in finding out the true value of the object stolen: (i) *vatthu* (object), whether it has an owner, (ii) *kāla* (time), when the object was stolen, (iii) *desa* (country) where the stealing was done, (iv) *aggha* (value) of the object, whether the object is a new one or an old one, (v) *paribhoga* (use), whether the object has been used or not (*VinA*. II, 305).

6 Ibid. p. 235.

7 *Psm*. p. 13.

8 S. Tachibana, op. cit. p. 60.

9 *Amāvatura* (ed. Ratmalānē Dharmakīrti Śrī Dharmārāma) p. 106.

10 *MA*. III. pp. 41-2 (*adinnādāna karaṇā kāmāsavo diṭṭhāsavo avijjāsavoti tayo āsavā uppajjanti*).

There is no offence in taking an article thinking it to be one's own, with confidence that the owner is a friend, for temporary use, if it belongs to the dead or to an animal, if it is discarded by the owner, if the taker is mad, has an unhinged mind or is a beginner (*ādikammika* : *Vin.* III, 55).

The *Aggañña Sutta* traces the origin of stealing to the appearance of private property among men (*D.* III, 92). At first, all rice-fields were commonly owned by the people. Later, when they were divided and boundaries established, one greedy person, while keeping his own share, stole that of another. Thus appeared stealing, followed by others such as censure, lying and punishment. It became a legal offence for which the punishment in Magadha at the time of the Buddha included imprisonment, banishment and death (*Vin.* III, 45). 'What is not given should not be taken', was one of the five commandments of a cakkavatti monarch (*D.* III, 62). The *Cakkavatti-sīhanāda Sutta* says that widespread poverty in a kingdom increases stealing which will be followed by other vices (*D.* III, 65 f.). The *Kūṭadanta Sutta* confirms the idea and goes on to suggest a remedy for the same. Stealing cannot be successfully ended by severe punishment. The root-cause should be first destroyed. The herdsmen and farmers should be supplied with food and seed-corn, traders should be given capital and government servants should be given wages and food. Then, each one following his own business will abstain from stealing and will leave the kindgom in peace (*D.* I, 135 f.).

C. WITANACHCHI.

ADINNAPUBBAKA, a very wealthy brāhman of Sāvatthi in the time of the Buddha. He was a miserable person devoid of faith, and bore heretical ideas. Because he never gave anyone anything at all he came to be called Adinnapubbaka ('Never-Gave'). He not only did not wish to see the Buddha and his disciples, but also taught his son to do the same (*VvuA.* 322 f.).

Adinnapubbaka's son was called Maṭṭakuṇḍalī, since he wore a pair of polished (*maṭṭa*) earrings (*kuṇḍalāni*) made by his father who wished to save the wages for making them.

When Maṭṭakuṇḍalī was 16 years old he fell sick. But the father refused to call a physician because that would cost money. Instead he went to various physicians and asked them as to what they would prescribe for such and such an illness. They mentioned to him the bark of trees etc., as medicine. Adinnapubbaka prepared the medicine and gave it to his son, but the patient worsened. Then the brāhman sent for a physician, but it was too late. Thereupon the brāhman, knowing that his son would soon die, left him in the outer verandah so that the people who visited him could not see his wealth.

The Buddha saw with his divine eye that Maṭṭakuṇḍalī was nearing death and set out to visit him with a large retinue of monks. Since Maṭṭakuṇḍalī could not see him as he was lying with his face turned towards the house, the Buddha sent forth a ray of light. Thereupon Maṭṭakuṇḍalī saw the Buddha and, though sad at the fact that he was unable to approach the Buddha, or obtain the privilege of attending on him, or giving him alms, or of hearing his doctrine, developed faith in the Buddha and, dying soon afterwards, he was born in the Tāvatiṃsa deva-world.

The brāhman, having performed the funeral rites, went daily to the cemetery and cried, remembering his only son, asking him to return. Maṭṭakuṇḍalī, surveying his past and recalling what had happened, resolved to bring about a change in the attitude of his father. He took the guise of a young man and went to the cemetery himself where the brāhman found him weeping copiously. In answer to the brāhman's question he said he was crying because he was unable to get a pair of wheels for a chariot which he had obtained. The brāhman said that he would give him a pair of wheels of whatever kind he desired. But Maṭṭakuṇḍalī told him it was the moon and the sun that he wanted as wheels. Thereupon the brāhman called him a fool crying for the moon and the sun. The deity asked the brāhman who the greater fool was, whether it was the one who cried for what one could see, or the one who cried for that which could not be seen at all.

Then the brāhman realised his folly, and Maṭṭakuṇḍalī revealed his identity. On his advice the brāhman said that he would take refuge in the Buddha from that day onwards (*DhpA.* I, 25–30), visit the Buddha, give him alms, listen to the doctrine and ask him questions.

The brāhman went home and informed his wife about the whole incident. A few days later he invited the Buddha to accept alms at his house with his retinue of monks. The Buddha accepted the invitation. When the Buddha had finished his meal, the brāhman asked him whether there were many people born in heaven, having reposed faith in the Buddha. Then the Buddha asked him whether he did not hear about it from his son who was already born in heaven as a result of having faith in the Buddha. The Buddha confirmed that there were innumerable beings who were born likewise having performed acts of faith. Seeing that some people still doubted what he said, the Buddha made Maṭṭakuṇḍalī appear before him and relate his own story. At the conclusion of the recital the Buddha spoke the following stanza :

Mind is of all things first,
Foremost of all, the cause of all.
If one does speak or act with faith,
Joy, like his shadow, follows him.

(*DhpA.* 29)

Eighty-four thousand people understood the truth and both Adinnapubbaka and Maṭṭakuṇḍalī attained the first Fruit of the Path (*sotāpatti*).

I. K

ADINNA SUTTA, the second sutta of the eighth chapter called *Appakā* (or *Virata*) *Vagga* of the *Sacca Saṃyutta* in the *Saṃyutta Nikāya* (V, p. 469). Insignificant, says the Buddha in this sutta, is the soil that can be taken on the tip of a fingernail when compared with the mighty earth. Even so, few are the people who abstain from taking what is not given (*adinnādāna*) and many more who do not so abstain. This is because they do not see the Four Noble Truths. The monks are advised to make an effort to realise this fact. The same simile is employed in all the other suttas of this chapter and also in the suttas of the seventh chapter.

ĀDIPRAJÑĀ. The etymological meaning of the word is given as *ādi* (first) and *prajñā* (supreme wisdom, nature). The word indicates *prajñā* when it is viewed as the first and essential cause of the world. In that sense, this word has a close relation with *Ādi-buddha* (q.v.), which is the central conception of later Mahāyāna Buddhism. The only difference between the two is that Ādi-buddha has his *Śaktī*, and is considered as an *upāya* and male, while Ādi-prajñā is considered as *prajñā* itself and female. The period of the origination of the concepts of *Ādi-buddha* and *Ādi-prajñā* is not known with certainty. But, at least, in the seventh century, a germ of these ideas seems to have existed among the Tantrists of Kaśmīra.

In this Tantrism are contained the old Indian idea of identification of the macrocosmos and the microcosmos and the symbolisation of the former into the latter. The sun is male and the moon is female; both these powers are also manifested in the body of a person. The movements of the universe and the creatures in the world are realised in the body of a person, especially in that of a yogin. Therefore, in this very world the wisdom of *prajñā* is represented as a female, or yoginī, mudrā; whereas the *upāya* of *mahākaruṇā* is represented as male, or yogin. Thus, the female *prajñā* is variously represented as a woman [1], sometimes as a girl of sixteen years of age, as sister, or mother, or daughter. Thus, *Prajñā* is an equivalent of all kinds of women, such as a girl, *Vajrakulā* and *Candrā*, and even the pudenda (*yoni*) themselves. Therefore, she is sometimes called Prajñāmātā, Bhagavatī, and so on.

In the eleventh century this concept was made fully known and various practices established in connection therewith. Prajñā is regarded as the mother of the world. In its last stage, Ādi-prajñā is regarded as the ultimate reason of all things, and thus she is characterised as the supreme existence, superior to Ādi-buddha.

The religious practices concerning this female Prajñā were expounded in the system of Sahajayāna, or sexo-yogic practices. The human body is identified with the maṇḍala of the universe, the left side of which is called *ladanā* (or the female nerve) and the right side *rasanā* (or the male nerve). The part which joins them is called *avadhūtī* (or *cāṇḍalī*, *ḍombhī*). When the *bodhicitta* reaches up to the brain from this *avadhūtī*, where a pleasant sensation resides, the *bodhi* should be completed. But, the joining should be done only in the mind; if physical matter is ejaculated from *avadhūtī* it does not mean the completion of the *bodhi*. In this case, the object of the yogin is Prajñā, or a girl of sixteen years of age. She is called *mudrā*, or *mahāmudrā*. It is said by Tantrists that Śākyamuni himself got his *bodhi* through the union with his consort Gopā.

This Sahaja practice is personified in the Tibetan lamaistic pantheon as the Yab-yum form of deities. It means the form of interlocked male and female deities, whence Prajñāpāramitā sūtras are called *Yum-sūtra*.

In China and Japan, however, this developed form of Prajñā conception was not introduced (with a few exceptions of Chinese translations during the Sung and Yüan dynasties). Thus, they have not become common in those countries.

ĀDITTA JĀTAKA. The Buddha related this birth-story (*J.* III, 469–74) to the monks while dwelling at Jetavana, with reference to an incomparable gift (*asadisa-dāna*) offered by the king of Kosala. It was related to show that even wise men of old (*porāṇakapaṇḍitā*), after examination, gave great gifts to holy men.

Once there was a great king, Bhārata, who reigned at Roruva, in the kingdom of Sovīra. He practised the ten royal virtues (*dasarājadhamma*) and won the people by the four forms of popularity (*catu-saṅgaha-vatthu*). His chief queen Samuddavijayā was wise and endowed with great knowledge.

The king, realising that evil and greedy people were enjoying the alms given by him, thought that he should offer alms to the virtuous paccekabuddhas who were worthy of receiving the best of gifts, and informed the queen about his desire. She said that paccekabuddhas could be invited for alms by sending flowers, through the power of their having given suitable things (*dātabbabala*), and of their virtue (*sīlabala*), and truthfulness (*saccabala*). The king acted on her advice and made proclamation to his people that they should undertake to keep the precepts. He himself with his servants observed all holy days and gave great gifts in charity.

One day he offered seven handfuls of jasmine flowers to the eastern quarter and, having made obeisance, wished that a paccekabuddha who lived in that quarter might come to accept his alms. Since there were no paccekabuddhas in that quarter

1 An example is the well-known statue (13th cent.) which is most commonly interpreted as that of Prajñāpāramitā in the form of queen Dedes. Presumed to have come from Siṅgasāri (Java), it is now in Leyden Museum, Holland.—G.P.M.

he was disappointed. On the second and the third days, he did likewise regarding the southern and the western quarters, but with no result. On the fourth day, he made obeisance to the northern quarter and made the same wish. The flowers travelled northwards and fell on the five hundred paccekabuddhas who were living on the slope of the Nandamūla mountain (*Nandamūlaka-pabbhāra*). The paccekabuddhas understood that the king had invited them; and seven of them came through the air and arrived at the king's gate. The king and queen welcomed them and offered them alms for seven days. On the last day they offered each of them all the requisites of an ascetic. Thereupon all the seven paccekabuddhas expressed their thanks. The seniormost among them admonished the king to be diligent (*appamatta*). Then they all disappeared from there and returned to the Nandamūla mountain.

It is very likely that this is the story referred to as the *Sucira Jātaka* in the introduction to the *Dasa-brahma Jātaka* (IV, 360) and as the *Sovīra Jātaka* in the introductory story of the *Sivi Jātaka* (IV, 410). The phrase: *idaṃ satthā Jetavane viharanto asadisadānaṃ ārabbha kathesi,* which occurs in the *Āditta Jātaka*, is common to the latter two Jātaka stories, too.

I. K.

ĀDITTAPARIYĀYA SUTTA. The 'Fire Sermon', as it is called, occurs in the first section of the *Mahāvagga* of the *Vinaya Piṭaka* (34 f.) and also as the 28th sutta of the *Saḷāyatana Vagga* (chap. 35) of the *Saṃyutta Nikāya* (Vol. IV). It is the third recorded address by the Buddha after his enlightenment, the first one being the *Dhammacakkappavattana Sutta* and the second one the *Anattalakkhana Sutta*. The sermon is often referred to in the commentaries.

Soon after his enlightenment the Buddha went with a group of disciples to Uruvelā where lived three brothers of the Kassapa clan: Uruvela-Kassapa, Nadī-Kassapa and Gayā-Kassapa. The Buddha spent a night in the fire-room of the hermitage of Uruvela-Kassapa although this room was occupied by a venomous snake. Through his psychic power the Buddha overcame the snake with fire and smoke and thereby won the admiration of Kassapa, who invited him to stay with him permanently[1]. Several exhibitions of psychic power were needed, however, before Kassapa of Uruvelā would admit the Buddha's greater perfection. And only when Kassapa was told that he not only was not perfect but had not even entered on the way to perfection, and that his present way of living was not conducive to perfection—only then did he ask to be accepted as a disciple of the Buddha and receive ordination from his hands. His own disciples, and his two brothers with their disciples, also sought ordination from the Buddha.

All these former ascetics had been fire-worshipper and most of the powers shown by the Buddha had connection with fire and smoke. It is, therefore, on fire that the Buddha preached a sermon to them which brought to all of them release from "the cankers (*āsava*) without grasping". They had left their hermitages and had followed the Buddha on his tour to Gayā. Near that place on the crest of a rock, called Gayāsīsa, the Buddha addressed his monks, "Everything is burning" (*sabbaṃ ādittaṃ*). The sutta as a whole is an admirable piece of ordered thinking. First, the subject is stated and analysed with all particulars. Then the nature of the fire, followed by the cause of the conflagration, is explained. Action to be taken in this respect is detailed and finally the results of such action are shown. This arrangement displays a pattern almost identical with that of the *Dhammacakkappavattana Sutta*, the first sermon preached by the Buddha, in which he details the general fact of suffering and conflict (*dukkha-sacca*), the cause (*dukkha-samudaya*), the cessation (*dukkha-nirodha*) and the path or method leading to cessation (*dukkha-nirodha-gāminī-paṭipadā*).

1. *The subject*: "Everything is on fire. And what, O monks, is everything that is burning?" The six senses of sight, hearing, smell, taste, touch and thought are now taken one by one. "It is the eye (*cakkhu*) that is burning, material shapes (*rūpa*) are burning, mental vision (*cakkhu-viññāṇa*) is burning, the mental impression through visual contact (*cakkhusamphassa*) is burning; in fact, the feeling, whether pleasant, painful or neutral, resulting from such contact is burning". In other words, it is the physical sense-organ as subject, the physical sense-phenomenon as object, the physical activity of the sense-organ, the mental impression thereof and the mental reaction thereto, all that is burning. And the same analysis is repeated for each of the senses mentioned above.

2. *Nature and cause*: "But what is it burning with? It is ablaze with the fire of lust (*rāga*), of hate (*dosa*), of irrationality (*moha*)." These are the three roots of all evil, passionate desire being directly opposed to hate, while either is always combined with and inspired by lack of understanding by dullness, senselessness, ignorance, stupidity, delusion. These fires, however, could not burn by themselves, but they are fed by the fuel provided "by birth, decay and death, by grief and sorrow, by physical and mental conflict and by the conflict" (resulting therefrom). It is life in all its phases from beginning to end, which is set ablaze with the fires of lust and hate, which is consumed in senseless action. It is not the body or the mind on account of which the corporeal and mental senses are said to be burning (*āditta*), flaming (*paditta*) and blazing (*sampajjalita*: *SA*. II, p. 363). But, the friction of that physico-psychical process, misapprehended as a permanent self, with the impermanent stream of life's process, causes **the conflict**

1 It was a subject popular with the sculptors of ancient Gandhāra. Reliefs from different sites are presented by Harald Ingholt (*Gandhāran Art in Pakistan*, Plates 80–81, 83–9).—G. P. M.

which is unrest, grief and sorrow, from birth to death. Thus is the nature and the cause of that which has set everything aflame.

3. *Action to be taken*: "Seeing this, O monks, the well-instructed ariyan disciple gets wearied" with the sense-organs, their objects, their contacts and their mental reactions, whether they are pleasant or painful, or neither. And in his disenchantment (*nibbindati*) he detaches himself therefrom (*virajjati*).

4. *Results*: Through dispassion he is set free (*vimuccati*) with the knowledge of deliverance and realisation that "rebirth is destroyed, the righteous life is lived, what had to be done is done, for life in these conditions there is nothing more".

Noteworthy in these concluding lines is the absence of all reference to any person, even in an impersonal way. It is not the disciple who destroys rebirth by living a righteous life; it is not a perfected one who has completed his task; but "done is what was to be done" (*kataṃ karaṇīyaṃ*). The conflict has solved itself, the conflagration is burnt out, the fire extinguished.

The sutta appears in an abridged form as *Āditta Sutta* in the *Saṃyutta Nikāya* (III, 71).

H. G. A. van Zeyst.

ĀDITTA SUTTA (1) occurs in the *Āditta Vagga* of the *Devatā Saṃyutta* of the *Saṃyutta Nikāya* (I, 31–32). When the Buddha was once staying at Sāvatthi in Jetavana in Anāthapiṇḍika's park, a deva spoke to him on the good of giving. Just as one takes out goods from a burning house (*ādittasmiṃ agārasmiṃ*) rather than let them burn inside, similarly in this world which is on fire with decay and death, the wise one should enjoy his belongings and give them away rather than store them, for they would not be safe—they could be seized by robbers, commandeered by the king or burnt by fire. Moreover, at the end of life one leaves one's body and possessions. Therefore, what use is storing goods? Gifts are fruitful. He who makes use of his belongings and gives them away is reborn in heaven.

The first two stanzas of this sutta are found also in the *Āditta Jātaka* (*J.* III, No. 424, p. 471). This sutta is also included in the *Sutta Saṅgaha* (No. 34).

L. R. G.

ĀDITTA SUTTA (2), abridged form of the *Āditta pariyāya Sutta*. See ĀDITTAPARIYĀYA SUTTA.

ĀDITTA SUTTA (3), contained in the *Samudda Vagga* of the *Saḷāyatana Saṃyutta* of the *Saṃyutta Nikāya* (IV, 168 f.). It is a sermon illustrated by fire (*ādittapariyāya*) and preached to the bhikkhus by the Buddha.

It would be a good thing if each of the five sense-organs was burnt with a red-hot iron, for then there would be no grasping of marks or details of objects cognisable by the senses. For, should one die while being attracted by such marks or details of objects, one would be born either in hell or in the womb of an animal.

It would be a good thing, too, to be asleep, for although sleep is barren, dull and fruitless, the sleeping man would not be given to evil thoughts.

But, the learned disciple, rather than destroy his sense-organs, ponders on the impermanence of the sense-organs, the sense-objects, consciousness, the contacts and sensations connected with them. Instead of sleeping, he ponders over the impermanence of the mind, mind-states, mind-consciousness, mind-contact and resulting sensation. And, in due course, he wins arahantship by being disgusted of the sense-organs and all that is connected with them, becoming detached from them and finally being freed from them.

In the *uddāna* (the list of titles at the end of the chapter) this sutta is referred to as *Ādittena* (*āditta* in its case-ending, meaning, together with the Āditta Sutta).

L. R. G.

ĀDITTA VAGGA, the fifth chapter of the *Devatā Saṃyutta* of the *Saṃyutta Nikāya* (I, 31–6) consisting of ten suttas, the first of which Āditta ('burning') has given the title to the entire chapter. The suttas show no common theme. A connection may, however, be seen between the first three suttas: *Āditta*, *Kiṃdada*, and *Anna*, as they centre on giving. The remaining seven: *Ekamūla, Anomiya, Accharā, Vanaropa, Jetavana, Macchari* and *Ghaṭīkāra*, have no connection with each other or with the first three.

ĀDITYA (1), name of a former Buddha, proclaimed by Mahābala Tathāgata. Āditya Buddha himself proclaimed Pratāpavanta as his successor. This was revealed by Gotama Buddha to his disciple Ānanda at the end of a period of three months, having remained in total seclusion with only one bowl of alms at Śrāvastī in Jetavanārāma, mentally abiding in the states of former Tathāgatas, arahants and perfectly enlightened Buddhas (*Mhvu.* III, 237).

ĀDITYA (2), another name for Suriya, the sun (*D.* III, 196). It is also the gotra name of the Sākyans. The bodhisattva, at his first meeting with king Bimbisāra, introduced himself as an Ādityan by clan (*Mhvyut.* III, 199.16; *Sn.* 423). *Ādicca-bandhu* (kinsman of the sun), an epithet often used of the Buddha, also seems to follow from this. The *Vimānavatthu* commentary gives three explanations for the epithet: both Ādicca and the Buddha were of the same Gotama family; the Buddha was a descendant of the sun and was of the same Āryan family (*ariyā jāti*); the deity Ādicca was an *orasa-putta* (breast-born son) of the Buddha (*VvA.* 116). It is in this last sense that

the Buddha calls Suriya *pajaṃ mama* (my offspring : *S.* I, 51), which, according to the commentator, was said because Suriya had already become a stream-winner (*SA.* I, 109). The Tibetan Vinaya offers a completely different explanation. Ikṣvāku (Okkāka), the immediate ancestor of the Śākyans was born of an egg formed by the coagulated seed and blood of the sage Gautama, a descendant of Mahāsammata as he lay impaled for the alleged murder of a courtesan. The egg was hatched by the rays of the rising sun. Being born with the rising sun and being brought forth by its rays, the clan of Ikṣvāku and descendants were called Sūryavaṃsa (Rockhill, *The Life of the Buddha*, 10 f.).

C. W.

ĀDITYADATTA, a former Buddha mentioned in a list of Buddhas under whom Śākyamuni acquired merit while in the eighth bhūmi (*Mhvu.* I, 138.5).

ĀDITYAGARBHA, one of the bodhisattvas present at the palace of Vaśavarti, king of gods, in the deva world Paranirmita-vaśavarti, where the bodhisattva Vajragarbha, through the Buddha's power, preached the *Daśabhūmika Sūtra* (pp. 1 f.). The name of Ādityagarbha also appears in a list of bodhisattvas in the *Mahāvyutpatti* (708).

ĀDITYASAṂBHAVA, a Tathāgata of the northern quarter mentioned in the *Sukhāvatīvyūha* (98.1).

ĀDITYATEJA(S), one of the innumerable Buddhas honoured, in her former births, by the night-goddess (*rātri-devatā*) named Pramudita-nayana-jagad-virocanā. He was born in the world-system (*lokadhātu*) named Ratanadhvajāgramati in the aeon named Sārocaya (*Gvyū.* 258. 17).

ĀDIYA SUTTA deals with five uses of possessions (*pañca bhogānaṃ ādiyā : A.* III, 45), as explained by the Buddha to Anāthapiṇḍika. Wealth and possessions justly earned by work and zeal can make a man and his entire household happy and enable them to live in comfort. They also enable the owner to share this happiness and comfort with his friends. Further, they can protect him against the afflictions of fire and floods, of rājas, robbers, enemies and heirs (!). They enable him to make the fivefold offering to kinsfolk, guests, the departed, the king and the gods; and finally devote his gifts to monks leading a pure life. If, subsequently, his possessions decrease, he can console himself with the consideration that he has made good use of his wealth. If they, on the other hand, increase, he may attribute that to his good practices.

The concluding *gāthā* is found also at *A.* II, 67.

This sutta speaks without doubt of the various ways one should appropriate (*ādiyati*) or apply the use of wealth (*bhogānaṃ ādiya*). Hence the reading of *bhojanāni*, food, for *bhogānaṃ*, wealth, has led to the derivation in *PED* of *ādiya*, usage, from the Skt. *ādya*, edible, eatable.

ADMISSION of lay disciples and monks.

Admission to participate in religious ceremonies usually involves membership of such a religious body through acceptance of its tenets and submission to its authority.

In certain instances the admission may partly exist in the transfer of power, in which case one speaks of consecration, e.g., of priests and kings. The admission may be an introduction to a specialised or even secret doctrine, in which case one speaks of initiation. Among the Romans *initia* was a generic term for mysteries (Varro, *de Re Rustica*, iii, 5).

The admission to early Buddhism, before any kind of organisation was possible owing to the absence of the Saṅgha, took place through the two-word (*dvevācikā*) formula (*Vin.* I, *Mahāvagga*, p. 4), when the first lay-disciples Tapussa and Bhallika took their refuge in the Blessed One and his teaching (*bhagavantaṃ saraṇaṃ gacchāma dhammañca*), the name Bhagavā being used instead of Buddha, and the Saṅgha being omitted, as no monks had been admitted at the time. Also, the earliest admission into the Order of monks lacked all ceremony. It was Aññāta Koṇḍañña, one of the group of five monks (*pañcavaggiyā bhikkhū*) who was with the Buddha before his enlightenment and who now, having listened to his first discourse requested to be allowed to go forth into the homeless life (*pabbajjā*) and to be received into the brotherhood of monks. His admission (*upasampadā*) was effected by the simple word of the Teacher : " Come, monk " (*ehi bhikkhu* : ibid. p. 12). This was followed by similar admissions of the remaining four ascetics, Vappa, Bhaddiya, Mahānāma and Assaji, in that order. (How very similar is this to the invitation of Jesus calling his disciples " Come ye after Me " in *Matthew* iv, 19.)

After the Saṅgha is established, one reads of a merchant, the father of Yasa, who, after due instruction by the Buddha, acquires full confidence in him and requests to be admitted as a lay disciple, being the first one to take his refuge with the three-word (*tevācika*) formula : the Blessed One, his Teaching and Order of monks (*bhagavantaṃ saraṇaṃ gacchāmi dhammañca bhikkhusaṅghañca : Vin.* I, p. 16).

When there were sixty-one arahants in the world (inclusive of the Buddha himself), they were sent out one by one in different directions, and from far distances would-be disciples came to the Buddha to receive admission from him, resulting in unnecessary fatigue. Therefore, the Buddha allowed his monks themselves to admit new entrants to the Order with the following observances : after having shaved the applicant's hair and beard they were to give him the monk's robes, arranging the outer robe to cover the left shoulder only; then the applicant should pay his respects to his teacher and squatting down he should be made to repeat : I take my refuge in the Buddha, I take my refuge in the Dhamma, I take my refuge in the Saṅgha (*Buddhaṃ saraṇaṃ gacchāmi, Dhammaṃ saraṇaṃ gacchāmi, Saṅghaṃ saraṇaṃ gacchāmi*), to be repeated a second and a third time (*dutiyam pi.... tatiyam pi......* ibid. 22). And thus the Buddha

allowed admission and ordination by these three undertakings (*anujānāmi, bhikkhave, imehi tīhi saraṇāgamanehi pabbajjaṃ upasampadaṃ*), although he himself continued to admit disciples in the Order of Monks with his simple formula, "Come, Monks". Sāriputta and Moggallāna, who were to become the Buddha's chief disciples, appear to have been among the last ones thus admitted into the Saṅgha, which had grown by now to a strength of several thousands (*Vin.* I, 43). While the wave of enthusiasm swept the country to such an extent that the Buddha was accused of making the people childless, of making women 'widows', or breaking up families, the large number of monks who had all joined within a short space of time roamed the countryside wrongly dressed, not befittingly attired, without instruction, without exhortation, because of the lack of preceptors (*anupajjhāyakā* : ibid. 44). And thus sheer necessity of discipline brought about the institution of tutor (*upajjhāya*), who, sharing the same dwelling place with his pupils (*saddhivihārikā*), should arouse in them the mental attitude of a son (*puttacitta*) while assuming himself the attitude of a father (*pitucitta*). The tutor had to accept his pupils either by word of mouth by saying: Very well (*sādhu*), certainly (*lāhu*), all right (*opāyika*), or something to that effect, or consent at least by gesture (*kāyena*), whereupon the pupil would agree to perform all the minor attentions expected of him, such as preparing wash-water, sweeping the place, folding the robes, and be, in short, the tutor's attendant (*upajjhāyassa pacchāsamaṇa* : ibid. 46). The preceptor, on the other hand, would help his pupil in regard to recitation, interrogation, exhortation and instruction: provide for him the necessities of life in clothing and lodging ; and look after him in illness. The tutor could dismiss his pupil for improper conduct and refuse to be waited upon by him any longer ; but if the pupil apologised, he should be forgiven (ibid. 54).

Many rules were thus gradually formulated regulating the relationship between tutor and pupil. And in the same way as the family is the prototype of society and state, so the tutor-pupil relationship became the prototype of the organised Brotherhood of Monks, the Saṅgha.

Thus, with the increase of regulations also the method of receiving a pupil in the Order was altered by the Buddha. He abolished the ordination by taking the three refuges as earlier allowed, and introduced a formal act consisting of a proposal or motion (*ñatti*), with a thrice repeated resolution, inviting the Saṅgha to express its disapproval, if so desired. This was followed by the actual decision as fourth item (*ñatti-catuttha-kamma*), that the Saṅgha is pleased to admit into the Order a new member, consent being expressed by silence (ibid. 56).

But, several complications set in by the indiscriminate admission into the Order, either on the occasion of going forth (*pabbajjā*) from home to homelessness, or on admission to full membership by ordination (*upasampadā*). And hence, when the occasion arose, further restrictions were laid down and an enquiry into those requisite conditions formed part of the actual ritual. Thereby, the following were debarred from admission : those suffering from cutaneous diseases, such as leprosy (*kuṭṭha*), abscesses (*gaṇḍa*), eczema (*kilāsa*), or from consumption (*sosa*), or epilepsy (*apamāra*). Again, jail-breakers (*kara-bhedaka-cora*) and refugees from justice (*palāyita*) or those against whom a warrant was outstanding (*likhitaka*), those who had been punished by flogging (*kasāhata*) or branding (*lakkhaṇāhata*), those in debt (*iṇāyika*) and runaway slaves (*dāsa palāyita*), all these were denied admission into the Order even in the lower grade (*pabbajjā : Vin.* I, *Mahāvagga*, pp. 71–6). An age limit was fixed for the *upasampadā*, at the age of twenty, when young boys wetted their bedding when oppressed by hunger during the night towards dawn. But the going forth (*pabbajjā*) was allowed as soon as a boy was able to scare crows (*kāke uṭṭepetuṃ* : ibid. 78–9).

This distinction between a preliminary admission at the time of going forth (*pabbajjā*) from home to homelessness and the subsequent confirmation thereof by a final admission or ordination (*upasampadā*), when the candidate takes upon himself (*upasampajjati*) the obligations of the Pātimokkha, does not appear in the earlier stages of development of the Saṅgha, and it was probably rendered necessary by the phenomenal numerical growth of the brotherhood, which required a period of probation, both to allow the preceptor to test an applicant's views, if he had been a member of another sect, and to allow the aspirant to test his own strength in leading a life of renunciation. The time before the final admission served, therefore, as a period of probation which was imposed irrespective of age on those who sought admission after having belonged to a different sect or school. A period of probation (*parivāsa*, q.v.) very similar to that of the novitiate was also imposed as part of the penalty for breaking any of the major rules of discipline to be confessed to the Saṅgha (*saṅghādisesa*) ; but, in that case, no new admission to the Order was required after completing the period, but only a rehabilitation (*abbhāna*).

Thus the going forth ceremony (*pabbajjā*) became the initiation of the novice (*sāmaṇera*), and the confirmation ceremony (*upasampadā*) the admission into the Order as a full-fledged bhikkhu. See further ABHAYŪVARA, BHIKKHU, PABBAJJĀ, SĀMAṆERA, SAṄGHA, UPASAMPADĀ.

H. G. A. v. Z.

ADORATION. The Chinese word *tsan-tan* (讚嘆) for adoration is a translation of the Sanskrit *varṇa* and the Tibetan *bsṅags-pa* and is sometimes abbreviated as *tsan* (讚) meaning admiration or as *tan* (嘆) meaning ejaculation and exclamation. The English term, therefore, should not be taken in the Christian theological sense of divine worship (*latria*) which is reserved for the supreme Godhead, but in the sense of veneration (*doulia*), which is respect paid to persons and objects, worthy of honour.

A general definition of this word is given in Vol. 2 of the *Miao-fa-lien-hua-ching-wên-chu* (the collection of sermons of T'ien-tai ta-hsi in the Sui dynasty put down by his disciple Kuan-ting in 587 A. C.) as 'To utter words and adore is called an adoration.' According to this definition, the adoration consists in uttering words, admiring and adoring. It is to be noted that while it is the general practice in Buddhism to classify the actions of people into the three acts of the body, speech and mind (the three karmas), adoration is not confined to entertaining a feeling of adoration in the mind only, nor to expressing an attitude of adoration by bodily movement, but it should be accompanied by words of mouth. Therefore, an utterance of words is considered essential to an act of adoration. A similar definition is found in *Birth in the Pure Land* (sometimes known as 'Pure Land'): What makes an adoration ? An adoration is made by the karma of speech.

The *Mahāprajñāpāramitā-śāstra* of Nāgārjuna (whose Chinese version was made by Kumārajīva, Lo-shih, in 405 A. C. by royal order) can be taken as the representative writing which gives the contents of an adoration. Vol. 30 of the same work has this to say, "The word 'adoration' is derived from two words. To admire the virtues (the virtues of various Buddhas) is an admiration. This being insufficient, they are praised again. This is an ejaculation." In this writing, the objects to which an adoration is made are the virtues of the Buddhas; and as to the manner of an adoration, the word is explained in its component parts of admiration and ejaculation. That is, to admire the virtues of the Buddhas by means of speech is an admiration, but however hard one may try, the virtues of the Buddhas are so deep and subtle that even repeated acts of admiration can never do full justice to them. Therefore, one who earnestly tries to admire them piles one admiration upon another and piles one praise upon another, giving rise to sighs and exclamations, in one's mind at least. Thus, a praise becomes an exclamation. However, according to this explanation, though an adoration arises from the karma of speech, in that it is expressed by means of words, its ultimate is shown to be an adoration from the karma of mind. This fact is rendered more clear in Vol. 3 of the above mentioned *Miao-fa-lien-hua-ching-wên-chu* by the terms: verbal ejaculation and non-verbal ejaculation. The former means adoration by means of words, whereas the latter signifies adoration which, being incapable of being transmitted by words, is simply uttered in one's mind. When these terms are interpreted according to the *Mahāprajñā-pāramitā-śāstra*, the former corresponds to an admiration and the latter to an exclamation.

The meaning of adoration as is found in the sūtra commentaries has been explained above, but since the non-verbal exclamation which is the ultimate of adoration cannot be expressed in words, the adorative passages appearing in the sūtras which will be dealt with in the following pages are inevitably verbal utterances. It is also to be noticed that the adorative passages in the sūtras are generally rhymed verses (*gāthā*) and songs, so that they may be used in chanting and recitation. For this reason, they are usually referred to as the songs of adoration.

Significance and Contents of Adoration. (*a*) *The Origin of Adoration.* Where an adoration is an act of praising great deeds and virtues, it is by no means confined to Buddhism, but it can be found in any religion. However, in regard to the reasons for the adoration they should be sought in the reflections which originate in the idea of divinity, which is a purely religious problem. The divine qualities or attributes, such as permanence, omniscience, ubiquity, creativeness, etc., which were conceived at the same time as the idea of divinity, gave rise to the sense of awe and respect on the part of men, and these feelings gradually found expression in the adoration of the respective attributes. Therefore, adoration is amply seen in any primitive religion.

In India, the *Ṛg-Veda*, one of the oldest works of Brahmanic literature, has already many allusions to this situation. As the *Ṛg-Veda* is originally the 'knowledge of the verses to be recited', a greater part of the verses consists of songs of offering and praise to the gods and of optative sentences. These verses and songs developed into the songs of adoration offered to such gods as Viṣṇu and Śiva, appearing in the literature of the Perāṇa at a later period, and the adorative songs in Buddhism had a similar origin.

(*b*) *The Objects of Adoration.* Among Buddhists adoration is not limited to the Śākyamuni, the founder of Buddhism, but includes also those who belong to the ranks of Tathāgata and bodhisattva such as Amita Buddha, Samantabhadra, Mañjuśrī and Avalokiteśvara, and the initiators of different sects of Buddhism, the number being so large as to render enumeration tedious. Of them the Buddha has been rightly enough the object of the highest adoration in that he is the originator of Buddhism and the possessor of the noblest attributes. In this connection, it should be noted that in China and Japan the adoration of Amita Buddha grew in extent in keeping with the development of the concept of Pure Land.

(*c*) *The Contents of Adoration.* The contents of an adotation are the virtues and the merits, which are divided into those of internal nature, i.e., those connected with the personalities of the Buddhas, and those of external nature, i.e., the characteristic marks which appear outwardly. Generally speaking the virtues of both natures constitute the contents of an adoration but in some cases those dealing with the separate natures appear as the contents of separate adorations.

The Śākyamuni is used as the typical example of an adoration. In his case, the internal virtues are regarded as the attributes of a Buddha while the external characteristic marks have developed into the image of the Buddha. In the former, the biography of the Buddha which is centered round the five circumstantial factors of his life are considered representative of these internal attributes. Historically, in the light of extant Sanskrit texts

and MSS., the biography of the Buddha was given its final shape some 600 or 700 years after his death through such writings as the *Mahāvastu*, the *Lalitavistara*, etc. In Pali texts the biography of the Buddha was finalised in the *Nidāna kathā*. Therefore, for several centuries after the Buddha's Parinibbāna every adoration had been paid to him and the five circumstantial factors which are possessed by an ideal saint were incorporated into the life of the Buddha. In the latter case, the thirty-two auspicious signs and eighty characteristic marks, which are regarded as the peculiar characteristics of kings, had been attributed to him and adored as such.

In the case of adorations of Amita Buddha, since people admire his wisdom and intelligence and believe in the Buddha's power of merit-transference, the adoration of both his internal and external virtues was considered essential.

(*d*) *Relationship between Adoration and Repeating the Name of the Buddha* (*Nembutsu*). As has been remarked above, since an adoration is an act of veneration of the virtues and the excellent marks of Buddhas, a question which has been discussed since of old is what relationship exists between adoration and the repetition of the name of the Buddha as *Namu-Amidabutsu* : Praise be to Amita Buddha, which is indicative of accepting the teachings of the Buddha, and is particularly popular in the sect of Pure Land. To cite an old example, Vasubandhu in his 'Birth in the Pure Land' (sometimes known as 'Pure Land') mentions five forms of discipline which he terms as 'five forms of meditation' by which one may bear in mind Amita Buddha and the Pure Land in order to obtain merit which benefits both oneself and others. As the second item of the five forms of meditation he mentions the form of adoration and teaches that one's adoration should be matched with invocation of Amita's name. Since then, many theories have been put forward by translators in China, but the general tendency of their interpretation is found in Vol. 4 of the *Wang-shêng-lun-chu-chi*, from which the following quotation is taken :

Question : If the name 'adoration' is confined to 'praise', how can a form of adoration correspond to invocation of the name ?

Answer : If songs of adoration are properly praise speaking utterances of the names of Buddhas, even if the names themselves are omitted, it is the virtues of Buddhas that are adored. Therefore, as the old masters say, there is no better adoration than uttering the name of Amita Buddha.

As seen from the above passage, the correspondence of adoration to invocation of Amita's name is considered to be a matter of course.

The Form of Adoration. As has been discussed already, since adoration is done by means of words extolling the virtues and characteristic marks of Buddhas, Tathāgatas, bodhisattvas and founders of sects, the adorative sentences came to be made rhymed and euphonic, in order to facilitate their utterance and recitation, and thus, a greater part of them have the form of verses and songs. However, these rhymed and euphonious adorative sentences vary in length ; some of them are long, since they are based on the Jātaka which is the life-story of the Buddha, each of his auspicious signs being made the object of adoration. Others are short and are generally known as *stotras* which is the Sanskrit term for praise. It is the usual practice that those of greater length are edited in the form of volumes while most of the short ones are contained in the sūtras. Some representative examples of adoration from India, China and Japan are given below.

(*a*) *India*.—As examples of the most beautiful adorative verses in India mention should be made of those found in the epic poem *Buddhacarita* which was composed by Aśvaghoṣa (1–2 cent. A.C.). The extant Sanskrit text comprises seventeen chapters and begins with the birth of the Buddha, and ends with his arrival home. On the other hand, the Chinese and Tibetan versions of the poem consist of twenty-eight chapters, starting with the chapter on his birth, and ending with the division of his relics (*śarīra*). Therefore, they deal with the life of the Buddha. Among adorative verses of short length may be mentioned the *Saptabuddha-stotra*, *Āryatārānāmāṣṭottara-śataka-stotra*, *Gaṇḍī-stotragāthā* and so forth.

As an example of adorative verses which are contained in the sūtras, a quotation is made from the *Saddharmapuṇḍarīka Sūtra* (Chapter 4, Devadatta) as follows : "You have penetrated into the aspects of sins and merits deeply and now shine all over the world in every direction. Yours is the pure body of dharma and being possessed of thirty two and eighty auspicious signs, your body of dharma is made sacred. When the people of the heavens adore you, the god of the dragon respects you and there are no living creatures and men who do not admire and follow you. What we hear and learn so as to attain Buddhahood is known by Buddhas alone. I like to follow the teachings of Mahāyāna and extricate myself from the sufferings of all." An adorative piece of this kind is found frequently in such sūtras as the *Śrīmālādevī-siṃhanāda Sūtra* and *Mahāvaipulya-buddha-gaṇḍa-vyūha Sūtra*.

(*b*) *China*.—In China adoration had been much in usage from the old days and adorative sentences are found in many writings such as the *Shih-chia-wên-fo-hsiang-tsan* (釋迦文佛像讚) and *A-mi-to-fo-hsiang-tsan* (阿彌陀佛像讚) of Tao-lin, *Tsan-a-mi-to-fo-chieh* (讚阿彌陀佛偈) of T'an-lan, *Wang-shêng-li-tsan* (往生禮讚) of Shan-tao, *Hua-yen-li-tsan* (華嚴禮讚) of Fa-tsang and *Pan-chou-san-mei-tsan* (般舟三昧讚) of Hui-jih, etc.

(*c*) *Japan*.—In Japan a peculiar form of adoration came to be cultivated, known as Native or Japanese adoration. After a priest named En-nin set an example in the composition of such long, adorative sentences, it was zealously followed and came into wide usage among the people. The form consists of the alternate arrangement of seven and five words, and, as native words were employed in

its composition, they were easy of recitation and comprehension at the same time, so that the people could recite them in their daily devotions. The masterpieces of adorative sentences were contributed by such priests as Kūya, Ryōgen, Genshin, Shinran and Chishin, and others of fame selected and edited them one after another, thus giving further advancement to the sect of Pure Land. On the other hand, these adorative sentences are found largely in the Zen sect, too.

(d) *Some peculiar forms of adoration.*—The types of adorative sentences discussed above are the rhymed verses and songs. In addition to these there are some peculiar forms of composition which are as follows:

(1) Head paragraphs of merit-transference sentences.—In a memorial service to the dead, it is the usual practice that a merit-transference is recited after the reading of sacred texts and the head paragraph of a merit-transference commonly comprises an adoration of the virtues of Buddhas. The form of this head paragraph is found to be common to the various sects, but this is particularly in wide circulation in Zen Buddhism. The following is mentioned by way of example: "Magnificent aspects of gold, the stately king of enlightenment, the only Buddha in the three worlds, every soul looks up to him all. Being vast in his holy accomplishments, his sacred virtues are bright. When a prayer is said at all, it will surely be answered."

(2) Hymns of praise affixed to pictures.—An adorative phrase is usually affixed to the upper part of a picture depicting Buddhas, Tathāgatas, bodhisattvas or founders of sects, which is made up of a series of five or seven words. To the pictures of the seven founders of the Shingon sect enshrined in the Gokuku temple at Kyōto there are affixed hymns of praise both in Sanskrit and Chinese characters, and also in Zen Buddhism a similar hymn of praise is affixed to the protuberance on the Buddha's brow on the occasion of the handing down of the doctrine. The origin of this custom to affix a hymn of praise to the picture is traced to the introduction of the Sogen school in calligraphy after the Muro-machi era.[1]

(3) Hymns of praise affixed to the end of biographies of monks.—There are found a paragraph or two affixed to the end of the biographies of the famous monks and they serve to praise the virtues of the monks whose lives have been written in these books. By way of example, reference is made to the *Denkō-roku* (傳光錄) attributed to the hand of Keizan, the leader of the Sōtō sect, in which are described the fifty-two lives of the masters beginning with Śākyamuni, through India, China and Japan, together with the handing down of their doctrines a hymn of praise being affixed to the end of each life. For example, a hymn of praise affixed to the end of the Śākyamuni's life is: "An old plum tree whose branch protrudes itself, a bush of thorns, it comes in conformity with time." A hymn of praise affixed to the life of Bodhidharma, "There are no more sides, there are no more surfaces; indeed, is there anything larger at all?" A hymn of praise affixed to the life of Eihei Dōgen (永平道元), "Shining and bright all over, there is no middle surface: is there anything so enlightened both in mind and body as he at all?"

BUNYŪ MATSUDA.

ADORNMENT. The Sanskrit words *vyūha* and *alaṅkāra* mean either 'fine adornment' or 'the thing finely adorned'. To be more exact, in religious contexts they indicate adornment of temples or the Buddha-land with gold, silver and other gems, lotuses and other flowers, flags and banners, and flower-decorations of the Buddha's image, or adornment of the body and dignity with canopy, clothes and diadems, and gem necklaces, or adornment of a figure with the bodhisattva's religious practices and the merits attained as the result of accomplishment of these practices. Generally, *vyūha* means adornment of things, and *alaṅkāra* that of practices and merits. Describing the adornment of the Buddha-land when the Buddha holds preaching, the *Ta-p'in-pan-jo-ching* (大品般若經) relates how at that time the whole world changed into a treasure-flower over which silk banners and canopies were stretched and where all the sweet-smelling trees and flower-trees were adorned. Giving an interpretation of this account, the *Ta-chih-tu-lun* (大智度論), 10, explains as follows: "With the four dhyānas capable of changing the world into fourteen different forms, the Buddha can adorn all the flowering and fragrant trees as well as the whole surface of the earth and can put in harmony and make good all the living things there." He adorns the world to preach the *prajñāpāramitā* and also to receive numerous bodhisattavas of the worlds in the ten directions and people of the various worlds who come there to meet together. When inviting an honoured guest, a man adorns his house, a king adorns his land, a cakravarti-rāja the four great continents and a brahma-rāja his great cosmos of a hundred million worlds. The Buddha is the lord of the worlds as innumerable as the limitless sands of the Ganges in ten directions. He receives bodhisattvas from innumerable worlds and residents of other worlds. When they look at the adornment done by the Buddha, inside them are stirred up feelings of purity and rejoicing in those who look at them and thereby lead them eventually to supreme enlightenment. This is an example of adornment of the Buddha-land, and here we can see the significance of such adornment.

There are a number of sūtras and abhidharmakośas which bear names containing the word *vyūha* (莊嚴) in them. There are, for instance, the *Sukhāvatī-vyūha*, the *Ta-ch'êng-wu-liang-shou-chuang-yen-ching* (大乘無量壽莊嚴經) and the *Wên-shou-shih-li-p'u-sa-fo-ch'a-kung-tê-chuang-yen-ching* (文殊師利菩薩佛刹功德莊嚴經) in which the

1 1392–1573 A.C.—G. P. M.

adornment of the Pure Land is described concretely; the *Ganda-vyūha*, the *Chuang-yen-pai-t'i-hsin-ching* (莊嚴菩提心經), the *Ta-chuang-yen-fa-mên-ching* (大莊嚴法門經), and the *Ta-ch'êng-chuang-yen-ching lun* (大乘莊嚴經論) which mainly preach the vows of bodhisattvas and the 'law-gate of merits'; the *Ta-ch'êng-pai-fu-chuang-yen-ching* (大乘百福莊嚴經) which relates the adornment decorating the Buddhas with thirty-two aspects and eighty kinds; the *Kou-ch'ü-chuang-yen-chieh-ch'ien-fo-ming-ching* (過去莊嚴劫千佛名經) indicating how one thousand Buddhas appear in the world and adorn the age. There are also the *Tan-kuang-ta-chuang-yen-ching* (方廣大莊嚴經) relating the biography of the Buddha and the *Ta-chuang-yen-lun-ching* (大莊嚴論經) giving accounts of legends, parables and jatakas

Aspects of Adornment. (1) *Adornment of specific things*.—In his *Wu-han-shên-ching-yu-p'o-t'i-han-yüan-shêng-chieh* (無量壽經優婆提舍願生偈) Vasubandhu relates that 29 kinds of adornment merits are accomplished in Amita Buddha's Pure Land, which consist of seventeen kinds for the Buddha-land, eight kinds for Buddhas and four kinds for bodhisattvas.

The 17 kinds of adornment for the Buddha-land are the following types of merit: (1) the merit of purity, being unsoiled by worldly desires and transcending the world of impurity and evil, (2) the merit of quantity, which is the vastness of the Buddha-land, (3) of quality, which is the origination of the Buddha-land from the Buddha's wisdom and mercy, (4) of form, the Buddha-land being replete with pure lights, (5) of diversity, the Buddha-land being furnished with numerous and rare treasures, (6) of exquisite colours, the light there being superb and beyond comparison, (7) of the functioning of the senses by which all six senses experience superior delights, (8) the merit of the threefold adornment of water, earth and sky, (9) of the twofold showering of gem-studded clothes and flowers, (10) the merit of light which removes all darkness and ignorance, (11) of an excellent voice which can be heard in ten directions, guiding living beings to enlightenment, (12) the merit of rulership by Amita Buddha, who is the king of the Dharma, protecting living beings, (13) the merit of relationship with living beings in the Pure Land who are born from the flower of the Buddha's supreme enlightenment, (14) the merit of receiving the joy and the taste of the Mahāyāna teaching and the concentration of Zen (*ch'an : dhyāna*) Buddhism, (15) the merit of being for ever free from mental and physical sufferings, (16) the merit of entering the gate of righteousness which changes all living beings into Mahāyāna bodhisattvas, and (17) the merit of having all wishes gratified.

The eight kinds of adornment for the Buddha are his merit of a flower-seat which embodies his dignity and virtue, his threefold merit whereby he enlightens living beings by his acts of body, speech and mind. his merit whereby pious crowds bathe in the sea of his wisdom, the merit which makes Amita Buddha the supreme and most venerable one. the merit by which he is revered by all people as the Lord and the merit by which all those who come in contact with the Buddha's providence experience the accomplishment of his supreme merit.

The four kinds of adornment for bodhisattvas are: (1) bodhisattvas, as assistants to the Buddha in his work of enlightening, come into all the worlds of ten directions, (2) they have the power to hold a memorial service in honour of the Buddha in one meditation, (3) they have no sense of discrimination in praising and worshipping Buddhas, and (4) they arrive in places with the three treasures (Buddha, Dharma and Saṅgha) and they preserve them there. It is made clear that all these twenty-nine merits of adornment were accomplished by the power of the vow of Amita Buddha.

In elucidating the significance of the Pure Land, the *Ta-ch'êng-i-chang* (大乘義章), 19, summarises the adornments of the Pure Land under the three items of person, law and thing. Firstly, person-adornment means that excellent personalities such as bodhisattvas live in the Pure Land. Secondly, law-adornment means that the Pure Land is furnished with the 'law-gate' of the Buddha. Thirdly, thing-adornment indicates things adorned by supernatural power such as treasures and light.

(2) *Adornment of practice-merit*.—Accounts of the adornment of the bodhisattvas' practice or 'law-gate' of merits make frequent appearances in the sūtras. The *Ta-ai-ching* (大哀經), 2, and the *Ta-fang-têng-ta-chi-ching* (大方等大集經), 1, mention adornment of four matters, viz., precept (not to violate the precepts), *samādhi* (to have steady will), wisdom (with mind disturbed by nothing) and *dhāraṇī* (to remember everything once heard). In the *Hua-yen-ching* (華嚴經), which deals with adornment concerning vows and practices of bodhisattvas repeatedly, are given ten kinds of adornment. These are (1) colour-form-adornment, to appear in colour and form as occasion demands in the work of edification, (2) word-adornment for removing doubts in the mind of the people, (3) adornment of mental intention to cultivate perfect-mindedness in meditation, (4) temple-adornment for annihilation of all earthly desires, (5) light-adornment to light all ten directions, (6) kin-adornment to summon all the people to give them joy, (7) supernatural-power-adornment to make appearance at will, (8) Buddhism-adornment to edify wicked people, (9) Nirvāṇa-adornment to manifest oneself in ten directions, and (10) dharma-adornment to give adequate sermons in accordance with time and audience. The *Old Hua-yen-ching*, 10, gives another version of the 10 kinds of adornment. They are: (1) great-mercy-adornment through salvation and protection of all living things, (2) great-pity-adornment through endurance of all suffering, (3) great-vow-adornment through realisation of all the vows, (4) merit-transference-adornment through the adornment of all Buddhas' merits, (6) *pāram'tā*-adornment through saving all living things, (7) wisdom-adornment through annihilation of all earthly desires and complaints, (8) expediency (*upāya*)-adornment through creation of all good deeds, (9) adornment of solid calm-mindedness to keep off from heretical teachings, (10) decision-adornment through driving away doubt

about the right law. The *Old Hua-yen-ching*, 38, gives its own 10 kinds of adornment including power-adornment and non-fear-adornment, and the *Old Hua-yen-ching*, 40, also gives its version of 10 kinds of adornment of bodhisattvas. The *Ta-fang-têng-ta-chi-ching* (大方等大集經), 17, gives twenty kinds of great-vow-adornment as follows: Being on board a big ship, bodhisattvas practise great-vow-adornment in order to save all the unsaved. Having got rid of wicked and irrelevant thoughts, bodhisattvas practise great-vow-adornment in order to make all the people comprehend the truth. Living peacefully in the state of non-fear, bodhisattvas practise great-vow-adornment in order to help all people to attain peace of mind. Bodhisattvas practise the great vow-adornment of guiding all people to Nirvāṇa in order to make them get rid of the burden of the five darknesses. Being assiduous all the time, bodhisattvas practise the great-vow-adornment of supplying living beings so that they might live in comfort. Being never tired and bored, bodhisattvas practise great-vow-adornment in order to attain and maintain infinity in life and death. Worshipping and revering them in their very presence, bodhisattvas practise great-vow-adornment for pleasing all Buddhas. Bodhisattvas practise great-vow-adornment to receive and preserve all the Buddha's laws so that the three treasures may continue to exist. Having acquired *dhyāna*, bodhisattvas practise great-vow-adornment to remember all the laws they have heard. Possessing wisdom of speech, bodhisattvas practise great-vow-adornment to please all living beings with their fine sermons. In order to accomplish beautiful forms, bodhisattvas practise great-vow-adornment to collect food to gain infinite merit. For establishing the practices, bodhisattvas practise great-vow-adornment to please all the wise. For producing *dhyāna* (meditation), *vimukti* (liberation) and *samādhi* (concentration), bodhisattvas practise great-vow-adornment in order to stop distraction of the mind. With supernatural powers of six kinds, bodhisattvas practise great-vow-adornment to attain detachment from body and life in the state of tranquillity. Having acquired the law of non-self, bodhisattvas practise great-vow-adornment in their wish to make a fearless lion-roar. Desiring to comprehend that all existences are nothing else but illusions, dreams and shadows, bodhisattvas practise great-vow-adornment in order to reach all the worlds. Because of their power of maintaining and accomplishing the pure precepts, bodhisattvas practise great-vow-adornment to solemnly adorn and light all the worlds. Having fulfilled the *pāramitās*, bodhisattvas practise great-vow-adornment to accomplish the ten powers of a Tathāgata. To practise in conformity with the theory, bodhisattvas practise great-vow-adornment for attaining to the four kinds of fearlessness. Being free of irrelevant theories as the law of bodhisattva-bhūmi, bodhisattvas practise great-vow-adornment in order to obtain all the eighteen exclusive properties of the Buddha. There also exists a theory that classifies adornment, a theory of twofold adornment of wisdom and blessed virtue, related in the *Mahāparinirvāṇa Sūtra* (27), and that of threefold adornment of religious awakening, religious practice and religious property that appears in the *Ta-fa-chü-t'o-lo-ni-ching* (大法炬陀羅尼經), 4, and also that of fourfold adornment of body, speech, Buddha-land and caste (birth) mentioned in the *Ta-fang-têng-ta-chi-ching*, 9.

Various Aspects in Sūtras and Abhidharmakośas. (1) *Adornment of the Pure Land.*—Of all the paradises of Buddhas, the Pure Land of Amita Buddha appears most frequently in sūtras. To describe the magnificence of adornment of the Pure Land according to the *Amitābha-vyūha Sūtra*, the Pure Land stands on golden ground surrounded by sevenfold railings decked with gold, silver, sapphire and crystal, sevenfold nets adorned with jewels, and seven rows of trees. There is a pond of seven treasures filled with water of eight kinds of merit, the bottom is covered with gold sand, and the lotus flowers blooming in the pond are exquisite and fragrant. The pond is encircled with steps made of four precious things, and on the banks stand in magnificence many-storied buildings, covered with treasures and gems of seven kinds. Heavenly music is played all the time, and six times daily heavenly flowers shower from heaven, with which the inhabitants go over to the other paradises to hold celebrations in honour of the Buddhas. Swans, peacocks and kālaviṅka (a bird of the Pure Land) created by Amita Buddha, relate in their melodious voices the laws of the five faculties (*indriya*), five powers, seven factors of enlightenment and the Noble Eightfold Path, while the breeze stirs and vibrates the gem-decked trees and nets which emit delicate sounds harmonising in a concert of hundreds and thousands of musical sounds. The spirit of meditation on the Buddha, Dharma and Saṅgha swells up of its own accord in the minds of the listeners. Amita Buddha preaches there and his infinite light pervades the lands of the ten directions. The Buddha and the residents of the Pure Land live for ever. Amita Buddha has as disciples of unfathomable wisdom numerous śrāvakas, who have attained the enlightenment of arahants and who are countless in number. So are the bodhisattvas. Those who are born there, according to the sūtras, are all in the unretrogressive (*anāgāmi*) state, and there are a great many who have attained to the stage supplemental to the Buddha's merit.

The accounts on adornment in the *Aparimitāyus Sūtra* and the *Sukhāvatīvyūha Sūtra* are even more detailed. The adornment of the Buddha Land described in the above mentioned *Wu-liang-shên-ching-yu-p'o-t'i-han-yüan-shêng-chieh* is based on the accounts related in the above sūtras. In later ages in China and Japan, the pictures of the adornments of the Pure Land, drawn according to *Aparimitāyus Sūtra* and others, the so-called 'transfigurations of the Pure Land', came to be used as objects of veneration.

(2) *Adornment of the place of enlightenment.*—The earlier *Gaṇḍavyūha Sūtra*, 1, describes the scene of the Buddha's enlightenment under the bodhi-tree. The Buddha attained enlightenment for the first time while he was at the holy place in Magadha. The place was changed into *vajra* (diamond),

adorned with pure magnificence and numerous treasures and flowers. The wondrous *ratna-cakra* (treasure-wheel) was perfect and spotless, painted with infinite and exquisite colours. Gem-decked banners and flags shone in the light, sweet-smelling flowers covered everything, a net made of seven treasures was stretched over them, capable of showering numberless treasures and gems, and bright flowers and leaves were thick on the treasure-trees. With his mysterious power, the Buddha transformed this place into a vast expanse, adorned with purity, magnificence, light, wondrous treasures and unfathomable good faculties (*indriya*). This means that the Buddha changed this world into the land adorned with treasures by his supernatural power, and adorned the place of enlightenment with unfathomable good qualities. The *Prajñā-pāramitā Sūtra*, mentioned earlier, gives descriptions of the adornment of the place of preaching, which account is very similar to the adornment of the Pure Land. Among the remains in Gandhāra there are a few images of the preaching Buddha surrounded by Buddhas and bodhisattvas. There stand gem-decked many-storied buildings and trees, and a flying deva holds a gem-set crown above the head of the Buddha, while the four guardian gods either hold up a canopy or offer flowers from both sides to the seat of the Buddha. This carved scene also expresses adornment of the holy place. The accounts of adornment in the *Gaṇḍavyūha Sūtra* have something in common with the carvings and paintings of heavenly beings on the pillars, walls and railings or with the ornamental flags and canopy hoisted beside and above the main image of the Buddha in the temples.

(3) *Adornment of towers.*—The style of towers changed according to the time and location in which they were built. The style and adornment of the first stage of Buddhism can be known by examining the old method related in the Vinaya. According to the *Mo-ho sêng-chih-lü* (摩訶僧祇律), 33, the railing stands on the four sides on the lowest foundation. On the top of the foundation is another circular structure and above it the inverted bowl. Pillars stand in the four corners, and the pagoda is topped with roofing with a long stretch of wheels attached on top of it. According to the instructions given for building a tower in the *Yü-pu-p'i-nai-yeh-tsa-shih*, (*Mūlasarvāstivāda-vinayanidāna-mātṛkoddāna*), twofold basic platforms are constructed first, then the body of the tower is placed, capped with the inverted bowl. The height of the tower is optional. On it is placed a flat top, one, two or three feet high. Inside it is placed a bar to which are attached wheels which can be one to thirteen in number, and a gem-decked jar is placed there. This system is found in the old pagodas at Bhārhut and Sāñcī. To judge from the remains of the oldest towers, roofing, ornamental banners and flower-decorations seem to have been used for the adornment of towers.

(4) *Articles used for adornment.*—The *Dhāraṇī Sūtra*, 12, gives more than eighty articles used for adornment. In Japan, for the adornment of the shrine in a temple, the platform for a Buddha image is surrounded by gem-decked railings, the image is placed on the pedestal, and a halo is attached behind, while a canopy is hoisted above the image. The main image is sometimes placed inside a gem-decked many-storied building, *zushi* or niche. It is a general rule to place the five instruments on the table in front and to decorate the inside of the hall with ornamental banners and flowers. Each sect has a different style of adorning the main image and the halls.

Yūkan Ozawa.

ADOSA, literally, the negation of anger, ill-will malice, hate (*dosa*). But, actually, it is much more than the mere absence of an evil; for, in the same way as ill-will denotes one of the three main blemishes of character (*rāga-dosa-moha*) and is one of the three roots of all evil, so the absence of ill-will (*adosa*) becomes a wholesome root (*kusala-mūla*) with a distinctly positive character which is so typical of the negative terminology in Buddhism. In the absence of ill-will, a main obstacle in the approach to understanding has been removed and thereby an atmosphere of good-will (*mettā*) has been created, which alone can break down the aloofness of selfish greed (*lobha*) and stupid ignorance (*moha*). And thus, hatelessness (*adosa*) is synonymous with loving kindness (*mettā*). "To get rid of hatred, cultivate amity" (*dosassa pahānāya mettā bhāvetabbā* : *A.* III, 446).

Adosa, as a wholesome root (*kusala-mūla*), is a condition or state of mind which by its very presence determines the actual moral quality of an act of will (*cetanā*), in other words, the quality of karma, its reproductive tendency and future effect.

ADUKA, name of a nāga king, which occurs in *Mahāmāyūrī* (247.27 : *BHS*. s.v.).

ADUKKHA-M-ASUKHĀ VEDANĀ, indifferent feeling or sensation, one of the five classes into which sensations (*vedanā*) are grouped according to their nature. It is a hedonic neutrality, contemplating pain and pleasure, without pursuing them; but it differs from equanimity (*upekkhā*) which is a balanced state of mind (*tatramajjhattatā*). Feelings of pain and pleasure are experienced only by the sense of touch (*phassa*), because the impact between the sentient surface (*pasāda-rūpa*) and the respective objects of the other senses (colour, sound, odour, taste) is not strong enough to produce physical pain or pleasure. Hence, the senses of the eye, ear, nose and tongue are always accompanied by this hedonic indifference. See also VEDANĀ.

ADUKKHA-M-ASUKHĪ SUTTA is the forty-fourth sutta of the *Sotāpatti Vagga* of the *Saṃyutta Nikāya* (III, 220).

It purports to explain the reason for the arising of the dogmatic belief that self is without bliss or suffering and that it is without sickness after death. Attachment to, and dependence upon, the five aggregates (*khandha*) of corporeality, feelings, perceptions, formations and consciousness are given here as the source of all such speculations regarding a self.

ADULTERY. The general attitude towards immorality in the teaching of the Buddha is not expressed in a penal code; but, wherever social customs had alreedy built up such a collection of laws, the influence of the doctrine tended to the mitigation of their severity. Far from condoning any transgression of rules which were based on and grown out of communal, social life, the responsibility for the result of such action is always laid squarely at the door of the transgressor. If the transgressor happened to be a member of the Saṅgha, monastic discipline would be enforced by the application of relevant regulations. Excommunication (*pārājikā*) is the sentence fixed for any sexual intercourse in which a monk would find himself wilfully involved, irrespective of the act having been adultery or not. This excommunication, therefore, is not a punishment of the culprit, but a safeguarding of the community to preserve its own purity. The culprit has suffered 'defeat' in his striving for the goal of a disciplined life.

Adultery does not in the Buddhist texts and traditions receive the same distinct attention as in some other religions and codes of morality. It is no doubt mentioned as one of the various degrees of sexual misconduct (*kāmesu micchācāra*); but apart from the act of inordinate desire (*kāmacchanda*) which is the first in the series of five hindrances (*pañca nīvaraṇāni*) and also the first and foremost of the group of ten fetters (*dasa saṃyojanāni*) which prevent deliverance of mind and which bind to rebirth in *saṃsāra*, the sinfulness of the act appears to lie in the violation of custodianship. The Buddha explains to Cunda (*A.* V, 264), that in sexual desires the wrongdoer is he who has intercourse with girls under the guardianship of mother, father, brother, sister or relatives, under the protection of law, or with married women, jailed women, or with betrothed girls.

It is noteworthy that whereas the transgression of misconduct with an evil woman is censurable only to a small degree (*micchācāro pi dussīlāya itthiyā vītikkamo appasāvajjo*), it becomes increasingly worse with the proportionate growth of virtue in the woman as a lay-disciple, as a sāmaṇerī, a bhikkhunī, one who is on the road to sainthood, or one who has attained the extinction of all mental intoxicants (*khīṇāsavāya pana ekantamahāsāvajjo va : VbhA.* 383). It is also noteworthy that adultery is never referred to as a psychological wrong done by a married man to his own wife in his association with another woman. The reason is perhaps that the difference between monogamy and polygamy was not one of virtue and vice, but only a difference in degree of sense-desire (*kāma*). The ideal man will avoid both.

The Book of Monastic Discipline (*Vinaya*) speaks only incidentally of various types of women, as mistresses, 'temporary wives' (*taṅkhaṇikā*), 'wives for the moment' (*muhuttikā : Vin.* III, 139); they are mentioned factually, whereas the ethical fault is with the monk who should act as a go-between for such a woman with a man.

That a woman should make a living by selling her body does not seem to have appeared as if she was selling her virtue. For we come across several instances of courtesans, publicly respected and honoured, such as Ambapāli and the woman whose daughter was asked to be given in marriage to some disciple of the Nigaṇṭhas (*Vin.* III, 134). The stress is on the conjugal right of exclusive possession of the wife by her husband: If one is unable to lead a life of continence one should not transgress against another's wife (*asambhuṇanto pana brahmacariyaṃ parassa dāraṃ na atikkameyya : Sn.* 396). A life of abandon is usually described as that of a man indulging in women (*itthidhutta*), in drink (*surādhutta*) and in gambling (*akkhadhutta*):

> "The rake who squanders all he gets
> Fast as it comes, on women, drink and dice.
> Next comes the lecher who, not satisfied
> With his own wife, is seen about with whores,
> Or caught in dalliance with others' wives".

(*Sn.* 106–8, trsl. Chalmers.)

"He is seen with others' wives" (*dissati paradāresu*), stands here as the culmination of sexual misconduct. The brāhman's wanton wife (*bhariyā anācārī dussīlā*) of the *Rādha Jātaka* (*J.* No. 145, I, p. 496) is nicknamed the owlish one (*kosiyāyanī*), possibly in consideration of her night activities, for that other bad woman of the *Kosiya Jātaka* (*J.* No. 130, I, pp. 463 ff.) is also named the owl (*kosiyā*). Although the commentary explains the name as belonging to Kosiya-gotta, a lower clan of brāhmans, the coincidence of these bad women being named after a night-bird is too strong to be without significance.

It would appear that if an adulterer (*paradārika*) were seized, he was beheaded (*S.* II, 188), but it is not clear whether this punishment was meted out by the law of the country, or by an outraged husband taking the law into his own hands. But even when remaining undetected in this life, the effect of adultery may be experienced after many lives perhaps, as happened in the case of that man in Rājagaha who was sunk, head and all, in a dungpit; he used to be an adulterer in that same town (*kūpe nimuggo paradāriko : S.* II, 259). An adulteress (*aticārinī*) was seen being flayed alive by vultures (loc. cit.). Inasmuch as she got her pleasures with other men, not with her own husband, she was to undergo this painful contact, being deprived of pleasant touch (*VinA.* 510).

H. G. A. v. Z.

ADVAITA or *advaya* is found in Buddhism in the sense that the Buddha denies the duality (*dvayatā*) of existence (*atthitā*) and non-existence (*natthitā*), which two terms refer to the theories of eternalism (*sassata-diṭṭhi*) and annihilationism (*uccheda-diṭṭhi*). "The world, Kaccāyana, usually bases its views on two things: on existence and on non-existence" (*dvayanissito khvāyaṃ Kaccāyana loko yebhuyyena atthitañ c'eva natthitañca : S.* II, 17). But he, who with right insight sees the passing of the world as it really is, does not hold with the existence of the world. And he, who with right insight sees the uprising of the world as it really is, does not hold with the non-existence of the world, either.

Dualism is found in most religious systems with various modifications. But, essentially, it implies a co-eternal existence of two independent principles. In Zoroastrianism the two are the primal Good and Evil, applied to the soul and the body, spirit and nature, the psychical and the physical, or personified as God and the Devil. In Plato the world of ideas is rigidly separated from the manifold of sense.

Non-Dualism (*advaita*), as the fundamental principle of Vedānta, asserts that there is only one reality (*brahman*), that the changing phenomena in the world of events are illusory (*māyā*), that the only reality (*brahman*) is identical with the self (*ātman*), which, however, in ignorance is assumed as an individual Ego.

Thus where Dualism (*dvaita*) distinguishes and opposes the real Ego and the non-Ego, this is denied in non-Dualism (*advaita*) according to which this distinction is illusory. This non-Dualism is thus actually Monism in its acceptance of only one reality.

This one reality, however, is also denied in Buddhism, where only phenomena are admitted, without substance or noumenon; mental processes without a static mind; ethical actions without an individual performer. All this is enshrined in the doctrine of *anatta* which is the teaching of no-soul, no-substance, non-entity, and hence of non-Dualism in the most general sense. For it denies the existence of essence and its affiliated doctrine of eternalism, as well as the denial of existence as a phenomenal process, which denial is absolute scepticism and annihilationism.

The positive aspect of this Buddhist doctrine is the doctrine of Dependent Origination (*paṭicca-samuppāda*), according to which nothing arises or ceases unless in dependence on conditions, which again holds the middle between existence and non-existence.

The Buddha is spoken of as a teacher of non-duality (*advaya-vādin* : *Mhvyut.* 23 ; *Divy.* 95.13).

ADVAYANĀḌIKĀ-BHĀVANĀKRAMA, a Sanskrit text which is extant in its Tibetan translation, the *Gñis-med-kyi rtsa-bsgom-paḥi rim-pa*, in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. Its author is Nīlakhanda (or Nīlakaṇṭha ?) who is the descendant of Nag-po (Kṛṣṇa). The translator's name is not recorded. In *TM.* the author's name is given as Nilakhandha (*Cordier*, II, p. 246, No. 96; *TM.* 2422).

ADVAYA-SAMATĀVIJAYĀKHYĀ-KALPA-MAHĀRĀJA, name of a Sanskrit work, translated into Tibetan under the title *Ḥphags-pa gñis-su-med-pa mñam-pa-ñid rnam-par-rgyal-ba shes-bya-baḥi rtog-paḥi rgyal-po chen-po* by Bu-ston Rin-chen grub. The translation was revised by Mi bzaṅ mgon-poḥi skyabs (*TM.* No. 452), and classified in the Rgyud-ḥbum (100,000 tantra) section of the Kangyur.

According to *Nanjio* (No. 1030) and *Taishō* (No. 887) a Chinese translation by Shih-hu (Dānapāla ?) of the later Sung dynasty (960–1127 A.C.), entitled (*Fo-shuo-*) *Wu-êrh-ping-têng-tsui-shang-yü-chia-ta-chiao-wang-ching*, and which may be restored as (*Buddha-bhāṣita-*) *Asamasamānuttara-yoga-mahātantrarāja Sūtra*, is also found in six fascicules in agreement with the Tibetan translation.

ADVAYASIDDHI, a famous Tantric work written by Bhagavatī Lakṣmī, or Lakṣmīṅkarā (*circa* 729 A.C.)[1] who was born in the royal family of Uḍḍiyāna as a sister of Indrabhūti. This is one of her extant and most important works, in which she shows remarkable boldness in preaching her own theories in getting Vajrayāna emancipation. This work was long lost in the original Sanskrit, but was preserved in the Tibetan Tengyur in translation[2] with her two other works[3].

To this work the attention of scholars was first drawn by Haraprasad Sastri, in an article in the *Dacca Review*. Copies of the original manuscripts are available in the libraries of the Oriental Institute of Baroda and of Haraprasad Sastri[4]. According to the summarisation by B. Bhattacharyya[5], throughout this work the influence of Indrabhūti's *Jñānasiddhi* is evident; and this is due probably to the fact that Lakṣmīṅkarā was not only a sister of Indrabhūti, but also one of his favourite disciples.

In this work a most remarkable and bold invocation is introduced by the authoress. Hitherto the Vajrayāna advocated the worship of the five Dhyāni Buddhas and their innumerable emanations; but what Lakṣmīṅkarā advocated was quite unusual and strange, even though from her time this new teaching gradually won many adherents, who were styled Sahajiyās; they are still to be found among the Nāḍhā Nāḍhis of Bengal, and especially among the Bāuls. Lakṣmīṅkarā declares that no suffering, no fasting, no rites, no bathing, no purification, nor other rules of society are necessary; nor does one need to bow down before the images of gods, which are made of wood, stone or mud; but one should with concentration offer worship to one's own body, where all gods reside.

1 This date is given by B. Bhattacharyya, *An Introduction to Buddhist Esotericism*, on which this article is based.

2 *TM.* No. 2220, under the Tibetan title: *Gñis-su-med-par grub-paḥi sgrub-thabs shes-bya-ba*. *TM.* gives the name of the authoress as Lakṣmikara instead of Lakṣmīṅkarā.

3 *TM.* 1547 (*Vajrayoginīsādhana*) and No. 1172 (*Paramagurudharma-rājastotra-nāma*).

4 B. Bhattacharyya, op. cit. p. 76, n.2.

5 ibid. pp. 76–7.

She explains later on, without, however, openly declaring the truth, that when the truth is known there are no restrictions for the worshipper. He can eat anything, he can drink anything and violate any laws, human or divine. Towards women, she declares, no hatred should be displayed; because they are the embodiments of the Prajñā in restraint [6]. Later on, she says that instructions on Nirvāṇa should always be obtained from the preceptor. In the whole of the movable and immovable world, there is nothing better than the guru, through whose kind offices the wise achieve many kinds of perfection.

S. K.

ADVAYASIDDHI-SĀDHANA-NĀMA, a Sanskrit text which is extant in its Tibetan translation, the *Gñis-su-med-par grub-paḥi sgrub-thabs shes-bya-ba,* in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. Its author is Bhagavatī Lakṣmī of the royal family of Uḍḍiyāna, sister of Indrabhūti. The translator's name is not recorded. In *TM.* the author's name is recorded as Lakṣmīṅkarā (*Cordier*, II, p. 211, n. 4; *TM.* 2220).

ADVAYA-VAJRA, name of an author, mentioned in the *Sādhanamālā* (p. 48, etc.; *BHS.* s.v.). He was one of the later Buddhist writers who lived in the 11th or at the beginning of the 12th century and wrote a large number of short didactic poems on the Mahāyāna and Vajrayāna, collected in the *Advayavajra-saṅgraha.*

ADVAYAVAJRA-SAṄGRAHA, a collection of short Mahāyāna and Vajrayāna poems of a didactic nature, ascribed to Advaya-vajra (Winternitz, *A History of Indian Literature,* II, p. 375, n.3). It is edited with an introduction by Haraprasad Sastri (*GOS.* XL).

ADVERTENCE is a turning of the mind either in presentative cognition bending towards the five sense-doors (*pañcadvārāvajjana*), or in representative cognition bending towards the mind-doors (*manodvārāvajjana*). It is not cognition itself, but a reaction of the consciousness to an impression which impinges itself, in order to give rise to a thought. Without perception of the object, there is awareness of its presence; and hence an advertence in that direction. See ĀVAJJANA.

ĀDYĀŚAYA-SAÑCODANA, one of the minor sūtras of the *Mahāratnakūṭa Sūtra* (*Nanjio*, No. 23). It is translated under the title of *Fa-shêng-chih-yao-hui* (發勝志樂會) or 'that spoken at an assembly on raising excellent inclination and wish'. This is translated by Bodhiruci of the T'ang dynasty. It consists of two fascicules which correspond to the 91st and 92nd fascicules of the *Mahāratnakūṭa Sūtra.*

Before the translation above mentioned, this sūtra was translated separately by Jñānagupta, of the Sui dynasty, under the name of *Fa-chiao-ching-hsin-ching,* 發覺淨心經 (*Nanjio*, No. 37), or 'the sūtra on the raising and awakening of pure thought'.

This is the sūtra of compassion and tolerance which was emphasised in early Mahāyāna Buddhism. The Buddha comforts all bodhisattvas who blamed Buddhist monks and he assures them they are able to be born in the Sukhāvatī paradise. Then he teaches them thirteen sorts of vows and informs Maitreya of twenty kinds of faults which are liable to be committed in this last period, as well as ten kinds of faith which are necessary in order to be born in the Sukhāvatī paradise.

This work is also extant in Tibetan. It is translated by Jinamitra, Surendrabodhi and Ye-śes sde, under the title of *Hphags-pa lhag-paḥi-bsam-pa bskul-ba shes-bya-ba theg-pa chen-poḥi-mdo* (*TM.* No. 69).

ÆSCULAPIC BUDDHAS ('Medical Buddhas'). See BHAIṢAJYA-GURU.

AFFIRMATION AND NEGATION. In this pair of opposites is sometimes implied activity and passivity. Various theories in this connection present themselves in several branches of study, such as ontology, epistemology, theories of practice and of expression; hence it is quite possible that what is affirmed in one may be negated in another. For example, the Christian and Muslim idea of God as an entity is beyond general recognition and can be expressed only in negation, yet simultaneously and contrariwise is thereby admitted and affirmed a positive acceptance of the transcendental existence of God, which is an assertion of the possibility to apprehend God through practice rather than through comprehension. Christian theology regards God as an existence which transcends the domain of recognition and expression. Thus God is beyond all law, has no designation, no appellation, is neither good nor bad. Although we say what it is not, we cannot affirm what it is. In other words, God is the unknowable darkness, non-existence beyond the range of existence, and nothingness. Such a negative attitude concerning the recognition and description of the attributes of God, it is held, does not imply a denial of the existence of God; on the contrary, it affirms, emphasises and exalts the paramount existence of God. In this way, God is described positively by means of incompatible expressions: he is the one and all, infinitely great and infinitely small. Nicolaus Cusanus (1401–64 A. C.) regarded God as 'coincidentia oppositorum', a coincidence of opposites, while Giordano Bruno (1548–1600 A. C.)

6 The germ of the theory of the Prajñā, or the great woman to be adopted in the sexo-yogic practice in the later full-blown Sahajiyās, is found in this part of her work. Sahajiyās maintained that perfect bliss was obtained only from the union with the Prajñā or the sixteen years old girl and this bliss is the highest non-duality or Mahā-sukha. cp. S. B. Dasgupta, *An Introduction to Tantric Buddhism*, pp. 69 & 112.

drove this point home still further by defining God as the infinite substance underlying every phenomenon, and unifying all opposite existences. It is also asserted, while rejecting this sort of intellectual recognition of God, that man can become physically united with God through mystic intuition, at work in experience and practice.

This way of thinking is also found in the Upaniṣads, where the absolute being, Brahman or Ātman, was regarded as an existence beyond the range of human knowledge and linguistic description and was depicted only negatively : *neti, neti* (it's not, it's not). Yet, at the same time, its existence was most positively asserted and even affirmed as the truth of truth (*satyasya satyaṃ*); the one and all; existence infinite as well as infinitesimal. The Upaniṣads asserted that Brahman or Ātman was to be comprehended not through recognition, but through introspection (*adhyātmayoga*) and awareness (*pratibodha*).

There may be some instances where the denial of recognisability of an absolute existence would lead to the negation of such existence itself, unless negation stops at the stage of scepsis, which regards the absolute as unknowable. This shows that the question of affirmation and negation is not simple, and that their relation is contradictory and dialectic. Thus in one's attitude towards actuality, for instance, the negation of actuality becomes actively positive when it comes to working upon actuality. An example may be cited from the various movements for social reforms or social relief operations carried out by religious bodies. On the other hand, an affirmative attitude towards actuality often leads to the passivity of compromise in dealing with actuality.

The Fundamental Standpoint of Buddhism. Sañjaya Belaṭṭhiputta, one of the six heterodox teachers at the time of Gotama Buddha, gave no definite answers to metaphysical questions, but took an absolutely negative attitude while asserting complete scepticism regarding the absolute being. Another of the six teachers, who was also the founder of Jainism, the nigaṇṭha Nātaputta, took a relativistic standpoint (*syād-vāda, anekānta-vāda*) by admitting a probable recognisability, while preserving both an attitude of relative affirmation, as well as of relative negation. Śākyamuni (Gotama Buddha) resembled Sañjaya in his attitude of refraining from answering metaphysical questions which were indeterminable (*avyākata*); but when it came to the question of the absolute existence of a God-creator, he gave a definitely negative answer; and, therefore, he can be regarded as having progressed beyond Sañjaya. As a result of this attitude, those who believed in absolute existence criticised him and called him a nihilist (*nāstika*). In reply to this accusation Śākyamuni said that to presuppose a metaphysical existence means the assumption of a passive and negative attitude towards actuality. Śākyamuni's aim was to stop the assumption of a metaphysical entity and ideological existence as a permanent standpoint and viewpoint, and to encourage positive action upon concrete events and actual existence, observing things as they actually are, and one's reactions thereto. Because of this it is said that he brought about a right-about turn in the history of Indian thought; for, it must be well understood that his indeterminate attitude did not constitute a mere negation, but a very positive affirmation, pointing to actuality, and clearly indicated by his own words :

> " Whate'er is seen, heard, sensed or clung to is esteemed
> As truth by other folk. 'Midst those who are convinced
> Not such am I, not one to claim that what they say,
> Be it true or false, is ultimate."
>
> (*A.* II, 24 ; *Gradual Sayings*, II, p. 23.)

Another point to observe is that Śākyamuni gave up all ascetic and yogic practices. The aim of asceticism is to free the mind from the material world and from the physical body by means of a positive control of energy. Yoga, on the other hand, tries to set the mind free from matter in a passive and negative way. Although there is a difference of approach, both take their stand on a duality of matter and mind in which the final emancipation of mind is realised only with the death of physical matter. Such a view of emancipation cannot but assume an attitude of indifference and resignation in dealing with the actual world of events. In contrast with such views and attitudes, deliverance, according to Śākyamuni, is positively based on action of body, word and mind, as seen in the Noble Eightfold Path. This Path has no supramundane or mysterious element in its doctrine, but is a practical and positive method applied to actual, daily life.

As there have been many wrong views about the teachings and concepts of Śākyamuni, and even erroneous interpretations among his followers, some of these concepts will now be considered and elucidated.

Anicca-dukkha-anattā. The feeling of impermanence (*anicca*) underlies the entire structure of Buddhism and severe criticism has been levelled against it by outsiders charging it with bringing about a passive, negative and resigned attitude towards life. In truth, it cannot be denied that in the later period of Buddhist history there have been instances where an actuality-evading pessimism prevailed. Śākyamuni's view of impermanence is, however, fundamentally different. For him, to face actuality which is impermanent and full of conflict was to cope with that actuality and conquer it in a positive way. Thus, concerning the caste system, for instance, his theory of impermanence taught that family connection and birth were not of the nature of a fixed absolute, but were only temporary phenomena; and, therefore, to those who were proud of their birth and family-name and who kept themselves high above others, he said, " whom birth or wealth inflates, to them doth failure come " (*Parābhava Sutta : Sn. v.* 104). Here we find a positive attitude towards the abolition, i.e., the negation, of the caste-system;

for Śākyamuni asserted that "none is born untouchable and none is born as peer" (*na jaccā vasalo hoti, na jaccā hoti brāhmaṇo* : ibid, *v*. 142). Hence, he taught not to care about birth, but only to care for virtue (*mā jātiṃ puccha, caraṇañ ca puccha* : ibid. *v*. 462, *Sundarika-bhāradvāja Sutta*). He himself indiscriminately accepted followers into his religious order from every caste, instructing all when asked about their caste to answer : I belong to the Śākya family.

In respect of his conception of 'selflessness' (*anattā*) there have been many criticisms and wrong interpretations, either giving it the meaning of the absence of the subjective self or accepting a compromising attitude, which, even by some Buddhists were not rejected as entirely wrong. Śākyamuni's doctrine of soullessness (*anattā*), however, denied the metaphysical, ideological *ātman* of Brahmanism, and he criticised the attitude of seeking one's own welfare where there is no self, thus becoming swallowed up in the whirl of rebirth. Yet, this negation of self is at the same time a positive and active search for independence, stressing the need of being free from others. At his deathbed he spoke those words of advice that one should not rely on others, but be to oneself one's own guiding light.

Voidness (*śūnyatā*) **and the Middle Way.** Friedrich Nietzsche (1844–1900) constantly referred to Buddhism in his writings on nihilism and, regarding the advent of nihilism in Europe as that of Buddhism, he went so far as to say that a second Buddhism was coming over Europe. He classified nihilism as either active and positive or passive and negative, and classed Buddhism in the latter group. He was not aware that the positive and active side of the Void is expounded in Mahāyāna Buddhism. The concept of non-existence or voidness is not a passive and negative nihilism, born from an exhausted mental condition. As an active and positive nihilism it conquers nihilism and brings about the light of truth. This is demonstrated clearly by Nāgārjuna : Where voidness (*śūnyatā*) establishes itself, everything establishes itself ; where voidness does not establish itself, nothing establishes itself (*Madhyamaka-śāstra*, 24, 14). He calls the truth brought about through voidness the reality beneath all things (*tattvasya lakṣaṇam*) or the essential nature (*dharmatā* : ibid. 18, 7 and 9), and gives it the name of the middle way (*madhyamā pratipad* : ibid. 24, 18). In the *Cakravarti Sūtra* it is related how the Buddha, abandoning both hedonism and asceticism, awoke to the middle way. This middle way is not a compromise of hedonism and asceticism, some kind of lukewarm moderation, but it implies a strong negation and condemnation of both. And in this respect the middle way can be described as active and positive.

Compassion (*karuṇā*). The positive and negative aspects of compassion form even today the object of many controversies, and one of these controversies concerns the relationship between voidness and compassion. During the period of the branching of the various schools of Indian Buddhism compassion was regarded as a passion by some, as it is experienced in respect of objects of affection on an occasion of misfortune, and thus the Uttarāpathaka school went so far as to assert that the Buddha had no compassion (*Kvu*. xviii, 3). Others counted compassion together with the other three sublime states (*brahma-vihāra*), viz., loving kindness, sympathetic joy and evenmindedness, as an unconditioned absolute (*asaṅkhata*). Mahāyāna Buddhism, however, places great weight on the practice of compassion, even to the point of giving up the thought of the void and the unconditioned state for the purpose of actively practising compassion (*apratiṣṭhita-nirvāṇa*). At the same time there appeared a theory which asserted that real and impartial compassion or causeless great pity was possible only when based on the philosophy of emptiness. But in the meantime, criticism on this aspect of Buddhist compassion was voiced from the side of the Christians who asserted as follows : the Buddha's compassion is a love that admits and embraces everything and the Buddhists hold this kind of compassion as broader than God's love which bears anger in it ; actually, however, the Buddha's compassion, having no medium, is only a quiet and observing love, while God's love, with justice working as medium, is an active, painful love which tries to embrace also what does not deserve being embraced.

The Japanese monk Nichiren (1222–82) distinguished two types of compassion in Buddhism, namely a father's love (*mettā*) and a mother's love (*karuṇā*), designating the former as the active and positive love with aggressive persuasion that makes his sick child undergo an operation necessary for recovery, though the operation gives him great pain, and the latter as the passive and negative love in a persuasive attitude, refusing the operation because she cannot bear to see her child suffer from the operation, though she knows that the operation is requisite for recovery. Compassion in Buddhism is often interpreted to indicate the latter, admitting and embracing everything as it is ; but there are instances when compassion has to be aggressive or active as the former, and as long as compassion remains as the latter, it will inevitably become helpless in the face of actuality, without power to resist evil. Based on this view of compassion Nichiren refuted the erroneous view and elucidated the right view that the practice of the bodhisattva was the manifestation of active and positive compassion. Thus there is a resemblance between a father's love with justice as preached in Christianity and a father's love with aggressive persuasion as taught by Nichiren.

YOSHIRŌ TAMURA.

AFGHANISTAN. The country known as Afghanistan today lies between Pakistan (West) and Iran (Persia). The name 'Afghan' first appears in literature in the *India* of al-Bīrūni (973–1048 A. C.), but its application is uncertain. In historical times the country was traversed by Alexander the Great; Strabo called it 'Ghandharis' (*ERE*. I, 158 f.). In the early Christian eras, Buddhism prevailed in a large part of modern Afghanistan (e.g., Gandhāra, east ; Kandahar,

south; Balkh, north; Tukhar, north-east; etc.). The introduction of Buddhism was under the dynasty of Indo-Scythian kings, most powerfully illustrated by Kaniṣka.

Many centres with archaeological remains have been discovered both by scientists working in the field, and from literary research. Owing to the once conservative closeness of the Afghan authorities, largely because of their faith, archaeological study had not been possible until 1922, in which year a French mission was allowed to secure rights for excavation. Nearly all of the information of Buddhist interest that is available has been due to the researches of the members of this archaeological mission, notably Alfred Foucher, Joseph Hackin, A. and Y. Goddard and J. Carl. In 1951–2, K. de B. Codrington and F. R. Allchin (of the London School of Oriental and African Studies) did some field work. More recently, in 1956, an Italian Archaeological Mission inspired by G. Tucci further investigated this earlier phase of the culture of Afghanistan. (See Alessio Bombaci and Umberto Scerrato in *EW*., New Series, X, Nos. 1–2.)

Buddhism once flourished exceedingly in Afghanistan but was showing signs of decline by the 7th century A. C. In some parts, traces survived even as late as the 9th century A. C. But by the close of the same century Islam had completely displaced the earlier religion.

An inscription of Asoka written in Greek and Aramaic was recently discovered in Kandahar. (See *EW*. op. cit. IX, Nos. 1–3; X, Nos. 3 & 4, etc.; also *JA*. Vol. CCXLVI for 1958.) Detailed information on Buddhist matters appears more appropriately under such references as: BACTRIA, BALKH, BĀMIYĀN, BEGRAM, GANDHĀRA, HAḌḌA, JAMALGIRI, KANDAHAR, KAPĪSA, SHAHRI-BAHLOL, TAKHTI-I-BAHI, TOKHARISTAN.

D. T. D.

AFTER-IMAGE, also called 'counter-image' (*paṭibhāganimitta*), is a mental mark, sign or reflex (*nimitta*), which arises during the successful practice of certain exercises of meditation (*bhāvanā*) and concentration (*samādhi*). After the setting up of the preliminary work-sign (*parikamma-nimitta*) which is the material object of concentration, and when the mind is fully concentrated on the object of its choice, an acquired image, called the assumed sign (*uggaha-nimitta*), presents itself. It is the mental reflection of the material object which should be seen as one views one's own face in a mirror, with all its imperfections, till all details are seen, or rather known, whether the eyes are open or closed. From this mental reflex of the assumed sign or acquired image (*uggaha-nimitta*), the imperfections gradually disappear till the after-image or counterpart sign (*paṭibhāga-nimitta*) appears without any of the imperfections attached to the material prototype. It is a mere mode of appearance (*upaṭṭhānākāramattaṃ*: *Vism*. iv, § 31, p. 102) which has now become completely independent both from the preliminary object and the acquired sign, and is hence called the after-image, or counterpart image (*paṭibhāga-nimitta*). This mental reflex in its purity ceases to distract the mind and thereby becomes a true reflection of the state of mind at that time, as the hindrances (*nīvaraṇa*) are suppressed, and the defilements (*kilesa*) have subsided. Thus, while meditating on a loathsome object like a bloated corpse, the acquired image will be hideous and a dreadful sight, but the after-image thereof will appear "like a stout man resting after a heavy meal".

These signs are not so sharply differentiated in the canonical texts, although even there already they can be recognised in their basic forms. Thus, "having cognised a mental object with the mind, he is not enticed by the outward sign (*na nimittaggāhī hoti*) or general appearance, nor is he entranced by its minor characteristics" (*nānubyañjanaggāhī*: *M*. I, 180). In this passage the different signs accompanying the various degrees of concentration have not assumed as yet the technical distinction which is found in the commentaries, especially in the *Visuddhimagga*, where the three signs are indicative of progressive concentration, and are stages of visualisation. In the suttas these signs are rather methods of association of ideas, by means of which deeper concentration may be obtained. Thus, in the *Vitakka-saṇṭhāna Sutta* (*M*. I, 119) the Buddha refers to five signs (*pañca nimittāni*), but they are rather various attitudes of mind which should be developed from time to time depending on the characteristics involved in the development of a thought. When an object of thought becomes associated with desire, aversion or confusion, one should turn towards another object of thought associated with skill and virtue, "just as a clever carpenter drives out a large peg with a small one". If this method does not prove sufficiently effective, the meditating monk should scrutinise his thoughts and reflect on the painful results (*dukkhavipāka*) of such unskilful thoughts. Or, he should ignore them and forget them through lack of attention (*asatiamanasikāra*). Or, if such forgetfulness is not possible, he should analyse the formation of such thoughts (*vitakkasaṅkhāra-saṇṭhānaṃ manasikātabbaṃ*) and thereby bring them to an end. Finally, he may resort to concentrated will-force to subdue, restrain and dominate his mind (*cetasā cittaṃ abhiniggaṇhitabbaṃ abhinippīḷetabbaṃ abhisantāpetabbaṃ*).

The after-image or counter-sign (*paṭibhāganimitta*) is the immediate forerunner of a state of mental absorption (*jhāna*), but the transition is subtle. For, should one force one's energy at the moment of the arising of this sign, thinking: 'Now I shall soon reach absorption', this agitation may easily prevent attainment and progress. On the other hand, delight in this counter-image (*paṭibhāga-nimitta*) may become a cause of idleness, whereby progress and eventual attainment of absorption will be retarded and even blocked (*Vism*. iv, § 72, p. 111).

Once the after-image is obtained, it should be extended "in order to perfect the development of consciousness" (*cittabhāvanāvepullatthañca yathāladdhaṃ paṭibhāga-nimittaṃ vaḍḍhetabbaṃ*: ibid.

§ 126, p. 123), till it pervades all and the mind becomes concentrated in access-concentration (*upacārasamādhinā cittaṃ samāhitam evā ti* : ibid. § 31, p. 102).

H. G. A. v. Z.

AGADA, name of Subāhu (q. v.) thera in a previous birth as cakkavatti (world ruler).

AGAYHA SUTTA, one of the suttas in the *Devadahavagga* of the *Saṃyutta Nikāya* (IV, 126 f.).

The Buddha, while staying at Devadaha, a small town of the Sakkas, declares in this sutta to the monks that devas and men delight in objects, sounds, etc., and become excited by them. Thus, they live woefully because of the instability, the destruction, and the ceasing-to-be of objects (*rūpavipariṇāmavirāganirodha*). On the other hand, the Tathāgata, knowing things as they really are, the arising and the destruction, the satisfaction, the misery and the way of renunciation of objects neither delights in objects nor gets excited by them. The instability, the destruction and the cessation of objects does not affect him, therefore, and he leads a happy life.

ĀGAMA (I). Āgama is a title given to the collection of scriptures transmitted by the northern branch of early Buddhism. Literally, it means the tradition of successive teachers. It is generally regarded in Buddhist documents as the *Sūtra-piṭaka* of the *Śrāvaka Tripiṭaka*. This piṭaka consists of four divisions known as the four āgamas, viz., the *Dīrghāgama*, the *Madhyamāgama*, the *Saṃyuktāgama*, and the *Ekottarikāgama*. The *Nandimitrāvadāna*, translated by Hsüan-tsang of the T'ang dynasty, mentions a fifth division, the *Kṣudrakāgama*, with reference to the fivefold division of the nikāyas transmitted by the Theravādins of the south. But this class of text is generally regarded as a miscellaneous piṭaka, outside the range of the regular *Sūtra*, *Vinaya* and *Abhidharma-piṭakas*. According to the records in various vinayas, the four āgamas were compiled by the Buddha's disciples shortly after his entering Nirvāṇa, but, as a matter of fact, they are compilations of later dates.

The separate compilations of the four āgamas were based chiefly on the length and form of the works that were included as well as the 'numerical' categorisation of the dharma that was involved, and at the same time the dogmas taught in these writings as well as the extent of their intended applications were also taken into consideration (cp. the *Record of the Compilation of the Tripiṭaka and the Miscellaneous Piṭaka* 撰集三藏及雜藏傳, and the *Sarvāstivādavinaya-vibhāṣā* 薩婆多毗尼毗婆沙). The writings collected in the *Dīrghāgama* are of greater length, containing narrations that often involve large units of time (e.g., the seven Buddhas of the past, the kalpas of the formation and the destruction of the world, etc.). In addition, some heretic doctrines are particularly taken into examination in order to show the superiority of Buddhism, and hence it has become the specific text for proselytisers. The *Madhyamāgama* contains pieces of medium length, in which writings of similar nature are often juxtaposed in pairs. The doctrines taught are in conformity with the Middle Path. Special stress is laid on the intensive study of the Four Truths, the discriminative analysis of the principle of the Void and the eradication of ignorance and doubts, and hence it is the specific text for scholastic studies. The *Saṃyuktāgama* contains short pieces of writings which appear somewhat trivial and disconnected, inconvenient for memorisation (hence the title *tsa* 雜, 'mixed', given by the translator). A threefold categorisation is made in consideration of the three aspects of dharmas, viz., that which concerns the subjective potentiality, that which concerns the external object and that which concerns accomplished deeds; and all the writings included are arranged according to their different natures. (Hence some translators rendered the title of this āgama as *hsiang-ying* 相應 'corresponding'.) The stress is laid on the various methods of dhyāna and hence it serves as a specific text for the dhyāna-practisers. The collections in the *Ekottarikāgama* are for the most part related with the numerical categorisation of the dharmas, arranged according to their numerical order from one to ten or eleven. The contents mostly deal with the topics of charity, the precepts, birth in the deva-realm, Nirvāṇa, the gradual entry into the truth and the like, with special emphasis on the selection of the most suitable dharma to be preached, adapted in all ways to the capacity of the hearer. Besides, there are also a number of *nidāna* stories and hence it is the specific text for the preachers.

Since each of the four āgamas shows its own adaptability to the need of special circumstances, some of the Buddhist schools used to favour a particular division of the āgamas as required by the particular sphere of their activities. For instance, the Mahāsaṅghikas preferred the *Ekottarikāgama* (see the *Puṇyavibhaṅga-śāstra* 分別功德論, fasc. 1), the Mūlasarvāstivādins the *Saṃyuktāgama* (see the *Yogācārabhūmi-śāstra* 瑜伽師地論, fasc. 85, the *Mūlasarvāstivādavinaya-kṣudrakavastu* 根本說一切有部毗奈耶雜事, fasc. 39), and so forth.

Each important school of Śrāvakayāna Buddhism had its own four āgamas (the Theravādins of the south called them Nikāyas), differing from those of other schools in contents as well as in the arrangement of these contents. Even as late as the 7th century A. C., there still existed seven divergent texts, i.e., those of the Theravādins, the Mahāsaṅghikas, the Sammitīyas, the Mahīśāsakas, the Kāśyapīyas, the Dharmaguptakas and the Sarvāstivādins (*The Biography of the Tripiṭaka Master of the Great Ts'u-en Temple* 大慈恩寺三藏法師傳, fasc. 6). But no complete āgama text in Sanskrit is extant now, the fragments found in central Asia numbering barely a little more than a dozen. Thus, it is only through the Chinese versions that we may form some idea about the contents and structures of the four āgamas.

The Chinese versions of the four āgamas were produced one after another within a limited period of fifty years from the late Eastern Tsin to the early southern and northern dynasties. Those of the *Madhyamāgama* and the *Ekottarikāgama* belong to the earliest dates. The former was compiled by Dharmanandi in the 20th year of Chien-yüan (384 A. C.) of the Yao-ch'in regime, entitled the *Chung-a-han-ching* (中阿含經), in 59 fascicules; it is now lost, except for a few individual sūtras. Because this version proved unsatisfactory in its failure to present fully the meaning of the original text, a later translation was produced in 60 fascicules by Saṅghadeva in the 2nd year of Lung-an (398 A. C.) of the Eastern Tsin dynasty, and this is the version now extant (*Taishō*, No. 26). Some of the newly coined terms of this re-translation were afterwards again replaced by those used in the old version. In order to provide for further considerations, Tao-tzŭ, the transcriber of the new translation, preserved these new and old terms in a record of one fascicule which he appended to the list of contents, but which is now lost. The *Ekottarikāgama* was also translated by Dharmanandi, in the 21st year of Chien-yüan (385 A. C.), entitled in Chinese *Tsêng-i-a-han-ching* (增一阿含經, *Taishō*, No. 125) in 41 fascicules; it exists now in 51 fascicules. Owing to the neglect of the translator, the concluding uddānas of the chapters in the last 15 fascicules were left untranslated, and had to be supplied afterwards by the joint efforts of Tao-an and Fa-ho. Still, the version was not wholly satisfactory and some revisions were again made by Saṅghadeva. The next translation produced was that of the *Dīrghāgama* by Buddhayaśas, working in collaboration with Chu-fo-nien, in the 15th year of Hung-shih, (413 A. C.) of the Yao-ch'in regime, under the Chinese title of the *Ch'ang-a-han-ching* (長阿含經, *Taishō*, No. 1) in 22 fascicules; it is still extant. The latest was the translation of the *Saṃyuktāgama* entitled in Chinese *Tsa-a-han-ching* (雜阿含經. *Taishō*, No. 99) in 50 fascicules, made by Guṇabhadra during the Yüan-chia period (435–53 A.C.) of the Earlier Sung dynasty. The text of this version does not seem to have been carefully re-adjusted by later copyists, so that the fascicules of the present edition are in poor order. More than that, there was a gap of two missing fascicules erroneously filled up by interpolating into it Guṇabhadra's translation. (cp. the *Aśokāvadāna* and the *Record of the Translation of the Tripiṭaka* 出三藏記集, fascs. 2 & 9.)

Besides these complete translations of the āgamas, there are a number of fragmentary translations now extant. The *Tsa-a-han-ching* in one fascicule (*Taishō*, No. 101), by an unknown translator during the period of the Three Kingdoms (220–80 A. C.) includes 27 sūtras. The *Pieh-i-tsa-a-han-ching* (別譯雜阿含經. *Taishō*, No. 100) in 20 fascicules, another work produced in the time of the Three Ch'ins (351–431 A. C.) by an unknown translator, includes 364 sūtras. Still another translation is An Shih-kao's *Mixed Sūtras in Forty-four Chapters* (雜經四十四篇) in 1 fascicule. It includes 44 sūtras which are parts of the *Ekottarikāgama*. But, in the modern edition it has incorporated the *Sūtra on Seven Āyatanas and Three Contemplations* and the *Chi-ku-ching* (積骨經), and hence assumes the title of the *Ch'i-ch'u-san-kuan-ching* (七處三觀經, *Taishō*, No. 150; cp. T. Hayashiya's *An Shih-kao's Translations of the Saṃyuktāgama and the Ekottarikāgama*, *The Journal of Buddhist Study*, vol. 1, No. 2). As for the individual sūtras collected in these four āgamas, separate translations have been made at different times throughout the period from the Later Han down to the Northern Sung dynasty, and more than 130 of these works are still extant.

As to the sectarian origins of these āgamas which were translated into Chinese in their complete forms, various theories have been presented in the past. According to the results of modern investigations, the following observations seem in the main worthy of consideration. The *Dīrghāgama* was recited by the translator who, before taking up this work, had first produced the *Caturvarga-vinaya* (四分律), a work of the Dharmaguptakas. The texts of the sūtras included in this āgama, although arranged in an order different from that of the *Caturvarga-vinaya*, explicitly attribute great significance to the merits of making offerings to the Buddha's stūpas, and definitely aver the flawlessness of the body of arahantship. These ideas are in conformity with the teaching of the Dharmaguptakas, hence it seems quite permissible to ascribe this āgama to the tradition of this school (cp. H. Ui's *Studies in Indian Philosophy*, Vol. II, pp. 134–5). Next, the system of the Chinese *Chung-a-han-ching* is strikingly similar to that of the Sarvāstivāda *Madhyamāgama* as quoted in the Tibetan *Chos mṅon-paḥi mdsod-kyi ḥgrel-bśad ñe-bar mkho-ba*, a translation of Śamathadeva's work, and hence it can be regarded as a work of the Sarvāstivāda tradition (cp. H. Sakurabe, 'On the Madyamāgama as quoted by Śamathadeva in his Abhidharmakośa Commentary', *Studies in Indology and Buddhology*, Kyoto, 1955). Thirdly, the system of the Chinese *Tsa-a-han-ching* agrees very well with the *Mūlasarvāstivādavinaya-kṣudrakavastu*. Furthermore, the order of the text of its basic portion, too, is in perfect accord with that described in the *Saṃyuktāgamamātṛkā* which is quoted in the *Yogācārabhūmi* (fascs. 85–98), and therefore it is evidently a Mūlasarvāstivāda tradition (cp. my treatise, *A Record of Revision Work done on the Tsa-a-han-ching*. 雜阿含經刊定記, *The Inner Learning*, Vol. I). Lastly, the Chinese *Tsêng-i-a-han-ching* includes an eleven-fold division of the dharmas preceded by an introductory chapter, a system which is evidently not the tradition of the Sarvāstivāda school. On the other hand, in this work the position of Mahāyāna Buddhism is acknowledged, and parts of its theories are somewhat akin to those of the Mahāsāṅghikas. Thus, it is very probably the tradition of the Mahāsāṅghika school (cp. H. Ui, op. cit.). Besides these, the *Pieh-i-tsa-a-han-ching* might be a derivation from the tradition of the Mahīśāsakas or the Dharmaguptakas, because this work seems to hold the *Recitation on the Eight Masses* as the first section of the whole work (cp. the *Pañcavarga-vinaya*, 五分律, fasc. 30, and the *Caturvarga-vinaya*, fasc. 54). The *Mixed Sūtras in Forty-four Chapters* might be a derivation of the Theravāda tradition, as the

arrangement of its contents is quite similar to that of the Theravāda *Aṅguttara Nikāya* transmitted in the south (cp. T. Hayashiya, op. cit.). As for the sectarian origin of the *Tsa-a-han-ching* in one fascicule, it is not yet possible to come to any conclusion owing to the scantiness of its contents.

As remarked above, almost all the Chinese versions of the four āgamas trace their origins to different schools. Of course the system that can be drawn from the examination of any of them is limited to a particular āgama of a particular school. Needless to say, it is still not possible to define the distinctive features of any school in its entirety.

The contents of the *Dīrghāgama* consist of four parts given to four recitations (i.e., divisions made according to the quantity of materials so that each can be recited within a day) including 30 sūtras to make up the whole. The first part comprising the first recitation includes 4 sūtras, viz., the *Sūtra on the Great Nidāna*, etc. The second part comprising the second recitation includes 15 sūtras, viz., the *Sūtra on the Lesser Nidāna*, etc. The third part comprising the third recitation includes 10 sūtras, viz., the *Sūtra on Ambaṣṭha*, etc. The fourth part comprising the fourth recitation includes 1 sūtra, the *Sūtra on the Record of the World*, which is sub-divided into 12 chapters, viz., *Chapter on Jambudvīpa*, etc.

The system of the *Madhyamāgama* comprises four parts which, in turn, comprise 19 chapters arranged under 5 recitations, including 222 sūtras in all. In the modern (current) edition, only the divisions of the recitations are marked, while the original divisions of the parts are unknown. The first recitation, the title of which is wanting, covers five and a half chapters, including 64 sūtras. They are: Chapter i, *On the Seven Dharmas* (10 sūtras: *On the Good Law*, etc.); Chapter ii, *On the Consequence of Karma* (10 sūtras: *On the Salt Comparison*, etc.); Chapter iii, *On the Fitness of Śāriputra* (11 sūtras: *Sūtra spoken to Samacitta-deva*, etc.); Chapter iv, *On the Adbhūta-dharmas* (10 sūtras: *On the Adbhūta-dharmas*, etc.); Chapter v, *On the Fitness of Practice* (16 sūtras: *On Answering the Questions about the Meaning of Keeping the Śīla*, etc.); and the first half of Chapter vi, *On the Fitness of the King* (7 sūtras: *On the Seven Precious Things*, etc.). The second recitation, *At the Small Earthen City*, covers four and a half chapters, including 52 sūtras. They are: the second half of Chapter vi, *On the Fitness of the King* (7 sūtras: *On the Crow and Other Birds. Comparison*, etc.); Chapter vii, *On the King of Long Age* (15 sūtras: *On the Ityukta of the King of Long Age*, etc.); Chapter viii, *On the Uncleanness* (10 sūtras: *On the Uncleanness*, etc.); Chapter ix, *On the Cause* (10 sūtras: *On the Great Cause*, etc.); and Chapter x, *On the Forest* (10 sūtras: *On the Forest*, etc.). The third recitation, *On Mindfulness*, covers two chapters, including 35 sūtras. They are: Chapter xi, the *Large* Chapter (25 sūtras: *On Softness*, etc.); and the first half of Chapter xii, *On the Brahmacārin*, (10 sūtras: *On the Minister, Rain-power*, etc.). The fourth recitation, *On the Nirdeśa*, covers three and a half chapters, including 35 sūtras. They are: the second half of Chapter xii, *On the Brahmacārin*, (10 sūtras: *Sūtra Spoken to the Mānavaśuka*, etc.); Chapter xiii, *On the Mūlanirdeśa* (10 sūtras: *On the Description of the Six Dhātus*, etc.); Chapter xiv, *On Thought* (10 sūtras: *On Thought*, etc.); and the first half of Chapter xv, *The Twin Chapter* (5 sūtras: *Sūtra spoken at the Horse Village*, etc.). The fifth recitation, entitled the *Later Recitation*, covers three and a half chapters, including 36 sūtras. They are: the second half of Chapter xv, the *Twin Chapter* (5 sūtras: *On the Explanation of Wisdom*, etc.); Chapter xvi, the *Later Large Chapter* (10 sūtras: *Sūtra spoken to Kālodayin*, etc.); Chapter xvii, *On the Instruction to Vrddha* (?) *and others* (10 sūtras: *On the Keeping of the Fast-day*, etc.); and Chapter xviii, *On Example* (11 sūtras: *On the All-knowing Wisdom*, etc.).

The *Saṃyuktāgama*, according to the re-adjusted order that we have tried to make, should be divided into ten recitations arranged under four parts. Firstly, the *Part on the Five Skandhas of Attachment, the Six Āyatanas and the Causal Origination* comprises 6 recitations: (1) *On the Five Skandhas of Attachment*, (2) *On the Six Āyatanas*, (3) *On Causal Origination*, (4) *On Food*, (5) *On the Truth* and (6) *On the Dhātus*. Secondly, the *Part on the Sayings of the Buddha's Disciples and the Sayings of the Buddha Himself* comprises 2 recitations: (7) the *Sayings of the Disciples* and (8) the *Sayings of the Buddha*. Thirdly, the *Part on the Items Leading to Enlightenment* comprises 1 recitation: (9) *On the Objects of Meditation*. Fourthly, the *Part on the Collection of the Scriptures* comprises 1 recitation: (10) *On the Eight Masses*. This arrangement of the ten recitations is based on the discussion on the nine topics by the Buddha as related in the sūtras, i.e., the sentient beings, the receiving, the origination, the abiding, the purity and impurity, the differentiation, the preachers, the doctrine preached, and the assemblies (cp. my treatise, op. cit.). The sūtras included in the *Saṃyuktāgama* are all pieces of limited length. The extant Chinese version consists of 48 fascicules, altogether 1,359 sūtras (calculated according to the numbering of the *Taishō* edition). The text of the sūtras in the *Recitation on the Eight Masses* is intermingled with verses, while all the rest are in prose form and hence in the *Mūlasarvāstivādavinaya-kṣudraka-vastu* referred to as the *Chapter of Gāthās*. The *Pieh-i-tsa-a-han-ching* includes only the sūtras of two recitations, *On the Eight Masses* and *On the Sayings of the Buddha*.

As for the *Ekottarikāgama*, past tradition says that it comprises eight recitations under four parts (see Sêng-chao's Preface to the *Ch'ang-a-han-ching*, 長阿含經), but in the modern edition only the chapter *On Pasturing Cows* (under the numeral 'eleven') bears the remark assigning it to the *Recitation on Differentiation* of Part IV, while the divisions of the other recitations are unknown. The whole work consists of 472 sūtras in 52 chapters. They are: (1) the *Preliminary Chapter*; (2) Dharmas under the numeral 'One' (109 sūtras in 13 chapters, e.g., *Chapter on the Ten Intense Thoughts*, etc.); (3) Dharmas under the numeral 'Two' (65 sūtras in 6 chapters, e.g.,

Chapter on Existence and Non-Existence, etc.); (4) Dharmas under the numeral 'Three' (40 sūtras in 4 chapters, e.g., *Chapter on the Triple Gem*, etc.); (5) Dharmas under the numeral 'Four' (61 sūtras in 7 chapters, e.g., *Chapter on the Four Truths*, etc.); (6) Dharmas under the numeral 'Five' (47 sūtras in 5 chapters, e.g., *Chapter on the Collection of Good Qualities*, etc.); (7) Dharmas under the numeral 'Six' (22 sūtras in 2 chapters e.g., *Chapter on Six Degrees*, etc.); (8) Dharmas under the numeral 'Seven' (25 sūtras in 3 chapters, e.g., *Chapter on the Equal Law*, etc.); (9) Dharmas under the numeral 'Eight' (20 sūtras in 2 chapters, e.g., *Chapter on the Eight Difficulties*, etc.); (10) Dharmas under the numeral 'Nine' (18 sūtras in 2 chapters, e.g., *Chapter on the Dwellings of the Nine Sorts of Beings*, etc.); (11) Dharmas under the numeral 'Ten' (26 sūtras in 3 chapters, e.g., *Chapter on the Establishment of Prohibitions*, etc.); and (12) Dharmas under the numeral 'Eleven' (39 sūtras in 4 chapters, e.g., *Chapter on Pasturing Cows*, etc.).

It is needless to say that in respect of their composites as seen in the Chinese versions, none of the four āgamas agrees perfectly with its corresponding nikāya transmitted by the Theravādins in the south. Those that present the closest resemblance are perhaps the *Dīrghāgama* and the *Dīgha Nikāya*. The *Dīgha Nikāya* comprises 34 sūtras in 3 parts while the *Dīrghāgama* comprises 30 sūtras in 4 parts, the only difference being the one surplus part on the side of the *Dīrghāgama*; furthermore of the 30 sūtras included in the *Dīrghāgama*, 27 sūtras agree with the *Dīgha Nikāya*, while only 3 sūtras are wanting in the latter. The next pair is the *Saṃyuktāgama* and the *Saṃyutta Nikāya*. The latter consists of 5 parts, re-divided successively into 56 sections and 203 chapters, including about 2,889 sūtras in all. The *Saṃyuktāgama* consists of 10 recitations grouped under 4 parts, thus making the sub-divisions much simpler; but of the 1,359 sūtras included in it, 883 sūtras, that is more than two-thirds of its contents, have their corresponding counterparts in the *Saṃyutta Nikāya*. The third pair is the *Madhyamāgama* and the *Majjhima Nikāya*. The latter comprises 3 parts in 15 chapters and includes 152 sūtras. The *Madhyamāgama* consists of a larger number of divisions, 18 chapters grouped under 4 parts, and of its 222 sūtras only 96 agree with the *Majjhima Nikāya*, that is to say, less than one half of its contents. The pair that presents the greatest divergence is the *Ekottarikāgama* and the *Aṅguttara Nikāya*. The *Aṅguttara Nikāya* consists of eleven 'numerical' divisions of dharmas, including about 2,308 sūtras arranged under 171 chapters. In the *Ekottarikāgama*, the number of the 'numerical' divisions is the same, but the division of the chapters, 52 in number, is done in a briefer way; and of its 472 sūtras, only 135, that is, less than one third of its contents, agree with the *Aṅguttara Nikāya*. It is also needless to say that, even in those sūtras which agree with each other, there still exist variations in respect of the contents as well as the order of their arrangement (cp. C. Akanuma, *The Comparative Catalogue of Chinese Āgamas and Pāli Nikāyas*).

Practically all commentarial works in India on the four āgamas are now lost. Only one book on the *Ekottarikāgama* is found among the Chinese versions, that is, the *Puṇyavibhaṅga-śāstra* in 5 fascicules (*Taishō*, No. 1507) by an unknown translator of the Later Han dynasty (25–221 A.C.). But, this is not a complete version as it includes only the explanation of the portion from the *Preliminary Chapter* to the major half of the *Chapter on the Buddha's Disciples*. Another work entitled the *Explanation of the Extract from the Four Āgamas* (四阿鋡暮抄解, *Taishō*, No. 1505) in 2 fascicules, consists of a collection of the characteristics of the dharmas taught in the four āgamas, compiled under a triple division system for the convenience of recitation and memorisation. This work was composed by Vasubhadra of the Bhadrāyanīya school, commented upon by Saṅghasena and translated by Kumārabuddhi and others during the time of Yao-ch'in. A different version of this book entitled *San-fa-tu-lun* (三法度論 or *Tridharmaka-śāstra* : *Taishō*, No. 1506) was made by Saṅghadeva of the Eastern Tsin dynasty. Besides these, the *Saṃyuktāgamamātṛkā* which has been quoted in Hsüan-tsang's translation of the *Yogācārabhūmi* (fascs. 85–98), and the old explanation of the *Gāthās* of the *Saṃyuktāgama* which has been quoted in the same śāstra (fascs. 17–18), may be regarded as two relatively comprehensive commentaries on the *Saṃyuktāgama*. As for the *Chapter on the Collection of the Synonyms* (*paryāyas*), contained in the fascs. 83–4 of the same śāstra, it is in fact a work explaining the characteristics of the synonyms described in the *Saṃyuktāgama*.

LÜ CHÊNG.

ĀGAMA (2)*. The Sanskrit word *āgama* is phonetically transcribed in Japanese as *agon* (阿含). In the Chinese form, used by Hsüan-tsang (602–64 A. C.), it is phonetically rendered as *a-chi-mo* (阿笈摩).

Etymologically, the word *āgama* is derived from *ā+gam* (to come, to arrive at, etc.) and it means coming near, approach, origin, traditional doctrine and science, being especially employed to denote the text, scripture or canon. Therefore, in the broad sense this word means the sacred writings usually. In the Tibetan texts it is translated as *luṅ*, in this sense. In Buddhism the word *āgama* is usually applied to what are known as the four *āgama* or *agons*, but outside Buddhism the history of its usage is of long standing. It is not known

* The following article, sent by our Japanese committee, is published, because it supplements the information contained in the preceding article. It is being published in full, in spite of some repetitions, in order to preserve its sequence of thought.—G. P. M.

definitely when the Buddhistic sense of *āgama* first came into being. But it has been assumed that this usage is very old, since the translation of *Tsa-a-han-ching* (雜阿含經), Miscellaneous Āgama Sūtra of Taishō Tripiṭaka No. 101, made in the middle of the third century, outdates translations of the four āgama sūtras which were made from the end of the fourth to the beginning of the fifth century successively. And since the *A-han-chêng-hsing-ching* (阿含正行經), Āgama Orthodox Sūtra translated by An-shih-kao, appeared in the latter part of the second century, it can claim to be the oldest sūtra where the term *āgama* was first used. But, examples of the word *āgama* appearing in the sūtras are found in the *Ch'u-yao-ching* (*Udānavarga*) of the *Chung-a-han-ching* (中阿含經), Middle Āgama Sūtra and in the preface to the *Szŭ-a-han-mu-ch'ao* (四阿鋡暮抄解) four āgama sūtra which was translated in 382 A. C.

Now it is proper to review the translations and interpretations of *āgama* in China. According to the Vol. 85 of *Yogācāra-bhūmi* (瑜伽師地論) *āgama* is explained as follows: Since it has been handed down from a master to his disciple successively to this day, it is called *āgama*. The word is variously translated as legend, learning, instruction, doctrine, etc., and teachings that have been handed down, the application of the word being extended later to refer also to the sacred sūtras which embody these teachings. In Vol. 9 of the *Hua-yen-t'an-hsüan-chi* (華嚴探玄記), *āgama* is interpreted as "What has been taught and handed down by the various Buddhas in the three phases of the world". This can be called a broad interpretation of the connotation of the word. However, in the narrow sense, the use of *āgama* is restricted to mean the sacred sūtras belonging to the Hīnayāna form of Buddhism. This was due to an effort to insist on the authority of tradition, especially with the coming into being of the Mahāyāna form of Buddhism. Among other translations, mention may be made of such words as 'unparalleled doctrine' and 'non-significant doctrine'. The latter term is found in the preface to *Szŭ-a-han-mu-ch'ao* and is taken to mean that all the doctrines and teachings will revert in the end to nothing. In the *Chang-a-han-ching* (長阿含經) some *sūtra-āgama* is translated as 'dharma reversion', in that all the dharma reverts to it in the end. All these translations, however, do not convey the essential significance of *āgama*, but they are interpreted in such a manner as to endow the sacred sūtras with authority.

In Vol. I of the *Samantapāsādikā* (善見律毘婆沙, *Taishō* Tripiṭaka V, 677a), *āgama* is translated as 'receptacle' or 'collection'. This interpretation may have been based on the meaning of the word *nikāya*, which fact can be supported in that *nikāya* of southern Buddhism corresponds to *āgama* of northern Buddhism in the narrow sense and is given a phonetic transcription of 尼柯耶 (*nikāya*), being translated as 'school'.

The usage of Āgama in the various religions of India. The word *āgama* has been widely used in the various religions of India from the days of yore. In Jainism the sacred sūtras are called *āgama* and sometimes they are referred to as *siddhānta*. In this sense, *āgama* is taken to mean the authority of the sūtras and corresponds to *pramāṇa* in Indian philosophy. However, there seems to be some difference in the meaning of *āgama* between the two schools of Jainism, Digambara and Śvetāmbara. The Jains believe that the words of sacred sūtras are those in Ardhamāgadhī or the words of the ṛṣis or saints.

In Hinduism, there are the writings known as *āgama* which constitute one of the important materials for the understanding of the religion. Of course, it is a kind of sacred sūtra, *āgama* being employed in the sense of 'tradition' or 'heritage'. Of the schools of Hinduism, the Śaiva school of Kaśmīra calls the Śiva-sūtras *āgama*. According to this school, these sūtras have been issued after the creation of the world by Śiva and constitute the twenty-eight kinds of *āgama*. And each of these different kinds is accompanied by *upāgama* (supplementary *āgama*), numbering anywhere from 120 to 198 in all. The contents of the Śiva-sūtra consist of the adoration of Śiva and Śakti, having been influenced by the tantra literature which was formed with Śakti as its central theme and which was in vogue for some time. Therefore, it is natural that its contents should have much in common with those of tantra. It comprises four parts, knowledge, yoga, manners and practice, which are of especial importance in that they form the nucleus of the doctrine of the Śaiva school.

In Buddhism, the term *āgama* is applied to the four *āgamas*, that is, long or *Dīrgha Āgama* (長阿含), middle or *Madhyama Āgama* (中阿含), miscellaneous or *Saṃyukta Āgama* (雜阿含) and increasing or *Ekottara Āgama* (增一阿含). These four *āgamas* in Chinese correspond to the following Pali nikāyas, respectively: *Dīgha, Majjhima, Saṃyutta* and *Aṅguttara Nikāya.*

But besides these, the term *āgama* is employed like *pramāṇa* in the terminology of Indian philosophy. In this case, the word is used as an equivalent of *śabda* and means all the statements (*āpta-vākya*) of people which can be relied upon, and they serve as the ground for our efforts to attain right comprehension.

Āgama Sūtra. *Southern tradition and northern tradition.* There are extant the four āgama sūtras and their variants together with some Chinese versions. In the Theravāda of the southern tradition there exist what are known as the nikāyas or collections.

In the relationship between the southern and northern traditions each of the four āgamas has its counterpart, respectively known as *Dīgha Nikāya, Majjhima Nikāya, Saṃyutta Nikāya* and *Aṅguttara Nikāya.* The *Khuddaka Nikāya* of southern tradition is represented by the *Dvādaśāṅga-dharma-pravacana* and the *Navaṅga-śāsana.* They are listed by their titles only in the āgama sūtras of the various schools of Buddhism, while in the writings of the Mahīśāsaka, Dharmagupta and Mahāsāṅghika, etc., they seem to have been classified as 'miscellaneous sūtras'. Moreover, there is found evidence in the Sarvāstivāda to

indicate that these sūtras may have been in existence in that school, but none of the collected materials have come down to us. Some of them, however, are extant in such scattered forms as the *Dhammapada, Aṭṭhakavagga, Itivuttaka, Jātaka,* etc.

Next, the names and characteristics of the four āgamas should be dealth with. To begin with, the *Dīrgha* and *Madhyama Āgamas* are classified according to the length of the sūtras contained therein, and the *Ekottara Āgama* sūtras were compiled according to the number of topics contained in each division. Under these circumstances the three āgama sūtras came to be called as they are now, and they are the same in the southern and northern traditions. On the other hand, the *Miscellaneous Āgama Sūtras* of the northern tradition is translated as Saṃyutta in the southern tradition. The sūtras of the *Saṃyutta Nikāya* are classified under several headings, such as *Devatā Saṃyutta, Nidāna Saṃyutta, Khandha Saṃyutta, Magga Saṃyutta,* according to the nature of the sūtras. The miscellaneous section was very complex in the translated Chinese versions and in the order of compilation, as it lacks in precision. Moreover, each sūtra is very short in length and varies in contents, faithfully representing aspects of early Buddhism, with the natural consequence that the arrangement is not accurate. Out of this fact was born the name of the *Miscellaneous Āgama Sūtra*. But sometimes this collection is referred to as *Saṃyukta* in the sacred writings of the northern tradition and, therefore, it is conjectured that the names 'miscellaneous' and 'saṃyukta' sūtras came into being according to the difference of treatment of the same sūtras.

The term *Khuddaka* of the southern tradition may have been derived from the *Khuddakapāṭha* which constitutes the first book of the *Khuddaka Nikāya*.

The study of the āgama sūtras has made remarkable progress and expansion in later years. Till then, the āgama sūtras had been regarded merely as part of Hīnayāna sūtras and were apt to be ignored. However, having been given stimulus by various European scholars such as H. Oldenberg, T. W. Rhys-Davids and Otto Franke in recent times, the study regarding the Theravāda nikāyas of Ceylon has become quite active. Thus, recent researches into the āgama sūtras have reached a higher degree of progress by the comparative study of southern and northern traditions. In Japan this study has been much furthered by such leading scholars as M. Anesaki, B. Shiio, H. Ui and C. Akanuma. In our days, it is impossible for any scholar of the subject to refer to early Buddhism unless he pays due regard to the comparative study of southern and northern traditions.

We shall now take a glance at the origin of each āgama sūtra. The *Miscellaneous Āgama Sūtra* consists of fifty volumes which are made up of 1,362 sūtras in all, while the *Saṃyutta Nikāya* of the southern tradition corresponding to the former comprises five volumes, five parts, fifty-six saṃyuttas and 2,858 sūtras. Of all the āgama sūtras this *Miscellaneous Āgama Sūtra* preserves the outline of the dharma of early Buddhism in a most faithful manner, but there do exist some differences in the two traditions. As has been mentioned earlier this *Miscellaneous Āgama Sūtra* lacks proper classification; the sūtras are arranged without any system at all. Moreover, in the fifty-six saṃyuttas of the southern tradition certain sūtras are wanting such as the *Asaṅkhata Saṃyutta* and other sūtras which correspond to nine saṃyukta sūtras of the northern tradition, while there are only one or two sūtras corresponding to eight saṃyukta sūtras of the northern tradition.

On the other hand, there exist approximately 320 sūtras of the southern tradition which are not included in the northern saṃyukta sūtras. Of them, about 140 are included in the *Aṅguttara Nikāya*. Likewise, about thirty of them belong either to the *Majjhima Nikāya* or to the *Dīgha Nikāya* and about twenty to the *Khuddaka Nikāya*. The balance is found in the *Saṃyutta Nikāya* of the south only.

In spite of the fact that though about half of the *Saṃyutta Nikāya* sūtras are not found in the northern tradition, their corresponding sūtras are not contained in the *Miscellaneous Āgama* and the number of those included in other three, *Ekottara, Dīrgha* and *Madhyama Āgamas*, is only twenty. Thus, most of them correspond to the *Miscellaneous Āgama*, retaining their identity as the *Saṃyutta Nikāya* or the *Miscellaneous Āgama*.

There are sixty fascicules, eighteen classes and 222 sūtras in the *Madhyama Āgama* of the northern tradition and corresponding to these are three volumes (*paṇṇāsa*) comprising 152 suttas of the *Majjhima Nikāya* of the southern tradition. In the *Yüeh-ts'ang-chih-ching* (閱藏知津) the *Madhyama Āgama* is described as making clear the deepest of doctrines. And in it, the reflections on dharma begin the *Miscellaneous Āgama* and proceed to meditation on the Buddha. Of the 152 suttas of the *Majjhima Nikāya* ninety-eight correspond to those of the *Madhyama Āgama*, twenty-three correspond to those of the *Miscellaneous Āgama* and nine to those of the *Ekottara Āgama*. Also, in the northern tradition, there are twenty sūtras which have no counterparts. When examined from the standpoint of the *Madhyama Āgama* ninety-nine sūtras correspond to the *Majjhima Nikāya*, eighty sūtras correspond to the *Aṅguttara Nikāya*, ten sūtras correspond to the *Saṃyutta Nikāya* and nine sūtras to the *Dīgha Nikāya* and the *Khuddaka Nikāya* each. And there are fifteen madhyama sūtras which have no corresponding saṃyukta sūtras in the northern tradition. Thus, in the *Madhyama Āgama* the number of sūtras corresponding to the *Majjhima Nikāya* far exceeds those of the other three *Nikāyas*. The *Dīrgha Āgama* of the northern tradition consists of twenty-two fascicules, four divisions and thirty sūtras and corresponding to it are three volumes, three divisions and thirty-four suttas of the *Dīgha Nikāya* of the south. As far as the number is concerned, these two match best of all the nikāyas and āgamas. Thus, twenty-seven sūtras of the *Dīrgha Āgama* correspond to twenty-eight suttas of the *Dīgha Nikāya* and the remaining three sūtras

of the *Dīrgha Āgama* lack corresponding suttas in the southern tradition. At the same time, two suttas of the *Dīgha Nikāya* have no corresponding sūtras in the north. One sūtra is known only by name. Of the remaining three suttas of the *Dīgha Nikāya* two correspond to those of the *Madhyama Āgama* and one to that of the *Miscellaneous Āgama*. Here, contrary to the previous cases, it is found that the *Dīrgha Āgama* corresponds to the *Dīgha Nikāya* only and in the latter are mixed some external elements coming from other than those of the *Dīrgha Āgama*.

In regard to the name *Dīrgha Āgama*, the *Yüeh-ts'ang-chih-ching* explains, " *Dīrgha Āgama* destroys the wicked ", and it is said that the *Dīrgha Āgama* sūtras have been compiled for the purpose of propagating Buddhism.

In this connection, of the three vaggas of the *Dīgha Nikāya* the first is for propagating Buddhism, the second is for meditation on the Buddha and the third is compiled for the organisation of the dharma. Against these, the *Dīrgha Āgama* of the north places the first vagga at the end of the others, the order being the second, third and first. And in the second vagga, five sūtras, such as *Mahāpadāna Sutta* (*D.* No. 14), *Mahāparinibbāna Sutta* (*D.* No. 16), etc., which agree in their subject-matter, are grouped together. This regrouping of sūtras in the *Dīrgha Āgama* can be attributed to efforts to extol the Buddha. In comparison with the *Dīgha Nikāya* the *Dīrgha Āgama* has a greater tendency to idolise the Buddha.

Fifty-one fascicules, fifty-two vaggas and 472 sūtras make up the *Ekottara Āgama*. These together with their counterparts in the *Aṅguttara Nikāya* of five volumes, 11 collections (*nipāta*) and 2,204 suttas, carry within them the newest ideas of all four āgamas. Of 472 sūtras of the *Ekottara Āgama* some 150 have their saṃyukta sūtras in the *Aṅguttara Nikāya*, and the remaining 180 are not to be found in the southern tradition. Also, there are about ninety sūtras in all which correspond to those of the *Saṃyutta Nikāya* and the *Majjhima Nikāya*: and a further fifty sūtras correspond to the *Khuddaka Nikāya* and others. Of these fifty sūtras, about twenty correspond to those found in the nikāya commentaries written by Buddhaghosa. Of 2,204 suttas of the *Aṅguttara Nikāya* about 1,800 are not found in the north, and those which correspond to the two āgamas of miscellaneous and middle-length sūtras amount to 180 in all. As the *Aṅguttara Nikāya* of the southern tradition is of a more argumentative character when compared with other nikāyas, the influence exercised on it by other nikāyas can be said to be small. However, the *Ekottara Āgama* of the northern tradition has a wide range of thoughts and it has made remarkable progress especially in its views on the Buddha. It is, therefore, rich in Mahāyānistic colour.

Next a brief reference should be made to the 'Twelve Texts' which has been regarded as part of the *Miscellaneous Sūtras* in the northern tradition. Though this text has not been preserved in a perfect form to the present day, we are able to infer about it from the *Khuddaka Nikāya* of the south. The 'Twelve Texts' and the *Khuddaka Nikāya* as well are based upon the *Navaṅga Sūtra*. The 'Twelve Texts' was compiled from the *Navaṅga Sūtra* with the addition of three parts. In like manner, the *Khuddaka Nikāya* was compiled after the *Navaṅga Sūtra* had been reduced to five parts, which in turn was regrouped to form seven parts and to them were further added eight parts, amounting to fifteen parts in all.

When the *Suttapiṭaka* was compiled by the southern school, this 'Twelve Texts' was classified as one of the *Miscellaneous Sūtras* and thereby omitted from *Suttapiṭaka* which is the usual repository of āgama sūtras. On the other hand, in the southern school it was included within the āgama as a part of the *Pañca Nikāya* and for this reason it has remained as the *Khuddaka Nikāya* (fifteen parts text) in the southern tradition to this day. Of these fifteen parts, the *Suttanipāta*, the *Dhammapada* and the *Theragāthā* and *Therīgāthā*, belonging to the original *Navaṅga*, contain some suttas which form a much older stratum than the four nikāyas themselves. In Burma, these fifteen have been made to form nineteen parts with the addition of four more texts, such as the *Milinda-pañha*, etc. And in Siam, these fifteen are reduced to seven.

The emergence of āgama sūtras as the *Suttapiṭaka* is generally believed to have taken place some time in the second century B.C., but they were committed to writing 100 years later than this date, in the southern school; it was done in the reign of Vaṭṭagāmiṇi of Ceylon (*Mhv.* xxxiii, 100 f.). In the northern school it was much later.

According to numerous legends, soon after the death of the Śākyamuni, Mahākāśyapa became the leader of the Saṅgha and the first *saṅgīti* was carried out under his supervision. The two piṭakas of monastic discipline (Vinaya) and the sūtras were recited by such monks as Upāli, Ānanda and others. At the *saṅgīti* which took place in the reign of emperor Asoka, differences were observed in the interpretations of the teachings, thus giving rise to various schools. Each of these different schools is said to have recited its own āgama sūtras. As for the *Suttapiṭaka*, though the sūtras were recited by the custodians of sūtras, the time was yet to come much later when a piṭaka by the name of *Suttapiṭaka* was to appear. The overall emergence of the tripiṭaka of monastic discipline, sūtra and doctrine took place at a much later date. In this connection, a moot point has been whether or not the nikāyas came to be compiled at the same time as the emergence of the tripiṭaka. If we examine this from the point of view of the contents, there are observed various stages, old and new, as it was compiled over a period of three hundred years after the death of the Śākyamuni. The contents were expanded after their emergence as the nikāyas.

Under the following section a glance is taken at the various āgama sūtras handed down in the schools of Buddhism. To begin with, attention is paid to a legend regarding the *Samaya-bheda-upacaraṇa-cakra* (*I-pu-tsung-lun-lun*) and a preface

to the sacred suttas of the *Dīgha Nikāya* where there is expounded a view of Buddhaghosa. According to these it is said, "After the first *saṅgīti*, the *Dīgha Nikāya* was handed down by a school of Ānanda, the *Majjhima Nikāya* by Sāriputta, the *Saṃyutta Nikāya* by Mahākassapa and the *Aṅguttara Nikāya* by Anuruddha, respecteivly." Also, according to other writings such as the *Abhidharmakośavyākhyā* and the *Mahāyānasaṅgraha* (*Shê-ta-ch'êng-lun*), it is recorded that the āgama sūtras which have been handed down by various schools are different from one another, and it is said that among some twenty schools of Hīnayāna there are only a few schools which have the āgama sūtras. Those which have the āgama sūtras are the Theravāda, Mahāsāṅghika, Dharmagupta, Mahīśāsaka, Sarvāstivāda, Vātsīputrīya, Kāsyapīya, of the main schools.

On the other hand, almost all the schools of the north have preserved at least some kind of āgama sūtras, and this fact gave rise to the four āgamas of the present day. Then, the next question to be posed will be to what schools can these āgamas be traced? A view found in the first volume of *Fa-hua-hsüan-tsan* (法華玄贊) that the four āgamas are the property of the Mahāsāṅghikas together with the *Vinaya-piṭaka*. is not taken seriously by present-day scholars. A reference found in the writing entitled *Chü-shê-lun-chi-ku* (俱舍論稽古) by Fa-ch'uang says that the two āgamas called 'middle' and 'miscellaneous' are the property of the Sarvāstivāda, the *Ekottara Āgama* that of the Mahāsāṅghikas, the *Dīrgha Āgama* of the Mahīśāsaka and a different version of the *Miscellaneous Āgama* belongs to the Kāśyapīyas.

The absence of trustworthy materials for determining the sources of the āgamas has been a well-known fact and since we have no choice but to infer them from the contents of the āgama sūtras, the above statement deserves our attention. At present, the general theory is that the two āgamas, called 'middle' and 'miscellaneous', are the property of the Sarvāstivāda or of a school similar to it in nature, and the *Ekottara Āgama* is that of schools belonging to the Mahāsāṅghika. As for the *Dīrgha Āgama*, however, the present view gives support to its origin from the Dharmaguptas.

The following table gives the number and origin of these āgama sūtras :

Translation of Āgama Sūtras. The southern form of Buddhism was brought to Ceylon through central India possibly by way of its western region, and its northern form went into China from the north-west of India along the mountain range of T'ien-shan and through the province of Ch'ing-hai or Chinese Turkistan by way of the western district.

The first translation of the āgama sūtras into Chinese was undertaken by a monk of the western district, An Shih-kao (circa 2nd cent. A. C.), and following this, all the four āgama sūtras were rendered into Chinese by such men as Chih-ch'ien, Chu-fa-hu, Saṅghadeva, Buddhayaśa and Guṇabhadra from the end of the 4th century to the beginning of the 5th century. At a later period, in the reign of the T'ang dynasty, individual translations of these sūtras were made by Hsüan-tsang (602–64 A. C.), I-tsing (635–713 A. C.) and others.

Though some fragmentary manuscripts of the āgama sūtras in Sanskrit have been discovered in the western district of China, they are only an infinitesimal part of the vast collection. Also, twenty-three sūtras in Tibetan are now extant, but they are only a small portion of what must have been a large compilation.

As for the nikāya texts of the southern tradition, they were published in romanised editions by the Pali Text Society of London from the end of the 19th century onward. New editions were recently published in Thailand, Burma and Ceylon, in Siamese, Burmese and Sinhalese scripts, respectively. Moreover, English translations have been made by western scholars, while Sinhalese translations have been made in Ceylon.

In Japan, the Chinese versions of the āgama sūtras had been in circulation in their original form and, compiled and published by the Publishing Society of Taishō as the Complete Collection of the Sūtras, there are the volumes which are devoted to āgama sūtras, the *Suttanipāta* and other relevant sūtras. In the beginning of the present era the above Chinese versions were rendered into Japanese and published by the Daitō Publishing Company. There is also the *Nan-den-daizō-kyō* (the great collection of sūtras of the southern tradition, 南傳大藏經) which is a Japanese translation of the five nikāya suttas of Pali.

Pali Nikāya		*Āgama in Chinese version*		*Origin*
Dīgha Nikāya	34 suttas	Dīrgha Āgama	22 parts; 30 sūtras	Dharmagupta
Majjhima Nikāya	152 suttas	Madhyama Āgama	60 parts; 222 sūtras	Sarvāstivāda
Saṃyutta Nikāya	56 saṃyuttas	Saṃyukta Āgama	50 parts	Sarvāstivāda
Aṅguttara Nikāya	11 nipātas	Ekottara Āgama	51 parts	Mahāsāṅghika

SHŌZEN KUMOI.

ĀGAMA-CAKRAVARTI. The Sinhalese work *Nikāya Saṅgrahaya* names him as one of several lay scholars, in a list of eminent Buddhist men of learning who lived in Ceylon from the time of Buddhaghosa to that of king Paṇḍita Parākramabāhu (13th cent. A. C.). They are collectively described as having "produced religious poems, explanatory translations and glossaries and numerous doctrinal treatises. On the foundation of those works succeeding writers have produced religious expositions in accordance with the needs of their times, and made the scriptures of the religion of the Buddha resplendent". (See the English trsl. by C. M. Fernando, revised by W. F. Gunawardhana, Colombo, Govt. Press, 1908, p. 24.)

ĀGAMAKṢUDRAKA-VYĀKHYĀNA, a Sanskrit text which is extant in its Tibetan translation, the *Luṅ-phran tshegs-kyi rnam-par gśad-pa,* in the Mdo-ḥgrel (sūtra commentary) section of the Tengyur. Its authors are Tshul-khrims bskyaṅs (Śīlapālita) and Chos-mchog (Dharmottara). Śrī Buddhaśānti of India and Dge-baḥi blo-gros (Śubhamati) translated the work into Tibetan. But in *TM.* only the former is given as the author (*Cordier,* III, p. 405, No. 1; *TM.* 4115).

ĀGAMANAGAMANĀ, a gandharva-maiden who was present with innumerable others in Jetavana to listen to the Buddha (*Kvyū.* 5.15).

ĀGAMAVASTU-VṚTTI, of Ācārya Sautrāntika Kalyāṇamitra, is extant in Tibetan; the better known title is *Vinayavastu-ṭīkā.* See VINAYA-VASTU-ṬĪKĀ.

AGA MONASTERY (Aginski datsan), the largest Buddhist monastery of the Transbaikal region, built in 1811–16 in the lower reaches of the river Aga. It is known as a publishing centre, and for its philosophic schools. The first 'abbot' of the monastery was Pagbaev Rigdel. In the middle of the last century, about 1850–60, the 'abbot', Galsang Jimba Tuguldurov, founded a philosophic school (*chos-ra* or *mtshan-ñid*), for which a special temple was erected known as *tsanyidīn süme* or *coirin dugan.* In 1880 the Tantric faculty or Jyud-pa was founded, and in 1894 a medical school (*sman-grwa*). In the beginning of the 20th century a *Kālacakra* college was established.

In the present century the Aga monastery comprised one large main temple, or *tshogs-chen,* and six other temples, or *'du-khaṅ.* Four of these temples were especially built for the philosophic, tantric, medical and kālacakra studies. The others were especially built to house the gigantic brass image of Maitreya (80 cubits in height), and for the temple of the Buddha Amitābha, with two models of the Sukhāvatī and Tuṣita heavens.

About 1860 a printing press was established at the monastery for the printing, xylographically, of Buddhist texts in Tibetan and Mongolian. This monastery became the centre of publishing activity in Buryatiya. The printing press published books in Tibetan on philosophy, tantric systems, astrology and medical texts, Tibetan-Mongolian dictionaries and a certain number of popular Buddhist texts in Mongolian. The catalogue of the printing press lists the following works among many others: treatises on logic by Dignāga; works on Mādhyamika philosophy by Candrakīrti; *Abhidharma-kośa* by Vasubandhu; works of Asaṅga on the Vijñānavāda; *Legs-bśad gser-'phreṅ* and *Lam-rim chen-mo* by Tsong-kha-pa; *Siddhānta* of Jam-dbyaṅs bzed-pa; works on philosophy by the same author; collection of works by Ñag-dbaṅ bkra-śis; collection of 39 works on philosophy, astrology and ritual by Dkon-mchog bstan-paḥi sgron-me (Tu-kwan ge-gen); collection of works of the fifth Dalai Lama; collection of works by Don-yod mkhas-grub; the rite of Śrī Cakrasaṃvara according to the method of the Mahāsiddha Lu-yi-pa.

The monastery's printing press published also a number of Buddhist texts in Mongolian such as: the Buddha's answers to Subhūti; Yekhe Onol (the great understanding); the Wise and the Idiot (Mdzaṅs-blun); the biography of Tsong-kha-pa; Drops of Amṛta; Subhāṣita. It also published original works by Buriyat scholar-monks. This literature was published both in Tibetan and Mongolian languages. The printing press of the monastery also published the following dictionaries: Mongolian-Tibetan dictionary by Rinchen Nomtoev and Tibetan-Mongolian dictionary by Galsang-Jimba Tuguldurov.

Several members of the monastery are known to have composed original works in Tibetan: a work on the kālacakra system by Dandzan Zharbaev; a text-book of the philosophic school of the monastery, by Sodnom Jamtsho who was a student of the philosophic school of the Aga monastery and received the degree of Rab-'byams-pa in the Mongolian monastery of Badgar: Mtshod-bya-don-gyi dge-'dun ñi-śu 'i rnam-bzag; the story of twenty lamas who followed the path of wisdom, which was used as a text-book in the Prajñāpāramitā class; a text-book on the Mādhyamika philosophy; work on the notion of *Śūnyatā* in the philosophy of Mādhyamika and Yogācāra.

In 1867 'abbot' Tuguldurov wrote in Tibetan a book on astronomy and founded an astronomical school.

Among the authors and translators who wrote in Mongolian, the first place belongs to 'abbot' Lubsang Dorje Danjinov. He became known as a translator and editor of popular books in Buriyat. He edited the biographies of well-known Buddhist leaders in Mongolia, popular books on ethics, Mongolian primers, grammars, collections of Jātaka stories, the songs of Milaraspa, and was one of the authors of a series of books on ethics published in 1892.

Well known as a translator and editor was Dilgirov, especially known as a translator of philosophic text-books, such as the *Chu'i bstan-bcos,* the *Sing-gi bstan-bcos,* and a commentary of the *Lam-rim chen-mo.*

The present 'abbot' of the monastery is Gomboev Jambal Dorje.

Most of the literature published by the printing press of the Aga monastery can be found in the library of the Oriental Institute of the Academy of Sciences of the USSR., the Buriyat Research Institute of the Siberian Branch of the Academy of Sciences of the USSR., and the Museum in Ulan-ude, capital of the Buriyat Republic of the USSR.

B. DANDARON.

ĀGANTUKA, a banker of Sāvatthi who gained great wealth as a result of an offering of alms he made to a paccekabuddha in a previous birth. However, he made no use of his wealth whatsoever, as he had repented of his offering afterwards.

His story is contained in the *Mayhaka Jātaka* (*J.* III, No. 390). It is said that Āgantuka, in spite of his riches, neither spent on himself nor on others, lived very frugally and went about in a broken-down old chariot, refusing any form of luxury. After death he was born in Roruva Niraya. He died without an heir and the king's men took seven days and seven nights to remove his wealth to the palace.

On being questioned by king Pasenadi as to the cause of this miser's wealth and his inability to enjoy it, the Buddha narrated his previous birth. Āgantuka had then been born a merchant in Bārāṇasī. On his way to the king's court he saw the paccekabuddha Tagarasikhi begging for alms and he ordered his own meal to be offered to him. But, on his way back, seeing the choice food that was his meal in the paccekabuddha's alms-bowl, he regretted that he had not distributed it among his servants who would have done some hard work in return. The Buddha explained that as a result of his offering to the paccekabuddha, Āgantuka gained much wealth, but, because he could not make his after-thought pure, he was unable to enjoy it. The Buddha added that for a perfect gift, the three thoughts—before giving, while giving and after giving—should be pure.

Asked for the reason why Āgantuka had no son, the Buddha traced the cause to another previous birth. Āgantuka had been born as younger brother to the bodhisatta in a merchant's family. The bodhisatta led a charitable life and, seeing the futility of worldly pleasures, went to the Himalayas to lead the life of an ascetic, leaving everything including his wife and young son, to his younger brother. The latter, overcome with greed for his brother's wealth, drowned the son in the river one day, so that he could become the sole heir. By reason of this misdeed Āgantuka had no son or daughter in any of the subsequent births up to that time. (It is not clear whether Āgantuka was the name of the banker, or whether it is used as a common noun meaning 'stranger', as the editors of the *Jātaka* and the translation have interpreted it.)

L. R. G.

ĀGANTUKA SUTTA, the eleventh sutta of the sixth chapter called *Balakaraṇīya* of the *Magga Saṃyutta* of the *Saṃyutta Nikāya* (V, pp. 51–2). While residing at Sāvatthi the Buddha drew the attention of the monks to a guest house (*āgantukāgāra*), where people of the four castes used to come from all the four quarters. A guest house, according to the commentary (*SA.* III, p. 136), is built by people desirous of merit in the centre of a town and there even kings and ministers can take residence. Even so, says the Buddha, is a monk who cultivates the factors of the Noble Eightfold Path, each based on seclusion (*viveka*), on dispassion (*virāga*), on cessation (*nirodha*) and ending in self-surrender (*vossagga-pariṇāmi*). For he, through insight-knowledge, comprehends the five groups of clinging which should be comprehended; abandons ignorance and craving for becoming which should be abandoned; realises knowledge and deliverance which should be realised; and cultivates calm and insight which should be cultivated.

AGĀRA, house or hut, generally implying the home-life of the layman as opposed to *anagāra*, the homeless life of the recluse (*samaṇa*). Buddhism, as a path of deliverance, was primarily meant for the person who was ready to renounce the comforts of home life and adopt the retired life of the monk. Prince Siddhattha, who wanted to find a way of deliverance, renounced home life, and this is what the *Pabbajjā Sutta* (*Sn. v.* 406) says of his renunciation. "Full of impediments is the homelife (*gharāvāsa*), it is the sphere of dust. But like the open air is going-forth (*pabbajjā*). Seeing this he renounced the world." In his first discourse (*S.* V, 420) the Buddha laid down the path of the homeless monk, but he said nothing of the conduct of laymen. From the beginning of the Buddha's ministry it was generally accepted that a person who wanted to practise fully the Buddha's instructions should adopt the homeless life. Hence all those who realised the importance of putting an end to worldly suffering, here and now, followed the foot-steps of the Master. No doubt they were convinced, as was Raṭṭhapāla, that it was "not easy for one living in a house to practise the higher life (*brahmacariyā*), completely fulfilled, completely pure, and polished like a conch-shell" (*M.* I, 55). Living in a house, for them, was a life given to the pleasures of the senses and to be bound by various duties and obligations, all obstructions on the path to deliverance. The unsatisfactory nature of the comforts of home life are described in dark terms to induce the laymen to adopt the homeless life which is more conducive to the winning of permanent bliss. "Folk grieve with thoughts of 'mine'. But impermanent are all possessions and they all do pass away. See this and do not live the home life" (*Sn. v.* 805). The outbursts of Subhā (*Thīg. vv.* 342–59) and Raṭṭhapāla (*M.* II, 64 f. & 72 ff.) against the comforts of household life with which their relatives tried to lure them back to the lower life (*hīna*)—a term often used to describe home life—are couched in equally strong terms. On the other hand, the advantages of leading the life of a monk are painted in glowing colours (*D.* I, 60 ff.; *Miln.* 243 f.). "Shed the

layman's garb, as the pārichatta-tree its leaves in autumn. Going forth in the yellow robes, fare lonely as the rhinoceros" (*Sn. v.* 64). By giving up craving and sensual pleasures, by living a homeless life, one becomes a real brāhman (ibid. 640).

With its greater weight on the side of renunciation and homeless life which has led some to brand it as a purely monastic religion, early Buddhism has not left the laity entirely out of its scheme of salvation. Though placed amidst great disadvantages, the laity is not denied the benefits of a religious life or the possibility of spiritual progress. The brāhmanic doctrine that "the right path (*dharmaṃ kuśalaṃ*) is within the reach only of householders (*gahaṭṭha*) is definitely rejected. But the Buddha did not go to the other extreme to declare that it can be achieved only by a recluse. "I discriminate on this point, O brāhman youth, I do not give a one sided answer," was his reply to Subha, the son of Todeyya, who questioned him on this point. "Whether he be a monk or layman, if he conducts himself properly (*sammā paṭipanna*) then he is capable of realising the Right Path" (*M.* II, 197 f.; *A.* I, 69). Nevertheless, it is reiterated that the qualities conducive to spiritual upliftment are to be found more in monks than in the laity (*M.* II, 205).

An Order of homeless monks with their full time devoted to the practice of religious duties cannot possibly exist without the material support of the laity. As such, from the very inception of the Order of monks there also appeared a group of lay devotees who considered it their duty to provide the material needs of the monks. Their number and influence increased with time and they played an important rôle during the course of the history of Buddhism. Even some of the disciplinary rules for the monks have been formulated at their request (*Vin.* IV, 21, 32 f., 70, 76) and special rules also have been formed for the punishment of those monks whose actions were detrimental to the interests of the laity (ibid. III, 211, 148 f., 183 ff.). The laity—of either sex—formed two of the four divisions in the community of the Buddha's disciples. The achievements expected of them and the rôle they were expected to play in the religion were as important as, if not equal to, those of the monks and nuns. "I shall not pass away, O Evil One, until my lay disciples of either sex become true followers, wise and well-trained, confident and learned, having reached the *dhamma* righteously, correct in life, living in full conformity with the law (*dhamma*), until they themselves having learned the doctrine shall be able to talk to others of it, preach it, make it known, establish it, analyse it and make it clear, until they can refute by themselves the criticisms of others, and spread abroad the wonderful doctrine" (*D.* II, 105).

The number of discourses preached for the purpose of instructing the laity is considerable. Hedged in as he is on all sides by the numerous duties of society, a layman cannot be expected to devote his full time to the practice of religion. Hence, only the barest minimum of religious duties, essential for his spiritual progress and the welfare of the society, are prescribed for him. But, a layman has the full liberty, if he so desires, to follow an advanced course in religious duties. By a simple declaration of faith in the Buddha, the Dhamma (Doctrine) and the Saṅgha (Order) a layman or a laywoman is admitted into the fold of the Buddha's lay devotees (*upāsaka* : *S.* V, 395). Thenceforth he is expected to keep regularly the five precepts (*pañca-sīla*: s. v. SĪLA) called the 'regular morality' (*nicca-sīla* : *Vism.* 13) of the lay devotees. Further, on *uposatha* days, a lay devotee may observe the eight precepts (*aṭṭhaṅga-sīla*), the benefits of which are said to be many and which may also serve as a training for a more advanced spiritual life in the future, for in doing so the lay devotee emulates the life of an arahant (*A.* IV, 255 ff.). One of the chief religious duties of a lay devotee is to supply the material needs of the Saṅgha. "The noble disciple who serves the Order with robes (*cīvara*), food (*piṇḍapāta*), lodgings (*senāsana*) and medicine (*gilānapaccaya-bhesajja*) has entered upon the right path of the laity" (ibid. II, 65). The four achievements (*sampadā*) that would ensure to every lay devotee, man and woman, happiness in the next life are *saddhā* or faith in the enlightenment and the virtues of the Buddha, *sīla* or the strict observance of the five precepts, *cāga* or liberality and the absence of stinginess, and *paññā* or penetrative wisdom into the rise and fall of phenomena (ibid. IV, 270 f., 284 f.). *Suta* or learnedness is also sometimes added to these as a fifth (ibid. III, 53). In the *Āḷavaka Sutta* truth (*sacca*), *dhamma*, courage (*dhiti*) and liberality (*cāga*) are said to be the four qualities that would bring happiness in the next life for a faithful lay devotee (*Sn. v.* 188). Among the suttas mainly devoted to the instructions of laymen are the *Mahāmaṅgala*, *Parābhava*, *Vasala* and the *Sigālovāda Suttas*, which bring out in detail the things to be done or given up by the laity. Besides these ethical qualities that should be cultivated by every lay Buddhist there are no other purificatory ceremonies or rituals prescribed for him. In fact, the layman who believes in curious rituals and ceremonies (*kotuhala-maṅgalika*) and fixes his faith in lucky omens but not in deeds (*maṅgalaṃ pacceti no kammaṃ*) is called the outcaste among lay-devotees (*A.* III, 206). As the *Mahāmaṅgala Sutta* clearly shows, luck should be sought in good qualities within but not in external symbols. Lack of faith, lack of morals and seeking for gift-worthy persons outside the Order are three other conditions that would make a lay devotee an outcaste. However, the last one does not in the least prohibit a Buddhist lay devotee from bestowing gifts on outsiders. The Buddha was emphatic in his denial of any such view (ibid. I, 161) and he sometimes even advised his new converts to feed the monks of their old faiths (*M.* I, 379; *Vin.* I, 236 f.).

Spiritual wealth alone—sometimes described as sevenfold, viz., faith (*saddhā*), morality (*sīla*), shame (*hiri*), fear (*ottappa*), learning (*suta*), liberality (*cāga*) and wisdom (*paññā* : *A.* IV, 5 ff.)—however valuable and far superior to material wealth it may be, would not be sufficient for a successful home life. Material wealth, too, has a great contribution to make towards the happiness of the layman. Hence, the two qualities, the ability to acquire wealth and the ability to know what is good (*kusala*) and bad (*akusala*), etc., are compared to the two eyes of a

man (ibid. I, 128 f.). It is the layman who possesses both these qualities that can make his life happy. The happiness of a householder, it is said, consists in the possession of wealth (*atthisukha*), its enjoyment (*bhogasukha*), freedom from debts (*ananasukha*) and freedom from blame (*anavajjasukha* : ibid. II, 69 f.). Lack of stored treasure is one of the causes of the decline of a family (*S*. IV, 324). Wealth could be acquired only through great toil and firm effort (*Sn. v.* 187), while sloth and laziness resulting from immoral practices lead to its diminution (*Vin.* I, 227 f.). The *Sigālovāda Sutta* enumerates six doors for the loss of wealth (s.v. APĀYA-MUKHA), and the householder is advised to avoid them. There are four achievements (*sampadā*) that would ensure a happy life in this world for a layman, viz., deftness and tireless effort in whatever occupation one is engaged, with the ability to carry it out efficiently (*utthāna-sampadā*), the ability to guard one's wealth acquired righteously (*ārakkha-sampadā*), association with people, both young and old, endowed with faith, morality, liberality and wisdom (*kalyāna-mittatā*) and an even life to suit one's income (*samajīvatā* : *A*. IV, 281 ff.). In the acquisition of wealth a layman should avoid all evil means and employ only righteous methods (s.v. ĀJĪVA).

The layman who acquires wealth righteously should be wise in using it. Both stinginess and extravagance are looked down upon as evil qualities leading to one's downfall (*Sn. vv.* 102, 106). The householder is instructed to divide his earnings into four parts. With one he should meet his daily needs; two parts should be invested in business and the fourth should be set apart for a time of need (*D*. III, 188). He may draw from all the four parts for purposes of charity. Besides maintaining his own self he has to perform numerous other, social duties. The householder who uses his wealth wisely uses it in the performance of these duties towards one's own self and others. The *Sigālovāda Sutta* gives in full detail the duties of a householder towards his parents, wife and children, teachers, friends, monks, brāhmans, servants and workers; and also the duties they have to perform in turn towards their benefactor. In other places, it is shown that the householder also has his duties by his relatives and guests, rites to be performed towards gods and departed ones (*pubba-peta*) and the duty towards the king or the state (*A*. II, 67 f.). The king becomes entitled to the service of his subjects only if he performs the duties he owes to his subjects (*D*. III, 92 f. ; I, 135 f.). Thus, each person by performing the duties of his station plays his part in preserving harmony in society. However important may be the duties one has to perform, the householder is warned not to commit any evil deeds in their performance, for there are enough righteous measures that one can employ in their execution (*M*. II, 188). All these may be summed up with the description of the ideal layman as given in the *Aṅguttara Nikāya* (V, 181 f.), "Now, O householder, of these ten enjoyers of sense-pleasures, he who seeks wealth lawfully and not arbitrarily, and in doing so makes himself happy and cheerful, also shares his wealth with others and further does meritorious work therewith and yet makes use of his wealth without greed and longing, without infatuation, heedful of the danger and alive to his own deliverance : of these ten he is the best and chief, topmost highest and supreme."

Spiritual wealth as described above should be the common possession of both men and women. Apart from these there are other conditions that would ensure a happy life for a woman in this world. Beauty, wealth, relatives, sons and virtue are said to be her five powers. But virtue is the most important of them all and its absence would make all the others worthless (*S*. IV, 247). A woman should get rid of stinginess, jealousy, sensuality and lust which would easily pave her way to hell (*A*. I, 281). She should not allow gains, flattery and favours to assail her (*S*. II, 236). A married woman must possess four qualities that can bring her happiness in life, viz., she should be able to carry out her husband's household duties with efficiency; she must be obedient and lovely in her ways to her husband; she must be able to manage her husband's servants and workers and also to see to their welfare ; and she should guard with care her husband's wealth (*A*. IV, 269 f.). In addition, she is also expected to respect her husband's parents, elders and also the recluses and brāhmans respected by him (ibid. 265). The two characters held up as examples to be followed by Buddhist laywomen are those of Khujjuttarā and Velukaṇṭakiyā Nandamātā. Every mother (it is declared) who is a true believer, if she loves her only daughter, should advise her to emulate the lives of these two noble lay disciples of the Buddha (*S*. II, 236). A woman with virtue and wisdom, reverencing her mother-in-law and faithful to her husband may, in the Buddha's opinion, even prove better than a man, for her son may do mighty things and even rule great realms. A son of a noble wife can be his country's guide (ibid. I, 86). A woman with faith, morality, liberality and wisdom, and a man with the same qualities, united in wedlock would prove the happiest pair. They will have all the blessings in this life and will be united in the lives to come (*A*. II, 57 f.). Probably the best example of a happily married couple found in the Pali works is that of Nakulapitā and Nakulamātā. In the presence of the Buddha they declared their faith in each other and sought the Buddha's advice in order to be united in the next life. He recommended to them the cultivation of the four qualities mentioned earlier (ibid. 61 ff.).

The ideal that was constantly held before the laity was a happy life after death in one of the many heavens. There are numerous instances in the Pali texts and commentaries of noble lay devotees who reaped in one or other heaven the harvest of the seeds of good deeds sown while on earth. But, early Buddhism never tried to limit the aspirations of the lay devotee to heavenly bliss which the Buddha did not regard as of lasting value. It is true that the discourses to the laity usually started with a talk on liberality (*dāna*), morality (*sīla*) and heaven (*sagga* : *D*. I, 148), because they were the subjects that appealed most to ordinary laymen. But the talk was continued on the disadvantages of enjoying sense-pleasures, the advantages of renunciation and finally on the Four Noble Truths.

The Buddha and his disciples, no doubt, were cautious in introducing abstruse and deep doctrines to the uninstructed laity (*M.* III, 261). But, it should not be taken as pointing to any esoteric element in early Buddhism. The teachings of the Buddha were quite open to both the laity and monks and even to those outside the fold of Buddhism (*S.* IV, 315 f.). The Buddha on many occasions discussed the deeper points in his doctrines with the laity and even advised them to learn these. A lay devotee, he once said, should not be satisfied with merely providing the monks with the four requisites. He should from time to time enter and abide in the joy (*pīti*) that comes from seclusion (*A.* III, 207). Dhammadinna was advised to study the discourses dealing with the void (*suñña: S.* V, 407) and there were lay disciples who cultivated the four bases of mindfulness (*satipaṭṭhāna: M.* I, 340) called the one path (*ekāyana-magga*) to purity. Such being the case, there were lay disciples who were very much advanced spiritually and had even won the Fruits of the Path. The majority of these naturally were the Stream-winners (*sotāpannā*), free from rebirth in woeful states and destined for Nibbāna. Unwavering loyalty to the Buddha, the Dhamma and the Saṅgha, and the possession of unbroken noble virtues are the qualities that would bring a person to this stage (*S.* V, 344). They were also the very qualities that the Buddha often advised his lay disciples to cultivate (ibid. 308, 407). There were also laymen who had reached the stages of Once-returner (*sakadāgāmī*) and Non-returner (*anāgāmī*). Ugga was an *anāgāmin* who practised the higher life (*brahmacariya*), but yet remained a layman. He is said to have had eight wonderful qualities. He shared his wealth impartially with the virtuous and he gave his wives the freedom to remain with him or to go back to their parents. He was so learned that he sometimes preached even to the monks (*A.* IV, 206). Velukaṇṭakiyā Nandamātā also was an *anāgāmin* who could attain the various states of mental absorption (*jhāna*) at will (ibid. 66 f.). The courage and confidence in her own self shown by Nakulamātā, when she consoled her dying husband, is a clear indication of her high spiritual attainments (ibid. III, 295 ff.).

The fact that (according to early Buddhism) a lay devotee can realise the first three stages of the Path was never doubted. But the same cannot be said of the fourth and the final stage, i.e., arahantship. Whether a lay devotee can realise arahantship has been a point of controversy from the earliest times. The question is raised both in the *Kathāvatthu* (267) and the *Milindapañha* (242 f.). The answer of the Theravādins (according to the *Kathāvatthu*) is in the negative, while the Uttarāpathakas (one of the early sects of Buddhism) answer in the affirmative. The *Milindapañha* admits that a layman can realise arahantship but states that the life of a monk is more conducive to its realisation (loc. cit.). The consensus of opinion in the nikāyas, too, is that a layman can realise arahantship. There are examples of persons, e.g., Yasa (*Vin.* I, 17) and Bāhiya (*Ud.* 8), who attained emancipation while they were still laymen. We also have the instance of Suddhodana, the father of the Buddha, who died as a lay arahant (*ThīgA.* 141). A discreet lay devotee can help another discreet lay devotee who is ill by assisting him to develop his mind gradually until it reaches the cessation of individuality (*sakkāyanirodha*), which is identical with the extinction of the intoxicants (*āsavakkhaya*) or arahantship (*S.* V, 408 f.). Moreover, as already mentioned, it is clearly stated that a layman who conducts himself properly is capable of realising the Right Path. However, there is a statement in the *Majjhima Nikāya* that a layman who has not broken the layman's spiritual fetters (*gihī-saṃyojana*) cannot put an end to suffering at the dissolution of the body (*M.* I, 483). Probably, this statement has led some to conclude that a layman is incapable of realising arahantship. The conclusion of the *Kathāvatthu* (as stated above) may also be due to this. But, Buddhaghosa's explanation makes everything clear. According to him, the Theravādins identify a layman from the layman's spiritual fetters and not from layman's clothes (*gihīvyañjana : KvuA.* 73). Thus, whether it be a yellow-robed monk or a layman (in the ordinary sense of the term) in white clothes, if he has destroyed the fetters within, then he is the real monk. " A man, though he be clad in fine clothes, if he lives righteously, according to *dhamma*, if his mind be tranquillised and controlled, if he harms no living creature, then he is a real brāhman, a recluse (*samaṇa*) and a monk (*bhikkhu*)." (*Dhp. v.* 142.) No one should be judged by his outward guise, for there are many unrestrained ones who live in the garb of decent and well-conducted people (*S.* I, 79). The converse may be equally true.

Whatever may have been the position of the laity in early Buddhism the gap between them and the Saṅgha was a wide one. The laity, at least the majority of them, had to be content with the hope of final deliverance in a future life, while the members of the Saṅgha were pledged to try their best to attain arahantship in this very life. But, with the passage of time and the appearance of new schools such as the Mahāsaṅghikas and still later Mahāyāna, there was a tendency for the laity to be drawn closer to the Saṅgha. It was probably the Mahāsaṅghikas who first introduced the theory of *pāramitās* (perfections) which gave the monks as well as the laity an equal opportunity of aspiring to Buddhahood. The theory was taken up by the other schools and the Mahāyānists completely replaced the ideal of arhantship, which they called the Lower Vehicle (*Hīnayāna*), with the bodhisattva ideal or the Greater Vehicle (*Mahāyāna*). Both the monks and the laity were allowed to follow the latter, placing them almost on an equal footing. In the earliest Mahāyāna works no mention is made of lay bodhisattvas, but they do appear in later works. The *Śikṣāsamuccaya*, a work dealing with the duties and practices of a bodhisattva, enumerates some special ones, prescribed for lay bodhisattvas, taken mainly from the *Ugradatta-paripṛcchā*. Accordingly, a lay bodhisattva should have no attachment to material possessions and must be

able to part with them without regrets.[1] To be unmoved by wordly circumstances, to acquire wealth through righteous means, not to obstruct anyone from renouncing home life, to believe in the efficacy of the results of *karma*, to develop *bodhicitta* (q.v.) and to renounce one's own benefits for the sake of others, are among qualities expected of lay bodhisattvas. It is interesting to see that all these, except the last two, were also expected of all lay devotees, in early Buddhism. The life of Vimalakīrti is a good example of the height a lay bodhisattva can attain according to the tenets of Māhāyāna. He was a man of great virtue and wisdom. Though completely detached from material things, he still remained a layman and worked for the welfare of others. His wisdom was highly respected, and even such great theras as Śāriputra and Mahā Kāśyapa and such heavenly bodhisattvas as Mañjuśrī, it is said, were not his equals in this respect [2].

Even Mahāyāna in its earliest stages could not completely close the gap between the laity and the Saṅgha. A layman can aspire to Buddhahood, but yet he has to renounce home life at the end of the fourth stage (*bhūmi*) of bodhisattvahood[3]. The *Śikṣāsamuccaya* devotes a whole chapter to the praise of the virtues of forest life. The ideal of the rhinoceros was still in favour with them. "In the forest seek always solitude, leaving the delights of village and town. Be always like the solitary rhinoceros: soon you will win the boon of tranquillity" (*Śikṣ.* 195). Buddhahood, it is said, can never be obtained by a layman. "Never will he obtain the supreme wisdom (*anuttaraṃ agrabodhiṃ*), by living the detested life of a family-man, by enjoying the pleasures of the senses and hankering after wife and children" (ibid. 193). And again (loc. cit.), "There never was a Buddha aforetime, nor shall be in the future, nor is there now, who can attain the highest wisdom whilst he yet remain in household life." Yet some of the later Mahāyāna schools, especially those of China and Japan, could bring almost to a naught the gap that existed between the Saṅgha and the laity. In Kumārajīva's Chinese translation of the *Saddharmapuṇḍarīka* it is said that to live the home life, to speak secular words, to acquire wealth and to produce everything is in keeping with the Buddha's words [4]. This, however, does not agree with the extant Sanskrit versions of the sūtra (*Sdmp.* 3.315). The Chinese commentator of the *Śūraṅgama Sūtra*, Chang-shui Tzŭ-hsüan, interprets this statement as meaning that the home life agrees more with the Buddha's teachings than the homeless life. The Japanese author Musō goes a step further in his interpretation of the statement. The Buddha's truth (*tatva*) exists, according to him, only in controlling the world and producing everything [5]. Thus, in some Japanese sects, like the Shingon-shu, a person need not renounce home life to be initiated into the Path of Buddhahood, and one can hope to attain supreme wisdom and yet remain a layman.

C. Witanachchi.

ĀGĀRA SUTTA, the fourth *sutta* of the *Rahogata Vagga* in the *Saṃyutta Nikāya* (IV, 219).

It explains the arising of the three types of feeling—pleasant, painful and neutral. Just as various people from the four quarters come and take up residence in a guest-house (*āgantukāgāra*), even so diverse feelings arise in the body. What the sutta emphasises is that feelings are of diverse origin and that they are all characterised by impermanence.

AGĀRAVA SUTTA (1), the ninth sutta of the *Sekhabala Vagga* of the *Pañcaka Nipāta* of the *Aṅguttara Nikāya* (III, 7 f.).

The Buddha says that a monk who is lacking in respect and is unruly possesses these five evil qualities, viz., he has no faith, is shameless, reckless, indolent and lacks insight. As a result he will surely fall away and will find no support in the good doctrine. But a monk who is full of reverence and is docile, has faith, is modest, scrupulous, resolute and wise, does not fall away. He finds support in the good doctrine.

The concluding sutta of this vagga (ibid. 8 f.) also goes under the same name. It differs slightly from the other one. Here, a monk who possesses the five evil qualities is said to be incapable of attaining growth, increase and fullness in this discipline of the dhamma (*imasmiṃ dhammavinaye*), while the monk who possesses the opposite good qualities will be able to attain the same.

Both suttas are repetitions of the eighth sutta (ibid. 6 f.) of the same vagga, with the difference that the latter does not contain the two words *agārava* (lacking in respect) and *appatissa* (unruly), the first of which has given the names to both our suttas.

AGĀRAVA SUTTA (2), one of several suttas under the same title. It is found in the *Pañcaṅgika Vagga* of the *Pañcaka Nipāta* of the *Aṅguttara Nikāya* (III, 14 f.).

The Buddha declares it impossible for a monk who is disrespectful and unruly, or who does not dwell in harmony with his fellows in the higher life, to keep the minor precepts (*abhisamācārika-dhamma*), to keep the learner's code (*sekha-dhamma*) without the minor precepts, the virtues (*sīlāni*)

without the learner's code, to have right views without virtues, or right concentration without right views.

As with many other suttas this sutta, too, goes on to give the converse of the above. The *Manorathapūraṇī* explains the term *abhisamācārika dhamma* as the highest conduct in accord with duties, the declared morality. The *Visuddhimagga* (10), too, agrees and identifies this highest conduct with the minor precepts (*yāni vā sikkhāpadāni khuddānukhuddakānīti vuttāni idaṃ ābhisamācārika-sīlaṃ*). *Sekhaṃ dhammaṃ* is explained as *sekhaṃ sīlaṃ*. This same passage is said (*Gradual Sayings* III, p. 10, n. 3) to be quoted in the *Visuddhimagga* but it replaces *sekhaṃ* with *ādibrahmacariyakaṃ*. The word *sīlaṃ* is explained as the four great *sīlas*. E. M. Hare says here that this is a commentarial division and that the term *mahāsīlāni* does not seem to occur in the nikāyas though in the *Dīgha Nikāya* (I, 12) there is a sub-division of *sīlas* which, according to him, is probably a late editorial addition (ibid. note 4).

AGĀRAVA SUTTA (3), occurs as the second of the *Pañcaṅgika Vagga* of the Book of Fives in the *Aṅguttara Nikāya* (III, 15 f.). It is almost a repetition of *Agārava Sutta* (1), but in place of the terms, virtues, right views and right concentration, are inserted the terms, the body of virtues (*sīlakkhandha*), the body of concentration exercises (*samādhikkhandha*) and the body of insight (*paññakkhandha*), respectively.

AGĀRIYA VIMĀNA, a palace (*vimāna*) in the world of the Thirty-three Gods (*Tāvatiṃsa*) occupied by a couple who, as human beings in Rājagaha, had done many deeds of piety. The poem (*Vvu.* VI, 1) in which the story is given describes the palace in the words of Mahā Moggallāna. The palace is compared in splendour to the Cittalatāvana, a pleasance in Tāvatiṃsa, and it stands in the sky shedding its lustre all around. Questioned by Mahā Moggallāna, the deity replies that all they have are the fruits of their giving with open hands—they were a welling spring (*opānabhūtā*), as it were, in satisfying the needs of all men, while in the human world. The commentary (*VvuA.* 286–7) adds very little to the description of the palace given in the text. It says that the palace is ten leagues (*dasayojanika*) in extent.

The same poem mentions again, with no alteration either in subject matter or in the composition of the verses, a second Agāriya Vimāna (*Vvu.* VI, 2). The commentary offers no explanation for this repetition, except to say that the interpretation is the same as in the earlier one.

AGATI, the negative form of *gati* which means path or course. The term *agati*, in the phraseology of Buddhist ethics, refers to the wrong or incorrect path. Buddhaghosa in his *Manorathapūraṇī* (ii, p. 22) explains *agati* as *akattabbaṃ*, i.e., that which is not proper, or that which should not be done. In the Buddhist writings mention is made of four conditions known as *agati-gamanī* which are said to lead to *agati* or the wrong path, viz., *chanda* (lust or desire), *dosa* (hatred), *moha* (delusion) and *bhaya* (cowardice).

The term *chanda* according to its usage assumes different meanings in different contexts. In the first place, it is considered as an ethically indeterminate psychological state which means intention. It is in this sense that it is regarded as one of the fifty-two mental concomitants (*cetasika*). In the second place, it refers to righteous will or zeal (*dhammacchanda*). In this sense, it is an ethically desirable quality and as such it occurs in the formula of the four Right Efforts (*sammappadhāna*). Thirdly, it refers to the unwholesome quality of lust or desire and is closely connected with sensuality, greed, etc. It is in this last sense that *chanda* is considered as one of the four *agatigamanī dhammā*. *Dosa* or hatred is one of the three ethically unwholesome roots (*mūla*) which, through their presence, determine the actual moral quality of a volitional state. *Moha* or delusion, too, is one of the unwholesome roots and is synonymous with *avijjā* or ignorance. *Bhaya* or cowardice is also ethically undesirable, since one overcome by it is blind to what is right and wrong.

These four psychological states are called *agatigamanī* or leading to the wrong path, for one who comes under their influence omits what is good and commits what is bad.

Y. K.

AGATI SUTTA. Three suttas under the same title are found in the *Catukka Nipāta* of the *Aṅguttara Nikāya* as the seventh, eighth and the ninth suttas of the chapter called *Caravagga* (*A.* II, 18–9).

In the first the Buddha declares that a person may fall into evil practice (*agatigamana*) in four ways, viz., through desire (*chanda*), hate (*dosa*), delusion (*moha*), or fear (*bhaya*). A verse at the end of the sutta says that the fame of a person who transgresses *dhamma* through any of the above mentioned qualities will wane like the moon in the dark fortnight.

The second declares that a person in whom desire, hate, delusion and fear are absent will not fall into evil practice. The verse at the end of the sutta declares that the fame of a person who does not transgress *dhamma* through the above four qualities will wax like the moon in the bright fortnight.

The third is but a combination of the above two suttas, which according to the commentary is for the sake of the intelligent (*bujjhakānaṃ vasena*).

The *Bhattuddesaka Sutta* (*A.* II, 19) also gives the same four qualities—desire, hate, delusion and fear—through which a food-steward (*bhattuddesaka*) may fall into evil practice and thus be reborn in purgatory, while the absence of the same four may lead him to heaven.

In the *Sigālovāda Sutta* (*D.* III, 182) the Buddha expresses the same view when he says that a person does evil deeds by falling into evil practice through desire, hate, delusion and fear. A person does no evil deeds when the same qualities are absent. The verses found in the three *Agati Suttas* are also found in the *Sigālovāda Sutta* as having been spoken by the Buddha.

The commentary explains *chandāgatiṃ gacchati* as *chandena agatiṃ gacchati, akattabbaṃ karoti*, i.e., falls into evil practice through desire, and does what should not be done. *Agati* is not explained in the commentary.

C. W.

AGGABODHI (1), a prince of Ceylon in the 7th cent. A.C. The lineage of his father Mahātissa is traced to Okkāka; his mother, Saṅghasivā, was the daughter of the ruler of the southern district, Rohaṇa. Aggabodhi was the eldest of their three sons and is himself called the 'independent ruler of Rohaṇa'. He was an energetic builder in the cause of the religion and was responsible for the Mahāpāli alms hall and the Dāṭhaggabodhi pariveṇa both in Mahāgāma (Tissamahārāma); in Kāṇagāma, the Paṭimā vihāra where he set up a great stone Buddha image which was so splendid as to be considered miraculous [1]; the Sālavāṇa and Parivena vihāras, as well as one in Kājaragāma (Kataragama); and new buildings in the Dhammasāla vihāra. In Kāṇagāma he also built hospitals for the blind and the sick. Not all of these works have been identified, but they were most probably confined to the district which he ruled. He was a devout Buddhist. It is chronicled of him that once he was so moved as to eat of the food left over from alms given to the Saṅgha. As a further expression of the piety which induced him to do it, he granted them the village of Maṇḍagāma (*Mhv.* xlv, 38 ff.).

D. T. D.

AGGABODHI (2), a minister of king Sena III of Ceylon (938–46 A.C.). When he was in charge of the mountain district (Malayarāja) he built the pariveṇa called Nāgasālā. Its situation has not been traced, but was probably within the territory which he administered. King Sena visited it when on a royal tour and granted it a maintenance village (*Mhv.* liii, 36).

AGGABODHI I, king of Ceylon (571–604 A.C.) who is credited with many works of piety. To various foundations for the Saṅgha he attached tanks, fields and slaves. Among his repairs and additions to well-known shrines were those to Lohapāsāda, Mahā Thūpa and Dakkhiṇa-vihāra. He set up a statue of Mahinda on the bund of Mahindataṭa tank, made a golden reliquary for the Tooth Relic and set up a bronze canoe (see BHATTANĀVĀ) in the Mahāpāli alms hall, presumbly for boiled rice to be stored for the bhikkhus. In his time there was a disputation between the orthodox fraternity and the adherents of Vetullavāda. Mahā thera Jotipāla led the former and they were successful, although the latter were fiercely sponsored by prince Dāṭhāpabhuti. During his reign there was a great efflorescence of literature and there exists a list of twelve poets of the period. (See *Mhv.* xlii for general facts. The list is given in *Pūjāvaliya, Nikāya Saṅgraha* and *Rājāvaliya*, each with its variations.)

AGGABODHI II, king of Ceylon (604–14 A. C.). He devoted himself, with his queen Dāṭhā, zealously, to religious activities. Though obviously a patron of the Mahāvihāra community, he supported the Dhammarucikas of Abhayagiri and the Sāgaliyas of Jetavana, without prejudice. In his time the Kāliṅga king (who seems to have been dethroned by the Chālukya king) came to Ceylon "with the resolve of world renunciation", as "his mind was disturbed when he saw the death of living beings in war". The visitor entered the Saṅgha, with Jotipāla as his sponsor, and was soon followed by his minister and the queen who, too, were duly admitted to the Order. Aggabodhi and his queen built residences for them and supported them in various other ways, too. The thūpa of the Thūpārāma was threatening collapse at this time and, pending repairs, the king removed the right Collar-Bone relic of the Buddha, which lay enshrined within, to the Lohapāsāda where it remained. The king and his officers "renewed the whole work of Devānampiyatissa" with all sorts of embellishments and replaced the relic in a repaired thūpa which was richly embellished, and offered costly gifts. The king enlarged the Mahāpāli and "set up a canoe for the gifts of rice" (it is yet in position, with short donative inscriptions of four centuries later. See BHATTANĀVĀ). The queen ordered permanent gifts of rice for the bhikkhunīs (*Mhv.* xlii, 40 ff.).

AGGABODHI IV, king of Ceylon (667–83 A. C.). He was so intensely religious that his people spontaneously followed his example. Though partial to the Theravādins he also supported other religious communities. He granted them various endowments, placing at their disposal, in one instance, "helpers for the monastery who were even of his own kindred". He got the bhikkhus to recite *paritta*. His queen Jeṭṭhā built an ārāma (named after her) for bhikkhunīs. "All the heads of districts in the island built, here and there according to their means, numerous vihāras and pariveṇas. The time of this ruler of men consisted as it were, in nothing but meritorious works", is the succint description in the *Mahāvaṃsa*. He lived his last years in Polonnaruva where there is a touching story of his end—a story of a people's attachment that is probably unique in the annals of the world. "He was attacked by an incurable disease and as he saw that the time for his death had come, he called his subjects, exhorted them to

1 Probably the colossal stone image at Māligāvela (*ASCAR.* 1934, para 81; Univ. of Ceylon, *History of Ceylon*, I, p. 404.

piety and went to his death. When he was dead his subjects mourned all in deep grief, performed for him on his pyre all ceremonies without fail," and, continues the moving account in the chronicle, "made for themselves medicine from the ashes of the pyre" (*Mhv.* xlvi, 1–38). See also AGGABODHI-PADHĀNAGHARA, AGGABODHI-PARIVEṆA.

AGGABODHI VI, king of Ceylon (733–72 A. C.). Perhaps the most memorable of his several acts of piety were repairs to the damaged doors in Thūpārāma in Anurādhapura and the re-arranging of the triple row of graceful monoliths with sculptured capitals which encircle the thūpa (*Mhv.* xlviii, 64–7). It was in his reign that the Tiriyāy (q.v.) Sanskrit inscription, in Sinhalese characters, was engraved. The inscription (*circa* 8th cent. A. C.) is Mahāyānist in contents and is important in the history of the religion in Ceylon. In it is the earliest contemporary notice (so far locally found) of Avalokiteśvara (*EZ.* IV, 242 ff.; V, Pt. 1, 174 ff.).

AGGABODHI VII, king of Ceylon (772–7 A. C.). He "built anew and solidly" the ruined temple of the historic Bodhi tree at Anurādhapura. The *Mahāvaṃsa* also says, "By legal acts he carefully reformed the Order of the Conqueror", an important point in the relations between the Saṅgha and the ruler. He is credited with having himself studied the medical plants for therapeutic uses. He died in Polonnaruva (*Mhv.* xlviii, 68–74).

AGGABODHI VIII, king of Ceylon (804–15 A. C.). He was an exemplar of some of the Buddhist virtues. Thus, he forbade the bringing in of meat, fish and strong spirits to the centre of the town (Anurādhapura) on uposatha (fast-) days. After worshipping at the temple he would clean his feet thoroughly on leaving, lest he should take away even a grain of sand. He never used harsh speech and it is said that when he had once forgetfully addressed a slave, using the word 'slave', he felt such remorse that he called on the slave to address him in return in the same way. The *Mahāvaṃsa* gives the following description of his remarkable filial service to his mother, which is probably unprecedented among kings, whether Buddhist or otherwise (xlix, 51–61).

"The King found pleasure in the serving of his mother day and night. He went to wait on her already early in the morning, rubbed her head with oil, perfumed the parts moist with sweat, cleaned her nails and bathed her carefully. He clad her himself in a new garment, pleasant to the touch, and the cast-off raiment he took and cleaned it himself. With the water therefrom he sprinkled his own head together with the diadem, and worshipped her perfectly with fragrant flowers as a cetiya. After making obeisance before her three times, and walking, with right side facing, round her and giving her attendants raiments and the like to their heart's content, he offered her delicious food with his own hand, partook himself of what she left and strewed thereof on his head. To her attendants he gave the best food such as was meant for the king, and when he had put in order her chamber, fragrant with sweet odours, he carefully prepared there with his own hand her couch, washed her feet, rubbed her gently with fragrant oil, sat by her rubbing her limbs and sought to make her sleep. Then with right side facing, he walked round her bed, did reverence three times in the right way, ordered slaves or servants as guard and without turning his back on her, went out. At a spot where she could no longer see him, he halted and three times again did reverence. Then happy at his action, and ever thinking of her, he went home. As long as she lived he served her in this way."

AGGABODHI IX, king of Ceylon (831–3 A. C.), one of whose best remembered acts was to ensure, by handsome endowments, that ailing bhikkhus of the lesser vihāras in Anurādhapura receive medicinal rice-gruel, without having to rely on uncertain charity in their weak state. His action, in summoning beggars by the beat of drum and for three days distributing to them as much gold as they wanted, is reminiscent of the donations of Vessantara who, in this manner, practised the perfection of giving (*dānapāramitā* : *Mhv.* xlix, 83–92).

D. T. D.

AGGABODHI-PADHĀNAGHARA, a building erected in Ceylon by Aggabodhi IV (667–83 A. C.) who also came to be known as Sirisaṅghabodhi after his attainment of kingship. King Sirisaṅghabodhi performed various meritorious deeds and once, when he visited the thera Dāṭhāsiva, he became overwhelmed with joy, having listened to a sermon preached by the thera. Thereupon he erected 'a house for the practice of meditation' (*padhānaghara*) and having named it as Aggabodhi-padhānaghara, presented it to the thera. Further, the king granted it several villages and servitors for its maintenance (*Mhv.* xlvi, 11). The class of building known as *padhānaghara* is referred to elsewhere.

I. K.

AGGABODHI-PARIVEṆA, a building belonging to the Jetavanārāma of Anurādhapura, erected by Potthasāta, the general (*senāpati*) of Aggabodhi IV. He named this building after the king (*Mhv.* xlvi, 23).

AGGADHAMMA SUTTA, the ninth sutta of the *Arahatta Vagga* of the Book of the Sixes (*A.* III, 433–4). The Buddha declares that if a monk possesses six evil qualities, i.e., if he has no faith (*assaddho*), is shameless (*ahiriko*), reckless (*anottāpī*), indolent (*kusīto*), lacks insight (*duppañño*) and hankers after body and life (*kāye ca jīvite ca sāpekho*), then he cannot realise the highest state (*aggaṃ dhammaṃ*), i.e., arahantship.

But, if the opposite qualities are possessed by a monk, then he is capable of realising the highest state.

AGGA-DHANUGGAHA-PAṆḌITA, a young brāhman of Bārāṇasī, so-called because of his great skill in archery; also known as Culla-Dhanuggaha Paṇḍita. Because of his cleverness, his teacher at Takkasilā presented his daughter to him as his wife. On his way back to Bārāṇasī with his wife, he killed a fierce elephant and, meeting fifty robbers, killed all except the leader. Then he seized the leader and desiring to kill him asked his wife for the sword. But as she had fallen in love with the robber, she placed in the robber's hand the sword's hilt with which he slew her husband. Going together they came to a stream which was flooded. He left her on the bank and pretending that he was taking her ornaments for safe keeping, ran away. The bodhisattva, born as Sakka, saw this and, in order to show her folly, went down to the earth with Pañcasikha as a bird and Mātali as a fish, while he himself took the form of a jackal holding a piece of meat in his mouth. When the fish leapt up he abandoned the piece of meat to catch the fish. Meanwhile the bird carried away the piece of meat. When the woman saw this she realised her foolishness.

This story was told by the Buddha at Jetavana in connection with a monk who wished to leave the Order, because of his former wife. The monk was identified with the archer, his wife with the woman of the story and the Buddha with Sakka (*J.* III, 374).

According to the commentary of the *Dhammapada* this story was told in reference to a novice who fell in love with a young girl whom he had seen when he visited a certain house to obtain water. When the girl had encouraged his visits and roused his feelings, he became dissatisfied with his life as a monk and wished to leave the Order (*DhpA.* IV, 65 ff.).

I. K.

AGGAḶAPURA, one of the several cities visited by Revata thera on his way from Soreyya to Sahajāti (*Vin.* 300), before he was invited by Yasa to question the monks of Vesāli at the Second Council, where they brought up a dispute regarding the validity of the 'ten points' (*dasa-vatthu*, q.v.).

AGGĀḶAVA CETIYA, the chief shrine of Āḷavī, originally dedicated to the worship of yakkhas and nāgas, later converted to a Buddhist vihāra, but still retaining its old name (*SnA.* I, 344; *SA.* I, 207). On many occasions the Buddha stopped here during his wanderings, and it became the scene of the formulation of a number of Vinaya rules, e.g., against digging the ground (*Vin.* IV, 32), cutting down trees (ibid. 34), using unfiltered water for building purposes (ibid. 48), sleeping in the company of novices (ibid. 16), giving new buildings in charge for repairs (*Vin.* II, 172) and making rugs mixed with silk (*Vin.* III, 224). The rule pertaining to the building of cells also was enacted here. Mahā Kassapa found that the people of Āḷavī detested the monks and ran away at the very sight of them, because they pestered them by asking building materials. When this was reported to the Buddha, he related a number of Jātaka tales, e.g., the *Maṇikaṇṭha* (*J.* II, 282), the *Brahmadatta* (*J.* III, 78), the *Aṭṭhisena* (ibid. 351) and other anecdotes to illustrate the disadvantages of begging, and laid down the above rule (*Vin.* III, 144 f.). It was here, too, that the Buddha praised Hatthaka Āḷavaka as the possessor of eight wonderful qualities. Āḷavaka visited the Buddha with a large following whose fealty, he averred, had been won by practising the four characteristics of sympathy (*saṅgaha-vatthu*) taught by the Buddha (*A.* IV, 218).

The *Vaṅgīsa Sutta* was preached at the Aggāḷava Cetiya to Vaṅgīsa, on the occasion of the death of his preceptor Nigrodha Kappa. During his early novitiate Vaṅgīsa lived here with his preceptor and acted as the custodian of the shrine (*vihārapāla* : *S.* I, 185). On two occasions dissatisfaction (*anabhirati*) arose within him, once because of some women, and the second time because of his preceptor's solitary habits (*S.* I, 185–6). Later, again, he despised his fellow monks through pride in his own power of improvisation (*paṭibhāna* : *S.* I, 187). However, on all three occasions he was able to overpower his evil thoughts by his own efforts.

C. W.

AGGĀNI SUTTA, a short sutta in the *Catukka-nipāta* of the *Aṅguttara Nikāya* (II, 79), enumerating two sets of four perfections (*agga* : the foremost) the first set containing the perfections of virtue, concentration, wisdom and deliverance, and the second set comprising the four perfections of bodily form, sensation, perception and becoming. From the context it is clear already that this last item 'becoming' (*bhava*), combined as it stands with *rūpa*, *vedanā* and *saññā*, is no other than the mental complexes (*saṅkhāra*); for also in the formula of dependent origination (*paṭicca-samuppāda*) the two links of karma-formations (*saṅkhāra*) and the process of becoming (*bhava*) are the identical karma-process (*kamma-bhava*). As perfections (*aggāni*) these are taken by the commentary to be the personality in which one attains arahantship (*uttama-sarīra*).

AGGAÑÑA SUTTA, the twenty-seventh sutta of the *Dīgha Nikāya* (III, 80 ff.) reporting a discussion in which the Buddha is concerned with the establishment of a standard for the evaluation of human personality as an alternative to that contemporaneously in vogue, namely, of birth. In the course of the discussion he enunciates, with an elucidatory as much as a refutative purpose, a theory of origins from which the sutta derives its name, *Aggañña*, meaning 'pertaining to beginnings'.

The Buddha, staying at the time in the Migāramātupāsāda in the Pubbārāma in Sāvatthi, addresses two brāhman youths Bhāradvāja and Vāseṭṭha (seemingly two young men belonging to

clans of these same names[1]). Two brāhman youths with the same names are met with in the *Vāseṭṭha Sutta* of the *Majjhima Nikāya* (II, 197) and *Sutta Nipāta* (116) as well as in the *Tevijja Sutta* of the *Dīgha Nikāya* (I, 235), and are identified in the commentary (*DA*. 406) with these two. In the common sutta of the *Sutta Nipāta* and *Majjhima Nikāya*, Vāseṭṭha claims to be the pupil of Pokkharasāti and Bhāradvāja of Tārukkha, and describe themselves as versed in the three Vedas (*Sn*. 116). Their associations with the respective teachers are shown also in the debate which takes place between them in the *Tevijja Sutta* (*D*. I, 235). According to the commentary, the two youths were converted by the Buddha on the occasion recorded in the *Vāseṭṭha Sutta*, and again on the occasion referred to in the *Tevijja Sutta*, the first taking place near Icchānaṅkala (*Sn*. loc. cit.) and the second at Manasākata (*D* I, loc. cit.). The *Aggañña Sutta*, then, refers to an occasion later than either of these, when the two young brāhmans are said to be "passing their probation to enter the Saṅgha" (*D*. I, loc. cit.).

The problem which the Vāseṭṭha and Bhāradvāja youths bring to the Buddha in the *Vāseṭṭha Sutta* is: what constitutes a brāhman? (*Sn*. loc. cit.) and in the *Tevijja Sutta* (*D*. I, 326): whether all the various paths taught by the various brāhman teachers, such as Addhariyā, Tittiriyā, Chandokā and Bavarikā, lead to the same right goal. In the *Aggañña Sutta* the problem has altered. They no more dispute, nor approach the Buddha in doubt, but are here interested merely in listening to a discourse on the doctrine when they come to him. They are now converted and confident, and it is the Buddha who opens the discussion, asking them whether they, who, being brāhmans by birth and family, have gone forth from a brāhman family and home to the homeless life are being reviled by the brāhmans (*D*. III, 81). Their answer to it, that they have been accused of abandoning the superior class, which has been born from the mouth of Brahmā, in order to join the inferior company of 'shavelings', provides the point of departure for the lengthy discourse on origins contained in the *Aggañña Sutta*.

Proceeding to refute first the brāhman claim that the brāhmans are the genuine children of Brahmā, born from his mouth (loc. cit.), the Buddha points to the mere empirical evidence that brāhmaṇīs, the wives of brāhmans, give birth to children, like other folk, reasserting equality in kind and origin consistently with the claim of the *Vāseṭṭha Sutta* that in man there is no manifold (*Sn*. *v*. 607). Secondly, he argues against the brāhman claim that only a brāhman is of the best social grade, other grades are low (*D*. III, 81). The *Madhura Sutta* (*M*. II, 84-6) argues that in point of desires and aspirations which are common to all, men are equal and that the criterion for supremacy is virtue. It adds, in fact, to the argument of the *Vāseṭṭha Sutta* that man is of one genus and species and the difference in men is nominal (*Sn*. *v*. 611). The *Aggañña Sutta*, however, is emphatic in the assertion that there is another standard by which men may be graded—that of personality, character, nature, *dhamma*—the same arguments which are repeated by Kaccāna to Avantiputta, though with lesser force and precision. Here, in the present sutta, the Buddha is represented as saying that even conventionally this fact is recognised, and calls to witness the respect shown by the royal Pasenadi to the 'shaveling' Gotama (*D*. III, 84; cp. *M*. II, 100-1).

The Buddha attributes the cause of this idea of divine origins and consequent superiority of the brāhmans to mere ignorance of history and of the evolution of beings and society. Proposing that the origin of the development of the idea of God is psychological, he traces a predominantly psychological process of evolution. In this theory, which is also brought forward in a different context in the *Brahmajāla Sutta* (*D*. I, 17-8) and for a different purpose in the *Pāṭika Sutta* (*D*. III, 27 ff.), he depicts life on this earth as a mere re-evolution.

The universe is shown to be one nebulous mass, sunk in darkness, soon to appear in a liquid state from which the earth emerges. The earth is then shown to be visited with life from the Ābhassara (q.v.) world, there to go through various transformations as a result of the desires of these luminous beings. In the course of this transformation, time, light and darkness appear. Vegetation, first of a mushroom variety, then creeping plants, then legumes and cereals appear, on which animate life feeds. Bisexuality occurs as one of the stages in the process. How men came to build habitations for themselves and to acquire private property is explained, the acquisition of private property gradually giving rise to crime and immorality, this in turn necessitating Law and the State. The evolution of kingship from Mahāsammata[2], and the establishment of monarchy is then shown, rejecting the theory of divine origin of kings and replacing it with a theory of kingly duty arising from the fact of democratic beginnings. The Buddha then explains the gradual division of labour and how the brāhmans came to practise their professions. Throughout this discourse an attempt is made to show that:

> "The Norm's the best among this folk
> Both in this life and in the next,"

and that it has through the ages been the criterion of human worth.

---

1 Some valuable material regarding the Bhāradvāja and Vāseṭṭha clans or gens is found in Macdonnel's *Vedic Mythology* and Keith's *Religion and Philosophy of the Veda*. The clans are said to derive their names from ṛṣis who were authors of certain works of the Ṛgveda.

2 *Mahāvastu*, 338, expands this, tracing the geneaology of Gautama as in the line of Mahāsammata.

The sutta concludes with the celebrated poem of Brahmā Sanaṅkumāra who is admitted by the Buddha to have revealed this story of genesis. See also s.v. AMBAṬṬHA SUTTA, BRĀHMAṆA, CASTE, PASENADI.

BANDULA JAYAWARDHANA.

AGGAPAṆḌITA, a Burmese thera of the thirteenth century. At Pagān he wrote the *Lokuppatti-pakaraṇa, Lokuppattipakāsanī*, etc. Apparently, he was one of the few contemporary Pali scholars who were not exclusively devoted to the study of the language in itself. According to the *Sāsanavaṃsa* (p. 74) there were three theras of the same name. They were distinguished by the prefixes Mahā, Dutiya and Tatiya, respectively. All were famed for their learning and were residents of Arimaddana (s. v. PAGĀN). Our thera was probably Mahā Aggapaṇḍita and is sometimes confused with Aggavaṃsa.

AGGAPAÑÑATTI is a manifestation of superiority in a particular field. The Buddha describes four types of beings (*A.* II, 17) and makes known the chief (*agga*) of each. Thus Rāhu, the lord of the Asuras, is mentioned as chief of those who have personality (*attabhāva*). Mandhāta, the rāja, is named chief of those who are given to the pleasures of sense. Of him it is said (*Miln.* iv, 8, 25) that in his earthly body he attained to such glory as is confined to the city of the gods. Yet his desire and greed was the root of his misfortune (*J.* II, 312). Māra, the evil one, is called the chief of those who have lordship, radiant with power and glory. But in all the worlds of devas, māras and brahmās, in the world of mankind with its recluses and brāhmans, the Tathāgata is reckoned chief, for he is an arahant, a perfectly enlightened one.

The superiority of the Buddha, Dhamma and Saṅgha is proclaimed elsewhere as *agra-prajñapti* (*Avś* I, 49, 329).

AGGAPPASĀDA SUTTA, a discourse by the Buddha on 'faith' (*pasāda*) in the 'best' (*agga*). It occurs, in what is probably its most original form together with verses, in the *Itivuttaka* (87–9), where the three 'best' are explained as the Buddha, the Dhamma and the Saṅgha. For, amongst all beings, whether they have a physical form or not, sense-perception or not, the fully enlightened one, the Buddha, is supreme. Hence, faith in him is the best. Then, amongst all states or things, whether they are conditioned (*saṅkhata*) or not, the best is freedom from passion, for that leads to the subjugation of pride, restraint of lust, removal of clinging, the extirpation of the root of rebirth, destruction of craving, freedom from passion, cessation (of becoming) and Nibbāna. But it is the Dhamma which teaches this passionless freedom. Hence, faith in the Dhamma is the best. And again, amongst all orders and societies the Order of the monks of the Buddha is the best, for it is that Order which consists of the four pairs of holy men, i.e., of those who follow the path (*magga*) and enjoy the fruit (*phala*) of the four stages of holiness, who are thereby worthy of honour, reverence, offerings and worship, a field beyond compare in which the faithful may sow their good deeds to ripen into the fruits of merit. Hence, faith in the Saṅgha is the best.

This *Aggappasāda Sutta* has been enlarged with a fourth best, the Eightfold Path (*aṭṭhaṅgika magga*), to enable its inclusion in the Book of Fours (*catukka nipāta*) of the *Aṅguttara Nikāya* (II, 34). But in the *Cundī Sutta* (*A.* III, 35) the Eightfold Path is again omitted and replaced by five virtuous practices (*pañca sīlāni*). Had the Eightfold Path been included here too, it would have earned thereby the right to appear in the Book of Fives. But that both suttas in the *Aṅguttara Nikāya* have been edited is clear from the fact that in both cases the concluding verses speak only of the three best faiths, as originally mentioned in the *Itivuttaka*.

A quotation of the section dealing with conditioned and unconditioned states and the freedom from passion occurs in the *Visuddhimagga* (viii, § 242, p. 242) under the chapter on recollection of peace (*upasamānussati*) with a comprehensive paraphrase on some terms used therein.

H. G. A. v. Z.

AGGAPUPPHIYA, an arahant thera who in a previous birth, taking flowers which blossomed at a tree-top (*aggaja*), offered them to the Buddha Sikhī. In one of his later births he became a world ruler (*cakkavatti*), named Amita (*Ap.* I, 229).

AGGAVAṂSA, a monk who was tutor to king Narapatisithu (1167–1202 A. C.) reputedly the most prosperous of the Burmese rulers of Pagān. According to the *Gandhavaṃsa* he was from Jambudīpa—which is not necessarily India, the Burmese writers of the period often having taken the name to mean their own country, too. In 1154 the thera completed *Saddanīti*, a grammar in which was expounded the original meaning of the language used in the Tipiṭaka. The work won unstinted praise from the Saṅgha of Ceylon who considered that it surpassed anything of a like nature found in that country. It earned a great reputation for Burmese scholarship and for the author as well. To this day it is treated as a classic in the country. Aggavaṃsa resided in the vihāra north of the plateau above Pagān.

AGGAVATĪ-PARISĀ SUTTA of the *Aṅguttara Nikāya* (I, 243) deals with three types of company: the distinguished (*aggavatī*), the discordant (*vaggā*) and the harmonious company (*sammaggā parisā*). The first one is indeed 'distinguished', for the monks who live in such company are not given over to a life of ease, but they strive to attain the

unattained, to realise the unrealised. The discordant company is a band of quarrelsome, disputatious monks, wounding each other with the weapons of the tongue, whereas the harmonious company, on the other hand, lives in unity, courteously, without quarrelling, 'like milk and water mixed', respecting one another with affection.

Having thus explained the three types of company the Buddha addresses his monks about monks living in harmony. It is in such company that the monks acquire great merit and lead the holy life; for spiritual joy is born from delight through sympathy and freedom of mind; and one who is thus full of joy is calm in body, experiences well-being and is concentrated in mind.

The discourse concludes with a lengthy simile, comparing the good effects of living harmoniously together, with rain that falls in heavy drops on the mountains, and which, then flowing down the slopes, fills up the crevices and gullies of the mountains, making small pools which become large pools, which in their turn cause the streamlets to run down and feed the large rivers, ultimately filling the sea.

AGGI-BHAGAVĀ, the Lord of Fire, a deity referred to in several Jātakas, and evidently identical with the Vedic Agni (q.v.). In the *Asātamanta Jātaka* (*J.* I, 285, No. 61) the ceaseless worship of the Lord of Fire is referred to as an ancient custom in brāhman families among whom the fire, which is lit on the day a son is born, is not allowed to go out until the boy is sixteen, after which he himself has to tend it if he wishes to retire to the forest as an ascetic and thereby ensure his rebirth in Brahmaloka. This sixteenth birthday is again referred to in the *Naṅguṭṭha Jātaka* (*J.* I, 494, No. 144), where the bodhisatta, born as a brāhman's son, was asked by his father to choose either to lead a family life and study the sacred Vedas, or to take the fire with him into the forest, there to tend it and win the favour of birth in Brahmā's realm. The bodhisatta chose the worship of Aggi-bhagavā, till one day he had occasion to sacrifice an ox to the Lord of Fire. But while he went in search of salt, a band of hunters killed the ox and ate it, leaving only its tail and hide and the shanks. On his return, the bodhisatta loses his faith in Agni, for, "how can he look after others if he cannot even protect himself?". Here he calls the Lord of Fire by the name Jātaveda, the archaic title used also in the *Vaṭṭaka Jātaka* (*J.* I, 214, No. 35).

Under circumstances similar to those related in the *Naṅguṭṭha Jātaka*, referred to earlier, the bodhisatta chooses again the forest-life and fire-worship in the *Santhava Jātaka* (*J*, II, 43, No. 162), but here Aggi-bhagavā is identified with Mahā-brahmā. When one day the hermit offered rice and ghee, the flame flared up so high that the hermitage was set on fire. Blaming the fire for burning down the hut put up by him with great trouble, the bodhisatta gives up his worship of Agni, as being bad company, and retires deeper into the mountains where he meets good friends, e.g., a deer licking the face of a tiger.

In his commentary on the *Brāhmaṇa Suttas* of the *Saṃyutta Nikāya* (I, 166 ff.) Buddhaghosa assumes that the fire-rites of the Bhāradvāja brāhmans had only Mahā-brahmā as their object, from which Mrs. Rhys Davids conjectures that in Buddhaghosa's day Agni worship had apparently become quite obsolete (*Kindred Sayings*, I, p. 209, notes 4 and 5). The fusion of Aggi-bhagavā into Mahā-brahmā may have been occasioned by the very purpose of the worship, namely, rebirth in Brahmaloka.

AGGIBRAHMĀ, a nephew of the emperor Asoka and later his son-in-law, being married to Asoka's daughter Saṅghamittā (*Mhv.* v, 169–70). He became a monk with the emperor's permission, and left home on the same day as Asoka's brother, Tissa, in the fourth year of Asoka's reign. He was admitted to the Order by Mahādhammarakkhita, a thera advanced in self-control, given over to meditation in the forest and in possession of supernormal psychic powers.

Aggibrahmā is said to have had a son, named Sumana, who later, as a *sāmaṇera* in the company of the arahant Mahinda brought the teachings of the Buddha to Ceylon.

AGGIDATTA (1), a poor brāhman of Kāsi, whose son was Somadatta, a previous birth of Sakyamuni. Somadatta was educated at Takkasilā and entered the king's service. His father had only a single pair of oxen, and when one of them died, he asked Somadatta to get an ox through the king's favour, but Somadatta suggested that his father should himself approach the king. As Aggidatta said that he was too nervous to do so, Somadatta undertook to train him to make the request in the proper manner, and took him to a cemetery where there were clumps of sweet grass. Having made bundles out of them, he named them after the king, the viceroy and the commander-in-chief, respectively. Having pointed them out to his father, he asked him to greet the king first and then to repeat the verse which would convey to the king his prayer for an ox.

After having trained him, Somadatta took his father to the king. But, there Aggidatta repeated the verse incorrectly. Instead of asking the king for an ox, he requested the king to take the ox he already had. The king knowing that the brāhman had made a mistake said to Somadatta, by way of a joke, that there was evidently a great number of oxen belonging to the brāhman. Somadatta in reply said that if that were so, they must be a gift of the king. The king, pleased with Somadatta's answer, gave the brāhman sixteen oxen, with fine caparison, and a village to live in.

Then the brāhman riding a chariot drawn by pure white Sindh horses went to his village with a great retinue. On the way Somadatta pointed out to him the mistake made in his recitation. Then the brāhman uttered this stanza:

"He that asks, dear Somadatta, takes his chance between the two—
May get more, or may get nothing: when you ask, 'tis ever so."

The story of Aggidatta occurs in the *Lāḷudāyi-thera-vatthu* of the *Dhammapadaṭṭhakathā* (III, pp. 124–5) and in the *Somadatta Jātaka* (*J.* II, 164–7). The story was told by the Teacher while residing at Jetavana, in connection with the monk Lāḷudāyī who was unable to speak in the presence of two or three persons.

The Teacher identified Lāḷudāyī with Aggidatta and himself with Somadatta. It is only in the *Dhammapadaṭṭhakathā* that Ānanda is identified with the king.

I. K.

AGGIDATTA (2), a brāhman chaplain (*purohita*) first of king Mahākosala and then of his son Pasenadi Kosala. When he became old and after obtaining the king's consent, he distributed all his wealth among the people and became an ascetic. With a large band of followers he wandered about Aṅga, Magadha and Kururaṭṭha teaching the inhabitants that they should take refuge in rocks (*pabbata*), forests (*vana*), parks (*ārāma*) and trees (*rukkha*), in order to be released from misery. The Buddha, knowing that the brāhman and his disciples had the necessary conditions to attain arahantship, sent Moggallāna to admonish him. Moggallāna went to the hermitage of Aggidatta and asked him for shelter; it was refused. Thereupon Moggallāna wished to know whether he could take shelter on the mound (*vālukārāsi*) which was the abode of the nāga king Ahicchatta. The brāhman said that it was a difficult task. But, the thera proceeded there and, while the ascetics were watching, he subdued and tamed the nāga king. They were all surprised and paid homage to him. Simultaneously the Buddha arrived and received Moggallāna's homage. The ascetics, thinking that the power of the Buddha should be greater than that of his disciple, also worshipped him. When the Buddha asked Aggidatta what he taught his pupils, he said that he taught them the cult of nature worship, in order to free themselves from sorrow. Then the Buddha said, "Aggidatta, one who has taken refuge in these things (rocks, forests, etc.) will not be released from sorrow, but all the ills of saṃsāra will be removed from him who has taken refuge in the Buddha, Dhamma and Saṅgha."

At the end of the discourse Aggidatta and his followers attained arahantship (*DhpA.* III, 241).

I. K.

AGGIDATTA (3), a brāhman of Khemavatī; father of the Buddha Kakusandha. His wife was known as Visākhā (*D.* II, 7; *Buv.* xxiii, 14; *J.* I, 42).

AGGIDEVA (1), name of Pāpanivāriya (q.v.) thera in a previous birth as a world ruler (*cakkavatti*).

AGGIDEVA (2) the fifth son of Devagabbhā and Upasāgara and one of the ten brothers who became known as Andhakaveṇhudāsaputtā (q.v.).

AGGIKA-BHĀRADVĀJA (1), a brāhman of the Bhāradvāja clan, who lived in Sāvatthi.

Once when in his house a sacrificial fire was blazing and oblation was being made, the Buddha while going round for alms arrived at the spot. On seeing the Buddha the brāhman insulted him by calling him a shaveling (*muṇḍaka*) and an outcast (*vasalaka*). The Buddha thereupon asked him whether he knew the meaning of the word *vasala* and the things that make one an outcast. The brāhman admitted that he was unaware of these things and asked the Buddha to enlighten him. The Buddha then preached the *Vasala Sutta* of twenty-seven verses, the last verse of which reads:

na jaccā vasalo hoti na jaccā hoti brāhmaṇo ;
kammanā vasalo hoti kammanā hoti brāhmaṇo

(*Sn. v.* 136 ; *SnA.* I, p. 174.)

"Not by birth does one become an outcast, not by birth does one become a brāhmaṇa; by deeds one becomes an outcast, by deeds one becomes a brāhmaṇa."

The Buddha also related to the brāhman the story of a caṇḍāla of the Sopāka caste, well known as Mātaṅga. Mātaṅga had been able to reach the highest fame and had been served by many khattiyas and brāhmaṇas. Further, Mātaṅga was able to be re-born in the Brahma world, as a result of the abandonment of sensual pleasures (*kāmarāga*). Also, said the Buddha, sometimes brāhmaṇas, having committed sinful deeds, get themselves blamed in this world and will be born in hell in the next birth. The Buddha, by giving these two examples made the brāhman Aggikabhāradvāja realise that a person becomes a brāhman or an outcast only by his deeds, but not by his birth.

Brāhman Aggikabhāradvāja who was listening to the Buddha all this while, was very pleased with his words and took refuge in the Buddha, Dhamma and Saṅgha (*Sn.* pp. 23–4; *SnA.* pp. 184–91; *J.* No. 497).

I. K.

AGGIKA-BHĀRADVĀJA (2), a brāhman of Rājagaha (Veḷuvana).

Once when the brāhman was making preparations for a fire-sacrifice, the Buddha, going on his alms-round, arrived at the brāhman's house and stood on a side.

The brāhman seeing the Buddha said that he would offer the sacrificial rice to any person who was proficient in the threefold knowledge (*tevijjā*), meaning thereby the three Vedas. Thereupon, the Buddha said that although a person chants multitudes of runes, if he is impure (*kasambusaṅkiliṭṭha*) and hypocritical (*kuhana*), he could not be regarded as a brāhman (*S.* I, pp. 166–7). He further said that a true brāhman learned in the triple lore is one who possesses the knowledge of former births (*pubbe-nivāsa-ñāṇa*), who sees the heavens and the hells with his divine eye, who has attained arahantship (*jātikkhaya*) and who has attained the mastery of special knowledge (*abhiññā-vosita*).

Having listened to the Buddha's words, the brāhman filled a golden bowl with the sacrificial rice and offered it to the Buddha saying that there was no better brāhman anywhere than the Buddha since he had put an end to all defilements. But the Buddha declined the food saying that it was not proper for him to enjoy presents obtained (as a fee) after chanting verses. He would partake of food only acquired by proper means.

It is said that the brāhman, delighted by the Buddha's virtue and wisdom, wished to spend his wealth, about eighty crores (800 millions), for the benefit of the dispensation of the Buddha. At the same time, he was concerned with the Buddha's refusal to accept his offer of alms.

The Buddha was aware of his thoughts, but did not want to talk about it in the presence of others since he felt that it was not proper. Therefore, he spoke to the brāhman alone, as to how a person desirous of gaining merit (*puñña-pekkha*) could obtain great merit by offering requisites such as robes, etc. (*SA*. I, pp. 231–3). Later, it is said, the brāhman attained arahantship (*S*. I, p. 167).

I. K.

AGGIKA-BHĀRADVĀJA SUTTA, another name for *Vasala Sutta*, the seventh sutta of the *Uraga Vagga* of the *Sutta Nipāta* (21–5). It contains the story of the brāhman Aggika-bhāradvāja (1). This sutta is considered to be of great importance in daily life and has been included in the protective verses (*paritta*, q.v.).

AGGIKA JĀTAKA (*J*. I, 461 f.). Once the bodhisatta was born as king of the rats. A jackal whose hair was singed in a forest fire entered the rats' cave pretending to be an ascetic with shaven hair, by the name of Aggika Bhāradvāja, a fire-worshipper. He told the king of the rats that he had come there to protect them by counting them on his fingers in the morning when they went out in quest of food and at night when they returned. The king agreed to the proposal and the jackal counted them accordingly. But every time he counted them, he seized the last of them all and devoured it. When the king became aware of this, he exposed the jackal's appearance of saintliness as covering up his gluttony. The Buddha identified the jackal of the story with a hypocritical monk at Jetavana.

AGGIKA SUTTA, a discourse of the Buddha preached to Aggika (fire worshipper) Bhāradvāja, a brāhman of Rājagaha (*S*. I, 166–7).

On his round for alms the Buddha arrived once at the house of the brāhman who praised the knowledge of the three Vedas. The Buddha in reply to him said that a mere mumbling of the Vedic runes would not make one a brāhman if he were defiled within and deceitful, and that one should have a knowledge of former lives, of heavens and hells, of higher insight (*abhiññā*), and of that which puts an end to birth (*jātikkhaya*). Then the brāhman offered the Buddha the preparation of rice with ghee as a fee for his teaching. The Buddha, however, did not accept it, saying that Buddhas do not enjoy presents for chanting verses, but if the brāhman desired to attend on him merely on account of his virtue, he could do so. When the Buddha had thus spoken, Aggika Bhāradvāja accepted his word and attained arahantship.

AGGIKKHANDHOPAMA SUTTA (var. *Aggikkhandhūpama*), included in the *Mahā Vagga* of the *Sattaka Nipāta* of the *Aṅguttara Nikāya* (IV, 128 ff.). As the title denotes, it is the discourse of the simile of a mass of fire. It was preached by the Buddha while he was journeying in Kosala with a large following of monks, and is concerned with the morality of the monks, the occasion for it being provided by a blazing fire on the roadside.

The Buddha begins with the assertion that it were better for an evil man to embrace that great flaming fire rather than caress a fair maiden well-born, for the result of the first which was death or deadly pain was preferable to the result of the second which would be birth in hell for a long time. He proceeds on to other images, more and more gruesome and revolting, and declares in turn that it were better for the wicked monk of evil conduct and corrupt practices to suffer each of those torments rather than enjoy the obeisance and reverence of the wealthy laity and accept their offerings of the four requisites, for after death he would be born in hell for a long period. There are seven images in all, whence the appropriateness of this sutta being included in the *Sattaka Nipāta* (the Book of the Sevens).

The Buddha concludes his address stressing the importance of diligence (*appamāda*). It is said that while the discourse was being delivered, sixty monks vomited hot blood, sixty reverted to the lay life in diffidence, while sixty others became arahants. According to Buddhaghosa (*AA*. I, 68), of these three groups, the first had committed *pārājikā* offences (grave transgression meriting expulsion), the second were guilty of minor offences and the third were of blameless conduct.

In the *Milindapañha* (p. 164) this sutta forms the subject of the twentieth dilemma of the Fourth Book of Dilemmas. Milinda's query from Nāgasena is how could the Buddha who was said to do only good and avoid harm to all beings have preached this sutta which resulted in sixty monks vomiting hot blood. Nāgasena replies that the Buddha was not to blame for the discomfiture of these sixty bhikkhus as that was the result of their own fault in taking the Buddha's words wrongly. By getting rid of these monks, the Buddha had saved the virtuous monks.

According to the commentarial tradition [1], however, the Buddha was aware of the consequences. The sutta was beneficial for all three classes, even to those who vomited hot blood and those who left the Saṅgha. It saved the *pārājikā* offenders from continuing to lead a sinful life in the Saṅgha and suffering the consequences in hell after death. It also prevented the minor offenders from committing graver offences in course of time. On hearing this discourse they would give up the higher life but would lead virtuous lives observing the precepts they had vowed to observe and enjoy birth in heaven or even reach one of the stages of the path.

The effect of this sutta is said to have been even more far-reaching. As news of it spread, there were mass desertions from the Saṅgha. It was to counteract these effects and to act as an encouragement to the bhikkhus that the Buddha preached the *Cūlaccharāsaṅghāta Sutta*, says the commentary (*AA.* I, 70).

This discourse was preached later by Yonaka Dhammarakkhita when he was on his mission at Aparantaka, and it resulted in many people being converted and joining the Saṅgha [2]. It was also preached by Mahinda in Ceylon in the Nandana Park on the day the Mahāmegha Grove was gifted to the Saṅgha. On hearing it several people attained the fruit of the path [3].

This sutta is quoted in the *Sīlaniddesa* of the *Visuddhimagga* (p. 43). It is also cited, among others, as an example of a discourse based on some immediate incident, in this case a raging fire (*MA.* I, 16) and as an example of a sermon with a simile (*AA.* I, 55).

LAKSHMI R. GOONESEKERE.

AGGIMĀLA (var. Aggimālī), one of six seas which were crossed by the sea-faring merchants of Bharukaccha, mentioned in the *Suppāraka Jātaka*, in the course of their voyage with the bodhisatta as their skipper. In the Pali *Jātaka* (IV, 139–40) it is the second of the seas they crossed, and is described as sending forth a radiance like a blazing bonfire, like the sun at midday, and containing abundance of gold. In the *Supārga Jātaka* of the Sanskrit *Jātakamālā* (91) its name is Agnimālin; it is mentioned as the third sea the merchants crossed, but there is no reference to it as containing gold. It is described there as tinged with the splendour of gold resembling the red-brown colour of flames, tinged with the brilliant hues of the rising sun, and like a great blazing fire. See also KHURAMĀLA JĀTAKA, SUPPĀRAKA JĀTAKA.

AGGIMITTĀ, one of the learned young arahant therīs who accompanied Saṅghamittā to Ceylon. All of them taught the Vinaya at Anurādhapura (*Dpv.* xv, 77–9; xviii, 11–3).

AGGIMUKHA (fire-mouth), the name of one of four species of snakes, mentioned by way of simile in the *Visuddhimagga* (308). Their bite is said there to be capable of causing bodies to grow hot. They are also mentioned in the *Atthasālinī* (*DhsA.* 300). For the names of the four species, see KAṬṬHAMUKHA.

AGGINIBBĀPAKA (var. Agginibbāpana), name of Māṇava (q.v.) thera in a previous birth as a world ruler (*cakkavatti*).

AGGIPAVISAKA, a cetiya in Anurādhapura, Ceylon, built to commemorate the spot where three nephews of king Khallāṭa-nāga immolated themselves in a fire. They were Tissa, Abhaya and Uttara, and were the sons of the king's half-sister. They had intrigued to kill the king, but the plot leaked out and they took refuge in the temple of the Jain ascetic, Giri. Knowing the fate which would befall them they decided to throw themselves on a pyre.

Aggipavisaka (fire-entering) cetiya was built on the spot of the self-immolation of these young princes, who had outstanding qualities (*sūra-vīra-parakkama*) which fired the people with admiration. It was here that the cetiya of the Abhayagiri vihāra was later built (*MhvA.* p. 612).

D. T. D.

AGGISAMA, name of Pupphathūpiya (q. v.) thera in sixteen successive previous births as a world ruler (*cakkavatti*).

AGGISĀMA, name of Udakāsana-dāyaka (q.v.) thera in a previous birth as a king.

AGGISIKHA, name of Gatasaññaka (q.v.) thera in three successive births as a world ruler (*cakkavatti*).

AGGI SUTTA (1), a discourse in the *Saṃyutta Nikāya* (V, 112). Some bhikkhus, having been questioned by the paribbājakas as to what distinction there is between the Buddha's teaching on the five hindrances (*pañca-nīvarana*) and the factors of enlightenment (*bojjhaṅga*) and their own teaching on the same subject, come to the Buddha and ask him for an explanation. The Buddha advises them to place before the challengers

---

1 The commentary on this sutta is very brief (*AA.* IV, 65) and the reader is referred to the commentary on the *Cūlaccharāsaṅghāta Sutta* which contains particulars pertaining to the *Aggikkhandhopama Sutta*. See *AA.* I, 67–70.

2 *Mhv.* xii, 34–6, p. 97; *Dpv.* viii, 7, p. 54; *VinA.* I, p. 67; *Mhbv.* p. 114.

3 *Mhv.* xv, 176–7, p. 126; *Mhbv.* p. 133.

a counter-question about what factors of enlightenment it is reasonable to cultivate and what unreasonable, what happens when the mind is sluggish (*līna*), and what when the mind is elated (*uddhata*). Making no subtle distinctions on this matter, having no specific doctrines regarding it, the paribbājakas, says the Buddha, would not be able to answer, and it is on this ground that there lies the difference between his teaching on this subject, and theirs. His own teaching, however, is that it is inadvisable to try to cultivate the factor of enlightenment known as tranquillity (*passaddhi*), or of concentration (*samādhi*) or equanimity (*upekkhā*), when the mind is sluggish, because it is hard to raise it up by these conditions, just as it is difficult to make a little fire blaze up if it is fed with wet materials; it is the wrong time to try to cultivate the spirit of enquiry into the law (*dhamma-vicaya*), energy (*viriya*) or zest (*pīti*) when the mind is in a state of elation. That would be like heaping dry grass on a fire which one wants to quench.

When the mind is sluggish it is the psychological opportunity to attempt the cultivation of a spirit of inquiry, of energy or of zest, for then it is easy to raise the mind from its sloth by these factors, just as surely as it would be to blaze a little fire by adding dry materials or blowing it with one's mouth, etc. It is the right season for the culture of tranquillity, of concentration and equanimity when the mind is in a state of elation, for then it is easy, as it is to quench a fire by heaping wet materials or exposing it to wind and rain, etc. But to cultivate mindfulness (*sati*), says the Buddha, is good at all times. There is no season for it. Whether the mind be sluggish or elated, this factor of enlightenment is always timely to cultivate.

The sutta obviously derives its name from the consistent, and quite significant, simile of fire (*aggi*). Indicating by implication the state of mind which is best attuned to the cultivation of enlightenment, and the aim and function of the factors of enlightenment, it seems to be a sutta of considerable importance to the ethics of Buddhism. The state of mind most attuned to the search for Nibbāna is that between sluggishness and elation. The aim of the wayfarer who is attempting to cultivate the factors of enlightenment is to attain this state, to quench the excitement, and to enliven the slovenliness of the mind. It is in that state of calm, it is suggested, that the mind is best equipped to the flash of wisdom which shatters the darkness of ignorance. A full grasp of the precise meaning of the words *līna* (here translated as sluggishness but literally meaning stuck fast, adhering) and *uddhata* (here translated elation but literally meaning puffed up, inflated) should prove very useful to the understanding of the requirements for the traveller on the Eightfold Path, and on this, some light may be thrown in the *Pubbe* or *Hetu Sutta* of the *Pāsādakampana Vagga* in this same Nikāya (*S.* V, 263) where the Buddha makes reference to his own struggle for enlightenment, contending between over-sluggishness and over-strain. See also PARIYĀYA SUTTA.

B. J.

AGGI SUTTA (2), contained in the *Akkosaka Vagga* of the *Pañcaka Nipāta* of the *Aṅguttara Nikāya* (III, 256). It enumerates five dangers arising from fire—it is harmful to the eyes, it causes ugliness and weakness, it encourages crowds and it leads to base talk. The *uddāna* (list of titles at the end of the chapter) refers to this sutta as *Aggismim* after the word occurring in the sutta.

AGGI SUTTA (3). There are two suttas which go under this name in the *Aṅguttara Nikāya* (IV, 41–6) referred to as the 'two fires' (*dve aggi*) at the close of the *Mahāyañña Vagga* (ibid. 67) in which they occur.

The first is addressed by the Buddha to his monks and is very brief, merely enumerating the seven fires. They are, he says, the fires of passion, hatred, delusion, the venerable, the householder, the gift-worthy, and the wood-fire.

The second, which is placed immediately after, elaborates and explains this notion of the seven fires, citing the occasion for the exposition. A brāhman, Uggatasarīra by name, preparing for an animal sacrifice, appears before the Buddha to discuss with him regarding the laying of the fire and the setting up of the sacrificial post, which, the brāhman asserts, he has heard to be very fruitful and very advantageous to one's welfare. Ānanda advises him to ask the Buddha for his instruction on the matter. When the brāhman does so, the Buddha tells him that the results of animal sacrifice are evil not only in their performance but even before it, preceded as it is by thoughts, words and deeds which bring evil as their fruit. The ritual of the laying of the fire and the setting of the sacrificial post or pillar involves the conception or volition, the verbal instruction and the actual, physical initiation of slaughter which is condemned downright in this part of the sutta as leading to damnation, though falsely conceived as meritorious. The Buddha then goes on to show that there are indeed fires which should be avoided by those who wish to avoid evil results, namely, the fire of passion, hatred and delusion, the first three of seven fires. He then names three other fires which, on the other hand, are desirable and deserving of honour, being fruitful and rewarding: the *āhuneyyaggi*, *gahapataggi*, and *dakkhineyyaggi*. These names are the traditional ones of the Vedic fire-ritual, the Āhavanīya, the Gārhapatya and the Dakṣiṇa fires which are the objects of reverence in the daily domestic rites of the brāhmans according to their ritual literature.

The names are apparently used in the same sense in which the ritual understood them, connoting objects deserving daily reverence, but the sutta gives them an ethical twist by identifying these three fires as symbols of three categories of persons deserving perpetual domestic honour and attention. Parents are the *āhavanīya*; wife, children and employees of the household are the *gārhapatya*; and brāhmans and recluses who become gift-worthy, not by reason of the ritual but by their possession and pursuit of inner peace, are the *dakṣiṇa aggi*.

Lastly, the Buddha names a seventh fire, called the wood-fire (*katthaggi*) which he describes as having to be kindled from time to time, tended from time to time, quenched from time to time, laid from time to time. Whether the Buddha is making specific reference or not to the fire of the ascetic, which, in the Jātakas (I, 285; II, 43) and elsewhere, hermits seeking release carry to the forest, is not explicit in the sutta.

The sutta ends by Uggatasarīra accepting the Buddha's teaching and releasing the animals, which had been brought for the sacrifice, from their captivity. See also AGNI (1), KŪṬADANTA SUTTA.

R. J.

AGGI-VACCHAGOTTA SUTTA, a discourse to Vacchagotta on fire, in the *Paribbājaka Vagga* of the *Majjhima Nikāya* (I, 483 f.). It forms the second of three suttas preached to the paribbājaka Vacchagotta by the Buddha, given in this chapter. Vacchagotta also figures in several other suttas found especially in the *Avyākata Saṃyutta* of the *Saṃyutta Nikāya*.

This sutta gives a clear indication of the attitude adopted by the Buddha towards speculative views. Vacchagotta comes to the Buddha at Jetavana and asks, "Is the revered Gotama of this view: 'The world is eternal (*sassata*), this indeed is the truth, all else is falsehood'?" "No", says the Buddha. The same question on nine other views follows—the world is not eternal (*asassata*); the world has an end (*antavā*); the world has no end (*anantavā*); the life principle and the body are the same (*taṃ jīvaṃ taṃ sarīraṃ*); the life principle is one and the body another (*aññaṃ jīvaṃ aññaṃ sarīraṃ*); the Tathāgata exists after death (*hoti Tathāgato paraṃ maraṇā*); the Tathāgata does not exist (*na hoti*) after death; the Tathāgata both exists and does not exist after death; the Tathāgata neither exists nor does not exist after death. In each case the answer is in the negative as in the first. These are the views usually described as unrevealed (*avyākata*, q.v.) and the paribbājaka Vacchagotta himself is represented as putting the same questions to Moggallāna and also to the Buddha in the *Saṃyutta Nikāya* (IV, 391 f.).

But what danger does the Buddha see in taking to these speculative views? To hold any of these views is a going to a wrong view (*diṭṭhigata*), a tangle of views (*diṭṭhi-gahana*), a wilderness (*kantāra*), the wriggling (*visūka*), the scuffling (*nipphandita*), a fetter (*saṃyojana*). It is accompanied by anguish (*dukkha*), distress (*vighāta*), misery (*upāyāsa*) and fever (*pariḷāha*), nor is it conducive to aversion (*nibbidā*), dispassion (*virāga*), cessation (*nirodha*), calm (*vūpasama*), insight knowledge (*abhiññā*), awakening (*sambodhi*) and Nibbāna. Knowing this peril the Buddha does not accept any of these views.

Then, has the Buddha any other view? No. Yet he has seen the nature of each of the five aggregates (*pañcakkhandha*), their arising, as well as their disappearance. By the destruction (*khaya*), giving up (*cāga*), casting out (*paṭinissagga*) of all imaginings (*maññita*), speculations (*mathita*) and belief in the idea of 'I' and 'mine' the Tathāgata is freed without clinging (*anupādā vimutta*).

Where is a monk, thus released, born? 'Born' cannot be applied to him. In the same way the terms 'not-born', 'both born and not-born', 'neither born nor not-born' cannot be applied to him. Vacchagotta is bewildered at the answer, and he is at a loss to understand it. He says that even the satisfaction he had from former talks with the Buddha has now disappeared. That is not surprising, is the Buddha's answer. For the Dhamma is deep (*gambhīra*), hard to see (*duddasa*), hard to understand (*duranubodha*), peaceful (*santa*), excellent (*paṇīta*), beyond logic (*atakkāvacara*), subtle (*nipuṇa*), intelligible to the wise (*paṇḍita-vedanīya*) and Vacchagotta is a follower of another teacher, and of another doctrine. The simile of fire is employed to make the point clear. Point by point Vacchagotta admits that he can know a fire ablaze before him, he can know the reason for its blazing to be the fuel, and when the fire is extinguished that, too, he can know. But does he know in which direction the extinguished fire has gone? No. The fuel being totally consumed, and there being no other fuel, the fire is quenched. That he knows, and only that. In the same manner, each of the five aggregates by which the Tathāgata is recognised, has been got rid of (*pahīna*) by him, cut at the root (*ucchinnamūla*), made like unto a stump of a palm tree (*tālavatthukata*) that cannot come to further existence (*anabhāvakata*) and is not liable to rise again (*āyatiṃ anuppāda-dhamma*). Freed from the denotation of these five aggregates, the Tathāgata is deep, immeasurable (*appameyya*) and unfathomable (*duppariyogāha*) like the great ocean. Hence none of those four alternatives can be applied to him. Vacchagotta is fully convinced and requests the Buddha to accept him as a lay disciple from that day forth as long as his life lasts.

C. W.

AGGIVESSA, one of the six guards of king Eleyya, according to the *Aṅguttara Nikāya* (II, 180). Like the king, Aggivessa and the other guards were devotees of Uddakarāmaputta. It is not known whether this name has any connection with Aggivessana, which appears to be a *gotra* (clan) name. The Sanskrit Agniveśya occurs as the name of a teacher (*SBE*. XV, 118, 186; *Mahābhārata*: Sukthankar's edition, I, p. 667) and also as the name of a brāhman *gotra* (*Divy*. 635).

AGGIVESSANA, a *gotta* or family name. The term occurring in Pali literature is Aggivessana, but two forms are known in Pali grammar: Aggivessāyana, Aggivessāna[1]. The corresponding Sanskrit is Agniveśyāyana or Agnivaiśyāyana.

1 *Kaccāyanavutti*, Sinhalese edition by Dharmakīrti Śrī Dharmārāma, 1904, p. 69.

It was a common practice to address a person by his *gotta* name. The Buddha often addressed wandering ascetics not as *paribbājaka* or by their personal name but by their *gotta* name. In turn, the Buddha was spoken to as Gotama by non-Buddhists. (See *Dialogues of the Buddha*, I, p. 195.)

Among those addressed in the suttas by the name of Aggivessana are Nigaṇṭha Nātaputta (*D.* I, 47)[2] Saccaka Nigaṇṭhaputta (*M.* I, 227), Dīghanakha paribbājaka (*M.* I, 497) and the novice Aciravata (*M.* III, 128). In the corresponding Sanskrit narrative of Dīrghanakha he is addressed as Agnivaiśyāyana and is known to be a brāhman (*Avś.* II, 187). There was also a teacher of the Upaniṣads by the name of Agniveśyāyana (*SBE.* I, 267). The famous Jaina disciple Sudharman, too, belonged to the Agniveśyāyana *gotra* (*SBE.* XXII, 286).

Aggivessana would appear to be a brāhman *gotta* name. Agniveśya is mentioned as one of the forty-nine clans of the brāhman caste in the *Divyāvadāna* (p. 635). But not all those addressed as Aggivessana were brāhmans. Chalmers (*Further Dialogues*, I, 162, n. 1) has explained this seeming anomaly by putting forward the theory that the *khattiyas* who styled themselves Aggivessana took the name from their brāhman *purohitas* (family chaplains). But Rhys Davids does not agree with this theory for the reason that there is no evidence that such priests were usually maintained in their clans. His view is that *gotta* names were probably used by brāhmans and by members of the free clans. The similarity between the *gotta* names of the non-brāhmans and those given to the brāhmans in the brāhman books should be explained by the fact that the clans claimed to be descended from the same ancestors as the brāhmans who also bore these names (*Dialogues of the Buddha*, loc. cit.).

L. R. G.

AGGREGATES, a collective term, including physical (*rūpa*) as well as non-material (*arūpa*) groups. The Pali term *khandha* (Skt. *skandha*) indicates a collection of ingredients which together comprise the phenomenal process of continued existence (*khandha santāna*). The word is also used in a less technical sense indicating the total mass of ill, all that goes to make up the concept of conflict in its arising and cessation (*kevalassa dukkhakkhandhassa samudaya* and *—nirodha*). But in a more specialised usage the aggregates (*khandha*) are the factors which constitute the process of existence, not as elements but as agents. As these aggregates are the factors which contribute to the continuation of the process of birth, life and death through their grasping and laying hold of fresh material for their nutriment (*āhāra*, q.v.), they are rightly called the aggregates of clinging (*upādānakkhandha*).

In a stereotyped analysis of this process we find an enumeration of five aggregates (*pañcakkhandha*), which will be dealt with under their respective headings: one physical group (*rūpakkhandha*) with its four basic elements (*dhātu*) and 24 derived (*upāda*) material phenomena, and four mental aggregates (*nāmakkhandha*), each forming a group of psychic phenomena, analysed, divided and subdivided as five kinds of feeling or mental reception (*vedanā*), six kinds of mental perception (*saññā*), fifty kinds of ideation or mental conception (*saṅkhāra*), and six kinds of consciousness (*viññāṇa*). All of them are associated and conditioned in mutual dependability (*aññamañña-paccaya*), which gives this process of continuity the appearance of substantiality. But it is exactly for the purpose of showing the non-existence of a substance, soul or abiding entity (*an-atta*) that this entire process is analysed in such minute detail.

As factors of existence, the aggregates are compared to the various co-existing parts of a chariot: they constitute the whole, and apart from them there is naught.

There are various ways in which these five groups of aggregates are classified. The usual one of body (*rūpa*) and mind (*nāma*) has already been outlined. The *Dhammasaṅgaṇi* treats all phenomena under three groups: physical (*rūpa*); mental (*cetasika*) which comprehends *vedanā*, *saññā* and *saṅkhāra*; and mind (*citta*), the equivalent of consciousness (*viññāṇa*).

Nyanatiloka (*Buddh. Dictionary*, p. 77) emphasises that not only does the total process of individual existence *not* constitute any self-dependent real ego-entity or personality (*attā*), but also that these five complete groups have no real existence either, as only single representatives of these groups can arise with any state of consciousness. For example, with one and the same unit of consciousness (i.e., in one single thought) only one single kind of feeling, say joy or sorrow, can be associated and never more than one. Similarly two different perceptions cannot arise at the same moment. As phenomena they have no substantiality, and apart from them there is no substance either. See further KHANDHA, RŪPA, SAṄKHĀRA, SAÑÑĀ, VEDANĀ, VIÑÑĀṆA.

H. G. A. v. Z.

AGHAMŪLA SUTTA, the thirty-first of the *Khandha Saṃyutta* in the *Saṃyutta Nikāya* (III, 32). It explains pain (*agha*) and the root of pain (*aghamūla*).

The five aggregates of corporeality, feeling, perceptions, formations and consciousness are said to be the source of all pain and misery, and the craving that leads to rebirth, accompanied by delight and lust is referred to as the root of pain.

AGHANIṢṬHA, a class of gods. See AKANIṬṬHA.

ĀGHĀTA, malice. See PAṬIGHA.

---

2 But this is an error as Nātaputta was a Kassapa (see *SBE.* XLV. p. xxi)

ĀGHĀTA SUTTA, the name given to several discourses of the *Aṅguttara Nikāya* (III, 185, 186; IV, 408). An entire chapter (xvii) of the *Pañcaka Nipāta* (*A.* III, 185–203) has derived its title from the first sutta contained therein.

The first sutta (*A.* III, 185) deals with five ways of putting away malice (*āghāta-paṭivinaya*), viz., by developing feelings of loving-kindness, of compassion and of equanimity, further by means of inattention to the evil done, and finally by means of rationalisation: the fact that one is only reaping the fruits of one's own deeds should dispel all feeling of malice for another.

The sutta which follows also deals with the overcoming of malice in five ways, and is spoken by Sāriputta addressing the monks (*A.* III, 186). But here the five methods vary according to the person in whom feelings of hatred with a desire to hurt (*āghāta*) have arisen. If such a person is impure in deed but not in word, he should, at the time when hate arises in his heart, dwell in his mind on actions that may be pure. Similarly, he who is pure in deed but not in word, should think of pure words only and put the impure out of his mind; just as a man, tortured by heat and thirst, arriving at a pond overgrown with mossy slime and weeds, would scatter those impurities with both hands and then plunge into that pool to refresh his limbs. Again, there may be some, impure both in deed and word, who yet obtain mental clarity and calm once in a way; they should fix their mind just on that occasional experience, however shortlived it may be, as a thirsty man, who finds no water except in the footprint of a cow, can sip only therefrom by crouching on all fours and drink from it as cattle do. But, when malice arises in a heart which is impure in thought and action, and which not even occasionally obtains clarity and calm, like an ailing man on a journey far from any village, unable to get either food or medicine,—then the only way for such malice to be overcome is through the compassion of someone else. But in him whose ways are pure and whose words are fair, whose mind is open and whose heart is calm, a thought may be made to arise and be fixed on any of those states (*manasikātabba*), and malice will be put away.

The other eight suttas which are included in this *Āghāta Vagga* (*A.* III, 185–203) do not deal with malice, but with the qualities required in a monk to allow him to address his fellow monks (*Sākacchā Sutta*), and to be an example to them (*Sājīva Sutta*); with the states of mind of one who questions another (*Pañha-pucchā Sutta*); with a dispute between Sāriputta and Udāyin regarding the cessation of perception and feeling (*Nirodha Sutta*); with the five conditions required in one to be fit to exhort another (*Codanā Sutta*); with virtue and the absence thereof, affecting concentration and insight, disgust with the world, dispassion and emancipation ([illegible] *Sutta*); with careful observation (*Nisanti Sutta*) leading to a thorough grasp and aptitude; and finally with the most perfect sense-objects as explained by Bhaddaji and Ānanda (*Bhaddaji Sutta*).

Two more suttas on malice (*dve āghātāni*) appear in the *Navaka-nipāta* of the *Aṅguttara Nikāya* (IV, 408 f.). The first speaks of the nine bases of malicious thought: which are the thoughts that someone has done, in the past, or is doing now, or will do in the future, 'harm either to me or to someone dear to me; or good to someone not dear to me'. This sutta is followed by the nine ways of dispelling such thoughts, in which each of the evil thoughts of the preceding sutta is followed by the introspective question. "But wherein lies the gain to him from this?" And with such reflection the earlier malicious thought is put away.

H. G. A. v. Z.

AGILITY (*lahutā*, q.v.) or lightness is of three kinds: As a characteristic of corporeality (*rūpassa lahutā*) see RŪPA. As a mental factor (*cetasika*) it is either agility of sensation, perception and ideation (*kāya-lahutā*) or agility of consciousness (*citta-lahutā*). See CETASIKA.

AGNI (1), the Vedic fire god, is perhaps the most contemptuously treated of the Vedic deities referred to in the Pali Buddhist literature of early times, and, unlike Indra who has been adopted (see SAKKA) and Brahmā who has been assimilated (see BRAHMĀ), is not admitted into the Buddhist pantheon in any form. The early Buddhist writers make no mistake as to the identification or association of this deity by the brāhmans with the Vedic fire ritual, which, particularly with regard to animal sacrifice, the Buddhists have always totally condemned. Their scorn for this ritual is perhaps associated with the fact that the Vedic Agni shared characteristics in common with the brahmanical priest, for whom the monastic writers of early Buddhism seem to have nothing but ridicule and contempt. In the Vedic pantheon Agni, being the sacrificial priest of the gods, was the divine representative or symbol of the brahmanical priest. (Keith, *Religion and Philosophy of the Veda* in *HOS*. Vol. 31, p. 159; Hopkins, *Epic Mythology*, 105–6.)

Agni is referred to in the early Buddhist literature by the name Aggi-bhagavā, the identity of which two terms has been discussed elsewhere (see AGGI-BHAGAVĀ). Usually, he is mentioned in association with the sacrificial ritual and the worship given him by his votaries, but there are a few instances where he is mentioned merely as the god of fire, with nothing said of fire worship. Such an instance is the reference to Aggi-bhagavā in the *Vaṭṭaka Jātaka* (*J.* I, 214) where the bodhisatta, commanding a jungle fire to retreat, says:

> "I conjure thee, dread Lord of Fire,
> Primaeval Jātaveda, turn, go back!"
>
> (*Jātaka*, trsl. *PTS*. I, p. 88).

Here, however, the reference to the fire as god is so abrupt, the prose context having all the time referred to fire as the element, that it is difficult to be certain whether it is not merely poetically that the personified use of the term is being made. If, however, it is

... merely poetic but an address to the god himself, then it is not favourably that he is being spoken of. This fact would appear very clearly in contrasting this reference with the attitude taken to Pajjunna in a similar birth-story, the *Maccha Jātaka* (*J.* I, 332), where the latter, the Vedic rain god, is appealed to or prayed to rather than scorned or commanded :

> " Pajjunna, thunder! Baffle, thwart, the crow !
> Breed sorrow's pangs in him ; ease me of woe ! "
>
> (*Jātaka*, *PTS.* trsl. I, p. 184).

The Jātaka writer adds in his unwillingness to surrender the superiority of righteousness over divine power, that the bodhisatta called to Pajjunna as a master might call to a servant.

This attitude to Agni is confirmed by the evidence of another similar address in the *Naṅguṭṭha Jātaka* (*J.* I, 493) where he is referred to as the 'vile Jātaveda '.

This name, Jātaveda, is used for Agni in both the *Naṅguṭṭha Jātaka* and *Vaṭṭaka Jātaka* in addition to the term Aggibhagavā. But its use in the Buddhist literature sheds no more light on the vexed question (see further *SBE.* XXVI, p. xxxi) of the etymology of this term than scholars have been able to obtain from Vedic studies.

What may be another solitary reference is the use of the term Aggideva in the *Ghata Jātaka* (*J.* IV, 81). It is here the name given to the son of Devagabbhā whose other sons are also named after gods, Vāsudeva, Baladeva, Sūryadeva, Candadeva, Ajjuna, Pajjunna. It is surmised that this Jātaka is probably a nature myth. Aggideva is here named obviously after the fire god, or is probably the fire god himself of the myth.

For the rest of the references to Agni the Buddhist writer does not seem to be able to dissociate himself from the knowledge that the brahmans associated the deity with the ritual of the fire. The *Brahmajāla Sutta* (*D.* I, 9) lists sacrifice to Agni (*aggihoma*) among nine *homas*, or offerings of oblation, namely, *dabbihoma*, *thusahoma*, *kaṇahoma*, *taṇḍulahoma*, *sappihoma*, *telahoma*, *mukhahoma*, *lohitahoma*, all of which are given as disapproved practices. It is not for the fact that he does not practise these, the Buddha says, that he should be reverenced, evidencing by this statement that the practice of these rituals must have been held in some esteem at the time.

It is in this same spirit of the Buddha's statement in the *Brahmajāla Sutta* that the sacrificer to Agni is referred to in the *Ambaṭṭha Sutta* (*D.* I, 101) where, too, it is maintained that such a sacrificer to fire is worthy only to be a servant to the man of wisdom and righteousness.

The latter sutta speaks of a man as building himself a fireshrine (*agyāgāra*) in a forest or near the boundary of a village. The *Pāyāsi Sutta* (*D.* II, 339) also refers to a fire worshipping Jaṭila dwelling in a leaf hut, and of this Jaṭila instructing his son to keep the fire burning, probably because it was the accepted belief that it was inauspicious or sacrilegious to let the fire go out. Retirement to the forest for fire sacrifice is also indicated in several Jātakas, particularly those already cited, and generally in a fair number of others, all of which seem infused with the breath of brahmanical fire rituals. This is confirmed as a fact also by statements to the same effect in the *Therīgāthā* (143) and *Theragāthā* (219) as well as in the *Dhammapada* (143).

The notion of the birth fire (*jātaggi*) is found frequently occurring in the Jātakas. The *Naṅguṭṭha*, *Santhava* and the *Asātamanta Jātakas* refer to brāhman youths being confronted with two alternative careers, the seeking of their education at Takkasilā and then returning to the householder's life as one, and the taking of the birth fire to the forest, there to worship the Lord of Fire, Aggibhagavā, as the other. The birth fire which is lit at the birth of a brāhman child is expected, according to them, to be kept burning continuously throughout his life.

According to the information found in the *Saṃyutta Nikāya*, it may be hazarded that fire had been connected with the death rites as well, at least among certain sects of brāhmans. In the *Saṃyutta Nikāya* (IV, 310) the brāhmans of the west, the Pacchābhūmaka brāhmans " who are carriers of waterpots, weavers of lily garlands, worshippers of fire, when a man dies, lift him up and carry him out, call on him by name and speed him heavenward ". This may be interpreted as a hint that the ritual of the fire worshippers was associated with their death ceremonies and that it may have had a connection with the belief in the after life.

The Pacchābhūmaka brāhmans are referred to by Cunda in the *Aṅguttara Nikāya* (V, 263), too, where they are represented as enjoining purifying rites on their adherents. Here, some procedural information is available on the required rites, though of a very scanty nature. Cunda, who is depicted as a believer, here tells the Buddha that the brāhmans instruct their followers to rise up in the morning and touch the ground, or to touch wet cowdung, or to worship fire, or to worship the sun, if not to descend into the water.

Some further information is available on the subject in the *Aṅguttara Nikāya* (V, 234) where Jāṇussoṇi, the brāhman, describes to the Buddha the ceremony of the 'Descent of the Brāhman'. Jāṇussoṇi is seen standing in fresh linen clothes, having washed his head in the morning of the sabbath day, holding a handful of wet *kusa* grass. The Buddha asks him why he is doing so, and he says, " It being the sabbath, brāhmans wash their heads, put on a fresh set of clothes, smear the floor with wet cowdung, and make their bed between the boundary (*velī*)[1] and the fire shrine (*agyāgāra*). Rising up thrice in the night with clasped hands they do homage to fire, saying 'We come down (*paccorohāma*) to your worship, we come down to

1 The *Ambaṭṭha Sutta* refers to a fire shrine being built on the boundary of a village. Is it this that is being referred to as a *velī* ?

your worship!' Then they feed the fire with oblation of oil of butter and fresh water. When the night has passed they feed brāhmans with choice food, both hard and soft."

It may safely be surmised that the ritual which Jānussoṇī, himself a brāhman, is describing as taking place in the night is what is known as the *Agnyupasthāna* in the Vedic Agnihotra.

That the Buddhists were aware of the ritualistic requirement to feed the brāhmans with the residual of the sacrifice is well brought out in the episode of Sundarika Bhāradvāja (*S.* I, 166; *Sn.* 79) who, having performed the rites, looks round for a brāhman (by caste) to offer the residual oblation, and seeing the Buddha, mistakes him to be one. The brahman inquiring into the Buddha's caste, the Buddha gives his familiar ethical twist to the notion of brāhmanhood, showing that he is the highest brāhman in that sense of the term. The attempt to show the magical properties which the residual oblation displayed when sunk in the water is probably inserted to prove the point that the Buddha was qualified (as a brāhman) to accept the residual oblation. It was probably believed that the *ucchiṣṭa*, the residual oblation, retained magical qualities when the sacrifice had been perfectly performed. (On this, see further: *Atharvaveda*, xi, 3. 7.; *Śatapatha Brāhmana*, ii, *Adh.* 3.; Macdonell, *Vedic Mythology*, 155.) An episode similar to that of Sundarika Bhāradvāja is also related of the Bhāradvāja brāhman whom the Recensionists called Aggika by the fact that he was a fire worshipper. The *Theragāthā* mentions another Bhāradvāja who renounced fire worship to join the Order, Aṅganika Bhāradvāja (218-9). In the minds of the Buddhists, the Bhāradvāja clan was obviously associated with the fire ritual.

They were also aware of the distinction made by the brāhmans regarding the fires of the householders and of those worthy of offerings and gifts, as seen in the *Aggi Sutta* (*A.* IV, 41-6). This sutta speaks of seven fires. In the *Saṅgīti Sutta* (*D.* III, 217) are mentioned six. In both suttas the usual ethical twist is given to the Vedic concept of the fire ritual. It is tempting to suggest that the notion of seven fires may derive from the concept of the seven tongues of Agni.

As said before, an attitude of condemnation runs throughout all references to Agni in Buddhist literature of these early times. The reason for this was, partly, that the ritual was associated in the Buddhist mind with the sacrifice of animal life. The orgies of the sacrifice are described with much emphasis and exaggeration in the *Aggi Sutta* already cited. But it was also felt that it needed condemnation on the grounds of its futility as a means of purification or salvation. This futility is expressed frequently, as in the *Therīgāthā* (143), where Khemā says:

> Lo! ye who blindly worship constellations of heaven,
> Ye who fostering fire in cool grove, wait upon Agni.
> Ignorant are ye all, ye foolish and young, of the Real,
> Deeming ye thus might find purification from evil.
>
> (trsl. *PTS*, p. 83).

Nadī Kassapa, a Magadha brāhman who once carried out fire ritual on the bank of the Nerañjarā, having come to arahantship by hearing the 'sermon on burning', confesses thus (*Thag. vv.* 341-3):

> The celebrant in many a sacrifice,
> I fostered fire, oblations made;
> 'These be the pure and holy rites!' methought—
> O blind and average worldling that I was!
> Errant in wilderness of heresies,
> By their contagion dazed and led astray
> I deemed *that* pure religion which was false.
> And blinded was I, shiftless, ignorant.
> Now is all error put away from me;
> Broken the line of comings back to be.
> Worth every gift, the Fire I celebrate:
> I worship 'Him who On This Wise Hath Come'.

The Buddhist attempt throughout is to show what has been succinctly expressed in the *Dhammapada* (*v.* 107), "If a man for a hundred years worship Agni in the forest, and if he but for a moment pay homage to a man whose heart is grounded in true knowledge, better is that homage than sacrifice for a hundred years." In brief, morality was a hundredfold more meaningful than mere ritual.

BANDULA JAYAWARDHANA.

AGNI (2), name of a yakṣa leader mentioned in the *Mahāmāyūrī* (236: *BHS.* s.v.).

AGNIBHĀṆDA, name of a people mentioned in the *Mañjuśrīmūlakalpa* (582), among whom the Buddha made a descent from the gods, an event (according to Edgerton: *BHS.* II, 4), other than that which is said to have taken place at Sāṅkāśya (see SAṄKASSA), and which is mentioned a few lines earlier in the same context. Edgerton states (loc. cit.) that it is definitely not identical with Saṅkassa, where the event is otherwise located.

AGNIDATTA, a brāhman king of Vairambhya (*GM.* III, pt. I, 25-45). Once, wandering in the country of the Sūrasenas, the Buddha arrived at Vairambhya. On hearing this, Agnidatta came to see him and after listening to a religious discourse requested the Buddha to receive from him all the requisites of a recluse for three months. The Buddha agreeing, he gave orders for the preparation of all kinds of food for the next day, but never said to whom the food should be given. Then he decreed that no one in his kingdom, except himself, should feed the Buddha or his disciples during those three months. That very night he had a dream, and, greatly perturbed over it, requested his house-priest to interpret it. Not desiring to see the growth of the king's inclination towards the Buddha, the house-priest interpreted it as an evil dream capable of bringing disaster on the kingdom or death to the

king. To avoid these the king was advised to keep away from the public for three months. It was proclaimed that any person who saw the king during the three months would be punished with death. As a result of all this, the Buddha and his disciples did not receive any food either at the palace or from the people. For the whole of the three months they had to live on *yava* (barley), meant for horses, supplied by a horse dealer. At the end of this period Ānanda went to the palace to inform the king of their intention to leave the kingdom. It was then that the king realised his fault and he was so perturbed by it that he fell down unconscious. After recovering, he hurried to the Buddha and begged his pardon for all the inconvenience caused by his act and further offered to supply the Buddha and his disciples with all their needs for the rest of his life. When this was rejected, he offered to do this for seven years but was again rejected. However, at the end, the Buddha accepted an invitation to have his meals at Agnidatta's palace the following day. After the meal he encouraged Agnidatta with a religious discourse and departed from Vairambhya.

The *Divyāvadāna* (620.13) also refers to a king named Agnidatta.

C. W.

AGNIDEVAPŪJĀ-NĀMA, a Sanskrit text in its Tibetan translation, the *Mehi-lha-mchod-pa shes-bya-ba*, in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. Its author is Dpal-ḥdsin (Śrīdhara) Dharpaṇācārya of India; and a Tibetan Śes-rab rin-chen (Prajñāratna) translated the work into Tibetan (*Cordier*, II, p. 182, No. 124; *TM*. 2043).

AGNI-DHĀTU-SAMĀDHI, literally, 'meditation in a fire-world'. It is a kind of *samādhi* in which the meditator seems to be in flames of fire-wisdom. Many Chinese translations have approximately the same meaning.

This term has a long history. First, in the *Bimbisāra-pratyudgamana-sūtra* (*Taishō*, vol. I, *Madhyama-āgama* fasc. ii, No. 62; Pali: *Vinaya*, *Mahāvagga* I, 4, 1) it is mentioned, "Having entered into *agni-dhātu-samādhi*, Uruvilvā-kāśyapa issues flames of various colours, blue, yellow, red and white, from his body. From the upper half of his body fire is radiated, while from the lower part of the body water is sent forth ...." Next, in the works of scholastic sects we find similar descriptions. For example, the 177th fasc. of *Mahāvibhāṣāśāstra* (*Nanjio*, No. 1263) states, "Then the Buddha stood up from his mat (*niṣīdana*) and went up to the top of the mountain, where he entered into a niche of Vaidūrya. There he spread a mat and entered into the *agni-dhātu-samādhi*. After seven days and nights he completed his practice and enjoyed supreme bliss, while light emanated from the whole of his body."

Further, the *Mahāsaṅghika Vinaya* (*Nanjio*, No. 1119) states that the Buddha ascended up to heaven by his marvellous steps and there entered into *agni-dhātu-samādhi*. He burnt himself (*kṣāpayati*; P. *jhāpeti*) and got final emancipation (*parinirvāṇa*).

Thirdly, in some sūtras of Mahāyāna we also find accounts of this special meditation. In the second fascicule of the *Mahāparinirvāṇa-sūtra* (*Nanjio*, Nos. 113 & 113) occurs the following interesting statement, "At the time (of the Buddha's parinirvāṇa) Subhadra went up to the Buddha and said, 'Lord, I cannot bear to see you go into parinirvāṇa, so I wish to attain it before you (will pass away).' The Lord said, 'Good!' Then Subhadra entered into the *agni-dhātu-samādhi* and reached parinirvāṇa right in front of the bed where Śākyamuni lay dying."

The fourth or the last stage in the development of the concept of *agni-dhātu-samādhi* is that of esoteric or later Mahāyāna Buddhism. There, the meaning of this term was changed. It comes to indicate the samādhi of Acalāgra, as seen in the descriptions given in the *Trisamaya-acarārya-krodha-rājadūtādhyāya-kalpa* (*Nanjio*, No. 1063. See ACALĀGRA VIDYĀRĀJA). The aim of *agni-dhātu-samādhi* of Acalāgra is to burn up every kind of defilement (*kleśa*) by means of this meditation. Here we probably see the influence on Buddhism of fire worshipping heretics who flourished in India.

Further, in the second chapter of the *Mahā-vairocana-sūtra* (*Nanjio*, No. 530), this mantra of Acalāgra is shown to be that of Mahāvairocana himself. This is because Acalāgra is supposed to be an expression of Mahāvairocana Tathāgata, especially in the later developed, esoteric Buddhism. If a devotee wishes to follow the practice of Acalāgra, he must enter into this samādhi. First, he makes a mudrā of fire, chants a mantra of the letter *Ra*, meditating that the fire of the Tathāgata will burn up his carnal body, so that in him only the letter *Ra* will remain and correspond to the samādhi of the Tathāgata.

We have several records of mediaeval Japan reporting that some priests actually burnt themselves in order to accomplish this samādhi. Probably, it comes from the faith of *kṣāpayati* referred to above. For example, the *Hyakurenshō* states that in 995 A. C. in Kyoto eleven eminent priests burnt themselves on the summit of Amida mountain, and a big crowd gathered to see it. In the *Nihon-Kiryaku* it is said that a high priest named Kakushin had entered into 'fire-Nirvāṇa' in his own temple residence, where even the emperor of that time had gone to worship him.

Thus the origin of the *agni-dhātu-samādhi* is evidently in the fire worship of heretics later purified by the spirit of Buddhism, but again the heretical side of fire worship was more popularly accepted in Japan.

S. K.

AGNIGHAṬA, the fire-pot, name of a hell, which occurs just before Agni-khadā, the fire-pit, in *Kvyū*. 98.

AGNIMĀLA-TANTRARĀJA, name of a Sanskrit text, translated by Gayadhara and Śākya ye-śes into Tibetan under the title *Dpal mehi phreṅ-baḥi rgyud-kyi rgyal po*. The work has been incorporated in the Kangyur under the Rgyud-ḥbum (100,000 tantra) section (*TM*. No. 407).

AGNIMĀLIN, a mythical sea. See AGGIMĀLA.

AGNIMUKHA, name of a nāga (literally, serpent) a previous birth of Māra (*Divy.* 119; 122).

AGNIPRABHĀ, a gandharva maiden who was present with innumerable others in Jetavana to listen to the Buddha (*Kvyū.* 441, 5.15).

AGNIPŪJĀVIDHI, a Sanskrit text extant in its Tibetan translation, the *Meḥi mchod-paḥi cho-ga,* in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. The names of the author and the translator are not recorded. In *TM.* the Sanskrit title is not recorded. But there the author's name is given as Ajitamitragupta and the translators are said to be Śrījaganmitrānanda and Buddhaśrījñāna (*Cordier,* II, p. 310, No. 30 ; *TM.* 2773).

S. K.

AGNIRAKṢITIKĀ, name of a sprite (*piśācī*), mentioned in the *Mahāmāyūrī* (p. 239, *BHS.* s.v.).

AGNIŚRĪ, a bodhisattva whose name occurs in a list of future Tathāgatas (*Gvyū.* 442.7). For details see MĀYĀDEVĪ.

AGNĪŚVARA, name of a former Buddha (*Srs.* 57).

AGNIVAIŚYĀYANA, family name of Dīrghanakha. See AGGIVESSANA.

AGNOSTICISM and Buddhism. There are various ways in which an experience can be approached. There is the detached view of the historian who deals with events and does not allow them to become experiences. There is also the approach of the scientist who, in developing his knowledge, has secured reliable information on a wide variety of subjects with which human knowledge is proximately concerned. He may admit his incapacity to achieve ultimate truth, but this should not be construed as a failure of science, as its aim is not to give a metaphysical view of reality. Only the most superficial thinkers will not feel their degree of assurance diminish as they continue their probings into ever more remote regions of inquiry. Great thinkers have always been keenly aware of the narrow limits within which certain knowledge is possible.

Science is not a body of laws governing reality, but a scheme anticipating the further course of phenomena. Its main interest is ~~in phenomena~~ as such, that is, in their behaviour. Since physics and metaphysics have officially and effectively parted their ways, a stupendous advance in all the various fields of science has become evident. Scientific methods of enquiry are now being employed even by metaphysicians in an endeavour to locate the ultimate object, showing thereby a definite turning away from dogmatism towards scepticism.

It is felt more and more that, unless the spirit of agnosticism—or the admission that certain kinds of alleged existents do not fall within the range of assured knowledge—is made the basis of research in any field, either of physics or metaphysics, the result will be a distortion of the actual values of life. Dreams may be more pleasant for the moment than realities, but life has to be adapted to reality rather than to dreams. To call poverty a blessing because of a subsequent supernatural abundance cannot have any meaning if the very existence of the supernatural remains beyond the reach of our present, knowledgeable experience. In such a case there will be no doubt in the mind of the willing believer, for wishful thinking has always had a strong influence on the formation of dogmas to the extent of arrogancy, " defining the nature of God Almighty with an accuracy from which modest naturalists would shrink in describing the genesis of a black-beetle "[1].

Agnosticism becomes impossible for those who obviously cannot live and act without adopting some kind of positive attitude towards the problems of life, who cannot envisage existence without a goal or purpose, who must see plan and order even in extra-mental phenomena, who feel the inner urge to regulate their lives and those of their neighbours according to pre-conceived standards of morality, who cannot live without hope, whose present lies in the future, who, therefore, do not live now, but exist either as shades of the past or as phantoms of an imaginary future.

As for those who sport the name of agnostic, hoping thereby to remain in the foreground of advanced thought, there are many (not excluding T. H. Huxley who in 1869 invented the term Agnosticism), who have not been able to maintain a complete consistency. For T. H. Huxley himself already accepted something that went beyond the evidence of the senses, as quoted by the Very Rev. Dr. John Baillie [2] : " If there is anything in the world that I do firmly believe in, it is the universal validity of the law of causation, but that universality cannot be proved by any amount of experience." And yet the same Huxley defined the agnostic principle by saying, " That which Agnostics deny and repudiate, as unmoral, is the contrary doctrine, that there are propositions which men ought to believe without logically satisfactory evidence." [3] How a Buddhist Agnostic avoids this pitfall of universality of causation will be seen later.

Unlike the scientific sceptic who entertains varying degrees of doubts as to whether some or all of the psychological processes, purporting to yield knowledge, really do so—the dogmatist is not interested in phenomena, but wants to see behind

1 Sir Lesley Stephen, *An Agnostic's Apology,* London, 1904.

2 'Are not all men agnostics ?' in : *Asking them Questions,* Oxford Univ. Press, 1950, p. 9.

3 *Controverted Questions,* p. 450.

and go beyond. Events and experiences are for the dogmatist but expressions of a further and ultimate cause: a reality behind actuality. Once this supposition is accepted, the fact that the human intellect cannot penetrate this veil is no barrier, and a transcendental or supramundane is created to explain the incomprehensible. Where the intellect fails to grasp an ultimate in an endless series of causes and effects, there an adequate cause in itself takes away the problem and makes it into a mystery which can be accepted by faith alone. But this transcendental, ultimate cause, being generated by an act of faith made by submission of the intellect to a dogma imposed by authority, still remains a product of thought and is, therefore, a self-deception. That this is realised more and more is shown by the fact that in modern times professed agnosticism springs mainly from the bosom of well-established and dogmatic religions. It is not so much the utter materialist but rather the reactionary to faith and dogma who now repudiates all supernatural knowledge.

Every truly reflective mind must be agnostic, for what else is meant by agnosticism than the recognition of the vast desert-like areas of uncertainty that surround the small oasis of knowledge we possess? For, even when agnosticism is described as a denial that we have any reliable knowledge at all about the ultimate meaning of things, it would not necessarily become identical with absolute scepticism. Whether the idea of an ultimate reality is reconcilable with the basic concept of Agnosticism, depends on the form given to this idea of ultimate reality. If reality is conceived as something supreme, as a principal entity, as an absolute essence, it must remain a contradiction, for such an existence is inconceivable without making it relative to the conceiving mind. If it is inconceivable, it is unknowable, and the mind's attitude must remain agnostic. But if reality is understood to be identical with actuality, if the ultimate nature of phenomena is seen as a process of action and reaction without any basis for identity such as entity, essence, substance or soul, it falls not only within the purview of experience, but is experience itself. The actual is the real. Then the task of the philosopher will be to remove the conditions which prevent the actual from being conceived as the actual. This is precisely the self-imposed task of the agnostic, as tersely expressed by the Buddha of his own teaching: "to know and see things as they are" (*yathābhūta-ñāṇa-dassana*).

In the same way as science is an approach to experience which is actual, even if science cannot prove that this actuality is also reality, so the Buddha approaches life, which is an actual conflict, as a series of events, a process of experience. His aim, however, is not merely the discovery and analysis of this conflict-experience, but, in analysing and tracing its origin and cause, it is an attempt to prove that this conflict is not real, but is based on a delusion. The discipline of science is based not on faith, but on scepticism. The discipline of the Buddha is based neither on faith nor on scepticism, but on agnosticism. "Science makes no attempt to study or describe reality—certainly not ultimate reality. Science is not even concerned with truth" (Crane Brinton, *The Anatomy of Revolution*). The Buddha on the other hand is not interested in phenomena as such, but only in so far as they affect and constitute the process of life, i.e., in phenomena as experienced. It is not their behaviour but their nature, which forms the subject of his enquiry. And when it is shown that their nature, i.e., their reality, does not correspond to their behaviour, i.e., their actuality, or their action and our reaction, his interest automatically ceases, as that of a traveller in the desert who discovers the oasis to be a *fata morgana*.

Such discovery is a system of knowledge which is neither scepticism nor dogmatism; and we find here once more the Middle Path[4] between the two extremes of denial and affirmation. It is this agnostic attitude which characterises the teaching of the Buddha, which is mainly negative in its form. The reason is that his method is not one of positive speculation, but one of scientific analysis of actuality. And, whenever actuality is fully understood, it proves to be different from its original appearances. The result is not an absolute denial or a mere doubt of existence, but a qualified denial of appearances. Existence proves to be a process (*santati*) of becoming and ceasing. Time and space are mental concepts (*paññatti*) in which experiences are cast. The 'self', that precious 'self', around which the whole universe revolves, is but a fabrication of the mind (*samoha-citta*) which in isolation and opposition is building up this permanent 'I' or soul-concept to escape the inevitable submersion in the stream of impermanence (*anicca*). Mind itself dissolves in a process of thinking, dependent in its arising and cessation on conditions which are equally without substance.

Therefore, although the method of approach of science may appear similar to that of the Buddha, viz., an analysis of experience, the two systems vary greatly in the object of their approach. Science is interested in phenomena and is not worried about their real nature as long as it can explain and experiment with their actual behaviour. The Buddha, on the other hand, is not content to play with phenomena; but, knowing them to be 'self'-experiences, he probes into the nature of that 'self' in order to discover the reality of such experiences. In this approach the Buddha does not become a Positivist. There is in his doctrine no insistence on synthesis, no preconception of a plan, order or purpose. His aim was not to find an explanation into which all events can be fitted, but he was prepared to meet life as a process of becoming, every moment afresh. Phenomena are not connected by the principles of causality and substance, but by conditionality and process. And thus the theological and metaphysical explanations of the world which are sporadically found in Buddhist texts should never be understood in the sense of cosmic laws. Such laws, as a matter

4 See *Dhammacakkappavattana Sutta*, *Vin.* I, 10 f.

of fact, are specifically rejected when based on the concept of creation. The *Brahmajāla Sutta* (*D.* I) explains how Brahmā, believing himself to be the creator of the universe on account of his being the sole occupant of his heaven, is caught in the net of error. The sutta is a refusal to choose between the various possibilities of affirmation or denial, simultaneous acceptance of the affirmative and the negative, in respect of the so-called 'unelucidated topics'[5].

The Buddha did not lay down a rigid and positive code of morality, but was prepared to point out any anomaly which might disturb the smooth flow of mutual relationship of living beings in their constant contact in this process of life, without resorting to supernatural sanction. This regulation of living and thinking is, therefore, not according to a dogmatic plan, neither does it ignore so-called immaterial values as in scientific scepticism, but it approaches each problem afresh without preconceived standards with a perfectly open mind which is not afraid to admit ignorance.

Yet, it must be admitted that the Buddha never said, 'I do not know'. On the contrary, he is claimed to have had omniscience (*sabbaññuta-ñāṇa*). This point, however, should not be stressed too much, for it is also mentioned that the Buddha, when he intended to preach the newly found truth, did not know of the death of his former teachers, Āḷāra Kālāma and Uddaka, but had to be informed thereof by an invisible *devatā*[6].

There are several occasions when the Buddha left a question unanswered or rather undecided (*avyākata*). Sometimes, views remain unexpounded or are dismissed without an answer. The question, "Either he knows that the world is eternal or he knows that the world is not eternal, or he does not know whether the world is eternal or not eternal"[7], comprehensive as it seems and forcing a solution, is simply met with a counter-question, "And who are you to reject whom?" (*ko santo kaṃ paccācikkhasi*), which is the real crux of the whole of the Buddha's teaching, for, "the higher life is not contingent on the truth of any thesis of this type, in so far as there still remains the fact of birth, decay and death, of sorrow and conflict—of all of which I proclaim the extirpation here and now". In other words, the problem is psychologically dealt with. A mere 'yes' or 'no' answer would have disposed of the question, but not of the problem which gave rise to the question. The question raised about the eternity of the world or the everlasting life has a much deeper root than the superficial enquiry about the presence or absence of a time-limit. The psychological cause of the question is the problem in the mind of the enquirer who is seeking confirmation as to the continuation of life, i.e., of 'self'. And with the solution of this problem by the Buddha's teaching of soullessness (*anattā*), the earlier question becomes meaningless and hence does not require an answer. The actual problem to be solved is: Who are you? (*ko santo . . . .*).

Even so, the tricky question of the world's beginning is not totally brushed away, for this round of existence (*saṃsāra*) is said to be incalculable: "This samsāra's beginning is inconceivable, O monks; its starting point cannot be known" (*anamataggo ayaṃ bhikkhave saṃsāro ; pubbakoti na paññāyati* : *S.* II, 178). It is unadulterated agnosticism!

On another occasion[8] the Buddha is asked, "Is there a self?" and the Buddha remains silent. Again he is asked, "Is there not a self?", but the Buddha maintains his silence. Only when Ānanda presses for an explanation at least of his silence, does the Buddha say that affirmation of a self would mean siding with the eternalists or dogmatists, while negation of a self would mean siding with the annihilationists or sceptics. Neither reply would have been in accordance with the knowledge that all things are impermanent. In a teaching of which the most fundamental thesis is the process of becoming in impermanency, the question 'to be' or 'not to be' cannot be put and has to remain unanswered (*avyākata*).

Questions similar to those about the 'self' were put by Anurādha about the existence or otherwise of an accomplished one (*Tathāgatha*) after his death. And here, too, the reply is to the effect that the question cannot be answered as the enquiry assumes the real existence, as an entity, of that which is only a process in actuality: "As a Tathāgatha is not met with in reality (*saccato thetato*), it is not proper to pronounce of him that he exists after death or does not exist after death, or that he both does and does not exist after death, or that he neither exists nor does not exist after death."[9] The question, therefore, cannot be conceived (*anupalabbhamāna*). The actual origin of such theories does not lie in a sincere desire for higher wisdom (*paññā*), but in hastily formed opinions (*ditthi*), "opinions based on ignorance and blindness, personal feelings as a result of craving, with excitement and sceptical agitation."[10]

A typical Buddhistic exposition by Sāriputta, based on the Buddha's model reply to the so-called undecided (*avyākata*) questions, occurs in the *Sañcetanika Vagga* of the *Catukka Nipāta* in the *Aṅguttara Nikāya*[11]. Mahākoṭṭhita wants to know whether anything at all exists or not after the complete and passionless cessation (*asesa-virāga-nirodha*) of the six spheres of physical and mental contact. Sāriputta explains his repeated and negative reply to each and every question by saying

5 See also *Cūla Māluṅkya Sutta* : *M.* I, 63.

6 *Vin.* I, 6. The commentator is at great pains in explaining the apparent contradiction as follows: The Buddha did not know this particular incident at that particular moment with his knowledge at the normal level. Had he applied his 'divine eye' of supernormal insight (*dibba-cakkhu*), this fact would have been known to him

8 *S.* IV, 400.

9 *S.* IV, 384

10 *D.* I, 3, 32.

11 *A.* II, iv, 18, sutta 174.

that any positive answer would cause an obsession where there was no obsession before (*iti vadam appapañcam papañceti*). The six spheres of physical and mental contact are an analytical description of individuality. As long as this is misunderstood as an entity, substance, soul or ego, this delusion will lead to questions, like the above, about the continuance or discontinuance thereof. "As long as this view of individuality persists, so long also will this obsession (of self-continuity) persist. But with the cessation, complete and passionless, of such a view of these spheres of contact, the obsession will also cease."

It cannot be denied that the Buddha had a very definite theory concerning the hereafter. His doctrine of *kamma* and the results of such action, which he certainly shared with other spiritual teachers of his time, are not restricted to one single life-span only. And hence, when the question of future life is shewn as one of the motives of control of present action, the question most intimately connected therewith, viz., of the antecedents of such action or a previous existence, cannot be simply ignored on the ground: let bygones be bygones. Satisfaction of curiosity, of course, as in the case of Māluṅkya[12] would not have served any purpose, and the Buddha's affirmation or negation would not have been any help towards the annihilation of the passions. But, we can visualise the same question, perhaps differently worded, to have been placed before the Buddha, with a view to finding not merely the physical origin of sorrow and life, but rather the psychological grounds, in which case the Buddha certainly would not have preserved a 'noble silence'.

An instance is found[13], when all the above-mentioned and similar questions are answered in the negative, because the Buddha does not hold any of these views, "as this tangle of theorising is attended by conflict and does not lead to peace". "The adoption of views" is a term discarded by the Tathāgatha, who has actual vision of the nature, origin and cessation of things and has thereby discarded all tendencies to the pride of saying 'I' or 'mine'. Because the subject of the enquiry is non-existent, in the same way as the extinguished fire cannot be determined, "these questions do not apply". Theories are like reading-glasses. They only reveal the weak eye-sight of him who uses them, but do not explain the nature of the object[14].

Hence, it is not to be considered a deficiency in the teaching of the Buddha that no ready-made answers are provided for such problems as the origin of the world, the eternal life of the soul, the ultimate goal. Religious systems based on faith have those answers ready-made, but beyond proof or verification. Theirs is a value which is fixed and supernatural. The value of the agnostic teaching of the Buddha lies in its pure relativity, which is in the nature of a process, where there is continuity without a persisting entity. Anything beyond this process cannot be known, as knowledge itself forms part of this process; and whatever is known being the object of knowledge, is thereby alone already also part of the process. Conditionality, therefore, forms the axis around which the teaching of the Buddha revolves: if certain conditions arise such effects will arise. But no dogmatic thesis is shewn as to the causality of things, still less as to a first cause, or origin.

Does this mean that Buddhism is a form of atheism? Atheism is a positive assertion of the falsity of the existence of a God-Creator, first cause and origin of all that exists. It is not merely a negative attitude of refusal of acceptance, but a positive disbelief, involving the acceptance of a proposition which asserts the falsity of the existence of God. In this very assertion, however, is involved a challenge, as it were, which, in principle, is equivalent to a recognition of the opponent.

An agnostic, as was the Buddha, confines himself to disproving the arguments produced in favour of theism. And that is exactly what we find expressed in the *Pāṭika Sutta*[15], where certain recluses and brāhmans declare it as their traditional doctrine that the beginning of things was the work of a creator (*issarakutta*), the work of Brahmā (*brahma-kutta*). Then the Buddha, while claiming that he knows the beginning of this world (*aggaññañcāhaṃ pajānāmi*), explains that this so-called beginning is a re-evolution (*vivaṭṭamāna*) from a dissolving world (*saṃvaṭṭamāna-loka*)[16]. He does not take up the position of a sceptic or a materialist, adhering to spontaneous origination (*adhicca-samuppanna*), for he points out that the absence of knowledge of preceding conditions does not prove a fortuitous origin[17]. The Buddha's vision of an evolving world[18] is certainly in agreement with the modern concepts of the formation of this world in its process of evolution. In the darkness of slimy earth sexless bodies fed on the scum of the cooling surface of the boiling globe. With feeding their taste developed; on the surface, awareness of light became manifest; in the measure of their feeding, their bodies assumed solid forms in varying degrees of comeliness.

The evolution of evil, too, has been graphically described without any recourse to the supernatural. A lazy disposition led some to hoarding, which is craving. When hoarding was not possible the same craving led to stealing; and stealing brings in its train censure, lying, punishment, with the social institutions of the judicial and governmental authority[19].

Thus, the Buddha explained the involution and re-evolution of a world-cycle as phases of the universal process of evolution, which process does not depend on a supreme force remaining itself outside the evolving cycle. In the Buddha's presentation

of the evolving universe there is no room for any static energy, for the process is truly universal. He does not claim that he has a god greater than other gods, but points out that all gods, even Mahā Brahmā, are included in this involving and evolving process [20]. He does not deny the possibility of certain forces, which appear to be creative, coming into this process, but these forces themselves merely appear because of the necessity of disappearance elsewhere. In other words, conditionality and impermanence are the rulers of this cosmos, physically as well as psychically.

But, as far as the beginning of the process of evolution is regarded, the true agnostic appears once again in the *Pāṭika Suttanta* [21] : "Whether the beginning of things be revealed or whether it be not, the object for which I teach the Norm is that it leads to the complete destruction of woe."

With his teaching of conditionality, especially in connection with the eleven theses of dependent origination (*paṭicca-samuppāda*, q.v.), the Buddha avoids the pitfall of universal causation, which, although it does not postulate an absolute beginning in the guise of a creation, yet sets an insoluble problem by its very universality. For, universality, by its own nature, lies outside the sphere of experience and verification, and hence is not acceptable to an agnostic. The Buddha's teaching shows the origin of whatever has arisen in dependence on a condition (*ye dhammā hetuppabhavā tesaṃ hetu Tathāgato āha*), and it shows also the cessation thereof in dependence on the cessation of those conditions (*yesañca yo nirodho evaṃ vādi mahā Samaṇo*) [22]. Thus, causation is replaced by conditionality which is said to be found intrinsically in all phenomena.

Although the Buddha, in this way of dependent origination and cessation, refuted an absolute beginning, an absolute existence and an absolute ending, yet there were some recluses and brāhmans who misrepresented him thus, falsely saying, "The recluse Gotama is a nihilist, he teaches the disintegration, the destruction, the cessation of existence." [23] This accusation the Buddha refuted by stating, "Formerly as well as now, I only teach the fact of conflict and the cessation of conflict." His attitude towards existence is not that of a nihilist or a sceptic, but of the agnostic who accepts only the known. In respect of so-called existence he only knows it as a process of becoming, a process of conflict and a process of cessation of this conflict through the understanding thereof.

H. G. A. VAN ZEYST.

AGRACARYĀ-PRAṆIDHĀNA, a Sanskrit text extant in its Tibetan translation, the *Mchog-gi spyod-paḥi smon-lam*, in the Mdo-ḥgrel (sūtra commentary) section of the Tengyur. The author is not known. The translator's name is not recorded. But in the Sde-dge edition (*TM.*) the translators' names are given as Prajñāvara and Ye-śes-sde (*Cordier*, III, 528, No. 41; *TM.* 1097).

20 *Brahmajāla Sutta* : *D.* I, 2, 3.
21 *D.* III, xxiv pp. 1–35.
22 *DhpA.* on *Aggasamana Vagga.*
23 *Alagaddūpama Sutta* : *M.* I, sutta xxii, p. 140.

AGRAMATICITRACŪḌA, name of a serpent king (*Mhvyut.* 3428).

AGRAPAṆḌITA, a lay writer of Ceylon on Buddhism. See AGGAPAṆḌITA.

AGRAPRADĪPA-DHĀRAṆĪ (-VIDYĀRĀJA), the name given in the course of restoration by the Chinese and the Tibetan authorities to a Sanskrit work of which the Chinese and the Tibetan translations are extant. The Chinese translations are incorporated in the Sūtra-piṭaka of the Chinese Buddhist Tripiṭaka. Among the Chinese translations of *Agrapra°* which have no corresponding Tibetan translations are the following: *Ch'ih-chü-shên-chou-ching* (*Taishō*, No. 1351 ; *Nanjio*, No. 364) of Chih Ch'ien of the Wu dynasty (222-80 A. C.), *T'o-lin-ni-po-ching* (*Taishō*, No. 1352 ; *Nanjio*, No. 365) of Buddhaśānta of the northern Wei dynasty (386–535 A. C.) and *Tung-fang-tsui-shêng-têng-wang-ju-lai- (chu-hu-ch'ih-shih-chien-shên-chou-) ching* (*Taishō*, No. 1354 ; *Nanjio*, No. 336. Cp. *Tung-fang-tsui-shêng-têng-wang-t'o-lo-ni-ching*, *Taishō*, No. 1353) of Jñānagupta of the Sui dynasty (589–618 A. C.), according to *Nanjio* (p. 91 a). The translation by Shih-hu (Dānapāla) of the later Sung dynasty (960–1127 A. C.), *Shêng-tsui-shang-têng-ming-ju-lai-t'o-lo-ni-ching* (*Taishō* No. 1355 ; *Nanjio*, No. 799) agrees with the Tibetan translation, (*Ḥphags-pa*) *Rigs-sṅags-kyi rgyal-po sgron-ma mchog-gi gzuṅs* (*TM.* Nos. 528 and 858), mentioned in the Rgyud-ḥbum (100,000 tantra) and Gzuṅs-ḥdus (dhāraṇī) sections of the Kangyur. The Tibetan translator of the work is not recorded. The work is believed to be of Buddha origin.

Two works are mentioned in the tantra section of the *AMG.*: the *Agrapradīpa-dhāraṇī* contains several mantras, giving protection against all sorts of evil (*AMG.* II, 319), whereas the *Agrapradīpa-dhāraṇī-vidyārāja* contains mantras which claim great efficacy to obtain prosperity and deliverance from adversity (ibid. 332). The additional title *vidyārāja* refers to eminent knowledge.

AGRAPRAJÑAPTI, proclamation of superiority. See AGGAPAÑÑATTI.

AGRAPURUṢA, a former Buddha, mentioned in a list of former Buddhas under whom Śākyamuni, while in the ninth bhūmi acquired merit (*Mhvu.* I, 141.5).

AGRASĀNUMATI, a bodhisattva whose name occurs in a list of future Tathāgatas (*Gvyū.* 443.5). For details see MĀYĀDEVĪ.

AGRATĀRAIKAJAṬOPADEŚA–SĀDHANA, a Sanskrit text extant in its Tibetan translation, the *Mchog-gi sgrol-ma ral-pa gcig-maḥi man-ṅag-gi bsgrub-thabs*, in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. Its author's name is not

recorded in the first page of the text, unlike in the other Tibetan texts. But, according to its colophon, the authors are Klu-sgrub (Nāgārjuna), Ḥchi-med go cha (Amaravarman), Rtag-paḥi rdo-rje (Śaśvatavajra) and Bhagu-pa (Bhagavatapāda ?). Dānaśīla of east India and Rnal-ḥbyor-pa (Yogācārin) of Khu (probably Brtson-ḥgrub gyuṅ-druṅ or Sanātana vīrya) are mentioned as the translators of the work into Tibetan. In *TM.* the author's name is given as Bhagu paṇḍit (*Cordier*, II, p. 123, No. 53; *TM.* 1735).

AGRATĀ SŪTRA, mentioned in the *Mahā-karmavibhaṅga* and *Karmavibhaṅgopadeśa.* It is probably identical with the *Etadagga Vagga* of the *Aṅguttara Nikāya* (I, 23-6). See Lévi's notes to his edition of the *Karmavibhaṅga* (*BHS.* s.v.).

AGRA-VIDYĀMANTRA, name of a Sanskrit work, translated into Tibetan under the title *Mchog tu ḥo paḥi rig-sṅags.* Two versions are extant and incorporated in the Kangyur, one in the Rgyud ḥbum (100,000 tantra) section (*TM.* No. 742) and one in the Gzuṅs-ḥdus (dhāraṇī) section (*TM.* No. 1036).

AGRAVĪRABĀHU, a name of a yakṣa occurring in the *Mahāvyutpatti* in a list of yakṣas. The list starts with the name of Vaiśravaṇa and ends with the name of Pāñcika. Agravīrabāhu stands as the seventh in the list (*BB.* XIII, p. 165).

AGRAYĀNA, a bodhisattva whose name occurs in a list of future Tathāgatas (*Gvyū.* 442.11). For details see MĀYĀDEVĪ.

AGRODIKĀ, name of a piśācī mentioned in the *Mahāmāyūrī* (p. 239, ed. S. F. Oldenbourg; see *BHS.* s.v.).

ĀGUHYAKĀDHIPATI, or Guhyakādhipati, an epithet of Vajrapāṇi. See VAJRAPĀṆI.

AGVAN BALDAN (Ngag-dbang Dpal-ldan), born in 1796 in the tent of a cattle-breeder in the state (*aimak*) of Setsen khan in Khalkha, Mongolia. At the age of six he learned from his father the Tibetan script. At the age of 13, he became a disciple of Skal-bzang bkra-śis and Blo-bzang grags-pa, two monks belonging to a monastery of his native country, and studied Buddhism and Buddhist texts. When he was 16 years old, he studied under his teacher Skal-bzang bkra-śis the work of translating Tibetan texts into Mongolian. He was 19 when he came to the Yeke kürien monastery of Mongolia and took the noviciate in the presence of the 'abbot' Agvan Keyidub (Ngag-dbang Mkhas-grub). He changed the name of Bimpil given him by his father to that of Baldan (Dpal-ldan). He then became a monk in the Bkra-śis chos-'phel college (grva-tshang) and studied under the kabcu (dka-bcu) Ngag-dbang ye-śes philosophy and the rules of philosophic debate. He was introduced into the Prajñā-pāramitā philosophy by Agvan Keyidub (Ngag-dbang Mkhas-grub) and the kabcu Bsed-nams. From the Tibetan lama Blo-bzang śes-rab he obtained the initiation into Tantrism. He thus became learned in the sūtras and tantras of Mahāyāna. With Rab-'byams-pa Bzed-pa and Rab-'byams-pa Bstan-'dzin dar-rgyas he studied Abhidharma. With the Lha-rams-pa Lha-mosrungs he studied the Vinaya, and in about three years mastered the main teachings of Indian and Tibetan Buddhism. At the age of 35, he passed the examination in the five branches of philosophy and obtained the degree of kabcu (dka'-bcu). He composed a treatise on the Vinaya, and a commentary on two of the Four Noble Truths, at the age of 36, and became dharmasvāmin of Yeke kürien monastery.

G. N. Roerich.

AGVAN DORJI (Ngag-dbang Rdo-rje), a lama nicknamed the 'writing abbot' (bicigeci tsorji, chos-rje, dharmasvāmin). At the end of the 18th century, after becoming a monk in the Yeke kürien monastery of Khalkha (Mongolia) he obtained distinction as a learned man. He became in turn 'abbot' of the Dashi-coikor (Bkra-śis-chos-'khor) monastery, Damba-darjiya (Bstan-pa dar-rgyas) monastery and of the Yeke kurien monastery, and laboured extensively in the interest of Buddhism and learning. Besides being the author of several works on the Tripiṭaka, he composed a detailed commentary on the *Vinaya-piṭaka*, philosophical treatises, tantric instructions, different kinds of laudatory compositions, moral admonitions, treatises on grammar and poetry, in all 14 printed volumes written in Tibetan. The collection of his works contains many commentaries on the works of Indian authors. Among these are a detailed commentary on the *Pramāṇa-vārtikā* by the Indian philosopher Dharmakīrti, a commentary on the *Bodhicaryāvatāra* by Śāntideva, and a commentary on the *Kāvyādarśa* by the Indian poet Daṇḍin.

G. N. Roerich.

AGVAN KEYIDUB (Ngag-dbang Mkhas-grub), born in 1779 in the river basin of the Tool-gol in Mongolia. In his youth he became a monk of the Yeke kürien monastery and studied Buddhism. At the age of 19, he proceeded to Tibet, where he entered the Drē-pung ('Bras-spuṅs) monastery and studied under Blo-bzang bstan-'dzin and 'Chi-med seng-ge. Within four years he mastered the rules of philosophic debates and the Prajñā-pāramitā philosophy. He took his monastic vows in the presence of the eighth Dalai Lama 'Jam-dpal rgya-mtsho. He became especially learned in the Mādhyamika, the Abhidharma and the Vinaya, and obtained the degree of Rab-'byams-pa. At the age of 32, he returned to Mongolia and became head (tsorji; Tibetan: chos-rje; dharmasvāmin) of the Yeke kürien monastery. In 1834, he became 'abbot' (qambo; Tibetan: mkhan-po; upādhyāya) and nom-un qan (dharmarāja) of Yeke kürien monastery, and greatly advanced learning among the monks of Yeke kürien. Agvan Keyidub actively participated in philosophic controversies

in Tibet. Thus, he took part in the philosophical controversy between Bstan-pa rab-rgyas of Rā-deng (Rva-sgreṅ) monastery and Dkon-mchog rgyal-mtshan known as Gang-mang tsang (Sgang-mang tshang) of the La-brang (Bla-brang) monastery, and composed a treatise in support of Bstan-pa rab-rgyas. Five volumes of his works were printed at the Yeke kürien monastery. Among them was an epistle condemning wine drinking and immorality among incarnate lamas, and some compositions in verse; a commentary on the 'Middle Path' section contained in the 'Questions of Mahākāśyapa', disciple of the Buddha (*Mahākāśyapa Sūtra*, Kg. Śer-phyin, 40), also a separate commentary on the *Suhṛllekhā* of Nāgārjuna. For more than ten years he supervised the affairs of the religious assembly. At the age of 40, he proceeded on a pilgrimage to the holy places of Lhasa and Tashi-lhunpo, met with learned lamas, acquainted himself with the deep meaning of Buddhist doctrines, and was acclaimed as a great scholar. Having returned to Yeke kürien in Mongolia, after some months he went to Peking and visited such holy places as the sandal image of the Buddha, the Tsagan Suburga, etc. He also visited Wu-t'ai-shan. From the Dzasak lama (lama supervisor) the Lha-rams-pa blo-bzang rnam-rgyal and the diyanci (meditator) Kalyāṇamitra Ngag-dbang grags-pa he obtained the exposition of the *Bodhi-patha-pradīpa*, sūtras and tantras, as well as initiations. While on pilgrimage, he composed a commentary on the *Grub-mtha-'chen-mo* of 'Jam-dbyangs bzhad-pa of Amdo in Tibet. He visited Kökö-khoto, the monastery of Dpad-dkar chos-gling, the monastery of Mergen-wang, and the Barūn-coira. He received an invitation to visit the monastery of the Khükhen-khutogtu and spent there three years. He completed there his commentary on the *Grub-mtha 'chen-mo*. Later, he composed treatises on the Vinaya, the Abhidharma, the Prajñā-pāramitā philosophy and on Tantra. He lectured on philosophy to the monks of the Yeke kürien. He died in 1864, aged 68. His works continue to be honoured and studied in Mongolia.

G. N. ROERICH.

AḤ (and ĀḤ). Aḥ is a Siddhaṃ character 𑖀𑖾. It is transcribed into Chinese in various ways, such as 惡, 阿, 噁, 痾. It is one of the twelve vowels (hsi-tan shih-êrh-yin 悉曇十二韻), as well as one of the fifty characters of Siddhaṃ (hsi-tan wu-shih-tzŭ-mên 悉曇五十字門).

This character, however, seems to be important as one of the five distinct forms of the letter A, to which are attributed various kinds of metaphysical meanings. As is well known, this is composed of simple A and its *visarga*. This is explained in the 14th fascicle of the *Ta-jih-ching-shu* (大日經疏, the commentary on the *Mahāvairocana-sūtra* by I-hsing) as follows: "If two dots (or *visarga*) are added on the right side of the letter A, this letter then symbolises *nirvāṇa* which excludes all kinds of obstacles to the *bodhicitta*".

According to the classification of the five distinct forms of the letter A as representing five Buddhas, the *visarga* Aḥ, stands for Śākyamuni Tathāgata in the north of the Buddha nature. Moreover, in the 4th fascicle of the *Lalitavistara*, it is explained that this character has the meaning of *astam-gamana* and detachment.

The letter Āḥ is a transcription of Siddhaṃ character 𑖁𑖾 or 𑖁𑖾. It is transcribed into Chinese as 噁 or 惡. It is the last of the five distinct forms of the letter A. In the above fascicle of the *Ta-jih-ching-shu* (大日經疏) it is explained thus: "There are five forms of A, namely A, Ā, Aṃ, Aḥ and Āḥ".

Thus Āḥ is the last of them. This is composed of lengthened A and its *visarga*. In the same work, it is stated that the fifth letter Āḥ represents several colours, namely, the letter A itself is yellow, the lengthening mark is white and the *visarga* is black. Therefore, it must be noted that this letter Āḥ is composed of several colours. If we reconstruct this letter according to the description mentioned above, it must be written thus, . We cannot find, however, such a letter in the list of Siddhaṃ characters. It must be one of the letters newly coined by Chinese commentators (probably by I-hsing). Since then this new letter has been used to represent the sound Āḥ, at least in China and Japan.

In the 14th chapter of I-hsing's commentary referred to above, the metaphysical significance of this letter is explained as follows: "The last Āḥ pervades everywhere, which satisfies all kinds of desire of mankind." The other four letters, A, Ā, Aṃ, and Aḥ represent awakening, discipline, bodhi and nirvāṇa, respectively, while this Āḥ stands for a synthetic power of the above four, or the power of *upāya*. Therefore, it is called 'the letter Āḥ which is possessed of five distinct forms' (*goten gusoku-no Āḥ*. 五轉具足の噁).

In the classification of the five distinct forms of the letter A as representing the Buddha, this fifth form Āḥ stands for Vairocana (according to Śubhākarasiṃha) or sometimes for Amoghasiddhi (according to Pu-k'ung).

V; *Mañjuśrī-paripṛcchā* (*Nanjio*, 442), fasc. i; *Yoga-vajraśekhara-sūtra-akṣaramātrikā-vyākhyā-varga* (*Nanjio*, 1052); *Ta-jih-ching-shu* (大日經疏, or the commentary on *Mahāvairocana-sūtra*); *Hsi-tan-tsang* (悉曇藏 or the store of Siddhaṃ characters), fasc. v and vi.

AHAHA, name of a subdivision in one system of hells (*niraya*) in Buddhist cosmology. It occurs in a passage common to the *Saṃyutta* and *Aṅguttara Nikāyas* and the *Sutta-nipāta* (*S.* II, 150; *A.* V. 173; *Sn.* iii, 10). It is fourth in a list of ten hells. See s.v. COSMOLOGY.

Answering a question from one of his monks, the Buddha says that the term of life in Ahaha Niraya is equal to eight thousand in the Abbuda Niraya. According to one commentary (*SnA.* II, 477),

it is a name used to denote one of ten divisions in terms of time, of periods of life spent by those damned to Avīci, rather than a separate hell by itself.

The word *aha* is an exclamation of grief, literally, "oh woe!" (*P.D.* s.v.) and the name *Ahaha*, derived therefrom, is evidently onomatopoetic, suggesting, according to the *Sutta-nipāta* commentary (loc. cit), sounds made by its shivering inmates. For, according to the *Udāna* commentary (140), it is a cold hell (*sītanaraka*). Presumably, says Woodward (*Gradual Sayings*, V, 116), the word *ahaha*, like *ababa* and *aṭaṭa*,—other hells in this list—represents the sound of the chattering of teeth. See ABABA, ABBUDA NIRAYA.

B. J.

A-HAN-CHÊNG-HSING-CHING (or *Fo-shuo-a-han-chêng-hsing-ching*, *Nanjio*, No. 687) a sūtra in the Ching-tsang (Sūtra-piṭaka) section of the Chinese Buddhist Tripiṭaka. The sūtra is believed to be one spoken by the Buddha. The extant Chinese translation is by An-shih-kao of the Eastern Han dynasty (2nd century A.C.). The sūtra deals with 'the right practice' explained in the āgamas (*Taishō*, No. 151).

AHAṄKĀRA is frequently met with in all Nikāyas with the acquired meaning of egotism and arrogance. The basic meaning of 'I am the doer' is still found in the *Udāna* (70): *Jaccandha Vagga* (vi, 6), where it is used in opposition to *paraṅkāra*: another is the doer. "People are attached to the notion: 'I am the doer' (*ahaṅkāra-pasutā*); they are holding on to the idea: 'Another is the doer' (*paraṅkārūpasaṃhitā*); they neither understand the wrongness of the view, nor do they see the sting in it. But he who sees the poisonous dart thereof does not give rise to the thought: I am the doer (*ahaṃ karomi*) or another is the doer (*paro karoti*)." It is clear that in this instance the heretical doctrine of 'self' or 'soul' is criticised, which always places the 'I' in opposition to 'non-I'. This view of a separate I-entity naturally forms the basis of all selfish activity, and hence *ahaṅkāra* has acquired the meaning of egotism and arrogance.

The checking of all that makes for the 'I' (*ahaṅkārā ca me uparujjhissanti*) and for 'mine' (*mamaṅkāra*) is among the good results to be considered when establishing the perception of soullessness (*anattasaññaṃ upaṭṭhāpetuṃ*: *A.* III, 444). The other advantages are a complete detachment from everything in the world, attainment of insight which cannot be imparted, full understanding of the root of all things and of their dependent origination.

And how should one understand and look at things, that neither in conscious thought the concept of 'I', nor in respect of external objects the idea of 'mine' might arise? That was the question put by Rāhula to the Buddha. And the reply, "Whatever physical forms arise of the past (i.e., in memory), of the present (i.e., actual) or of the future (i.e., in imagination), whether they be internal mental states or external forms, whether they represent coarse figures or exquisite shapes, vulgar or noble, distant or near: and similarly whatever sensations, perceptions, ideations or thoughts arise of any of these types, while you know that that does not constitute the 'I', is not the property of the 'I', is not the soul, with that knowledge there will be no tendency towards egotism, arrogance and pride (*ahaṅkāra-mamaṅkāra-mānānusayā na honti-ti*: *S.* II, 252)[1]. When one thus sees by right insight the true nature of all things, one is set free without grasping (*evam etaṃ yathābhūtaṃ sammappaññāya disvā anupādā vimutto hoti*). And thus, Rāhula, knowing and seeing things in this way, the mind will have turned away from egotism, arrogance and pride, gone beyond all distinctions, will be at peace and fully emancipated" (*ahaṅkāra-mamaṅkāra-mānāpagataṃ manasaṃ hoti vidhāsamatikkantaṃ santaṃ suvimuttanti*: *S.* II, 253).

The manner of extirpation of this evil tendency towards egotism, arrogance and pride is given in a passage (*M.* III, 32 ff.) describing the life of renunciation in the observance of the ten abstinences, which is also frequently found elsewhere [2].

These notions of 'I' and 'mine' had been rooted out from Sāriputta such a long time that even a changing or becoming otherwise in the Master would not have given rise to grief, sorrow and despair, although he certainly wished that such a wonderful Master might not be taken from them, that he might abide with them yet a long time for the welfare and happiness of many people (*S.* II, 275).

The utter destruction of egotism in any form (*sabba-ahiṅkāra-mamiṅkāra-mānānusayānaṃ khaya*: *M.* I, 486, sutta 72) forms part of the freedom of the Tathāgata and the arahant. It is only cast off with the breaking of the final five fetters (*saṃyojana*), in particular the fetter of the pride which says: I am (*asmi māna*). But, a mere conviction that there is no 'I' does not mean that the truth of soullessness has been fully comprehended. Such was the case with the monk Khemaka who admitted that he had still got the idea of 'self' in his mental-physical make-up, although he did not discern such a 'self' (*S.* III, p. 128, sutta 89, § 13). And yet Khemaka was at that time one who had entered the Stream of Sainthood (*sotāpanna*).

A remarkable event is related (*S.* IV, 41) of Upasena, the younger brother of Sāriputta. After his meal he was seated in the shade of the cave in which he was staying near Rājagaha, mending his outer robe. A snake fell from an overhanging branch on his shoulder and bit him. The poison spread rapidly and the arahant, knowing its deadliness, asked some other monks to carry his body into the open. As they saw no change in

---

1 Also found in *M.* III, p. 18; *S.* III, 80, 103, 136, 169.

2 *D.* I, 4-5; *M.* I, 179 and 287; *A.* II, 208; *Pug.* 26.

his body, they told him so. But he replied, "In him who would think: I am the eye, the body, the mind—in him there would be a change in his body[3]. But as I have no such ideas, how could there be a change in my body?". The monks carried his body outside, and there and then it was scattered just like a handful of chaff. But, it is not mentioned whether the brethren grasped the subtle reference to the 'I' and 'mine' from the arahant's viewpoint.

It is clear that we have come a long way from the pre-Buddhistic meaning of the word in Sāṅkhya philosophy where the term *ahaṅkāra* signifies the organ through which material attributes and mental events are wrongly ascribed to the soul (R. Garbe, *Die Sāṃkhya Philosophie*, Leipzig, 1894, p. 170). Then, the 'I-maker' was considered a subtle substance of an inner organ with the function to relate objects to the 'I', corresponding in the mind to the material sense-organs of the body; it was the substance around which the mental phenomena were grouped, and by means of which such phenomena were communicated to the intellect (*buddhi*).

When the Buddha took a firm stand for his specific teaching on the doctrine of insubstantiality (*anattā*), the 'I-maker' lost its original meaning, till it was incorporated in the suttas as an evil tendency (*anusaya*) of arrogance and pride, leading to the misconception of a separate I-entity and the fetter of self-conceit.

H. G. A. v. Z.

A-HAN-K'OU-CHIEH-SHIH-ERH-YIN-YÜAN-CHING, a sūtra in the Tsa-tsang (Miscellaneous Works) section of the Chinese Buddhist Tripiṭaka. This is a Chinese translation of a Sanskrit work the origin of which is believed to be Indian. But neither the Sanskrit title of the work nor the name of its author is known. An-hsüan of the Eastern Han dynasty is said to be the Chinese translator of the work, which deals with the twelve causes (*nidāna*) of the wheel of rebirth, as explained in the āgamas (*Nanjio*, No. 1339: *Taishō*, No. 1508).

ĀHĀRA, food, nutriment, support, both in the literal and figurative meanings. On this simple word is hinged practically the entire teaching of the Buddha, particularly his specific doctrines of the process of becoming, rebirth without a soul, dependent origination, the Four Noble Truths—to mention just a few of the more important issues. It is also the key-word which unlocks the doors of the mysteries of life and death in their most universal application. And all that is summed up in the answer to the first question, before which no problem can arise: *Katamo eko dhammo? Sabbe sattā āhāraṭṭhitikā*: All that lives subsists on food (*D.* III, 211). It is one thing that must be thoroughly understood (*eko dhammo abhiññeyyo*: ibid. 273). And again, there is one question, one statement, one explanation (*eko pañho, eko uddeso, ekaṃ veyyākaraṇaṃ*). The statement (*uddesa*) is that if concerning one fact a monk would feel the right kind of disgust (*ekadhamme sammā nibbindamāno*), the right kind of fading interest in the world (*sammā virajjamāno*), be rightly released (*sammā vimuccamāno*), rightly see the limits and restrictions (*sammā pariyantadassāvī*) and rightly comprehend the meaning of things (*sammatthābhisamecca*), then in this very existence he would make an end to all conflict (*diṭṭh'eva dhamme dukkhass antakaro hoti*). And the one explanation (*veyyākaraṇa*), the answer to this one question, the one fact concerning which the above statement was made, is: "All that lives, subsists on food" (*sabbe sattā āhāraṭṭhitikā*: *A.* V, 50–1).

From such solemn utterances alone already the importance of the subject should be evident, and it has indeed been played upon throughout the suttas in the *Nikāyas*, followed up in later abhidhamma texts of the *Dhammasaṅgaṇi* and played back in the many commentaries of Buddhaghosa and Dhammapāla and in later treatises such as Anuruddha's *Abhidhammattha-saṅgaha* up to the present century writers, such as Paul Dahlke in his *Buddhism*.

The quest for food, as well as the supply thereof, constitutes physically, psychologically and sociologically, the basis of all action. As a primary need of life itself it conveys the energy for sustenance at all levels, material, biological, volitional and intellectual. And all this is involved in the term *āhāra*, from the Sanskrit root *ā-hṛ*, to fetch, to bring near, to convey to oneself, which action is followed by absorption and assimilation. Thus, we find enumerated four sustenances for the maintenance of beings (*bhūtānaṃ vā sattānam ṭhitiyā*) and for the assistance of those seeking birth (*sambhavesīnaṃ vā anuggahāya*: *S.* II, 11), viz., material food (*kabaḷinkāra-āhāra*) which sustains the body, and which is either solid and gross (*oḷārika*), fine and exquisite (*sukhuma*); contact (*phassa*) which nurtures the senses with feelings of delight (*sukha-vedanā*) and displeasure (*dukkha*); volition (*mano-sañcetana*) which sustains the three forms of becoming, for will is the food of the mind through which action (*kamma*) is formed; and consciousness (*viññāṇa*) which feeds, supports and conditions both mind and body (*viññāṇa-paccayā nāma-rūpa*). And of these four sustenances it is further said that craving is the base (*taṇhā-nidānā*), craving the origin (*taṇhā-samudayā*), craving the producer (*taṇhā-jātikā*), craving the source (*taṇhā-pabhavā*: ibid. 12). But when Phagguna with the long hair (*moliya*) questioned the Buddha as to who feeds on the consciousness-sustenance (*ko nu kho bhante viññāṇāhāram āhāreti*), the Buddha replied that this was not a right question, for "I do not say that someone feeds" (*āhāretīti ahaṃ na vadāmi*). The correct question would have been: Of what is consciousness the sustenance (*kissa nu kho bhante viññāṇāhāro*); and then the fitting answer to that would be: Consciousness-sustenance is the condition to renewed becoming, to rebirth in the future (*viññāṇāhāro āyatiṃ punabbhavābhinibbattiyā paccayo*: ibid. 13). Here, therefore, it is clearly pointed out by the Buddha that in this process of nutrition there is no eater separate from

3 Expressing fear of approaching death.

the food; it is a process of assimilation where the life-continuum is sustained by physical food, by sense-contact, by volitional activity and by reproductive consciousness. In this process of alimentation and assimilation the absorbent physico-psychical organism is not a separate entity, not even a separate process, but has become and continues to become that which it has assimilated and by means of which it sustains its process of becoming.

Seeing, then, that the continuance of the rolling of this cycle of existence, of birth, conflict and death, is conditioned and maintained by the renewed assimilation of these four sustenances, they should be regarded with the utmost suspicion. Thus the Arahant Brahmadatta, son of the king of Kosala, reminded a brāhman who had reviled him (*Thag.* v. 445) of the parable of parents eating their own child. In the *Puttamaṃsa Sutta* (*S.* II, 98–100) the Buddha taught his disciples how to regard the four kinds of nutriment. Material food (*kabaliṅkāra āhāra*) should be taken not for pleasure (*davāya*), not for indulgence (*madāya*), not for personal charm (*maṇḍanāya*), not for comeliness (*vibhūsanāya*), but for the sheer necessity of living, as parents with their child in the jungle, when their provisions have run out, forced by extreme hunger and faced with the prospect of certain death for all, would be driven to kill the child and eat its flesh (the parable goes into many grim details), even so without passion of the senses should material food be taken.

Contact (*phassa*), the nutriment on which the senses thrive, should be regarded as a cow with a sore hide would regard all contact. For, whether she leans against a wall or a tree, the creatures that live there would sting her; in water she would be afflicted by the creatures in the water; even standing aloof in the open air she would be bitten and stung by all kinds of insects. When contact is regarded in this way, the three kinds of feeling, pleasurable, painful or indifferent, will be well understood and "there is nothing further which the Ariyan disciple has to do" (*tīsu vedanāsu pariññātāsu ariyasāvakassa natthi kiñci uttariṃ karaṇīyanti vadāmi* : ibid. 99), the Buddha declared.

Of all the four types of nutriment the most important, perhaps, is the food which is *will of mind* (*manosañcetanāhāra*). It is mental volition, without which no thought becomes active or alive. It is the equivalent of *karma*, and hence it feeds rebirth, fixes destiny and forms the 'soul' of existence. It is to be regarded as a pit of glowing charcoal which will beyond doubt burn one to death with mortal pain (loc, cit.).

Finally, consciousness (*viññāṇa*) is the rebirth-linking consciousness (*paṭisandhi-viññāṇa*), the food (*āhāra*) which at the moment of conception feeds mind and corporeality (*nāma-rūpa*) in the new life. It is to be considered as a robber seized by the king's men, who inflict dire punishment on him, morning, noon and eventide (ibid. 100).

Āhāra is one of the four origins (*samuṭṭhāna*) of material phenomena (*rūpa*), the other three being karma, the mind (*citta*) and the changes of physical nature (*utu*). It is the nutritive essence (*ojā*) which gives rise to material phenomena at the period of assimilation. Out of the twenty-eight material phenomena (*rūpa*) the following twelve (*Abhs* vi, 6, 4) find their origin in the process of nutrition (*āhāra*), the four essential material qualities (*mahābhūta*) of extension (*paṭhavī*), cohesion (*āpo*), caloricity (*tejo*) and vibration (*vāyo*), three material qualities of the sense-fields, viz., colour (*vaṇṇa*), odour (*gandha*) and taste (*rasa*), the material quality of nutritive essence (*ojā*), the material quality of limitation which is the element of space (*ākāsa-dhātu*) and the triple properties of lightness (*lahutā*), pliancy (*mudutā*) and adaptability (*kammaññatā*), which are grouped together as material qualities of plasticity (*vikāra-rūpa*). These are the material phenomena which are nutriment-originated (*āhāra-samuṭṭhāna*), for which nutriment is the producing condition (*janaka-paccaya*). Two more material phenomena are sometimes added to the above list of twelve, viz., growth (*upacaya*) and continuity (*santati* : *Vism.* xx, §36, p. 528).

While it is admitted that food is the main pre-requisite for existence, it is also acknowledged as a principal source of temptation, as an object through which the sense of taste develops into craving. Hence, on numerous occasions temperance with regard to food is advocated, although never to the extent of self mortification (*attakilamatha*). The ideal monk is described as controlled in deed and word, restrained in food for the stomach (*kāyagutto, vacigutto, āhāre udare yato* : *S.* I, 172; *Sn.* 78); with small (light) stomach, moderate in food, easily satisfied, and undisturbed (*ūnūdaro, mitāhāro, appicch'assa alolupo* : ibid. 707). On the other hand, a person who is immoderate as to food is described as one who thoughtlessly and unwisely takes food for the sake of amusement, pride, decoration, ornamentation, insatiability, immoderation and thoughtlessness as to food (*Pug.* 21, trsl. p. 31). Solid food is not exclusively enjoyed among humans, animals and other infra-human beings, for in the entire sphere of sense (*kāmāvacara*) the objects of the senses provide the food for sense-contact. Thus, some devas are referred to as feeding on solid food (*kabaliṅkārāhāra-bhakkha* : *A.* III, 192) and they are of lower rank than those who live in a mind-made body (*manomaya-kāya*). Although this latter class of devas have body and form, they do not come under the spheres of sense-pleasure (*kāmāvacara*), but under the spheres of form (*rūpāvacara*), where the pleasures of the senses, such as the taste of food, do not occur. It was Udāyin's wrong view to think that the devas with mind-made bodies (*manomaya-kāya*) are formless (*arūpa* : ibid. 194). Material food, or rather the process of digestion which involves the decomposition of food in the process of assimilation by the body, is one of the forty meditation-objects (*kammaṭṭhāna*) and is called reflection on the loathsomeness of food (*āhāre paṭikkūla-saññā*). "When one lives with this thought, reflecting on the loathsomeness of food, the mind draws back from a desire for life, and establishes itself either in equanimity or disgust" (*A.* IV, 49). And to the man who does not give up this reflection, although he may be weak and ailing, the Buddha promised that he may expect, ere long, to destroy the mental

intoxicants (*āsava*) and to enter and abide in the emancipation of mind and deliverance through insight (*A*. III, 142). The commentary on the *Dhammasaṅgaṇi* (§ 646), called the *Atthasālinī*, gives a lengthy exposition on physical food as a derived material quality (*rūpa*). Here *āhāra* is shown to be both the material foodstuff and the nutritive essence (*ojā*). It is the presence of the material stuff in the stomach which prevents the feeling of hunger; in its absence the bodily heat seizes the stomach-walls, but when material food is introduced the bodily heat seizes that and the process of assimilation in digestion begins. In gross substance, it is said (*DhsA*. 331), the nutritive essence is weak; and thus after eating coarse grain, etc., one becomes hungry again after a brief interval. But in subtle food, such as butter, the nutritive essence is great. The food derived from herbivorous animals, such as deer and cattle, is more subtle and more nutritious than that from carnivorous animals, such as tigers and crocodiles. A point of some interest, though not essentially connected with our subject, is mentioned by Buddhaghosa (*Vism*. xx, § 37, p. 528): Nutriment (*āhāra*) taken on one day gives sustenance lasting for seven days, but the nutritive essence (*dibbā ojā*) sustains for one or two months. The food taken by a mother with child originates materiality by pervading the body of the child she bears. Also, nutriment smeared on the body begets materiality.

Nutriment is not only a material phenomenon, but as an active process it is also a condition (*āhāra-paccaya*) of support of two kinds: the relation of edible food to the body and the relation of immaterial supports to co-existing states of mind and body. It is this nutritive support in the psychological field which forms the basis of the doctrine of karma and the teachings connected therewith. Food or sustenance (*āhāra*) is frequently synonymous with causal condition, e.g., " from the arising of food is the arising of the body; from the ceasing of food is the ceasing of the body; and the way leading to the ceasing of the body is the Noble Eightfold Path " (*āhāra-samudayā rūpa-samudayo, āhāranirodhā rūpanirodho; ayam eva ariyo aṭṭhaṅgiko maggo rūpanirodhagāminī paṭipadā*: *S*. III, 59). Here, sustenance of the body has been substituted for the usual conflict of existence (*dukkha*), its origin (*samudaya*), its cessation (*nirodha*) and the path thereto (*magga*). And again, consciousness and its cause (*pañcabīja-jātāni viññāṇaṃ sāhāraṃ daṭṭhabbaṃ*) are to be considered as the five sorts of seed, which require both the soil of the four stations of consciousness (*viññāṇaṭṭhiti*) and the water of lust (*nandirāga*) in order to grow and increase (*S*. III, 54). Similarly, merit is called the food, i.e., the cause of happiness (*sukhassāhāra*: *A*. III, 51).

Although in the stereotyped formula of dependent origination (*paṭicca-samuppāda*), ignorance (*avijjā*) is shown as the first condition (*paccaya*) which is not to be traced back any further, " for the origin of ignorance is not discernible " (*purimā koṭi na paññāyati avijjāya*), and it cannot be said, " There was a time when ignorance was not " (*ito pubbe avijjā nāhosi*), still it was definitely stated by the Buddha that ignorance, too, is conditioned and sustained by the five hindrances (*avijjam p'ahaṃ bhikkhave sāhāraṃ vadāmi, no anāhāraṃ. Ko cāhāro avijjāya? Pañca nīvaraṇā 'ti 'ssa vacanīyam*: *A*. V, 113). Then follows a chain of dependent and conditioned origins, not unlike the *paṭicca-samuppāda*, but links are here shown as sustenances (*āhāra*) in the following sequence: ignorance (*avijjā*), five hindrances (*pañca nīvaraṇāni*), three evil ways of conduct (*tīṇi duccaritāni*), lack of restraint of the sense-faculties (*indriyāsaṃvara*), lack of mindfulness and of self-control (*asatāsampajañña*), distracted attention (*ayonisomanasikāra*), lack of trust (*assaddha*), not listening to the true teaching (*asaddhammasavana*), not following a worthy man (*asappurisasaṃsevā*). Such is the nutriment of ignorance and thus its fulfilment (*evaṃ etissā avijjāya āhāro hoti, evañca pāripūri*). But their opposites lead to deliverance through knowledge (*vijjāvimutti*) in the following sequence of sustenances: following a worthy man (*sappurisasaṃsevā*), listening to the true doctrine (*saddhammasavana*), confidence (*saddhā*), careful attention (*yonisomanasikāra*), mindfulness with self-control (*sati-sampajañña*), restraint of the senses (*indriya-saṃvara*), the three right ways of conduct (*tīṇi sucaritāni*), the four methods of mindfulness (*cattāro satipaṭṭhānā*), the seven factors of wisdom (*satta bojjhaṅgā*), deliverance through knowledge (*vijjā-vimutti*: ibid. 115). The *Saṃyutta Nikāya* (V, 102) speaks of food or nutriment for the five hindrances (*pañca nīvaraṇāni*) and for the seven limbs of wisdom (*satta bojjhaṅgā*). Here, the alluring feature of things (*subhanimitta*) is said to be food for the arising of sensual lust (*kāmacchanda*), while the repulsive feature of things (*paṭighanimitta*) is said to be food for the arising of malevolence (*byāpāda*). Discontent, weariness, languor, drowsiness after meals, torpidity of mind (*arati, tandī, vijambhikā, bhattasammada, cetaso līnatta*), are food for the arising and growth of sloth and torpor (*thīna-middha*), while agitation of mind (*cetaso avūpasama*) the food for the arising and growth of excitement and worry (*uddhacca-kukkucca*); and things which are based on doubt and wavering are the food for the arising and growth of perplexity (*vicikicchā*).

As regards the seven elements of wisdom (*bojjhaṅga*) which is enlightenment, it is said that the things which are based on these various limbs, when systematically attended to, form also the nutriment of these seven elements of insight-wisdom, viz., mindfulness (*sati*), investigation of what is true (*dhamma-vicaya*), energy (*viriya*), zest (*pīti*), tranquillity (*passaddhi*), concentration (*samādhi*) and equanimity (*upekhā*: ibid. 103-4).

Again, sustenance (*āhāra*) is used in a weaker sense of help, as opposed to obstacle (*paripantha*), when ten things are enumerated which will assist one to obtain what is desirable, dear and charming, but hard to win in the world. Thus, energy and exertion are aids (*āhāra*) to wealth; finery and adornment are aids to beauty; seasonable action is an aid to health; noble friendship is an aid to lead a virtuous life; sense-control is an aid to a life of holiness; non-quarrelling is an aid to maintain friendship; repetition is an aid to the storing of knowledge; listening and questioning are aids to

the acquisition of wisdom; application and reflection are aids to understand the teachings; right conduct is an aid to attain to happiness in heaven (*A.* V, 136).

Thus, the process of nutrition in its various aspects covers the entire field of the teaching of the Buddha, physically, psychologically, emotionally, mentally, ethically, for it is the essence of the Buddha's teaching which shows existence as a flux, as a process of becoming, dependent on conditions. And that is a process of nutrition, which is a living experience in which the object is assimilated and becomes the subject. This so-called subject can only continue in its process by gathering fresh experience, just as a flame can keep itself alive only by burning, by drawing into itself new fuel, until everything is seen as food for body, food for will, food for thought. In the realisation of the loathsomeness of this food will arise a disgust with the process itself which alone can make one free.

Whatever conflict there may be
It finds support through nutriment;
But when nutrition's process comes to end
No growth of conflict there can be.

Yaṃ kiñci dukkhaṃ sambhoti
Sa baṃ āhārapaccayā;
Āhārānaṃ nirodhena
Natthi dukkhassa sambhavo (*Sn.* 747).

H. G. A. van Zeyst.

ĀHĀRA-PACCAYA. This is one of the twenty-four conditions (*paccaya*) in the system of correlation (*paṭṭhāna-naya*). Here the term *āhāra* or nutriment is used in a very wide sense to include that which nourishes or sustains. *Āhāra-paccaya*, therefore, refers to a relation between nutriment and its effect. There are altogether four kinds of nutriment that function as conditioning factors by way of sustenance, namely, material food (*kabaliṅkāra āhāra*), sensorial or mental impression (*phassa*), mental volition (*mano-sañcetanā*) and consciousness (*viññāṇa*).

Material food is one of the twenty-eight varieties of material qualities into which *rūpa* or corporeality is divided. It is a term for the nutritive essence by means of which living beings sustain themselves. It is spoken of as a condition, since it nourishes the eightfold corporeality, viz., the solid, liquid, heat, motion, colour, odour, flavour and nutritive essence. Sensorial or mental impression serves as a condition for feeling, whether it is agreeable, disagreeable or indifferent. *Mano sañcetanā* or mental volition serves its concomitant properties in the execution of mental, vocal and bodily actions. As a form of nutriment it nourishes (brings on) rebirth-linking in the three planes of existence (*Vism.* p. 285). *Viññāṇa* or consciousness serves as the support for consciousness-concomitants (*cetasika*) in cognising an object, for it is said that the latter cannot function without reference to the former (*Vibhāvinī Ṭīkā*, ed. Dharmaratna, p. 32). Moreover, as a form of nutriment it nourishes (brings on) mind and corporeality at the moment of conception (*Vism.* p. 285). See ĀHĀRA.

ĀHĀRARA, name of a dragon-king living in a pond near the source of the Suvāstu. At the time of Buddha Kāśyapa he was born as a man with the name Kyogi (Skt. Gāṅgi) and with his magic power he prevented evil demons to send thunderstorms, in gratitude for which the farmers offered him cereals. But when one day they neglected to do this, Gāṅgi became enraged and transformed himself into a venomous dragon threatening to ruin the harvests with violent hail storms. Hence he is also called Apalāla, 'leaving not even the straw'. The Buddha, however, felt compassion with the poor people of the locality and decided to fight the dragon. He struck the mountain with the lightning of Vajrapāṇi and thereby tamed the dragon who repented his evil ways. The Buddha, however, at Gāṅgi's request, allowed him to cause a thunderstorm once in every twelve years to ensure his survival (*Taishō*, 2087).

The legend is sometimes more elaborated. The pond is localised in the village of Uren near Rājagṛha; the name of the dragon is given as Sundara, destroying the harvests in Magadha. He is tamed by the magic of a brāhman who is honoured by the people accordingly. But when the Buddha comes to live in Rājagṛha, the offerings to the brāhman are transferred to the Buddha. Thereupon the brāhman vows to become himself a dragon together with his wife and two children. To ensure the realisation of this vow he acquires merit by making offerings to the four great disciples of the Buddha. Then he takes the place of the dragon and begins to devastate the harvests, leaving not even the straw. King Ajātaśatru requests the Buddha for help, and with the assistance of Vajrapāṇi who pulverises the mountain with his thunderbolt, the Buddha subjugates the dragon-family who evacuate to the neighbouring kingdom of Vaiśālī (*Taishō*, 155, 11).

Other variations are found elsewhere (ibid. 1448, 1509. Cp. *Hōbōgirin*, s. v.).

ĀHĀRA SUTTA (1) occurs in the *Āhāra Vagga* of the *Nidāna Saṃyutta* of the *Saṃyutta Nikāya* (II, 11–12). It was preached by the Buddha when he was staying at Sāvatthi in Anāthapiṇḍika's park at Jetavana. There are four kinds of nutriment (*āhāra*, q.v.) for the maintenance of beings after birth and for the support of those seeking birth, viz., material food, coarse or fine (*āhāro oḷāriko vā sukhumo vā*), contact (*phassa*), volition (*manosañcetanā*) and consciousness (*viññāṇa*). The Buddha traces the cause of these four nutriments to craving (*tanhā*). While proceeding to the cause of craving he discourses on the *paṭicca-samuppāda* (q.v.) and explains in turn the uprising and cessation of the entire mass of ill. See ĀHĀRA.

ĀHĀRA SUTTA (2), a group of four suttas dealing with the conditions suitable and unsuitable for the development of the five hindrances (*nīvaraṇa*) and the seven constituents of wisdom (*bojjhaṅga*). It was preached by the Buddha at Sāvatthi and is recorded in the *Bojjhaṅga-sākacchā Vagga* of the *Bojjhaṅga Saṃyutta* of the *Saṃyutta Nikāya* (V, 102–7).

The first section deals in turn with what constitutes 'food' for the arising of each of the five *nīvaraṇas* that have not yet arisen and for the development of those *nīvaraṇas* already arisen. The second section treats in a similar manner with the 'food' of each of the seven *bojjhaṅgas*. The third section discusses what does not constitute 'food' for the arising of each of the *nīvaraṇas* not yet arisen and for the growth of the *nīvaraṇas* already arisen. The fourth and the last section treats similarly with what is not 'food' for each of the *bojjhaṅgas*.

A detailed treatment of the subject is found in the commentary. See also ĀHĀRA.

L. R. G.

ĀHĀRA VAGGA, the second chapter of the *Nidāna Saṃyutta* of the *Saṃyutta Nikāya* (II, 11–27). It consists of ten suttas and derives its name from the first of them, *Āhāra Sutta*, dealing with the four sustenances. The others are *Phagguna*, *Samaṇa-brāhmaṇā* (1), *Samaṇa-brāhmaṇā* (2), *Kaccāyana-gotta*, *Dhammakathika*, *Acela*, *Timbaruka*, *Bāla-paṇḍita* and *Paccaya*.

There is no common theme running through its ten component suttas. True to the title of the bigger division, *Nidāna Saṃyutta*, they all show a connection with the doctrine of *paṭiccasamuppāda*, in common with the suttas of the other vaggas belonging to the *Nidāna Saṃyutta*.

Numerous repetitions are found in the suttas of the *Āhāra Vagga* as well as in those of the other vaggas of the *Nidāna Saṃyutta*. The *Āhāra Vagga* is a haphazard grouping of ten suttas which could equally well have fitted into any of the other vaggas of the *Nidāna Saṃyutta*.

L. R. G.

ĀHĀRIKA SAMĀDHI, a species of concentration (*samādhi*) which is the bringer (*āhārika*) of omniscient insight (*sarvajña-jñāna*), mentioned in the *Samādhirāja Sūtra* (*BHS*. s.v.).

AHETUKA-DIṬṬHI, wrong view, regarding events to be without cause or condition. One of the extreme heretical teachings in vogue at the time of the Buddha. See AHETUVĀDA, DIṬṬHI.

AHETUVĀDA, a teaching which denied causality. This heretical doctrine, teaching the non-existence of a moral cause, or *karma*, is referred to in the *Mahābodhi Jātaka*. One of the five counsellors of king Brahmadatta of Bārāṇasī taught the people that beings in this world were purified by rebirth and. therefore, that no moral responsibility attached to them. But he was refuted by the bodhisatta whose name was Bodhi, with the following verses:

"If this thy creed: 'All acts of men, or good or base,
From natural causes spring, I hold, in every case',
Where in involuntary acts can sin find place?
If such the creed thou holdst and this be doctrine true,
Then was my action right, when I that monkey slew."

(*J*. V, 237, trsl. H. T. Francis.)

When the Buddha gave his discourse on the certain, true or sure doctrine (*Apaṇṇaka Sutta : M*. I, 401–13) to the brāhman householders of Sālā in Kosala, he referred to many recluses and brāhmans who speak in direct opposition to one another. The *Sāmaññaphala Sutta* (*D*. I, 53) mentions a view which is ascribed to Makkhali Gosāla: "There is no cause, no reason for the depravity of beings; they become defiled without cause, without reason. Neither is there a cause or a reason for the rectitude of beings; they become purified without cause, without reason" (*n'atthi hetu n'atthi paccayo sattānaṃ saṅkilesāya, ahetu-apaccayā sattā saṅkilesanti; n'atthi hetu n'atthi paccayo sattānaṃ visuddhiyā, ahetu-apaccayā sattā visujjhanti*). "All living beings are without power, without strength, without energy, bent by fate, by chance, by disposition" (*sabbe sattā avasā abalā aviriyā niyati-saṅgati-bhāva pariṇatā*). By holding such views, the Buddha said, men do not see the peril in wrong things, the vanity, the defilement, nor the advantage allied to purity, in renouncing them for the good things; for they have laid aside the three good things: right conduct of action, of speech and of thought. Consequently, a variety of evil states spring up, such as false conception, false speech, mocking of noble disciples, convincing others of untruth, exaltation of oneself and disparaging of others. Then a person who is unable to decide the issue for himself may agree thus: if there is no moral causation, a person who accepts this doctrine may be safe at the breaking up of his life, but in this life itself he will be condemned by all intelligent people as being of bad moral habits and as having heretical views; whereas if there is a moral causation, then such a person is defeated twice, both here and hereafter (*M*. I, 408).

The fatalistic view which denies causality (*ahetuka-diṭṭhi*) is included together with the view of the inefficacy of action (*akiriya-diṭṭhi*) and the nihilistic view (*natthika-diṭṭhi*) among the ten unwholesome courses of action. Some specified instances of the teaching which denies the existence of moral cause and effect are to be found in the *Sevitabba-asevitabba Sutta* (*M*. III, 52): "There is no result in giving, in offering, in sacrifice; there is no fruit or ripening of deeds, whether they are done well or ill; there is no benefit from serving mother and father". But "the following up of this kind of assumption of views will make the evil states of mind develop greatly and the good ones decrease" (loc. cit.).

The rejection of this doctrine of non-causality does not imply the acceptance of the contrary doctrine, as held by the Uttarāpathakas, that objective matter is the cause of mental presentation (*Kvu*. ix, 3), which is subjective (*sārammaṇa*), i.e.,

having a mental object. 'Having a mental object' (*sārammaṇa*), however, establishes merely the correlationship between object and subject (*ārammaṇa-paccaya*), but not the relationship of causality (*hetu-paccaya*).

The denial of causality (if understood as a law of conditionality) is a denial of the very core of the ethical teaching of the Buddha, which is most tersely expressed by the formula : Whatever phenomena have arisen from a cause (*ye dhammā hetuppabhavā*), of these the Tathāgata has told the cause (*tesaṃ hetuṃ Tathāgato āha* : *Vin*. I, 40). But the conclusion drawn by Ananda K. Coomaraswamy (*HJAS*. IV, 130) that the opposite *hetuvāda*, which is synonymous to *kammavāda*, makes the Buddha " a causalist, that is to say a determinist or fatalist ", is certainly not borne out by the Buddha's own exposition of the working of the law of kamma, which is mental volition (*cetanā*).

H. G. A. v. Z.

AHEYA, a Sanskrit term, composed of *a* and *heya*. It literally means 'not to be left or quitted or abandoned or rejected or avoided' or 'not to be subtracted.' The Chinese translations *fei-so-tuan*, (非所斷), *fei-tuan* (非斷), *pu-tuan* (不斷) or *wu-tuan* (無斷), all mean 'not to be shut off' and correspond to the original. It is that which is not to be shut off because of its natural and original purity. Concerning this interpretation, the sixth fascicule of the *Prakaraṇa-pāda* (*Nanjio*, No. 1277) says: what is the element not to be shut off (*aheya-dharma*) ? It is that of purity (*anāśrava-dharma*). Similarly, in the fourth fascicle of the *Abhidharmakośa-śāstra* (*Nanjio*, No. 1267) we are told that various *anāśrava dharmas* are called *aheya-dharmas*.

These interpretations indicate the fact that the nature of *anāśrava-dharmas* is that they have no faults or impurities and thus stand aloof from all hindrances in life. What, then, are the real contents of such *aheya* elements ? In the system of the *Abhidharmakośa-śāstra*, it is mentioned as follows : the last three of the 18 dhātus, *vitarka-vicāra* of *citta-mahābhūmika*, all the ten *kuśala-mahā-bhūmikā dharmas*, *prāpti* and the four features, i.e., *jāti*, *sthiti*, *anyathātva* and *anityatā* of *citta-viprayukta-saṃskāra*, the five *indriyas* (i.e., *śraddhā*, *vīrya* *smṛti*, *samādhi* and *prajñā*) and the *anāśrava* aspect of *mana*, *sukha*, *saumanasya* and *smṛti*, the three *anāśrava indriyas* (i.e., *anājñātam-ājñāsyāmindriya*, *ājñendriya*, *ājñātāvindriya*) of the 22 *indriyas* (*dvāviṃśatīndriyāṇi*) and *avijñapti-karman*.

Later on, concerning the essential nature of these pure elements, a very important argument was advanced by the philosophers of the Yogācāra school. They laid stress upon the significance of the discrimination whether these purities arise *a priori* or *a posteriori*.

The 66th fascicle of *Yogācāra-bhūmi-śāstra* (*Nanjio*, 1170) expresses such two kinds of *aheya* as *tzŭ-hsing-ching* (自性淨 or original purity) and *i-tuan* (已斷 or purity gained through an effort of doing away with impurities). And, further, it states that all sacred or spiritual elements are *aheya* or *a priori*, and all secular or mundane elements are *a posteriori*. The same argument is expounded in the fourth fascicle of the *Mahāyāna-abhidharma-samuccaya-śāstra* (*Nanjio*, 1199). It was on the basis of this classification that the ethics of later Mahāyāna gradually developed.

S. K.

AHIBHĀNURĀGA, a former Buddha, mentioned in a list of former Buddhas under whom Śākvamuni, while in the ninth bhūmi acquired merit (*Mhvu*. I, 141.7).

AHICCHATRA, an ancient city with Buddhist connections, as evidenced both from ancient travel notices and archæological investigations. The site is near the modern Rāmnagar village in the Bareilly District of Uttar Pradesh, western India. Scholars have followed the *Mahābhārata* in calling it the capital of north Pañcāla country. (Kāmpilya city was the chief city of south Pañcāla ; but *Kumbhakāra Jātaka* has named it the capital of north Pañcāla.) According to a summary of reigns in the *Purāṇas*, the Pañcālas were a confederation of five tribes and were the neighbours of the Kurūs.

From inscriptions found at Pabhosā it has been inferred that, in the 2nd cent. B.C., this part of Pañcāla had been governed by branches of the same royal family and that, along with Vatsa (Kosambī), it acknowledged the supremacy of the Śuṅga rulers. Coins of Agnimitra have been found here. Obviously the name was that of the king of the region, but whether he was the same as the second Śuṅga king of the same name has yet to be conclusively established. Another north Pañcāla king, Indramitra, is recognised in a Buddha Gayā inscription. (See *EI*. II, 243 ; *Cambridge History of India*, I, ch. xxi.)

The description of the region by Hsüan-tsang, though not comprehensive, has enabled archaeologists, notably Alexander Cunningham, to locate ancient Ahicchatra. The Chinese pilgrim names it Ngo (or O)-hi-ch'i-ta-lo and gives it a circuit of over 3 000 *li*, and its strategically placed capital city one of 17 or 18 *li*. There were some ten vihāras with over 1,000 bhikṣūs who were studying the texts of the Sammitīya school of Hīnayāna. There were in the country adherents of other religious systems, too. Outside the capital city there was an Asoka stūpa by a Dragon Tank (Nāga-hrada) where, according to the story, the Buddha had preached to the nāga king for seven days. The story (s.v. AHICCHATTA) in which the place-name originated, survives in the local legend of Adi Rāja and the nāga. Beside this stūpa were four smaller stūpas commemorating the places of meditation exercises of four past Buddhas.

The name Ahicchatra has been differently rendered from the original Chinese O-hi-ch'i-ta-lo (Beal); Ahikshetra (Julien), Ahichitra (Watters and Cunningham). Cunningham mentions that in his time it was still called Ahichhatr, even though the

spot had been abandoned for centuries. When he investigated the site, he found the principal mound (stūpa) was being called Chhatr. The site appeared to be a large fortress, with a vast mound 3½ mls. in circumference; both this circumstance and the strategic position, not to speak of archaeological remains themselves, confidently led him to identify the place with that described by Hsüan-tsang. Within the fort he found the remains of 'brāhman' temples; but he noted that the Buddhist antiquities which he investigated were both more extensive and ancient. He identified the Chhatr as the great stūpa, the eponymous commemorative of the story. It was surrounded by eight smaller mounds, four of which appeared to be of stūpas, and three of temples, the character of the remaining one could not be discerned. Nor was the Nāga-hrada traceable.

The great stūpa was a 40 ft. high mound with a diameter of 30 ft. on the top. It had been excavated some time before Cunningham. Cunningham himself continued the search and found an earthenware vessel which disclosed a small steatite box containing assorted deposits of no peculiar interest. Further down he found a second steatite vase, exactly similar to some vessels found in the Bhilsā stūpas. He next examined the mound, which was known as Katāri Kohra; it was 20 ft. high and 400 ft. square. Surface excavation revealed it as having been, most probably, an image-house; he also found a damaged Buddha statue which had two flying figures depicted over the right shoulder. He computed the original height of the image as having been 4 ft. He reported other finds as well, and one of them was an inscribed pillar which had belonged to a 'Buddhist railing'. It was inscribed with characters of the Gupta period. A fragment of another, a large pillar, had a lion sculptured on each of its four faces. An extensive mound close to the south-west angle of the fort probably contains the ruins of a very large vihāra whose walls might have originally risen over 80 ft.

There is not very much to be learnt from historical records of this ancient capital of north Pañcāla. Both regions, north and south, were affected by the rapid rise of Kanauj under king Harsha (606–47 A.C.). The only later information comes from Cunningham (*ASIAR.* I, 255 ff.) who has mentioned the improvements and additions to the fort by Ali Muhammad Khan in the 17th century. (See also T. Watters, *On Yuan Chwang's Travels in India*, I; S. Beal, *Buddhist Records of the Western World*; B. C. Law in *ASIMem.* 67.)

D. T. D.

AHICCHATTA (Snake-parasol), name of a nāga-rāja, in the *Dhammapadaṭṭhakathā* (III, 241). He features in the story of Aggidatta who had entered a heretical order. There he is depicted as taking possession of a heap of sand piled up by Aggidatta and his followers in penance for evil thoughts conceived by them. This heap of sand apparently turns out to be a shrine, as the inhabitants of Aṅga, Magadha and the kingdom of Kuru begin to bring their offerings to Aggidatta and his followers who have now taken their abode in this place. Dwelling here, Aggidatta appears to have been teaching them the doctrine that "as surely as you seek refuge in a mountain, a forest, a grove or a tree, so surely will you obtain release from suffering"—a remnant probably of animism or fetishism or a philosophy which grew out of them.

The story goes on to say that the Buddha, perceiving that Aggidatta is urging upon the multitude a course of action other than the right one, sends the arahant Moggallāna to admonish him. But Aggidatta refuses him lodging, and on the latter's request to be given the sand-mound for an abode, tells him that that would be a serious affront to Ahicchatta. Moggallāna insists on staying and as he approaches the pile of sand, Ahicchatta attempts to kill him by emitting smoke and flames, but Moggallāna responds by performing similar acts and displaying the same powers. The smoke and flames cause discomfort to Ahicchatta but not to the arahant, who remains unperturbed. The nāga-king, realising the superior powers of Moggallāna, entertains him with food, and, creating a hood as large as a peak-house, holds it over the head of Moggallāna as if it were a parasol, while Moggallāna remains seated on the pile of sand he has won. The followers of Aggidatta, and Aggidatta himself, are amazed and impressed by the powers of the Buddha's disciple, and when the Buddha, as pre-arranged, arrives on the spot, they pay great honour to him.

The Buddha questions Aggidatta what he taught his following and tells him that it is not a doctrine helping or aiding release from suffering. Men seek refuge in hills, groves, trees and forests out of fear, but sure refuge is found only in the Buddha, his Law and his Order, and in the clear understanding of the Four Noble Truths (*Dhp. vv.* 188–92). See also AGGIDATTA (2), AHICCHATRA, NĀGA.

AHIGUṆḌIKA JĀTAKA (No. 365). When the Buddha was residing at Jetavana, an aged bhikkhu ordained a village lad; later he abused and assaulted him. Thereupon the lad fled away and forsook the Order. This was repeated three times, but on the third occasion the lad refused to come back. It was in connection with this incident that the Buddha related this Jātaka to show that formerly, too, this same lad had been very sensitive (*J.* III, 197–9).

The bodhisatta was once born in a corn merchant's family. When he grew up, he earned his living by selling corn. At that time, a certain snake charmer (*ahiguṇḍika*), having caught a monkey taught him to sport with the snake. Once during a festival in Bārāṇasī, he left the monkey with the corn merchant and wandered about for seven days, making the snake dance. In the meantime, the bodhisatta looked after the monkey. On the seventh day the snake charmer got drunk, and on his return

belaboured the monkey three times with a piece of bamboo. Then he took the monkey to the garden, tied him up and fell asleep. The monkey escaped and climbed on to a mango tree. Though it was asked by the snake charmer to come back to him, the monkey refused to do so.

Having related this story, the Buddha identified himself with the corn merchant, the novice (*sāmaṇera*) with the monkey and the aged bhikkhu with the snake charmer.

This Jātaka is very similar to the *Sālaka Jātaka* (II, 266, No. 249).

I. K.

AHIṂSĀ (abstention from injuring or killing).

1. **In the Indian religions.** *Ahiṃsā* is a word formed by adding the negative prefix *a* to the word *hiṃsā*, a derivative from the root *han* meaning 'to kill' and 'to injure'. Accordingly, *ahiṃsā* carries the meaning of not killing, and not injuring. It has been translated into Tibetan as 'mi-ḥtshe-ba', and into Chinese in such terms as 'pu-hai' 不害 (not to injure) and 'pu-sha-shêng' 不殺生 (not to kill living creatures), etc. All of these, however, convey the same meaning.

Ahiṃsā has been held in high regard in India from an early age. This term appears already in the *Chāndogya Upaniṣad* (III, 17) of the early period. Also, later, (fifth century B. C.) it was strongly advocated by the Buddha and by Mahāvīra in middle India, who included it in their systems of teaching and gave it a theoretical basis from their respective doctrines. In time, it spread to the whole of Indian religion and, down to the present day, has to be highly regarded as an incomparable moral principle

For example, in the various writings of the *Dharmasūtra*, which strongly influenced the daily life of the Indian people, there are many rules based on *ahiṃsā*. Again, in Hinduism the doctrine of *ahiṃsā* was highly respected, and from this as basis there sprang groups of people who practised vegetarianism. In recent times, it is well-known how Mahatma Gandhi united the people of India, guided the movements of the nation, and achieved so much on this basis of *ahiṃsā*, giving it a wider interpretation in order to exclude any thought of ill-will or hatred.

The principle of *ahiṃsā* is thus held in high esteem in the various religions of India, but the doctrinal basis for its assertion is different in the case of each religion. For example, Hinduism is based on the principle that the *ātman* is never destroyed and that it transmigrates through cycles of rebirths, as well as that the *ātman* and Brahman are one and the same (*Brahma-ātma-aikya*). Thus, the doctrine of *ahiṃsā* is based on the idea that all life is one. In Jainism, a deep reverence for even the most minute forms of life is advocated, from the standpoint of animism which regards not only conscious creatures but also such entities as plants and minerals as having life. Again, Gandhi widened the meaning of *ahiṃsā*, and interpreted it in a positive way, including benevolence and love for humanity, expanding and developing it in a nation-wide movement as a principle of non-resistance and a denial of violence and force.

2. **As sīla.** The doctrine of *ahiṃsā* as taught in Buddhism was a moderate one and did not run to extremes. The principle of *ahiṃsā* was expressed in such phrases as *pāṇātipātā veramaṇī*, and *pāṇātipātā paṭivirati* (both these expressions convey the same meaning, of abstaining from injuring living beings). Of these three terms, *ahiṃsā* is the one most widely used in the Buddhist texts, while the other two phrases are used mainly in reference to *sīla* and *vinaya* in the rules forbidding the killing of living creatures. In the case of the *vinaya* a special meaning is included in the words *veramaṇī* (abstaining) and *paṭivirati* (restraining). The effort of will is necessary to abstain from evil tendencies such as killing and uttering falsehood, and one must always, unceasingly, be on one's guard not to do evil. These precautionary efforts and the exercise of will-power are included in the terms *veramaṇī* and *paṭivirati*. When the vow is made, 'I will observe the principle not to kill living beings,' *sīla* is the self-realising spirit that arises when one undertakes to continue this effort.

A baby does not perform bad deeds, and yet there is no *sīla*, because it has no awareness of not doing evil. In much the same manner, it cannot be said that one observes *sīla* simply because one does not utter falsehood nor kill living creatures. *Sīla*, therefore, connotes abstention from evil, with deliberation. In the *Visuddhimagga* Buddhaghosa gives the definition of *sīla* in this light, as intent (*cetanā*). Again, this intent in *sīla* is not simply volition, but is the will that yearns to complete the practice, the endeavour to carry out the teachings of the Buddha and thereby to attain emancipation (*vimutti*). This will is, therefore, one that unceasingly turns towards enlightenment. It is the spirit animated by the teachings of the Buddha, the spirit which strives to practise and actualise that teaching, then advances towards realisation and, in the end, becomes one with enlightenment. It is *sīla* when good deeds are practised with this kind of determined consciousness.

From very early in the history of Buddhism, discipline has been classified into three practices (*tisso sikkhā*) of precepts (*sīla*), meditation (*samādhi*), and wisdom (*paññā*). These three practices are each separate and yet they are not exclusive but progress towards the highest by mutually helping each other. Therefore, a person who has *sīla* has wisdom: one who has wisdom has *sīla*. Wisdom is purified by *sīla*, and at the same time *sīla* is also purified by wisdom (*D.* I, p.124). In this manner, the spirit of consciousness which arises from *sīla* moves onward, in the end becoming one with the supreme wisdom of enlightenment. Thus *sīla* is the original motive power which advances the practice of Buddhism towards accomplishment, and included in this teaching of the precepts (*adhisīla-sikkhā*) is the doctrine of not killing living beings (*pāṇātipātā veramaṇī sikkhāpadaṃ*). Therefore, the practice of ***ahiṃsa*** in

Buddhism is supported by the spiritual force of this precept, and is actualised by the mental power that arises with it.

3. **As mental power (caitasika-dharma).** Psychologically speaking, the spirit which promotes *ahiṃsā* can be described as the spirit of compassion and, to explain this, various interpretations have appeared in later periods. Sthiramati of the Vijñānavāda (school of pure consciousness) in Mahāyāna states in the *Vijñaptimātratāsiddhi* (p. 28) "that compassion (*karuṇā*) is the mental property (*caitasika*) by which *ahiṃsā* is actualised and practised". He believed that when the feeling of pity wells up in one's mind, one does not kill nor capture living creatures, and thereby he construed that compassion is *ahiṃsā* as mental power. Thus, it was interpreted that compassion (the feeling of pity) was the mental property on which the practice of *ahiṃsā* was based.

Again, Dharmapāla, even though he belonged to the same school of pure consciousness, construed the mental property in the practice of *ahiṃsā* as being 'non-anger' (*adveṣa : Taishō*, V, 31, p. 30b). This means that when mental power, as anger (*dveṣa*), awakens and stimulates people, the object of that anger is injured or killed. Consequently, it was thought that when the suppression of anger, which is the mental power that repulses and destroys anger, starts to rule the mind, the practice of *ahiṃsā* is actualised.

On this same problem, the Sarvāstivāda believed that there was an independent mental power called *ahiṃsā* in the mind, and this actualised *ahiṃsā* which resulted as bodily action. This is to say that the mental quality from which *ahiṃsā* functioned as bodily action was not simply the feeling of pity (*karuṇā*), nor the absence of anger (*adveṣa*). It was almost similar to these two and yet different and was an independent meritorious mental power (*kuśalacaitasikadharma : Abhidharmakośa-śāstra : Taishō*, V, 29, p. 19 b; *Abhidharma-nyāyānusāra-śāstra : Taishō*, V, 29, p. 391 b).

In the Theravāda no special category was made of *ahiṃsā* as a psychological process. It is not included in the fifty-two kinds of *cetasikadhamma* of the *Abhidhammatthasaṅgaha*.

4. **The practice of ahiṃsā.** The reason why *ahiṃsā* is asserted as being of universal application is that most people love their own lives and do not wish to be injured or killed by others. This feeling of the love of self is transferred in thought to other people, and thus the love for and protection of life comes to be advocated. In Buddhism, too, *ahiṃsā* is taught first of all from this standpoint. For example, in the *Dhammapada* (*v.* 129), we are told:

> "All tremble before punishment; all fear death. Comparing others with oneself one should not slay, nor cause to slay.
>
> (trsl. A. P. Buddhadatta Mahāthera.)

Thus, *ahiṃsā* is asserted from the point of view of compassion and love towards all living beings; at the same time, it is also maintained from the standpoint of a penitent and a feeling of shame, because of the cruelty involved in killing living creatures.

For example, in the *Sāmaññaphala Sutta*, the first of the precepts that a bhikkhu must follow says, "the bhikkhu, putting away the killing of living things, holds aloof from the destruction of life. The cudgel and the sword he has laid aside, and ashamed of roughness, and full of mercy, he dwells compassionate and kind to all creatures that have life." (*Dialogues of the Buddha*, I, p. 79.) This shows that the practice of *ahiṃsā* is not limited to human beings only, but includes all living beings. Its basis is compassion (*dayā*), sympathy and pity (*hitānukampā*), as well as the feeling of shame (*lajjā*) of the cruelty of killing and injuring life. Thus, *ahiṃsā* is united with compassion and a consciousness of shame. Where there is compassion in the heart, it is expressed in an outward act as *ahiṃsā*. *Ahiṃsā* is considered a noble act, because it is not only the object of the act, but oneself, too, that can attain happiness by having compassion and actually practising it. Conversely, this means that persons who harbour hate, which is the reverse of compassion, not only injure others but also at the same time bring unhappiness to themselves. The fifth verse of the *Dhammapada* is rendered, "Hatred never ceases by hatred in this world. Through loving kindness it comes to an end. This is an ancient law." (trsl. op. cit.) And again, in the *Aṅguttara Nikāya* (IV, 151):

> "Who kills not, nor aught causes to be killed,
> Who robs not, nor makes others rob, for all
> Within his heart hath share, he hateth none."
>
> (*Gradual Sayings*, IV, p. 104.)

Thus, to kill living beings is a shameful act and is wrong because it opposes the spirit of compassion. Moreover, when *ahiṃsā* is practised one comes to know the true feeling of love and attains happiness, and, further, this happiness is also said to be spiritually a highly exalted state. This is seen, for example, in the following quotations:

> "The sage who injures none,
> who aye controls himself,
> Goes to the everlasting state
> where those who go don't grieve."
>
> (*Dhp. v.* 225, trsl. op. cit.)

And again,

> "Gotama's disciples are always well awake;
> Both day and night their minds in harmlessness delight."
>
> (*Dhp. v.* 300, trsl. op. cit.)

And again,

> "With all am I a friend, comrade to all,
> And to all creatures kind and merciful;
> A heart of amity I cultivate,
> And ever in good-will is my delight."
>
> (*Thag. v.* 648, trsl. *Psalms of the Brethren*, p. 280.)

What is indicated here is that to have delight in *ahiṃsā*, and to cultivate a mind of compassion (*mettā-citta-bhāvanā*), are one and the same. To

develop a compassionate heart is to desire that all living beings shall reach a state of happiness, tranquillity and well-being, and then to awaken in oneself the feeling of compassion towards innumerable and infinite kinds of life, and thus embrace all life by the thought of compassion. This is called the mind of boundless compassion (*mettā-appamaññā*). Consequently, at this point *ahiṃsā* also fuses with the principle of the mind of boundless compassion. The cultivation of this mental state is the method of discipline and training which awakens towards innumerable and infinite kinds of sentient beings. Again, the fact that *ahiṃsā* has as its basis the compassionate mind also merges with the principle of the emancipation of mind by the power of compassion (*mettā-cetovimutti*). This principle means that the mind achieves serenity by developing a compassionate heart and thus attains emancipation.

Thus, the development of the compassionate heart is something that elevates man to greater spiritual heights and finally leads him to emancipation. Indeed, the compassionate heart covers a much wider field than *ahiṃsā* and applies in cases other than that of *ahiṃsā*. On the other hand, it is clear that the actual practice of *ahiṃsā* strengthens the compassionate heart.

5. **In the teachings of early Buddhism.** As seen above, in Buddhism *ahiṃsā* is not confined to the ethical rule that one should love all living beings. It goes further and recognises in a religious sense that through its practice the lofty heights of enlightenment are attained. Therefore, in Buddhism the practice of *ahiṃsā* is taught in various ways. For example, the fourth item, right action (*sammākammanta*) of the Noble Eightfold Path (*ariya-aṭṭhaṅgika-magga*) can be explained and interpreted as *ahiṃsā* (*M*. III, p. 251, etc.). Again, the path of the ten kinds of good actions (*dasakusalakammapatha*) is highly regarded. Its first step is that of not killing living beings (*D*. III, p. 269, etc.). When the Buddha taught the correct daily conduct of a lay follower to Siṅgālika, the first principle enunciated was that of non-killing of beings (*D*. III, p. 181). Thus, *ahiṃsā* was a most important teaching in early Buddhism.

6. **Difference between the spirit and act.** *Ahiṃsā* is a beautiful act. It is one of the deeds that many desire to put into practice. In actuality, however, it is very difficult to achieve. In man, there is the invariable passion that wants to strike others down. Because of this, man, in spite of his desire for peace, frequently stirs up war and strife. Even if these struggles can be settled, man, in order to live, must eat, and so he captures various kinds of animal and fish-life. Some, like the Jainas, take to vegetarianism to escape this killing. But even this cannot be called a correct way of life, from the standpoint of those who look upon plants also as possessing life. Also, when one is attacked by others, there are occasions when one even resorts to killing the adversary to safeguard one's own life. Moreover, there is the question of mosquitoes and flies that carry dangerous, infectious diseases. Therefore, if the principle of *ahiṃsā* is upheld literally, it would be difficult, to say the least, to maintain one's own life. Suitable food cannot be obtained and probably one has to resort to suicide. Suicide is also injuring and killing the self, and, strictly speaking, this is inconsistent with *ahiṃsā*. Thus, many problems arise.

The world in which man lives is one of mutual injury, and life is sustained by sacrificing others. Therefore, the Buddha looked at this life and said, "Existence is suffering" (*dukkha*). Thus, the actual practice of *ahiṃsā* can be undertaken only on the basis of a true cognition of life, the contradictions of which are difficult to resolve. That is to say, in our lives the practice of perfect and absolute *ahiṃsā* in this particular sense is impossible. The inward feeling of the spirit of *ahiṃsā*, therefore, and its outward manifestation, the act of *ahiṃsā*, become different from one another. The *action* of *ahiṃsā* is difficult to perfect, but the *spirit* of *ahiṃsā* in the heart is not impossible to perfect, by learning and practice. When the inner feeling of *ahiṃsā* becomes complete and perfect it becomes expressed in outward actions, and where the two harmonise in actual life it can be called the life of the true follower of the Buddha. Consequently, in recognition of the fact that complete *ahiṃsā* is difficult to practise, the Buddha did not set up unduly strict rules for *ahiṃsā* as action. The rules of *ahiṃsā* are expressed as *sīla* and *vinaya*, and the following are the precepts connected therewith.

7. **Various manifestations.** Firstly, the lay follower (*upāsaka, upāsikā*) becomes a follower of the Buddha by accepting as his guide the Three Gems (*ti-ratana*) and undertaking to observe the five precepts (*pañcasīla*) of which the first is that of not killing living beings (*pāṇātipātā veramaṇī sikkhāpadaṃ*). Here, the follower undertakes to abstain from injuring or killing living beings. There are included in this vow two things: one is to have the intent of *ahiṃsā* and the other is to actualise it in action. Even if one held the intention of *ahiṃsā*, there are occasions in actual life on which it cannot be practised. In this case the precept is broken. Such a breach of the precepts can mean that while the *intent* of *ahiṃsā* is there, the selfish desires opposed to this intent are very strong. In such a case, when the precepts are broken there is inevitably regret, and thus confession (*paṭidesanā*) is made. The practice of the precept demands that this confession be made with a sincere heart. As opposed to this is the case of the person who has not undertaken to observe the precept and who, therefore, makes no confession and has no regrets when it is broken.

This precept of non-killing of beings is included not only in the five precepts of the laity but also in the eight precepts (*aṭṭhaṅgika-uposatha*) which are practised by Buddhists on the four 'fast' (*uposatha*) days of the month. Again, it is included as the first of the ten precepts of the sāmaṇera and the sāmaṇerī. The non-killing of life is given in much detail in the *Pātimokkha*, in the Vinaya of the bhikkhus and bhikkhunīs. The third precept of the *pārājikā* in the *Pātimokkha* forbids the killing of human beings. If a bhikkhu or bhikkhunī

kills a person with deliberate intent, this becomes a *pārājikā* offence and he or she is expelled from the Saṅgha. To be expelled from the Saṅgha is the most severe punishment for a member of the Order.

In the phrase 'kill a human being with intent', are also included, besides killing by one's own hand, such actions as ordering others to kill, and also giving advice leading others to commit suicide. Abortion (q.v.) is also placed on the same level as killing a human being. Thus, as in the cases mentioned above, when the killer acts with intent to kill and is successful, the bhikkhu or bhikkhunī who committed the evil is outside the Saṅgha. In cases where a person is killed accidentally and the intention to kill is not present, the bhikkhu is released through confession. Suicide, too, is forbidden (*Vin.* III, pp. 73, 82).

The above refers to the killing of human beings. Apart from this there is also the prohibition of killing animals. In *Pācittiya* (No. 61) it is stated, "If by intent the life of animals is taken it is *pācittiya*" (*Vin.* IV, p. 124). The offence of *pācittiya* is forgiven by confession (*āpatti-desanā*). It is also forbidden to drink water or sprinkle it on the ground knowing that it contains living creatures (*Pācittiya,* Nos. 20, 62). There is, again, a ban on injuring plant life (Nos. 10, 11). Therefore, a bhikkhu always carries with him a cloth-bag (*parissāvana*) to strain the water in order to avoid drinking water containing living creatures.

8. **The Buddha's moderate attitude.** Original Buddhism thus inculcated a high reverence towards life by various methods and prohibited the killing of life. But does this mean that the Buddha preached unlimited protection of animal life ? To begin with, the Buddha permitted the eating of meat. In the five injunctions (*pañca-vatthūni*) which Devadatta wanted the Buddha to put into effect, there was a regulation against eating fish or animal meat of any kind. But the Buddha refused to put these five matters into practice. He did prohibit the eating of ten kinds of flesh that were censured by society. Apart from that, meat could be eaten by one, provided it was not seen or heard or suspected by him that an animal was specially killed for the eater and the meat was prepared as food for him only (*tikoṭi-parisuddhaṃ macchamaṃsuṃ*: *Vin.* IV, pp. 218-20 ; *Sn.* 242, etc.). Also regarding plant life he permitted the use of twigs (*danta-kaṭṭha*) for the purpose of cleaning one's teeth. Consequently, he did not impose absolute non-injury to plant life.

In brief, the Buddha's injunction was against the destruction of life. As an example of this, the Buddha criticised the sacrifice of various animals to the gods by the brāhmans in ceremonies and worked towards the abolition of such sacrifices (*Sn.* 307 ff.; *D.* I, pp. 142, 143). The practice of not offering animal sacrifices at ceremonies has been consistently upheld by the Buddhists throughout their history. On occasions of Buddhist worship and veneration before a stūpa or a Buddha image, flowers, incense, lights, music, garments, banners, overhead canopies, necklaces of jewels, and similar articles are offered but never is any sort of animal sacrificed.

9. **History.** There are many who put the teaching of *ahiṃsā* into practice in social life. The Jainas consider it a sublime virtue (*ahiṃsā paramo dharmaḥ*). Among the best known names of individuals who practised the Buddhist *ahiṃsā* virtues was the emperor Asoka. He subjugated the country of Kāliṅga during the eighth year of his reign and at this time he felt deeply the great misery and sorrow of war, and realised that man's true happiness lay in practising the Buddha's teaching of *ahiṃsā*. The principles of his *ahiṃsā* are expressed in the imperial edicts, notably in pillar-edicts Nos. 2, 5, and 7, as well as the rock-edicts in Girnar and other places, such as Nos. 1, 2, 4, 11, and 13. Based on these, first the sacrifice of animals as offering was prohibited : the eating of meat was restricted and, even in the palace, the killing of animals for the king's table was reduced to a minimum. This was a prohibition against the needless killing of animals. Again, among the animals that were permitted to be killed, those that were pregnant, and the young under six months were not allowed to be killed ; the castration of domestic animals, the branding of cattle and horses, and the burning of forests for no reason at all, or to kill wild life, were prohibited. He worked in a positive way for the love and protection of animals. He built hospitals for both men and animals ; he cultivated medicinal plants, planted trees by the roadside and dug numerous wells, thus serving the needs of both man and beast. Asoka, in this way, spread the influence of Buddhism over the whole of India, which tremendous influence lasted for a long period of time in the spiritual life of the Indian people.

10. **In Mahāyāna.** In Mahāyāna Buddhism, too, the teaching of *ahiṃsā* was looked on with great importance. However, a different phase can be seen in the process of its manifestation. Even in the Mahāyāna texts, the five precepts (五戒), the eight precepts (八齋戒), the ten precepts (十戒), *Prātimokṣa*, and other teachings were highly revered. Apart from these, the 'way of the ten good actions' (十善業道) was especially held in high regard.

In the *Mahāprajñāpāramitā-śāstra* (*Taishō*, 25, p. 155 b.c.) in an explanation of the way of the ten good acts we read, "The offence of killing is the most terrible among all offences. Among the various virtues, the first is that of non-killing of life." And again, "There are 10 kinds of defects in the killing of beings." It goes on to explain in detail the seriousness of the offence of killing life. In the *Brahmajāla Sūtra* (*Fan-wang-ching*) of Mahāyāna, the first of the ten *pārājikas* mentions the prohibition of killing life. Six different methods used by killers are enumerated, and all are prohibited. These are : to kill by one's own hand, to order others to kill, to kill by various devices, to praise killing, to look on and rejoice when someone else is killing, to kill by magical words (*Taishō*, **24**, p. 1004 b).

In Mahāyāna, the perfection of giving (*dāna-pāramitā*) is esteemed greatly, and one kind of giving is the not taking of another's life. Thus, *ahiṃsā* is considered as being of great importance. Compassion is then strongly advocated and, because of this, the eating of meat (which is the cause of killing living beings) is prohibited. For example, in the *Mahāparinirvāṇa Sūtra* of Mahāyāna (*Taishō*, 12, p. 386 a, b) we are told, "The eating of meat extinguishes the seed of great compassion." Again, this sūtra prohibits the eating of meat, "I order the various disciples from today that they cannot any more partake of any meat."

The *Laṅkāvatāra Sūtra* speaks about the prohibition of eating meat (p. 425). "The bodhisattvas who seek the enlightenment of the Buddha, how can they eat the flesh of various living beings?" Also, in the *Brahmajāla Sūtra*, the third among the precepts regarding minor defilements states:

"One should not eat any sort of meat.
If one should eat meat,
The seed of Buddhahood of great compassion
is extinguished."

(*Taishō*, 24, p. 1004 b.)

Therefore, in Mahāyāna the eating of meat is considered an offence, and this exerted a great influence on Buddhism in China and Japan. Apart from the above, regulations regarding *ahiṃsā* in the life of the lay-follower are also stated in various ways in the sūtras of Mahāyāna in which the Mahāyāna *sīla* is taught.

In the *Fu-sa-nei-chieh-ching* the *Upāsaka-sīla Sūtra*, the *Brahmajāla Sūtra* of Mahāyāna, such things as the following are prohibited: to strike living beings; to buy and sell male and female servants; to sell one's wife and children and domestic animals such as horses and cattle; to raise cats and badgers and silk-worms; to neglect a sick person; to have lethal weapons such as the sword, bow and arrow; to possess a cane; to set fire to hills, woodlands, and fields; to take revenge on one's enemy; to administer poison. In particular, the *Brahmajāla Sūtra* recommends the principle of the liberation of life, and specifies that one should buy and set free in their own habitat fishes, birds and animals of all kinds that have been captured (*Taishō*, 24, pp. 1005, 1006, 1007, 1029, 1049, 1050).

Besides these, such sūtras as the *Buddhāvatamsaka-mahāvaipulya Sūtra*, *Mahāsatya-nirgrantha-putra-vyākaraṇa Sūtra*, *Suvarṇaprabhāsottamarāja Sūtra*, *Saddharmasmṛtyupasthāna Sūtra*, *Mahārāja Kanika-lekha* (Mātṛceta's letter addressed to the king Kaniṣka, extant in Tibetan) and others, teach in detail that the government of the country must be based on the spirit of *ahiṃsā*. This is to say, the king of a country must base his rule on true teaching and compassion; prohibit work that involves slaughter, hunting, and the like; give things to poor people and those in distress; prepare shelters for travellers; give medicine to the sick; safeguard the people from starvation, thieves, and invasion from other countries; inflict (on the wicked) punishments based on rules of law—and even in this case the action must be based on compassion. Depending on the degree of the offence, is meted out censure, punishment, jail, or exile; but there must not be amputation of body or the imposition of a death sentence (*Taishō*, 7, p. 923 c; 9, p. 334 a; 10, p. 717; 11, pp. 413 c, 530 b; 17, p. 100 c; 31, p. 857 a; 32, p. 501 a). The prohibition of the death penalty is stated in many Mahāyāna texts, and there are several countries that have observed it.

At the time when Buddhism flourished in India, there were many kings who in their rule practised *ahiṃsā* from the standpoint of Buddhism. This is stated in the Record (of his journey) by Fa-hsien who travelled himself to India in the 5th century A. C., as well as in 'The Records of the Western regions in the time of the great T'ang dynasty' by Hsüan-tsang. These records say, "The kings in the western regions believe deeply in the Buddhist teaching and do not use the death penalty in ruling the people. Even persons guilty of serious offences are not given the death penalty" (*Taishō*, 51, pp. 859 b, 887 b).

II. **China and Japan.** The form of Buddhism which developed in China and Japan was strongly influenced by the Mahāyāna texts and writings; and therefore, in regard to *ahiṃsā* also, these influences have been very conspicuous. First, the eating of meat was looked upon as an evil and was ostracised. The emperor Wu of the Liang dynasty proclaimed (511 A. C.) the abolition of liquor and meat in his kingdom; he put a stop to the killing and injuring of living creatures, prohibited the use of fish nets, decreed against slaughter and, again (in 517) sent out a proclamation calling on his subjects to stop the killing of living creatures on the days of religious service dedicated to the ancestors.

From this time onwards the eating of meat gradually ceased, and this tended to become general. It became a matter of course not to use any kind of meat in the meals of temples and monasteries. This tradition thereafter remained in the Buddhism of China and Japan. Again, the custom arose of 'liberating living creatures', based on the precept of liberation given in the *Brahmajāla Sūtra* and also on the story in the *Suvarṇaprabhāsottamarāja Sūtra* of the wealthy merchant who transported the fish in the water. It is said that the first to perform this act of liberating living creatures was Chih-i (538-97 A. C.) of the T'ien-t'ai school (天台宗). This practice became popular after that date and it is celebrated as the ceremony of the liberation of living creatures. Again, in various places and sanctuaries where the killing of life was prohibited, the ceremony was established; it was forbidden to capture birds and animals in the area. Also, the releasing of various kinds of fish into lakes, ponds and fords was practised. In Japan the ceremony of liberating creatures was practised for the first time as early as 578 A. C.; from that time on, this practice spread to various districts. (For Ceylon parallels see s. v. ABHAYA-DĀNA.) It became the general custom not to

capture or kill birds and animals within the confines of temple property. From the time of emperor Saga Tenno (809-23 A.C.) and thereafter for 200 years in Japan, the death sentence was abolished because of the influence of the teaching of *ahiṃsā*.

The practice of aiding the sick and the injured was also followed from early times. In China of the early Christian era, Fu-t'u-ch'êng was famous for his practice of medical treatment, and from that time on, the temples practised the custom of helping people with medical treatment. Particularly during the reign of the empress Wu (684-704 A. C.) of the T'ang dynasty, clinics and hospitals for the sick, and buildings to care for the dying were established. In Japan, prince-regent Shōtoku (574-621 A. C.) built a mercy home for the dying, a clinic and hospital for the recuperation of the sick in Shitennō temple and thus gave succour to invalids. It is a well-known fact also that the empress Kōmyō (702-60 A. C.) founded in Kōfuku temple a clinic and a mercy home for the poor and for mendicants. In the periods following, the monks also aided the sick by giving them medical treatment.

Thus, the Buddhists of China and Japan saved the lives of living beings in a positive manner in the above fashion and directed their efforts towards the amelioration of suffering. The spirit of *ahiṃsā* became a feature of this everyday life. In recent times, however, a material outlook has spread, mainly from western culture, many customs such as that of eating meat have infiltrated into the east, revolutionising the life of the people. Various changes have taken place in the daily lives of the Buddhists also. As a result of these changes, the noble practice of *ahiṃsā* of the past has been considerably affected, especially in Japan.

AKIRA HIRAKAWA.

AHIṂSAKA-BHĀRADVĀJA, one of the Bhāradvāja brothers, whose story is given in the *Saṃyutta Nikāya* (I, 164–5). He visited the Buddha at Sāvatthi and announced himself as Ahiṃsaka. Thereupon the Buddha said to him that a person who bore such a name should live up to its meaning. He asked the brāhman whether he practised harmlessness (*ahiṃsā*), and described *ahiṃsā* as refraining from harming others in deed, word and thought. Ahiṃsaka-Bhāradvāja said that the Buddha's explanation was excellent, and accepted him as teacher. It is said that he later became an arahant.

According to Buddhaghosa (*SA.* I, 230), it is uncertain as to why he was named Ahiṃsaka. He says the name was given by the Recensionists (Saṅgīti-kārā), either because his actual name was such, or because his conversation with the Buddha mainly dealt with *ahiṃsā*.

I. K.

AHIṂSAKA SUTTA, contained in the *Arahanta Vagga* of the *Brāhmaṇa Saṃyutta* of the *Saṃyutta Nikāya* (I, 164–5). It records an interview between the Buddha and Ahiṃsaka-Bhāradvāja.

AHINĀGA, the *nāgarāja*, serpent-king, that dwelt in the fire-room (*agyāgāra*) of the temple of the ascetic Uruvela Kassapa. When the Buddha requested the ascetic to allow him to stay one night in the fire-room the ascetic expressed his reluctance because the *nāgarāja*, terribly venomous, fierce and possessing psychic power, would harm the Buddha. But, when requested for the third time, the ascetic consented. The snake, when he saw the Buddha inside the room, blew forth smoke. The Buddha, too, did the same. The angered snake then blazed up heat, which the Buddha repeated. Ultimately, the snake, tamed by the Buddha, was put inside the Buddha's bowl and was shown to the ascetic (*Vin.* I, 24 f.).

A. K. Coomaraswamy (*JAOS.* LV, 386 ff.) suggests that the word 'Ahināga' in the above reference is a proper name like Ahicchatta. In Jaina tradition, as pointed out by Coomaraswamy (loc. cit.), the story survives in the episode of Mahāvīra's conflict with an unnamed adversary who appears in the form of a serpent. The serpent, however, is elsewhere called Saṅgama, i.e., Yama. Coomaraswamy further shows that Ahi, the serpent in the Vedas, is identical with a dragon Vṛtra in the Vedas. Vṛtra is said to be cut into two by Indra. Ahi further corresponds to Avestan Azhi, known also as Vishapa, 'of poisonous slaver', and also to Sumerian Mushussu, the seven-headed dragon slain by Nimitra, later Tiāmat, bisected by Marduk, who makes Heaven of one of the parts. All these legends, perhaps, could be related to one another.

H. R. P.

AHINDA SUTTA provides the background of the occasion on which the verses of protection (*paritta*, q.v.) against snake bites were given by the Buddha.

A monk at Sāvatthi had been bitten by a snake (*ahi*) and had died. When this was brought to the notice of the Buddha, he remarked that if that monk had suffused the four royal families of snakes (*cattāri ahirājakulāni*) with a heart of loving kindness, he would not have died of snake bite. Thereupon the Buddha recited a stanza of eight lines (*A.* II, 72) for sheltering, safeguarding and protecting oneself through development of loving kindness towards all living beings,

> that all may see good luck
> and not meet any ill.
>
> (*sabbe bhadrāni passantu*
> *mā kañci pāpam āgamā'ti*)

The four royal clans of snakes are named the Virūpakkhas, the Erāpathas, the Chabyāputtas and the Kaṇhā-gotamakas. The first mentioned family was regarded, according to the *Āṭānāṭiya Suttanta* (*D.* III, 199), as the custodians of the western quarter (*pacchimā disā*). The other three quarters, however, are not allocated to the remainin three clans, and the commentary, too, is silent i this respect.

The concluding lines of the *Ahinda Sutta* give the impression of having been added at some later stage.

AHIPETA, a peta, twenty-five leagues in length, whose body, enveloped in flames, had a head like that of a human being and the body like that of a serpent. His story is given in the *Dhammapadaṭṭhakathā* (II, 64 ff.).

One day Moggallāna accompanied by Lakkhaṇa went from Gijjhakūṭa to Rājagaha for their alms. On their way, Moggallāna saw a peta and smiled. When Lakkhaṇa asked him the reason for his smile, Moggallāna wanted him to put that question to him in the presence of the Buddha. This was done and Moggallāna revealed the peta's story.

In the past the men of Bārāṇasī had built a hermitage on the banks of a river for a pacceka-buddha. While residing there, the pacceka-buddha went daily for alms in the city. The citizens, too, went to the hermitage, morning and evening, with offerings to attend on him. On their way, they used to pass through a field, which they damaged. The farmer requested them not to walk across the field, but his requests were in vain.

One day when the pacceka-buddha was away, the farmer went to the hermitage, destroyed all the vessels used by the pacceka-buddha and set fire to the hermitage. When the devotees came in the evening with offerings as usual, they found that the hermitage had been burnt. On inquiring, the farmer confessed his action and the people in their fury beat him to death. As a result of this evil deed, the farmer was born in Avīci and suffered there till the earth rose to a height of one league. Thereafter, he was born as a peta in Gijjhakūṭa.

I. K.

AHIRIKA is an unprofitable mental property or factor (*akusala-cetasika*) of unscrupulousness, impudence and shamelessness in doing an unskilful action (*akusala-kamma*). Unless this mental factor is present, the mind will not think of doing evil. Hence, it is found in all unskilful thoughts, always combined with carelessness of blame (*anottappa*), mental agitation (*uddhacca*) and delusion (*moha*) in which it is firmly rooted. These four are collectively called the general unskilful mental factors (*sabbākusala-sādhāraṇa-cetasika*).

Ahirika has no conscientious scruples and does not abominate evil for evil's sake; it has neither fear nor disgust at misconduct (*kāyaduccaritādīhi ajigucchana* : *Vism.* xiv, § 160, p. 396), and is, therefore, characterised as immodesty (*alajjālakkhaṇa*) or shamelessness, disregard of the law, disobedience, lack of internal shame and impudence. Disregarding the accepted standards of morality, it has a good deal of independence and self-reliance (*attādhipateyya*), and, therefore, of consistency to some extent, many times leading to stubbornness, owing to its lack of power of adaptation.

Its motivating force acts, therefore, from an intrinsic cause. The subjective nature of this unskilful mental factor is its essential characteristic by means of which it is sharply differentiated from carelessness of blame (*anottappa*), the objective recklessness of consequences in doing evil, with which it is always combined. See also ANOTTAPPA.

H. G. A. v. Z.

AHIRIKAMŪLAKA SUTTA, a group of four suttas with a common title contained in the second chapter of the *Dhātu Saṃyutta* (*S.* II, 162–3). One finds in these a restatement of the contents of some of the suttas of the same chapter and the next, all of which centre round the fact that people of similar disposition are drawn together. The Buddha declares that beings come together according to their nature : thus, the shameless associate with the shameless, the reckless with the reckless, the modest with the modest, the scrupulous with the scrupulous, etc.

This group of suttas was preached by the Buddha at Sāvatthi. The four contain repetitions, each one beginning with *ahirikā* (the shameless)—hence the title. There are only minor variations in the four suttas. The second one differs from the first in that *appassutā* (the uneducated) and their opposites *bahussutā* (the learned) are substituted for *anottāpino* (the reckless) and their opposites *ottāpino* (the scrupulous). In the third these give way to *kusītā* (the indolent) and their opposites *āraddhaviriyā* (the energetic). In the fourth they are replaced by *muṭṭhasatino* (the muddleminded) and their opposites *upaṭṭhitasatino* (the attentive).

L. R. G.

AHIRIKA SUTTA. Two suttas of this name appear in the *Aṅguttara Nikāya* (II, 227 and 229) where shamelessness is combined with unbelief (*asaddhā*), immorality (*dussīla*) and carelessness of blame (*anottappa*). Possessed of these evil qualities, one not only is censured by the wise and incurs much demerit, but will be reborn in hell (*niraya*) according to one's deserts. See also AHIRIKA.

AHIVĀTAKA, name of a mortal infectious disease which, according to folk-belief, when it breaks out in a family attacks every member of the household not excluding even domesticated animals.

Apparently, the earliest reference to this disease is in the Vinaya, which, however, states nothing about it except that a certain family was counted among its victims (I, 77). The only information we have of it is in the commentaries.

The *Dhammapada* commentary (I, 187) informs us not only of how its infection gradually spreads but also of a possible way of escape from it. First, it attacks the lowest forms of living beings starting with the flies in a house, and then slowly spreads to other creatures as well such as lizards, mice, fowls, cats, dogs and cattle, all of which die ; next the infection spreads to persons residing in the house, as slaves for instance, and likewise to other members, until finally not even the owner of the house is spared. But a person who escapes through a hole that he makes in the wall could, however, avoid the disease. The Vinaya commentary (V, 1003) mentions other ways of avoiding the disease : one may also escape by breaking through the roof or by crossing over to some village or the like (*tirogāmādigata*). And both commentaries mention instances of persons who thus escaped being its victims.

Such methods of escape were perhaps prescribed to avoid the malicious spirit or demon of the disease who may have taken his stand at the entrance to the house.

Ahivātaka-roga—as the disease is properly called—may be translated literally as 'snake-wind-disease'. W. H. D. Rouse, however, in his translation of the second volume of the Jātaka (p. 55) has rendered it as malaria for no other reason than that, in the Terai, snake's breath is believed to be the cause of malarial fever. He perhaps had doubts about his own translation; for he has alternatively stated that the term *ahi* refers also to the navel which may be construed in the sense of bowels, so that the full expression may ultimately apply to a disease of the bowels like cholera (ibid. n. 1). I. B. Horner, too, retains the former translation, in her translation of the Vinaya entitled 'Book of the Discipline' (*SBB*. XIV, p. 98), but observes that the *Mahāvastu* alludes to a disease called *adhivāsa* "produced by non-human agency which is said to attack a whole district" (ibid. n. 4). However that may be, there is certainly no doubt that at least linguistically there can be no connection between the two.

H. S. C.

AHI-VIJJĀ. Snake craft, or snake science, is listed among the low arts (*tiracchāna vijjā*) and wrong means of livelihood (*micchā-ājīva*) which certain recluses and brāhmans are said in the *Brahmajāla Sutta* (*D*. I, 9) to have practised, but which the Buddha disapproved for his disciples. The word probably refers to the charming of snakes, sorcery and magic associated with snakes. The commentary (*DA*. I, 93) interprets the word as referring to the art of healing snake bites and the invocation of snakes for magical purposes: *sappadaṭṭha-tikicchana-vijjā c'eva sapp'avhāyana-vijjā*. But, for this instance, there is no straightforward interpretation of meaning.

On the other hand, methods of snake charming are referred to in several Jātakas such as the *Campeyya* (*J*. IV, 454), *Bhūridatta* (*J*. VI, 158) and *Saṅkhapāla* (*J*. V, 161) *Jātakas*. According to the *Campeyya Jātaka*, it required the knowledge of charms which could be learnt from well-known teachers of the liberal arts, in this particular instance it being learnt from a teacher at Takkasilā. Magical herbs were also needed, and the snake was approached while repeating the rune or charm, the sound of which caused much pain to the snake. The snake charmer in this story chews the magic herbs, repeats the charm and spits on the snake, whereupon blains arise, wherever the spittle touches it. After this, the snake is manhandled, the joints broken, and the body crushed. Once again the charm and the chewn herb are used to break the snake's fangs. A few technical terms are given in this story, which were probably used in describing the subsequent process; such as cloth-wrap (*paṭṭaka-veṭhana*), rope-rubbing (*tantamajjita*) and cotton-blow or rinsing (*dussapothita*).

In the *Bhūridatta Jātaka* too, Ālambāyana, the snake charmer, having learnt a spell, which is also called by the same name Ālambāyana, from Kosiya, the ascetic, to whom it was in turn revealed by a mythical bird, garuḍa, attempts to catch a snake by means of this charm. He uses it, along with drugs of magical power, in a manner similar to that of the snake charmer in the *Campeyya Jātaka*. But here the snake charmer anoints his body with drugs and takes food to fortify himself before he approaches the snake, and then begins to utter the charm. He, too, is seen to spit into the mouth of the snake after having eaten the drugs. When the snake has the drug in its mouth, it is weakened, after which the snake is made to vomit the food it has taken. It is then that it is manhandled in the way described in the *Campeyya Jātaka*.

Seizing of snakes was obviously considered an art or skill requiring special learning which was probably passed down from ascetic teachers and traced further back to a mystic origin. The mythical bird, the garuḍa, is said to have passed it on to the ascetic Kosiya, in the *Campeyya Jātaka*, and the garuḍas themselves are depicted there as having, at a certain period in their history, been unaware of the secret. A part of the secret was the seizing of the snake by the tail and not by the head, as explained in the *Paṇḍara Jātaka* (*J*. V, 75). In all the above mentioned Jātakas, snakes are seized by their tails, the belief underlying being that they swallowed stones, and being held in this manner, the stones would fall from their mouths, so that the snakes would not be heavy.

Snakes were usually captured in this manner for the purpose of making them perform before audiences. Making them dance was considered a feat and there was exceptional skill in causing them to create varying numbers of hoods. Technical terms, again, seem to have been used: forming of a black or blue, round or square figure, spreading of the hood by swift motion to give the appearance of a hundred, a thousand hoods, etc. There seem to have been exhibitions and contests in snake dancing. The audiences, including kings, held these as a sport and paid for their performances. The *Ahiguṇḍika Jātaka* speaks of a monkey who had been trained by a snake charmer to dance with a snake.

In the *Saṅkhapāla Jātaka*, too, there is the instance of the capture of a snake, but here it is by a band of hunters and not by a snake charmer. Its method does not seem to be that employed in *ahi-vijjā* and no magic is involved. The snake is captured by beating it with stakes and tying it up with ropes. The purpose of capturing it, peculiarly, is the eating of the flesh which is claimed to make a savoury dish. The only conformity here to the method earlier mentioned is the seizing of the snake by its tail.

Ahiguṇṭhika (variants: *-guṇḍika*, *-kuṇḍika*, etc., see R. Morris, *JPTS*. 1886, p. 153 and *PED*. under the word *Ahi*) probably referred to these professional snake charmers but not necessarily to all those who practised *ahi-vijjā*. In the *Bhūridatta* and *Campeyya Jātakas* the *ahiguṇṭhika* is identified with Devadatta and the snake with the Buddha.

B. J.

AHOGAṄGĀ, mountain, situated in north India on the upper Ganges (*Mhv.* v, 233 and *Mhbv.* p. 106 mention 'the other side of the Ganges': *upari Gaṅgāya*; see also *VinA.* I, 57), where Sambhūta Sāṇavāsī lived for some time. It was at this place that Yasa Kākaṇḍaputta met Sambhūta Sāṇavāsī and explained to him the ten doctrinal points wrongly held by the Vajjian monks of Vesāli. Thereupon Yasa requested him to deal with the situation, before the Vajjian monks could spread the wrong doctrine. A meeting of the arahants also took place near this hill to discuss how the Vajjian monks should be treated for the offence they had committed; and at the meeting monks from the western country, southern country and Avanti were present (*Vin.* II, 298–9).

According to the *Mahāvaṃsa*, Moggaliputta Tissa thera, prior to his taking part in the Third Council, took up his abode on the Ahogaṅgā mountain for seven years in solitude (*Mhv.* v, 233). In the *Samantapāsādikā*, (*VinA.* I, 57) it is stated that Moggalīputta Tissa thera, after accepting the third invitation of emperor Asoka, came from the Ahogaṅgā mountain along the river Ganges to Pāṭaliputta on a raft.

I. K.

AHOLŪKHALAMEKHALĀ, name of a yakṣī, in the *Mahāmāyūrī* (58. ed. Oldenbourg) as indicated by the Chinese versions. Edgerton (*BHS.* 427) suggests that it is probably a misprint for Maholūkhalamekhalā.

AHOSI KAMMA is literally 'action that was', with the implication that it is no more. The doctrine of karma involves the active and the passive aspects of the process of mental volition (*cetanā*). All the various classifications of types of karma have the efficacy of action in view, as functional (*kicca*), as productive (*pākadāna*), as intensive in its own sphere (*pākaṭṭhāna*), or as extensive in duration and time (*pākakāla*). When action ceases to be re-active, this may be due to its force having been obstructed (*upapīḷaka*) or even destroyed (*upaghātaka*) by other influences. It may be that, owing to a lack of opportunity to react immediately (*diṭṭha-dhamma-vedanīya*), the karmic force is lying in abeyance accumulatively (*kaṭattā*). But, when action with volition is not given any opportunity, either here or hereafter, not through having spent its reproductive energy (*janaka*), or through destructive opposition, but merely through lack of time or appropriate conditions, it is said: There has been action (*ahosi kammaṃ*), there has been no karma-result (*n'āhosi kammavipāko*), there will be no karma-result (*na bhavissati kammavipāko*), and there is no karma-result now (*n'atthi kammavipāko: Ps.* ii, 78; *Vism.* xix, § 14, p. 515).

As most types of action, however, have an inherent accumulative power of reproductivity without being bound by a time-limit, it is mostly that kind of action which must become reactive in this life itself (*diṭṭha-dhamma-vedanīya-kamma*) which will become inoperative and ineffective as *ahosi kamma*, once the limit of this life span has been passed. Its potential force having lapsed, it cannot be revived again; just as a man who has been acquitted in a murder-trial cannot be tried for that case again. Another reason for karmic action becoming inoperative (*ahosi*) is the intrinsic weakness of an action. Thus, a thought arising as the seventh thought-moment of apperception (*javana*) is not strong enough to carry its effect beyond a second birth; and if such thought (*upapajja-vedanīya-kamma*) does not become subsequently effective, it also will be an action that was (*ahosi kamma*). "All ineffectual volitions, by reason of their inherent weakness, and all time-barred kamma-s, by reason of their inhibition by more powerful kamma, are termed 'have-not been-s' (*ahosika*)" (*Compendium of Philosophy*, p. 45).

H. G. A. v. Z.

AHRĪ, shamelessness. See **AHIRIKA.**

A-HŪṂ is a combination of the Siddhaṃ characters *A* (𑖀) and *Hūṃ* (𑖮𑖳𑖽). As is well known, *A* stands at the first place of the Siddhaṃ alphabet, as the basic sound of all others and so it is called the mother of all characters and sounds. It is uttered by opening the mouth fully. On the other hand, *Hūṃ* is ejaculated when the mouth is shut and represents the end of all things.

In other words, *A* is the substantial base of this phenomenal world, whereas *Hūṃ* is the conclusion of every virtue and truth. This is expounded in the second chapter of the *Mahāvairocana Sūtra* (*Nanjio*, No. 530) as follows: "*A* is the real origin of all things from which every phenomenal existence is created." About *Hūṃ*, Kūkai (774–835) gave a definition in his *Un-ji-gi* (meaning of the word *Hūṃ*) thus: "This *hūṃ* is a word of truth spoken by every Tathāgata. .... It is endowed with complete wisdom (*sarvaprajñā*) at every moment, reaching to the ultimate goal (*anuttara-samyak-sambodhi*) without any delay."

Again, Jōgon's (1639–1702) *Sittan-sanmitsushō* (*Taishō*, vol. 83) explains that the two sounds *A* and *Hūṃ* represent exhalation and inhalation which symbolise the Buddha's Own Truth (*A*) and his Power of Salvation (*Hūṃ*), respectively. Every kind of other minor virtue is to be included in these two greater virtues. Similarly, in the *Kakuashō* it is stated thus: "All the respiration of Shingon (*mantra*) is tantamount to *A* and *Hūṃ*, the former stands for breathing out and the latter for breathing in." Based on this interpretation, the Buddha's power itself and that of others came to be characterised by means of breathing. Two Vajrayakṣas, placed, facing front, within the space covered by the four pillars in temple gates in Japan, represent this breathing of *A* and *Hūṃ*.

The sculpture of two dogs in the Chinese style of carving, placed in the front of the main hall of temples, similarly represents *A* and *Hūṃ*.

S. K.

ĀHUNEYYA SUTTA. There are several suttas bearing this title (*A.* III, 279, 280; IV, 290 ff., 373; V, 23) and each one deals with a certain number of individuals, six, eight, nine or ten, who, for various reasons, are worthy of offerings made to them (*āhuneyya*). The term *āhuneyya* is the gerundive form from *ā* + *hu*, connected with the noun *āhuti*, oblation, sacrifice, veneration, adoration, and with the verb *juhati*, to offer, to dedicate.

The concept of sacrifice as a form of placation being foreign to Buddhism, the underlying idea is that of an offering as a token of respect and veneration. The term is best known as the first in a series of epithets applied to the noble disciples, namely, the four groups (*cattāri purisa-yugāni*) who have attained the four stages of sainthood (*sotāpanna*, *sakadāgāmin*, *anāgāmin*, *arahant*). Each group comprises a pair (*yuga*), one who has attained the path (*magga*) and the other who enjoys the fruit (*phala*) of such attainment. All of them are worthy of offerings (*āhuneyya*). The offerings to be made are said to be the four 'requisites' (*paccaya* : *Vism.* VII, § 94, p. 181) : food, clothing, shelter and medicine; and the above mentioned community of noble disciples is worthy to receive them, for offerings made to them bear great fruit (*mahapphala-karaṇato* : loc. cit.).

When the list of 'worthy ones' is extended to ten, the following are included: a Tathāgata, who is an arahant, and a fully enlightened Buddha; a pacceka-buddha; one who is released in both respects (*ubhatobhāgavimutta*) or in two ways, viz., by way of mental absorption (*jhāna*) and by the path of insight-meditation (*vipassanā*); one who has found deliverance through insight (*paññā-vimutta*); one who is a witness of the truth or realisation in his own body (*kāya-sakkhi*), having attained the eight deliverances; one who is possessed of vision (*diṭṭhippatta*) during the middle stages on the path of holiness; one who is released by faith (*saddhā-vimutta*) at any stage, after having entered the path of holiness (*sotāpanna*); a truth-devotee (*dhammānusārī*), having gained the faculty of wisdom when entering the path of holiness; a faith-devotee (*saddhānusārī*), having gained the faculty of faith through contemplation of impermanence at the moment of entering the path of sainthood; and a matured one, one of the elect (*gotrabhū*), i.e., who has become a member of the family by adoption, immediately before entering the path of holiness which will make him one of the noble clan by attainment (*A.* V, 23).

Two other suttas which open the *Chakka-nipāta* (Book of Sixes) of the *Aṅguttara Nikāya* (III, 279–81) bear the same title and have given their name also to the first chapter thereof (*Āhuneyya Vagga*), although only the first four, directly (1–2) or indirectly (3–4), deal with the subject. A monk becomes worthy of offerings (*āhuneyya*) who does not become elated or depressed, but retains his mental equilibrium, mind-control and self-possession, when an object presents itself to any of his six senses (*A.* III, 279). They are also due to him who experiences the five supernatural powers (*iddhi*, q.v.) together with deliverance of heart and mind through destruction of all mental intoxicants (*A.* III, 280–1). The two following suttas, although identical in structure and also giving reasons why a monk is worthy of offerings, have not been named *āhuneyya* in the *uddāna* at the end of the chapter, but are mentioned by the names *indriya* and *bala*, as the first one speaks of faith (*saddhā*), energy (*viriya*), mindfulness (*sati*), concentration (*samādhi*) and insight (*paññā*) as the faculties (*indriya*) which together with emancipation (*vimutti*) make a monk worthy of offerings. These faculties are referred to as powers (*bala*) in the subsequent sutta (*A.* III, 282) which derives its name from them.

H. G. A. v. Z.

AI is one of the Sanskrit vowels and one of the Siddhaṃ characters (ऐ). It is transcribed into Chinese in various ways, such as 愛, 藹, 翳, 靉 (ai), 野 (yeh), 懈 (chieh).

In the *Lalitavistara*, p. 89 (Chinese translation *Fang-kuang-ta-chuang-yen-ching* 方廣大莊嚴經, fasc. IV) it is stated thus: the spelling of the letter *Ai* stands for *airyāpatha-śreyān*.

According to *Taishō*, No. 880, the letter *Ai* is the inconceivable supremacy of all the essences (Skt. Aiśvarya = that which belongs to a lord or Īśvara). Moreover, according to Meikaku's *Bukkyo-Daijii* (佛教大辭彙), the Sanskrit name of the god Īśvara is Aidairi (愛提里 Aindriya), so it is that the name explains the meaning of sovereignty.

Many Chinese and Japanese commentators have given it the meanings of freedom, *sva-lakṣa*, victory and so on, based on the interpretations mentioned above.

Bibliography: *Mahāparinirvāṇa-sūtra*, fasc. VIII (*Nanjio*, No. 118); *Mahāvairocana-sūtra*, fasc. V (*Nanjio*, No. 530); *Mañjuśrīparipṛcchā*, fasc. I (*Nanjio*, No. 442); *Hsi-tan-tsang* (悉曇藏 or the store of Siddhaṃ), fasc. V.

AI-KONGŌ, 'diamond of love,' name of a bodhisattva whose place in tantric Buddhism is in the west amidst the five 'diamond bodhisattvas'. He carries a standard headed by the dragon's tail (*makaraketu*). He is blue in colour and differs hardly from Kongō-ai, one of the four bodhisattvas belonging to the entourage of Akṣobhya Buddha. Sometimes he carries a bow in his left and an arrow in his right hand (Cp. *Hōbōgirin*, s. v.).

AIMLESS, not bent on anything, free from desire (*appaṇihita*), is one of the three kinds of deliverance (*vimutti*). It is achieved by presenting all mental formations to the mind as unsatisfactory (*dukkha*), whence results tranquillity. Thus, it is actually rather a gate of emancipation (*vimokkha-mukha*). See VIMOKKHA.

AINŌSHŌ, (壒嚢鈔 or 'the dust bag') is an ancient Japanese encyclopaedia edited by Gyōyo in 1446 A.C. It consists of 536 items spread over seven volumes and its main purpose is to explain the origin of Buddhist terms, cults, ceremonies and customs.

In connection with this work, there are two others which should be noted. One is called *Chiri-bukuro* (塵袋 or 'the dust sack'). It consists of ten volumes. But the author's name is unknown. In the same way as the above, it elucidates the meanings of Buddhist terms and forms a collection of the important customs and ceremonies in Buddhist life.

The other forms an appendix to the above two works and is thus given the name of *Jinten-ainōshō* (塵添壒嚢鈔 or 'the dust bag to which is added more trash'). It contains 737 items in all. Of these, 536 items are culled from the first work, while the remaining 201 items are those of the second one. From its preface the date of its completion is ascertained as 1532 A.C. But, in the case of this work, too, the author's name remains unknown.

S. K.

AIR (*vāyu*), one of the four primary elements (*dhātu*) constituting matter (*rūpa*). It should not be taken as the mixture of oxygen, nitrogen, etc. which is the atmosphere, enveloping the earth, but as the element of vibration and oscillation, of growth and motion. See BHŪTA.

AIRĀVAṆA, Skt. form of Erāvaṇa, name of Indra's (Śakra's) elephant. See ERĀVAṆA.

AIRĀVATA, one of the many mountains that prince Sudhana had to cross on his way to the dwelling place of Manoharā the kiṃnara maid (*Divy.* 450). The name is sometimes spelt as Airāvataka (ibid. 455; *GM.* III, part I, 144, 152).

AIRĀVATĪ (1), name of a yoginī, found in the *Sādhanamālā* (427.5). She is one of the eight yoginīs of the speech-circle (*vāk-cakra*) mentioned in connection with the *sādhana* (fulfilment) named Prajñāloka.

AIRĀVATĪ (2), another name for the river Rāpti in Oudh. See ACIRAVATĪ.

AIŚCARYA, more correctly *Aśādhāraṇa-saṅghārāma*, a monastery of Kucha in ancient western China. In Chinese literature it is named Ch'i-t'ê-chung-yüan (monastery of the miracles), but it is transcribed in various ways, such as *a-shê-li-êrh* (阿奢理兒), *a-chê-li-êrh* (阿遮哩貳) and so on.

In the first fascicle of *Ta-t'ang-hsi-yü-chi* (大唐西域記 Travel book of the Western Region of the great T'ang Empire) of Hsüan-tsang, the reason why this monastery is called 'the monastery of the miracles' is explained as follows: a certain king of the Kucha country was an extremely pious Buddhist who served the three treasures (*triratna*) with great zeal. On account of his merits, both his mother and brother obtained many miraculous benefits unexpectedly. After his death the monastery was founded by his relations and pupils in lasting memory of this great king, under the name of 'the monastery of the miracles'.

The descriptions with regard to the appearance of this monastery as found in the same work are as follows: the park is very wide and beautiful, the buildings are huge and gorgeous in which many masterpieces of Buddhist art are placed. Many monks living there are diligent and well-trained in religious practices. Therefore, many monks and laymen from various places gather here to study. These monks are served by the king and ministers very piously.

According to Hsüan-tsang's biography (*Ta-tz'ŭ-ên-szŭ-san-tsang-fa-shih-ch'uan*, 大慈恩寺三藏法師傳 fasc. 2) he stayed at this monastery for more than two months, and had a discussion with a great scholar Mokṣagupta, who lived there.

AIŚVARIKA DOCTRINE. The term *aiśvarika* is derived from Īśvara, meaning lord, ruler, master, chief, from the root *īś*, meaning 'to have power'. By Aiśvarika doctrine, the teaching of one of the four Nepalese schools of Buddhist philosophy, is meant, in the words of de la Vallée Poussin, "the half-naiyānika (i.e., theistic), half-Śaivite (i.e., pantheistic) interpretation of the ontological and religious speculation of the Great Vehicle in the last state of its development" (*ERE.* I, p. 93). However, this interpretation differs considerably from the accepted doctrines of Mahāyāna, so as to make scholars recognise in it a new kind of Buddhism, based, as it were, on theism. It is not only from atheism, scepticism, agnosticism, or deism that this theistic doctrine of Buddhist philosophy distinguishes itself, but also from the theism accepted by some world religions.

According to tradition, Buddhism was introduced to Nepal in the third century B. C., by the great emperor Asoka[1]. Early in the Christian era, Buddhism in Nepal developed into four philosophical systems, namely, Svābhāvika, Aiśvarika, Yātnika and Kārmika, each in its own way attempting to explain away what it considered objectionable, as well as contradictory, in the original doctrine, e.g., the origin of the world, the nature of a first cause and the nature and destiny of the soul.

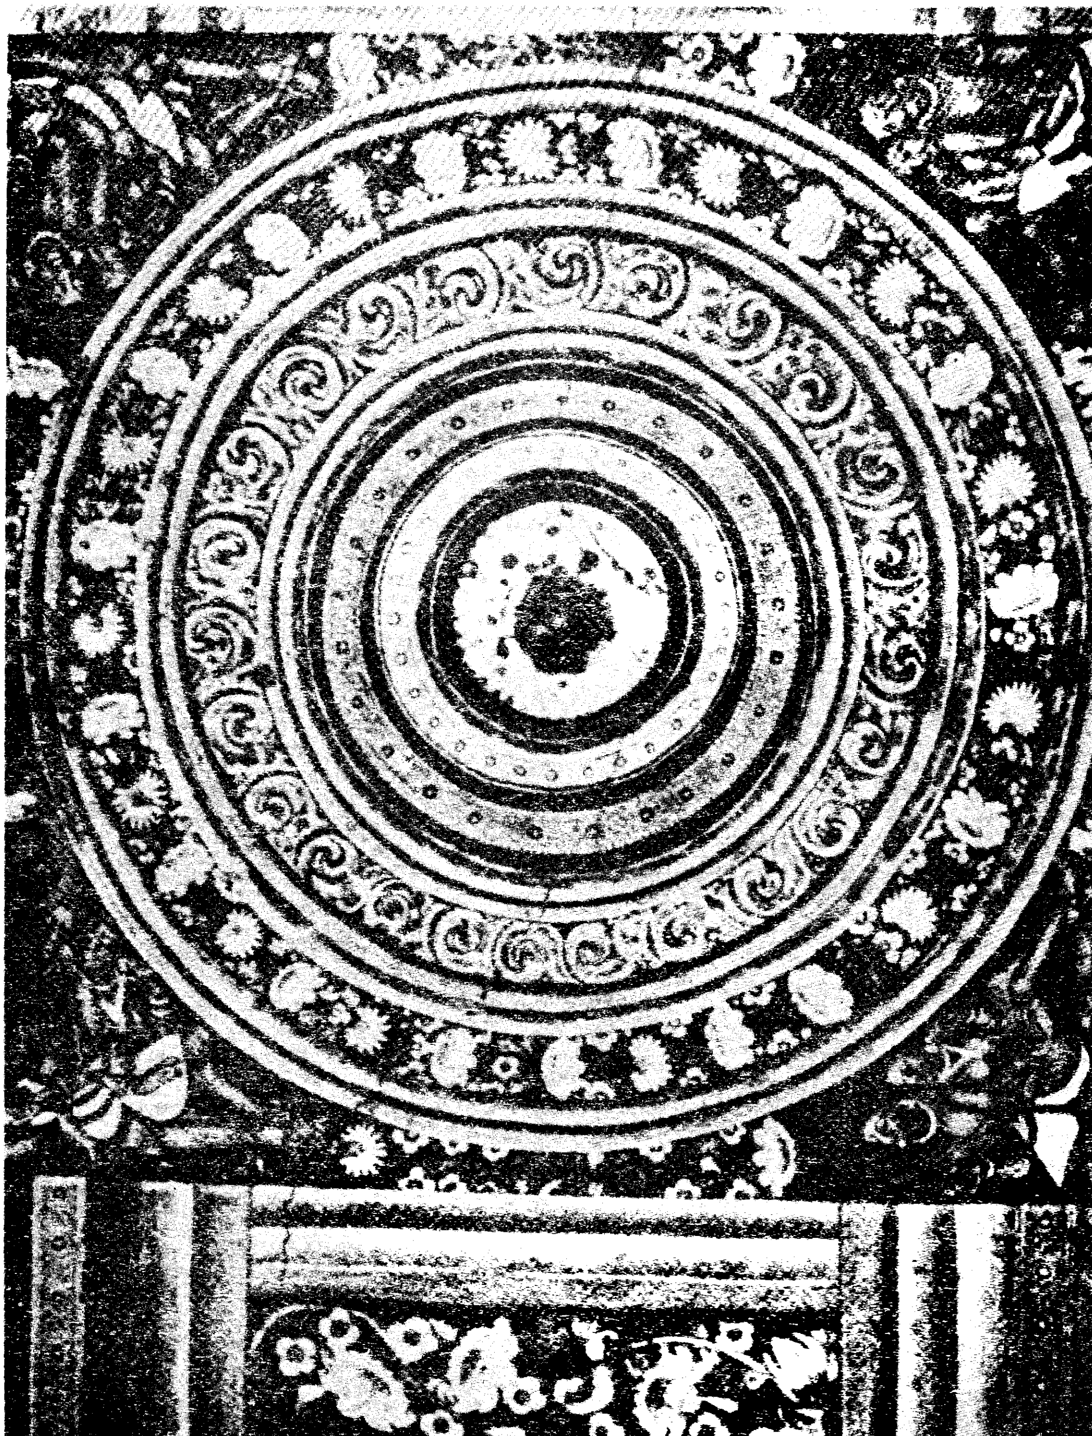
1 Buchanan-Hamilton thinks that Buddhism was introduced to Nepal in 33 A.C. (*Account of Nepal*, p. 190); but L. A. Waddell says that this was probably its re-introduction (*The Buddhism of Tibet*, p. 8). D. R. Regmi, however, denies that direct evidence exists for the introduction of Buddhism, and avers that the religion was widely current at the time of Hsüan-tsang (*Ancient Nepal*, Calcutta, 1960, p. 120).

The Aiśvarika doctrine is largely based on the interpretations derived from the *Svayambhū-purāṇa*, the *Bhadrakalpāvadāna* and the *Avalāna-kalpalatā*.

According to this doctrine, when all was void, perfect void (*śūnya*, *mahā-śūnya*), the sacred syllable *Om*, which consists of the three sounds *a*, *u*, and *m*, became manifest, surrounded by all the radical letters (*bījākṣara*). In that sacred syllable Īśvara[2], identified with the Great Buddha (Ādi-Buddha, q.v.), the first intellectual essence, revealed himself in the form of light by his own will. This eternal, infinite, intellectual and immaterial Īśvara, the self existent Great Buddha, became for the sake of creation, Pañca-jñānātmika, as proper to his own essence. Pañca-jñānātmika, possessing five kinds of knowledge, namely, *suviśuddha-dharmadhātu-jñāna*, *ādarśana-jñāna*, *pratyavekṣaṇā-jñāna*, *samatā-jñāna* and *kṛtyānuṣṭhāna-jñāna*, created from them by five separate acts of mental absorption (*dhyāna*) the five transcendent Buddhas[3] (Dhyāni-buddha), Vairocana, Akṣobhya, Ratnasambhava, Amitābha and Amoghasiddhi, respectively, to whom he gave the virtues of that knowledge (*jñāna*) whence they originated. The five transcendent Buddhas are the immediate source, Īśvara, the Great Buddha, being the ultimate source, of the five elements (*pañca-bhūta*), and of the five faculties (*pañca-indriya*) and five spheres (*pañca-āyatana*) of perception. The element of space (*ākāśa*), the faculty of sight (*cakṣus*) and visible objects (*rūpa*) proceed from Vairocana; the element of air (*vāyu*), the faculty of hearing (*śrotra*) and sounds (*śabda*) from Akṣobhya; the element of fire (*teja*), the faculty of smell (*ghrāṇa*) and odours (*gandha*) from Ratnasambhava; the element of water (*āpa*), the faculty of taste (*jihvā*) and tastes (*rasa*) from Amitābha; and the element of earth (*pṛthivī*), the faculty of body-sensibility (*kāya*) and tangible objects (*spraṣṭavya*) from Amoghasiddhi. Thus, the five elements and the five faculties and five spheres of perception are forms of the five transcendent Buddhas[4]. Each one of them, in order to mould these materials into the shape of an actual world, produced a transcendent bodhisattva (*dhyāni-bodhisattva*) by the joint efficacy of the knowledge (*jñāna*) received from Īśvara, the Great Buddha and of an act of his own mental absorption (*dhyāna*). The five transcendent bodhisattvas thus produced by the five transcendent Buddhas are Samantabhadra, Vajrapāṇi, Ratnapāṇi, Padmapāṇi and Viśvapāṇi, respectively. Each of these transcendent bodhisattvas, in his turn, having become possessed of all qualities (*sarvaguṇa*) by virtue of powers derived immediately from the five transcendent Buddhas—Īśvara, the Great Buddha, being their ultimate source—produced all things by his decree. Hence, the transcendent bodhisattvas are the actual creators of the physical universe. They are the immediate agents of creation (*sṛṣṭi-karmakāra*), the five transcendent Buddhas being the authors of creation (*pravṛtti-karmakāra*). But the worlds created by the transcendent bodhisattvas are perishable. Three of their creations, viz., those of Samantabhadra, Vajrapāṇi and Ratnapāṇi, have already passed away. The fourth, the existing universe, is the creation of Padmapāṇi (Avalokiteśvara). According to the *Guṇa-kāraṇḍa-vyūha*, Brahmā proceeded from Padmapāṇi's shoulders, Mahādeva from his forehead, the sun and moon from his two eyes, the air from his mouth, Sarasvatī from his teeth, Varuṇa from his belly, Lakṣmī from his knees, the earth from his feet, water from his navel and the Indras and other gods from the roots of his hair. Amitābha is the lord (*nātha*) and the conqueror (*jina*) of the existing universe for the instruction of which it has had Śākyamuni, the fourth of the five human Buddhas (*mānuṣi-buddha*) who correspond (*pratibimba*) to the five transcendent Buddhas.

Thus, as stated in the *Svayambhū-purāṇa*, Īśvara, the self-existent Great Buddha, is one with all things in *pravṛtti*, the state in which intellectual essence exists while mixed with matter, and separate from all things in *nirvṛtti*, the state in which intellectual essence exists independent of matter. Hence, he is the essence of *pravṛtti* and *nirvṛtti*. But, being sustained in *pravṛtti* and unsustained in *nirvṛtti*, his essence is *nirvṛtti*. In *nirvṛtti* he is formless, but in *pravṛtti* all things are forms of him. In other words, as stated in the *Bhadra-kalpāvadāna*, he is the cause of all things existent in the impermanent universe. And being the cause of impermanent existence, he is the cause of the cessation of all such existence as well.

Body and intellectual essence are produced by Īśvara, the Great Buddha. Body is a compound of the five elements; intellectual essence, which animates it, is an emanation from the self-existent Īśvara, the Great Buddha. Hence an absorption into him is *mokṣa*, the ultimate bliss (*nirvṛtti*).



This *mokṣa* can be won, according to the Aiśvarika doctrine, by one's own efforts, through *tapas* and *dhyāna*. By the term *tapas* is meant not penance or self-inflicted bodily pain, but a total rejection of all objective (*pravṛttika*) phenomena; and by the term *dhyāna*, pure mental abstraction. By the efforts of *tapas* and *dhyāna* a trainee can enlarge his faculties to infinity through the stages of *śīla* (morality), *samādhi* (concentration), *prajñā* (unison with Īśvara, the Great Buddha), *vimukti* (emancipation) and *jñāna* (full-knowledge: the knowledge of Īśvara, the Great Buddha), elevate himself to the status of divinity and be absorbed into Īśvara.

---

2 In Pali texts (e.g., *D.* III, 28; *M.* II, 222; *A.* I, 173 and *Vism.* 513) the word *issara* (Vedic *īśvara*) is used to denote 'creative deity', Brahmā.

3 P. Mus, *Barabudur*, pp. 577 ff.

4 There is also a series of six, Vajrasattva being added to the series of five. Vajrasattva is assigned the immediate organisation of mind (*manas*) and cognisable objects (*dharma*). The series of six has also been augmented to nine by the addition of Vajrakāya, Vajradharma and Vajrakarma.

Copyright : Department of Archaeology, India.

From the above analysis of the Aiśvarika doctrine, it is clear that it teaches an immaterial essence, an infinite, self-existent god (Īśvara, the Great Buddha) who is the sole god and cause of all things, and regards *mokṣa* as an absorption into his essence. But, as Hodgson points out [5], though it believes in an immaterial essence and a supreme god, it denies his providence and dominion, and though it believes *mokṣa* to be an absorption into his essence, and him to be the giver of the good things of *pravṛtti*, it accepts the connection of virtue and felicity in *pravṛtti* to be independent of him. Further, *mokṣa*, the ultimate bliss, is declared capable of being won only by one's own efforts through *tapas* and *dhyāna*, the efforts which will enlarge the devotee's faculties to infinity, will elevate him to the status of divinity, and will raise him in heaven to an equal and self-earned participation of the attributes and bliss of the supreme Great Buddha, Īśvara.

E. Hector Perera.

AI-THUṄ or Ai-t'ung is only known as the author of the *Mahīsāsaka-karman* (*Nanjio*, No. 1153), which is an extract from the *Mahīsāsaka Vinaya* (*Nanjio*, No. 1122). He lived circa 700 A.C. during the T'ang dynasty.

AI-ZEM-MYŌŌ, 'king of the science of love'. Destroying vulgar passions, he awakens in his devotees a greater and stronger love, embracing the entire universe. See RĀGA-VIDYĀRĀJA.

AJAJJARA SUTTA, the eighteenth sutta of the Asaṅkhata *Saṃyutta* (*S*. IV, 369), dealing with the 'non-withering', i.e., Nibbāna.

It is referred to as *Ajara Sutta* in *Vism*. p. 243, viii, § 248, where the term *ajara* means 'non-decay' or 'non-fading', for, it is said to be the bliss eternal, in contrast to *saṃsāra* which is characterised by impermanence, suffering and unsubstantiality.

AJAKALĀPAKA, name of a yakkha who tried to terrify the Buddha. The *Udāna* (4, 5) mentions him as dwelling in the Ajakalāpaka-shrine (*cetiya*), at Pāṭalī—the commentary reading Pāvā (of the Mallas) for Pāṭalī. He tries to inspire fear in the Buddha's mind by uttering a loud cry, but the Buddha responds by reciting a stanza which states that he who has achieved release has nothing to fear from yakkhas

The commentary (*UdA*. 63 ff.) gives further details. It relates that the yakkha, returning from a yakkha assembly, finds the Buddha seated on his couch, as had been already told him by Sātāgira and Hemavata. Angered, he tries various means of ousting the Buddha, but fails and is, instead, converted to seek refuge in him.

The commentary (loc. cit.) also derives the name of the yakkha from *aja-kalāpeti*, meaning 'tying up goats', but it suggests also *ajaka-lāpa* meaning 'goat-cry'. F. L. Woodward (*Minor Anthologies*, Part II, p. 6. n. 2.) thinks the latter derivation more likely, as referring to the imitative noise made by the yakkha. R. Morris (*JPTS*. 1886, pp. 94 ff.) has an interesting note on this passage, giving also a description of a demon as found in the Jaina sutta, the *Uvāsaga-dāso* (ed. A. F. R. Hoernle, I, pp. 65–9).

B. J.

AJAKARṆA, a disciple of the Buddha, who after the death of the Buddha, in preparation for a discourse on the ten bodhisattva-bhūmis, was ordered by arahant Mahā-Kāśyapa to keep away hunger, thirst and sickness from men (*Mhvu*. I, 76).

ĀJĀNI SUTTA (*A*. III, 248) employs a common simile, setting out five excellent qualities in a thoroughbred horse (*assājāniya*): it runs straight, swiftly, gently, with patience and with restraint. Similarly, if a monk develops a straightness of intuitive knowledge, a swiftness of intellectual grasp, gentleness, patience and self-control, he is indeed worthy of offerings and respect, and he becomes an unsurpassed field in which devotees may sow their good deeds and from which they may reap the fruits of their merit.

Elsewhere (*A*. III, 282) the same simile between a thoroughbred horse and a monk is found, but there the point of comparison lies in the undisturbed tolerance (*khama*) as regards the sense-objects, which makes the horse fit for a nobleman, and the monk worthy of offerings, etc.

ĀJĀNIYA SUTTA. Although the word *ājāniya* should, correctly, be derived from *ā* + *jan*, 'to be of good birth', it is by Buddhaghosa connected with *ā* + *jñā*, 'to be well taught or trained'. And, it is in this connotation that it is most frequently found as a quality of a thoroughbred horse (*assājāniya*). For, the qualities in respect of which comparisons are drawn between a rāja's thoroughbred steeds and monks worthy of offerings are not qualities of pedigree and birth, but those acquired by training and practice.

In the *Tika-nipāta* of the *Aṅguttara Nikāya* (I, 244–6) are found three suttas, dealing with the three qualities of a worthy monk: that he is possessed of beauty of life (*vaṇṇasampanna*). strength of character (*balasampanna*) and swiftness of understanding (*javasampanna*). All three suttas agree in their explanation of a monk's beauty of life consisting in discipline, in observance of the monastic obligations, proficiency in the practice of righteousness and in seeing danger even in minor transgressions. They also agree in their explanation of a monk's strength of character which consists in his living with ardour and zeal, abandoning

5 B. H. Hodgson, *Essays on the Languages, Literature, and Religion of Nepal and Tibet*, p. 25.

evil habits, cultivating good habits, with steadfastness and strong energy, without throwing off the yoke of good qualities.

The difference between these three suttas lies in their variations as to the explanation of swiftness of understanding which is attained through insight in the Four Noble Truths of woe, its origin, cessation and method (p. 244), or through the destruction of the five fetters that bind beings to the lower worlds (p. 245), or through the destruction of the mental intoxicants (*āsava* : p. 246), thereby realising freedom of heart and insight.

ĀJAÑÑA JĀTAKA. The Buddha related this Jātaka (No. 24, *J.* I, pp. 181–2) to a monk who had given up striving, to teach him that the wise do not give up striving (*viriya*), even when they are physically unfit.

Once when Brahmadatta was king of Bārāṇasī, seven kings encompassed the city. A warrior who fought from a chariot harnessed two Sindh horses who were brothers, and set out to capture the seven kings. He was able to destroy six camps and capture six kings. In this struggle the older horse was wounded. The charioteer drove on, until he arrived at the king's gate. There he stopped the chariot, and having released the wounded horse, unfastened the armour and made him lie on a side. Then he started to equip another horse. On seeing this, the wounded animal, who was the bodhisatta, protested that as an *ājañña*-horse he must fight on. Thereupon the charioteer harnessed him again, and this time he broke down the camp of the seventh king and captured him. The charioteer returned to the capital where he released the wounded horse.

Thereupon the bodhisatta died, after having counselled king Brahmadatta not to slay the captives, but to honour the victorious warrior and rule the kingdom righteously. The king had his body cremated with all respects.

Having listened to the story the monk became an arahant. Ānanda was identified with the king of Bārāṇasī.

ĀJAÑÑA SUTTA. The comparison between a rāja's noble thoroughbred steed and a monk who is worthy of offerings is met with fairly frequently, although the points of comparison vary. Thus, the four qualities in common (*A.* II, 250) are beauty, strength, speed and good proportions, i.e., length of body and girth. In a monk, these qualities are explained as the beauty of a life of virtue, strength of character, speed of insight and good proportions of the necessaries for living, such as food, clothing, shelter and medicine. In the sutta immediately following (*A.* II, 251) the speed of insight in a monk is replaced by and defined as the attainment of the four states of mental absorption (*jhāna*) and the destruction of the mental intoxicants (*āsava*).

Elsewhere (*A.* IV, 188–90), another *Ājañña Sutta* gives eight points of comparison. The royal steed has a good pedigree, eats carefully, avoids lying down in dirt, is easy to live with; revealing its faults it is open for correction; in harness it pulls correctly; it goes straight ahead and is steadfast. Similarly, to be worthy of offerings and respect, a monk should be perfect in behaviour, eat without being vexed about the quality of food, avoid misconduct; he does not trouble other monks; he confesses his faults to his teachers; as a learner he trains in the way he thinks best; he goes the straight way, which is the Noble Eightfold Path of right understanding, etc.; and is strenuous in his endeavour without slacking his energy.

AJAṆṬĀ, the name given to a series of celebrated cave hermitages and halls in the state of Bombay in India (N. lat. 20° 32′ by E. long. 75° 48′).

Topography and early notices: The site takes its name from that of the village (more properly Ājūnthā) seven miles away. The village Fardapur is, however, nearer the caves. Auraṅgābād, 55 miles away, is the headquarters of the district in which these famous monuments are located. (Map p. 311)

The area, which was once a great stronghold of Buddhism and which had been often visited by pilgrims [1], scholars and connoisseurs alike, was totally forgotten and remained unnoticed for more than a millennium, till 1819. In that year some British officers of the Madras army, who were out hunting in the neighbourhood, accidentally discovered the monuments as they were led to the caves to see the 'home of tigers' [2]. Since then interest in them has rapidly grown. There were several early papers written on the rock-cut temples and the paintings which they contain. The paintings were copied and exhibited in the Crystal Palace in London where the first set, a most valuable

1 Some scholars suggest that here was the monastery A-chê-lo mentioned by Hsüan-tsang.—G.P.M.

2 *IA.* III (pp. 269 ff.) which refers to the ***Transactions of the Literary Society***, Bombay, Vol. III (p. 520) for this visit. In the *Transactions RAS.* Vol. II for 1829 (pp. 362 ff.), Lieut. J. E. Alexander has described the caves which he had visited in Feb. 1824. For others who followed not too long after, Capt. Owens and Laing, Capt. Gresley and Ralph, as well as the medical man Dr. Bird (who peeled off and removed 4 painted figures despite his companions' protests), see *JASB.* V, (pp. 348 f. & 556 ff.).—G. P. M.

collection by Major Gill, was lost in a fire [3]. Undaunted by this, more copies were prepared by John Griffiths of the Bombay School of Art [4], Lady Herringham and others, and a great literature has gathered on the subject of the art, architecture and paintings of the Ajaṇṭā caves.

Descriptive and chronological: The caves are situated in picturesque surroundings in a wooded and rugged ravine (Pl. XI), along the bottom of which runs the river Waghora (Wāgura), which enters the valley over a cliff on the east and forms in its descent a series of pleasant waterfalls. The caves have been excavated in the living rock of the Vindhya range on a semi-circular scarp of mountain in the south side of the precipitous bank of the ravine and vary from 35 to 110 ft. in elevation above the bed of the stream. They are of two kinds, dwelling halls (*vihāra*) and meeting halls (*chaitya*). Architecturally they are said to be rock-cut replicas of the wooden architecture of the day. The dwelling halls have a broad verandah, its roof supported by pillars, leading into a hall (Pl. XII). To the left and right and at the back, dormitories have been excavated, opening into this hall. In the centre of the back wall, facing the entrance is an image of the Buddha, usually standing, in a niche. The cells generally have stone beds. The larger meeting halls (e.g., caves IX and X) seem to have been derived from the apsidal halls of the secular communities and guilds mentioned in early Buddhist literature. They have a rectangular portico and a nave with side aisles in the form of an apse at the end. The chaitya halls are so-called because they contain, as an essential feature, a memorial (*uddeśika*) stūpa.

The total number of caves is thirty. Of these the earliest ones are Nos. VI, VIII, XII, XIII and XXX. The first two are chaityas and the rest viharas Some of them are half-finished, and those that demand attention are the finished and painted ones.

The early caves rank with the early western caves like Kārlā (Karlī, Karle), Bhājā, Koṇdane, Bedsā and so forth and represent the art of the early Sātavāhanas. The horse-shoe shaped chaitya-window type of the façade at Ajaṇṭā (Pl. XIII) is not different from what we know at Bhājā, Kārlā and other places. The rows of pillars composing the long apsidal 'prayer-hall', with aisles on either side and the memorial stūpa towards the farthest end near the apse, are similar to those in other western Indian caves. The memorial stūpa is devoid of any human representation because such anthropomorphic representation was probably considered disrespectful to the Teacher. The monasteries are elaborate, with cells on all the sides.

While the early caves thus show the earlier features of the architecture of the Sātavāhana period, the later caves represent the more elaborate pillars (Pl. XIV) and capitals (Pl. XV) of the Gupta-Vākāṭaka period, the more elaborate and developed chaitya-window type and sculptural embellishment with the memorial stūpa in the chaitya clearly presenting on the sides the Teacher in human form (Pl. XVI).

The sculptures, specially in the later caves, show the high-water mark of achievement during the Vākāṭaka age, and no more splendid example need be sought for the study of Vākāṭaka art contemporaneous in the Deccan with the Gupta art in the north (Pls. XVII, XIX).

The paintings completely covering the walls, pillars and ceilings form a great galaxy of panels presenting masterpieces of Buddhist art illustrating scenes from the life of the Teacher, his previous lives comprising the Jātakas (Pls. VI, VIII, XXV) [5] and Avadānas (Pl. XXVII), and floral and animal motifs (Pls. V, XVIII) dexterously woven into diverse designs of staggering originality [6].

Inscriptions in caves IX and X reveal the early date of the paintings. The date is confirmed also by the features and characteristics that bring them nearer Bhājā, Sāñcī, Jaggayyapeṭa and the early phases of Amarāvatī. It would be interesting to compare Āndhra art in the 2nd century B. C., with paintings in Ajaṇṭā caves IX and X. The script of the inscriptions here is early Brāhmī of the 2nd century B. C. The paintings, therefore, belong to the early Sātavāhana period, probably to the time of Śātakarṇi, during whose time the Sāñcī gateway was also worked by the ivory carvers of Vidisā as recorded in an inscription thereon. The paintings in these two caves are thus the earliest that we know of the historical period in India. They form, as it were, the very first in the historical sequence of pictorial art in India.

---

3 About the year 1850 Gill was deputed by the Directors of the East India Co. to copy the paintings. Out of about 30 of the best, which he faithfully copied in large size, some 22 were exhibited in the Crystal Palace, Sydenham. After they had perished in the fire, 5 of the unexhibited copies were found in the stores, from where they were removed and hung in the corridors of the India office (*IA*. II, pp. 152 f.)—later in the India section of the South Kensington Museum. An early record of these incidents is found in the *Life in Ancient India* of Mrs. C. Speir, who rewrote her book in 2 vols. as *Ancient and Mediaeval India* (under her changed name of Mrs. Manning). In the latter work (II, p. 357) she referred to the *Edinburgh Review* (Jany. 1868) for further information. (The fire occurred in 1866.)—G. P. M.

4 *IA*. II (p. 152). Griffiths sent 125 copies to the South Kensington Museum but 87 were damaged in a fire in 1885. It is from the remainder that he wrote his book. The India section of the Victoria and Albert Museum exhibits 56 of his copies.—G. P. M.

5 Not all the Jātaka stories conform to their better known versions. Some have adopted later developments of a story and, in certain instances, the painter has made changes to create particular effects. Among examples of these may be cited the *Sivi*, *Campeyya*, *Mahāhaṃsa*, *Vidhurapaṇḍita* and *Sutasoma Jātakas*.—G. P. M.

6 Twelve Jātaka representations were identified by S. F. Oldenburg whose article (in Russian), published in St. Petersburg (1895) was translated into English (in 1897 by Leo Wiener) in *JAOS*. Vol. 18 (first part pp. 183 ff.), as the direct result of a notice of it by T.W. Rhys Davids in the *JRAS*. (1896). Oldenburg identified 3 stories in Cave II 1 each in caves IX & X and 7 in cave XVII.—G.P. M.

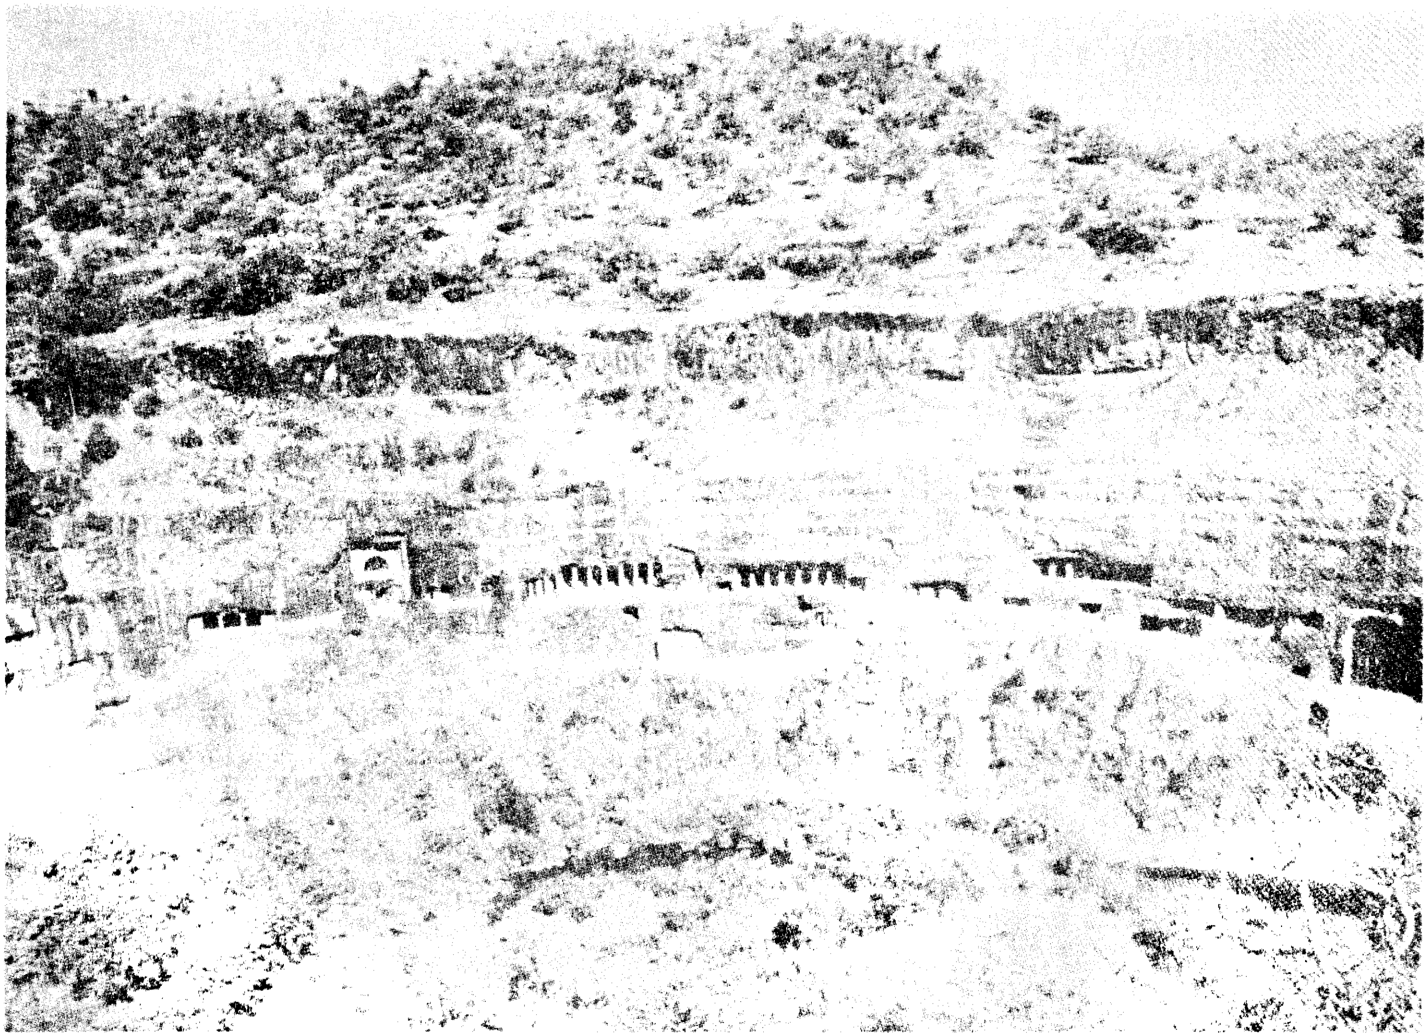
The later ones, which belong to the 5th-6th centuries A. C., are associated with the Vākāṭaka age; Vākāṭaka inscriptions have been discovered along with the paintings. An inscription in cave XVI mentions its dedication to the monks by Varāhadeva, the minister of the Vākāṭaka king Hariṣeṇa in the later half of the 5th century A. C., while another (in cave XXVI) records the gift of the temple of Sugata by a monk Buddhabhadra, a friend of Bhavvirāja, the minister of the king of Aśmaka; its date, judging by palaeographic evidence, may be about the same. A fragmentary inscription from cave XX recording the gift of the hall by Upendra is also of the same date. It is thus clear from these inscriptions of the Vākāṭaka box-headed type of letters that they are assignable to the Vākāṭaka period. The art is thus the art of the Vākāṭakas, just as the earlier phase represents the art of the Sātavāhanas. From a recently edited inscription, cave IV has now been dated in the first half of the 6th century A. C. (*EI.* XXXIII, 261). It is just possible that the early western Chāḷukyas had also a hand in the latest phase, that is, towards the end of the 6th and the beginning of the 7th century A. C.

There is also a school of thought that believes one of the paintings in the Ajaṇṭā caves to be a representation of the embassy of Persia during the time of Pulakeśin II (7th cent.) and a bacchanalian scene, that of the Persian king Khusrau II and his beautiful queen Shīrīn. There is, however, no agreement amongst scholars on some of these identifications; the contrary opinions have been more numerous and weighty. Nevertheless, no other satisfactory explanation for the presence here of such scenes has yet been made.

Painting techniques: The paintings at Ajaṇṭā are executed in the tempera process and the materials used are very simple. The five colours usually described in all the *śilpa* texts elaborately describing the process of tempera painting in India may be seen here, i.e., red ochre, yellow ochre, lamp black, lapis lazuli and white. The surface of the rock was first covered with a layer of clay mixed with rice husk and gum, on which was applied a coat of lime beautifully smoothed and polished to form the ground on which the paintings were to be executed. The outline drawing was in dark brown or black, the other colours being subsequently added by wash. Effects of light and shade were created by the process of streaks and dots, illustrating the methods of *patra-vartanā* and *bindu-vartanā*, hatching and stippling, mentioned in the *śilpa* texts.

> The paintings were done with the 'Asian fresco' technique, which is something between tempera and dry fresco painting. Generally, the rocky walls, prepared by chisel beforehand, have received two layers of a very tenacious plaster which has often resisted time; a lower and rather thin layer over which a thicker stratum was laid, both composed of a very fine clay earth mixed with ground-up straw over which was spread a glue, of a white-grayish colour owing to the presence of ashes. In some cases, on the chiselled surface of the rock, a dense network of small holes has been made for the insertion of projecting wooden 'nails' in order to have a greater adhesion of the earthy plasters . . .
>
> The drawing was freely sketched onto the plaster, often with a 'graffito' which served as a guide for the ultimate design in black or brown. In many cases there seem to be repentances and uncertainties in setting down the figures. Inside the contours, as fixed in this way, colour was put on evenly without any chiaroscuro. Details were sometimes done in 'graffito', and sometimes in white. (Dr. Imberto Scerrato in his 'Short Note on some recently discovered Buddhist grottoes near Bāmiyān, Afghanistan', in *EW*. New Series, XI, Nos. 2-3, pp. 10-12. The remarks here have a general relevancy, and are not specifically on Ajaṇṭā.—G. P. M.)
>
> The technique of the Ajaṇṭā wall-paintings is not markedly different from that described in the paintings at Bāmiyān. The rough surface of the wall or vault is first covered with a layer of clay or cow dung mixed with chopped straw or animal hair. When this has been smoothed and levelled, it is given a coating of gesso (fine white clay or gypsum), and it is on this ground that the actual painting is done. Although Indian wall-paintings can never be described as fresco in the true sense of the word, it is notable that the plaster ground was kept moist during the application of the pigment. The composition was first entirely outlined in cinnabar red; next came an under-painting corresponding to the terra verde of medieval Italian practice. The various local tints were then applied and the painting was finished by a general strengthening of outlines and accents. A burnishing process gave a lustrous finish to the whole surface. (Benjamin Rowland, *The Art and Architecture of India*, 1959, p. 138.)

The lines composing the painted figures are so sure, sinuous, rich in form and depth that one may at once recall the apposite and appreciative remark on effective line-drawing in the *Viddhaśālabhañjikā : api laghu likhiteyaṃ dṛśyata pūrṇamūrtiḥ* (even with the minimum drawing the maximum effect of full form is produced). Truly, these masters have demonstrated the excellence of line-drawing as is given in the *Viṣṇudharmottara : rekhām praśaṃsantyācaryāḥ* (the masters praise effective line-drawing as the highest in art).



Content of paintings : The painter at Ajaṇṭā has studied life around him and natural scenes of great beauty with intense sympathy and appreciation.

> Whoever were the authors of these paintings, they must have constantly mixed with the world. Scenes of everyday life, such as preparing food, carrying water, buying and selling, processions, hunting scenes, elephant fights, men and women engaged in singing, dancing and playing on musical instruments. Many are most gracefully, and all most graphically depicted upon these walls; and they could only have been done by men who were constant spectators of such scenes; by men of keen observation and retentive memories. (*ERE*. I, p. 258, quoting J. Griffiths.)

Plant or animal life has interested him considerably and he has revealed his tender approach to such themes as the flora or fauna as he has chosen to depict. The elephants under the banyan tree

(cave X), the geese in the *Haṃsa Jātaka* (cave XVII) and the deer in the *Miga Jātaka* also from the same cave may be cited as a few examples of the loving approach of the painter to the themes of animals and birds. He has been equally at home in the royal court, with all its dazzling magnificence (Pl. VI), the simplicity of rural life and the sublime serenity of the hermit's life in sylvan surroundings.

The *Vessantara Jātaka* shows the magnificence of the prince side by side with the simple hermit and the poor brāhman appearing as a beggar. The scene of prince Vessantara with his consort in the chariot on the royal high road (cave XXVII) is a pulsating picture of life as actually lived in ancient India. The landing in Ceylon (cave XVII) is a spectacular presentation of royal glory. The interior of the palace, giving a glimpse of the king and the queen in the women's apartments or in the garden, reveals that nothing was hidden from the gaze of the court painter. The toilet of the princess is another example of a similar theme. The imagination of the painter in portraying the celestials has probably no better example of the high achievement of a comparable theme than that of the divine musicians floating in the air as depicted in cave XVII (Pls. VII, X). The gay theme of *dampatī* (loving couples) is splendidly represented; a whole row of them is found just above the entrance doorway of cave XVII, showing the versatility of the Vākāṭaka painter in creating diverse poses for several seated *dampatīs* in artistically attractive situations. The *māradarśana* (cave I) and the Buddha's descent from heaven at Saṅkassa (cave XVII), as also prince Siddhārtha and Yasodharā (cave I), are magnificent renderings of the principal figure in different attitudes as depicted by artists whose minds had soared high to the eminence needed for the execution of such noble themes. The long panels and borders from the ceilings, of swans and birds, *vidyādhara* (flying) couples, auspicious conches and lotuses as well as sinuous rhizomes and stalks with lotuses in bud and bloom and leaves covering large areas in artistic fashion reveal the capacity of the artist to create diverse patterns of great artistic value.

The animals of fancy created in the paintings are no less remarkable than the stone carvings of similar nature in early monuments all over the country. The buffaloes and bulls, horses and elephants, lions and griffons with floriated tails, as found at Ajaṇṭā and later continued in early western Chāḷukya and Pallava art, reveal a great tradition beginning from the days of Amarāvatī.

Content of sculptures : The sculptural work merits as great an attention as the paintings. The lovely carvings of *mithunas* (affectionate couples) on either side of the door jambs of the shrines in the caves, the personified figures of the rivers Gaṅgā and Yamunā on the top, as at Udayagiri in Bhilsā, representing the earlier tradition of the river goddesses at the top rather than at the bottom, the *nāgarājas* as guards, the quaint dwarf figures and the *vidyādhara* celestial couples below the pillar capitals, as in cave XVI, form here a delightful subject of sculptural study. The originality of thought of the sculptor is powerfully illustrated in such representations as the composite deer (Pl. XIX) with a single head as a common factor for four bodies of the animal artistically arranged (cave I). But, probably the greatest masterpieces at Ajaṇṭā are the *nāgarāja* and *nāginī* with attendant in cave XIX (Pl. XX), the *māradarśana* in cave XXVI (Pl. XXI), the first sermon at Mṛgadāya (Pl. XXII) in the shrine of cave I and the huge *parinirvāṇa* scene in cave XXVI (Pl. XXIII).

The sculptor and painter both showed themselves capable of portraying human emotions most effectively. Their ability is revealed in the *Chaddanta Jātaka* (cave X) and the scene of the dying princess (cave XVI) where the feeling of pathos is instantaneously aroused in the spectator.

> For pathos and sentiment and the unmistakable way of telling its story, this picture, I consider, cannot be surpassed in the history of art. The Florentine could have put better drawing, and the Venetian better colour, but neither could have thrown greater expression into it. (J. Griffiths, *ERE*. I, as above.)

Similarly rendered is the presentation of Rāhula to the Buddha by Yasodharā in cave XVII (Pl. XXIV). The fearful host of Māra in the temptation of the Buddha (cave I), the angry prince raising his sword, to the utter consternation of the ladies of the court one of whom prostrates herself at his feet (cave II), and the elephant of Ajātaśatru let loose to kill the Buddha in the streets of Rājagṛha (cave XVI) cannot but rouse agitation and fear in those viewing the scenes. The element of *śṛṅgāra* (sensuousness) in the scenes of the zenana and in the *mithunas* (amatory couples), the spirit of despondency in figures like the *kañcukī* announcing failure (cave II) and the spirit of mirth and gaiety as in the scene (cave I) of the musical orchestra for *avarodha-saṅgītaka* (chamber music) show the intense communion with the spirit of the theme by the artist which enables him so nobly to present such emotions.

> Nowhere else in Indian art but at Ajaṇṭā do we find such a complete statement of indivisible union of what in the West is referred to as sacred and secular art. Like the poetry, the music, and the drama of Gupta India, this is an art of 'great courts charming the mind by their noble routine'—all different yet united reflexions of a luxurious aristocratic culture.
>
> ....
>
> In the Ajaṇṭā wall-paintings we feel a definite change from the art of early Buddhism, with its emphasis on the symbolic quite apart from the world of reality. Here is a turn to a sort of religious romanticism of a really lyric quality, a reflexion of the view that every aspect of life has an equal value in the spiritual sense and as an aspect of the divine. Sensuous physical beauty is as an emblem of spiritual beauty (Benjamin Rowland, op. cit. pp. 137 f.).

Interaction in art : Early art in India has almost a similar form all over the land. The Śuṅgas and Kuṣāṇas in the north, the Kāliṅgas in the east and the Sātavāhanas in the Deccan were inheritors of common traditions from the Mauryas, and striking similarities in the Śuṅga, Sātavāhana, Kāliṅga and Kuṣāṇa art cannot but take the eye of the connoisseur. Common motifs with undoubted resemblance in distant parts of the land urge attention. It is interesting, for instance, to compare

earlier figures from Bhārhut and Amarāvatī, with those of cave X in Ajaṇṭā. Turbans, necklaces, earrings, facial features and the position of hands joined in adoration will be noted, the fan-shaped head-gear of the *toraṇaśālabhañjikā* (the tree-sprite on the gateway) at Sāñcī has its counterpart in Mathurā and Amarāvatī. There are other figures from Amarāvatī that agree with those at Kārlā. The traditions of the Sātavāhanas are great, but these are results of the development of art all over the land for some centuries and the unity of Indian art accounts for such similitude of details in concepts.

The Vākāṭaka traditions as we see at Ajaṇṭā are derived from the earlier Sātavāhana. This can be clearly noted in many echoes here (of the painted figures) from Amarāvatī. It is only the decorative element, chiefly composed of pearls and ribbons so characteristic of the Gupta-Vākāṭaka age, that distinguishes them from the simpler but nobler sculpture of Amarāvatī. Even individual motifs have a great story to tell, as in the case of the *udaremukha* motif occurring in the *Rāmāyaṇa*. Kabandha described as huge headless and devoid of neck, with face on stomach (*udaremukha*), has been made use of as the form of an evil one attacking the Buddha in the *māradarśana* scene at Amarāvatī in the 2nd century A. C. Contemporary sculpture at Ghaṇṭaśālā has repeated it and the sculptor of the Vākāṭakas at Ajaṇṭā has continued this weird theme. It is present in still later sculpture also, i.e., Pallava and early western Chāḷukya, which succeeded to the tradition of the Vākāṭakas. It is interesting to recall that the Vākāṭakas are mentioned in a late second century inscription at Amarāvatī, and having travelled from the Krishna valley to the Deccan and founded a ruling house there, they continued a tradition that started in the Krishna valley. The Guptas, who were connected with the Vākāṭakas by matrimony, adopted the theme which consequently occurs even at Sārnāth. This *udaremukha* motif has travelled beyond the shores of India and occurs, to cite one instance, in proper context in the narration of the *Rāmāyaṇa* at Prāmbanan in Java.

The Vākāṭaka traditions at Ajaṇṭā continued in later sculpture, as can easily be seen in figures in identical poses found at Mahābalipuram inspired by those at Ajaṇṭā, which themselves in turn recall earlier ones from Amarāvatī. The twist of the right leg put forward in an identical pose at Ajaṇṭā and at Mahābalipuram cannot but draw attention. The beautiful paintings in colour help us to conjecture and envisage fully the glory of earlier Amarāvatī sculpture and the culture it represents, where the lack of colour stands in the way of comprehending the entire range of rich jewellery, sparkling gems, gay and glamorous drapery, elaborate furniture, and the garments of the peasantry, or the imposing architecture.

Traditional standards: The six limbs (*ṣaḍaṅga*) of painting comprise *rūpabheda* (variety of form), *pramāṇa* (proper proportion), *bhāva* (depiction of emotion), *lāvaṇya-yojanā* (infusion of grace), *sādṛśya* (likeness) and *varṇikābhaṅga* (mixing of colours) to produce an effect of modelling. All these have excellent renderings in the paintings at Ajaṇṭā. The diversity of form shown is unique; the painters here have mastered the vast complex of human, animal and plant form, in addition to training their imagination for creating diverse designs. The study of form has given the masters at Ajaṇṭā astonishing control over the proportions of figures individually and in groups and helped the creation of splendid compositions. Emotion is seen at its best in several important narrations or stories and scenes. The grace of some of the famous figures, like the princess at her toilet, prince Siddhārtha, the so-called black princess and so forth, bespeak the *lāvaṇya-yojanā* of the artist. The element of portraiture as seen in some of the Ajaṇṭā figures like Jūjaka the wicked brāhman, repeated in the panels of the *Vessantara Jātaka*, or in so typical a face as that of the old chamberlain (cave II), cannot but make us wonder at this effect of faithfulness to some original (*sādṛśya*). The way the painter has contrived to mix the colours which have made the paintings truly world famous is a tribute to his capacity in *varṇikābhaṅga*.

Identification, comparative studies: It is interesting also to note how the sculptor, while following the traditions of the mode of presenting each particular Jātaka, as seen at Amarāvatī, Nāgārjunakoṇḍa, Goli, Ghaṇṭaśālā, Gummiḍidurru and other places, has yet preserved his individuality. This could be noticed if the mode of the depiction of the Jātakas here is compared with that elsewhere. While the version of the Pali Jātaka, e.g., the hunter cutting the tusks of the elephant, is presented at Bhārhut, Amarāvatī and in Gandhāra sculpture, the version followed at Ajaṇṭā is that of the *Sūtrālaṅkāra* where the elephant himself pulls out his tusks with his trunk. The pathos is greatly heightened by this noble act of the animal which not only offers its tusks to the wicked hunter but further helps him even in pulling them out.

But, probably, the simple and direct presentation of the most important incident in the *Mahājanaka Jātaka* at Bhārhut, where the king followed by Sīvalīdevī realises that solitude is essential for concentration, is more effective than the picturesque and elaborate presentation of the court scene and the earnest endeavour of the queen to keep the king to herself and confined to her private apartments.

The presentation of Irandatī in a swing in the *Vidhurapaṇḍita Jātaka* heightens the charm of the nāga princess, the desire to marry whom made the yakkha Puṇṇaka play the game of dice, win and bring the wise Vidhurapaṇḍita to the palace of the nāga queen. The story of Vidhurapaṇḍita, as being a very important one, has been elaborately represented at Bhārhut, at Amarāvatī and Barabuḍur. At Ajaṇṭā, it has been no less expansively dealt with, and most pleasingly.

The *Saṅkhapāla Jātaka* and the *Campeyya Jātaka* have been as effectively depicted as at Amarāvatī. The *Haṃsa Jātaka* is probably more vivid than even at Amarāvatī where, though the panel depicting the discourse of the *haṃsa* is an important masterpiece, at Ajaṇṭā the elaboration

is both in the fowler's attempt to catch the golden goose as well as in the scene of the discourse in the king's court.

Probably, nowhere else has the touching story of the *Sāma Jātaka* had so effective a portrayal as in the paintings at Ajaṇṭā where the incidents of the story are wonderfully expressed. There is a certain elaboration in the story of prince Vessantara, specially his driving in a chariot through the royal highway of his capital, with merchants plying their different trades depicted one after the other. Similarly, the scene of the wicked brāhman Jūjaka (Pl. XXV), begging of the prince both at the court and in the leaf hut, singles out the representation here of the *Vessantara Jātaka* as even more effective than the detailed depictions at Sāñcī, Amarāvatī and Goli. The *Mahākapi Jātaka* here is one of the two stories of nearly the same name which has not found great favour with earlier sculptors and painters. Thus, while at Bhārhut and Sāñcī the story chosen is that (in the *Kapi Jātaka*) of the leader of the herd who saved the group of monkeys from the archers of the king of Bārāṇasī, at Ajaṇṭā it is that (the *Mahākapi Jātaka*) of the helpful monkey who rescued a man from a deep abyss and later forgave him even though the man had proved himself ungrateful.

In the same way, the story of the helpful stag which rescued a king from the pit, the *Sarabhamiga Jātaka*, is chosen for depiction at Ajaṇṭā in place of the one of the stag which offered its own life to save the pregnant doe and admonished the king, as shown in a medallion at Bhārhut inscribed 'Isi Miga Jātaka'.

The story of the *Mātiposaka Jātaka* is elaborately dealt with at Ajaṇṭā and is much more elaborated than the very simple single scene depicted at Goli.

The *Mahisa Jātaka* here is particularly interesting as it is rarely depicted, though at Barabuḍur the sculpture presenting this is very forceful. The *Valāhassa Jātaka*, which is picturesquely represented on the back of one of the Kuṣāṇa rail pillars from Bhūteśar, with a lovely yakṣī on the front, has probably its most effective representation at Ajaṇṭā where the story of the voyage of Siṃhala, his encounter with the rākṣasīs, his overcoming them, and his coronation are all narrated. The story here follows the *Divyāvadāna* and is supplemented by details from the *Valāhassa Jātaka*.

The *Sivi Jātaka* as represented is the version of the king offering his eyes to a blind brāhman. It is different from the more popular story of the king offering his flesh to the wicked hunter, after the version of Kṣemendra in the *Avadānakalpalatā*, which has inspired the scenes at Amarāvatī, Nāgārjunakoṇḍa and other places.

The *Nigrodhamiga Jātaka*, more imaginatively presented here than the 'Isi Miga Jātaka' at Bhārhut, glorifies the bodhisattva as a beast preaching a sermon to the ruler from the throne on which he is seated with dignity.

At Bhārhut, if the wisdom of the lady Amarā (wife of Mahosadha) was chosen for showing the discomfiture of the wicked enemies of her husband who were trapped by her in boxes, it is the wisdom of Mahosadha himself that is depicted in one of the scenes from the *Mahā-ummagga Jātaka* at Ajaṇṭā, where the wise young man settles the dispute of the real mother and the goblin over the ownership of a child.

In the depiction of scenes from the Buddha's life, the incident of Nālāgiri, which is more comprehensive at Ajaṇṭā than even at Amarāvatī or Goli, is almost as effective as in the famed medallion from Amarāvatī. The representation at Amarāvatī is somewhat more elaborated and more episodic at Ajaṇṭā, though the repetition of the elephant here, as in the crossbar at Amarāvatī, clearly points to the synoptic method chosen by the painter as by the sculptor.

The scenes of the presentation of Rāhula to the Buddha, of the overcoming of Māra by the Teacher and of the descent at Saṅkassa, remain unsurpassed by any other sculpture or painting depicting these themes. The presentation of Rāhula at Amarāvatī is no doubt a masterpiece, but it is not so effective as at Ajaṇṭā. Even the most lovely Kurkihār bronze (Gayā district, Bihār) representing the descent of the Buddha pales into insignificance before the great masterpiece of painting depicting the theme at Ajaṇṭā. The elaborate *māradarśana* scene in sculpture even at Ajaṇṭā is eclipsed by the powerful painting of the same theme, not to mention the masterpiece at Barabuḍur which also dwindles in importance in comparison with this.

Among the sculptural representations, the colossal *parinirvāṇa* of the Buddha, the *māradarśana* episode, the miniature carvings representing prince Siddhārtha seeing the signs (old age, disease and death) eloquently suggest the dexterity of the sculptor's chisel.

It is equally interesting to compare several other scenes from the Buddha's life with their depiction elsewhere. There is, for instance, the dream of Māyā, the interpretation, the birth, the seven steps, the visit of Asita, the meditation under the tree during the ploughing festival, the prince at school, Sujātā's offering of milk-food, the incident of Trapuṣa and Bhallika, the story of Nanda, and so forth.

The sculptor, and likewise the painter, at Ajaṇṭā was not only a craftsman adept in his line but was also evidently a keen student of literature with abundant creative skill and poetic fancy. This it is which accounts for splendid lyrical creations. Thus, such details from one painting as the presence of the tender shoots on the ear of a damsel, recall Kālidāsa: *kisalayapraśavopi vilāsinām madayitā dayitāśravaṇārpitaḥ* (*Raghuvaṃśa*, ix, 28: 'tender leaf-sprouts, too, which on the ears of maids beloved madden lovers, passion-wrought'). Indeed so often have we to call him to mind. The coiffure of damsels in their boudoir, pearl-bedecked, with beautiful ringlets of hair heightening the charm: *muktājālagrathitam alakam* (*Meghadūta*, i, 66: 'glossy curls in-braided with net of pearls'); the large central sapphire which sets off the beauty of the pearl necklace vivid in colour-presentation: *ekam muktāguṇamiva bhuvas sthūlamadhyendranī-*

lam (*Meghadūta*, i, 46: 'like earth's one pearl necklace of single string, with a large blue sapphire in the centre'); the beautiful long pearl *yajñopavītas* shown in the figures, both in sculpture and painting: *muktāyajñopavītāni bibhrato haimavalkalāḥ* (*Kumārasambhava*, vi, 6: 'decked in holy threads of pearl, dight in bark of golden hue'); *kaṇṭhāśleṣa* (embrace on the neck): *kaṇṭhāśleṣapraṇayini jane kim punardūrasaṃsthe* (*Meghadūta*, i, 3: 'what, then, of him who longs for the clasp around his neck but is far away') probably has no better representation than in the painting in cave XVII. The elaborate description of the king's bath in Bāṇa's *Kādambarī* is nowhere better shown than in the painting from cave I. Similarly, the musical gaiety in the palace, as described by Kālidāsa both in the *Meghadūta* and *Raghuvaṃsa*, has no more animated presentation than the colourful scene in the *Mahājanaka Jātaka* (cave I). The flying *vidyādharas* (cave XVII), recall several fine descriptive lines from the *Meghadūta*.

In short, Ajaṇṭā art is a commentary, as it were, on classical Sanskrit literature. The great traditions of Ajaṇṭā art, together with the literary flavour, have found echoes even in distant places, far beyond the borders of India. There is, for instance, almost an Ajaṇṭā conjured up in central Asia, at Dandan Uiliq, in the damsel in the lotus pond. It is startlingly like a female figure from Ajaṇṭā, and recalls Kālidāsa:

dine dine śaivalavantyadhastāt-
sopānaparvāṇi vimuñcadambhaḥ,
uddaṇḍapadmaṃ gṛhadīrghikāṇāṃ
nārīnitambadvayasaṃ babhūva

(*Raghuvaṃsa*, xvi, 46)

'waters of house-pond receding on mossy steps,
day by day,
baring their lotus stalks uprisen,
no deeper (now) than (to lap) maiden's waist.'

The caves: The series of caves is a very rich one. Though there are on the whole five chaityas and twenty-five vihāras, some of them are unfinished and some mutilated. It is caves I, II, IV, VI, VII, IX, X, XI, XII, XV, XVI, XVII, XIX, XX, XXI, XXII, XXVI, XXVII which offer the more important studies. Special interest, however, is attached to I, II, IX, X and XVII.

Cave I is a fine vihāra with a verandah, a hall, a sanctuary and a number of monks' cells. It has beautiful pillars typical of the Gupta-Vākāṭaka age, massive and artistically decorated with fluting, floral tracery, bulbous cushions and other elements of ornament. The capitals are decorated with the *makara* (mythical complex monster) motif and the dwarf figures at the four points on the cubical part of the pillar are the precursors of the *nāgabandha* (coiled snakes) which comes up centuries later. The sanctuary enshrines a colossal seated Buddha, flanked by bearers of the chowry (fly-whisk of the tail of the white yak); the wheel flanked by deer on the pedestal points to the scene as that of the first sermon (Pl. XXII). This cave contains great masterpieces illustrating scenes from the Buddha's life. There is a large painting of prince Siddhārtha and Yasodharā, and paintings of the bodhisattva Padmapāṇi (Pl. IX), the *māradarśana*, the miracle of Śrāvastī and the story of Nanda.

The *māradarśana* incident glorifies the determination of Gautama who, with firm resolve, sat under the Bodhi tree determined to become the Enlightened One. Māra tried to tempt him with his beautiful daughters and frighten him with his mighty hosts, but the Buddha remained unmoved and called the earth to witness the great deeds by which he had qualified himself in his previous lives.

The miracle of Śrāvastī is an oft-repeated scene in Buddhist monuments. It depicts how at Śrāvastī the Buddha appeared simultaneously in innumerable forms in the presence of a vast gathering including king Prasenajit of Kośala, to confuse and humble the sceptics.

The Buddha converted his unwilling cousin Nanda when the latter's mind was still occupied with thoughts of his beautiful wife Sundarī who was sorrow-stricken by his absence. The sad princess represented here is Sundarī in grief.

From the *Jātakas*, we have here the stories of the *Sivi*, the *Saṅkhapāla*, the *Mahājanaka* and the *Campeyya Jātakas* [8].

The painting from the *Saṅkhapāla Jātaka* represents the bodhisatta, born as a nāga, being roughly handled by a wicked man and rescued by a passer-by. The nāga is then shown conducting his benefactor to his aquatic home.

The painting from the *Mahājanaka Jātaka* shows how Mahājanaka's wife, Sīvalī, attempts to retain him in worldly pleasures, Mahājanaka's determination to become an ascetic, and Sīvalī following her husband.

The *Campeyya Jātaka* is the story of the bodhisatta born as a nāga and caught by a snake charmer. The nāga's wife, Sumanā, secures his release through the king of Bārāṇasī. The painting shows the king in his court listening to the entreaties of Sumanā. A further panel represents the king and the nāga seated amidst attendants.

A scene in this cave has been a subject of controversy among scholars regarding its identification. As mentioned earlier it is this which has been held to represent the embassy of the Sassanian king Khusrau II received by the early western Chāḷukya king, Pulakeśin II. There is also another, a bacchanalian scene.

The most famous paintings at Ajaṇṭā are in Cave I, and date either from the late Gupta or Early Chāḷukya Period; roughly, that is, the late sixth or early

8 These stories are dealt with elsewhere, each under its own name.—G. P. M.

seventh century. The cave has the form of a square hall with the roof supported by rows of pillars. At the back of the shrine is a deep niche containing a rock-cut image of a seated Buddha. Originally, of course, the entire interior surface of the cave, even the pillars, was covered with paintings; among the most unusual details from this cave that we shall examine are parts of the complete decoration of the flat ceiling. Although the painted decoration does not form a complete or unified iconographic scheme, large portions are thought of as parts of a single concept: the two colossal painted figures of Bodhisattvas on each side of the niche at the back of the hall may be regarded as parts of a Trinity, with the sculptured image of the Buddha in the sanctuary as the central figure. Both these Bodhisattvas are of the *caraṇa* type or composition in which a principal figure serves as stabilizing factor and guide to the entire arrangement; for example, on the left-hand wall, the enormous figure of a Bodhisattva with a Blue Lotus stands in a landscape teeming with forms of all sorts, related not by any laws of spatial composition but by their relation to the object of their veneration, the Deity of Compassion represented at the moment that he manifests himself to this group of devotees. The spectator does not take in the entire huge composition at a single glance, but his eye, following the directions suggested by the gestures and movements of the forms, and always returning to the dominating shape of the Bodhisattva, comes gradually to explore and apprehend the entire arrangement.

The figure of the Bodhisattva is worthy of detailed analysis. Following the principle of hieratic scaling it is enormously larger than the attendant figures; this device not only serves an iconographical function but provides a dominant vertical axis around which the composition literally revolves. We may be sure that the form, just like the sculptured Buddhist images of the period, was composed according to a system of canonical proportion, probably nine thalams to the total height of the figure. The pose of the body with its pronounced *dêhanchement* contrives to impart a feeling of swaying grace and movement that is carried out in the exquisite tilt of the head and the gesture of the hand. As an example of that metaphorical rather than organic composition of human forms, this figure has few equals. We may see how feature by feature the parts of the face and body are drawn with reference to the shape of certain forms in the animal and vegetable world, which by their beauty and finality recommended themselves as more fitting than any transitory human model for creating the imagined superior and eternal anatomy of a god: the face has the perfect oval of the egg; the brows curve as an Indian bow; the eyes are lotiform. We recognize again the elephantine shoulders and arms, the leonine body, and, perhaps loveliest of all, the hand, which in its articulation suggests the pliant growth of the lotus flower it holds. It will be observed in the figure of the Bodhisattva and his attendants that the flesh parts appear to be modelled in light and shade. Actually this chiaroscuro has nothing to do with the recording of any effects of illumination: like the highly similar modelling of Trecento painters such as Giotto, its sole function is to impart a feeling of solidity and plasticity to the forms. In a completely arbitrary way areas of shadow are placed on both sides of the bridge of the nose of the Bodhisattva, and in some of the dark-skinned attendants bold highlights are painted on the saliencies of features and body further to enhance the feeling of existence in the round. In the examples at Ajaṇṭā and elsewhere in India this abstract shading has a much softer *sfumato* effect than in the provincial Indian painting at Bāmiyān, where the technique is in process of becoming a convention... In a marvellous reconciliation of beauty, physical and spiritual, the Great Bodhisattva is realized as the very embodiment of that compassion and tenderness that his mission of allaying the miseries of the world implies. The flawless opalescent smoothness of the skin, like the generalized modelling of Gupta statues, the eyes half closed in reverie, the physically unreal proportions of the face suggest a beauty beyond reality; this is a loveliness so refined away from transitory human appearance that it becomes a symbol of celestial beauty and purity. The head, almost like a heavy flower on the strong stalk of the neck, bends slightly forward: an Olympian majesty sits on the tensile arc of the brows. The face is veiled in a lyric, pensive abstraction that almost reminds one of the half-sensual, half-spiritual ghostliness that animates the faces of Michelangelo's demi-gods. The figure as a whole in its tranquil suavity and virile sweetness is the perfect realization of this deity of salvation and refuge. The proper expression of the qualities of a Bodhisattva is no happy accident nor solely the result of any aesthetic inspiration, it is the result of the artist's knowledge and possession of the entire body of the painter's tradition—proportion, drawing, technique—together with an understanding of drama of pose and gesture which, as in the dance, conveys the essential nature of the deity. The figure gives an impression of being arrested in a moment between tranquillity and movement, an impression that is also given by some of the great bronze statues of the Hindu Renaissance; this suggestion of the potentiality of movement as though the figure were about to 'come to life' is, of course, the express result of the wonderfully rhythmic disposing of pose and gesture. (Benjamin Rowland, op. cit. 138 ff.)

Cave II is also a vihāra, like the earlier one wherein the shrine houses the preaching Buddha flanked by chowry bearers. In two subsidiary chapels, there is Hāritī and Pañchika in one (Pl. XXVI) and two yakṣas in the other. Among the paintings here are a large-sized bodhisattva, the dream of Māyā, the interpretation, the descent from Tuṣita heaven, the birth and the seven steps.

The dream of Māyā is an oft-repeated theme. It relates to the dream wherein the bodhisattva was conceived as a white elephant which entered the womb of the queen.

The interpretation relates to the prediction of soothsayers, summoned by king Śuddhodana, the father of Gautama, who explained that the prince to be born would either be a universal monarch or the supremely Enlightened One.

The descent from Tuṣita heaven relates to the story of the bodhisattva in heaven making up his mind to be born on earth as the future Buddha and descending from Tuṣita heaven for that purpose. The moment the Buddha was born, Śakra and other gods received the new-born prince on a silken garment even as Māyā stood under the *śāla* tree holding one of its branches. Immediately afterwards, he walked seven steps forward and pronounced that this was his last birth and that he would become the Enlightened One.

Depicted here are the *Haṃsa*, *Vidhurapaṇḍita* and *Ruru Jātakas* and the *Pūrṇa-avadāna*. There are fragments of a painted legend mentioning the donation of a thousand painted Buddhas, as also some verses from the *Kṣānti Jātaka* from the *Jātakamālā*.

The painting of the *Haṃsa Jātaka* depicts the bodhisattva—golden goose—enthroned and speaking to the queen of Bārāṇasī who had persuaded her husband to have the bird caught by a fowler so that she might hear the Law from him. Earlier, the fowler is shown capturing the goose. The lotus lake, the abode of the goose, is also picturesquely presented.

The paintings of the *Vidhurapaṇḍita Jātaka* depict the beautiful nāga princess Irandatī in a swing, the yakkha Puṇṇaka meeting her, the game

of dice between Puṇṇaka and the king whose minister was Vidhurapaṇḍita, Vidhurapaṇḍita's discourse in the nāga palace to the nāga queen and the happy union of Puṇṇaka and Irandatī.

The painting of the *Ruru Jātaka* shows the kind-hearted golden deer rescuing the drowning man who, ungratefully, later informed the king about him and had him captured.

The *Pūrṇa-avadāna* from the *Divyāvadāna* depicts the story of the conversion of Pūrṇa by the Buddha and the miraculous rescue of his brother, Bhavila, by a deva when he encountered a boat tragedy.

The *Kṣānti Jātaka* is the story of an ascetic who had such a spirit of forbearance that he patiently endured all the persecution of the king of Bārāṇasī in accordance with the vow he had taken not to get agitated under any provocation.

Cave III is an incomplete vihāra.

Cave IV, the most ambitiously planned vihāra at Ajaṇṭā, is also unfinished. The decoration of the doorway is most elaborate and pleasing. The hall has twenty-eight pillars similar to those in the verandah. The shrine has a colossal Buddha in the attitude of preaching the law and flanked by Vajrapāṇi and Padmapāṇi.

Cave V is an unfinished vihāra, with a richly carved doorway.

Cave VI is a large vihāra, double-storeyed, with a damaged ornamental doorway. A preaching Buddha is carved in the sanctuary. Among the paintings, which are mostly obliterated, are the miracle of Śrāvastī and the temptation of Māra. An inscription here mentions the gift by a monk.

Cave VII is a vihāra with a seated Buddha in the shrine and six standing Buddhas carved on the walls around. The paintings here have nearly all disappeared.

Cave VIII is a saṅghārāma (monastery) that has badly suffered damage.

Cave IX is a chaitya hall with a fine façade, its nave, apse and aisles composed by a colonnade of pillars running its entire length. Towards the apsidal end is a memorial (*uddeśika*) stūpa. The pillars and other parts composing the chaitya present early characteristics of the 2nd-1st centuries B. C. The cave has two layers of paintings, an earlier and a later, the former contemporary with the structure of the latter half of the 5th century A. C. [9]

Cave X is the earliest chaitya hall here, with a votive stūpa towards the apse end. It has an inscription, which can be dated in the 2nd century B. C.; it names one Vāsiṭhīputa Kaṭahādi as the donor of the façade. The paintings here show the worship of the Bodhi tree, the *Sāma Jātaka* and the *Chaddanta Jātaka*.

9 G. Yazdani, *Ajanta*, III (text), pp. 15 f.—G. P. M.

The painting of the *Sāma Jātaka* represents the hunter king, Sāma killed by his arrow, Sāma's blind and sorrowing parents, the king in penitent mood, and Sāma restored to life by a goddess who also gave back to his parents their eye-sight.

The *Chaddanta Jātaka* is oft-repeated in Buddhist monuments and gives the story of the bodhisattva born as a six-tusked elephant [10]. The paintings show the happy life of the elephant and his queens in the lotus lake near a huge banyan tree, the queen of Bārāṇasī pretending to be ill, so as to have the elephant (her husband in the former birth) killed, the hunter sent in quest of the tusks, his cutting them and bringing them to the queen, who fainted at their sight.

> Only about one-third of the painting is given over to the actual martyrdom and the dénouement of the tragedy. The greater part of the space is devoted to a most wonderfully naturalistic recording of the elephants in their home in the deep forest. We see them bathing, resting, feeding, and apprehensively awaiting the hunters.
>
> The composition is crowded, and yet one has the impression of the beasts moving with perfect freedom in the space that the artist assigns them. Every available area that is not occupied by the forms of the pachyderms is filled with the carving of floral and foliate forms, and serves to give a dramatic illusion to the density of the jungle. Although the elephants are types, just as much as the human figures in the composition, the artist has given us a marvellous impression of their immense dignity and weight, and their ponderous frolics. The nearest comparison in sculpture is in the representation of the same story on the cross-bars of the southern and western gateways of Sāñchī. The same method of continuous narration is employed, so that the figure of the six-tusked elephant (the future Buddha) is repeated no fewer than four times. In the relief only the intrusion of the figure of the hunter at the extreme right suggests that this is more than a jungle idyll. The method for suggesting space in these animal subjects is exactly the same as that in dealing with human figures in both sculpture and painting. The forms in the foreground slightly overlap those behind, which are placed above them in one or more tiers to the top of the composition. As in all periods of Indian art, we are struck with the artist's complete assurance and mastery in rendering the animals in literally dozens of poses, every one of which is completely characteristic of the species. The elephants at Ajaṇṭā and Sāñchī are rendered with such consummate knowledge of their specific articulation and gait that it is difficult to think of a memory-image intervening between the artist and the realization of his design.
>
> The setting, especially in those portions of wall-painting dealing with the activity of human figures, is entirely formalized, and exists only as a background. There is already a completely evolved convention whereby rocks are symbolized by a series of block-like cubes, and mountains are represented simply by duplication of these same forms. These shapes, by their squareness and hardness, serve to connote the idea of rock or mountain without the necessity of any really structural or textural description of the form. This is the equivalent of the archaic method of representing trees, whereby leaves of the different species are attached to a mere ideograph of the trunk-and-branch structure. (Benjamin Rowland, op. cit. pp. 60-1.)

Cave XI is a vihāra with Buddha figures in three panels on the right wall of the verandah and a seated Buddha against a stūpa in the shrine. The

10 Four-tusked elephants from Africa have been noted by Attilio Gatti in *Great Mother Forest* (Lond. Hodder & Stoughton, 1938 ed.), p. 183. Rajendra Lala Mitra (in *Buddha Gayā*, 213 f.) gives the report of a (freak) nine-tusked beast.—G. P. M.

famous sculpture of four deer with a common head (cave I) has a painted version. There are large bodhisattva paintings here, but they are quite damaged.

Cave XII is an early saṅghārāma with an early Brāhmī inscription in one of the cells, mentioning the gift of a merchant Ghanāmadaḍa.

Cave XIII is a dilapidated saṅghārāma of early date. No. XIV is an incomplete vihāra with a beautiful, decorated doorway, and No. XV a damaged vihāra.

Cave XVI is amongst the most beautiful vihāras at Ajaṇṭā. The inscription here, mentioning its dedication by Varāhadeva, the minister of the Vākāṭaka king Hariṣeṇa towards the end of the 5th century A. C., enhances the importance of this cave. The account given in the inscription of this dwelling, that it was adorned with windows, doors, beautiful picture galleries (*vīthī*), carvings of celestial nymphs, ornamental pillars, stairs, shrine (*chaitya-mandira*), a large reservoir and a shrine of the lord of the nāgas, is fully borne out by what is seen here. The twenty pillars supporting the hall have square bases with octagonal, polygonal and square parts in succession, and decorated capitals and bracket figures of *gaṇas*, musicians and flying couples. The large, preaching Buddha here is seated in the attitude of *pralambapāda* (western sitting style).

The paintings represent the story of Nanda, the miracle of Śrāvastī, Sujātā's offering, the incident of Trapuṣa and Bhallika and of the ploughing festival, the visit of Asita, the prince at school, and the dream of Māyā.

The story of Nanda here has reference to his conversion. The scenes show Nanda's ordination and his journey to heaven in the company of the Buddha in order to see the heavenly nymphs who would be his if he lived the monk's life. The finest representation of this theme is to be found in Nāgārjunakoṇḍa.

Sujātā, the daughter of a village headman, had made a vow to offer the best of milk-food to the shining spirit of the tree, whom she saw in the resplendent figure of the Buddha under the Bodhi tree. To him she gave the food prepared by her. This is an oft-repeated theme in Buddhist sculpture.

Trapuṣa and Bhallika were two merchants who offered food to the Buddha. There are many representations of this scene.

The incident of the ploughing festival is, again, a favourite theme. The little prince was left in the shade of a tree while Śuddhodana and the other Sākyas celebrated the ploughing festival. The shadow of the tree did not move with the passage of time and the prince was found seated in meditation, a miracle which astonished the Sākyas.

Asita, the sage, came to king Śuddhodana to see the little child Siddhārtha who, he knew, would later become the supremely Enlightened One and to whose first sermon, as he sorrowfully knew, he would not live to listen.

Many sculptures represent Siddhārtha at school, or using the bow and arrow, wrestling and distinguishing himself in every branch of learning and the use of arms.

Among the stories that have found representation in this cave are the *Hasti*, the *Mahā-ummagga* and the *Sutasoma Jātakas*.

The *Hasti Jātaka* (from the *Jātakamālā*) narrates the story of a noble elephant which threw itself down from a great height so that its flesh might feed a number of hungry travellers. The *Mahā-ummagga Jātaka* is one of the longest of the *Jātakas* and the episode chosen for depiction is that of the riddle of the son. The bodhisattva acted as a judge to settle a dispute between an ogress and the real mother who each claimed the child as her own. He asked them both to pull the child but the mother, seeing the pain experienced by the baby, gave in, thus enabling the judge to pronounce her the real mother. The riddle of the chariot and the riddle of the cotton thread, both from the same story, are also shown further on.

The *Sutasoma Jātaka* gives the story of the infatuation of a lioness for a charming prince and the incidents that followed. The painting shows the lioness licking the feet of the sleeping prince, thereby conceiving a child.

Cave XVII, which was excavated by a feudatory of the Vākāṭaka king Hariṣeṇa as given in an inscription incised on the wall of the verandah, has an elaborately carved doorway with fine floral designs; the Gaṅgā and Yamunā figures on the door jambs are most pleasing, as also the several Buddha figures here. The central Buddha image in the shrine is flanked by Padmapāṇi and Vajrapāṇi holding chowries and on the pedestal is the wheel flanked by deer.

Among the masterpieces of painting here are the seven earlier Buddhas, Vipaśyi, Śikhi, Viśvabhū, Krakucchanda, Kanakamuni, Kāśyapa and Śākyamuni, as well as Maitreya, the Buddha to come; the subjugation of Nālāgiri; the descent at Saṅkassa; the miracle of Śrāvastī, and the meeting with Rāhula.

The Jātakas represented are the *Chaddanta*, the two *Mahākapi* (Nos. 407 and 516), *Hasti*, *Haṃsa*, *Vessantara*, *Sutasoma*, *Sarabhamiga*, *Maccha*, *Mātiposaka*, *Sāma*, and *Mahisa* and the story of *Siṃhala* from the *Divyāvadāna*, together with details from the *Valāhassa*, *Sivi*, *Ruru* and *Nigrodhamiga Jātakas*. The story of the first *Mahākapi Jātaka* (No. 407; cp. *Jātakamālā*, No. 27) is famous and has been sculptured in the Bhārhut stūpa. It is that of the bodhisattva (born as king of the monkeys) who sacrificed his own life to save those of his subjects.

The paintings in this cave represent the river, the followers of the king shooting the monkeys, the strange bridge partly composed of the body of their leader the bodhisattva who thereby helped them go safely, and the sermon of the dying monkey to the king.

The painting is of great interest from the religious point of view, since it shows that according to the teaching of the Buddha, as preserved in the *Jātaka* stories, men, animals, even reptiles possess alike a sense of moral and spiritual values, and are bound together as different aspects of life in the universe (G. Yazdani, *Ajanta*, Vol. IV, p. 35).

The *Hasti Jātaka*, already described, relates to the magnanimous elephant which offered itself as food to the travellers.

The interesting panels of the *Haṃsa Jātaka* here show the fowler with the geese he has caught and the sermon by the bird to the king and queen in their court.

The painted scenes from the *Vessantara Jātaka* show the banishment of Vessantara because of his limitless generosity, Vessantara leaving the city in his chariot, his life in the forest, his gift of his children to a wicked brāhman (Jūjaka), the restoration of the children to the grandfather and the return of the prince and princess.

The scenes from the second *Mahākapi Jātaka* (No. 516; cp. *Jātakamālā*, No. 24) show how the bodhisattva, born as a monkey, rescued a man fallen into a deep pit in the forest and showed him the way out of the forest in spite of the latter's ingratitude.

The scenes from the *Sutasoma Jātaka* show the king going for a hunt, the lioness licking the feet of the sleeping ruler, the mother-lioness in the city with her child (Saudāsa) in the king's lap, the schooling of the prince and his coronation, his cannibal habits and his conversion by Sutasoma, all of which are narrated in detail.

The *Sarabhamiga Jātaka* is the story of the king of Bārāṇasī rescued by a stag from a pit into which he had fallen.

The *Maccha Jātaka* is the story of the bodhisattva who, born as a fish, made a solemn asseveration to bring down rain to save his kin from the danger of sure death by drought.

The *Mātiposaka Jātaka* is the story of the elephant who looked after his blind mother and who, when captured by the king of Bārāṇasī to be made the state elephant, refused to touch any food. The king out of compassion released him to return to the forest and take care of his blind parent. The scenes painted here depict the refusal of the elephant to touch food, his release and happy re-union with his mother.

The painting of the *Sāma Jātaka* shows first the youth carrying his blind parents in slings suspended from a bamboo resting on his shoulder, then the king carrying Sāma, and the latter with a pot to be filled in the lake.

The *Mahisa Jātaka* is the story of the bodhisattva who, born as a buffalo of infinite patience, freely allowed a monkey to torture him. The monkey learnt a lesson only when he practised the same tricks on another buffalo and dearly paid for it with his life, being thrown down and trampled.

The *Siṃhala Avadāna* is the story of Siṃhala who accompanied by several merchants was shipwrecked and cast ashore on a strange island inhabited by demonesses who assumed the beautiful forms of nymphs to lure them. The bodhisattva (born as a horse) offered to rescue these ship-wrecked merchants. Siṃhala with some of his companions availed themselves of this help. Those who stayed behind were eaten up by the delectable demonesses. One of these ogresses, disguised as a beautiful woman and carrying a child in her arms, followed Siṃhala and claimed him as her husband before the king. Himself struck by her beauty the king made her his queen in spite of the protests of his wise ministers. This resulted in the steady annihilation of the palace folk, who were devoured by the demonesses. Siṃhala drove out the ogresses, set out with an army, crossed the sea to reach the land of these wicked ones, defeated them and, as the saviour of the island, became the ruler there (Pl. XXVII).

In the painting of the *Sivi Jātaka* there is a short legend 'Sibirājā' painted in the panel. The painting beautifully depicts the magnanimous gift of Sivi, while experiencing great pain when his eyes were being pulled out. The sorrow of his queens is very vivid.

The *Ruru Jātaka* as depicted here shows the king promising a reward to the hunters for information about the deer. The king in the forest, surrounded by hunters, and the miracle of the hunter's hand, getting chopped when he tried to capture the deer, are deviations from the Jātaka story. The principal scene here is the return of the king, with the deer respectfully placed in a chariot.

The *Nigrodhamiga Jātaka* is the story of the bodhisattva who offered himself to be killed by the king of Bārāṇasī. The latter was fond of venison and on that account secured from the animals an agreement that one animal should be sent every day to the slaughter house by the animals themselves. The lot having fallen on a pregnant doe the compassionate deer offered itself in her place. The cook, astonished at this magnanimity, brought it to the notice of the king who worshipped the animal as it preached to him regarding the right practice of *karuṇā* towards fellow-beings.

Another part of the wall of the court in Cave XVII illustrates a portion of the *Viśvantara Jātaka*, in which the chief episode shows the princely hero announcing to his wife the news of his banishment from his father's kingdom. At the right of the composition, in a pavilion with orange walls and red pillars, a swarthy lord clasps his swooning consort; her drooping pose is accented by the bend of her head, and the relaxation of every limb emphasizes her distress. This detail of the fresco is an illustration of how in Indian painting states of mind or moods are, as in a play, precisely indicated by pose and gesture and glances. This is exactly what is implied in the Six Limbs of Painting and in all later treatises on the art of painting. The anxiety of the princess is revealed by the way in which she clings to her lord for support; the prince's solicitude, by his offering of the cup of wine. The atmosphere of concern is further heightened by the figure of the dwarf glancing upward at the couch and the maid servant with the carafe who hovers behind the couple. It will be noted how the directions of the glances of the principal actors are fixed on the figure of the hapless prince. He and the princess appear again with umbrella-bearing attendants in the part to the left of this detail, where one should also notice the wonderfully characterized figure of a beggar with bowl and crooked staff. Behind this group is a boldly patternized background of exotic foliage, in the rich variety of its greens suggesting European tapestry design.

AJĀTASATTU, sculptured at Bhārhut (*circa* 2nd cent. B. C.) as worshipping the Buddha.

The effect of the whole composition in its employment of dramatic and emotional gestures, the device of continuous narration, and the feeling of stirring movement that leads across the shallow stage and animates the individual figures, is like a translation of the technique of the Amarāvatī reliefs into terms of painting. It should be noted further in connexion with this wall-painting that the representation of the palace with its heavy cornice supported by slender colonnettes is probably a reasonable approximation of the domestic architecture of the period (Benjamin Rowland, op. cit. pp. 141-2).

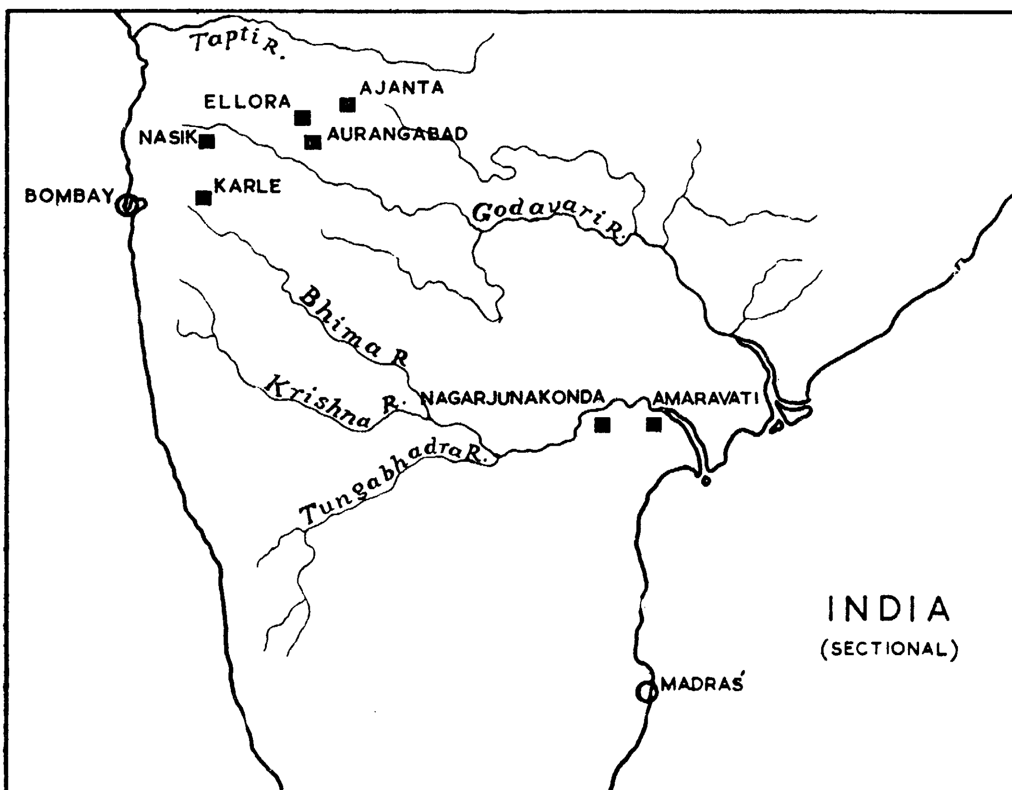
Cave XVIII is unfinished.

Cave XIX is a fine specimen of a chaitya hall. The stūpa towards the end has on it representations of the Buddha in human form. It has a wonderfully carved façade and a beautiful little portico, all dominated by the chaitya-window pattern, and huge figures of dwarf yakṣas and Buddhas. One of the loveliest carvings at Ajaṇṭā, the beautiful group of the nāgarāja and queen, with the female chowry bearer behind them, is to the left of the facade (Pl. XX).

The paintings here represent the Buddha, and a particularly noteworthy one is that of the Buddha with his begging-bowl, before his son Rāhula and Yasodharā.

Cave XX is a vihāra with the preaching Buddha in its shrine and a fragmentary inscription mentioning one Upendra as the donor of the *maṇḍapa* there. The inscription may be dated towards the end of the 5th and the beginning of the 6th century A. C.

Cave XXI is a partially damaged vihāra.



Cave XXII is also a vihāra that enshrines the Buddha seated in the *pralambapāda* attitude (with legs hanging down). Among the paintings here are Mānuṣī Buddhas, Maitreyas, and nāgas holding lotuses.

Caves XXIII, XXIV and XXV are incomplete vihāras.

Cave XXVI enshrines the Buddha in the *pralambapāda* attitude. The two important scenes here are the *parinirvāṇa* (Pl. XXIII) and the *māra-darśana* (Pl. XXI). The inscription near the verandah mentions the name of the donor of this temple as the monk Buddhabhadra, a friend of Bhavvirāja the minister of the king of Aśmaka, and may be dated towards the end of the 5th and the beginning of the 6th century A. C.

Cave XXVII enshrines an image of the preaching Buddha. It is a vihāra, as also are Nos. XXVIII and XXX. But XXIX is a chaitya. All of them are left unfinished.

C. SIVARAMAMURTI.

AJAPĀLA-NIGRODHA, the 'Goatherd's Banyan' tree.

When monasticism had not yet developed into a system of organised hierarchy with vested interest and permanent hold on property, when the life of a bhikkhu was more like that of a wandering ascetic although the spirit of asceticism as self-mortification was denounced, when the chief characteristic of a follower of the Buddha was contentment with little (*appicchatā*), at that time the shade and shelter of a spreading tree played an important part in religious living. The foot of a tree (*rukkha-mūla*) is recommended frequently for meditation, and is one of the four reliances (*nissaya*) of a true monk's life.

Not only do trees and shady groves in general form the background of many historical details in the life of the Buddha, but some have acquired an individuality and history of their own. And the Goatherd's Banyan tree (*ajapāla-nigrodha*) is one of the most outstanding among them. The story of how it got its name does not, however, occur in Pali literature and is probably a late invention based on the name [1].

We read in the *Mahāvastu* [2] that when Gautama as a bodhisattva was living his life of austerity on the banks of the Nairañjanā, he was seen by a goatherd who with great devotion planted a young banyan-tree with the firm belief that when that banyan-tree should have grown to its full size, the bodhisattva would have achieved his aim. And he begged, " For my sake, be pleased then to make use of this banyan-tree ", to which request assent was given by silence. From time to time the goatherd would hoe the soil around the tree and pour water on it. Thus, the tree grew quickly with many branches. When the goatherd saw this, his heart became exceedingly serene ; and when he died, he was reborn in the Heaven of the Thirty-three (*trāyastriṃśa*).

The Chinese version of the *Abhiniṣkramana Sūtra* [3], too, mentions a shepherd boy, who offered the bodhisattva some goat's milk, and also anointed his body therewith. Then, cutting down some branches from a banyan-tree, the boy made therewith a covering over the head of the bodhisattva as a shelter from the wind and the rain. These branches took root and bore flowers and leaves.

Still, the name of the banyan-tree, as recorded, is probably no more than an indication that goatherds used to come and sit in its shade [4]. But, whatever the origin may be, it is evident from these and other sources that the Buddha after his enlightenment sat down at the foot of this Goatherd's Banyan-tree, for a period of seven days, experiencing the bliss of emancipation [5], in joy and ease [6]. As to the exact placing of those seven days, there is some discrepancy among the different sources.

From the Book of Discipline and the Verses of Uplift [7] it would appear that the Buddha spent the first seven days in concentration of mind, experiencing the bliss of emancipation, seated at the foot of the Bodhi-tree. At the end of this first week he formulated the doctrine of dependent origination (*paṭicca-samuppāda*, q.v.). the following seven days were spent in contemplation and in the blissful experience of release under the Goatherd's Banyan-tree.

4 *UdA.* 51 and *Vin A.* 957.

5 *Vin.* I, 2.

6 *Mhvu.* III, 302.

7 *Vin.* I, *Mahāvagga*, 2 ; *Udāna*, 1–4.

But according to the *Mahāvastu*[8], it was only after the fifth week spent by the Buddha at the abode of Mucalinda, the nāga king, that he sat for seven days in joy and ease at the foot of the Goatherd's Banyan-tree. While the narrative of the *Mahāvastu* does not mention any detail about the happenings in connection with this week under the Ajapāla-nigrodha, the *Mahāvagga*[9] relates that at the end of the seven days there, a brāhman, with a fault-finding nature (*buhunka-jātika-brāhmaṇa*) and stiff with pride[10], approached the Buddha with the questions: To what extent is one a brāhman? What are the things that constitute a brāhman? The Buddha replied with an *Udāna-gāthā*[11], saying that a brāhman is one who has done away with all evil, who is without stain, who has self-control, who is well-versed in the sacred lore, and lives a saintly life.

It will be noted that the reply has been couched in very general terms which could have been uttered by any spiritual teacher without expressing any definite characteristic of a specific doctrine. It is, no doubt, for this reason that this utterance, although the first one of the Buddha after his enlightenment directed to human ears, has never attained the status of his first sermon, the *Dhamma-cakkappavattana Sutta* (q.v.). It is after this conversation that the Buddha left the shelter of the Goatherd's Banyan-tree. It was beneath this tree that the Buddha meditated in solitude, just after he had won full enlightenment[12], with joy in his mind over the freedom attained, and which is so hard to achieve. It was there and then that Māra, the tempter, approached him with the thought that the giving up of his austerities had given the Buddha an illusory freedom, whereas, in truth, he had strayed from the path of purity. The Buddha understood at once the source of such distracting thoughts, and rejoined in verse that he knew the uselessness of rituals, which may be compared to the oars and the rudder of a boat on dry land. When Māra realised his defeat, he immediately changed his tactics and assumed the likeness of a great elephant in order to frighten the Buddha; but once again his efforts were in vain[13].

It was, probably, on the same occasion, as the Buddha subsequently related to Ānanda and as recorded in the *Mahā Parinibbāna Suttanta*[14], that Māra, the evil one, approached the Buddha, resting under the banyan-tree, shortly after having attained enlightenment, with the request, "Pass away now, lord, from existence" (*parinibbātu dāni bhante Bhagavā*). But the Buddha replied, "I shall not pass away, O Evil One! until not only the brethren and sisters of the Order, but also the lay-disciples of either sex shall have become true hearers, wise and well-trained, ... I shall not die until this pure religion of mine shall have become successful, prosperous, wide-spread, and popular in all its full extent until, in a word, it shall have been well proclaimed among men!"[15]

It was still during the same season and in the same place, when the Buddha was seated under the open sky during the night, and Māra once more tried to produce fear in the Buddha, making use of the rain which was falling drop by drop[16], but failed to make the slightest impression on the Buddha who dismissed Māra by saying that those who are well controlled in deed, word and thought were in no way to be conditioned by Māra's seductions.

According to the *Mahāvastu*[17] and other sources, it was at the foot of the same banyan-tree that the Buddha hesitated to teach his doctrine because it was "profound, abstruse, subtle, hard to understand by mere logic, intelligible only to the wise ...." But it is only in the Pali canonical works[18] that we read of the solution of this doubt and hesitation, of how Brahmā Sahampati pointed out that there were some beings "with only little dust in their eyes, who would grow in knowledge on hearing the doctrine".

In the commentary to the *Dhammapada*[19], however, we read that "for seven weeks he remained on the Throne of Wisdom; in the eighth week he seated himself under the Goatherd's Banyan-tree and meditated upon the depths of the Law, finally arriving at misgivings as to his ability to preach the law to others"[20]. But then, following Brahmā Sahampati's petition, the Buddha surveyed the world and acceded to his request.

A year passed, and again the Buddha had come to Uruvelā on the banks of the river Nerañjarā. For seven years now Māra, the evil one, had been dogging (*anubaddha*) the Exalted One, six years before the enlightenment and one year thereafter, watching for an opening (*otārāpekkha*) to make him falter, but without gaining access. Once again the Buddha was seated underneath the Goatherd's Banyan-tree, which seems to have been not only his favourite retreat for meditation, but also the haunt of Māra's choice. This time Māra presented himself as a compassionate friend of that lonesome figure, "Is't sunk in grief thou art, that in the wood thou meditatest? .... Is there no one with whom thou canst be friends?"[21] But, if friendship is not wanted, the spheres and objects of the senses are the domains of Māra, and hence he boasts, "Thou wilt not, O recluse, escape from me!" The Buddha, however, replies that as he is not interested in whatever belongs to the senses, Māra cannot even see the way he (the Buddha) goes. That really sets Māra worrying and so he entreats the Buddha that if he has found a path that is safe (*khema*) and that

leads to deathlessness (*amatagāmina*), "go thou that way alone and do not lead another there" (*pehi gaccha tvam ev-eko, kim aññam anusāsasī 'ti*). But even that is not conceded by the Buddha :

" When people seek the kingdom not of death,
Enquiring for a road beyond,
To them, when asked, I do declare
The freedom from attachments all " [22].

But although the evil one apparently gave up, not so his daughters Taṇhā (craving), Arati (discontent) and Ragā (lust), who, assuming their most enticing forms, offered themselves to minister at his feet [23]. All their efforts, however, were like attempts to cleave a rocky mountain with lotus stalks [24].

Not only were temptations fought and overcome at the foot of this famous tree, but it was here also that during the Buddha's meditation in solitude he discovered the one and only way (*ekamagga* [25]) that leads to the purification of beings, to the utter passing beyond sorrow and grief, to the destruction of woe and lamentation, to the winning of the Path, to the realising of Nibbāna, namely, the four methods of mindfulness (*satipaṭṭhāna*, q.v.), contemplating the body, feelings, thoughts and mental states. Here, too, the Buddha reflected on how the five controlling faculties of faith, energy, mindfulness, concentration and insight could be cultivated and developed, and would culminate in the deathless state of Nibbāna [26]

And again at the foot of the Goatherd's Banyan-tree, after having been rebuked for his apparent lack of respect for seniority, the Buddha thought of the things which make an elder : to speak in due season things true and profitable ; and.

" He who, in virtue perfect, learned,
Of ready wit, controlled, a sage,
With wisdom sees the sense of things,
Of open heart, of ready wit
He hath transcended every state.

Who hath abandoned birth and death,
Who in the God-life perfect is—
That is the man I elder call.
By ending of the *āsavas*
A monk is rightly elder called." [27]

AJARASĀ SUTTA, a short sutta in verse occurring in the *Jarā Vagga* of the *Devatā Saṃyutta* of the *Saṃyutta Nikāya* (I, pp. 36-7). It derives its title from the question contained in the first line—What is it that is desirous because of its absence of decay (*ajarasā*), the answer to which is found in the third line, viz., virtue. It is to be inferred that the questioner is a deva and the answer is to be attributed to the Buddha. The sutta ends with the Buddha's answers to the three questions : It is faith that is profitable when well established, it is wisdom that is a jewel to mankind and it is merit that cannot be carried away by thieves. [1]

AJARA SUTTA, reference in *Vism.* viii, § 248, p. 243, to AJAJJARA SUTTA (*S.* IV, 369).

AJĀTAŚATRU, king of Magadha. See AJĀTASATTU.

AJĀTAŚATRU-KAUKṚTYA-VINODANA has three Chinese translations extant in the Tripiṭaka. The first one is called *Fo-shuo-a-shê-shih-wang-ching* (佛說阿闍世王經, its Sanskrit equivalent being *Buddhabhāṣitājātaśatrurāja-sūtra*), which was translated by Chih Lou-chia-ch'an (Lokarakṣa ?), of the Eastern Han dynasty, 25–221 A.C. It consists of 2 fascicles and agrees with the Tibetan text (*Nanjio*, No. 174 ; *Taishō*, No. 626).

Another translation is called *P'u-ch'ao-san-mei-ching* (普超三昧經, its Sanskrit equivalent being *Sammantaukramaṇa-samādhi-sūtra*), which was translated by Chu Fa-hu (Dharmarakṣa) 286 A.C. of the Western Tsin dynasty, 265–317 A.C., and consists of 4 fascicles. This is the later translation of the above mentioned (*Nanjio*, No. 182 ; *Taishō*, No. 627).

The last one was translated under the title of *Fang-po-ching* (放鉢經 or the 'Sūtra on letting the bowl go', its original name being referred to by Nanjio as *Pātra-gamayat-sūtra*) under the Western Tsin dynasty, but the translator's name is lost. Moreover, this is not a complete translation, unlike the two mentioned above. It is a translation similar to the second chapter of the above (*Nanjio*, No. 183 ; *Taishō*, No. 629).

Beside these, *Fo-shuo-wei-ts'êng-yu-ch'êng-fa-ching* (佛說未曾有正法經) is also called a later translation of this sūtra. It consists of 6 fascicles, and was translated by Fa-hsien of the later Sung dynasty (*Nanjio*, No. 925 ; *Taishō*, No. 628). The corresponding Tibetan translation can be found both in the Sde-dge and the Peking editions.

The former is rendered as *Ḥphags-pa ma-skyes-dgraḥi ḥgyod-pa bsal-ba shes-bya-ba theg-pa chen-poḥi-mdo* (its Sanskrit equivalent being *Ārya-Ajātaśatrukaukṛtyavinodana-nāma-mahāyāna-sūtra*). This was translated by Mañjuśrīgarbha and

1 The reading *corehahāriyaṃ* in the Sinhalese edition (Buddhist Congress Tripiṭaka Series, 1948, p. 80) is to be preferred to the reading of the other editions *corehi hāriyam* which has the opposite meaning.

Ratnarakṣita (*TM.*, No. 216). The title of the sūtra and the name of translators of the latter are in complete agreement with the former (*ŌM.* No. 882).

The contents of this sūtra are based on the famous legend of king Ajātaśatru and Gautama Buddha. But its doctrines show the influence of early Mahāyāna Buddhism. The question of the confession and the purity of mind (*citta-viśuddhi*) are fully discussed. From this point of view this work should be estimated as belonging to the period of transition from the early Mahāyāna to the teaching of Pure-Land Buddhism.

S. K.

AJĀTAŚATRU - RĀJA - VYĀKARAṆA SŪTRA, extant in Chinese. It was translated during the Western Tsin dynasty (265—317 A.C.) by Fa-chü and consists of five leaves (*Nanjio*, No. 272). With regard to the contents of this sūtra, see AJĀTAŚATRU-KAUKṚTYA-VINODANA.

AJĀTASATTU, king of Magadha. The life story of Ajātasattu, who reigned during the last eight years of the Buddha's life and yet twenty-four years more thereafter [1], begins even before he was born. It is a prenatal incident which provided him with the epithet Ajātasattu, one which adhered to him for life and even thereafter, superseding his own proper name, unknown in Theravāda history [2]. For, at the time of his conception there arose in his mother, a princess of Videha and daughter of the king of Kosala, an intense desire to drink blood from the right knee of her husband, king Bimbisāra of Magadha. When the king heard of this, he called for his astrologers to find out from them what would be the result thereof. The astrologers said, "The child conceived in the womb of the queen will kill you and seize your kingdom." Whether the king did not think much of this prophecy, or resigned himself without reservation, he had his right knee cut open with a sword and gave the blood to the queen to drink out of a golden vessel. But the queen lost her affection for the unborn child which thus became its father's 'enemy while still unborn' (*ajātasattu* [3]). Several times the queen endeavoured to bring about an abortion by causing her womb to be 'crushed' and to be heated with steam. But notwithstanding all her efforts the child was born in due course to fulfil the prophecy, as will be seen later.

Bimbisāra, however, loved his child dearly, so much so that once, instead of paying attention to a discourse by the Buddha, who was being entertained at the royal palace, the king fondled the boy on his lap without listening to the doctrine expounded. The Buddha admonished the king in this connection and told him a story of olden time, called the *Thusa Jātaka* [4], in which the king was apprised of the danger coming to him through his son. But Bimbisāra gave no heed to the words of the Buddha.

Another incident is related, showing Bimbisāra's affection for his son. Once the child was in great pain, due to an abscess on his finger. Although the king was administering justice, he wanted to soothe the pain by holding the child's festering finger in his mouth, where the abscess broke. As he could not leave the courtroom to spit out the matter, the king swallowed it [5].

The prince showed evil tendencies quite early in his life. Once he visited the palace that was being built for Jotika, the treasurer. Holding his father's finger, as he walked round and round the palace, he thought to himself, "What an utter simpleton my father is! This Jotika, although he is a mere householder, dwells in a palace made entirely of the seven precious minerals. But my father, although he is a king, dwells in a house of wood. Not for a moment after I have become king will I permit this householder to dwell in such a palace." [6]

His ambitious tendencies did not pass unnoticed and were exploited in due course by Devadatta, a cousin of the Buddha, who through his personal ambition and self-conceit had formed evil wishes for religious leadership and power. He planned to secure the co-operation of Ajātasattu for the fulfilment of his avid schemes. Having developed certain psychic powers (*iddhi*, q.v.), Devadatta was able to win his admiration thereby, and ingratiated himself with the prince [7].

Ajātasattu showered gain and honour on the crafty Devadatta while the latter developed his plan to place himself at the head of the Order of monks. He even suggested to the Buddha, that since he, the Buddha, was now feeble and aged, he should live free from care, and that he, therefore, should leave the direction of the Saṅgha in the hands of Devadatta. The Buddha's refusal was received by Devadatta with indignation, which soon developed into real hatred [8].

Meanwhile Ajātasattu had a monastery built for Devadatta at Gayā-sīsa; and every day he brought him perfumed three-year-old rice flavoured with the choicest spices. Such great honour and gain brought Devadatta a large following [9]. But it also brought about his downfall, as "the bearing of fruit brings about the destruction of a plantain tree" [10].

After the Buddha had caused the Order of monks to issue in Rājagaha an Act of Proclamation (*pakāsanīya-kamma*) that in anything done by Devadatta neither the Buddha, nor the Doctrine (*dhamma*), nor the Saṅgha was to be recognized but only Devadatta, the latter went to Ajātasattu and proposed that, while he himself should kill the

Buddha, Ajātasattu should kill his father, Bimbisāra. Ajātasattu took a dagger and went to do so, but on being found out by the ministers, he confessed his purpose. The ministers advised the king that the prince and all the plotters should be slain; but Bimbisāra, when he found out who the real instigator was, pardoned his son and handed over the kingdom to him [11].

Devadatta, having succeeded thus far in that the tool in his hands had now acquired real power as king of Magadha, approached Ajātasattu again with the request "to command his men to deprive the recluse Gotama of life" [12]. And Ajātasattu asked his soldiers to do whatever Devadatta wished. Thus it was that Devadatta laid various plans to encompass the Buddha's death, all of which miscarried. (For details, see s.v. DEVADATTA.)

But, although Bimbisāra had handed over the kingdom to Ajātasattu, the evil seed sown by Devadatta had taken root, and the new ruler thought that as long as Bimbisāra was alive, he might try to regain his throne and power; therefore, he should be done away with. But, after his abortive attempt at patricide failed, he hesitated to adopt the extreme course of direct action, and resolved instead to imprison Bimbisāra and allow him to be starved to death. In prison, nobody but queen Khemā, sister of the king of Kosala, was allowed to visit Bimbisāra. This queen secretly took food with her, on which Bimbisāra used to live. When this was discovered and forbidden, she took food hidden in the locks of her hair. On this being found out, she was allowed to enter only with flowing tresses. Then she took small quantities of food in her shoes, but this too was discovered, and she had to go bare-footed. When, finally, she smeared her body with honey which Bimbisāra used to lick and thereby kept himself alive, she was no longer allowed to see Bimbisāra at all.

It is said in the *Amitāyur-dhyāna-sūtra* [13] that Ajātaśatru became so angry when he heard of his mother's action of smuggling food into prison, that "he brandished his sharp sword, intending to slay his mother". But, his minister Candraprabha and the physician Jīva intervened; they rebuked him for such low conduct, calling him a caṇḍāla (outcaste), and threatened to leave his court. Thereupon, Ajātaśatru repented, laid down his sword and did not hurt his mother, but ordered his officers to put the queen in a hidden palace and not to allow her to come out again. Bimbisāra ultimately died in prison of starvation, at the age of 65.

On the very same day that Bimbisāra died, but before the news thereof had reached the royal palace, a son was born to Ajātasattu who was greatly pleased thereby [14]. Ajātasattu's mother used the opportunity to tell him of the incident, related earlier, when the prince had an abscess on his finger. Hearing this, Ajātasattu, now himself the happy father of a child, was overcome with remorse and issued orders to have his father released at once. But, when the messengers reached the prison, Bimbisāra was already dead.

Ajātasattu's friendship with Devadatta and his consequent hostility against the Buddha and his Order of monks probably endeared him to those who felt their prestige waning with the increasing influence of the Buddha's doctrine. It is not surprising, therefore, to find a different version of Bimbisāra's death in the *Nirayāvali Sūtra* of the Jains, who have tried as far as possible to free Ajātasattu from the guilt of patricide. There Koṇika (as Ajātasattu is named) orders his father's imprisonment, owing to some misunderstanding. When the mistake is realised, the good son himself rushes to the prison with an axe wherewith he intends to hack through the fetters which keep his father bound. Bimbisāra, however, not aware of the son's changed attitude and seeing him approach with an axe, thinks that he has come with murderous intentions. Rather than allow his son to become a patricide, Bimbisāra takes his own life [15].

One feels inclined to think that Ajātasattu's change of heart was not very deeply rooted, or was not considered by others as convincing. For, his half-brother, commonly called Abhayarājakumāra (q.v.), the son of king Bimbisāra and Padumavatī of Ujjeni, was not only greatly disturbed in mind at the tragic death of his father, but, even though he had less claim to the throne than Ajātasattu, he seems to have thought it wiser or safer to dispel in others all possible thoughts of a future claim of his in this regard. Whatever be the reason, he became a Buddhist monk shortly thereafter, and later, having listened to the Buddha's preaching of the discourse on the parable of the hole in the yoke [16], he attained the first stage on the path of sainthood (*sotāpatti*), and subsequently, stirring up insight, became an arahant [17].

Another son of Bimbisāra (the commentary is silent as to the person of his mother) was named Sīlavat. When he was come of age, Ajātasattu, the king, wished to put him to death, but was unable to do so, because Sīlavat was in his last span of life and had not yet won arahantship. It was Mahā-Moggallāna who led the young prince to the Buddha who taught him, adapting the doctrine to his temperament and understanding. The youth developed confidence in the Teacher and entered the Order of monks. Later on, while living in Kosala (was there still fear in him that he did not live in his native country of Magadha?), men were sent to him by Ajātasattu to murder him, but he taught them in turn, converted them, so that they, too, joined the Order of monks [18].

During his life-time, Bimbisāra had received some hairs and nail-parings of the Buddha, over which the king had erected a thūpa within the women's quarters in his palace. The women used to pay their homage to these objects with incense, lamps and flowers. But when Ajātasattu had ascended the throne after his father's death, he issued strict commands that no woman should, on pain of death, do so thereafter. One of the women, named Srīmatī, however, took no notice of this command and lit a row of lamps all round the monument. She was killed by the enraged king, but her dying thoughts remained fixed on the Buddha and ensured her a happy rebirth in heaven [19].

There was yet another son of Bimbisāra, a half-brother of Ajātasattu, born of the famous courtesan of Vesāli, Ambapālī. He was called Vimala, but was afterwards known as Vimala-koṇḍañña, there being, however, no apparent reason for his acquiring this brāhman clan-name [20]. He, too, became a monk in the Order of the Buddha, and attained arahantship. There is no reference of any attempt on his life having been made by Ajātasattu[21].

After Bimbisāra had died in prison, the queen who was a sister of Pasenadi, king of the Kosalas, died of grief. The revenue of a Kāsī village, amounting to a hundred thousand (*kahāpaṇa* ?), had been assigned to her as part of her dowry, but Pasenadi refused to continue payment thereafter. Because of this he was at war with his nephew, Ajātasattu [22], with varying success. Victory at first lay with Ajātasattu. He raised his banner and marched through the country in triumph while returning to his capital. But when a battle was lost, he returned downcast without letting anyone know. In this connection the Buddha related how in some previous existence too, when Ajātasattu was a watersnake, he used to catch and eat fish. Once the snake crept into a wicker cage in the river, full of fish ; but when a number of fish thronging together fell to biting him until he was covered with blood, he complained to a frog that it did not seem fair. The wise frog, however, replied that as the snake ate fish in his domain, so fish would kill him when entering their domain [23]. Evidently Ajātasattu took his reverses very unsportingly [24].

While the war dragged on, undecided, the king of Kosala asked his councillors for some device to capture Ajātasattu. The councillors suggested to have the matter referred to the monks as having great skill in magical charms. Accordingly, Pasenadi sent his men to the monastery with instructions to hide themselves there and overhear what the monks should say. In that monastery dwelt some of the king's officers who had renounced the world, in particular Dhanuggaha-Tissa, an expert in strategy. It was this thera who was overheard by the king's men as saying : That pot-bellied king of Kosala is a big fool ; all he knows is how to eat. And thus he allows himself to be beaten by Ajātasattu, who is no better than a worm in his own belly. What he should do is to fight the 'Waggon-battle' by posting brave soldiers on his two sides, on hill-tops, and then advance with his main force in the middle. Once the enemy gets in between, they will have him like a fish in a lobster-pot. That is the way to catch him [25].

When the messengers reported this back to Pasenadi, he set out with a large force, acted according to the advice of Dhanuggaha-Tissa thera, took Ajātasattu prisoner and had him bound in chains. But having punished him in this manner for some days, he set him free again. Thus, peace was finally made and Pasenadi gave his own daughter, Vajirā, in marriage to Ajātasattu, with the revenue of the disputed village as her bath-money.

A son was born from this marriage, named Udāyibhadda, obviously greatly loved by his father, for when Ajātasattu once visited the Mango Grove where the Buddha was in residence with 1,250 monks and saw how silent was the assembly his wish was : Would that my son Udāyibhadda have such calm as this [26]. Does this reflection show that remorse had been eating so deeply into the king's heart, that he did not even dare to wish for peace in his own mind ? That Ajātasattu's conscience was certainly much perturbed is also clear from his reaction to the peaceful surroundings of the monks' dwelling place in that Mango Grove near Rājagaha. He was seized with a sudden fear and consternation which made the hairs on his body stand erect. In anxiety and excitement he said to Jīvaka, the physician, who accompanied the king and on whose advice this visit was made : You are playing me no tricks, Jīvaka ? You are not deceiving me ? You are not betraying me to my foes ? How can it be that there should be no sound at all, not a sneeze nor a cough, in so large an assembly ? [27]

In this account of Ajātasattu's visit to the Buddha the king says that he had previously paid visits to six teachers of other schools, and he repeats their doctrines : Pūraṇa Kassapa who taught the doctrine of non-action, i.e., the absence of merit in any virtuous action and of demerit in even the greatest crimes ; Makkhali Gosāla who admitted the fact of depravity, but said that purification was attained merely by transmigration, not by any action of the individual ; Ajita Kesakambalī, who taught the doctrine of cutting off, i.e., of annihilation at death ; Pakudha Kaccāyana, who maintained the existence of seven permanent, uncreated substances ; the Nigaṇṭha (Jain)

Nātaputta, who taught that a Niganṭha, i.e., one free from bonds, is restrained by restraints in four directions; Sañjaya Belaṭṭhaputta, who prevaricated and refused to affirm any doctrine positive or negative. Having done this, Ajātasattu points out to the Buddha the advantages which various people in the world derive from their occupations, and asks whether the members of the Saṅgha, who have renounced the world, derive therefrom any corresponding advantage, not only in a life hereafter, but in their present existence. The Buddha's reply is given in the *Sāmaññaphala Sutta*[28].

After hearing this discourse on the advantages of the ascetic life, Ajātasattu confessed his sin to the Buddha, "Transgression overcame me, Lord, in that in folly, stupidity and wickedness, for the sake of lordship, I deprived my righteous father, that righteous king, of life. May the Lord accept it from me that I admit my transgression as such, that I may be restrained in the future." The Buddha accepts his confession, and this was taken by some as if the matter of his patricide was ended herewith, and as if Ajātasattu were let off far too easily. But after the king's departure, the Buddha mentions merely one evil effect which overtook him in his present life, for it was owing to this criminal action that Ajātasattu did not attain at that meeting the initial stage on the path of holiness (*sotāpatti*). Said the Buddha, "This king, brethren, was deeply affected, he was touched in heart. If the king had not put his father to death, that righteous man and righteous king, then would the clear and spotless eye for the truth have arisen in him, even as he sat there."[30] Moreover, he would still have to bear the effect of his evil deed in the future, both in this life and the next.

The visit of Ajātasattu to the Buddha has been preserved in stone sculpture on one of the monolithic corner pillars of the western gateway of the thūpa of Bhārhut, 120 miles south-west of Allahabad (Pl. XXVIII). An inscription: 'Ajātasattu worships (the feet) of the Buddha' (*Ajātasata Bhagavato vandate*) identifies the story in stone with absolute certainty. Cunningham[31] assigned the thūpa to the Asokan period, somewhere between 250 and 200 B.C. The small sculpture represents three stages of the visit: Ajātasattu leaving his palace at night by torchlight, accompanied by several women, each mounted on an elephant; the king dismounting from his elephant near the dwelling place of the Buddha; and above these two, the king paying his respects, with bended knees and joined hands, to the Buddha's seat and footprints, the usual representations of the Buddha himself, who is not known to have been delineated in human figure, at that time. Although Ajātasattu had certainly been touched by the Buddha's discourse, and his remorse over his crime was accepted as genuine, the self-centredness of his character does not appear to have improved much. In fact, we do not read even of a second visit of his to the Buddha, even though he remained till the end a faithful follower and received also a share of the relics after the Buddha's passing away. But looking at his whole life as a continued process, there is no striking point of conversion, as, e.g., in the case of emperor Asoka after his conquest of the Kāliṅgas.

Ajātasattu appears to have been an egoistic despot, and an opportunist where his own advantage was concerned. Even his one single visit to the Buddha had a purpose, to find out the advantage of a life of renunciation. And seeing that many good results of such a life could be expected from such a life in this present existence, Ajātasattu was full of praise for the system in preference to more idealistic views of other teachers, such as the inefficacy of action, the existence of uncreated substances, purification through transmigration, etc. As long as his father Bimbisāra was alive and patronised the Buddha, Ajātasattu encouraged a schism in the Saṅgha by his support of Devadatta. But, as soon as he had usurped the throne and allowed his father to die in prison he had no further use of Devadatta.

And, again, in the struggle for supremacy between Kosala and Magadha, although Ajātasattu was captured and put in chains, he managed not only to obtain his release, but emerged ultimately as the victor of the contest, returning home not only with his conqueror's daughter as wife, but even with the restored revenue of the village, which was the *casus belli*.

It is clear that this did not satisfy Ajātasattu's ambitions, for we see him soon afterwards making plans for the conquest of Vesāli, the capital and territory of the princes of the Licchavis, the Vajjian confederacy, although his mother, Callanā, the princess of Videha, was a daughter of the aged head of the Licchavis, Ceṭaka[32]. As the Licchavis were the chief patrons of the Jaina sect of Jñātiputra, it might have been a matter of prudent policy that Ajātasattu went for spiritual advice elsewhere, and by preference to the one opposing sect powerful enough to make its weight felt; and that was the brotherhood of monks following the Buddha. It was to the Buddha that the chief ministers of Magadha, named Sunidha and Vassakāra, came with great respect, while they were building a fortified town on the south of the Ganges at Pāṭaligāma for repelling the Vajjis.

The Vajjian confederacy included eight clans, the most powerful of which was the Kṣatriya clan of the Licchavis. It is probable that this clan with their capital in Vesāli caused the overthrow of neighbouring monarchies, such as the Videhan monarchy, and thus formed a republican confederation, retaining Vesāli as the capital. The princes of the Licchavis seem to have loved

war as much as independence. They attacked the kingdom of Magadha across the river Ganges during the time of Bimbisāra ; and even Ajātasattu, although himself a terror to his neighbours, the Kosalans and the Sakyans, was sufficiently afraid of them to have this strong fortress built on the junction of the Ganges and the Sōn. With his 'divine eye', i.e., with supernormal clairvoyance, the Buddha saw on that occasion how many *devatas* were occupying the sites at Pāṭaligāma, bending the minds of the building ministers to erect their structures on selected spots. From this vision the Buddha prophesied that the new town would be a leading trading centre, a place where men would open up their bales of merchandise. Calling the place Pāṭaliputta, the Buddha also announced three dangers from which it might suffer : fire, water and internal dissension [33].

But, Ajātasattu had made up his mind to attack the Vajjians ; and sent his chief minister, the brāhman Vassakāra, to the Buddha to find out his views about his decision to conquer the Vajjians. But the Buddha, although the usual complimentary greetings were exchanged, did not give a direct reply to Vassakāra's main enquiry. Instead, the Buddha spoke to his pupil Ānanda with praise of the Vajjians and their democratic confederacy. He declared that their prosperity would last as long as the Vajjians would often gather their clan in public meetings in concord, adhering to their ancient traditions, respecting the elders of the clan while listening to their advice, respecting also their womenfolk, honouring the religious places of worship in their country while supporting those worthy of veneration. As long as they would continue on those lines, taught them by the Buddha earlier at the Sārandada shrine at Vesāli, so long might the Vajjians be expected not to decline, but to prosper. And the Buddha also said of the Licchavis : Now they are sleeping on wooden couches, full of zeal and fervour in their service. Against them Ajātasattu, the king of Magadha, gets no chance, no opening. But in some time to come the Licchavis will become delicate, soft-handed and tender-footed ; they will lie down on soft-beds with pillows of down till sun rise. And against them Ajātasattu will get his chance, his opening [34].

And the shrewd minister drew his own conclusion that the Vajjians could not be conquered in battle without diplomacy or breaking up their alliance, all of which came to pass about three years after the Buddha's death.

Vassakāra was then sent to Vesāli to create dissension, quarrel and civil strife among the Licchavis. He pretended that he had fled suddenly to the Vajjian capital Vesāli, giving out that he had barely escaped with his life from Ajātasattu. Having been given refuge and hospitality, he dwelt among them for three years, which time he utilised in spreading lies and slanders, thereby breaking up the unity of the Licchavis. The poor began to hate the rich, and the strong looked down upon the weak. Three years after his kindly reception, Vassakāra gave the hint to his master Ajātasattu, who swooped down on Vesāli at that psychological moment, taking advantage of the internal dissensions. The weak Licchavis refused to stand against him and said : Let the strong Licchavis go forward and crush him. Thus, it was easy for Ajātasattu to conquer Vesāli, the capital, which he destroyed, slaughtering as many of the clan—men, women and children—as he could seize. Many, however, escaped ; and that they regained their power and status is clear from the fact of their subsequent connections with the imperial Guptas. Thus, in the 4th century A.C., Chandragupta I married Kumāradevī, the daughter of the Licchavis, who became the mother of Samudragupta [35].

An interesting sidelight on Ajātasattu's character is shown by his impatience, anger and displeasure with a certain Upaka, the son of Maṇḍikā and a supporter of Devadatta. Upaka had come to find out whether the Buddha would praise or blame him, but Ajātasattu understood him to have presumed to abuse the Buddha after the latter had severely censured Devadatta. "What a pestilent fellow is this salt worker's boy ! A scurrilous, shameless rogue ! To think that he should presume to revile that Exalted One, the Arahant, the fully-enlightened One ! Away with you, Upaka ! Let me see you no more ! " [36] And the commentator adds that the king had him taken by the neck and dragged away.

Again, Ajātasattu is mentioned in a quarrel which developed into a great massacre between the Kosalans and some Sakyan princes. In the earlier stages of his reign the king of Kosala had through his own negligence lost the confidence of the Buddhist monks who for that reason failed to come to his palace on their usual tour for alms. The best way to regain their confidence, the king thought, would be to introduce into his household the daughter of some kinsman of their teacher, the Buddha. Thus, he had sent messengers to the Sakyans, requesting one of their maidens for a queen. But the proud clansmen deceived Pasenadi and had given him a girl born from a slave-woman, who in due course became the mother of Pasenadi's son Viḍūḍabha. When Viḍūḍabha, grown up, had learned incidentally of the treacherous way the Sakyans had treated his father, the Kosalan prince wanted to take revenge in blood. But, as he was unable to make his father, king Pasenadi, see his point, he made use one day of the king's absence to rebel and raise himself to the throne. Pasenadi set out for Rājagaha to secure Ajātasattu's help against his rebellious son, but he died from exposure during the night outside the closed gates of that city.

This tragic end of Pasenadi, the king of Kosala, only shows how easily in those times enmity could be changed to friendship, as well as *vice versa*. For Ajātasattu did not move to interfere in the

33 *Vin.* I, *Mahāvagga*, vi, p. 228.

quarrel between the Kosalan and Sakyan princes, since the destruction of the latter by the vindictive Vidūḍabha would have suited him well, confirming his stability among neighbouring states without effort on his own part. A great number without distinction of age or sex were put to death, and Kapilavatthu, the Sakyan capital, was destroyed.

It was during Ajātasattu's reign that the death occurred of the Buddha's two chief disciples, Sāriputta and Moggallāna, and also of the Buddha himself. Moggallāna, although an accomplished arahant, was overtaken by the weightiness of an evil act of his in some earlier existence, when he had killed his own father and mother. The resultant effect of this heinous crime was experienced by Moggallāna when he himself was clubbed to death. Ajātasattu sent out spies to discover the murderers, who, when arrested, confessed to have been set up by a sect of naked ascetics, the Nigaṇṭhas. The reaction in the king was typical of his impulsive nature. Five hundred Nigaṇṭhas were buried waist-deep in the court of the royal palace and had their heads ploughed off[37]. It is not surprising that Ajātasattu seems to have been held in hatred by the Nigaṇṭhas[38].

He does not seem to have been aware at the time of the passing away of the Buddha, the news of which event was communicated to the king very carefully and delicately. The story of the Buddha's death being related to Ajātasattu is found as part of a series of frescoes covering the walls of a walk around a thūpa at Qyzyl in the Kucha area of north-central Turkistan, dating from the Tocharian period. The king is here being told, by a device, of the Parinibbāna of the Buddha. The Buddha has passed away, but who shall tell the king? The news is going to imperil his life: he may die of shock if the tidings are indiscreetly borne to him. His brilliant minister Vassakāra, therefore, induces him to take a bath in melted butter and, while the king is undergoing this soothing treatment, unfolds before his eyes, without a word, a painting that he has ordered made, from which the king may deduce what has happened. The principal scenes of the Buddha's life shown to the king are those of Siddhattha's birth, the enlightenment, the Buddha's first sermon concluding with his death in the sāla-grove at Kusināgāra. When he saw this last scene, the king cried out in despair, throwing up his hands[39].

The Pali commentary (*DA*. II, 605-6) varies slightly in detail.

On the pretext of warding off the evil effects of a dream, the king's ministers place him in a vat filled with the four kinds of sweet (*catu-madhura*) and then break the news to him. The king faints immediately, and only after the process has been repeated twice more, he grasps the implication of the message with utter despair.

After having thus learned the sad news, he sent a messenger to the Mallas saying, "The Exalted One was a *kṣatriya* (a warrior by caste) and so am I. I am worthy to receive a portion of the relics of the Exalted One. Over his remains will I put up a sacred monument and in their honour will I celebrate a feast....". Doṇa, the brāhman, in assent to the request of those assembled, divided the remains equally into eight parts with fair division. And so the king of Magadha, Ajātasattu, the son of the princess of the Videha clan, made a thūpa in Rājagaha over the remains of the Exalted One, and celebrated a feast[40].

There is no evidence in Theravāda tradition of Ajātasattu's sustained interest in the teaching of the Buddha after his visit mentioned earlier. As a matter of fact, there is no record of any visit by the king, either to the Buddha or to one of his disciples thereafter. Still, when, after the passing away of the Buddha, Ajātasattu had obtained a share of the relics on the ground of equality of caste, he was approached by the monks who planned to hold a council (*dhamma-saṅgīti*) for the purpose of compiling the Buddha's teaching through recitation, and asked for help, which he readily gave. With all speed he had a splendid hall built by the side of the Vebhāra rock by the entrance of the Sattapaṇṇi grotto, like to the assembly hall of the gods, adorned in every way and spread with precious mats, a noble seat for the presiding thera on the south side, and a lofty seat for the reciting monk in the middle of the hall.[41]

In the Chinese translation *A-yü-wang-ching* by Saṅghapāla (512 A.C.) of the *Asokāvadāna*[42] we find a more elaborate account of Ajātaśatru's activities in connection with the Council of Rājagṛha. When Ajātaśatru was informed of the approach of Kāśyapa and 500 arahants, he had the roads to Rājagṛha cleared, and placing all kinds of offerings along the route, he himself went ahead of Mahā-Kāśyapa. Now, on an earlier occasion, Ajātaśatru had fallen down from a raised pavilion when he had gone to see the Buddha entering the town. The Buddha, then, had come to his rescue. This time, when, having mounted his elephant, he was on the point of falling to the ground, Mahā-Kāśyapa with his supernormal power, seized him, saying, "The supernormal power of the Tathāgata manifests itself without particular concentration, but in his disciples this requires very special will-power. If I had not exercised my will thus, you would have been killed in your fall. Be more careful in future." Then Ajātaśatru prostrated himself at the feet of

37 *DhpA*. III, p. 66.

38 *DPPN*. I, p. 35.

39 Heinrich Zimmer, *The Art of Indian Asia*, Plate 612, pp. 203-4. There appears to be a slight historical anachronism in the presence of Vassakāra at Ajātasattu's court, while he is said to be residing with the Licchavis, pretending to have fled from Magadha in fear of his life, unless the beginning of his treacherous mission to Vesāli is placed after the Buddha's Parinibbāna, which is not chronologically impossible.

40 *D*. II, *Mahā-parinibbāna Suttanta*, pp. 164-6.

41 *Mhv*. iii, 19-22.

42 *Trip*. (ed. Tokyo). xxiv, 10, p. 47 a; *Nanjio*, No. 1343, partly translated in French by Jean Przyluski in *Le Concile de Rājagṛha*, Paris, 1926, pp. 22-53.

Mahā-Kāśyapa, requesting him. "When the Blessed One entered Nirvāṇa, I was not able to see him. But when you enter Nirvāṇa, allow me to be present." Mahā-Kāśyapa consented and informed the king that they wished to recite the Dharma in that town. To which the king replied, "Henceforth, and as long as I shall live, I shall donate to the Saṅgha clothing, food, medicine and bedding. I beg the members of the Order to stay in the Bamboo Grove." But Mahā-Kāśyapa thought, "That is a vast place, and the resident monks will disturb our work by interfering: 'That must be said thus; that should not be said thus.'" And he spoke to the king, "There is a mountain cave named Pi-po-lo-yen (Pippalāyana). Allow us to compile the collected sayings of the teachings there."

Further mention is made of Ajātaśatru in connection with the recital of the teaching of the Buddha, as related in the *Chuan-chi-san-tsang-chi-tsa-tsang chuan* or the 'Account of the Compilation of the Tripiṭaka and of the Tsa tsang'[43]. The *Tsa-tsang* mentioned in this work is a collection of miscellaneous sayings, which constitutes a further and fourth *piṭaka*. It speaks of the various causes which produced successive existences of the bodhisattva in the course of three incalculable world cycles. In this collection, there is more diversity than in the three *piṭakas*[44], while the sayings are not only attributed to the Buddha, but also partly to his disciples and to celestial beings. They are said to have been the result of a request by king Ajātaśatru regarding the practices of bodhisattvas, and were called by the Buddha the *Bodhisattva-piṭaka*. Several sūtras of later development (*Vaipulya-sūtra*) are included[45].

But the more reliable tradition of the Ceylon chronicles[46] is that the Council of Rājagaha was held under the patronage of Ajātasattu on the Vebhāra hill at the entrance to the Sattapaṇṇi cave, and lasted seven months (s.v. COUNCILS). There is, however, no evidence of Ajātasattu taking any personal interest in this matter, unlike Dharmāsoka (s.v. ASOKA) in respect of the third Council of Pāṭaliputta. But then, apart from the expulsion of Devadatta and the outburst of Subhadda, there were at the time of the Rājagaha Council no signs of dissension, and the assembly of 500 arahants confined itself to the recitation of the sacred texts, so that it might be known authoritatively what they really were. Hence, Ajātasattu's patronage was restricted to the provision of the monks' requisites during those seven months.

In the account of this first Council, as it is found in the Vinaya of the Mahāsāṅghikas[47] we find Mahā-Kāśyapa saying to the bhikṣus assembled for the cremation of the body of the Buddha, "The relics of the Blessed One are not our business. The kings, heads of families, brāhmans, householders, and the many who search for merit will pay due respect to the relics. Our business is to gather the collections of the teaching to prevent a speedy disappearance of the Buddha's doctrine." Immediately, the monks began to discuss where they should meet to gather the collections of the teaching. Some said: Let us go to Śrāvastī. Other places suggested were Sāketa, Campā, Vaiśālī and Kapilavastu. Then Mahā-Kāśyapa spoke the following words: "We must go to the town of Rājagṛha and there bring together the collected sayings of the Doctrine. And for what reason? The Blessed One has predicted that in the town of Rājagṛha, Ajātaśatru, the son of the Vaidehī princess, was by far the most pre-eminent[48] among his lay-followers, having faith without root-conditions as concomitant. Moreover, this king has sleeping accommodation and food offerings for five hundred individuals. It is there we should go."

Apart from Ajātasattu's aggression against the Vajjian confederacy in the third year after the Buddha's death, hardly anything is known of the final stages of his reign. There is, moreover, some discrepancy among the various sources of history in respect of the duration thereof. According to Tāranātha's 'History of Buddhism in India'[49], the teacher's office, when the Tathāgata had passed away, was given to Mahā-Kāśyapa, who, when he "disappeared from existence" made it over to Ānanda. Ānanda carried on the teachership for forty years and during this entire period Ajātasattu was living, for he obtained one half of the relics of Ānanda's cremation, the other half being taken by the inhabitants of Vesāli. A year after him, king Ajātasattu also died.

But according to the Ceylon chronicles, Ajātasattu lived only twenty-four years after the Buddha's passing away, bringing the total number of years of his reign to thirty-two[50]. His evil deed of murdering his father recoiled on him with full and equal strength, for Ajātasattu himself was slain by his son, Udāyibhaddaka[51].

According to Tāranātha, he was "in a trice reborn in hell, from there he passed away (lit. separated himself) and was reborn among the gods. Thereafter, he heard the teaching from Śāṇavāsika and attained the grade of a *srotāpanna*"[52]. But according to the Theravāda tradition as recorded by Buddhaghosa[53] he was reborn in the Lohakumbhiya-niraya after his death. There he will have to suffer the torments of that hell for 60,000 years, but finally he will attain deliverance as a pacceka-buddha under the name Viditavisesa or Vijitāvī[54].

54 *DPPN.* I, p. 35.

AJAYĀ, the goddess who occupies the northern direction of the third section (*puṭa*) of the Buddha-kapāla maṇḍala. The other directions are occupied by the goddesses Bhīmadarśanā, Śubhā, Ostārakī, Surakṣiṇī, Vikālarātrī, Mahāyaśā and Sundarī (*Sādh.* 502).

AJEḶAKA SUTTA, contained in the *Āmaka-dhañña-peyyāla* of the *Sacca Saṃyutta* of the *Saṃyutta Nikāya* (V, 472). The Buddha declares to the bhikkhus that those who abstain from accepting goats and sheep are few, and those who do not so abstain are numerous (cp. *D.* I, 5—the list of minor moralities in *Brahmajāla Sutta*). For the first portion of this sutta which has been omitted, see the beginning of the seventh chapter of the same saṃyutta (*S.* V, 465).

AJELAPHALADĀYAKA, the designation of an arahant thera. Ninety-four kappas ago he offered to the Buddha Ajjuna, who was living in the Himālayas, an *ajela* fruit as big as a pot on a platter of leaves. As a result of this meritorious deed he escaped all miserable existences. In the time of the Buddha Gotama he joined the Saṅgha and became an arahant (*Ap.* II, No. 504).

The name of the fruit is given as *ajeli* (*CPD.*); and accordingly the thera is called Ajeliphaladāyaka.

AJEYA, a samādhi or a concentration of both mind and body, mentioned in the *Mahāvyutpatti* (*BB.* XIII, 9). Its literal meaning is 'invincible'. It is neither mentioned nor explained in the *Śata-sāhasrikāprajñāpāramitā* where a number of samādhis are enumerated.

AJI-GIDEN, an ancient Japanese scroll, the purpose of which is to explain the meaning of the letter 'A' and the method of meditation upon it. It is divided into three parts. The first and the last parts consist of paintings, while the middle part is devoted to philosophical statements on the nature of 'A' and its method of meditation. The first painting is a portrait of emperor Saga (810–24 A.C.) dressed in the emperor's gala costume. The last one is a portrait of Kūkai (774–835 A.C.). Both of them hold a letter 'A' at their chest; and from this letter 'A' light spreads in every direction. This symbolises the completion of the meditation on the letter 'A'.

These paintings are done on the lines of the ancient and traditional Japanese art of drawing (*yamato-e* 大和繪), and there is no doubt that these paintings belong to the masterpieces of the Kamakura period (1192–1333). It is, however, not certain whether, as held by popular tradition, the painter was Jakuren (1207) and whether the sponsor was emperor Toba (1108–23) or not.

BIBLIOGRAPHY: Kōko-gwafu (考古畫譜).

AJINA, an arahant whose verses are found at *Theragāthā* (129–30). According to the commentary (II, pp. 9–10), in keeping with his kamma he was born into a poor brāhman family at Sāvatthi and was named Ajina as he was wrapped at birth in an antelope skin (*ajinacamma*). He grew up in poverty. Seeing the majesty of the Buddha at the presentation of Jetavana, he gained faith and joined the Saṅgha. Before long he became an arahant. Even as an arahant, because of his past kamma, he continued to be unhonoured and unknown and for this reason was despised by worldly novices. It was to agitate these monks that Ajina thera uttered the verses to the effect that even if one were an arahant but unknown he was scorned by the foolish, but if one received offerings though evil-minded he was respected by them.

In a previous life Ajina is said to have offered butter as medicine to the pacceka-buddha Sucintita, who was afflicted with disease, and as a result of this good deed he was born in heaven. His past lives are described in greater detail and with slight variation in the *Apadāna* under the name of Ghatamaṇḍadāyaka thera (II, p. 436).

AJINADĀYAKA, a thera, the story of whom occurs in the Therāpadāna of *Apadāna* (I, pp. 213–4).

Ajinadāyaka was a chief of a guild (*gaṇasanthāraka*) who offered a piece of (antelope) skin (*camma-khaṇḍa*) to the Buddha Sikhī. As a result of that meritorious deed he was able to enjoy great wealth. Having put an end to all defilements (*kilesa*), he led his last existence as a bhikkhu in the dispensation of the Buddha. He made the offering of the antelope skin (*ajina*) to Sikhī Buddha, thirty-one aeons prior to the aeon in which he was leading a life of a thera. The consequence of the offering was that he did not experience a low state of existence (*duggati*). Five aeons before, he had been a powerful world ruler (*cakkavatti*) by the name of Sudāyaka. Later he attained arahantship with the four branches of logical analysis (*catasso paṭisambhidā*), namely, subject (*attha*), matter (*dhamma*), etymology (*nirutti*) and insight (*paṭibhāna*).

AJIOKA-RYŪ (味岡流) is one of the thirteen schools or sub-divisions of esoteric Buddhism or Taimitsu (台密) which was propagated by Saichō (768–822 A. C.), and which was based on the Japanese Tendai-shū (天台宗), a sect to which he belonged. On the death of this great founder, his successors were unable to arrive at a consensus of opinion with regard to the method of the practices enjoined by him. It was in this way that there arose thirteen or more sub-divisions from the original school. Thus, the hybrid and somewhat later and uninfluential Ajioka school was established by Chūsai in the thirteenth century. Chūsai received the secret teaching of the Yōjō (葉上) school from Eisai (1141–1215 A.C.), of the Renge (蓮華) school from Ninben, and of the Anō (穴太) school from Shōshō. On the completion of these studies in and near the city of Kyōto he returned to his native place, Ajioka (now in the

Aichi prefecture near Nagoya), where he propagated his new doctrine. Hence the name of Ajioka for this particular branch of esoteric Buddhism.

Of the three original schools of esoteric Buddhism of Taimitsu mentioned above, the Renge school bears the closest resemblance to this new school. This explains why Chūsai's full name reads Renge-in Chūsai, or Chūsai of the Renge temple. Moreover, he is venerated as one who was responsible for the final development of the Renge school.

According to the *Jizaikongōshū-remmom* (自在金剛集連文), Chūsai spent most of his lifetime in the Aichi prefecture at the Mitsuzō temple, and it was in this temple that the ceremonies of the Renge school were performed. However, according to other sources (*Sangokudenki*, 三國傳記, fasc. viii), the ceremonies held in this temple were gradually changed from those of the Renge or Ajioka school to those of the Okabe (岡部) school. Thus, it should be noted that the Ajioka school was not very influential; it did not prevail even in its founder's native temple. Nevertheless, in spite of its early insignificance, it has been given a prominent position by Echō who, in his *Mitsumon-zasshō* (密門雜抄), reckons this as one among the 13 schools of Taimitsu (台密) esoteric Buddhism.

AJIRAVATĪ, a name which was in vogue in the Sanskrit tradition for the river Aciravatī (q.v.).

AJITA (1), epithet of Maitreya Buddha. See MAITREYA.

AJITA (2), the unconquered one, proclaimed by the Śākyamuni to the five Bhadravargīya monks, as the name of one of the thousand Buddhas who will arise in this auspicious world-cycle (*bhadrakalpa*) and who will possess a radiance of twelve yojanas (*Mhvu.* III, 330). He appears to be distinguished from the future Buddha Maitreya, of whom *ajita* is an epithet.

AJITA (3), a pacceka-buddha who lived ninety-one aeons ago. Dāsaka thera, in a previous birth, offered him mangoes (*ThagA.* I, 72).

AJITA (4), one of the sixteen arahants, according to the *Nandimitrāvadāna*, as translated into Chinese by Hsüan-tsang. In this work compiled by the arahant Nandimitra of Siṃhala (Ceylon) about 800 years after the Buddha's Nirvāṇa, Ajita is the fifteenth arahant mentioned, and he is said to have lived with his retinue of one thousand five hundred arahants mostly on mount Gṛdhrakūṭa.

These sixteen arahants, according to the *Ratnamegha Sūtra* (fasc. vii) as mentioned in the 'Notes on the Analytical Study of the Saddharmapuṇḍarīka Sūtra' were ordered by the Buddha to sustain Buddhism and not to enter Nirvāṇa until the coming of the next Buddha. They took an oath to this effect in the presence of the Buddha.

The veneration of these sixteen arahants became widely prevalent in China after the translation of the *Nandimitrāvadāna* during the T'ang dynasty, and many pictures are recorded to have been made by Lu Lêng-Ch'ieh of the Ch'ien-yüan period (758–60 A.C.).

It is obvious that the concept of 'arahantship' in respect of these sixteen disciples of Śākyamuni is not in total accord with the Theravāda doctrine. Nor is it possible to identify the arahant Ajita of the Mahāyāna tradition with any of the Buddha's disciples as known from Pali literature.

H. G. A. v. Z.

AJITA (5), a brāhman, known as Ajitamāṇava who later became an arahant thera. He is the author of *Theragāthā v.* 20 and came to be known as Ajita thera.

He was one of the sixteen disciples of the brāhman Bāvarī who were sent by the latter with their following of pupils to interview the Buddha on the subject of heads and head-splitting, after Bāvarī had been cursed by another brāhman that his head should split in seven. Ajita's questions and the Buddha's replies are contained in the *Ajitamāṇavapucchā* (q.v.) of the *Pārāyana Vagga* of the *Suttanipāta*. According to the prologue Ajita put the introductory questions mentally to ascertain that he was speaking to the Buddha. It is said that at the end of the conversation Ajita joined the Saṅgha. The *Suttanipāta* commentary adds that Ajita attained arahantship along with his one thousand pupils. Their hermit attire disappeared and they became robe-clad (*SnA.* pp. 587–8). This incident is also recorded in the *Aṅguttara* commentary with slight variation. It gives the added information that Ajita was Bāvarī's nephew and that the latter made a special request to come back to him with the Buddha's words for he doubted the others returning. Ajita went as the leader of the sixteen disciples and their followings of one thousand each (*AA.* I, p. 335). The *Theragāthā* commentary repeats the story of his conversion, but seems to indicate that he did not reach arahantship immediately. After his ordination he took on a topic of meditation, and only after developing insight he became an arahant (*ThagA.* I, p. 78).

We have the following information regarding Ajita's early life. He was born in Sāvatthi, the son of the brāhman price-assessor of the king of Kosala and was named Ajita (ibid.). He became an ascetic under Bāvarī who, to please the king, first lived in the king's park. But in search of a more secluded spot they went from Uttarajanapada to Dakkhiṇajanapada (*SnA.* II, p. 580). They finally settled on the bank of the Godhāvarī in the neighbourhood of Assaka and Muḷhaka (*Sn. v.* 977; *AA.* I, p. 333).

The various accounts speak of Ajita's past births, too. The *Suttanipāta* commentary describes the past births of Bāvarī and his sixteen disciples and their following of one thousand each. In the time of Buddha Kassapa, Ajita was one of sixteen carpenters under Bāvarī, their chief. They seized a kingdom in the Himālayas and while Bāvarī became known as Kaṭṭhavāhanarājā, Ajita became one of his sixteen ministers. They heard news of the appearance of a Buddha from the king of Bārāṇasī, but before Ajita and the other ministers got there, he had passed away. However, they joined the Saṅgha and after death were born in the Kāmāvacara heaven where they remained till the time of Gotama Buddha (*SnA.* II, pp. 575–9).

In the time of Buddha Vipassī, it is stated that Ajita offered him a wood-apple (*kapiṭṭha-phala*). Thereafter he did meritorious deeds and moved among devas and men until his final birth in the time of the Buddha Gotama (*ThagA.* I, ibid.). He is to be identified with Kapiṭṭhaphaladāyaka thera of the *Apadāna* who offered a wood-apple (*Feronia elephantum*) to a Buddha and as a result of which, it is said, he knew of no miserable existence (*Ap.* II, No. 509).

Ajita thera of the *Apadāna* (I, No. 397) also probably refers to Ajitamāṇava though the story of his past is different from the accounts of Ajitamāṇava. According to this account, he offered in a past birth a lighted lamp before the Buddha Padumuttara and the Buddha prophesied his future births in heaven, as a world-ruler (*cakkavatti*) and as lesser kings on earth. He further foretold that Ajita would be gifted with the divine eye as a result of his offering and that finally he would become a disciple under the Buddha Gotama. The prophecy came to pass and when Ajita passed away from Tusita heaven, he was born in the human world amidst a great light, even as the Buddha had predicted. He renounced the world and became an ascetic under Bāvarī and it was while living in the Himālayas that he heard of the Buddha.

In spite of the divergence between this and other accounts of Ajitamāṇava, the fact that they both bear the same name (Ajitamāṇava is referred to as Ajita also in the *Suttanipāta*, *Theragāthā* and its commentary) and that they were both pupils of Bāvarī before they came under the Buddha's influence makes it plausible that they refer to the same Ajita.

See, however, N. A. Jayawickrama, 'The Suttanipāta : Pucchās of the Pārāyana Vagga' in *UCR.* **IX**, 1 (Jan. 1951) where the author expresses the view that Ajita of the *Ajitamāṇavapucchā* and Ajita of the *Theragāthā*, *Theragāthā* commentary and *Apadāna* No. 509 are two different persons. He further doubts whether Ajita was a brāhman merely because he is referred to as a brāhman in the *Vatthugāthā* (prologue) and is called *māṇava* in the title of the *pucchā*, because it is significant that in the *pucchā* itself, which is decidedly older than the *Vatthugāthā*, Ajita is spoken of as *āyasmā Ajito*. The author goes on to say that "one would not be far wrong to conjecture that since the kṣatriya seers were the custodians of Upaniṣadic lore and as Ajita's mode of thinking resembles theirs that he was a kṣatriya belonging to an Upaniṣadic school.'

L. R. G.

AJITA (6), a monk devoted to the exposition of the *pātimokkha*. He was appointed by the Saṅgha to assign seats to the theras taking part in the Second Council held at Vālikārāma. At this time he is said to have been a young monk of ten years' standing (*Vin.* II, 305; *Mhv.* iv, 51).

AJITA (7), a brāhman, the bodhisatta in the time of Buddha Sobhita. He listened to the Buddha's preaching, became a convert and offered a great almsgiving to the Buddha and his following of bhikkhus. Sobhita predicted that Ajita would become a Buddha in the future (*J.* I, p. 35, *ApA.* p. 38). In the *Buddhavaṃsa* (vii, 12–13) his name is given as Sujāta. According to the *Buddhavaṃsa* commentary the bodhisatta was born in the city of Rammavatī.

AJITA (8), name of the arahant thera, Citakapūjaka (q.v.), in a previous birth as a brāhman.

AJITA (9), an attendant of the bodhisattva in a previous life. One day Ajita was following the bodhisattva, then an ascetic brāhman, along a mountainous path. In a cavern below, they saw a young tigress tormented by pangs of hunger and getting ready to devour her own young ones. Ajita was at once sent by his master in search of some food for her. But on his return he found the tigress feeding on the lifeless body of the bodhisattva who, in the meanwhile, had sacrificed his own life for the sake of the tigress and her cubs. When he saw this, Ajita, in a beautiful monologue, gave utterance to his admiration of the virtues of love and self-sacrifice of the bodhisattva (*HOS.* I, 3, 4 f.).

AJITA (10), a wanderer (*paribbājaka*) who questioned the Buddha on the topic of what constitutes a sage, and in reply received an exposition on what is right (*dhamma*) and wrong (*adhamma*) speech (*A.* V, 229). See AJITA SUTTA.

AJITA (11), general of the Licchavis and a devotee of the Buddha. After death he was born in the Tāvatiṃsa heaven. As a deva he visited the Buddha to repudiate the statement of the naked ascetic (Acela) Pāṭikaputta to the Vajjians that Ajita had been born in the Mahāniraya (*D.* III, 15).

The commentary elaborates on the statement of Pāṭikaputta. He is said to have come out with this reply when questioned by the people after the funeral rites as to Ajita's destiny. He had further asserted that Ajita had come before him and wept saying that by rejecting Pāṭikaputta's words and following the Buddha, he had been born in hell (*DA.* III, p. 825).

AJITABALA, a former Buddha, mentioned in a list (*Mhvu.* I, 140) of former Buddhas under whom the Śākyamuni acquired merit, while residing in the ninth bodhisattva-bhūmi.

AJITACAKRA, name of a former Buddha, under whom the Śākyamuni, as bodhisattva dwelling in the eighth bhūmi, acquired merit. This name appears in a list of former Buddhas, mentioned in the *Mahāvastu* (I, 137).

AJITAJINA (var. Ajitajana), a king of the race of Mahāsammata. His descendants reigned in Kapilapura (*MhvA.* 127). He is called Abhitatta in the *Dīpavaṃsa* (iii, 17).

AJITA KESAKAMBALĪ, (also Ajita Kesakambala, Skt. Ajita Keśakambalī, Ajita Keśakambala), one of the six famous leaders of heretical sects mentioned in Buddhist literature as being contemporaneous with the Buddha, the others being Pūraṇa Kassapa, Makkhali Gosāla, Pakudha Kaccāyana, Sañjaya Belaṭṭhiputta and the Nigaṇṭha Nātaputta (*D.* II, 150; *Avś.* p. 102; *Mhvyut.* § 179). Ajita appears to have enjoyed a certain reputation as a religious teacher, for he is described as the head of a large following, well-known and of repute as a sophist (*titthakara*), revered by the people, a man of experience who has long been a recluse, old and well stricken in years (*D.* I, 48; *M.* I, 198; etc.). He was much older than the Buddha and much senior to him as a recluse (*S.* I, 68; *Sn.* pp. 92 f.; Rockhill, *The Life of the Buddha*, p. 49 for the reference in the *Dulva*).

The best summary of Ajita's teachings is found in the *Sāmaññaphala Sutta* of the *Dīgha Nikāya* and it is noteworthy that all his assertions are of a negative character: there is no such thing as almsgiving, sacrifice or offering, nor reward or retribution for one's actions, no future life, neither father, nor mother, nor beings of spontaneous birth. There are no ascetics or brāhmans who have reached perfection, who, having understood and realised this world and the world beyond, make known their wisdom to others. A man is made of the four elements. When he dies, the earth element returns to the earth, the water to water, the fire to fire and the air to air, while the faculties pass into space. Four men with the bier carry his corpse. Till they reach the charnel ground men utter his praises, but there his bones are bleached and his offerings end in ashes. The talk of gifts is a doctrine of fools and they lie when they say there is profit in giving. At death, fools and wise alike are cut off, annihilated and do not survive after death (*D.* I, 55). A passage very similar to this about a heretical doctrine is found in the Jaina *Sūtrakṛtāṅga* and is probably to be identified with the doctrine of Ajita (see *SBE.* XLV, p. 340). Thus, he denied past and future life, virtue and vice, heaven and hell, and fruits of good or evil deeds. He rejected all knowledge by insight. By declaring sacrifices to be futile he denounced the Brahmanic ritualism. With his theory that man is composed of the four elements which disperse at death, he rejected the Upaniṣadic theory of the *ātman*. His views come very close to those of the Cārvākas, the Materialists, who followed the Lokāyata system supposed to have been founded by Bṛhaspati, a legendary figure. The Cārvākas did not believe in a future life and postulated the theory that the individual was formed of the four elements—earth, water, fire and air, and that consciousness was a product of the combination of these elements, which was destroyed with the body at death. Ajita Kesakambalī, too, was clearly a materialist, preaching the doctrine of annihilation (*ucchedavāda*). He has been described as the historical founder of Indian Materialism (B. M. Barua, *A History of Pre-Buddhistic Indian Philosophy*, p. 288). Barua has also expressed the view that Ajita in the negative aspect of his doctrine shows a resemblance to Epicurus, while on the positive side of his speculations he appears to be more a Stoic than an Epicurean, his fundamental thesis being that nothing is real but that which is corporeal (ibid. p. 293). His was a doctrine of non-action *akiriyavāda*).

Although the Pali passage mentions only the four elements and is silent about Ajita's view regarding a soul, the parallel Jaina *Sūtrakṛtāṅga* passage gives the heretic's theory of the soul which is again closely akin to the Cārvāka view that the soul is not different from the body, "Upwards from the soles of the feet, downwards from the tips of the hair on the head, within the skin's surface is (what is called) soul (*jīva*) or what is the same, the *ātman*. The whole soul lives; when this (body) is dead, it does not live. It lasts as long as the body lasts, it does not outlast the destruction (of the body) . . . As a man draws a sword from the scabbard and shows it (you, saying): 'Friend, this is the sword, and that is the scabbard', so nobody can draw (the soul from the body) and show it (you, saying): 'Friend, this is the soul and that is the body' . . . " (*SBE.* XLV, p. 340). Thus, Ajita's doctrine came to be termed *Taṃ-jīva-taṃ-sarīra-vāda* (the body and soul are identical) as opposed to the doctrine of soul being distinct from the body (*aññaṃ-jīva-aññaṃ-sarīra-vāda*).

There is no indication in the *Sāmaññaphala Sutta* passage that Ajita like the Cārvākas advocated

hedonism. But the *Sūtrakṛtāṅga* continues to say of the heretical teacher, "Thus undertaking various works they engage in various pleasures and amusements for their own enjoyment."

Ajita Kesakambalī has been identified by some with Kambalāśvatara, a Cārvāka, mentioned in Śāntarakṣita's *Tattvasaṅgraha*. (See A. K. Warder, 'On the Relationship between Early Buddhism and other Contemporary Systems', in *BSOAS*. vol. XVIII, 1956, pp. 43 ff.) Kambalāśvatara's theory was that consciousness proceeds from the body itself which is equipped with the five life-breaths, *prāṇa*, *apāna*, etc. (*Tattvasaṅgraha*, 1864) [1].

Apart from the passage referred to there are a few other scattered references to Ajita's teachings in the Pali canon and in later literature. The *Sāmañña-phala Sutta* passage describing Ajita's doctrines recurs elsewhere as the view of a typical sophist with no mention of Ajita's name (*M.* I, 515; *S.* III, 207). Ajita has been sometimes confused with the other heretical leaders. Whereas Ajita emphatically denied rebirth, in one instance he is represented as discussing the rebirth of his disciples (*S.* IV, 398). In the *Aṅguttara*, Ajita Kesakambalī seems to have been confused with Makkhali Gosāla, for the simile is more appropriate to Ajita (*A.* I, 286). Pāyāsi, the chieftain of Setavya in Kosala, who appears on the scene a few years after the Buddha's demise, professed views very closely akin to those of Ajita Kesakambalī, "There is no other world, there are no beings reborn otherwise than from parents, there is no fruit or result of deeds well done or ill done." He adduces various arguments in support of his theory of annihilation, each of which is, however, refuted by Kumāra-Kassapa who finally wins him over to the teachings of the Buddha (*Pāyāsi Sutta*, *D.* II, 316 ff.). Out of a medley of views, ascribed to certain heretics, some are reminiscent of those of Ajita—thus of Nandaka in the *Petavatthu* (p. 59, *v.* 27) and of the naked ascetic Kassapa in the *Mahānāradakassapa Jātaka* (VI, 225). The Tibetan version of the *Sāmaññaphala Sutta* in the *Dulva* attributes to Ajita some of the views of two other heretical leaders—Pakudha Kaccāyana and Makkhali Gosāla (Rockhill, op. cit. pp. 102 ff.). While in one Chinese version of the *Sāmaññaphala Sutta* the account of Ajita's views closely resembles the latter part of the Pali account, another Chinese version has confused Ajita with Sañjaya Belaṭṭhiputta, the sceptic (Rockhill, op. cit. p. 257. See also P. V. Bapat, 'Śrāmaṇyaphala Sūtra and its different versions in Buddhist Literature', *Indian Culture*, Vol. XV). In a later work is to be found an echo of Ajita's views denying results of good and bad deeds (*Miln.* p. 25).

The *Sāmaññaphala Sutta* passage regarding Ajita's views is put into the mouth of Ajātasattu who speaks to the Buddha of his visit to Ajita Kesakambalī and the other five leaders of heretical sects, and repeats their teachings as he has heard from them (*D.* I, 55. There is a reference to this incident in the introduction to the *Sañjīva Jātaka*, in *J.* I, 509). An instance is recorded where Pasenadi of Kosala also interviewed Ajita (*S.* I, 68). Among others who met him were the mendicant Sabhiya (*Sn.* 92 f.) and Nālaka (*Mhvu.* III, 383). All these visitors went away dissatisfied and next sought the Buddha. The account in the *Milindapañha* (p. 4) of Milinda meeting Ajita and the other five heretics cannot possibly refer to the six heretical leaders of the Buddha's day and is very likely an interpolation.

Ajita Kesakambalī has on different occasions made claim to magical power (*iddhi*) but is not known anywhere to have shown proof of it. When the merchant of Rājagaha offered a costly sandal-wood bowl, which he placed on top of a long bamboo pole, to the perfected recluse who could fetch it with his psychic power, Ajita and the other five heretical leaders asked for the bowl claiming that they had reached perfection (*arahā*) and possessed supernatural power (*iddhimā*), but it was the bhikkhu Piṇḍola Bhāradvāja who actually rose from the ground and obtained the bowl (*Vin.* II, 111). In the *Suttanipāta* commentary it is said that Ajita claimed to have reached omniscience (*SnA.* II, 423) but elsewhere when questioned by Pasenadi he makes no such claim (*S.* I, 68). When a plague broke out in Vesāli the people approached Ajita and the others to help to arrest the plague but all of them failed in their attempts and finally it was the Buddha who succeeded in allaying the plague (*Mhvu.* I, 253 ff.). The Miracle of the Pairs (*yamaka-pāṭi-hāriya*) was performed by the Buddha in the seventh year after his enlightenment at a place near Sāvatthi in order to refute Ajita and the other five heretical leaders. It is said that these six heretics all claimed to have attained great supernatural power and, as they felt that the Buddha was depriving them of the honour they had been receiving from the people, they decided to have a public trial of their magical power at which they hoped to defeat the Buddha. King Pasenadi of Kosala had made everything ready for the performance. The Buddha was the first to display his magical power and when he performed the Miracle of the Pairs, the six heretical leaders dared not show their inferiority and fled in shame. (See *DA.* I, 57; *Divy.* pp. 143 ff.)

Hsüan-tsang speaks of a monastery in Śrāvastī where the Buddha is said to have held a discussion

---

1 For individual interpretations of Ajita's philosophy, see also, apart from the works already mentioned, B. C. Law, *Buddhistic Studies*, pp. 81 f.: 'Influence of Five Heretical Teachers on Jainism and Buddhism', in *JASB* (Bengal,) 1919, pp. 123 f.; *Heaven and Hell in Buddhist Perspective*, Appeudix by B. M. Barua. W. Ruben, *Geschichte der Indischen Philosophie*, Berlin, Deutscher Verlag der Wissenschaften, 1954; Dakshinaranjan Shastri, *A Short History of Indian Materialism*, Calcutta, The Book Company Ltd., 1930.

with the heretics. He also refers to a stūpa nearby erected on the spot where Śāriputra silenced the six leaders of heretical sects. Hsüan-tsang says that when Śāriputra accompanied Anāthapiṇḍika to Jeta's grove to help him with the plan for the monastery, the six heretics sought to deprive Śāriputra of his spiritual power but the latter brought them to reason and subdued them. Reference is also made to a monastery and stūpa built where the Buddha defeated the heretical leaders (Beal, *Buddhist Records of the Western World*, Book VI, p. 10).

Ajita has been identified with one of the characters in a jātaka. It is said that in a previous birth he was born as one of five heretical councillors to the king of Bārāṇasī. Then, too, he preached the doctrine of annihilation (*ucchedavāda*) and was refuted by the bodhisatta who was then born as a mendicant named Bodhi (*Mahābodhi Jātaka*, in *J.* V, 246).

Ajita was his personal name and he earned the name of Kesakambalī from his garb. He wore a blanket of hair (*kesakambala*—human hair according to the commentator), which was 'the meanest of all garments'. It was cold in cold weather, warm in warm weather, ill-coloured, foul-smelling and unpleasant to the touch (*DA.* I, 144 ; *MA.* II, 233). His choice of this garment would indicate that he was a believer in austerity (*SnA.* II, 423) in spite of the fact that he was a materialist. The hair-blanket was one type of dress adopted by ascetics in the time of the Buddha (*D.* I, 167 ; *M.* I, 78 ; *A.* I, 240).

All the information we can glean of Ajita Kesakambalī is from works of other religions where he is treated as a heretic. These accounts cannot therefore be expected to be free from prejudice. Thus, in the Jaina *Sūtrakṛtāṅga*, Mahāvīra (i.e., Nigaṇṭha Nātaputta) condemns the heretical leader who may reasonably be identified as Ajita, as a murderer who teaches men to kill, burn and destroy, and engage in pleasures for their own enjoyment, as there is no world beyond (*SBE.* XLV, p. 341). In Buddhist literature Ajita Kesakambalī rarely appears alone. Ajita and the other five are often treated as a group of leaders of six heretical sects and Ajita Kesakambalī's name occurs most often third in order (var. °kambali, °kammala). LAKSHMI R. GOONESEKERE.

AJITAMĀṆAVA-PUCCHĀ, the first of the sixteen questions of the *Pārāyana Vagga* of the *Sutta Nipāta* (*vv.* 1032–9). It records the interview between Ajita, pupil of the brāhman Bāvarī, and the Buddha.

The preceding section, the *Vatthugāthā* (prologue), narrates the events which led to Ajita's visit to the Buddha. After he fulfils the mission on which he was sent by his teacher, Ajita proceeds to ask his own questions from the Buddha which form the subject of the *Ajitamāṇava-pucchā*.

To Ajita's question about the obstructions and dangers of this world the Buddha replies that this world is shrouded by ignorance, that it does not show clearly because of avarice and indolence; it is stained by desire and its greatest danger is from sorrow. In reply to further questions the Buddha declares that it is mindfulness that obstructs the streams of evil, and knowledge checks their flow. Mind and body (*nāmarūpa*) will cease only when consciousness (*viññāṇa*) has ceased. (In the commentary this is explained as the summing up of the Four Noble Truths: *SnA.* II, 587; *NdA.* III, 7.) When asked by Ajita for the way of life for the trained and yet training and for the ordinary man, the Buddha advocates the life of the bhikkhu: one should not delight in sensual pleasures, should have the mind unperturbed, and should be expert in everything. With mindfulness a monk should conduct himself. The meeting with the Buddha resulted in Ajita becoming a bhikkhu.

In the Siamese edition of the *Culla Niddesa*, the *Ajitamāṇava-pucchā* has been referred to as *Ajitamāṇavaka-pañhā* while in other editions of the *Culla Niddesa* and in the *Niddesa* commentary as well as in the *Suttanipāta* commentary, it is called *Ajita Sutta*. Outside these commentaries this sutta has also been discussed at great length in the *Nettippakaraṇa* (pp. 10–21). Elsewhere the *Nettippakaraṇa* states that the Buddha's explanation was in the nature of a reply to questions and not on his own initiative (pp. 70–2).

The *Ajitamāṇava-pucchā* has been quoted in chapter iii of the *Mahāprajñāpāramitāśāstra.* An elucidation of *v.* 1038 by Sāriputta which won the Buddha's approval is found in the *Saṃyutta Nikāya* (II, pp. 47–50). The *Atthasālinī* also quotes *v.* 1035 at p. 351.

This *pucchā* is in śloka metre. (See *UCR.* IX, 1, January 1951, 'The Suttanipāta : Pucchās of the Pārāyana Vagga', where N. A. Jayawickrama has made a study of this sutta and has also analysed linguistic and grammatical evidence which denote the antiquity of this sutta.)

L. R. G.

AJITAMITRA, a famous Buddhist Tantrist. In spite of his great fame, the details in respect of the date of his birth, his career and his works still remain confused.

First, we must consider the works, the authorship of which is attributed to him. In regard to this problem, the best way is to examine the catalogues of extant materials translated into Tibetan, and to compare and try to identify the names mentioned in these catalogues. The catalogue of Cordier mentions six works under the name of Ajitamitra, the *Śrīyakṣabhrātṛdvaya-sādhana* (II, p. 196), four works by the name *Arapacanasādhana* (II, p. 301 ; III, pp. 4, 30, 177) and *Ratnāvalīṭikā* (III, p. 422). On the other hand the Tōhōku catalogue does not mention even his name. Tōhōku (or Sde-dge edition)

also contains seven works named *Arapacana-sādhana*, but in three instances the name of their author is not given (Nos. 3172, 3173, 3459), while in the other cases it is given, in Tibetan, as Mi-phan bśes-gñen, or as Ajitamitra (Nos. 2714, 2715, 3311, 3449). Of the other two works, *Śrīyakṣabhrātṛdvaya-sādhana* is not contained in Sde-dge edition (*TM.*), and *Ratnāvalīṭīkā* is mentioned under the authorship of Mi-phan bśes-gñen, or Ajitamitra.

Therefore, we can, at least, mention two works under his name. One is *Arapacana-sādhana* and the other is *Ratnāvalīṭīkā*. Fortunately, the former work is extant in original Sanskrit and preserved (as No. 55) in the *Sādhanamālā* (in *GOS*, pp. 112–5). According to this, *Arapacana* means a mystical collective name of the five Buddhas, each of which is represented by a letter. The idea of five dhyāni Buddhas first appeared in the *Mahāvairocana Sūtra*, the completion of which is reckoned between 500 and 650 A. C. But the ideas contained in this *Sādhana* tend to the later period. On the contrary, the latest author in the *Sādhanamālā* is Abhayākara-gupta (q.v.).

Based on these propositions, Ajitamitra's date can be roughly determined from 9th to 10th century A. C. But it is no easy task to determine the date of this practically unknown author from the scanty materials available. As B. Bhattacharyya has noticed, the words of this ācārya have been put into the mouth of the highest god Mahādeva in Hindu tantras (*An Introduction to Buddhist Esoterism*, p. 163). Even his extant work *Arapacana-sādhana* in the *Sādhanamālā*, referred to above, is also attributed to the same high god, in the *Kukuteśvaratantra* of the Hindus (ibid. p. 162).

Thus the many confusions are caused by this super-mystical devotion to him by later Hindu Tantrists. This consonance between Buddhists and Bengal Hindu Tantrists shows us that Ajitamitra could have been from Bengal.

S. K.

AJITAMJAYA (1), name of a bodhisattva, mentioned in the *Ārya-Mañjuśrī-mūlakalpa* (p. 41 : *BHS.* s.v.).

AJITAṂJAYA (2), name of a locality, mentioned in the *Mahāmāyūrī* (pp. 27 and 69: *BHS.* s.v.).

AJITANĀTHA-SĀDHANA, name of a Sanskrit work, a Tibetan translation of which has been incorporated in the Rgyud (tantra) section of the Tengyur under the title *Dpal mi-pham mgon-poḥi sgrub-thabs shes-bya-ba*. The name of the author is mentioned as Nairiti-pa, and the translation is ascribed to Byams-paḥi dpal (*TM.* No. 3649).

AJITANĀTHASTUTI-MṚTYUVAÑCANĀ-NĀMA, a Sanskrit text which is extant in its Tibetan translation, the *Mi-pham mgon-po-la bstod-pa ḥchi slu-ma shes-bya-ba*, in the Rgyud-ḥgrel (tantra commentary) section of the Tengyur. Its author is Dpal Ḥjigs-med grags-pa (Śrī Abhayakīrti). The translator's name is not recorded (*Cordier*, III, p. 99, No. 2).

AJITAÑJAYA, name of Todeyya (q.v.) thera in a previous life as king of Ketumati.

AJITAPUṢYALA (var. Ajitapuṣya), name of a former Buddha under whom the Śākyamuni acquired merit while residing in the eighth bodhisattva-bhūmi. His name is mentioned in a list of former Buddhas in the *Mahāvastu* (I, 137).

AJITASENA, a householder of the city of Roruka in the south. Sudhana, the treasurer's son, was sent to him by the householder Sucandra of Bharukaccha to learn as to how a bodhisattva should train himself in the duties of a bodhisattva (*bodhisattva-caryā*). Saying that he had attained the *bodhisattva-vimokṣa* (release) named Akṣayalakṣaṇa, he, in his turn, sent Sudhana to the brāhman Śivarāgra of Dharmagrāma (*Gvyū.* 453 f.).

AJITASENARĀJAN, a former Buddha, mentioned in a list of former Buddhas, under whom the Śākyamuni while in the ninth bodhisattva-bhūmi acquired merit. Edgerton (*BHS.* s.v.) questions the spelling of this name, as certain MSS. have Ajinasenaḥ Rājā.

AJITA SUTTA, named after Ajita, the wanderer (*paribbājaka*), who is not mentioned elsewhere, although the name is common enough amongst monks and ascetics, Ajita thera, Ajita-kesakambalī, etc. One manuscript in Sinhalese writing, however, has in the *uddāna* (summary of contents) to the *Paccorohaṇī Vagga* (*A.* V, 222–37) to which this sutta belongs as the fourth in a chapter of ten, instead of Ajita, the name Ājina, and speaks of him as an ascetic (*ājīvaka*).

In his conversation with the Buddha this wanderer Ajita (*A.* V, 229) speaks with pride of a comrade in his mode of living (*sabrahmacārī*) as a sage (*paṇḍita*) who had thought out five hundred mental states (*pañcamattāni cittaṭṭhānasatāni*). With this system of his he was able to outvie holders of other views (*aññatitthiya*). Perhaps Ajita had here in mind also the holders of the system of mental analysis, which was later developed as Abhidhamma, according to which there are 'only' 121 mental states (*cittāni*).

The Buddha does not contradict his claim, but merely points out that learning does not make a wise man. People may acclaim a man as a sage, when he is able to excite a group of people and make them uproarious and noisy. Thus, when he is able, with wrong views, to counter and crush right views, he may be acclaimed a wise man by the ignorant. What is important to understand is not: who is a sage, but what is right (*dhamma*) and what is wrong (*adhamma*), what is profitable (*attha*) and what is harmful (*anattha*). Knowing all that, one should regulate one's life accordingly (*tathā paṭipajjitabbaṃ*).

Then is repeated the explanation of wrong (*adhamma*) and harmful (*anattha*) as in the three preceding *Adhamma Suttas* (*A.* V, 222 ff.) : wrong views (*micchādiṭṭhi*) and the unprofitable states that arise from wrong views, wrong intentions

(*micchāsaṅkappa*) and the unprofitable states that arise therefrom, wrong speech (*micchāvācā*), wrong action (*micchākammanta*), wrong livelihood (*micchā-ājīva*), wrong effort (*micchāvāyāma*), wrong mindfulness (*micchāsati*, omitted in *PTS*. text, *A*. V, p. 228), wrong concentration (*micchāsamādhi*), wrong knowledge (*micchāñāṇa*) and wrong release (*micchā-vimutti*) together with the harmful conditions arising therefrom. And also the ten opposites of the above which are right (*dhamma*) together with the profitable states (*kusalā dhammā*) with the fulness of culture (*bhāvanā-pāripūriṃ*) which ought to be one's aim (*attha*).

AJITAVATĪ, a name for Aciravatī (q.v.), the river Rāpti in Oudh.

ĀJĪVA, livelihood, mode of living or the occupation by means of which a person earns his living. Hence a person who makes a living by archery is called a *yodhājīvin*, and people living by composing or reciting hymns are *mantassa-ājīvino*. However, the word occurs frequently in the contrasting pair of terms *sammā-ājīva* (right livelihood) and *micchā-ājīva* (wrong livelihood).

Purity of livelihood (*ājīva-pārisuddhi*) is one of the essential conditions required of a monk aspiring for perfection in morality, in the first instance, and ultimately for the bliss of Nibbāna. It is called a condition of making one a recluse (*samaṇa-karaṇa-dhamma*) or making one a brāhman (*brāhmaṇa-karaṇa-dhamma*). It is duly perfected when a monk's livelihood is perfectly pure (*parisuddha*), clear (*uttāna*), open (*vivaṭa*), without defects (*acchid-davā*) and controlled (*saṃvuta* : *M*. I, 272). The cultivation of right livelihood (*sammā-ājīva*), which forms the fifth step on the Noble Eightfold Path, is the means by which one can hope to attain this end.
